In judging applications, the department puts particularly heavy emphasis on the quality of the student’s historical interests and prior research experience. Each applicant must submit a sample of written work. Applicants must also take the general aptitude portions of the Graduate Record Examination. Ordinarily no candidate for admission is accepted whose record does not indicate an ability to read at least one foreign language.

The department accepts only those students who plan to work in the specific fields of the faculty, and each student is admitted only with the approval of a particular professor. Applicants should indicate the proposed field of specialization at the time of application. With the concurrence of a new faculty advisor, students may, of course, later change their major professor.

The department has a number of fellowships that provide tuition and a stipend for students of unusual promise.

Requirements for the Ph.D. Degree
Students are required to have a reading knowledge of those foreign languages that are necessary for the satisfactory completion of their program of graduate study. Students in European history must have a reading knowledge of at least two languages, and students in medieval history must also have a reading knowledge of Latin. Students in the Latin American area must have a reading knowledge of two of the following, depending upon their particular specialties: French, Spanish, Portuguese, or Dutch. In African history, students must have a reading knowledge of three languages including English and French. Depending upon their fields of specialization, students in African history may have other language needs. Students are expected to pass a written examination in one language within a month after entering the department, and they are required to do so before the end of the first year.

Each student is required to take a seminar under his/her major professor and to participate in at least one departmental seminar each semester.

The student’s knowledge of four fields will be tested by written and oral examinations before the end of the second year of graduate study.

The student must write and defend a dissertation that is a major piece of historical research and interpretation based on primary sources and representing a contribution to historical knowledge. Its content, form, and style must be adequate to make it suitable for publication.

Normally, each student is required to perform some supervised teaching or research duties at some point during the graduate program, most often as a teaching fellow during the second and fourth years.

Interdisciplinary Ph.D. Degree
The departments of History and Anthropology offer an interdisciplinary doctoral degree. For details concerning this degree students should contact either department.

M.A. Degree
The master of arts degree is automatically awarded to each doctoral candidate following the passing of field examinations and the completion of the language requirements. In special circumstances, a student may be
permitted to take an M.A. degree after one full year of graduate study. In such cases students will be required to demonstrate by examination an ability to read at least one foreign language, write a satisfactory research essay, and satisfy the director of their research that they have a mastery of the field of history that forms its background. The essay must be submitted to the Graduate Board.

Admission as an M.A. candidate occurs only under exceptional circumstances, at the initiative of a faculty sponsor and with approval of the department chair. Such students are expected to be fully matriculated students and to pursue the normal course of study expected of all first-year graduate students as well as to fulfill the particular requirements for an M.A.

Faculty
Chair
Philip D. Morgan
Harry C. Black professor: early American history, with subsidiary interests in African-American history and the study of the Atlantic world.

Professors
Jeffrey Brooks
Russian and Soviet history, with an emphasis on culture and society, the press, and popular culture.
Toby L. Ditz
Director of Undergraduate Studies: early American cultural and social history, with a special interest in the history of women and gender.
Louis Galambos
Economic, business, and political history of the United States with emphasis on institutional change in the period since 1880.
Peter Jelavich
Modern European cultural and intellectual history.
Michael Johnson
9th-century United States history with emphasis on slavery and the South.
Franklin W. Knight
Leonard and Helen R. Stulman Professor of History; Latin American and Caribbean social and economic history with emphasis on the late colonial period, an interest in American slave systems, and the modern Caribbean.
Pier M. Larson
African history with specialization in East Africa, Madagascar, the Indian Ocean, and the history of slavery and the slave trade in the Atlantic world.
John Marshall
Early modern Europe, with emphasis on British and intellectual history.
Philip D. Morgan
Early American history, with subsidiary interests in African-American history and the study of the Atlantic world.
William T. Rowe
John and Diane Cooke Professor of Chinese History: modern East Asia, especially socioeconomic, urban history.
Mary Ryan
John Martin Vincent Professor: 19th-century United States history with emphasis on women, gender, urban history, and the cultural landscape.
Gabrielle Spiegel
Krieger-Eisenhower Professor: medieval history, with special interest in historiography and linguistic analysis.
Judith Walkowitz
Modern European cultural and social history with special interest in Great Britain, comparative women’s history.
Ronald G. Walters
Social and cultural history of the United States with special interest in radicalism, reform, race, and popular culture.

Associate Professors
Francois Furstenberg
Michael A. Kwass
Early modern France.
Tobie Meyer-Fong
Director of Graduate Studies: East Asia, cultural and social history, race, gender, and nationalism in 20th-century Asia, the Cultural Revolution, contemporary Chinese popular culture, and urban life in China.
Kenneth Moss
Jewish history, modern Russian, and East European history.
Marina Rustow
Jewish history, medieval Middle Eastern history, the Islamic Mediterranean.
Todd Shepard
20th-century France and the French Empire.

Assistant Professors
Angus Burgin
20th-century United States; political history; intellectual history; history of capitalism.
Nathan Connolly
20th-century America; race and real estate, tourism, Caribbean Diaspora in the United States.
Gabriel Paquette
Iberian history, colonial Latin America, political and intellectual history.
Erin Rowe
Early modern Spanish monarchy, the Mediterranean, saints and sanctity, women and gender.

Professors Emeriti
John W. Baldwin
Charles Homer Haskins Professor Emeritus.
Sara S. Berry
Robert Forster
Richard Goldthwaite
Jack P. Greene
Andrew W. Mellon Professor of the Humanities Emeritus.
Richard L. Kagan
Vernon Lidtke
John G. A. Pocock
Harry C. Black Professor Emeritus.
Orest Ranum
Mack Walker
Willie Lee Rose
Dorothy Ross
Arthur O. Lovejoy Professor Emerita.
Nancy Struever

Courses

AS.100.102. The Medieval World. 3 Credits.
This course explores selected topics in the political, economic, social and intellectual history of Western Europe in the period between the fall of the Roman Empire and the 13th century.
Instructor(s): G. Spiegel
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.103. Occidental Civilization: Early Modern Europe and the Wider World. 3 Credits.
This course surveys the history of Europe and its interactions with Africa, the Americas, and Asia during the early modern period (c. 1400-1800). Topics include: the Renaissance, the Reformation, International Relations and Warfare, Colonialism, the Enlightenment, and the Age of Revolutions.
Instructor(s): G. Paquette
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.111. Making America: The History of Black Americans, I. 3 Credits.
This course explores the history of African descended people in North America since the seventeenth century to the early twentieth century.
Instructor(s): N. Connolly
Area: Humanities, Social and Behavioral Sciences.

AS.100.116. Colonial Latin America. 3 Credits.
This course will introduce students to the colonial antecedents of modern Latin America. The focus is on the economies and societies of Spanish and Portuguese America and the paths toward independence. Cross listed with Latin American Studies
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.117. Latin America at a Global Crossroads, 1400-1850. 3 Credits.
This course offers an introduction to the history of colonial Latin America and the Caribbean, c. 1400-1850, nearly four centuries of encounter, colonization, accommodation, and struggle of enormous global consequence.
Area: Humanities, Social and Behavioral Sciences.

AS.100.118. History of Africa to 1880. 3 Credits.
Instructor(s): P. Larson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.122. Introduction to History of Africa (since 1880). 3 Credits.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.129. Introduction to Modern Jewish History. 3 Credits.
An examination of the history of Jews over the past three hundred years. Explores the dramatic encounter at the close of the 18th century between rapidly changing European societies caught up in intellectual, political, and economic revolution and a 2000-year old traditional civilization living in their midst; the kaleidoscopic array of Jewish political, religious, cultural and social responses to this encounter; the new forms of Jewish communal and individual life and consciousness which emerged in the course of the 19th and 20th centuries; the extension of this new modern framework to the Jews of the Middle East in the context of European imperialism and colonialism; the key roles played by the Jews as agents and symbols of political, economic, and cultural modernity; the phenomenon of anti-Semitism and whether it is a pathology or integral part of modern European civilization; the extreme shifts in Jewish life from the mid-20th century in light of the Holocaust, the creation of the state of Israel, and integration into American society.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences.

AS.100.134. African Encounters with Development. 3 Credits.
Has development been a blessing or a curse for Africa and Africans in the 20th century? This course will examine theories and practices of development that were conceived and carried out with respect to Africa both before and after independence, and ask how their impact on Africans’ lives has been represented and understood by African people, African governments, and international actors, from the late 19th century to the present. This course will be taught as a freshmen seminar
Instructor(s): S. Berry
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.136. Abraham Lincoln and His America. 3 Credits.
Freshmen seminar that explores the life and times of Abraham Lincoln though contemporary sources and texts by historians.
Instructor(s): M. Johnson
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.137. Global Iberian Empires 1400-1800. 3 Credits.
A survey of the origins and development of the Portuguese and Spanish empires in the early modern period, emphasizing the circuits that facilitated exchanges of people, ideas, commodities, and technologies.
Instructor(s): G. Paquette
Area: Humanities.

AS.100.138. Inheriting the Revolution: America from 1787 to 1836. 2 Credits.
This course will meet from July 13-31. It explores the profound economic, political, and social changes that occurred in the United States in the wake of the American Revolution. Topics will range from state-building to the spread of slavery, allowing students to better understand the lasting effects of early nineteenth-century history on the development of American institutions, democracy, and capitalism.
Instructor(s): C. Hollander
Area: Humanities.

AS.100.139. American Conservatism. 3 Credits.
Freshmen Only. This course will explore the history of conservative ideas and politics in the United States from the antebellum South to the age of Reagan.
Instructor(s): A. Burgin
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.140. From Plantation to Paris: The American South in Global Perspective. 3 Credits.
This course looks at the American South from a global, rather than national perspective, focusing on how the world beyond the United States has shaped and been shaped by the South. Using an interdisciplinary approach and interpretation of primary sources, students will explore topics ranging from African American journeys to Africa to the Dutch influence on post-Katrina New Orleans.
Instructor(s): I. Beamish
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.144. A Social and Cultural History of the American South. 3 Credits.
This course will explore the social and cultural history of the southern part of the United States from pre-Columbian times to the present. While presenting a comprehensive survey, it will focus particular attention on issues of slavery and race, conceptions of southern identity, and the potency of historical memory in the South.
Area: Humanities, Social and Behavioral Sciences.

AS.100.149. War in American Culture. 3 Credits.
This course will explore the history of the United States, from revolution and nation-building to the present, by looking at American values and assumptions about war and warfare. We will examine domestic conflicts and foreign invasions, rebellions and civil wars, imperial and world wars, and finally terrorism and counterinsurgency in order to assess the role of war in shaping American society and culture.
Instructor(s): T. Jones
Area: Humanities.

AS.100.150. Born in the U.S.A.: First Generation Americans. 3 Credits.
This course will explore the profound economic, political, and social changes that the first generation of Americans experienced in the United States during the course of their lives. Topics will range from state-building efforts to the spread of slavery, allowing students to better understand the lasting effects of nineteenth-century history on the development of American institutions, democracy, and capitalism.
Instructor(s): C. Hollander.

AS.100.153. Making America: Immigration/Race/Citizenship. 3 Credits.
Debates over who should come, who is eligible for citizenship and rights as old as the process of immigration to the United States itself. Beginning with the end of Reconstruction and continuing through the 20th century interwar period, this course explores who came, why, how they were received, how these waves of newcomers transformed American politics, society and culture, and what these debates can teach us about debates over contemporary immigration today. Class is conducted twice weekly lecture format, with separate required discussion sections. Cross listed with Africana Studies
Instructor(s): M. Shell-Weiss
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.154. Images and Realities: Native Americans in American History. 3 Credits.
Images and Realities addresses American stereotypes and narratives about native people while exploring the history of Native Americans from pre-contact to the present. In doing so, the course covers major events and issues in Native America like culture, identity, sovereignty and representation.
Instructor(s): S. Gamble
Area: Humanities.
AS.100.155. Race and Politics in US History, 1880-1965. 3 Credits.
This course examines race and politics in U.S. history during the era of overlapping immigration exclusion and segregation (ca. 1880-1965). It compares and contrasts southern segregation and Asian immigration restriction to understand American attitudes about race, equality, and citizenship. Focuses on the experiences of African Americans, Chinese and Japanese immigrants/Americans, and racial groups in racially mixed cities. Major themes include racial and economic discrimination, racial violence, everyday resistance, struggles for equality, and civil rights.
Area: Humanities.

AS.100.156. The U.S. City in the 20th Century. 3 Credits.
This course examines urban development in twentieth-century America. It gives special attention to federal and local government housing policies. It will also explore how cities shape American culture and how American popular culture shaped both citizen and immigrant encounters with urban spaces.
Instructor(s): N. Connolly
Area: Humanities.

AS.100.157. History of Race and Empire. 3 Credits.
Many states, in a number of historical periods, and across diverse cultures and civilizations can be defined as empires. Similarly, many cultures and civilizations have identified groups of people as distinct from other people on the basis of diverse criteria. This class will examine how the pursuit and maintenance of empires by European states in the modern period was uniquely linked to distinctions between groups of people on the basis of "race".
Instructor(s): T. Shepard
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.160. Consumer Culture and the Modern City. 3 Credits.
This course explores new forms of consumer culture arising in nineteenth- and twentieth-century cities, and the public spaces-- department stores, theaters, exhibition halls, cinemas, shopping malls-- that housed them. We read primary and secondary sources produced in imperial and post-colonial contexts in cities such as London, Paris, New York, Mumbai, and Bangkok. Course themes include the relationship between consumer culture and empire, sexual liberation and exploitation, racial and class conflict, body politics, and possibilities for or constraints on self-fashioning.
Instructor(s): L. Pepitone
Area: Humanities.

AS.100.161. Jews and Christians in Western Europe: Conflict and Concord from Late Antiquity to the Age of Exploration. 3 Credits.
The course will examine relations between Christian and Jews in the medieval West beginning in the Patristic period of the early Church down through the age of European explorations in the 15th and 16th centuries. It will, therefore, cover the premodern history of the Jews in light of their evolving and complex relationship to the Christian communities in whose midst they lived. Cross listed with Jewish Studies
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.162. Crime and Punishment in British Society, 1700-1900. 3 Credits.
This course explores crime and punishment in English society and culture, with an emphasis on ordinary people as victims and spectators of crime. We will also examine the representation of perpetrators -- from pickpockets and prostitutes to celebrity criminals - in newspapers, literature, visual culture, and early film, and discuss what this can tell us about English history during these two centuries.
Area: Humanities.

AS.100.164. Slavery and Freedom in the Americas. 3 Credits.
Americans are generally aware of the fact that slavery existed in the United States until 1865. In addition, most Americans have at least a basic understanding of slavery's importance to understanding the histories of the American South, African-Americans, and racism in the United States. However, fewer Americans know that the history of slavery far transcends these topics. Slavery existed throughout the Americas, from as far north as Canada to as far south as Argentina. In many parts of the Americas, local economies depended almost entirely upon the labor of slaves. In fact, far more Africans came (involuntarily) to the Americas prior to the nineteenth century than did Europeans. In this course, we will explore the often unrecognized fact that slavery was one of the most important institutions for the success and development of the various European colonial settlements in the Americas. This course will particularly emphasize the variable forms slavery took in different times, places, and situations. However, we will also explore in greater depth those aspects of slavery that, while not uniform, did show some commonality in all forms of American slavery. Finally, we will survey the growth of opposition to slavery during the late eighteenth and into the nineteenth century, and the ways freedom came to various slave societies. Freshmen Only.
Area: Humanities.

AS.100.165. Urban Growth and Urban Life in Nineteenth-Century America. 3 Credits.
This course examines the development of American cities in the nineteenth century, considering the governmental, infrastructural, and social challenges posed by urban growth. It will explore how the changing role of the city in American economic and political life influenced the development of cities as spaces of cultural interaction and exchange. The course will also focus on changes in urban form over the century, as cities developed from dense walking cities to sprawling metropolises.
Instructor(s): D. Schley
Area: Humanities, Social and Behavioral Sciences.

AS.100.166. African American History since Emancipation. 3 Credits.
This course explores the social, cultural, and political history of African Americans from the Civil War to Barack Obama.
Instructor(s): A. Ewing
Area: Humanities, Social and Behavioral Sciences.

AS.100.167. Evangelicism & Fundamentalism in America. 3 Credits.
In this course, we will trace the emergence and development of evangelicalism and fundamentalism in America from the Second Great Awakening to the rise of the Religious Right. Butler Freshman Seminar Fellowship Course
Instructor(s): G. Klehr
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.168. Freshman Seminar: US-USSR Cold War. 3 Credits.
Freshmen only. Reading, discussions, short papers on Cold War with emphasis on US and USSR.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.178. Household Technology and American Culture. 3 Credits.
From quill pens to computers, with toilets and televisions along the way, we will consider how home life has both been shaped by and dictated the use of improved technologies. Society chooses to adopt technologies for specific reasons, yet new technologies often have unintended consequences. This course covers domestic technological innovation and corresponding cultural change in the United States, encouraging students to examine the impact of technological choices in American history, and their own lives.
Area: Humanities, Social and Behavioral Sciences.

AS.100.182. The United States since 1929. 3 Credits.
This course explores the interplay between economic growth and instability, communism and anti-communism, diversity and conformity, war and protest, and liberalism and conservatism in American politics and society since the Great Depression.
Instructor(s): A. Burgin
Area: Humanities, Social and Behavioral Sciences.

AS.100.183. Slavery and Freedom in the Americas. 3 Credits.
This course will focus on slavery as fundamental to the social, cultural and economic development of the various European settlements in the Americas from their foundings until the end of the institution. It will particularly emphasize the variable forms slavery took in different times, places, and situations. Finally, the course will explore the growth of opposition to slavery during the late eighteenth and into the nineteenth century, and the different ways freedom came to various slave societies.
Instructor(s): P. Luck
Area: Humanities, Social and Behavioral Sciences.

AS.100.184. Riots, Revolts, and Revolutions: Violence in Early American History. 3 Credits.
This course will examine the history of early America from the first English colonization to the ratification of the Constitution by analyzing the role of violence in shaping this society.
Instructor(s): T. Jones
Area: Humanities, Social and Behavioral Sciences.

AS.100.185. A Cultural History of Contemporary China. 3 Credits.
This course explores cultural and intellectual changes in post-Mao and contemporary China. In considering topics such as literature, cinema, art, music, and the media, it seeks to provide students with an understanding of the interactions between developments in popular culture and the profound social and economic transformations in China’s three decades of reform. We will pay attention to both domestic issues as well as the context of globalization.
Instructor(s): K. Ren
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.186. The History of Photojournalism from Daguerre to Digital. 3 Credits.
This course examines the aesthetic, technological, social, and historical dimensions of photojournalism, from the invention of the daguerreotype to the age of digital media (roughly from 1839 to 1899).
Instructor(s): C. Stolarski
Area: Humanities.

AS.100.189. Crime, Punishment, and the State in Nineteenth Century America. 3 Credits.
This course examines crime and punishment in nineteenth-century America, with special focus on imaginings of the criminal and on the development of the prison.
Instructor(s): K. Hemphill
Area: Humanities.

AS.100.191. Freshman Seminar: Family History in the U.S. and Europe. 3 Credits.
Freshmen only Discussion style. Introduces major themes since 1700: family sentiment and authority relations; gender and sexuality; family and work; dynamics of family and race. Readings emphasize interdisciplinary perspectives and interpretation of primary sources
Instructor(s): T. Ditz
Area: Humanities, Social and Behavioral Sciences.

AS.100.193. Undergraduate Seminar In History. 3 Credits.
The first semester of the two-semester sequence required for majors, this course introduces students to the theory and practice of history. Following a survey of approaches to the study of the past and an introduction to research methods, students undertake original research and write an extended essay.
Instructor(s): G. Paquette; M. Rustow
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.194. Undergraduate Seminar In History. 3 Credits.
The second semester of the two-semester sequence required for majors, this course further introduces students to the theory and practice of history. Students undertake original research and write an extended essay.
Instructor(s): G. Paquette; M. Rustow
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.195. The French Revolution. 3 Credits.
The French Revolution is a seminal moment in western history. This course will explore multiple aspects of the Revolution, examining its central events, its global ramifications, and subsequent historical and literary interpretations. Students will leave the course with an understanding of life, ideas and politics during the Revolution, as well as a sense of how the event has operated culturally and intellectually since 1789.
Instructor(s): K. Kurji
Area: Humanities, Social and Behavioral Sciences.

AS.100.200. American Environmental History. 3 Credits.
This course examines how Americans’ relationship to the natural world has changed over the past three centuries. Starting from the proposition that human interactions with the environment are shaped by cultural attitudes, it looks at how shifts in politics, the economy, and demography influenced Americans’ understandings of nature from the colonial period to the present. We will examine the effects of important processes like urbanization and industrialization on the environment.
Instructor(s): D. Schley
Area: Humanities
Writing Intensive.

AS.100.201. Gender and Society in Early Modern Europe. 3 Credits.
This course explores the ways in which gender was experienced, understood, and represented in early modern Europe. Topics covered will include: religion, marriage, family, politics, and sexuality. The course will pay special attention to the relationship between gender ideologies and the political, intellectual, cultural, and social conditions that shaped early modern society.
Instructor(s): E. Cage
Area: Humanities, Social and Behavioral Sciences.
AS.100.202. Conflict and Co-Existence: The Early Modern Mediterranean. 3 Credits.
This course explores the dynamic and fluid world of the early modern Mediterranean (1453-1650), where Christians, Jews, and Muslims met, fought, traded with, and encompassed each other.
Instructor(s): E. Rowe
Area: Humanities, Social and Behavioral Sciences

AS.100.203. Modern Japan. 3 Credits.
Instructor(s): T. Steen
Area: Humanities, Social and Behavioral Sciences.

AS.100.204. Freshman Seminar: Abraham Lincoln and his America. 3 Credits.
Freshman seminar that explores the life and times of Abraham Lincoln through contemporary sources and texts by historians.
Instructor(s): M. Johnson
Area: Humanities, Social and Behavioral Sciences

AS.100.205. The South Asian Diaspora in British Empire. 3 Credits.
Instructor(s): S. Aiyar
Area: Humanities, Social and Behavioral Sciences.

AS.100.206. Children Without Parents: Orphaned, Abandoned, and Stolen Children in American History. 3 Credits.
This course studies children separated from parents by death, poverty, abandonment, and coercion, and the ways Americans have cared for them—incuding indenture, orphanages, "orphan trains," adoption, and foster care. Dean's Prize Fellowship Seminar
Instructor(s): S. Adelman
Area: Humanities, Social and Behavioral Sciences

AS.100.207. Russia in the Age of Dostoevsky. 3 Credits.
This course explores the explosion of creativity that brought Russian literature and the arts to the forefront of European culture at the time when Dostoevsky wrote his greatest novels.
Area: Humanities, Social and Behavioral Sciences

AS.100.208. China: Neolithic to Song. 3 Credits.
This class offers a broad overview of changes in China from Neolithic times through the Song Dynasty (roughly from 5000 BCE through the 13th century CE) and will include discussion of art, material culture, and literature as well as politics and society. Close readings of primary sources in discussion sections and extensive use of visual material in lectures will help students gain firsthand perspective on the materials covered. Cross listed with East Asian Studies
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences.

AS.100.209. Islam and Nationalism. 3 Credits.
This course offers students an introduction to the history of the 19th- and 20th-century Muslim world, using the lens of the development of different forms of nationalism.
Area: Humanities, Social and Behavioral Sciences

AS.100.210. Sexuality, Marriage, and Celibacy from Late Antiquity to the Modern Era. 3 Credits.
This course examines issues of sexuality, marriage, and celibacy in the Western Christian World. Dean's Teaching Fellowship
Instructor(s): E. Cage
Area: Humanities, Social and Behavioral Sciences.

AS.100.212. Women, Family, and the Body Politic. 3 Credits.
We look at such thinkers as Plato, Confucius, Paul of Tarsus, John Locke, and Mary Wollstonecraft to discuss how they envisioned women and the family as part of political society (or not).
Instructor(s): C. Gardner
Area: Humanities, Social and Behavioral Sciences

AS.100.213. The Rise of Modern Japan. 3 Credits.
This course begins in the year 1868, when Japan shed its samurai past and embraced a modernity centered around its imperial legacy. The new Meiji leaders made studied efforts to modernize (and at times, westernize) in an effort to create a Japan that was primed to compete on the international scene. We will explore the nation's emergent imperialism at the end of the 19th century, its involvement in two world wars, post-Occupation economic growth in the 1960s and 1970s, and finally the economic and social troubles of the 1980s to the present. Cross listed with East Asian Studies
Instructor(s): J. Oakes
Area: Humanities, Social and Behavioral Sciences.

AS.100.214. Japan's Last Shogunate, 1568-1868. 3 Credits.
This course begins in the last years of the Warring States period and explores the history and culture of Japan's last samurai-based government—the Tokugawa Shogunate—that spanned the period 1600-1868. Known for its two and a half centuries of peace, the Tokugawa period witnessed significant changes for the samurai class, the advent of a new urban-based culture, and an increasingly complicated relationship with the west. Although this period is considered part of Japan's pre-modern past, it laid the foundations for the country's emergence as a modern nation in the latter part of the nineteenth century.
Instructor(s): J. Oakes
Area: Humanities, Social and Behavioral Sciences.

AS.100.216. Freshman Seminar: The Tudors: Reforming England. 3 Credits.
This freshman seminar will examine England under Tudor rule (including Henry VIII, Edward VI, Mary I, and Elizabeth I) and the intellectual and cultural movements of the Reformation and the Renaissance.
Instructor(s): J. Walker
Area: Humanities, Social and Behavioral Sciences.

AS.100.217. The United States and the Philippines. 3 Credits.
From 1898 until 1946, the United States governed the Philippines as its first colony. This course describes the imperial economic motivations, the Progressive Era political developments, and the dynamic cultural exchanges that brought Americans to the Pacific and Filipinos to the United States. The course will also examine American anti-imperialists like Mark Twain and the three-hundred year tradition of Filipino anti-imperial writing.
Area: Humanities, Social and Behavioral Sciences

AS.100.218. This Almost Chosen People: Popular Religion in U.S. History. 3 Credits.
An exploration of the ways popular religious belief, particularly Protestant evangelicalism, has influenced politics, culture, and race relations in the U.S. over the past four centuries. Dean's Teaching Prize Seminar
Instructor(s): J. Matsui
Area: Humanities, Social and Behavioral Sciences
AS.100.219. Chinese Cultural Revolution. 3 Credits.
This introductory class will explore the Cultural Revolution (1966-1976), Chairman Mao’s last attempt to transform China, and a period marked by social upheaval, personal vendettas, violence, and ideological pressure.
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences.

AS.100.224. Americans and their Environment. 3 Credits.
Area: Humanities, Social and Behavioral Sciences.

AS.100.227. Indigenous Issues Today. 3 Credits.
This course will explore questions of indigeneity in global perspective. How do indigenous people define themselves in post-colonial nations? How do native communities maintain a cultural identity in a modern world? We will address the importance of rights and national and international recognition for indigenous peoples. Though looking at a wide range of world indigenous cultures, we will particularly focus on the modern experience and struggles of America’s native peoples.
Area: Humanities, Social and Behavioral Sciences.

AS.100.230. Bones, Blood, and Ecstasy: Religious Culture in Western Christendom, 1100-1700. 3 Credits.
Explores religious culture in medieval and early modern Europe, with an emphasis on spiritual beliefs and practices, relics, miracles, pilgrimage, and saint-making. Emphasis on reading and discussing written sources and visual culture.
Instructor(s): E. Rowe
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.231. Christian-Muslim Relations in the Middle Age. 3 Credits.
This course will examine Christian-Muslim relations during the eleventh through fifteenth centuries. It takes a broad definition of Christianity and includes the experiences of the Roman, Byzantine and Eastern churches. Students will examine Christian-Muslim relations in a number of locations throughout the Mediterranean, Near East, and Persia. Comparative views on sacred land, political and religious views, philosophy, polemics, learning and scientific understanding will be examined, with particular reference to primary texts in translation.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.232. Gender in Latin American History. 3 Credits.
From Maya codices to Castro’s speeches, this class examines the opportunities and constraints gendered labels supplied and their relationships to hierarchies of class and race.
Instructor(s): N. Andrews
Area: Humanities, Social and Behavioral Sciences.

AS.100.233. History of Modern Germany. 3 Credits.
This course will offer a concise introduction to the political, social, and cultural history of Germany from the founding of the Empire in 1871 until the present.
Instructor(s): H. Balz
Area: Humanities, Social and Behavioral Sciences.

AS.100.239. Why Putin? The Rise and Fall of Democracy in Russia, 1985-2012. 3 Credits.
This course examines the main aspects of recent Russian history including the crisis of communism and the dissolution of the Soviet Union, the struggle for democratic reforms under Boris Eltsin, and the emergence of Vladimir Putin’s authoritarian regime.
Instructor(s): N. Koposov
Area: Humanities, Social and Behavioral Sciences.

AS.100.241. American Revolution. 3 Credits.
The aim of this course is to explore the causes, character, and consequences of the American Revolution, a seminal event in world history.
Instructor(s): P. Morgan
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.247. Remaking Gender in 20th Century America. 3 Credits.
The last century saw the radical transformation of the meaning of manhood and womanhood. We will trace these changes on multiple levels in public and private life.
Instructor(s): M. Ryan
Area: Humanities, Social and Behavioral Sciences.

AS.100.262. History, Politics and Identity in Russia from Stalin to Putin. 3 Credits.
The course explores political uses of the past and attempts to define “Russianness” in the context of the projects of Communism and liberal democracy respectively in Soviet and post-Soviet Russia.
Instructor(s): N. Koposov
Area: Humanities, Social and Behavioral Sciences.

AS.100.269. Revolutionary America. 3 Credits.
This course provides an intensive introduction to the causes, character, and consequences of the American Revolution, the colonial rebellion that produced the modern world’s first republic, restructured the British Empire, and set in motion an age of democratic revolutions in the Atlantic world. A remarkable epoch in world history, the revolutionary era was of momentous significance. The full impact and scope of the American Revolution will be addressed in a sweeping Atlantic context.
Instructor(s): J. Adelman
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.274. Early American Legal History. 3 Credits.
This course examines the relationship between law, governance, and social structures in America between the start of European settlement and the era of the Civil War. Topics will include Native American and European land claims, the regulation of family life, economic and commercial disputes, and the legal regimes of race and slavery. Throughout, we will consider both authorities’ aims and the ways in which individual men and women maneuvered within the legal system.
Area: Humanities, Social and Behavioral Sciences.

AS.100.300. History of 20th Century France since 1945. 3 Credits.
Examines white, African, and Native American women’s economic activities in early America, including as laborers, entrepreneurs, and consumers. Also considers women’s economic and political roles during the Revolution and Civil War.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.301. America after the Civil Rights Movement. 3 Credits.
Explores the role of the 1964 Civil Rights Act and mid-twentieth century reform movements in transforming American politics, economy, and culture since the late 1960’s.
Instructor(s): N. Connolly
Area: Humanities
Writing Intensive.
AS.100.302. The French-Algerian War, 1945-1962. 3 Credits.
The Algerian Revolution is often seen as the touchstone anti-colonial struggle as well as the matrix for modern forms of terrorism and state-sponsored torture. We will explore its history.
Instructor(s): T. Shepard
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.303. Old Regime France. 3 Credits.
This course examines the history of France from the reign of Louis XIV to the French Revolution, concentrating on the rise of absolutism, the challenge of the Enlightenment, and the origins of the French Revolution.
Instructor(s): M. Kwass
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.304. New World Slavery. 3 Credits.
Instructor(s): P. Morgan
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.305. Russia in the Age of Dostoevsky. 3 Credits.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.306. By Force or Fiat? The History of International Law, 1648-2000. 3 Credits.
An examination of law in international relations, this course combines an intellectual, cultural, and diplomatic history approach to examine the evolution of international law since the Peace of Westphalia.
Dean's Teaching Fellowship Course
Instructor(s): E. Kolla
Area: Humanities, Social and Behavioral Sciences.

AS.100.307. Latin American Independence. 3 Credits.
This seminar examines the breakdown of the Spanish and Portuguese empires and the emergence of new states in Latin America in the nineteenth century. Topics include: war, revolution, slavery, liberalism, and monarchism.
Instructor(s): G. Paquette
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.308. Bridging East and West: Chinese Cosmopolitans and Cultural Mediators in the 19th and 20th Centuries. 3 Credits.
This course explores the contributions that cosmopolitan Chinese intellectuals, revolutionaries, diplomats, artists, translators, politicians, and scholars made to cross-cultural understanding in Europe and China of the 19th and 20th centuries. Cross-listed with East Asian Studies
Instructor(s): K. Ren
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.309. Sailors Ashore, Afloat, and Across the Line to Piracy: Perspectives in 18th Century Maritime History. 3 Credits.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.310. The French Revolution. 3 Credits.
Political, social and cultural history of one of the great turning-points in European history. Previously offered as AS.100.204.
Prerequisites: Not open if you have taken AS.100.204.
Instructor(s): L. Mason
Area: Humanities, Social and Behavioral Sciences.

AS.100.311. The Atlantic Slave Trade. 3 Credits.
This course explores the African, European, and American involvement in the Atlantic slave trade, as well as the economic, political, and sociological impact of the trade on various Atlantic communities.
Dean's Teaching Fellowship Course
Instructor(s): C. Hollander
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.312. Emancipations. 3 Credits.
Comparative exploration of black emancipation and freedom struggles, including slave rebellions in the Caribbean and United States, global civil rights and black power, African nationalism, and the end of apartheid.
Instructor(s): A. Ewing
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.313. The Construction of the African Diaspora in the Americas. 3 Credits.
An examination of the various ways in which an African Diaspora developed across the Americas between 1492 and the present. Attention will be paid to the period of the Transatlantic slave trade but the greater emphasis will be on the complex societies that emerged by the early twentieth century and the responses of people of African descent to these societies. Readings will range across history, demography, economics, politics and culture in order to define a Diaspora and examine the factors that encourage or inhibit its formation.
Cross listed with Africana Studies
Instructor(s): F. Knight
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.314. The Enlightenment. 3 Credits.
Examines the ideas and social context of the Enlightenment, an intellectual movement that swept Europe in the 18th century.
Instructor(s): M. Kwass
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.315. New World, New Wants: Our Consuming Passions and our Passions for Consuming, from Columbus to the Age of Revolution. 3 Credits.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.317. Jewish Music. 3 Credits.
What is “Jewish music,” and what roles has it played in global and Jewish cultures? This course will address these questions, considering genres and contexts of Jewish music from cantillation to klezmer and from art music to Yiddish cinema.
Cross listed with Jewish Studies
Instructor(s): J. Walden
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.318. The Age of Revolutions. 3 Credits.
This seminar focuses on the political, social, and economic thought animating the revolutions which transformed Europe and the Americas, c. 1760 - 1850.
Instructor(s): G. Paquette
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.319. The Tudors: Reforming England 1485-1603. 3 Credits.
This course will examine Tudor England, including the reigns of Henry VIII, Edward VI, Mary I, and Elizabeth I, and the intellectual and cultural movements of the Reformation and the Renaissance.
Instructor(s): J. Walker
Area: Humanities, Social and Behavioral Sciences.

AS.100.320. Writing U.S. Empire. 3 Credits.
This team-taught course explores how to think and write about U.S. overseas colonies and mandates, and world-wide economic depression.
Instructor(s): N. Connolly
Writing Intensive.

AS.100.321. Visions Of The Self. 3 Credits.
Examines a variety of autobiographical texts – male and female, western and non-western, from the Middle Ages to the present, with an eye towards using these texts as “windows” into the society in which they were written. Course will require weekly reports, a term paper, and final exam. Organized as a seminar, student-run discussion will be integral to the course.
Instructor(s): R. Kagan
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.322. New World Encounters: Europeans, Natives, Africans. The Makings of Creole Society in Spanish America, 15th - 18th centuries. 3 Credits.
This course is designed to introduce students to the complex relationships that were established between the different cultures that inhabited colonial Latin America, from 1492 to the 18th century. Dean’s Teaching Fellowship course.
Instructor(s): G. Garcia Montufar
Area: Humanities, Social and Behavioral Sciences.

AS.100.323. Commerce in the Age of Enlightenment. 3 Credits.
This course explores political and economical debates about commerce, debt, inequality, and international competition in 18th century Europe. We will adopt an interdisciplinary approach to the study of a diverse group of primary sources. Dean’s Teaching Fellowship Course.
Instructor(s): D. Woodworth
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.324. Puritan Maidens to Pop Culture Tweens: The History of Youth in America. 3 Credits.
Instructor(s): K. Gray
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.325. The Jewish Condition & the Interwar Crisis: Jewish Politics & Culture in Europe, America, Palestine. 3 Credits.
The twenty years following the First World War were characterized by manifold political crises: the apotheosis of radical left-wing and radical right-wing politics at the heart of Europe, hyper-nationalism in post-imperial Eastern and southern Europe, violent confrontations in Europe’s overseas colonies and mandates, and world-wide economic depression. This course asks how the 16-18 million Jews of Europe, America, and the Near East were affected by these processes and traces their opposing political, religious, and cultural responses to them.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.326. Extreme America: Political Extremism, 1787-1920. 3 Credits.
In the half century between 1870 and 1920, socialism, anarchism, and communism were real presences in American life, not just smear words. This course will examine political extremism in this extraordinary period with an eye toward understanding the causes and consequences of a political culture of extremism.
Instructor(s): R. Walters
Area: Humanities, Social and Behavioral Sciences.

AS.100.328. Images and Realities: Native Americans in American History. 3 Credits.
This course explores the history of native people in American history from European landfall to today, introducing its major events and issues, including culture, representation, politics, and identity. DTF course
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.329. Chinese Thought. 3 Credits.
Chinese classical philosophy, Confucianism, and Daoism. Cross-listed with East Asian Studies
Instructor(s): B. Lievens
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.330. National Identity in 20th Century China & Japan. 3 Credits.
Using primary sources, including literature and film, we will explore the changing ways in which ideologues, intellectuals, and ordinary citizens defined national identity in 20th century China and Japan. Cross-listed with WGS and East Asian Studies
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences.

AS.100.331. Buying Power: American Consumer Society 1750-1960. 3 Credits.
This course examines the causes and consequences of America’s transformation into a mass consumer society, including the growth of advertising, the gendering of shopping, and the globalization of American products and tastes. Dean’s Teaching Fellowship course.
Instructor(s): R. Gamble
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.332. Human Rights History. 3 Credits.
Examines how the idea that people have rights transcending their particular place and time has evolved since the early modern period, with special emphasis on European experience and thought.
Instructor(s): L. Mason
Area: Humanities, Social and Behavioral Sciences.

AS.100.333. Global Public Health Since World War II. 3 Credits.
Globalization has dramatically reshaped the world economy, providing great advantages to some but leaving poor nations to struggle with hunger, disease and death on a daily basis. This course explores the impact of globalization on public health in the developed and the developing nations since 1945. Cross-listed with Public Health Studies
Instructor(s): B. Morgan; L. Galambos
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.334. Gender and the Economy in America, 1600-1870. 3 Credits.

Examines the history of the Inquisition - its origins, theological foundations, methods, and role as a mechanism for social control in medieval & early modern Europe.
Instructor(s): R. Kagan
Area: Humanities
Writing Intensive.

AS.100.342. Spain: The Golden Age. 3 Credits.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.343. The Power of Place: Race and Community in East Baltimore. 3 Credits.
Instructor(s): M. Shell-Weiss
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.344. History of Twentieth Century Russia. 3 Credits.
This course is a survey of twentieth-century Russian history. There will be short papers based on the assigned readings as well as a quiz or two. The emphasis will be on the Soviet era.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.345. Portuguese Seaborne Empire. 3 Credits.
Exploration and Portuguese settlement in Africa, Asia and America, and integration of these regions into an inter-continental and multi-oceanic system. Emphasis on political, commercial, military, cultural, and social aspects and European/non-European relations.
Instructor(s): A. Russell-Wood
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.346. Soviet-American Cold War. 3 Credits.
The focus will be on Soviet-American interactions, Cold-War Cultures, and the impact on both societies.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.347. Early Modern China. 3 Credits.
The history of China from the 16th to the late 19th centuries.
Instructor(s): W. Rowe
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.348. 20th-Century China. 3 Credits.
Cross listed with East Asian Studies
Instructor(s): W. Rowe
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.349. Reform and its Discontents in the Southern Atlantic World. 3 Credits.
A seminar on Spain, Portugal, and Ibero-America, c. 1650-1830, situated in the wider Atlantic/European context. Topics include: Enlightenment; Warfare; Absolutism; Resistance and Revolution; and Transitions from Empire.
Instructor(s): G. Paquette
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.350. The Art of Collecting in America’s Gilded Age, 1880-1920. 3 Credits.
Course is organized as an upper division seminar for students with interest in history, art history, and museum studies, focuses on the art collections of wealthy Americans during the fabled Gilded Age, ca. 1880 - ca. 1920. Topics to be discussed include the motives, both personal and patriotic, underlying the formation of these collections, the ideas and circumstances that contributed to the creation of municipal museums such as New York City’s Metropolitan Museum of Art, and the relationship between these collections, both private and public, and America’s national identity. Cross-listed with Museums and Society.
Instructor(s): R. Kagan
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.351. God, Self, Nation and Revolution in East European Jewish Life and Thought, 1860-1939. 3 Credits.
The divided Jewish community of modern Eastern Europe defined many of the key modern forms of Jewish identity, politics, culture, and religion and forged bewildering array of syntheses, hybrids, and even negations of Jewishness in relation to the unprecedented political, cultural, and social dilemmas of life in Eastern Europe. Focus on key texts of Jewish religious and secular thought created in Imperial Russia and interwar Poland.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.352. Age Of Pasternak. 3 Credits.
This course covers Russian history, literature, and the arts 1890-1950. It is writing intensive. Students will develop a theme, keep journals on the readings, and make one oral presentation.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.354. History of Israel, 1948-1970. 3 Credits.
The political, social, and culture history of the State of Israel and its inhabitants during its pivotal first two decades, as reconstructed in recent historiography.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences.

AS.100.356. The Buddhist Experience. 3 Credits.
Introduction to Buddhist theory and practice - from India to East Asia. Cross listed with East Asian Studies
Instructor(s): J. Valentine
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.357. Panic and Liberation: The Politics of Sex in 20th Century Europe. 3 Credits.
This course examines the 20th century history of sexual attitudes, desires, behaviors, identities, communities, and movements in Western Europe (most notably, Germany, France, and the United Kingdom).
Instructor(s): T. Shepard
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.358. Americans and the Environment. 3 Credits.
The course focuses on the ideas, and the social and political structures that have influenced Americans in their relationship with the environment. Special emphasis will be placed on the impacts of industrialization and urbanization on the environment and the political and legal responses that ensued, especially since the 1960s.
Instructor(s): A. Beveridge
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.360. Literature as an Institution: The Russian Case. 3 Credits.
Instructor(s): A. Eakin Moss; J. Brooks
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.361. Age of Tolstoy. 3 Credits.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.362. The History of Photojournalism from Daguerre to Digital. 3 Credits.
This course examines the aesthetic, technological, social, and historical dimensions of photojournalism, from the invention of the daguerreotype to the age of digital media (roughly from 1839 to 1989). Dean’s Fellowship Course.
Instructor(s): C. Stolarski
Area: Humanities, Social and Behavioral Sciences.

AS.100.363. Jewish Society and Selfhood in the Age of Nationalism: The Religious, Cultural, Civic, and Private Lives of Jews in the Russian Empire and Eastern Europe, 1860-1939. 3 Credits.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.364. Pilgrims, Crusaders, Explorers. 3 Credits.
The course looks at primary sources concerning pilgrimage and crusade from the fourth through fifteenth centuries. The readings concentrate on western Christianity, though we shall study the changing ways western Christians perceived their north African and middle eastern counterparts. Moreover, we shall study pilgrimage/hajj and crusade/jihad from historical, economic, anthropological, and theological perspectives. The course is writing intensive, and students will pursue research in a particular topic or event of their interest.
Instructor(s): C. Gardner
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.365. Culture & Society in the High Middle Ages. 3 Credits.
This course will cover the history of Medieval Europe in the High Middle Ages. It will investigate growth of feudalism, the revival of commerce, the growth of national kingdoms, and the intellectual revival known as the Renaissance of the 12th century, including the birth of courtly literature and the emergence of scholasticism.
Instructor(s): G. Spiegel
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.368. Understanding Poverty in Modern Europe and the United States. 3 Credits.
This course examines the history of poverty in Europe and the United States between the late 18th and 20th centuries. Topics include the interconnectedness of race and gender, and cultural representations of “the poor.” Dean’s Teaching Fellowship Course.
Instructor(s): A. Hoelger
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.369. The American Earth: Empire and Environment in U.S. History. 3 Credits.
America’s emergence to global power has had tremendous environmental consequences. This course examines the intersections of U.S. imperialism and the environment and how they have transformed each other since 1898. Dean’s Teaching Fellowship course
Instructor(s): N. Cincinnati
Area: Humanities, Social and Behavioral Sciences.
AS.100.372. The Victorians. 3 Credits.
This course focuses on the politics of everyday life, consumption, intimate relations, and concepts of the self in Victorian Britain (1837–1901). Particular attention will be devoted to Victorian visual culture, including exhibitions, built environment, decorative arts and leisure culture. Other themes include popular nationalism, class cultures, feminism and body politics, Empire and racial thought. Cross-listed with WGS and Program in Museums and Society
Instructor(s): J. Walkowitz
Area: Humanities, Social and Behavioral Sciences.

AS.100.373. Sex and Society in Early Modern Europe. 3 Credits.
This course will examine how early modern views on the body, gender, and sexuality shaped beliefs about the abilities and rights of women and men.
Instructor(s): E. Rowe
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.374. The Railroad in American Life. 3 Credits.
This course will examine the history of the railroad in America, tracing its social, geographic, and economic effects. It will encourage students to consider the cultural dimensions of technological change. DTF course
Instructor(s): D. Schley
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.375. Problems in American Social History. 3 Credits.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.376. Balto As Historical Site. 3 Credits.
This class will use historical sites of Baltimore to demonstrate the spatial context of major events in U.S. and urban history.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.377. Colonial North America in Hemispheric Context. 3 Credits.
This seminar will study European colonialism in North America in larger comparative perspectives with a special focus on race, imperial politics, and economic exchange.
Instructor(s): M. Heerman
Area: Humanities, Social and Behavioral Sciences.

AS.100.378. Warfare in the Era of the French Revolution. 3 Credits.
This course examines the wars associated with the French Revolution and Napoleonic Empire in Europe. Recommended Course Background: AS.100.103 or AS.100.104
Instructor(s): C. Tozzi
Area: Humanities, Social and Behavioral Sciences.

AS.100.380. In Turner’s Footsteps: History and Historiography of the American Frontier. 3 Credits.
This course explores the intellectual world of Hopkins graduate Frederick Jackson Turner, reading the scholarship of his day alongside more recent work on Native Americans, settlers, geography and politics in early America.
Instructor(s): Staff
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.382. Critical Moments in American Radical Theater. 3 Credits.
Area: Humanities, Social and Behavioral Sciences.

AS.100.385. At the Center of the World: The Mediterranean, 1348–1799. 3 Credits.
From the Renaissance to Napoleon’s invasion of Egypt, this upper level course examines the central role played by the Mediterranean during these centuries. Particular attention given to religious and cultural identity, viewing the Mediterranean as a borderlands region between Christian and Islamic powers. Dean’s Teaching Fellowship course
Instructor(s): A. Devereux
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.386. Medieval Cities. 3 Credits.
What characteristics defined a medieval city and how did these characteristics change between 400 and 1400? We study texts and images of cityscapes throughout the medieval Mediterranean and Middle East.
Instructor(s): C. Gardner
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.387. Black Intellectuals and the Idea of Africa: Symbolism, Invention, and Reality in Modern Black Cultural Production. 3 Credits.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.388. European Intellectual History from Adam Smith To Nietzsche. 3 Credits.
A survey of major thinkers who supported or opposed capitalism and democracy.
Instructor(s): P. Jelavich
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.391. Originalism and the American Constitution: History and Interpretation. 3 Credits.
This course explores both the historical dimension of the American Constitution’s creation as well as the meaning that such knowledge should bring to bear on its subsequent interpretation.
Instructor(s): J. Gienapp
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.395. A Cultural History of Contemporary China. 3 Credits.
This course examines cultural and intellectual changes in post-Mao China through developments in literature, film, art, music, and the media, with attention to both domestic transformations and global contexts.
Instructor(s): K. Ren
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.396. Landscapes of the American South: Slavery, Law, and Culture, 1770-1900. 3 Credits.
Focusing on the legal and social history of the American South, this course attempts to answer how national identity was complicated by questions concerning race and slavery from the founding forward. Dean’s Teaching Fellowship course.
Instructor(s): S. Cerato
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.397. American Histories, Male and Female. 3 Credits.
This seminar will be devoted to exploring gender differences as they have been expressed in a sequence of autobiographies and autobiographical fiction set in a shifting social and historical context.
Instructor(s): M. Ryan
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.398. The Mediterranean and France. 3 Credits.
The course explores the interplay of greater Mediterranean culture, economics, and war with the Gaulic/Frankish/French peoples. The course treats the pre-modern Mediterranean as a conduit and connector, rather than as a separator, of Europe and Africa. We will focus on how the Gaulic/French peoples were influenced by classical Mediterranean culture and how the kings of medieval France sought to expand their powers into the Mediterranean before the upheavals of the late fifteenth century shifted royal ambitions away from the sea.
Instructor(s): C. Gardner
Writing Intensive.

AS.100.399. Decolonization and Nationalism in Africa. 3 Credits.
The end of European colonization in Africa after World War II and its causes, with an examination of the emergence and various forms of African nationalism. Cross listed with Africana Studies.
Instructor(s): P. Larson
Area: Humanities
Writing Intensive.

AS.100.400. American Social Thought since 1865. 3 Credits.
This course explores the intellectual development of the modern United States through readings in philosophy, literature, law, economics, politics, and social theory.
Instructor(s): A. Burgin
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.401. Cabaret: History, Theory, and Performance. 3 Credits.
An examination of cabaret, primarily in France and Germany during its heyday (1880-1930).
Instructor(s): P. Jelavich
Area: Humanities, Social and Behavioral Sciences

AS.100.402. Power and Violence in Early Modern Europe. 3 Credits.
Area: Humanities, Social and Behavioral Sciences.

AS.100.403. John Locke. 3 Credits.
Seminar style course in which John Locke's major works will be read intensively, together with some of his contemporaries' works, and select scholarly interpretations.
Instructor(s): J. Marshall
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.404. European Socialist Thought. 3 Credits.
Examination of socialist, social-democratic, communist, and anarchist theorists, including Proudhon, Marx, Engels, Bakunin, Bernstein, Lenin, Luxemburg, and Sorel.
Instructor(s): P. Jelavich
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.405. American Business in the Age of the Modern Corporation. 3 Credits.
This course will focus on business organizations, their performance, and sociopolitical relations in the 20th century.
Instructor(s): L. Galambos
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.406. The History of Science Policy and Diplomacy in Japan. 3 Credits.
This course traces and analyzes the history of Japan's science policy and diplomacy. Students learn Japan's unique position evolved under the influence of neighboring Asian countries, Europe and the U.S.
Instructor(s): T. Steen
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.407. Theorizing the Age of 'Enormity:' Social Theory and the History of the 20th Century. 3 Credits.
Instructor(s): K. Moss; T. Shepard
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.408. Decolonization and Nationalism in Africa. 3 Credits.
The end of European colonization in Africa after World War II and its causes, with an examination of the emergence and various forms of African nationalism. Cross listed with Africana Studies.
Instructor(s): P. Larson
Area: Humanities
Writing Intensive.

AS.100.409. Fascism: History and Interpretation. 3 Credits.
This course investigates the history and historiography of fascism, with emphases on definitions of fascism and on fascist political culture in a comparative framework. AS.100.104 recommended but not required.
Dean's Teaching Fellowship course.
Instructor(s): A. Bisno
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.410. Subversive Humor in US and Modern Europe. 3 Credits.
Varieties of subversive laughter in historical context: 1850s through 1970s in fiction, cartoons, comics, children's literature, and art. Also open to graduate students.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.412. Jewish History in British Mandatory Palestine 1917-1947. 3 Credits.
Recent historical writing on Jewish politics, culture, and society in British Mandatory Palestine, 1917-1947. Significant attention will also be paid to work on Palestinian Arab society and politics and to Jewish-Arab-British relations.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.413. London 1580-1830: The History of Britain's capital city. 3 Credits.
Seminar-style class analyzing the social, cultural, gender, religious, economic, and political history of London from Shakespeare's time through revolutions, plague, fire, and commercial, colonial, and industrial expansion.
Instructor(s): J. Marshall
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
**AS.100.414. Rebeling Subjects, Revealing Objects: The Material & Visual Culture of the American Revolution. 3 Credits.**
This course explores the cultural and political history of the American Revolution through study of objects and images, and introduces students to the methodological possibilities of writing history through such material and visual culture. Juniors and Seniors Only
Instructor(s): Z. Anishanslin
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.100.415. Papyrus, Parchment, and Paper. 3 Credits.**
The diffusion of writing before the industrial age, especially around the Mediterranean, the preservation of lightweight, portable texts; modern discoveries (Oxyrhynchus, Dead Sea Scrolls, Nag Hammadi, Cairo Geniza).
Instructor(s): M. Rustow
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.100.419. The Age of Revolutions. 3 Credits.**
This seminar focuses on the political, economic, and social thought animating the revolutions that transformed Europe and the Americas c.1760-1850.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.100.421. Creating the News: Media and Politics in Early America. 3 Credits.**
Examines how various forms of media - including books, pamphlets, speeches, newspapers, plays and public rituals - shaped American political culture from the Puritans through the Revolution to the coming of the Civil War.
Instructor(s): J. Adelman
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.100.422. Society & Social Change in 18th Century China. 3 Credits.**
Reading knowledge of Chinese recommended but not required. Cross listed with East Asian Studies
Instructor(s): W. Rowe
Area: Humanities, Social and Behavioral Sciences.

**AS.100.424. Women & Modern Chinese History. 3 Credits.**
This course examines the experience of Chinese women, and also how writers, scholars, and politicians (often male, sometimes foreign) have represented women’s experiences for their own political and social agendas. Cross listed with East Asian Studies.
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.100.425. Problems Islamic History. 3 Credits.**
Seminar on the making of the Middle East to 1500 focusing on conversion to Islam, the development of the state and slave-soldier regimes, the survival and efflorescence of religious minorities, and trade and commerce across the Mediterranean and Indian Ocean.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.100.426. Popular Culture in Early Modern Europe. 3 Credits.**
Witchcraft, magic, carnivals, riots, folk tales, gender roles; fertility cults and violence especially in Britain, Germany, France, and Italy.
Instructor(s): J. Marshall
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.100.428. London-20th Century. 3 Credits.**
This course investigates the history of London between 1900 and 1960. The following themes are explored: the built environment, the local and the global, policing and crime, sexual scandal, popular entertainments and erotic pleasure, consumer culture and the media, cultural imperialism, the experience of war, social democracy, and the emergence of a multi-racial urban society. Cross-listed with Studies of Women, Gender, and Sexuality
Instructor(s): J. Walkowitz
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.100.429. The History of Colonial Brazil. 3 Credits.**
Development of Brazilian civilization from 1500 to 1822 with special reference to the interrelationship of socio-economic determinants and Crown policy. Cross-listed with PLAS.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.100.433. Censorship in Europe and the U.S.. 3 Credits.**
This undergraduate research seminar will examine censorship policies and debates from the eighteenth century to the present. In addition to discussion of common readings, each student will choose a censorship case to research and present to the class.
Instructor(s): P. Jelavich
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.100.437. Late Imperial China: History and Fantasy. 3 Credits.**
Students in this seminar will look at the ways in which Chinese and Western scholars, novelists, film-makers, and artists have represented China’s Late Imperial period. We will look at the way foreigners have imagined China, and the ways in which Chinese writers past and present have fancifully, nostalgically, and inventively rendered their personal and national pasts. The course will explore issues of historical, geographical, and literary imagination. Cross-listed with East Asian Studies
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.100.438. Modern Mexico and the Mexican Revolution. 3 Credits.**
An examination of the political, social, and economic factors between 1810 and 2010 that produced incessant civil war in Mexico during the 19th century and a revolution in the early 20th century. Cross listed with PLAS
Instructor(s): F. Knight
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.100.439. Cuban Revolution and the Contemporary Caribbean. 3 Credits.**
Instructor(s): F. Knight
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.100.440. The Revolutionary Experience in Latin America. 3 Credits.**
Comparative examinations of revolutionary political changes in Haiti, Mexico, Bolivia, and Cuba. Cross-listed with Latin American Studies
Instructor(s): F. Knight
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.441. Society, Politics, and Economics in Latin America. 3 Credits.
This course traces the complex relationship between politics, economics, and social changes in Latin America and the Caribbean since World War II.
Instructor(s): F. Knight
Area: Humanities, Social and Behavioral Sciences.

AS.100.442. The Intellectual History of Capitalism, 1900 to present. 3 Credits.
This course examines shifting understandings of the philosophical foundations, political implications, and social effects of the market economy since the early twentieth century.
Instructor(s): A. Burgin
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.443. Russian Critical Theory. 3 Credits.
Junior and Senior only. Participants will explore the Russian critical tradition of the Soviet Era. Close reading of Bakhtin, Shklovsky, Propp, Violetsy, Lotman, Gurevich, etc. Short essays required on aspects of the texts.
Instructor(s): J. Brooks; N. Koposov
Area: Humanities, Social and Behavioral Sciences.

AS.100.445. African Fiction as History. 3 Credits.
An exploration of Modern African history through the African historical novel.
Instructor(s): P. Larson
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.447. Christian-Jewish Polemics in the Middle Ages and the Construction of the Enemy. 3 Credits.
The four great public Christian-Jewish disputations of the high middle ages: Paris, Barcelona, Majorca, Tortosa. Original Hebrew and Latin sources in English translation; questions of the changing motives for anti-Semitism and the formation of a persecuting society.
Instructor(s): P. Capelli
Area: Humanities, Social and Behavioral Sciences.

AS.100.450. The British Empire in Africa & South Asia: A Comparative Perspective. 3 Credits.
This seminar surveys the history of British colonial rule and anti-colonial resistance in African and South Asia from a comparative perspective.
Instructor(s): S. Aiyar
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.452. Material History: Objects and Material Culture in the Britsh Atlantic World, 1607-1815. 3 Credits.
Instructor(s): Z. Anishanslin
Area: Humanities, Social and Behavioral Sciences.

AS.100.458. Visions of Africa. 3 Credits.
This course examines the ways in which representations of, and journeys to, Africa have shaped the contours of African American politcal activity, literary production, and social thought, 1619-2011. Cross listed with Africana Studies
Instructor(s): A. Ewing
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.463. African Diasporas: The Brazilian Experience. 3 Credits.
Instructor(s): A. Russell-Wood
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.468. Britain from the English Revolution to the Industrial Revolution. 3 Credits.
Instructor(s): J. Marshall
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.470. Monuments and Memory in Asian History. 3 Credits.
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.473. Indian Ocean: Economy, Society, Diaspora. 3 Credits.
A seminar level survey of the history of the Indian Ocean with an emphasis on human diaspora.
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.479. Problems in Chinese Urban History. 3 Credits.
Reading and discussion of works in Western languages on the role of cities in Chinese society, from the Tang dynasty (628-906 A.D.) to the present.
Instructor(s): W. Rowe
Area: Humanities, Social and Behavioral Sciences.

AS.100.482. Historiography Mod China. 3 Credits.
Instructor(s): W. Rowe
Area: Humanities, Social and Behavioral Sciences.

AS.100.484. Marcus Garvey’s America. 3 Credits.
An exploration of African American history from 1896-1942, paying particular attention to the rise and fall of Garveyism and themes of race, imperialism, capitalism, war, gender, migration, and global politics.
Instructor(s): A. Ewing.

AS.100.486. Jim Crow in America. 3 Credits.
Examines the history of racial segregation in America, which is commonly known, when written into law as “Jim Crow” segregation. This course moves from Jim Crow’s cultural roots in the early 19th century to the present-day legacies of legalized segregation, as they exist in housing patterns, schools, and popular culture.
Instructor(s): N. Connolly
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.488. The Early Caribbean and the Atlantic World Seminar. 3 Credits.
No other part of the world has been shaped so completely as the Caribbean by the two institutions of European colonialism and plantation slavery. This course, which covers the development of colonization in the Caribbean, is designed to give students an understanding of the making of the region. It begins with the Amerindian societies that Columbus encountered and ends with the slave revolution that created Haiti. The region will be approached from the inside and the outside, and placed in comparative perspective. The intention is to provide a composite analysis of life in the colonial Caribbean and the influences that shaped it.
Instructor(s): P. Morgan
Area: Humanities, Social and Behavioral Sciences Writing Intensive.
AS.100.497. Year of Revolt: 1968 in Europe. 3 Credits.
This course will examine the dramatic events of 1968 in Western and Eastern Europe during 1968—a year of social and political revolts, generational conflicts, and cultural activism—as well as their long-term consequences.
Instructor(s): H. Balz
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.498. Hist-Family & Gender-Us. 3 Credits.
Topics include: history of emotions; politics of sexuality and marriage; impact of race, ethnicity, and class on family life; women and gender inequality. Primarily colonial era through the early twentieth century, with some attention to contemporary politics of family, gender, and sexuality.
Instructor(s): T. Ditz
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.499. Film and Propaganda in Nazi Germany. 3 Credits.
By examining a range of cinematic works—from explicitly ideological pseudo-documentaries to less overtly tendentious entertainment films—this course will explore the transmission of propaganda into the everyday culture of Nazi Germany.
Instructor(s): H. Balz
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.501. Internship. 1 Credit.
Instructor(s): J. Brooks; L. Galambos; M. Johnson; T. Shepard.

AS.100.502. Internship. 0 - 3 Credit.
Instructor(s): Staff.

AS.100.503. Independent Reading in Latin American History.
Instructor(s): F. Knight.

AS.100.507. Senior Thesis. 3 Credits.
First semester of year long Seminar for students writing an honor thesis in history. Students will conduct research in primary materials and explore a significant historical issue or problem.
Instructor(s): T. Ditz
Writing Intensive.

AS.100.508. Senior Thesis. 0 - 3 Credit.
Senior Honors Thesis Seminar. Required of all history majors who are writing senior honors theses and wishing to graduate with departmental honors.
Instructor(s): T. Ditz
Writing Intensive.

AS.100.535. Independent Study. 3 Credits.
Instructor(s): Staff.

AS.100.536. Independent Study. 0 - 3 Credit.
Instructor(s): Staff
Writing Intensive.

AS.100.592. Summer Research-History. 3 Credits.
Instructor(s): F. Knight; P. Romero.

AS.100.594. Internship-Summer. 1 Credit.
Instructor(s): A. Burgin; L. Galambos; M. Ryan.

AS.100.599. Independent Study. 3 Credits.
Instructor(s): G. Paquette; W. Rowe.

AS.100.600. Reading Land and History.
How do people’s relations to land figure in their relations to one another and their perspectives on the past? What problems has land presented to the workings of capitalism, the formation of collective identities, the exercise of power and vice versa—in different historical contexts? The course will examine these and related questions through a series on the US and Africa.
Instructor(s): N. Connolly; S. Berry.

AS.100.603. Medieval Italy: Sources and Readings.
Area: Humanities, Social and Behavioral Sciences.

Instructor(s): B. Vinson.

AS.100.606. The European Consumer Revolution.
This course will examine transformations in European consumer and commercial culture from 1500-1800. It will also consider how consumption shaped the relationship between Europe and the wider world.
Instructor(s): M. Kwass
Area: Humanities, Social and Behavioral Sciences.

AS.100.609. Russian Critical Theory.
Participants will explore the Russian critical tradition of the Soviet Era. Close reading of Bakhtin, Shklovsky, Propp, Vgotsky, Lotman, Gurevich, etc. Short essays required on aspects of the texts.
Instructor(s): J. Brooks; N. Koposov
Area: Humanities, Social and Behavioral Sciences.

AS.100.611. Humor and Society in European Print Culture: Theory and Practice, 1840-1918. Theoretical texts include works by Bergson, Freud, Bakhtin, and more recent authors. Case studies will focus on Russia but student research projects and materials for discussion will include England and France. The seminar will meet on Tuesdays 1:30-3:45. (I assume this time is OK). If the time is a problem I could do 3-5 on the same day. Open to graduates and advanced undergraduates. Credit.
100.610
Area: 2.50
H.S.

AS.100.614. Power and Violence in Early Modern Europe.
Area: Humanities, Social and Behavioral Sciences.

AS.100.616. Proseminar on the Sociedad de Castas en la epoca virrenal.
This course familiarizes graduate students with questions surrounding the evolution of the sociedad de castas in the viceroyal period of Latin America, with an emphasis on Mexican historiography.
Prerequisites: AS.100.672
Instructor(s): B. Vinson
Area: Humanities, Social and Behavioral Sciences.

AS.100.620. Early Modern France.
A readings seminar on French history from Louis XIV to the French Revolution. Topics include: absolutism, political culture, the Enlightenment, production and consumption, the French Atlantic, and the French Revolution.
Instructor(s): M. Kwass
Area: Humanities, Social and Behavioral Sciences.

This graduate seminar examines the Black Freedom Struggle through several of the most recent and ground-breaking biographies written about American civil rights and human rights activists.
Instructor(s): N. Connolly.
AS.100.626. Russian History Graduate Seminar.
Reading, discussion, and writing: Russian history and culture in 19th and 20th centuries.
Instructor(s): J. Brooks.

AS.100.627. Humor and Society in Modern Europe.
Seminar focuses on European print culture though other forms and regions may be explored. Readings include Freud, Bergson, Bakhtin, and others. A paper or project design will be required.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.628. Russian Avant.

AS.100.630. Empire and Sexuality in Modern European History.

AS.100.633. Spain and its Empire.
Instructor(s): R. Kagan.

AS.100.634. Spain and its Empire.
Instructor(s): R. Kagan.

AS.100.635. Russian History and Culture.
This is a graduate seminar in Russian history and culture. The focus will be on the hundred years of Russian experience, from the middle of the nineteenth century through the death of Stalin. There will be attention to art and literature particularly, from Dostoevsky and Tolstoy through the Russian avant-garde, to writers such as Pasternak and Akhmatova. There will nevertheless be some attention to the traditions of modern Russia back to the eighteenth century. The emphasis will be on the great issues of Russian history, politics, and culture. Students will produce a research paper or design a research project depending their needs. There will be extensive reading in primary as well as secondary sources.
Instructor(s): J. Brooks
Writing Intensive.

AS.100.639. German History.
German history from the Restoration through World War I, with emphasis on cultural and intellectual developments.
Instructor(s): P. Jelavich.

AS.100.640. Approaches to a Visual History of War in the 20th Century.
This course will examine theoretical aspects of visual history, as well as analyze depictions of war and their propagandistic, aesthetic, and allegorical dimensions from World War I to the present.
Instructor(s): H. Balz
Area: Humanities, Social and Behavioral Sciences.

AS.100.641. Global Catholicism in the Early Modern Period.
Explores religious culture in medieval and early modern Europe, with an emphasis on spiritual beliefs and practices, relics, miracles, pilgrimage, and saint-making. Emphasis on reading and discussing written sources and visual culture. Graduate students only.
Instructor(s): E. Rowe
Area: Humanities, Social and Behavioral Sciences.

AS.100.642. Historiography of the Jews.
Instructor(s): K. Moss; M. Rustow.

AS.100.647. 19th Century America.
Instructor(s): M. Johnson.

AS.100.649. The American South.
Instructor(s): M. Johnson.

AS.100.650. The American South.
Instructor(s): M. Johnson.

AS.100.651. Readings in Urban and Suburban America: The Twentieth Century.
Introduces students to intellectual trends shaping historical treatments of urban and suburban life in twentieth-century America.
Instructor(s): N. Connolly.

AS.100.655. Jewish History and Historiography in Ottoman and British Palestine.
Recent historiography on Jewish politics, culture, and society in late Ottoman and British Mandatory Palestine, 1880s-1947, English and Hebrew. With permission of the professor.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

Graduate students only. Recent historical writing on Jewish politics, culture, and society in British Mandatory Palestine, 1917-1947. Significant attention will also be paid to work on Palestinian Arab society and politics and to Jewish-Arab-British relations.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences.

AS.100.659. Women and Modern Chinese History.
Graduate students only. This course examines the experience of Chinese women, and also how writers, scholars, and politicians (often male, sometimes foreign) have represented women’s experiences for their own political and social agendas. Cross listed with East Asian Studies.
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences.

AS.100.661. Racial Literacy for Historians.
Instructor(s): N. Connolly
Area: Humanities, Social and Behavioral Sciences.

AS.100.662. Desegregating American History.

AS.100.664. The French Revolution and the World.
Instructor(s): D. Bell.

AS.100.667. Topics in Modern Jewish History.
Intensive readings in historiography of modern Jewry, with particular focus on Jewish life in 19th - 20th century Palestine and the State of Israel.
Recommended Course Background: AS.100.668
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences.

AS.100.668. Colloquium on Modern Jewish History.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.670. Directed Readings in the Cultural History of British America and the Early United States.
Reading Seminar focusing on modes of interpretation associated with cultural history. Ordinarily a continuation of AS.100.669 (fall), but other interested graduate students may register with instructor's permission.
Co-taught by Francois Furstenberg.
Instructor(s): T. Ditz.

AS.100.671. Germany Since 1918.
German history since World War I - Weimar Republic, Third Reich, German Democratic Republic, and Federal Republic of Germany - with emphasis on cultural and intellectual developments.
Instructor(s): P. Jelavich.
AS.100.672. Colonial Latin American Historical Research and Methodology Seminar.
This course is designed to introduce students to a range of colonial Latin American source documentation and to familiarize them with basic issues in conducting primary source research. Focusing on textual analysis, the use of economic and social data, and archival survey, students will write a series of papers that will build basic competency and skills in the area of Latin American colonial methodology. Advanced Spanish is required. Familiarity and some background in colonial Latin American history is strongly encouraged. The course adopts a practicum style.
Instructor(s): B. Vinson
Area: Humanities, Social and Behavioral Sciences.

AS.100.673. Research Seminar: Colonial British America and the United States.
Instructor(s): T. Ditz.

AS.100.679. Colonial Latin American History and Readings.
Instructor(s): B. Vinson
Area: Humanities, Social and Behavioral Sciences.

AS.100.680. Research Seminar in Atlantic History 1600-1800.
Instructor(s): P. Morgan.

AS.100.681. Research Seminar in Atlantic History, 1600-1800.
Continuation of AS.100.680
Instructor(s): P. Morgan
Area: Humanities, Social and Behavioral Sciences.

AS.100.684. Reading Seminar in the Atlantic World, 1500-1810.
Instructor(s): P. Morgan; T. Ditz.

AS.100.685. Reading Seminar in Atlantic History.
Instructor(s): P. Morgan
Area: Humanities, Social and Behavioral Sciences.

AS.100.686. Russia at War.
This seminar explores Russian society and culture in wartime with particular emphasis on Russia's relationship with Europe.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences.

AS.100.687. Amer Economic History.
Instructor(s): L. Galambos.

AS.100.690. Directed Readings in Latin American History and Historiography.
Provides a comprehensive understanding of the major trends in colonial Latin American historiography from the 1950's until contemporary times. Cross listed with PLAS
Instructor(s): B. Vinson.

AS.100.692. Theorizing the Age of Enormity.
Instructor(s): K. Moss; T. Shepard.

AS.100.693. American Land in Black History.
Interrogates American history from the perspective of blacks' relationship to the built environment of rural communities, cities, and suburbs. Moving from Reconstruction to the Reagan Era, this course uses the land as a framework to combine themes from urban history, the history of the black freedom struggle, sex, and sexuality in America, and contemporary memories of slavery.

AS.100.694. American Land in Black America.

This is a seminar reading widely in U.S. social and cultural history, ranging chronologically this semester from the mid-18th century to the late 19th century.
Instructor(s): R. Walters.

AS.100.696. Probs Amern Soc & Cult.
An intensive graduate seminar exploring various topics in US social and cultural history, focusing on the period from the late 19th century to the late 20th century.
Instructor(s): R. Walters.

AS.100.700. American Intellectual History.
Readings on American and transatlantic intellectual history since 1865, with an emphasis on the history of the social sciences.
Instructor(s): A. Burgin.

AS.100.701. Historiography and Methods in African History.
Graduate students only. Methods, philosophies, approaches, and useful historiographies for researching and writing African histories.

AS.100.702. Race and Migration in Modern History.
Instructor(s): M. Shell-Weiss.

AS.100.704. Sex and the City.
Instructor(s): J. Walkowitz; M. Ryan.

AS.100.705. Decolonization and the "Global North.
This course explores how the mid-20th-century phenomenon often named "decolonization" shaped developments in Europe (including the Soviet Union), the USA, and Canada.
Instructor(s): T. Shepard.

AS.100.706. Topics in Early African History.
Selected topics in African history prior to 1900. Contact Professor Larson regarding topic for 2010-11 academic year.
Instructor(s): P. Larson.

AS.100.707. Sex and the City.
Continuation of AS.100.704. Graduate students only.
Instructor(s): J. Walkowitz; M. Ryan
Area: Humanities, Social and Behavioral Sciences.

AS.100.708. Colonial Latin America.

AS.100.709. Modern Latin America.
This course will examine selected themes in Modern Latin American history such as legacies of the colonial administrations, the plural societies, political cultures, slavery, and other forms of servitude; religious impact, independence movements, globalization and narco trafficking. Reading knowledge of Spanish required. Reading knowledge of Spanish. Graduate Students only
Instructor(s): F. Knight.

AS.100.710. Modern Latin America.
Selected themes in Modern Latin America will be discussed along with relevant bibliographies.
Instructor(s): F. Knight
Area: Humanities, Social and Behavioral Sciences.

AS.100.711. Topics in Brazilian History.
Instructor(s): A. Russell-Wood.

AS.100.712. Topics in Brazilian History.
Instructor(s): A. Russell-Wood
Area: Humanities.
AS.100.713. Comparative Politics of Memory in Present-Day Europe.
This course examines the tension between the cult of national heritage and the glorification of national states as reflected in the politics of memory in various European countries. Graduate students only.
Instructor(s): N. Koposov
Area: Humanities, Social and Behavioral Sciences.

AS.100.716. Cultural Theory For Historians.
Readings include Benjamin, Horkheimer, Adorno, Barthes, Debord, Baudrillard, Foucault, Bourdieu, and de Certeau.
Instructor(s): P. Jelavich.

AS.100.717. Twentieth-Century America.
Readings seminar in twentieth-century American history.
Instructor(s): A. Burgin.
Area: Humanities, Social and Behavioral Sciences.

AS.100.719. Transnational Approaches to U.S. History.
Readings on American history in a transnational context since the nineteenth century.
Instructor(s): A. Burgin
Area: Humanities, Social and Behavioral Sciences.

AS.100.720. Culture, Society, History: Theoretical Orientation.
Examination of recent cultural and social theories informing historical scholarship, including the works of Levi-Strauss, Geertz, Bourdieu, Sahlins, de Certeau, Foucault, and Koselleck.
Instructor(s): G. Spiegel; P. Jelavich.

AS.100.721. Topics In African History.
Critical readings on selected themes in African history and historiography.
Instructor(s): S. Berry.

AS.100.723. Seminar in Mediterranean History: The Fatimids as a Medieval Empire.
The Fatimids have generally been studied as a local Egyptian power or else as competitors to the Abbasids. Yet the dynasty sat astride the lucrative Mediterranean and Indian Ocean trade routes, and its court and capital cities inspired imitators in Umayyad Cordoba and Norman Sicily. This seminar will focus on primary sources from the tenth through fifteenth centuries in Arabic and other languages as well as modern scholarship.
Instructor(s): M. Rustow.

AS.100.728. Historical Writing in the Middle Ages.
Instructor(s): G. Spiegel.

AS.100.729. Reading Seminar: Colonial British America and the Atlantic World.
Instructor(s): T. Ditz.

AS.100.730. Reading Seminar: Colonial British America & the Atlantic World.
Instructor(s): T. Ditz.

AS.100.733. Reading Qing Documents.
Open to advanced undergraduates with at least one semester of Classical Chinese. This course has several objectives. First and foremost, it is a hands on document reading class designed to familiarize students with the skills, sources, and reference materials necessary to conduct research in Qing history. To that end, we will spend much of our time reading documents. At the same time, we will engage in problem solving exercises designed to develop and enhance basic research skills. Finally, several important archive-based secondary works in the secondary literature are available on reserve for your reference. These works demonstrate the ways in which historians have recently applied archival skills (and materials).
Instructor(s): T. Meyer-Fong.

AS.100.735. Early Modern Britain.
Instructor(s): J. Marshall.

AS.100.736. Early Modern Britain.
Instructor(s): J. Marshall.

AS.100.737. Seminar in Modern Chinese History.
Instructor(s): J. Marshall.

AS.100.738. Seminar in Modern Chinese History.
Instructor(s): T. Meyer-Fong.

AS.100.739. The Power of Place in US History.
Through readings in urban history as well as other scholarship that is situated firmly in physical space, the seminar will explore the intricate and interactive relationship between space and power (a 2 semester sequence, the fall will focus on the long 19th century, the spring on the 20th and 21st)
Instructor(s): M. Ryan; N. Connolly
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.740. The Power of Place in U.S.
Through readings in urban history as well as other scholarship that is situated firmly in physical space, the seminar will explore the intricate and interactive relationship between space and power (a 2 semester sequence, the fall will focus on the long 19th century, the spring on the 20th and 21st),
Instructor(s): M. Ryan
Area: Humanities, Social and Behavioral Sciences.

AS.100.741. Recent Theoretical Issues in History.
An examination of recent theoretical issues in history, including: history as/and memory; the return of presence in history; the turn to affect and the rise of "neurohistory"; posthistoricism and the uses of literary theory in history; and the uses of photography and visual cultures in history. Cross-listed with Humanities Center.
Instructor(s): G. Spiegel; R. Leys
Area: Humanities, Social and Behavioral Sciences.

AS.100.742. Modern France and French Imperialism.
Historiographic in focus.
Instructor(s): T. Shepard
Area: Humanities, Social and Behavioral Sciences.

AS.100.743. Topics in Post-1945 European History.
Critical readings on selected themes in recent European history and historiography
Instructor(s): T. Shepard
Area: Humanities, Social and Behavioral Sciences.

AS.100.744. Twentieth Century France and the French Empire.
We will discuss the historiography of 20th century France and the French empire.
Instructor(s): T. Shepard.
AS.100.745. Africa and the World.
Instructor(s): P. Larson.

AS.100.746. History of South Africa.
A reading seminar focusing on significant and/or recent studies in the social history of South Africa. Cross listed with Africana Studies.
Instructor(s): P. Larson.

AS.100.747. Modern European Empires.

AS.100.748. France and the Maghreb in Modern European History.
Instructor(s): T. Shepard.

AS.100.749. Social Theory for Historians.
Examination of the theories of Marx, Durkheim, and Weber
Instructor(s): P. Jelavich.

AS.100.754. Advanced Topics in Chinese History: Early-Middle Period.
This course will survey and attempt to contextualize recent developments in the historiography of China’s “early” and “middle” periods. Intended for graduate students, this class is open to advanced undergraduates who have taken either East Asian Civilizations or Neolithic-Song - or by permission of instructor. Cross-listed with East Asian Studies.

AS.100.757. Cultural Histories of Late Imperial and Modern China.
This reading seminar will introduce graduate students and advanced undergraduates (by permission) to recent studies of Late Imperial and Republican China that can be classified as works of cultural history. Open to advanced undergraduates with permission of instructor.

AS.100.758. Research Seminar in Chinese History.

AS.100.759. The Cairo Geniza (Spring).
Documentary sources from the Cairo Geniza in Judaeo-Arabic, Arabic, and Hebrew. Paleography, genre, diplomatic, corpora and editorial technique; historical context, interpretation, historiography and history of the field. Cross listed with Jewish Studies.
Instructor(s): M. Rustow
Area: Humanities, Social and Behavioral Sciences.

AS.100.760. The Cairo Geniza.
Documentary sources from the Cairo Geniza in Judaeo-Arabic, Arabic, and Hebrew (depending on student interest). Diplomatic, paleography, research methods, historiography, and history of the field. Arabic required, some Hebrew preferred.
Instructor(s): M. Rustow
Area: Humanities, Social and Behavioral Sciences.

AS.100.761. History of Capitalism.
Readings on the history of capitalism since the mid-nineteenth century, with an emphasis on the American context.
Instructor(s): A. Burgin.

AS.100.763. Comparative World Hist.
Instructor(s): Staff.

AS.100.764. Comparative World Hist.
Instructor(s): Staff.

AS.100.765. Topics in Women’s History.
Exploration of recent work in European and US women’s history, focusing on some of the following: sexuality, cultural production, politics, family formation, work, religion, differences, and civic orders. Meets @ same time and place as 100.770.
Instructor(s): J. Walkowitz; T. Ditz.

AS.100.766. Topics In Women’s Hist.
Exploration of recent work in modern European and US women’s and gender history, focusing on some of the following: sexuality, cultural production, politics, family formation, work, religion, differences, and civic orders.
Area: Humanities, Social and Behavioral Sciences.

AS.100.767. London World City, 1830-1960.
Themes include cultural Marxism and social history, Victorian visual culture, built environment, commodity culture, philanthropy and crime, popular nationalism, class cultures, feminism and body politics, Empire and racial thought.
Instructor(s): J. Walkowitz
Area: Humanities.

AS.100.768. London World City.

AS.100.769. Gender History Workshop.
A forum for the discussion of research in progress about Women, Gender, and Sexuality.
Instructor(s): J. Walkowitz; M. Ryan.

AS.100.770. Gender History Workshop.
Instructor(s): Staff
Area: Humanities.

AS.100.777. Research In Gender History.

AS.100.778. Topics In Gender History.

AS.100.781. The Seminar.
Instructor(s): Staff.

AS.100.782. The Seminar.
Instructor(s): Staff.

AS.100.783. Sem: Medieval Europe.
Instructor(s): Staff.

AS.100.784. Sem: Medieval Europe.
Instructor(s): Staff.

AS.100.785. Sem: Early Modern Europe.
Instructor(s): Staff.

AS.100.786. Sem: Early Modern Europe.
Instructor(s): Staff.

AS.100.787. Sem: Modern Europe.
Instructor(s): Staff.

AS.100.788. General Seminar: Modern Europe.
Instructor(s): Staff.

AS.100.789. Seminar: American.
Instructor(s): Staff.

AS.100.790. General Seminar: America.
Instructor(s): Staff.

AS.100.791. Seminar: Latin American.
Instructor(s): Staff.

AS.100.792. Gen Sem: Latin America.
Instructor(s): Staff.

AS.100.793. Seminar: African.
Instructor(s): Staff.

AS.100.794. General Seminar: Africa.
Instructor(s): Staff.
AS.100.797. First Year Graduate Workshop.
First year graduate workshop.
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences.

AS.100.798. First Year Graduate Workshop.
First year graduate workshop.
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences.

AS.100.801. Dissertation Research.
Instructor(s): Staff.

AS.100.802. Dissertation Research.
Instructor(s): A. Burgin; G. Paquette; P. Morgan.

AS.100.803. Independent Study.
Instructor(s): Staff.

AS.100.804. Independent Study.
Instructor(s): G. Paquette; M. Johnson.

AS.100.821. Fall Practicum.
Instructor(s): W. Rowe.

AS.100.822. Spring Practicum.
Instructor(s): Staff.

AS.100.880. Independent Study.
Instructor(s): F. Knight.

AS.100.891. Summer Practicum.

Cross Listed Courses

History of Art

AS.010.291. Architectural History of Baltimore. 3 Credits.
Focusing on Baltimore's built environment and drawing upon primary sources, this course will explore the major European and American design theories, values, and practices of the last several centuries with an eye towards establishing Baltimore's place within a national and global urban environmental context. Topics addressed in this course include city building, class and race, architectural revivalism, transportation, urban renewal, and post-industrialism.
Instructor(s): M. Perschler
Area: Humanities
Writing Intensive.

AS.010.421. Michelangelo and His Contemporaries: Liscense, Controversy, and Reform in 16th Century Italian Art. 3 Credits.
An approach to the later work of Michelangelo (ie. 1520-64) and the response to his art by writers and artists in Rome, Florence and the Veneto before and after the call for a "reform of art" by the Council of Trent.
Instructor(s): S. Campbell
Area: Humanities
Writing Intensive.

AS.061.396. Modern Paris on Film. 3 Credits.
This course uses French film to examine the history of twentieth-century Paris. We will consider how filmmakers interpreted the social, political, and technological transformations that shaped Paris in the modern era, treating movies as expressions of change and means by which filmmakers comment on it. Taught in English. Cross-listed with History
Instructor(s): L. Mason
Area: Humanities.

Film and Media Studies

AS.061.397. French Masculinities. 3 Credits.
Examines changing ideals of masculinity in France after 1960 as they found expression on film, rooting the work of iconic stars and directors in their cultural, political and historical contexts.
Prerequisites: AS.061.140 OR AS.061.141 OR INSTRUCTOR PERMISSION
Instructor(s): L. Mason
Area: Humanities
Writing Intensive.

AS.061.421. History & Film. 3 Credits.
This course explores the intersection between historiography – that is, the theory of history – and its relationship to the moving image. How does film as a medium relate to history as a concept? How does film express its own form of an idea of history? How is film, perhaps, itself historical in the way it works? In this course, we will read the work of Walter Benjamin, Frederick Neitszche, and Jeffrey Skoller, among others. Students are expected to enter the course ready to engage in discussion. $40 Lab fee
Area: Humanities
Writing Intensive.

Anthropology

AS.070.290. Modern South Asia: Bangladesh/Pakistan. 3 Credits.
Bangladesh and Pakistan, two major regional players in South Asia, originate in the 1947 Partition of India and shared nationhood between 1947 and 1971, ending with the War of Independence in 1971 in which Bangladesh separated from Pakistan. Since that time the two nation-states have been on different paths that have sometimes mirrored each other. This course brings together contemporary works of national histories, social movements and cultural production to consider the politics of self-differentiation and the points of convergences.
Instructor(s): N. Khan
Area: Humanities
Social and Behavioral Sciences.

Near Eastern Studies

This Course will trace the archaeological rediscovery of ancient Nubia and explore its changing significance in American culture. No prior knowledge of ancient Nubia is expected. Cross-listed with Africana Studies, History, and Museums & Society
Area: Humanities.

AS.130.328. Ancient Egypt /Africa. 3 Credits.
Recent excavation and research have shed light on several ancient cultures of the Nile and its tributaries. We will look at the available archaeological and textual (all Egyptian) evidence for these societies and their interactions with Egypt between 3500 and 300 B.C. We will also discuss research aims and methods employed now and in the past in Egypt and the Sudan.
Instructor(s): B. Bryan
Area: Humanities
Writing Intensive.

AS.130.352. History of Hasidism. 3 Credits.
Although it appears to be a relic of pre-modern Judaism, Hasidism is a phenomenon of the modern era of Jewish history. This course surveys the political and social history of the Hasidic movement over the course of the last three centuries. Students will also explore basic features of Hasidic culture and thought in their historical development.
Instructor(s): D. Katz
Area: Humanities.
History of Science Technology

**AS.140.304. Medicine for and by Women in Early Modern Europe. 3 Credits.**

This course will examine women’s role in early modern European medicine through the reading of early modern medical texts written for or by women. The course is meant for students interested in women’s history, the history of medicine, European history.

Instructor(s): G. Pomata

Area: Humanities, Social and Behavioral Sciences

Writing Intensive.

**AS.140.418. Medicine for and by Women in Early Modern Europe. 3 Credits.**

This course will examine women’s role in early modern European medicine through the reading of early modern medical texts written for or by women. The course is meant for students interested in women’s history, the history of medicine, European history. Cross-listed with History.

Instructor(s): G. Pomata

Area: Humanities, Social and Behavioral Sciences

Writing Intensive.

**AS.140.425. Individualized Medicine from Antiquity to the Genome Age. 3 Credits.**

A seminar for graduate students and advanced undergraduates. We will explore the notion of the individual in medicine over 25 centuries, from the Hippocrates to the invention of the case study during the Renaissance to the genetic, biochemical, and immunological individual in recent biomedicine. Recommended Course Background: AS.140.105, AS.140.106

Instructor(s): G. Pomata; N. Comfort

Area: Humanities, Social and Behavioral Sciences

Writing Intensive.

**Political Science**

**AS.191.421. A Normal Country German Politics and Identity. 3 Credits.**

This seminar deals with questions pertaining to the formation of modern German nationalism and national identity through the perspective of German politics and history. Dean’s Teaching Fellowship

Instructor(s): F. Bauwens

Area: Social and Behavioral Sciences

**AS.191.609. Historical Research Methods and the Study of Politics.**

This course is designed for graduate students across the Social Sciences and the Humanities interested in the study of transnational politics from a historical perspective. Taught by Visiting Hinckley Professor Robert A. Hill, students will be introduced to methods of historical interpretation in the examination of archival documents and other sources of scholarly evidence. Utilizing materials and examples from Prof. Hill’s own extensive archive of Garveyism, Rastafarianism, Black Hebraism, and other transnational, millenarian political and social movements, students will become familiar with the unique research challenges posed by various forms of political and historical articulation, ranging from formal records of state governments, intelligence records, personal archives, to publications and memoirs of non-governmental actors and organizations.

Instructor(s): R. Hill.

German Romance Languages Literatures

**AS.211.202. Freshman Seminar: A Thousand Years of Jewish Culture. 3 Credits.**

This course will introduce students to the history and culture of Ashkenazi Jews through their vernacular, Yiddish, from the settlement of Jews in German-speaking lands in medieval times to the present day. Particular emphasis will be placed on the responses of Yiddish-speaking Jews to the challenges posed by modernity to a traditional society. In addition to studying a wide range of texts—including fiction, poetry, memoir, song, and film—students will learn how to read the Yiddish alphabet, and will prepare a meal of traditional Ashkenazi dishes. No prior knowledge of Yiddish is necessary for this course.

Instructor(s): B. Caplan

Area: Humanities

**AS.211.212. Holocaust and Film. 3 Credits.**

Taught in English. This class will examine the history of Holocaust films in regard to the possibilities of genre (documentary versus feature), the use of historical and archival materials, as well as general questions of representation and trauma. I CINEMA OF THE VICTIMS II CINEMA OF THE PERPETRATORS III CINEMA OF THE SECOND AND THIRD GENERATIONS WITNESSES Students will be writing weekly response papers to all screenings, and will choose to work with films in the original languages German, English, Italian, and French. This class will be writing-intensive. Cross-listed with Film and Media Studies, Political Science, History, and Jewish Studies.

Instructor(s): B. Caplan

Area: Humanities

Writing Intensive.

**AS.211.253. Freshman Seminar: Why is the Fiddler on the Roof?: The Shtetl in Modern Jewish Culture. 3 Credits.**

The most familiar portrayal of the shtetl for an American audience is the setting of the Broadway musical Fiddler on the Roof, where the shtetl, or market town, is a bastion of traditional Jewish life. But what exactly was a shtetl? How did traditional Jews live there, and how were their lives affected by the sweep of modernity? How was the Yiddish language, spoken by all shtetl Jew, both a repository of tradition and an agent of change? How do representations of the shtetl—from corrupt backwater to pious haven—reflect the concerns of Jews from the nineteenth century up to our own day? Through memoir, literature, film and painting, this course will examine actual lives lived in the shtetl, as well as a selection of the many artistic representations of it. All readings will be in English.

Instructor(s): B. Caplan

Area: Humanities

Writing Intensive.

**AS.211.344. Holocaust and Film. 3 Credits.**

This course will examine the history of Holocaust films in regard to the possibilities of genre (documentary versus feature), the use of historical and archival materials, as well as general questions of representation and trauma. I CINEMA OF THE VICTIMS II CINEMA OF THE PERPETRATORS III CINEMA OF THE SECOND AND THIRD GENERATIONS WITNESSES Students will be writing weekly response papers to all screenings, and will choose to work with films in the original languages German, English, Italian, and French. This class will be writing-intensive. Cross-listed with Film and Media Studies, Political Science, History, and Jewish Studies.

Instructor(s): B. Caplan

Area: Humanities

Writing Intensive.
AS.211.394. Brazilian Cult & Civ. 3 Credits.
This course is intended as an introduction to the culture and civilization of Brazil. It is designed to provide students with basic information about Brazilian history, art, literature, popular culture, theater, cinema, and music. The course will focus on how indigenous Asian, African, and European cultural influences have interacted to create the new and unique civilization that is Brazil today. The course is taught in English, but ONE extra credit will be given to students who wish to do the course work in Portuguese. Those wishing to do the course work in English for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. The sections will be taught simultaneously. Section 01: 3 credits Section 02: 4 credits (instructor’s permission required)
Instructor(s): M. Bensabat Ott
Area: Humanities
Writing Intensive.

AS.212.661. Post-Revolutionary Passions.
Coming to terms with the Enlightenment, the French revolution and the collapse of the political and spiritual authority that grounded the old regime, post-revolutionary thinkers confronted critically the responsibility of the intellectual and the nature of ideological violence; they reinventied the sacred in an attempt to shape a new self and redraw the boundaries between reason and belief. Classes in English, readings in French (some available in translation). Works by Constant, De Staël, Chateaubriand, De Maistre, Balanche, Tocqueville, Michelet, Taine.

AS.212.708. Testimony and Literature in the Twentieth Century.
The XXTh Century produced an enormous amount of testimonies. One can even say that it invented the genre of witnessing. The seminar will study testimonies in variety of languages about extreme historical situations (World Wars, totalitarianism, colonial wars, genocides, etc.). Through a close and careful reading of some of these texts, we shall try to formulate general problems pertaining at the same time to literary analysis, historical investigations, and political, ethical, juridical, anthropological issues. We’ll read works written in French — by Benjamin Fondane, Robert Antelme, Charlotte Delbo, Elie Wiesel, by Rithy Panh, or Jean Hatzfeld. But at every moment we shall compare them with texts written in other languages (using French or English translations) — by Primo Levi, Imre Kertész, Jean Améry, Tadeusz Borowski or Aharon Appelled, by Ossip Mandelstam, Alexander Soljenitxyn or Varlam Chalamarov, by Toge Sankichi or Iouse Masuji, by Yi Ch'ong Jun or Hwang Ji U, by Rithy Panh, etc. (2x/week beginning 3/24)
Area: Humanities.

AS.213.236. Panorama of German Thought II. 3 Credits.
Panorama of German Thought from Nietzsche to Habermas. Course will examine major thinkers in nineteenth and twentieth-century German thought with emphasis on the response to Enlightenment philosophy, the critique of reason, the questions about the autonomy of the subject and the search for new individual and collective identities. Reading will include traditional philosophical texts (Nietzsche, Cassirer, Heidegger, Adorno, Habermas) as well as works in anthropology (Gehlen, Scheler), sociology (Simmel, Weber), psychology (Mach, Freud), political theory (Marx, Schmitt) and aesthetics (Benjamin, Warburg, Panofsky). This course is a continuation of Panorama of German Thought I, though the first semester is not a prerequisite for the second. Taught in English.
Instructor(s): R. Tobias
Area: Humanities.

AS.213.252. The Idea of the University: Modern German Thought and the Hopkins’ Experiment. 3 Credits.
Readings and discussion in English. Many of the issues we grapple with today regarding higher education have a long history dating back to the eighteenth and nineteenth centuries, when the first modern universities were founded in Germany. What is the relation of research to teaching? How do we define scholarship? What is the difference between professional training and academic study? How do we distinguish secondary education from higher learning? What obligations does the university have vis-à-vis the state, which often finances it in whole or in part? What protections does the state owe the university when it pursues research that runs counter to the interests of state? What purpose does the ivory tower serve in an age in which higher learning is no longer limited to the classroom but is widely available (via books, radio, television, the internet)? In this class we will explore the rich literature from the nineteenth century on the idea of the university and the value of learning. We will conclude the course with an examination of the German roots of Johns Hopkins. Cross-listed with History
Instructor(s): R. Tobias
Area: Humanities.

AS.213.253. Freshman Seminar: Jewish Humor and the Construction of Cultural Discourse. 3 Credits.
With the fall of the Berlin Wall in 1989, one of the most powerful symbols of the Cold War came down. For decades, the division between East and West Germany had been a decisive factor in German literature and film from both states in several respects. Political censorship in the GDR and West German publishing policies determined the conditions for art production. They created specific audiences and shaped the role of the public intellectual. The Berlin Wall could also be said to have contributed to certain trends like the aesthetics of coldness and the poetic of observation. The course examines the relationship between aesthetics and politics in German-German literature and film from 1961 to the present. Readings include: Christa Wolf, Uwe Johnson, Reiner Kunze, Peter Schneider, Ingo Schulze, Anna Funder. Films: Wings of Desire (Wim Wenders, 1987), The Leading Role (Harun Farocki, 1994), The Tunnel (Roland Suso Richter, 2001), Good Bye, Lenin! (Wolfgang Becker, 2003), The Lives of Others (von Donnersmarck, 2007), Yella (Christian Petzold, 2007). The course will be taught in English.
Instructor(s): M. Caplan
Area: Humanities.

AS.213.344. Holocaust and Film. 3 Credits.
Taught in English. This class will examine the history of Holocaust films in regard to the possibilities of genre (documentary versus feature), the use of historical and archival materials, as well as general questions of representation and trauma. I CINEMA OF THE VICTIMS II CINEMA OF THE PERPETRATORS III CINEMA OF THE SECOND AND THIRD GENERATIONS WITNESSES Students will be writing weekly response papers to all screenings, and will choose to work with films in the original languages German, English, Italian, and French. This class will be writing-intensive. Cross-listed with Film and Media Studies, Political Science, History, and Jewish Studies.
Instructor(s): B. Wegenstein
Area: Humanities
Writing Intensive.
AS.213.368. German Political Thought. 3 Credits.
This course will introduce students to major figures in German political thought from Martin Luther to Karl Marx and Immanuel Kant to Carl Schmitt. The class will explore such issues as the notion of sovereignty, the relationship between church and state, the theory of parliamentary democracy, and the political and economic ramifications of liberalism.
Reading and discussion in English.
Instructor(s): R. Tobias
Area: Humanities.

AS.214.253. Perspectives on Islam in the Age of Dante. 3 Credits.
This course examines portrayals of Islam in European literary works of the late 13th and early 14th centuries. Authors include Ibn ‘Arabi, Marco Polo, Boccaccio, and Dante. Course taught in English with Italian section for majors/minors. Cross-listed with History and WGS Dean’s Teaching Fellowship
Area: Humanities.

AS.214.340. Holocaust & Film. 3 Credits.
Taught in English. This course examines the question of the Holocaust and its representation in the filmic media. We will analyze such themes as post-traumatic documentary (e.g., Night and Fog, Alain Resnais 1955), the resistance to representation (Shoah, Claude Lanzmann 1985), Holocaust drama and the ethics of entertainment (e.g., Schindler’s List, Steven Spielberg 1993), the question of filmic adaptation (e.g., The Grey Zone, Tim Blake Nelson 2002—based on Primo Levi’s The Drowned and the Saved 1986), and the new genre of confessional first person video-diary (e.g., Two or Three Things I know About him, Malte Ludin 2005). On this last theme we will also host the two-day symposium “The Holocaust: Children of the Perpetrators Confront Their Parents’ Nazi Past through Documentary Film,” in March 09. The symposium will feature three international documentary filmmakers and their recent films The End of the Neubacher Project, Marcus Carney 2007, Fatherland, Manfred Becker 2006, and Two or Three Things I know About him, Malte Ludin 2005, in which the filmmakers —children of Nazi perpetrators—are asking the question “who am I in relation to my father’s deeds?” The symposium will further include a number of experts on the topic of Holocaust, commemoration, and documentary film. Students will be involved in the preparation and, if interested, in the panel-discussions of the symposium. All films will be screened with English subtitles; this class is reading-intensive and writing-intensive; weekly response papers will be written about the films and the course topic at large. Cross-listed with Film and Media Studies, Political Science, History, and Jewish Studies Writing Intensive.

AS.214.345. Machiavelli’s World: Tyrants and Intellectuals in Renaissance Italy, 3 Credits.
Italy during the Renaissance was politically fragmented, a hodge-podge of small states organized under a wide variety of political systems: ostensibly democratic republics, states ruled by warrior-tyrants, the temporal authority of the papacy, and more. The struggle for dominance between these various states and systems was fought not only by armies but also by humanist intellectuals — a class that flourished during this period. We will focus on the particularly interesting career of Niccolò Machiavelli, who authored theoretical justifications for republicanism (especially in his Discourses) and for tyranny (in his most famous and enigmatic work, The Prince). With close attention to historical context, we will read these and other works by Machiavelli. We will also study other Italian Renaissance intellectuals who responded to the political upheavals of their day in a variety of ways, including Coluccio Salutati, Leonardo Bruni, Leon Battista Alberti, and Pietro Aretino. The class will be conducted in English, and a separate section will be offered for Italian majors (and others with a strong command of the language) in which we will read and discuss texts in Italian.
Instructor(s): J. Coleman
Area: Humanities.

AS.214.352. Writing and Wonder: Books, Libraries, and Discovery 1250-1550. 3 Credits.
The invention of printing occurred amid two centuries of intense development in the conduct and material means of European scholarship. The transition from writing by hand to movable type was accompanied by a revolution in scholarship that involved a new attitude to Classical and Biblical antiquity, the recovery of neglected and “lost” works, the formation of secular libraries, and the development of tools for the study of ancient handwriting, writing materials, and the history of language and of history itself. The revolution in attitudes to and uses of the book eventually transformed every discipline related to reading, writing, and the organization of knowledge. Topics to be covered include writing as an object of wonder, the transformation of a mythology of writing into a true history of books, writing, and libraries, the scientific study of writing and of language, and the representation of writing and books in the art and literature of the Middle Ages and Renaissance. Extensive use will be made of Johns Hopkins’ large collection of books published before 1600, and student projects will be oriented toward reliving the experiences of scholars in this period, including via computer-assisted means. Open to all undergraduates. Knowledge of a foreign language helpful but not required.
Instructor(s): C. Celenza; W. Stephens
Area: Humanities.

AS.214.356. Science and Heresy in Galileo’s Italy. 3 Credits.
The class will be conducted in English. In the wake of Copernicus, the still dominant geocentric model of the cosmos was challenged in Italy by two equally brilliant but very different thinkers: Giordano Bruno, iconoclastic philosopher and theorist of magic, and Galileo Galilei, who has been called the “father of modern science.” Both of these revolutionary intellectuals faced strong opposition from within the Catholic Church: Bruno was executed as a heretic, while Galileo was forced to formally recant his heliocentric views. We will study the principal writings of both thinkers, focusing on both the literary qualities and the historical context of their works. We will also examine the cosmological visions of earlier writers, including Dante. Additional section will be offered for Italian majors (and others with a strong command of the language) in which we will read and discuss texts in Italian.
Instructor(s): J. Coleman.
AS.214.373. Perspectives on Islam in the Age of Dante. 3 Credits.
This course examines portrayals of Islam in European literary works of the late 13th and early 14th centuries. Authors include Ibn ‘Arabî, Marco Polo, Boccaccio, and Dante. Course taught in English with Italian section for majors/minors.
Instructor(s): B. Neyarapally
Area: Humanities.

AS.214.681. Representing the Ancient Italian Past in the Renaissance.
The Renaissance was, among other aspects, a nationalistic movement, aimed at recovering the prestigious culture of the Roman and Etruscan past and countereacting the perceived decadence of the "modern" or "middle" age. Writers in both Italian and Latin pursued the "rebirth" of ancient Italic culture through a variety of literary and political contexts. After a brief review of familiar authors and texts from Petrarch to the Cinquecento, we will examine in depth a variety of texts in Latin and Italian that defended--often politically, and at times mendaciously--the ancient Italic cultural hegemony. Responses from other European cultures will be considered.

AS.214.761. Reading & Writing in Pre-Modern Europe.
This course has a fourfold aim: First, it is designed to familiarize participants with the basics of Latin paleography from Roman antiquity through the age of printing with moveable type; throughout, we will practice deciphering literary and documentary sources of various types, even as we concentrate on the evolution of different writing styles. Second, we will think about paleography's status as a "discipline." That is, the term "paleography" dates back to 1708 and Montfaucon's classic work, Palaeographia Graeca. However, it was only in the late nineteenth century in the world of the German research university that paleography came into the orbit of the Geisteswissenschaften as a "Hilfswissenschaft." Both implicitly and explicitly throughout the seminar we shall be asking what consequences that move entailed. Third, we will study the manner in which printing with moveable type changed western graphic culture: was printing "revolutionary" or "evolutionary"? Did printing and its radical graphic changes introduce new forms of consciousness in readers? Fourth, we will become familiar with certain aspects of "the history of the book," discovering as we do what sorts of questions scholars in this broad field of scholarly endeavor have been asking recently.
Instructor(s): C. Celenza.

AS.215.441. Borges, Cortazar, Bioy Casares and Their Time. 3 Credits.
The course introduces students to the study of Argentine literary culture in the first three quarters of the twentieth century. Its objective is to instruct the students in methods of close reading and develop perspectives in critical thinking. Cross-listed with History, Humanities Center and Program in Latin American Studies.
Instructor(s): S. Castro-Klaren
Area: Humanities.

AS.215.646. The Narrative of Conquest in the Andes, 1530 - 1680.
Departing from narratology and the perspective of post-colonial studies, the course will analyze the narrative of conquest as developed by Cieza de Leon, Garcilaso de la Vega, Inca, Guaman Poma, Jose de Acosta and William Prescott.
Instructor(s): S. Castro-Klaren.

Sociology
AS.230.166. Chinese Migration in Modern World History 1500’s-2000’s. 3 Credits.
This interdisciplinary course applies theories of economic sociology to examine the effects of Chinese overseas migration on modern world economy from the sixteenth century to the contemporary era. It examines the contribution of overseas Chinese to the development of capitalism in the following junctures: the East-West economic integration in the pre-modern era, China’s modern transformation after the Opium War (1839-1842), the making of US national economy in the early twentieth century, as well as the postwar economic miracles in the Pacific Rim, among others. Cross-listed with History and East Asian Studies.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences.

Humanities Center
AS.300.301. Life, Vitality, Thought. Philosophy and the Natural Sciences in Nineteenth Century Europe. 3 Credits.
Last year neuroscientists at MIT shined an optogenetic light on brain cells in order to artificially stimulate memories. If every detail of our past has a particular location in the brain, then we could alter, and even destroy, memories. Does this mean that humans are like machines whose history can be erased as easily as we delete files on a computer? Or are memories, like consciousness, not so easily reducible to brain structures? This class will examine how these and other questions shaped the history of modern biology and experimental psychology beginning in the nineteenth century. We will read the works of prominent biologists, psychologists, and philosophers who were all involved in a rich debate over the nature of life and thought.
Instructor(s): L. McGrath
Area: Humanities
Writing Intensive.

AS.300.330. Trauma in Theory, Film, and Fiction. 3 Credits.
An examination of the representation of trauma in literary theory, psychiatry, survivor literature, films, novels, and comics. Works by Sebald ("The Emigrants"), Lanzmann ("Shoah"), Spiegelman ("In the Shadow of No Towers"), McCarthy ("Remainder"), and others.
Instructor(s): R. Leys
Area: Humanities, Social and Behavioral Sciences.

AS.300.358. Modern Korean Culture and Film. 3 Credits.
This course examines modern Korean culture through film and literature in translation. Emphasis will be on the politics of representation, especially in light of the many collective and personal traumas (caused by poverty and factionalism, colonial rule, war, and an accelerated pace of modernization) that mark twentieth century Korean history.
Instructor(s): S. Rhee
Area: Humanities.
AS.300.364. What is Intellectual History?. 3 Credits.

Intellectual History today is a field with no hard and fast identity. This can be a problem but it can also offer unexpected opportunities. In this seminar we will read various books and essays that exemplify this state of affairs and perhaps point to ways beyond it. Texts include works by Foucault, Hayden White, Derrida, and others.

Instructor(s): R. Leys
Area: Humanities.

AS.300.365. Desire in the Fin de siècle. 3 Credits.

This course examines the obsession with desire at the turn of the 20th century in literature, drama, philosophy and social thought and its implications for notions of self and community in modernity. Primary focus will be Silver Age Russia with key texts drawn also from the European context. Readings in translation.

Area: Humanities
Writing Intensive.

AS.300.381. The Moses Complex. 3 Credits.

Instructor(s): R. Leys
Area: Humanities.

East Asian Studies

AS.310.103. Modern Japan - 1800 to the Present. 3 Credits.

An introduction to the history of Japan from the 18th century to the present. In lectures and discussion we will draw upon a combination of primary source materials (political documents, memoirs, oral histories, journalism, fiction, film) and scholarly writings in order to gain insight into the complex and tumultuous process by which Japan became an industrialized society, a modern nation-state, and a world power.

Instructor(s): A. Bronson
Area: Humanities, Social and Behavioral Sciences.

AS.310.105. Medicine and Society in China: From the Song to the Republican Period. 3 Credits.

This course introduces students to medical history in China in relation to gender history, legal history, publishing history, and literature from the Song to the Republican period.

Instructor(s): Y. Zhang
Area: Humanities.

AS.310.108. Introduction to Chinese Fiction and Drama. 3 Credits.

This course will introduce Chinese fiction and drama from the Tang dynasty (618-906) to the early Republican period (1911-1949), such as the romantic dramas of Tang Xianzu and the uncanny tales of Pu Songling. Students will draw connection between these vibrant literary genres and the cultural and socio-historical events that shaped imperial China. Key topics include story-telling, romance, urban culture, gender, reincarnation, and many more. Students will acquire skills in how to read, analyze and discuss the rich legacy of Chinese fiction and drama in translation and to think critically about these writings. Reading materials are all in English.

Instructor(s): F. Joo
Area: Humanities.

AS.310.203. Women Writers from East Asia, 11th to 19th Centuries. 3 Credits.

Introduction to women-authored texts in East Asia, 11th to 19th centuries. Historical and literary significance of their output in Chinese, Japanese, and Korean societies.

Instructor(s): F. Joo
Area: Humanities.

AS.310.215. Enlightenment, Empire, and Democracy: Transnational Political Cultures in East Asia, 1880-1980. 3 Credits.

This course explores the global circulation of political ideas and the formation of transnational social, intellectual, and aesthetic movements in Japan, China, and Korea from the 1880s to the 1980s.

Instructor(s): A. Bronson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.310.221. Introduction to Eastern Religious Traditions. 3 Credits.

This course serves as an introduction to Hinduism, Jainism, Buddhism, Sikhism, Confucianism, and Daoism. Successful completion of this course will provide students with a critical understanding of these six traditions.

Instructor(s): J. Valentine
Area: Humanities, Social and Behavioral Sciences.

AS.310.356. The Buddhist Experience. 3 Credits.

This course is a survey of Buddhist practice across Asia, covering a span of nearly 2500 years (from ca 500 BCE until the present). In addition to studying the origins of Buddhism in India and its eventual spread across Asia, we will examine unique local interpretations of Buddhism. Particular focus will be on manifestations of Buddhism in art and material culture. Students will gain a critical understanding of the role of texts, art, doctrine, and practice play in the overall Buddhist experience. Instructor(s): J. Valentine
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.310.403. Women Writers from East Asia, 11th to 19th Centuries. 3 Credits.

Introduction to women-authored texts in East Asia, 11th to 19th centuries. Historical and literary significance of their output in Chinese, Japanese, and Korean societies.

Interdepartmental

AS.360.147. Adam Smith and Karl Marx. 3 Credits.

Freshmen Seminar. This freshmen seminar examines the ideas of Smith, the greatest proponent of the free market, and Marx, his most radical critic. Freshmen only.

Instructor(s): E. Schoenberger; P. Jelavich
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

Program in Latin American Studies

AS.361.130. Introduction to Latin American Studies. 3 Credits.

Within a chronological frame that starts with early American-Indian civilizations and moves on to issues in contemporary culture and politics, the course introduces students to an interdisciplinary understanding of Latin American History and Culture. The course draws from historical geography, anthropology, history, politics, art, film, and literature.

Instructor(s): S. Castro-Klaren
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.361.340. Argentina: From Independence to the Present-Day. 3 Credits.
Argentina has long puzzled historians and social scientists. The country reached relatively high levels of development and possesses a large educated middle class, but has consistently “underperformed”. By focusing on the country’s politics from Independence to the present day, this course attempts to unravel Argentina’s many paradoxes.
Area: Humanities, Social and Behavioral Sciences.

AS.361.341. Peronismo and the Iconic Presence of Evita: Challenges of Representation. 3 Credits.
This course is designed to introduce students to the literary and artistic production originated by Peronismo and particularly by Evita. It explores the historical period that consolidated Peronismo and devotes great amount of time to the controversial figure of Evita. She has fed the popular imagination; her representations have reached far beyond the limits of Argentina. The materials will include different genres: biographical, historical, fictional, and documentary.

AS.361.352. Brazilian Literature in Translation (English). 3 Credits.
Course focuses on traditional and contemporary Brazilian fiction, in English, complemented by movies and PowerPoint. Some of the authors examined are: Machado de Assis, Lispector, G. Rosa, Telles, Sciar, Hatomu.
Area: Humanities, Social and Behavioral Sciences.

Center for Africana Studies

AS.362.104. Introduction to the African Diaspora. 3 Credits.
This course will begin in Africa before Atlantic slave trade, move to cover that trade into Brazil, the Caribbean and South Carolina. Comparisons of slave systems with Africa, Brazil, some parts of the Caribbean and Carolina (later South Carolina).
Instructor(s): P. Romero
Area: Humanities Writing Intensive.

AS.362.105. Reading Seminar: Black Society in the Americas. 3 Credits.
Jointly offered with Moira Hinderer, based on themes developed from the archives of the Afro-American Newspaper and selected readings of African American Societies from across the hemisphere of the Americas.
Instructor(s): F. Knight; M. Hinderer
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.362.175. Freshman Seminar: Remembering the Black Power Movement. 3 Credits.
This course critically examines trends, developments, contradictions, and dilemmas related to the Black Power Movement for black identity and self-determination in the late 1960s and 1970s.
Instructor(s): F. Hayes
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.362.204. Women in African History. 3 Credits.
Selected readings written by or about notable African women from the 17th century to the present. Themes explored include slavery, power and religion, economics, health and politics.
Instructor(s): P. Romero
Area: Humanities Writing Intensive.

AS.362.206. Research Seminar: Baltimore History from the AFRO Newspaper Archives-Community Based Learning. 3 Credits.
This small, project-oriented class will introduce you to methods in historical research while exploring major topics in twentieth century Baltimore history. We will use the rich reporting of Baltimore’s Afro-American Newspapers, to explore Baltimore’s place in the larger history of Black urban experience. Students will analyze images and exhibits related to African-American history, as well as research and curate small online exhibits of primary source materials including photographs, newspaper clippings, correspondence, pamphlets, flyers, and maps. We will be among the first scholars to work in the Afro’s rich archival collections, which include over a million images.
Instructor(s): M. Hinderer
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.362.217. The Civil Rights Movement: Struggles for Racial Justice in Twentieth Century America. 3 Credits.
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.362.220. Discourses in the African Diaspora. 3 Credits.
The African Diaspora has emerged as one of the “hot” topics of discussion in contemporary global race relations. The purpose of this course is to engage in a semester-long study into the meaning of the “African Diaspora.” Beginning with a brief reflection on some of the theoretical overlays on the topic, the course moves quickly into the heart of the subject matter. The course posts that beyond theoretical discussions, there is much to be learned from a close examination of the narrative accounts of individuals who have lived transnationally - who have themselves been actors and agents of the Diaspora.
Instructor(s): B. Vinson
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.362.303. Global Africa. 3 Credits.
This course will examine the literature surrounding cross-cultural exchange, through an interrogation of key concepts in African and transnational studies namely “diaspora,” “globalization,” and “transnationalism.”
Instructor(s): J. Ahlman
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.362.306. Seeing Baltimore History: Race & Community. 3 Credits.
This course will explore major topics in 20th century Baltimore history, using local newspapers and the archival collections of the Baltimore Afro American Newspaper.
Instructor(s): M. Hinderer
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.362.313. The Construction of the African Diaspora in the Americas. 3 Credits.
An examination of the various ways in which an African Diaspora developed across the Americas between 1492 and the present. Attention will be paid to the period of the Transatlantic slave trade but the greater emphasis will be on the complex societies that emerged by the early twentieth century and the responses of people of African descent to these societies. Readings will range across history, demography, economics, politics and culture in order to define a Diaspora and examine the factors that encourage or inhibit its formation. Cross listed with Africana Studies
Instructor(s): F. Knight
Area: Humanities, Social and Behavioral Sciences Writing Intensive.
AS.362.340. Power and Racism. 3 Credits.
This course investigates the impact of white supremacy and anti-black racism, as a global system of power, on the political development of the United States of America.
Instructor(s): F. Hayes
Area: Social and Behavioral Sciences
Writing Intensive.

AS.362.346. Critical Thinking, Sports, and the African American Experience. 3 Credits.
This course examines the influence of sports on American history and how that history has affected black athletes. A critical approach emphasizes the interrelationship of race, class, and gender domination.
Instructor(s): F. Hayes
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.362.361. Major Topics in 20th Century Black History. 3 Credits.
Area: Humanities.

AS.362.362. Before the Wire: Black Baltimore History in the 20th Century. 3 Credits.
This course focuses on the history of urban Black communities in the twentieth century, with emphasis on Baltimore City. We will pay particular attention to the idea of “the ghetto,” examining both the origins of this idea and its effect on the political, economic, social, and cultural development of urban communities. In this class each student will create an original research project focused on some aspect of African American life in twentieth century Baltimore.
Instructor(s): M. Hinderer
Area: Humanities, Social and Behavioral Sciences.

AS.362.401. Comparative Slavery in the Americas. 3 Credits.
This course examines the development of slavery and racial thought in Latin America and the Atlantic World from the fifteenth century until its demise in the middle and late nineteenth century. Readings in social and cultural history are intended to focus on the life and labor of slaves, while readings from economic and legal history evaluate slavery as an institution. Intellectual histories are also assigned in an attempt to map the development of slavery as an institution typified by racial caste. The primary goal of this course is to give students a background in the major historical debates that have shaped the production of the history of slavery, including questions of identity (creolization vs. “African survivals”), slave agency and control, and economic vs. racial causes of slavery and the slave trade. All of these topics will be examined through the overarching theme of the course, which is the Tannenbaum thesis: namely, to what extent slavery was experienced differently in Latin America, Anglo-America, and in Africa itself.
Instructor(s): J. Clark
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.362.495. AfroMexican History. 3 Credits.
Area: Humanities
Writing Intensive.

Program in Museums and Society

AS.389.201. Introduction to the Museum: Past and Present. 3 Credits.
This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends. Anthropology, art, history, and science museums are considered. Cross-listed with Anthropology, History, and History of Art.
Instructor(s): E. Rodini
Area: Humanities, Social and Behavioral Sciences.

AS.389.261. Curating Homewood: Trades and Training in Early Baltimore. 3 Credits.
Students explore early American life related to the region and the Carroll family of Homewood. Primary research and object study culminate in student-curated thematic exhibition. Optional intersession practicum experience is also possible. Cross-listed with History. M&S practicum course.
Instructor(s): C. Arthur
Area: Humanities.

AS.389.275. Interpreting Collections: An Introduction to Museum Education-Community Based Learning. 3 Credits.
Part public history, part introduction to museum practices, this hands-on course invites students into a local collection to develop interpretive materials for diverse audiences. Students consider the issues and ideas that inform object-based learning and learn about the history, theory and practice of museum education. Course culminates in the creation of interpretive text for the Baltimore Museum of Industry. M&S practicum course.
Instructor(s): E. Maloney
Area: Humanities, Social and Behavioral Sciences.

AS.389.340. Critical Issues in Art Conservation. 3 Credits.
The course examines recent controversies in the conservation of major global art works and sites, raising questions concerning the basic theoretical assumptions, practical methods and ethical implications of art conservation. Cross-Listed with History of Art and Anthropology.
Instructor(s): S. Balachandran
Area: Humanities.

AS.389.356. Halls of Wonder: Art, Science, and Literature in the Age of the Marvelous, 1500-1800. 3 Credits.
Explore the material culture of “wonder” from the Renaissance to the Enlightenment in literature, science, and art, with Hopkins’ rare book collections and the Walters Art Museum. M&S practicum course.
Instructor(s): E. Havens
Area: Humanities.

AS.389.357. Heaven on Earth: Art, Culture and Wonder in the Vatican Museum and Library. 3 Credits.
This interdisciplinary course will explore the institutional, cultural, artistic and architectural history of St. Peter’s and the Vatican Museum and Library from Antiquity through the Renaissance, up to the present day. Class meets in the Dick Macksey Seminar Room of the Brody Learning Commons. Cross-listed with History.
Instructor(s): E. Havens
Area: Humanities.

AS.389.361. Introduction to Material Culture: Early Views of Baltimore. 3 Credits.
Students explore early American life relating to the region and Homewood House. Primary research, object study culminate in exhibit focused on trades and crafts, training and work practices. M&S practicum course. Meets at Homewood Museum. Cross-listed with History.
Instructor(s): C. Arthur
Area: Humanities.

AS.389.364. History of the Artifact. 3 Credits.
By developing a small installation at the Baltimore Museum of Industry, students explore how museums use artifacts to present the past to diverse audiences. Earns M&S practicum credit. Cross listed with History.
Area: Humanities, Social and Behavioral Sciences.
History of Art

Located in a region known for its artistic riches, Johns Hopkins University offers special opportunities for the study of art history. Students work closely with a faculty of research scholars on aspects of European and American art and have access to the remarkable collections in Baltimore and Washington. In small classes and informal excursions, they integrate their direct experience of works of art with knowledge acquired through historical research. Programs leading to the B.A. and Ph.D. degrees emphasize the value of investigating works of art in various historical contexts and enable students to deepen their understanding of cultural history through courses in other departments.

Facilities and Opportunities

Johns Hopkins offers exceptional resources for the study of art history. The university maintains an extensive art library which includes the Fowler Collection of treatises on architecture. Research materials in numerous regional libraries and museums and in the Library of Congress are also accessible to art history students.

Diverse and extraordinarily active museums and research institutions provide a rich environment for the study of art history at Johns Hopkins. The Baltimore Museum of Art, adjacent to the campus, has recently completed a new addition to house its growing collections and exhibitions. A short distance from Hopkins, the Walters Art Museum preserves rare collections of ancient and medieval art, Renaissance and 19th-century painting.

Washington, only an hour away, is one of the most exciting art centers in the world. The National Gallery of Art specializes in painting, sculpture, and the graphic arts from the Renaissance to the present day. Modern art is presented in the permanent collections and exhibitions of the Hirshhorn Museum, the National Museum of American Art, and the Phillips Collection. Unique exhibitions of Byzantine and pre-Columbian art are maintained at Dumbarton Oaks, and collections of Asian and African art are housed in the Freer Museum and the Museum of African Art.

Undergraduates are encouraged to participate fully in all departmental activities.

Requirements for the B.A. Degree

The undergraduate will learn about European art and the methodologies of art history. Students begin their work with the introductory survey, AS.010.101 Intro to History Eur Art-AS.010.102 Introduction to History of European Art II, and then deepen their knowledge by taking seven advanced courses: one each in Ancient, Medieval, Renaissance/Baroque, and Modern, and three additional advanced courses, with no more than two taken in the same historical field; these three others may include courses in Asian, Ancient American or African Art. A secondary field consisting of three courses taken outside of the Department of the History of Art is developed in consultation with the undergraduate advisor.

Students must acquire intermediate-level knowledge of French, German, or Italian and must demonstrate this proficiency either by the successful completion of two intermediate-level courses or, on special request, by departmental examination. Spanish may be used only with prior departmental approval and is not recommended for those intending to pursue graduate studies in History of Art.

A minimum grade of C- is required for any course to be applied to meeting requirements for the major, including courses taken first semester freshman year.

Departmental honors are awarded at commencement to undergraduate majors in the history of art who achieve a GPA of 3.6 or better within the major.

Minor in the History of Art

Students majoring in another department may minor in art history by completing the introductory survey, AS.010.101-AS.010.102 Introduction to the History of European Art, and by taking six advanced courses: one each in Ancient, Medieval, Renaissance/Baroque, and Modern, and two additional advanced courses, with no more than two taken in the same chronological field; these may include courses Asian, Ancient American or African Art.

The Ph.D. program is designed to give students a systematic knowledge of the history of European art and an understanding of the methods of art-historical research. The program emphasizes close working relationships among students and faculty in seminars and acquaintance with the outstanding artistic works in the Baltimore-Washington area.

Students also have access to such research facilities as the Center for Advanced Study in the Visual Arts (National Gallery) and Dumbarton Oaks.

Admission and Financial Aid

Applicants for the Ph.D. program in the History of Art must complete the general university requirements and must also submit a recent paper, preferably in the area of their special interest. The department requires students to take the Graduate Record Examination. The application deadline falls in mid-January but varies slightly from year to year. The departmental website should be consulted for the current deadline. To maintain close student-faculty relationships and the greatest flexibility in developing individual curricula, the department strictly limits the number of students it admits each year.
Financial assistance is provided in the form of tuition grants, fellowships, and teaching assistantships. In addition, the department awards the Adolf Katzenellenbogen Prize and the Sadie and Louis Roth Fellowship each year to support a graduate student research project. Advanced students are also eligible for research grants provided by the Charles Singleton Center for the Study of Pre-Modern Europe.

Requirements for the in-process M.A. Degree

There is no terminal M.A. program; graduate students accepted into the Ph.D. program with a B.A. qualify for an M.A. upon completion of two semesters of course work (six courses) and completion of language requirements.

Requirements for the Ph.D. Degree

A student who has received the M.A. degree from Johns Hopkins or another institution may advance toward the Ph.D. degree after receiving the approval of the instructors in the areas chosen by the student as major and minor fields; in the case of transfer students, acceptance may be provisional. Unless they can present acceptable language certificates, students entering directly into the Ph.D. program will be required to pass language examinations in both German and either French or Italian during the first term.

Students usually take one and one-half years beyond the M.A. to complete course requirements for the Ph.D., but may take up to five terms. In discussions with major and minor field advisors, the Ph.D. student develops areas of concentration and courses of study to suit his/her needs and interests. The art history faculty encourages students to take full advantage of offerings in other departments, and students may, if they choose, develop a minor field in another discipline. Every Ph.D. student is expected to gain classroom experience by serving as a teaching assistant for at least one term.

After they have completed their course work, students must pass an examination in their major and minor fields and must submit a dissertation proposal to be approved by the department. When a student has completed the dissertation, he or she is examined by a Graduate Board appointed by the dean.

For further information on graduate study, write to Department of the History of Art.

Art History Fields

Ancient

Students who wish to study ancient art work will work with Professors Marian Feldman, Pier Luigi Tucci and Alan Shapiro. Facilities available to students of Greek and Roman art include the Archaeological Collection on campus and the extraordinary holdings of The Walters Art Museum.

Medieval

Ever since it was established by Adolf Katzenellenbogen, the department has given special emphasis to the study of medieval art. Students work under the direction of Professors Nino Zchomelidse and Christopher Lakey. As an adjunct member of the faculty, Martina Bagnoli of the Walters Art Museum is available for consultation. Seminars in Byzantine art, offered each year at Dumbarton Oaks, are open to Hopkins students.

The extraordinary holdings at the Walters Art Museum and at Dumbarton Oaks are especially valuable for students interested in manuscript illumination and the so-called minor arts. Students also have access to the Dumbarton Oaks research facilities, which include a copy of the Princeton Index of Christian Art.

Renaissance and Baroque

Students work with Professors Stephen Campbell, Mitchell Merback, and Felipe Pereda. Associates of the department in this area include Elizabeth Rodini, who also directs the undergraduate program in Museums and Society and Carl Strehlke (Philadelphia Museum of Art). Graduate students in medieval and Renaissance can also participate in the programs of The Charles Singleton Center for the Study of Pre-Modern Europe.

Modern

Students interested in 18th-, 19th-, and 20th-century art work with Professors Michael Fried, Molly Warnock and visiting scholars. In addition, students can develop critical skills by taking courses offered through the Humanities Center, the Philosophy Department, and the departments of the various literatures.

The Baltimore Museum of Art, which houses the Cone Collection, and museums in Washington provide stimulating resources and activities for students of modern art.

For current faculty and contact information go to http://arthist.jhu.edu/directory/index.html

Faculty

Chair

Mitchell Merback
Associate Professor: Northern Renaissance art.

Professors

Professor Emeritus: Renaissance and Baroque art.
Herbert L. Kessler
Early Christian and Medieval art.
Henry Maguire
Professor Emeritus: Byzantine and Medieval art.

Teaching Faculty
Rebecca M. Brown
Teaching Professor: South Asian art.
Elizabeth Rodini
Teaching Professor: Italian Renaissance art; and Director of the Program in Museums and Society.

Joint Appointments
Betsy M. Bryan
Professor (Near Eastern Studies): Egyptian art and archaeology, Egyptology.
H. Alan Shapiro
Professor (Classics): Greek and Roman art.
Emily S.K. Anderson
Senior Lecturer: Ancient Aegean art.

Adjunct, Associate, and Visiting Faculty
Martina Bagnoli
Adjunct Associate Professor (and Curator, Walters Art Museum): Medieval art.
Doreen Bolger
Adjunct Professor (and Director of The Baltimore Museum of Art): Modern art.
Lisa DeLeonardis
Senior Lecturer and Austen-Stokes Term Professor in the Art of the Ancient Americas.
James Meyer
Adjunct Professor; Modern art.
Martin Perschler
Lecturer (and Preservation Specialist, U.S. Department of State): architecture.
Carl Strehlke
Adjunct Professor (and Adjunct Curator, Philadelphia Museum of Art): Italian Renaissance art.

Courses
AS.010.101. Intro to History Eur Art. 4 Credits.
A survey of painting, sculpture, and architecture from the Renaissance to the present.
Instructor(s): F. Pereda; H. Kessler
Area: Humanities
Writing Intensive.

AS.010.102. Introduction to History of European Art II. 4 Credits.
A survey of painting, sculpture, and architecture from the Renaissance to the present. Recommended Course Background: AS.010.101 or instructor permission.
Instructor(s): S. Campbell
Area: Humanities.

AS.010.105. Art of the Ancient Americas. 3 Credits.
Surveys the art of Olmec, West Mexico, Teotihuacan, Maya, and Aztec.
Instructor(s): L. DeLeonardis
Area: Humanities.

AS.010.110. Art of the Islamic World. 3 Credits.
An introduction to art of the Islamic world, from the beginnings of Islam in the seventh century to the present, and from the Mediterranean to Southeast Asia. Architecture, ceramics, painting, textiles, metalwork, photography, installation, and performance art.
Instructor(s): R. Brown
Area: Humanities.

AS.010.126. Indian Art in the Museum. 3 Credits.
India's culture spans four millennia and multiple religious traditions. The Baltimore/DC area hosts wonderful collections of Indian art; this course introduces India's art in person, in the museum. We will examine sculptures of the Buddha's life, paintings of gods and kings, and richly embroidered textiles. We will study how these objects are displayed, and trace their paths from India to Maryland. Fieldtrips to the Smithsonian, Textile Museum, and the Walters, with possible behind-the-scenes workshops.
Instructor(s): R. Brown
Area: Humanities.

AS.010.138. Introduction to Public Art: Murals, Monuments, and Museums. 3 Credits.
Murals on the side of the local grocery, Washington monuments in both DC and Baltimore, a 16th century manuscript painting at the Walters, film series at the Charles, galleries in North Arts: this course asks how visual culture shapes and is shaped by the urban experience. Critical readings in museum studies, urban studies, art history, cultural politics. Weekly field trips to local sites, museums, monuments; discussions with artists, curators, collectors.
Area: Humanities.

AS.010.147. South Asian Art, Culture and Politics: Empire, Colony, Nation. 3 Credits.
This course explores the visual culture and politics of South Asia from early archaeological settlements to contemporary installation art. Themes will include: the role of the patron, the relation of text and image, architecture and ritual/political space, colonialism, nationalism, modernity, and postcoloniality. Cross-listed with Political Science
Instructor(s): R. Brown
Area: Humanities.

AS.010.162. Junk! New (Old) Materials in Modern Art. 3 Credits.
This course explores the recurring strategy of using junk materials for artistic creation in the twentieth century, in both Europe and the United States, and considers the different ways this strategy has been employed by artists and experienced by viewers at different historical moments. Dean's Teaching Fellowship course.
Instructor(s): J. Watson
Area: Humanities.
AS.010.175. Love and Death in the Middle Ages. 3 Credits.
The course is set to examine attitudes toward love and death in art and literature of the Middle Ages. Drawing on a wide range of sources, we shall examine topics such as the “love of God,” “love thy neighbor,” “making love,” as well as the “death of God,” and “death of the hero.” Tombs, reliquaries, dowry boxes as well as tapestries and manuscripts will all serve us to better understand how people in the Middle Ages understood those amorous and morbid instances of their lives.
Area: Humanities.

AS.010.192. Move over Michelangelo: Renaissance Sculpture in Northern Italy. 3 Credits.
Michelangelo’s heroic figure has dominated our conception of Renaissance sculpture, but outside of Florence & Rome, a princely aesthetic for small, intimate, tactile works dominated. We will explore the alternate paradigms for the figure and sculpture in the North, centering around Padua, Mantua, and Venice. The course is built around the collection at the Walters Art Museum, from which students will choose an object as the subject of a semester-long research project. We also take advantage of MICA to visit a bronze workshop, and will visit the Antico exhibition in NY at the Frick. Dean’s Teaching Fellowship
Instructor(s): L. Blom
Area: Humanities.

AS.010.196. Destroying Art: Iconoclasm through History. 3 Credits.
This course explores the deliberate destruction of art by political regimes, religious groups, and individuals, primarily in Europe and the Middle East, from antiquity to the present. Dean’s Teaching Fellowship
Instructor(s): B. Shilling
Area: Humanities.

AS.010.202. Sacred Arts of Africa. 3 Credits.
Area: Humanities.

AS.010.203. Abstraction. 3 Credits.
Introduction to major works and discourses of, and key debates surrounding, abstraction in the visual arts of Europe and the United States throughout the twentieth century. Visits to the BMA.
Instructor(s): M. Warnock
Area: Humanities.

AS.010.207. Masterpieces of Medieval Islamic Art. 3 Credits.
This course will explore Islamic artwork throughout the medieval world, from Damascus to Jerusalem, from Cordoba to Marrakesh. We will explore exquisite ivory carvings, bronze metalwork, textiles, ceramics and manuscripts that reflect the elite cultures and societies that produced them. Themes we will address include the exchange of luxury goods and culture; the influence of Islamic styles and modes of production on European art; and Islamic art and the Muslim faith.
Area: Humanities.

AS.010.208. The Disappearing Wall: Roman Frescoes in Context. 3 Credits.
The course introduces ancient Roman wall painting from Pompeii and Rome as images painted on “disappearing walls.” We will analyze these and other murals in historical, archaeological and museum contexts.
Instructor(s): S. O’Connell
Area: Humanities
Writing Intensive.

This course offers an introduction to one of the major movements in modern painting. We will explore the developments of a new aesthetic and subject matter during a period of vast cultural change in Paris and its environs, from the mid-19th century to the turn of the 20th century. Visits to the Baltimore Museum of Art and the National Gallery of Art will supplement our study of artists including Manet, Monet, Degas, Pissarro, Seurat, and more.
Area: Humanities.

AS.010.213. Medieval Renaissances. 3 Credits.
A course on the appropriation, citation, and imitation of classical antiquity in the art and architecture of the Middle Ages (ca. 300-1300), emphasizing the active transformation of earlier models rather than passive copying.
Instructor(s): R. Danford
Area: Humanities
Writing Intensive.

AS.010.216. 20th Century Italian Art. 3 Credits.
This course will be a critical survey of the major artistic movements in Italy during the 20th century, from Futurism to Arte Povera. Often seen as a secondary location of artistic production, the class will situate the artists working in Italy within a broader historical and global context.
Instructor(s): K. Johnson
Area: Humanities.

AS.010.219. Constantinople from Founding to Fall: Art of the Byzantine Empire. 3 Credits.
The course examines Byzantine art - from the founding to fall of Constantinople, both in Byzantium and beyond its borders - through its religious, political and aesthetic power.
Instructor(s): M. Raucher
Area: Humanities
Writing Intensive.

AS.010.225. Early Renaissance Art: Giotto to Leonardo. 3 Credits.
The circumstances of artistic production in Florence compared with those operating in Naples, Rome, Milan, and Venice. The city as site of divergent uses of art by different communities and interests, employing images for the expression of identity and status and as a strategic means of producing consensus or exploiting social division. Note - This offering may be counted toward the major requirement for Renaissance courses.
Instructor(s): S. Campbell
Area: Humanities.

AS.010.226. Art, Medicine, and the Body: From Leonardo to Body Worlds. 3 Credits.
This course explores five centuries of fruitful collaboration between physicians and artists -- those who observe the body in order to heal it, and those who do the same in order to picture it. From medieval medical manuscripts, where the body is portrayed as a microcosm of the created world, to the anatomical forays of Renaissance artists such as Leonardo da Vinci and Albrecht Dürer; from gruesome depictions of bodily pain, disease, and corruption in the art of Matthias Grünewald to the eloquent exposure of the body’s interior by anatomists such as Andreas Vesalius; from the spectacularization of the body in Enlightenment science to the rubberized cadavers of Gunther von Hagen’s Body Worlds project -- these and other topics will bring into focus the complex intersections between the history of medicine and the history of art.
Instructor(s): M. Merback
Area: Humanities.
AS.010.230. Impressionism, Painting of Modern Life. 3 Credits.
This course offers an introduction to one of the major movements in modern painting. We will explore the developments of a new aesthetic and subject matter during a period of vast cultural change in Paris and its environs, from the mid-19th century to the turn of the 20th century. Visits to the Baltimore Museum of Art and the National Gallery of Art will supplement our study of artists including Courbet, Manet, Monet, Degas, Cézanne, Pissarro, Seurat, and more.
Instructor(s): J. Watson
Area: Humanities.

AS.010.232. Art and Architecture of the Medieval Mediterranean World. 3 Credits.
This course serves as an introduction to the art and architecture of the Mediterranean region between the early Christian period and the Second Crusade (c. 250-1150). We will analyze the interactions between Western European, Byzantine, and Islamic cultures through the development of religious art and architecture, asking specifically how these interactions were mediated by culturally distinct representational practices. The course will cover the broad Mediterranean region by focusing on specific sites of interaction around the Sea (i.e. Islamic Spain, Norman Sicily, Byzantine North Africa, Venice and the Adriatic Coast, and Crusader Palestine). Select topics will include: the rise of religious image theory and its effect on the visual cultures of the Mediterranean region; the trans-regional movement of artists, crafted objects, and artistic technologies; the history of urbanism and the production of artistic objects in port cities and centers of trade; and the concept of the Mediterranean as “Premodern Globalism.” Readings will include both primary and secondary sources, and we will investigate a variety of methods and approaches to the interpretation of art objects.
Instructor(s): C. Lakey
Area: Humanities.

AS.010.236. Palaces, Temples and Tombs in Mesopotamia. 3 Credits.
Mesopotamia, the “land between the rivers,” is considered the cradle of civilization. Its earliest urban centers appeared by 3500 BCE in the region of modern-day Iraq, Iran, and Syria. Along with urbanism came the emergence of temples and palaces as large-scale elite institutions (replete with written records). Their arts manifest some of the earliest complex representations. This course explores the art and architecture within the social, political and cultural context of ancient Sumer, Babylonia and Assyria. It provides an integrated picture of the arts of Mesopotamia from 3500 to 3300 BCE with an emphasis on the development of visual narrative and the use of art in the expression of authority and legitimacy.
Instructor(s): M. Feldman
Area: Humanities.

AS.010.240. Introduction to the Arts of the African Diaspora. 3 Credits.
This is an introduction to the Art of the African Diaspora. It is designed to provide foundational knowledge of the major theoretical understandings of Diaspora and the ways in which they help to illuminate the artistic traditions of people of African descent. The course will present a series of case studies in order to begin to understand the art of the Diaspora and the complexities of its study.
Instructor(s): T. Woford
Area: Humanities.

AS.010.242. African American Art. 3 Credits.
This is an introduction to the history of African American art. While organized chronologically, the course will emphasize a series of case studies of artists and movements in order to understand African American art and the complexities of its study. The course will explore how black artists in the United States have engaged with key issues such as race, gender, class and ethnicity as well as debates about representation and the role of the artist.
Instructor(s): T. Woford
Area: Humanities.

AS.010.245. Art in London. 3 Credits.
Instructor(s): H. Letwin
Area: Humanities.

AS.010.250. Early Netherlandish Painting-From Broederlam to Bosch. 3 Credits.
Instructor(s): M. Merback
Area: Humanities.

AS.010.251. Medieval Spaces: Site, Image, and Viewer in the Middle. 3 Credits.
This lecture course serves as an introduction to medieval art by analyzing the formal relationships between architecture and images at holy sites from, roughly, the 4th century through the 14th. The course will focus primarily on how those relationships structured viewers’ experiences of the divine by understanding how works functioned for specific audiences in a particular spatial context. In reviewing the origins and transformations of Christian visual culture we will investigate how site-specific image production in Western Europe and Byzantium informed social and political relations; how theological problems related to image worship affected the form and content of the visual arts; and how developments in public and private devotion altered the spaces for imagistic display. Along the way we will encounter a wide array of geographical sites and histories, including early Christian examples in Rome and Byzantium (e.g. the Roman catacombs and Hagia Sophia), monastic settlements in France and Germany during the 8th and 9th centuries (e.g., St. Gall), 12th century architectural sculpture along the European pilgrimage routes, French and German Gothic cathedrals, and monumental painting cycles in Italy (e.g. the Arena Chapel in Padua). By undertaking close readings of a site and its images, we will discover how architectonics encouraged viewers to spatially interact with images. Readings will include both primary and secondary sources, and we will investigate a variety of methods and approaches to the interpretation of art objects.
Instructor(s): C. Lakey
Area: Humanities.

AS.010.250. Early Netherlandish Painting-From Broederlam to Bosch. 3 Credits.
Instructor(s): H. Letwin
Area: Humanities.

AS.010.252. Sculpture and Ideology in the Middle Ages. 3 Credits.
This lecture course will offer a selective, thematic exploration of the art of sculpture as practiced in the Middle Ages, from the fall of the Roman empire in the 4th century BCE to the dawn of the Renaissance. Our primary concern will be to analyze sculpture in all of its forms -- monumental free-standing, architectural, liturgical, and commemorative -- as the primary medium utilized by patrons, both private and corporate, to display political messages to an ever growing public. Through a series of case studies, we will study how a sculpture’s form and style related to a broader social and cultural realm. Selected topics include the medieval understanding of the body (living and dead); urbanism and politics; and the lure of classicism in the Middle Ages.
Instructor(s): C. Lakey
Area: Humanities.
AS.010.254. Art and Architecture of Early Christian and Medieval North Africa. 3 Credits.
Survey of Early Christian and medieval art and architecture in North Africa, with an emphasis on indigenous developments and cultural exchange in the Mediterranean world, 4th to 13th century. Dean’s Teaching Fellowship course.
Instructor(s): N. Dennis
Area: Humanities.

AS.010.255. The Art of Early Christian Pilgrimage. 3 Credits.
Instructor(s): A. Lam
Area: Humanities.

AS.010.256. Nineteenth-Century European Art. 3 Credits.
A selective survey of European painting and sculpture from the French Revolution to the start of the First World War. The nineteenth century ushered in an era which saw political instability, industrialization, imperialism, and the growth of popular culture come to bear on the very conditions of art-making. Focusing on key moments in this history, the course aims to recover the real intensity and strangeness of art’s involvement with modernity. Topics include neo-classicism; art and revolution; the rise of landscape; the triumph of the bourgeoisie; the gendering of art; and the birth of the avant-garde.
Instructor(s): J. Melius
Area: Humanities.

AS.010.263. Paris / New York After the War. 3 Credits.
This course introduces the developments in art after World War II, in both Paris and New York, and studies how certain sensibilities overlapped and intersected as the two cities vied to be the international center of modern art. Recommended Course Background: AS.010.102
Prerequisites: AS.010.102
Instructor(s): J. Watson
Area: Humanities.

AS.010.264. Twentieth-Century Art in Europe and the United States. 3 Credits.
A critical survey of the major artistic movements, paradigms, and documents of twentieth-century art in Europe and the United States. Topics will include: abstraction, collage and assemblage, art and politics, traditional and new media. Among the artists: Picasso, Matisse, Malevich, Pollock, Judd, and Hesse. Writing assignments will include a close analysis of a work in a local collection such as the Baltimore Museum of Art, the Hirshhorn Museum and Sculpture Garden, or the National Gallery of Art.
Instructor(s): M. Warnock
Area: Humanities.

AS.010.290. At the Very Edge: The Art of Islamic Spain as a Furtive Introduction to ‘Islamic Art’. 3 Credits.
Area: Humanities.

AS.010.291. Architectural History of Baltimore. 3 Credits.
Focusing on Baltimore’s built environment and drawing upon primary sources, this course will explore the major European and American design theories, values, and practices of the last several centuries with an eye towards establishing Baltimore’s place within a national and global urban environmental context. Topics addressed in this course include city building, class and race, architectural revivalism, transportation, urban renewal, and post-industrialism.
Instructor(s): M. Perschler
Area: Humanities
Writing Intensive.

AS.010.292. Dance Revolution: Rethinking Postwar American Art. 3 Credits.
Area: Humanities.

AS.010.309. Gifts and Thefts in the Middle Ages. 3 Credits.
Why were some medieval objects valued as gifts, others appropriated as spolia, and still others taken by force? How does transferring objects from one cultural context into another change their meaning? Western, Byzantine, and Islamic art, 6th-13th centuries.
Instructor(s): R. Danford
Area: Humanities.

AS.010.311. Japanese Print Culture and Western Collecting. 3 Credits.
The first half of this seminar will examine issues in Japanese print culture, especially the development and circulation of ukiyo-e prints, during the Edo and Meiji periods (1615-1912). Topics will include technological innovations, the role of publishers, censorship, and prints as didactic objects. The second half of the course will explore the popularity of Japanese prints in the West, including their impact on Japonisme and incorporation into Western collections Cross-list with East Asian Studies
Instructor(s): H. Snow
Area: Humanities
Writing Intensive.

AS.010.312. Surrealism. 3 Credits.
Topics include: art and the unconscious; "psychic automatism" and its implications for theories of medium, genre, and composition; objects, journals, and exhibitions. Visits to Special Collections and the BMA. Students will curate and install an exhibition of Surrealist journals from MSEL Special Collections, to open in April 2014.
Instructor(s): M. Warnock
Area: Humanities
Writing Intensive.

AS.010.313. The Image in Japanese Visual Culture: Muromachi Painting to Manga and Anime. 3 Credits.
This course explores the Japanese image as a distinct and readily identifiable cultural expression. Through a series of five critical works serving as visual landmarks, the students trace the emergence of the Japanese image from its roots in imported Chinese paintings, through the interpretations of the Rimpa painters, ukiyo-e printmakers, and decorative arts craftsmen of the early modern period, to the internationally acclaimed expressions we now find in 21st-century manga and anime. This course will be taught by Robert Mintz, Associate Curator of Asian Art at The Walters Art Museum.
Instructor(s): R. Mintz
Area: Humanities.

AS.010.314. Roman Art from Republic to Empire. 3 Credits.
Area: Humanities.

AS.010.317. The Face Of God(and Other Body Parts). 3 Credits.
Examines how the belief that God had assumed flesh was fundamental to the development of Christian art. Works of art remain the focus, but the course also considers manuscripts, reliefs, the Eucharist, and other manifestations
Instructor(s): H. Kessler
Area: Humanities
Writing Intensive.
AS.010.318. Art in Italy, 1200 – 1500. 3 Credits.
This course will offer a selective, chronological exploration of the art of the Italian peninsula from the late Middle Ages through the first century of the Renaissance. Our primary concern will be to examine stylistic developments in architecture, painting, and sculpture during a profound period of political, economic, and social changes. Select topics will include: the role of the Communes as patrons of art; the rise of Humanism and its influences on the arts; the development of perspective theory; the lure of classicism in both the Middle Ages and the early Renaissance; the rise of the artist. Readings will include both primary and secondary sources.
Instructor(s): C. Lakey  
Area: Humanities.

AS.010.319. Medieval Art and Architecture of the Holy Land. 3 Credits.
Discusses political and religious contexts in the Middle East, where specific territories (Jerusalem) were claimed by all three monotheistic religions for cult practices. Resulting conflicts influenced Jewish, Medieval, and Islamic art and architecture in the region.
Instructor(s): N. Zchomelidse  
Area: Humanities.

AS.010.320. Art of Colonial Peru. 3 Credits.
In this course we consider the painting, sculpture, and architecture of viceregal Peru (ca. 1520-1825) within the dynamic historical context of colonial society. Documentary sources inform our study by providing both institutional and personal accounts of events, histories, philosophies, and rebellion. We examine the role of religious orders, artisan guilds and cofradia, and consider the social and political implications of art patronage.
Instructor(s): L. Deleonardis  
Area: Humanities  
Writing Intensive.

AS.010.323. The Explosion of Art in the 1960's. 3 Credits.
This course will explore the diverse art world of the American 1960s, putting in dialogue the myriad experiments of cutting-edge artists working in a wide range of media (e.g. painting, sculpture, photography, performance, film). Topics of study will include, among others, Pop Art, Minimalism, Performance Art, Post-painterly Abstraction, Conceptual Art, Process Art, film, music, and dance. We will situate our synthetic account of sixties art in careful relation to the major historical events of that decade. Recommended Course Background: AS.010.102
Instructor(s): K. Markoski  
Area: Humanities  
Writing Intensive.

AS.010.324. Art and Architecture in the Augustan Age. 3 Credits.
Investigates Roman art and architecture during the Augustan age (31 BC – AD 14). Augustus' cultural program influenced many aspects of Roman life, leading to the creation of a new visual language that transformed Roman society. Methodologically, the focus will be on the integration of diverse sources to reconstruct and discuss the images and the built environment of the Augustan age.
Instructor(s): P. Tucci  
Area: Humanities.

AS.010.325. Crusader Art: the Road to the New Jerusalem. 3 Credits.
The fusion of Islamic, Byzantine and Western art during the Crusader period represents a dynamic turn in the history of medieval art. This course examines the material culture of the Crusades, including metalwork, enamels, illuminated manuscripts and architecture generated by the artistic exchanges of the era. We will also discuss the political and religious forces that prompted the Crusaders' quest for Jerusalem and the Holy Land.
Area: Humanities.

AS.010.327. The Harem and the Veil: Space and Gender in the Islamic World. 3 Credits.
This course explores the constructed imagery of the harem and the veil in relation to politics and visual culture in the Middle East, North Africa, India, and Euro-America. Topics will include: Ottoman palace architecture, Orientalist painting, mandating/banning the veil, Islamic feminisms. We will address visual culture broadly, including advertising, architecture, contemporary art, film, news media.
Instructor(s): R. Brown  
Area: Humanities  
Writing Intensive.

AS.010.331. Art, Knowledge and Power in Global Perspective, 1500-1700. 3 Credits.
This course reexamines renaissance and baroque art in a global perspective, emphasizing race, gender, and international exchange in the sixteenth and seventeenth centuries and drawing extensively on the Walters' collection.
Instructor(s): H. Friedman  
Area: Humanities.

AS.010.333. The Making of Renaissance Rome 1300-1600. 3 Credits.
The multiple identities of the ancient city as these are understood and represented through the work of artists such as Giotto, Filarete, Raphael, Bramante, and Caravaggio; the writings of Petrarch, Pius II, Alberti, and Montaigne; the statecraft and patronage of the Renaissance popes
Instructor(s): S. Campbell  
Area: Humanities.

AS.010.334. Problems in Ancient American Art. 3 Credits.
Selected topics which may include collecting the pre-Columbian past and connoisseurship, the formation of national museums, post-Columbian appropriations. Collections study in museums. May also be used toward credit for the Archaeology major. Cross-listed with PLAS and Program in Museum and Society
Instructor(s): L. Deleonardis  
Area: Humanities  
Writing Intensive.

AS.010.336. Hellenistic Art. 3 Credits.
Surveys painting, sculpture, and architecture after the fall of the Classical period in Greece (4th c. BC), assess their spread throughout the Mediterranean world, and will conclude with the role these artworks played on the rising dominance of Rome in the 1st c. BC.
Area: Humanities.
AS.010.337. Impressionism, Tradition, Originality: What’s new under the sun?. 3 Credits.
The course will examine the genesis of modern art, focusing on Impressionism and its debt to earlier traditions. Topics of study include Impressionist painting (Monet, Pissarro, Cézanne, among others), 17th-century Dutch landscape (Hobbema, Jacob van Ruisdael), 18th-century French painting (Fragonard, Chardin), Barbizon school, Courbet, Manet, Impressionist print (Cassatt, Degas), theories of perception, aesthetics of sketch.
Instructor(s): G. O'kamak
Area: Humanities.
AS.010.338. Murals, Monuments, Museums: Art in Baltimore & DC. 3 Credits.
Murals on the side of the local grocery, Washington monuments in both DC and Baltimore, a 16th century manuscript painting at the Walters, film series at the Charles, galleries in North Arts: this course asks how visual culture shapes and is shaped by the urban experience. Critical readings in museum studies, urban studies, art history, cultural politics. Weekly field trips to local sites, museums, monuments; discussions with artists, curators, collectors.
Instructor(s): R. Brown
Area: Humanities, Social and Behavioral Sciences.
AS.010.340. Renaissance Art in the Netherlands, 1400-1500. 3 Credits.
Explores the major painters working in the Low Countries during the fifteenth century: Melchior Broederlam, the Master of Flémalle, Jan van Eyck, Rogier van der Weyden; Hans Memling, Hugo van der Goes, Hieronymus Bosch, and others.
Instructor(s): M. Merback
Area: Humanities.
AS.010.345. The African City: Art and the Politics of Place. 3 Credits.
Area: Humanities
Writing Intensive.
AS.010.347. Inventing Antiquity in the Early Renaissance. 3 Credits.
A close look at how the ancient Greek, Roman and Jewish worlds were imagined and reconstructed by early Renaissance scholars, poets, warlords and artists.
Instructor(s): S. Campbell
Area: Humanities.
AS.010.348. Art and Faith in Golden Age Spain. 3 Credits.
Introduction to Spanish painting and sculpture of the XVIth and XVIIth centuries, with special focus on religious art.
Instructor(s): F. Pereda
Area: Humanities.
AS.010.351. Asian Art After 1945. 3 Credits.
This course examines the art and architecture of East, South, and Southeast Asia produced since the mid-twentieth century. We will engage with theoretical, visual, and political developments in the recent art of this region, reading statements by artists and architects, discussing the rising commercial and international profile of contemporary Asian art, and exploring established and emerging art histories of this period. Cross-list with East Asian Studies
Instructor(s): R. Brown
Area: Humanities.
AS.010.353. Key Moments in East Asian Politics & Visual Culture. 3 Credits.
Examines key political moments in China, Japan, and Korea from 1850 to the present, focusing on the way visual imagery shapes these events. Includes: Japanese occupation of Korea, Hiroshima and Nagasaki bombings, 1989 Tiananmen square protests, North Korean propaganda.
Instructor(s): R. Brown
Area: Humanities
Writing Intensive.
AS.010.355. Art and Religion in the Roman World. 3 Credits.
This course explores the relationships between Roman art and religion through a survey of key topics and issues, from the archaic period to late antiquity, providing an introduction into how to use and analyze both textual and material evidence as sources for understanding Roman society. Temples, altars, public and private buildings, reliefs, statues, sarcophagi, paintings, mosaics, coins, metal-ware, glass and pottery, all get increasingly complex and interesting as the Roman world developed and are important forms of evidence for political, intellectual, social and economical life.
Instructor(s): P. Tucci
Area: Humanities.
AS.010.356. Greek and Roman Art and Architecture. 3 Credits.
This course explores the principal forms and contexts in which art and architecture developed in the Greek and Roman world. It surveys Greek art and architecture from the archaic through the Hellenistic periods, and Roman art and architecture from the foundation of the city of Rome - against the background of the Etruscan tradition - to the divergent trends of late antiquity, including the interaction between Rome and the provinces of the empire. Overall the course encourages critical thinking about the purpose of studying art and architecture as a tool for understanding the Greek and Roman worlds, and provides an introduction into how to use visual and material evidence as a historical source. On completion of this course students will be able to describe and evaluate the architectural style and decorative of key Greek and Roman monuments, as well as their function in ancient society. To be taught by incoming faculty member Pier Luigi Tucci.
Instructor(s): P. Tucci
Area: Humanities.
AS.010.357. Monumentality in Classical Art and Architecture: From Greece to Rome. 3 Credits.
This course investigates the Romans’ reception of Greek and Hellenistic art and architecture, as well as Rome’s original contribution during the republican and imperial age. Its goal is to examine the effects of Hellenization on Roman society and the creation of a completely new visual language.
Instructor(s): P. Tucci
Area: Humanities.
AS.010.359. Arts of East Asia. 3 Credits.
This course introduces students to East Asian art and, by extension, to East Asian history and culture. Lectures and discussions will address major movements in the visual culture of East Asia, including architecture, painting and sculpture. Readings include both art historical works and primary source material in translation. Themes will include religious art, particularly the introduction of Buddhist to East Asia from India, cultural interchange within East Asia, and the collection and display of East Asian art in America. Cross-listed with East Asian Studies
Area: Humanities.
AS.010.360. Medieval Art in Europe: Methodology, Historiography, Theory. 3 Credits.
The course explores the conceptual character of medieval European art from Late Antiquity to the end of the Middle Ages with an emphasis on methodological, historiographical, and theoretical issues. Using selected monuments and objects from a wide geographical range and dating from the 4th to the 14th centuries as case studies, students will also familiarize with the methodological developments of art historical research. The course will focus in particular on the “anthropological turn” of medieval art history and medieval image theory.
Instructor(s): N. Zchomelidse
Area: Humanities.

AS.010.361. Studies in French Modernist Painting. 3 Credits.
Area: Humanities.

AS.010.364. Babylon: Myth and Reality. 3 Credits.
“Babylon - the name resonates, from the Biblical whore of Revelations to sci-fi. But what do we really know about the ancient city and its civilization?”
Instructor(s): M. Feldman
Area: Humanities.

AS.010.365. Art of the Ancient Andes. 3 Credits.
Course surveys the visual arts of Andean South America and includes discussion of royal Inka tunics, Nasca death imagery and the gold sculptural traditions of Colombia.
Instructor(s): L. DeLeonardis
Area: Humanities.

AS.010.366. Native American Art. 3 Credits.
Survey of the principle visual arts of North America (1500 BC - AD 1600). Introduction to interpretive theory and methodology. Collections study in local and regional museums. Cross-listed with Programs in Museums and Society, Archaeology, and PLAS.
Instructor(s): L. DeLeonardis
Area: Humanities
Writing Intensive.

AS.010.367. Cezanne,Matisse,Picasso. 3 Credits.
Addresses the development of modernist painting in France between 1890 and 1918 through an examination of the work of these three essential figures.
Instructor(s): K. Tuma
Area: Humanities

AS.010.370. History of Art: Histories, Methods, Theories. 3 Credits.
This course will be a short introduction to the construction of the discipline and to the different methodologies developed in the analysis of works of art, as a way to understand the basic challenges faced today by Art History.
Instructor(s): F. Pereda
Area: Humanities
Writing Intensive.

AS.010.380. Abstract Expressionism: de Kooning, Pollock, Rothko, Newman. 3 Credits.
This course addresses what is arguably the most significant moment in the history of American art: Abstract Expressionism. By looking closely at the careers of four painters from this period – Willem de Kooning, Mark Rothko, Barnett Newman and Jackson Pollock – we will explore both larger issues relevant to this crucial and controversial moment in art history and topics specific to the work of each of these pillars of American abstract art.
Instructor(s): K. Tuma
Area: Humanities.

AS.010.382. The Politics of Display in South Asia. 3 Credits.
Through examining collecting, patronage, colonial exhibitions, and museums, this course examines how South Asia has been constructed in practices of display. Themes: politics of representation, spectacle, ethnography, and economies of desire related to colonialism and the rise of modernity. Cross-list with Anthropology, Museums and Society and Political Science.
Instructor(s): R. Brown
Area: Humanities
Writing Intensive.

AS.010.384. Early Christian Art and Medieval Art. 3 Credits.
Area: Humanities.

AS.010.385. Byzantine Art. 3 Credits.
This course will cover the arts of Byzantium in the medieval period, from the seventh to the fifteenth centuries.
Instructor(s): H. Maguire
Area: Humanities.

AS.010.387. Roman Imperial Sculpture. 3 Credits.
Area: Humanities.

AS.010.389. The Stone and the Thread. 3 Credits.
This course examines the built environment of the Inka and considers architecture in its social, historical, and cultural contexts. Shared forms and ideas implicit in the fiber arts offer comparative points for analysis and discussion.
Instructor(s): L. DeLeonardis
Area: Humanities
Writing Intensive.

AS.010.392. Creating A Museum Exhibition: Micro-monuments. 3 Credits.
Area: Humanities.

AS.010.396. Art After 1945. 3 Credits.
Instructor(s): K. Tuma
Area: Humanities.

AS.010.397. Games of Eros and Mars: Art and Music of Renaissance Ferrara. 3 Credits.
Area: Humanities
Writing Intensive.

AS.010.398. Tombs for the Living. 3 Credits.
Centering on the tomb as a unit of analysis, this course examines how death and funerary ritual reflect the cultural values of the living and are an active force in shaping them. Drawing on case studies from Mesoamerica and the Andes we consider various approaches to entombment and funerary ritual.
Instructor(s): L. DeLeonardis
Area: Humanities
Writing Intensive.

AS.010.405. Depicting the Invisible God in the Middle Ages. 3 Credits.
Discusses conditions of medieval image making and theory. Each meeting focuses on how to represent God in the visual arts and introduces iconographic concepts and their reception.
Instructor(s): N. Zchomelidse
Area: Humanities
Writing Intensive.
AS.010.407. Ancient Americas Metallurgy. 3 Credits.
This course addresses the technology, iconography and social significance of metals and draws on case studies from Colombia, Peru, Hispaniola and Panama. Collections study in museums. May also be used as credit toward the Archaeology major. Cross-listed with PLAS
Instructor(s): L. Deleanardis
Area: Humanities.

AS.010.408. Venetian Art and the Mediterranean 1440-1560. 3 Credits.
How Venetian art 1450-1580 was informed by the city’s unique ecological environment and its status as a nexus of cultural interaction in the Mediterranean. Emphasis on recent scholarship.
Instructor(s): S. Campbell
Area: Humanities.

AS.010.412. The Art of Describing. 3 Credits.
Limited to Seniors only (Juniors with permission). This writing-intensive course explores the complex role of description in the analysis and interpretation of works of art. This course explores the role of description in the analysis and interpretation of works of art. Emphasis will be placed on texts by twentieth-century authors, though not exclusively on twentieth-century subject matter. Our primary focus will be the use of different rhetorical strategies to meet the formidable challenge of “translating” visual phenomena into language.
Instructor(s): K. Tuma
Area: Humanities
Writing Intensive.

AS.010.415. Modernism and Postmodernism in Architecture. 3 Credits.
"Form forever follows function," "the house is a machine for living in," "less is more," "less is a bore"—when and where on earth did these architectural catch phrases originate, and what did they mean to the people who coined them and attempted to express them in their designs for buildings? In this course we will study the major architectural theories and design trends of the late 19th and early 20th centuries in Europe and the United States—a turbulent and complicated period in the history of architecture. Topics and personalities addressed in this course will include Expressionism, the Bauhaus, Le Corbusier, urbanism, functionalism, and Frank Lloyd Wright.
Instructor(s): M. Perschler
Area: Humanities
Writing Intensive.

AS.010.419. Passion Cult, Passion Image, Passion Drama. 3 Credits.
A set of interdisciplinary explorations of the Passion of Christ theme, viewed as a mythic paradigm within European visual culture, religious consciousness and cultic practice since the High Middle Ages.
Instructor(s): M. Merback
Area: Humanities
Writing Intensive.

AS.010.421. Michelangelo and His Contemporaries: Liscense, Controversy, and Reform in 16th Century Italian Art. 3 Credits.
An approach to the later work of Michelangelo (ie. 1520-64) and the response to his art by writers and artists in Rome, Florence and the Veneto before and after the call for a "reform of art" by the Council of Trent.
Instructor(s): S. Campbell
Area: Humanities.

AS.010.422. Early Modern Dutch and Flemish Painting. 3 Credits.
Explores the major painters and printmakers working in the Netherlands during the sixteenth and early seventeenth centuries: Pieter Brueghel, Jan Gossaert, Pieter Aertsen, Peter Paul Rubens, Jan Steen, Jan Vermeer, and many others.
Instructor(s): M. Merback
Area: Humanities.

AS.010.423. Roman Sculpture. 3 Credits.
The course examines all the major public and private monuments, in Rome and in the provinces, from the Republican age to the end of the Roman empire. It considers their cultural, political, and social contexts, and of course the original architectural setting. New light is shed on the reception of statuary and reliefs by the Roman viewer, using primary texts as well as the sculptures themselves. The course illustrates the different types of sculpture that an ancient Roman would have encountered, explaining the nuances of meaning in the different words used by Roman and Greek authors in their descriptions. Sculpture was an integral part of Roman life: indeed the Romans placed statues and reliefs in their houses, villas, gardens, and tombs, as well as in their temples and public buildings. While Rome remains a focus for the course, western and eastern provincial examples are also offered to help further understand the role of Roman sculpture. May also be used as credit toward the Archaeology major. Cross-listed with Classics.
Instructor(s): P. Tucci
Area: Humanities.

AS.010.424. Collecting Roman Art: From Antiquity to Present. 3 Credits.
A survey of the most important collections of Greek and Roman sculpture, from the late-Republican age through the Middle Ages and the Renaissance, until the creation of the main museums in Europe and in the United States.
Instructor(s): P. Tucci
Area: Humanities.

AS.010.430. History of Roman Art and Architecture. 3 Credits.
This course explores the principal forms and contexts in which art and architecture developed in the Roman world. It surveys Roman art and architecture from the foundation of the city of Rome - against the background of the Etruscan tradition - to the divergent trends of late antiquity, including the interaction between Rome and the provinces of the empire. Overall the course encourages critical thinking about the purpose of studying art and architecture as a tool for understanding the Roman world, and provides an introduction into how to use visual and material evidence as a historical source. On completion of this course students will be able to describe and evaluate the architectural style and decorative key Roman monuments, as well as their function in ancient society. Cross-list with Classics
Instructor(s): P. Tucci
Area: Humanities.

AS.010.431. History of Art: Histories, Methods, Theories. 3 Credits.
This course will be a short introduction to the construction of the discipline and to the different methodologies developed in the analysis of works of art, as a way to understand the basic challenges faced today by Art History.
Instructor(s): F. Pereda
Area: Humanities
Writing Intensive.
AS.010.433. Sculpture and the Embodied Viewer. 3 Credits.
This seminar serves as an introduction to reading and writing about visual experience. Our primary focus will be on the relationship between embodied viewers and the art of sculpture broadly defined. By exploring the art of sculpture in all of its historical forms, from the ancient to the contemporary we will investigate the experiential and spatial challenges sculpture poses in order to develop the necessary analytic skills for understanding and interpreting the visual arts. We will combine on-site studies of sculptures in local collections (including the Walters Art Museum, the Baltimore Museum of Art, and public works in Baltimore and on campus) with the development of a critical vocabulary with which to write about sculptural objects, one that draws on the critical histories of sculpture from the birth of art history to the present day.
Instructor(s): C. Lakey
Area: Humanities
Writing Intensive.

AS.010.440. Velázquez and 17th Century Spanish Naturalism. 3 Credits.
An introduction to Spanish Baroque painting, with specific attention to the emergence of naturalism in the work of Diego Velázquez, Francisco de Zurbarán, Murillo and Ribera. This course is open to graduate students.
Instructor(s): F. Pereda
Area: Humanities.

AS.010.445. Topics in Postwar European Art. 3 Credits.
This seminar examines aspects of artistic production in Western Europe primarily in the period 1950-1972, with an emphasis on the art of France, Italy, the Benelux, and German-speaking countries. How was the work of art reimagined and repositioned in the wake of World War II and the horrors of the Holocaust, in the context of reconstruction and an emerging consumer society, and in light of the Cold War? How did postwar artists conceive the claims of artistic tradition and painting in particular in a rapidly expanding field of aesthetic practices and possibilities? Is there such a thing as “European art,” and if so, how does it relate to or mediate among various national identities? These and related questions will be at the heart of our discussions.
Instructor(s): M. Warnock
Area: Humanities.

AS.010.460. The Medieval Art and Architecture of Venice and Constantinople. 3 Credits.
Juniors and Seniors only An introduction to the rival cities, Venice and Constantinople, studied through their medieval art and architecture. Meets with 010.681
Instructor(s): M. Maguire
Area: Humanities.

AS.010.461. Courbet and Manet. 3 Credits.
A close engagement with the work of two great 19th-century French painters.
Instructor(s): M. Fried
Area: Humanities.

AS.010.468. Sculpture After Sculpture. 3 Credits.
A survey of major theories of sculpture from the mid-Twentieth Century to the present day. Through close readings of critical texts, we will consider the following nexes of debate: late modernism; minimalism; land art and the alleged dispersion of sculpture as an autonomous medium; site-specific and mobile site sculpture; giganticist sculpture; and the resurgence of a conventional sculpture of bodily proportion during the last fifteen years after sculpture as a medium was declared obsolete: a sculpture “after” sculpture. Readings: Writings by Henry Moore, Herbert Read, Clement Greenberg, Michael Fried, Donald Judd, Robert Morris, Robert Smithson, Rosalind Krauss, Yve-Alain Bois, Douglas Crimp, Hal Foster, Alex Potts, Miwon Kwon, and George Baker.
Instructor(s): J. Meyer
Area: Humanities.

AS.010.469. Return of the Sixties. 3 Credits.
The period of the Sixties and early Seventies has emerged as a central preoccupation of art and art history in recent years. The Sixties witnesses the conclusion of modernism and utopic aspirations, of radical politics and the counterculture. It also ushers in contemporary forms of mediation, consumption, and mobility. This course will examine the art of Sixties return, and narratives of art since the Sixties. Topics will include the Sixties as history, memory, and nostalgia; the monumentalization of entropy (the “return” of Robert Smithson); the artist-traveler from Ed Ruscha to Francis Alys; and the reprisal of sculpture as medium after its alleged dispersion. We will consider works by Francis Alys, Matthew Buckingham, Gerard Byrne, Tom Burr, Tacita Dean, Sam Durant, Olafur Eliasson, Felix Gmelin, Renée Green, Mary Kelly, Kerry James Marshall, Mike Nelson, Philippe Parreno, Charles Ray, Mark Tribe, and Kelley Walker, among others. This class is led by James Meyer, Associate Curator of Modern and Contemporary Art, National Gallery of Art. Will meet with 010.641
Instructor(s): J. Meyer
Area: Humanities.

AS.010.470. Power and Politics in Assyrian Art. 3 Credits.
Assyria, centered in northern Iraq, created one of the world’s first great empires that dominated the ancient Near Eastern world from around 900 to 612 BCE. In concert with imperial expansion came an explosion of artistic production ranging from palace wall reliefs to small-scale luxury objects. This seminar examines the close relationship between the arts and politics in the Assyrian empire. Some themes that will be explored are: historical narrative, text and image, portable luxury arts and gender, politics and religion. The course will engage in close visual analysis of the ancient materials and readings of critical scholarship.
Instructor(s): M. Feldman
Area: Humanities
Writing Intensive.

AS.010.481. Classics of Art Criticism. 3 Credits.
Readings by Diderot, Baudelaire, Fry, Greenberg.
Instructor(s): M. Fried
Area: Humanities.

AS.010.501. Independent Study. 0 - 3 Credit.
Instructor(s): Staff.

AS.010.502. Independent Study. 0 - 3 Credit.
Instructor(s): Staff.
AS.010.521. Honors Thesis. 0 - 3 Credit.
Open to students by arrangement with a faculty advisor in the History of Art Department. Interested students should review the program description available in the department office.
Instructor(s): Staff
Writing Intensive.

AS.010.522. Honors Thesis. 3 Credits.
Instructor(s): Staff
Writing Intensive.

AS.010.552. Museum Independent Study. 1 Credit.
Instructor(s): E. Maguire.

AS.010.596. Internship-Summer. 1 Credit.
Instructor(s): E. Rodini; K. Tuma; M. Koortboijan; P. Tucci.

AS.010.597. Independent Study-Summer. 3 Credits.
Instructor(s): L. DeLeonardis; M. Koortboijan; S. Campbell.

AS.010.603. The Active Body: On Display and in Performance.
An examination of two recent developments in art history and museum studies: the recognition of the object as active and agentic and a growing critical engagement with the body of the artist and performance art. The seminar will unsettle these two themes with the history of living humans on display, from nineteenth-century exhibitions to present-day craftspeople, thinking through bodies, objects, and performance through disciplinary engagements from anthropology, political theory, art history, and museum studies. Open to motivated undergraduates.
Instructor(s): R. Brown
Area: Humanities.

AS.010.605. Problems in Description.
Instructor(s): K. Tuma.

AS.010.606. Sculpture After Sculpture.
A survey of major theories of sculpture from the mid-Twentieth Century to the present day. Through close readings of critical texts, we will consider the following nexes of debate: late modernism; minimalism; land art and the alleged dispersion of sculpture as an autonomous medium; site-specific and mobile site sculpture; gigantist sculpture; and the resurgence of a conventional sculpture of bodily proportion during the last fifteen years after sculpture as a medium was declared obsolete: a sculpture “after” sculpture. Readings: Writings by Henry Moore, Herbert Read, Clement Greenberg, Michael Fried, Donald Judd, Robert Morris, Robert Smithson, Rosalind Krauss, Yve-Alain Bois, Douglas Crimp, Hal Foster, Alex Potts, Miwon Kwon, and George Baker.
Instructor(s): J. Meyer.

AS.010.607. The Epistemology of Photography.
This seminar will ask how photography produces ways of knowing: how does photography’s reality-effect shape its dissemination and absorption? Is photography’s emergence during the colonial era coincidental or catalytic? How is memory (re)constituted in a photography-saturated world? What kinds of histories does photography encourage and discourage? Is a photograph an object? We will read across disciplines (literature, anthropology, history, history of art, political science, theory) to investigate the epistemology of photography and the photograph.
Instructor(s): R. Brown.

AS.010.608. Urban Images, Urban Realities from Rome to the Renaissance.
In the western world over the course of the past two millennia, cities and urban living have been a central component of what it has meant, in the eyes of contemporaries, to be ‘civilized.’ Hence, representations of cities often tend to reflect the political, cultural and ideological agendas of those who created or commissioned them, from the ‘Madaba Map Mosaic’ in sixth-century Jordan to the Lorenzetti frescoes in the Palazzo Pubblico in fourteenth-century Siena. In this course, we will attempt to compare these idealized images with the reality of urban living conditions in western Europe, insofar as these can be traced through textual and archaeological evidence, in order to assess the relationship between the ‘real’ and the ‘ideal,’ and to ask how and why the former often differed so greatly from the latter.
Instructor(s): H. Dey.

AS.010.609. Image and Incarnation.
Area: Humanities.

AS.010.612. Medieval Image.
From a careful reading of significant works of art, contemporary texts bearing on images, and modern theoretic writings, the seminar investigates the function of narratives, icons, physical matter, and accompanying texts in the production of meaning.
Instructor(s): H. Kessler.

AS.010.613. Questions of Artistic Geography in Italy, 1400-1600.
A consideration of the role of place in the art of Lorenzo Lotto, Gaudenzio Ferrari, Cesare da Sesto, Romanino, Moretto, Pordenone, Titian, and other artists active before the canon-formation enterprise of Giorgio Vasari definitively altered the map of Italian art after 1550. Also open to advanced undergrads.
Instructor(s): S. Campbell.

AS.010.616. Monumental Narrative.
Investigates the depictions of Old and New Testament themes on the walls of early medieval buildings. The programs and sources of early Christian cycles, the adjustments made to address the public, and such technical issues as the role of model books are studied.
Instructor(s): H. Kessler.

AS.010.618. Topics in 19th Century Art.

Instructor(s): M. Merback
Area: Humanities.

AS.010.620. Art of Colonial Peru.
Instructor(s): L. DeLeonardis
Area: Humanities.

Beginning with the anti-colonial and popular art of the turn of the nineteenth century, the seminar will address the subcontinent’s participation in modernism, interrelations between “high” and “vernacular” art, appropriations of spirituality, critical engagements with sexuality and feminism, and experimentations with film, performance, and new media into the 21st century. Questions related to nationalism, modernity, postcoloniality, religio-political conflict, commercialization, international biennials, and globalization. Note: Course will engage with Raqs Media Collective’s spring campus residency. Seminar is open to motivated undergraduates.
Instructor(s): R. Brown.
AS.010.629. Materials in Postwar Art.
Through case studies of specific artists and works of art, this course examines the use of new materials in the postwar period: bricks, felt, fiberglass, fluorescent light, house paint, kapok, latex, lead, rocks, rubber, sponges, vinyl, wax, etc.
Instructor(s): K. Tuma.
Area: Humanities.

AS.010.630. Art of Medieval Italy.
Instructor(s): H. Kessler
Area: Humanities.

AS.010.631. Art, Science and Representation in the Middle Ages.
This seminar investigates the relationship between art, science, and theories of representation from the late antique period through the fourteenth century. Select topics include illuminated cosmological and astronomical manuscripts; Islamic cartographers and astrologers at the court of Roger II in Palermo; the rise of optical theory and scientific representation; and the intersection of diagrammatic and mimetic theories of images.
Instructor(s): C. Lakey.
Area: Humanities.

AS.010.632. Mannerism.
Transformations in central Italian art following the Sack of Rome and the Florentine Last Republic, with a particular focus on the court of Cosimo I in Florence (1537-1574).
Area: Humanities.

AS.010.634. The Politics of Visual Culture.
In-depth reading and discussion at the intersection of visual culture and the political. Issues may include photography and colonialism, national symbolisms, commodification of culture, visual and ethnographic display, the national museum, repatriation, modernity and the spectacle.
Instructor(s): R. Brown.
Area: Humanities.

AS.010.635. Art and Representation in Nineteenth Century Peru.
Permission required Graduate, nineteenth-century Peru, nationalism, visual sources and interpretation
Instructor(s): L. DeLeonardis.
Area: Humanities.

AS.010.636. Cezanne and Interpretation.
This course explores key interpretations of Cézanne’s art from the late nineteenth century to the present, including formalist, socio-historical, psychoanalytic, phenomenological, deconstructive and post-deconstructive perspectives.
Instructor(s): K. Tuma.
Area: Humanities.

AS.010.640. van Eyck and His Legacy.
Area: Humanities.

AS.010.641. Return of the Sixties.
The period of the Sixties and early Seventies has emerged as a central preoccupation of art and art history in recent years. The Sixties witnesses the conclusion of modernism and utopian aspirations, of radical politics and the counterculture. It also ushered in contemporary forms of mediation, consumption, and mobility. This course will examine the art of Sixties return, and narratives of art since the Sixties. Topics will include the Sixties as history, memory, and nostalgia; the monumentalization of entropy (the “return” of Robert Smithson); the artist-traveler from Ed Ruscha to Francis Als; and the reprisal of sculpture as medium after its alleged dispersion. We will consider works by Francis Als, Matthew Buckingham, Gerard Byrne, Tom Burr, Tacita Dean, Sam Durant, Olafur Eliasson, Felix Gmelin, Renée Green, Mary Kelly, Kerry James Marshall, Mike Nelson, Philippe Parreno, Charles Ray, Mark Tribe, and Kelley Walker, among others. This class is led by James Meyer, Associate Curator of Modern and Contemporary Art, National Gallery of Art. Will meet with 010.469.
Instructor(s): J. Meyer.
Area: Humanities.

AS.010.642. Man of Sorrows: Reception, Interpretation, Confrontation.
Focusing on the cultic and devotional imagery of Christ as the Man of Sorrows, this seminar explores modes of reception in Byzantine, Medieval and Renaissance art (painting, sculpture and prints).
Instructor(s): M. Merback.
Area: Humanities.

AS.010.644. Mantegna and Bellini: painting and art theory 1450-1500.
Mantenga’s and Bellini’s work will be considered in the context of humanist and antiquarian culture of Padua, Venice and Mantua.
Instructor(s): S. Campbell.
Area: Humanities.

AS.010.650. Reform Art In Italy.
This course is a consideration of initiatives to reform religious art in Italy before and after the Council of Trent.
Instructor(s): S. Campbell.
Area: Humanities.

The depiction of visionary experiences is an important and frequent topic in medieval art. This course discusses iconographical and theoretical preconditions for the development of a particularly challenging body of medieval images that range from the visions of Old Testament prophets, to John’s Apocalypse, dreams, and visionary experiences in the context of female monasticism (Hildegard von Bingen, Gertrud von Helfta). Issues covered in this course are: patristic and medieval theories of vision, devotional practices, and the scientific approach towards vision in the later Middle Ages.
Instructor(s): N. Zchomelidse
Area: Humanities.

This seminar investigates the fate of painting in the decades following Abstract Expressionism. Topics to be addressed include: the legacy of Jackson Pollock; anti-gesture; European décollage; painting and photography; modularity/seriality/chance; painting and conceptualism; monochrome and the fate of color.
Instructor(s): K. Tuma.
Area: Humanities.

AS.010.655. Religion in Roman Art.
This course explores the relationships between Roman art and religion through a survey of key topics and issues, from the archaic period to late antiquity, providing an introduction into how to use both textual and material evidence as sources for understanding Roman art and society.
Instructor(s): P. Tucci.
Area: Humanities.

AS.010.656. Depicting the Invisible God in the Middle Ages.
Discusses conditions of medieval image making and theory. Each meeting focuses on how to represent God in the visual arts and introduces iconographic concepts and their reception.
Instructor(s): N. Zchomelidse.
Area: Humanities.

How Venetian art 1450-1580 was informed by the city’s unique ecological environment and its status as a nexus of cultural interaction in the Mediterranean. Emphasis on recent scholarship.
Instructor(s): S. Campbell
Area: Humanities.

AS.010.658. Special Topics in the Art of Lombardy and the Veneto, 1500-1600.
An approach to the problem of regionalism in Italian art, focusing on art production in the Lombard cities of Bergamo, Brescia and Cremona 1520-90.
Instructor(s): S. Campbell.
AS.010.659. Passion Cult, Passion Image, Passion Drama.
A set of interdisciplinary explorations of the Passion of Christ theme, viewed as a mythic paradigm within European visual culture, religious consciousness and cultic practice since the High Middle Ages. Instructor(s): M. Merback.

AS.010.661. 12th Century Courts at Constantinople and Patermo.
Area: Humanities.
Instructor(s): H. Maguire.

AS.010.666. Exhibiting the Other.
Despite challenges to museum practices in the 1970s and 1980s, the approach to displaying the art and visual culture of regions and periods outside of the European and North American mainstream remains caught between scholarly theorizing and demands for the commodification of the exotic. The ongoing exclusionary logic of collecting and display practices and the shrinking budgets for museums undermine efforts to rethink and challenge longstanding institutionalized patterns. In this seminar we will assess the politics, theory, and practice of displaying what still operates as the "other", reading across art history, museum studies, politics, and anthropology. Open to senior undergraduates with permission of instructor. Cross-listed with Political Science and Programs in Museums and Society
Instructor(s): R. Brown.

AS.010.675. Roman Sarcophagi.
Area: Humanities.
Seminar will assess the many recent contributions to research on these monuments, and will primarily be devoted to problems of interpretation.

AS.010.676. Problems in Romanesque Art.
This course explores the art, historiography, and interpretation of Romanesque art, including select topic for discussion around specific works, focusing on issues such as the "rebirth" of monumental sculptures, orality and literacy, visions and visually, the textual body, authorial presence/denial, visual exegesis, etc.
Area: Humanities.

An introduction to the rival cities, Venice and Constantinople, studied through their medieval art and architecture. Meets with 010.460
Instructor(s): H. Maguire
Area: Humanities.

This seminar will study the art and architecture of Venice and its colonies from the ninth to the fifteenth centuries, including architecture, sculpture, wall and floor mosaics, painting and metalwork.
Instructor(s): H. Maguire.

AS.010.684. Topics in Recent Art: Jeff Wall, Joseph Marioni, Anri Sala.
A consideration of the work of at least three contemporary artists in different media: the photographer Jeff Wall, the painter Joseph Marioni, and the video artist Anri Sala. Open to advanced undergrads with permission of the instructor.
Instructor(s): M. Fried.

AS.010.685. Roman Sarcophagi.
Seminar will assess the many recent contributions to research on these monuments, and will primarily be devoted to problems of interpretation.
Area: Humanities.

AS.010.686. Serra, Hesse, Nauman.
Instructor(s): M. Fried.

AS.010.687. Topics in Postwar European Art.
This seminar examines aspects of artistic production in Western Europe primarily in the period 1950-1972, with an emphasis on the art of France, Italy, the Benelux, and German-speaking countries. How was the work of art reimagined and repositioned in the wake of World War II and the horrors of the Holocaust, in the context of reconstruction and an emerging consumer society, and in light of the Cold War? How did postwar artists conceive the claims of artistic tradition and painting in particular in a rapidly expanding field of aesthetic practices and possibilities? Is there such a thing as “European art,” and if so, how does it relate to or mediate among various national identities? These and related questions will be at the heart of our discussions.
Instructor(s): M. Warnock.

AS.010.689. Seeing Sculpture.
This course explores the art of sculpture in all of its historical forms, from the ancient to the contemporary, and investigates the experiential and spatial challenges that sculpture as a medium poses. Our focus will combine on-site studies of artifacts in local collections with the development of a critical vocabulary with which to write about sculptural objects, one that draws on the rich history of responses to sculpture from the birth of art history to the present.
Instructor(s): C. Lakey; J. Mellus
Area: Humanities.

AS.010.693. Classics Of Art Criticism.
Readings include Diderot, Baudelaire, Fry, Greenberg, and Jeff Wall.
Instructor(s): M. Fried.

AS.010.696. Serra, Hesse, Nauman.
Instructor(s): M. Fried.

AS.010.697. Topics in Venetian Art.
This seminar examines artistic exchanges between Venice and its territorial state.
Instructor(s): S. Campbell.

AS.010.698. The Representation of Space in the Roman World.

AS.010.700. Juan Gris, Cubism & Representation.
This course is offered to Undergraduates by permission only. Contact Sally Hauf: shauf@jhu.edu for permission. - In his paintings, collages, and drawings, Juan Gris (1887-1927) made major contributions to the radical redefinition of pictorial representation in Paris in the early years of the 20th century. However, he has too often dismissed as a craftsman rather than a revolutionary if not overlooked altogether. Triangulating his work with that of Picasso and Matisse, this seminar will explore Gris' role in the innovations of the teens and in the post-war "return to order." Special attention will be given to his particular brand of Cubism, with its interest in effects of light (halo, shadow, silhouette), mixture of materials, and complex pattern.
Instructor(s): H. Cooper.

AS.010.703. Art History’s Interdisciplinary Turn.
Examines the ways Art History has opened itself to paradigms in other disciplines since the 1970s. What has been gained and lost? What does it mean to be "interdisciplinary" today?
Instructor(s): M. Merback.

AS.010.704. Altarpiece and Altar-image.
This seminar investigates, historically and anthropologically, the origins, development and articulation of the Christian altarpiece as a functional genre within European art, on both sides of the Alps, with emphasis on the later Middle Ages and early Renaissance.
Instructor(s): M. Merback.
AS.010.705. Dürer & Grünewald.  
Recent perspectives on the two most celebrated artists of the German Renaissance, their lives and intersecting careers, their major works, and the shifting tides of reception that ultimately made them representatives of “zweierlei deutsche Kunst” -- opposed models of German art’s epochal achievement.  
Instructor(s): M. Merback.

AS.010.706. Pilgrimage: Art and Anthropology.  
Research paradigms and problems in the study of Christian pilgrimage, ca. 500-1500, and its relation to prevailing forms of visual culture, popular and elite. Topics include: the historical development of European cult forms and shifting conceptions of sanctity; articulations in the environmental poetics of pilgrimage shrines; case studies of miracle-cycles and votives, portable objects and pilgrimage devotionalia, and works of art thematizing the penitential, experiential, and therapeutic dynamics of homo viator.  
Instructor(s): M. Merback.

AS.010.712. Michelangelo and His Contemporaries: Liscense, Controversy, and Reform in 16th Century Italian Art.  
An approach to the later work of Michelangelo (ie. 1520-64) and the response to his art by writers and artists in Rome, Florence and the Veneto before and after the call for a “reform of art” by the Council of Trent.  
Instructor(s): S. Campbell  
Area: Humanities.

The course investigates the earliest influence from Greece on Roman artists, architects and patrons during the Late Republic. Even before the conquest of mainland Greece, Roman society was transformed by a dramatic process of acculturation. Hellenistic art, quickly adopted by the Romans, played an important part in the development of late-republican Rome: the contrast between the old mos maiorum and what would soon be condemned as luxuria was striking. Archaeological material and literary sources prove that the new taste pervaded not only the Roman way of life but also art and architecture. The course examines in detail the inspiring struggle between Etrusco-Italic traditions and the overwhelming riches from the Hellenistic world. Cross-listed with Classics  
Instructor(s): P. Tucci.

AS.010.717. Alternative Histories Through Art and Archaeology: from Arcaic to Late Antique Rome.  
This seminar investigates important areas and buildings of ancient Rome in relation to the culture and events of their time, and explores the role of art and architecture in Roman society. Methodologically the focus is on the integration of diverse sources (archaeological evidence, architecture, sculpture, mosaic, painting) to reconstruct and understand different aspects of Rome’s development, from its foundation to the late antique period. This course provides a framework for critical discussion of historical and socio-cultural themes through the analysis and interpretation of material and visual culture as well as other forms of archaeological evidence. It addresses key debates on the construction and transformation of ancient Rome, exploring notions of identity, cult, language, economy as well as forms of political organization. Overall the course aims to give graduate students the tools to access those histories and ideologies which appear unattainable through the literary sources alone, allowing for the expansion of existing narratives and challenging the underlying models which inform our understanding of key historical and cultural processes. To be taught by incoming faculty member Pier Luigi Tucci.  
Instructor(s): P. Tucci.

AS.010.718. Art and Architecture in the Augustan Age.  
This seminar investigates Roman art and architecture during the Augustan age (31 BC – AD 14), in Rome and in the provinces of the empire. Augustus’ cultural program influenced any aspects of the Roman way of life (religious ritual, clothing, state ceremony), leading to the creation of a new visual language that expressed and furthered the transformation of Roman society. Methodologically the focus will be on the integration of diverse sources (archaeological evidence, architecture, sculpture, mosaic, painting) to reconstruct and discuss the images that a contemporary would have experienced in Rome and elsewhere.  
Instructor(s): P. Tucci.

AS.010.719. Art and Architecture under the Flavian Dynasty.  
This seminar investigates Roman art and architecture during the Flavian age (AD 69-96) in Rome and in the provinces. With the Flavian dynasty the empire enjoyed a period of renewed political and economic stability: and this was the result of the principate of Vespasian. The 2009-celebration of the bimillenary of Vespasian’s birth gave the opportunity to reassess the figure of this emperor and the role of his dynasty in the development of Rome. With the Flavians, the capital of the empire enjoyed a period of intense building activity (e.g. the Colosseum). The great projects of Vespasian and Domitian radically transformed its image. The embellishment of the city and the global re-planning of the urban spaces were the visible signs of the political revival of the empire. Methodologically the focus will be on the integration of diverse sources (archaeological evidence, architecture, sculpture, mosaic, painting, epigraphy and literary sources) to reconstruct the built environment of Rome during the last three decades of the 1st century AD. Cross-list with Classics  
Instructor(s): P. Tucci.

AS.010.720. Roman Art and Archaeology: The Capitoline Hill.  
An interdisciplinary seminar on the Capitoline Hill in Rome, with its focus on archaeological and architectural issues, as well as on the legacy of the classical world (from an ideal point of view, but also for what concerns the physical reuse of the memories of the past).  
Instructor(s): P. Tucci.

AS.010.730. Sacred Images in Early Modern Spain.  
This course will look at the dialogue between sacred images and art in Baroque Spain. The status of religious images, the “paragone” or competition between sculpture and painting, and the issue of cult, will all be analyzed through the work of such painters as Velazquez, Zurbaran and Ribera. Cross-listed with the Spanish section of GRLL.  
Instructor(s): F. Pereda.

AS.010.731. Art & Reform in Renaissance Spain.  
The seminar will explore main ideas of Spiritual and Ecclesiastical Reform in relation to the arts. The seminar will consider different chronological and geographical areas, such as Renaissance Seville, Counter-Reformation Valencia or the decoration of the Escorial Basilica.  
Instructor(s): F. Pereda.

This seminar will concentrate in the artistic production in the time of the Catholic Monarchs (1472-1516). The immigration of Flemish artists, the mechanics of patronage, and the interreligious uses of images will be addressed with a historical perspective.  
Instructor(s): F. Pereda.
AS.010.733. Evidence in Early Modern Art: Italy and Spain.
This course will analyze the uses of evidence in Early Baroque art at the crossroads of History of Art, Science and Religion. How do images/paintings produce evidence? How does evidence relate to belief? And to skepticism? And how does it affect shifting conceptions of Naturalism? Case studies will include paintings by such artists as Caravaggio, Velázquez, Ribera or Zurbarán.
Instructor(s): F. Pereda
Area: Humanities.

This course investigates medieval practices and theories of 'seeing' (broadly defined) in relation to the visual arts: topics will include the history of perspective, ancient and medieval optics, medieval histories of vision and perception, the allegorization of optics in theological tracts and literature, and the application of the theories in art, preaching, and liturgy.
Instructor(s): C. Lakey; H. Kessler.

AS.010.760. Agency and Other Topics in Contemporary Theory of Art History.
A critical reading of texts by various thinkers including Alfred Gell, Horst Bredekamp, David Freedberg, Whitney Davis, and David Summers. Open to qualified undergraduates with the permission of the instructor. This course is being co-taught with Jeremy Melius.
Instructor(s): M. Fried; R. Leys.

AS.010.751. Writing the Italian Renaissance, Burckhardt to Panofsky.
A close reading of key thinkers, reconsidering their relevance to contemporary critical and art-historical practice. This course is being co-taught with Jeremy Melius.
Instructor(s): J. Melius; S. Campbell.

AS.010.761. Art and Reformation in Germany and Switzerland.
Research paradigms and new developments in evaluating the impact of church reform, evangelical theology, confessional conflict, iconoclasm, and revolution on the arts, visual culture, and the social place of the artist in German and Swiss society between 1500 and 1575.
Instructor(s): M. Merback
Area: Humanities.

Cross Listed Courses
Classics
AS.040.119. The World of Pompeii. 3 Credits.
This course will focus on the history and archaeology of Pompeii. Close attention will also be paid to the reception of Pompeian materials in European and American culture. Cross-listed with History of Art and the Program in Museums and Society.
Instructor(s): H. Valladares
Area: Humanities.

AS.040.201. Digging Up the Gods: The Archaeology of Roman Sanctuaries. 3 Credits.
This course will explore the major sites of Ancient Italy, such as Rome, Ostia, and Pompeii, from temples to dedications, and their role in religion and society. Cross-listed with History of Art.
Instructor(s): G. Gessert
Area: Humanities.

AS.040.218. Celebration and Performance in Early Greece. 3 Credits.
Surviving imagery suggests that early Aegean societies engaged in diverse celebratory performances, including funerals and palatial feasts, puberty rites and ecstatic dance. We investigate archaeological evidence of such celebrations, focusing on sociocultural roles, bodily experience, and interpretive challenges.
Instructor(s): E. Anderson
Area: Humanities
Writing Intensive.

AS.040.355. Roman Landscapes in Context. 3 Credits.
This course will explore Roman representations of landscape from the 1st century BCE to the 2nd century CE. We will also consider early modern fantasies of ancient landscapes. Cross-listed with History of Art and Interdepartmental.
Instructor(s): H. Valladares
Area: Humanities.

AS.040.357. The Art of Classical Greece. 3 Credits.
Instructor(s): J. Neils
Area: Humanities.

AS.040.360. The Archaeology of Daily Life. 3 Credits.
Limited to juniors and seniors from Classics, History of Art, Archaeology, and Museum and Society. Others with permission of instructor only. This course will examine objects of daily life from the Greco-Roman world in the Johns Hopkins University Archaeological Museum. Students will collaborate on an online catalogue, featuring their research. Cross-listed with History of Art, Near Eastern Studies, and Museums and Society.
Instructor(s): H. Valladares
Area: Humanities.

AS.040.366. The Archaeology of Ancient Cyprus: Investigating a Mediterranean Island World in the JHU Museum. 3 Credits.
This course explores the visual and material worlds of ancient Cyprus from the earliest human evidence through the Iron Age. Class involves regular analysis of artifacts based in the Archaeological Museum.
Instructor(s): E. Anderson
Area: Humanities
Writing Intensive.

AS.010.801. Special Rsrch & Problems.
Instructor(s): Staff.

AS.010.802. Special Research/Problems.
Instructor(s): Staff.

AS.010.803. Individual Work.
Instructor(s): Staff.

AS.010.804. Individual Work.
Instructor(s): Staff.

AS.010.805. Individual Work.
Instructor(s): Staff.

AS.010.890. Summer Practicum-History of Art.
Instructor(s): S. Campbell.

AS.010.997. History of Modern Art.
Writing Intensive.
AS.040.648. Homeric Archaeology.
This seminar surveys the archaeology of the Late Bronze Age in the Aegean, then explores the creation, diffusion, and reception of Homeric epic from the Iron Age to the end of the Archaic Period.
Instructor(s): A. Shapiro; E. Anderson.

AS.040.651. Greek Art: Archaic into Classical.
An intensive exploration, based on current scholarship, of Greek sculpture and painting ca. 500-460 BCE and the origins of the Classical style.
Cross-list with History of Art.
Instructor(s): A. Shapiro
Area: Humanities.

AS.040.663. Heroes and Hero Cult in Greece.
Instructor(s): J. Neils.

AS.040.668. The Authority of Ruins: Antiquarianism in Italy, 1690-1890. 3 Credits.
(Same as 040.668) This seminar will focus on the transformation of antiquarianism in Italy after the discovery of Herculaneum and Pompeii. Students will work primarily with rare books from the collections at JHU. Cross-listed with History of Art and Museums and Society and Interdepartmental.
Instructor(s): H. Valladares
Area: Humanities.

AS.040.671. Greek Portraiture and Society.
This seminar will explore the development of Greek portrait sculpture from the Early Classical through the Hellenistic periods and the contexts of its display in Greek cities.
Instructor(s): A. Shapiro.

Film and Media Studies
AS.061.223. Special Topics: Performance Art and Video. 3 Credits.
This course will explore the history and current state of video and performance art, two of the most important movements in contemporary art. How have they influenced each other and how have they affected mainstream media and cultural notions of art? Students will view significant works and their presentation in galleries, museums, and public spaces, and will create individual and collaborative performance pieces of their own.
Instructor(s): S. Barber
Area: Humanities.

Anthropology
AS.070.408. Creative Expression. 3 Credits.
Tacking between theoretical and ethnographic texts on art and poetry, visual image and dramatic performance, living body and natural landscape, this course seeks anthropological ground for an impersonal and asubjective philosophy of creative expression. Drawing from thinkers such as Nietzsche, Bergson, Whitehead, Merleau-Ponty, and Deleuze, and studies set in China, India, Indonesia, Melanesia, and aboriginal Australia, we will confront the working intuitions of artists and “creators” of various kinds with the unpredictable life of the worlds in which they work.
Area: Humanities, Social and Behavioral Sciences.

Near Eastern Studies
AS.130.329. Ancient Egyptian Art and Archaeology. 3 Credits.
A survey of Egyptian art as seen in the temples, tombs, funerary, and minor arts of Egypt between 3000 and 100 B.C. Slide lectures will provide a survey of art from the Pyramids to Augustus Caesar and will focus on such topics as the principles of Egyptian art; can the term art apply to early Egypt? How were artisans trained and what techniques and materials were utilized in their work? Co-listed (meets with) AS.133.750.
Instructor(s): B. Bryan
Area: Humanities
Writing Intensive.

Introduces students to the methods of analysis involved in the study of archaeological ceramics. In addition to the history of ceramic analysis and its place in archaeology, students will be introduced to the basic skills needed for processing ceramics in an archaeological setting, and introduce them to the basic corpus of ancient Eastern Mediterranean ceramics, from the Neolithic until the Hellenistic period, with an emphasis on assemblages from the region of Near East, Egypt, Aegean, Greece, and Rome. They will learn more technical forms of analysis aimed at identifying methods of production, and the function and use of ceramic vessels. The aim is to prepare students who intend to participate in archaeological field projects with the appropriate knowledge of the ceramics of the Eastern Mediterranean Region. Emphasis will be placed on linking analytical methods with the appropriate research questions they can address. Students will have the opportunity to work directly with existing collections at the university, and in the Walters Art Gallery.
Instructor(s): S. Batiuk
Area: Humanities.

AS.131.635. Seminar: Near East Archaeology.
Topic varies but can include the archaeology of Mesopotamia, Syria, or Palestine, or thematic discussions (e.g., on ideology, state collapse, etc.).
Instructor(s): G. Schwartz; M. Feldman.
German Romance Languages Literatures

AS.214.634. Aesthetics of Description.
Since the enduring disavowal of description by Lessing, characteristics commonly assigned to description include structural endlessness and exorbitance; the simple succession of elements; the "breakdown of composition" (Lukács) in a proliferation of details; the parity of described details; its failed ability at illusion; also its tendency to mortify, insofar as it transforms its subject into something static, stagnant. The course will undertake a critical revision of these characteristics by analyzing aesthetic debates and literary descriptions from the 18th to the 20th centuries. Topics leading the discussion will be: text-image relations; description between literature and science; observation through description; dynamization of description; motion and motionlessness; poetics of perception; performativity of description; the boredom of reading. Readings include: Bodmer, Breitinger, von Haller, Winckelmann, Lessing, Alexander von Humboldt, Hebbel, Stifter, Darwin, Issip Mandelstam, Aby Warburg, Lukács, Peter Weiss, Peter Handke. The course will be taught in German.
Instructor(s): E. Strowick.

AS.214.352. Writing and Wonder: Books, Libraries, and Discovery 1250-1500. 3 Credits.
The invention of printing occurred amid two centuries of intense development in the conduct and material means of European scholarship. The transition from writing by hand to movable type was accompanied by a revolution in scholarship that involved a new attitude to Classical and Biblical antiquity, the recovery of neglected and "lost" works, the formation of secular libraries, and the development of tools for the study of ancient handwriting, writing materials, and the history of language and of history itself. The revolution in attitudes to and uses of the book eventually transformed every discipline related to reading, writing, and the organization of knowledge. Topics to be covered include writing as an object of wonder, the transformation of a mythology of writing into a true history of books, writing, and libraries, the scientific study of writing and of language, and the representation of writing and books in the art and literature of the Middle Ages and Renaissance. Extensive use will be made of Johns Hopkins' large collection of books published before 1800, and student projects will be oriented toward reliving the experiences of scholars in this period, including via computer-assisted means. Open to all undergraduates. Knowledge of a foreign language helpful but not required.
Instructor(s): C. Celenza; W. Stephens
Area: Humanities.

AS.214.672. Tasso, the Epic & Tradition.
Students will achieve deep familiarity with Tasso's Gerusalemme liberata and Aminta; read selections from Gerusalemme conquistata, Il mondo creato, Tasso's Dialogues, and his literary-theoretical treatises; survey important texts of Tasso criticism, and sample Tasso's legacy in poetry and figurative arts.
Instructor(s): W. Stephens.

AS.214.681. Representing the Ancient Italian Past in the Renaissance.
The Renaissance was, among other aspects, a nationalistic movement, aimed at recovering the prestigious culture of the Roman and Etruscan past and counteracting the perceived decadence of the "modern" or "middle" age. Writers in both Italian and Latin pursued the "rebirth" of ancient Italic culture through a variety of literary and political strategies. After a brief review of familiar authors and texts from Petrarch to the Cinquecento, we will examine in depth a variety of texts in Latin and Italian that defended--often politically, and at times mendaciously--the ancient Italic cultural hegemony. Responses from other European cultures will be considered.

Humanities Center

AS.300.602. Theory, Painting, Vision.
Reading in philosophy, theory, criticism. Texts by Merleau-Ponty, Heidegger, Foucault, Cavell, Pippin, among others.
Instructor(s): M. Fried.

AS.300.631. Topics in Esthetics and Criticism.
This seminar will be taught successfully by four "estheticians," Richard Moran (Harvard), David Wellbery (University of Chicago), Michael Fried (JHU), and James Conant (University of Chicago).

AS.300.644. Theory, Painting, Vision.
Theory, Painting, Vision: Readings to be selected but they will definitely include texts by Barthes, Cavell, Wall, and Michaels.
Instructor(s): M. Fried.

Center for Africana Studies

AS.362.103. Introduction to African Arts. 3 Credits.
This course provides an overview of principal visual arts of Africa, prehistoric to contemporary.
Instructor(s): N. Bridges
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

Program in Museums and Society

AS.389.130. Mini Course: Conservation, An Introduction to Technical Art History. 1 Credit.
Look through the eyes of a conservator and learn how to answer historical questions by analyzing the physical nature of works of art. Objects examined will include paintings, sculpture and works on paper from the collection of the Baltimore Museum of Art. Class meets 4 times, on February 7, 14, 21 and 28, at the BMA. Syllabus and organizational meeting at JHU on Thursday, January 31, 5:30pm.
Instructor(s): T. Primeau
Area: Humanities.

AS.389.201. Introduction to the Museum: Past and Present. 3 Credits.
This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends. Anthropology, art, history, and science museums are considered. Cross-listed with Anthropology, History, and History of Art.
Instructor(s): E. Rodini
Area: Humanities, Social and Behavioral Sciences.
AS.389.205. Examining Archaeological Objects. 3 Credits.
This course considers the role of materials in the production, study and interpretation of objects by examining artifacts from the Johns Hopkins Archaeological Museum. Students will consider materials such as ceramics, stone, metal, glass and textiles, and visit artists’ studios to gain an understanding of historical manufacturing processes. M&S practicum course. Cross-listed with Archaeology, Near Eastern Studies, Classics, and History of Art.
Instructor(s): S. Balachandran
Area: Humanities.

AS.389.320. Photographs on the Edge: Ara Güler in Archives of the Smithsonian’s Freer and Sackler Galleries. 3 Credits.
Work as a curator alongside Smithsonian staff, researching the work of Turkish photographer Ara Güler to develop an exhibit that considers relationships between the history of photography, archives and the museum. Class will travel several times to the Freer and Sackler Galleries in Washington D.C. M&S practicum course.
Instructor(s): N. Micklewright
Area: Humanities, Social and Behavioral Sciences.

AS.389.330. Critique of the Museum in Contemporary Art. 3 Credits.
Since the 1960s, many artists have challenged art museum conventions, contesting the assumption that museums are ideologically neutral spaces of display. This institutional critique is examined in artworks, installations, literature. Cross-listed with History of Art.
Instructor(s): R. Haywood
Area: Humanities.

AS.389.342. Objects in Focus: Materials, Techniques, History. 3 Credits.
What can art and archaeological objects reveal about materials, their craftsmanship and preservation? We investigate artists’ treatises, visit studios and museum conservation laboratories and closely examine artworks. M&S practicum course. Cross-listed with Classics, History of Art, Near Eastern Studies.
Area: Humanities.

AS.389.343. Conservation of Modern and Contemporary Art. 3 Credits.
We examine how museums care for, interpret, and preserve modern and contemporary artworks that defy the traditional materials, display methods, and uses of ancient or historic art. Cross-listed with History of Art.
Area: Humanities.

AS.389.345. Introduction to Museum Practice. 3 Credits.
Taking the JHU Archaeological Museum as a case study and working closely with its holdings, we discuss the principles and practice of managing and preserving museum collections. Earns M&S Practicum credit. Cross-listed with History of Art, Anthropology, Near Eastern Studies, and Classics.
Instructor(s): S. Balachandran
Area: Humanities.

AS.389.354. Paper Museums: Exhibiting Prints at the BMA. 3 Credits.
In this advanced seminar, students work with BMA curator to organize an exhibition about the printed series. Covers various aspects of museum work, including research, installation, programming. M&S practicum course. Cross-listed with History of Art.
Instructor(s): R. Hoisington
Area: Humanities.

AS.389.356. Halls of Wonder: Art, Science, and Literature in the Age of the Marvelous, 1500-1800. 3 Credits.
Explore the material culture of “wonder” from the Renaissance to the Enlightenment in literature, science, and art, with Hopkins’ rare book collections and the Walters Art Museum. M&S practicum course.
Instructor(s): E. Havens
Area: Humanities.

AS.389.362. Behind the Scenes at the Walters Art Museum: Material Migrations. 3 Credits.
Work with Walters and STSci staff to learn about the workings of a professional art museum while developing an exhibition of images from the Hubble Space Telescope. M&S practicum course.
Instructor(s): E. Rodini
Area: Humanities.

AS.389.363. Curating Culture at JHU’s Evergreen Museum & Library: Excellence in Twentieth Century Design. 3 Credits.
In this hands-on course, students research Evergreen and develop an innovative, public exhibition or presentation. History of the house, grounds, books, artifacts are all subject to investigation. M&S practicum course. Cross-listed with History of Art.
Instructor(s): J. Abbott
Area: Humanities.

AS.389.365. Close Looking at the BMA: Van Dyck’s “Rinaldo & Armida. 3 Credits.
Music, drama, literature, history will all shed light on one of the BMA’s greatest paintings. Creative final projects will support the museum’s educational programming. Earns M&S practicum credit. Cross listed with History of Art.
Area: Humanities.

AS.389.366. Interpreting Warhol: An Introduction to Museum Education and Interpretation. 3 Credits.
A hybrid between art history and an introduction to museum practices, this course culminates in developing education programs for the BMA’s upcoming exhibition dedicated to Andy Warhol. M&S practicum course. Cross-listed with History of Art.
Instructor(s): P. Bautista
Area: Humanities.

AS.389.367. Walking with Reliquaries. 3 Credits.
Students will study medieval objects from the Walters Art Museum collection and design interpretative tools that will be used in an upcoming exhibition at the museum. The class meets at Walters, and is M&S practicum course. Cross-listed with History of Art.
Instructor(s): M. Bagnoli
Area: Humanities.

AS.389.368. Artists, Museums, and Social Purpose: Contemporary Models. 3 Credits.
How do artists working today engage with museums? Students explore these partnerships in theory and practice, proposing a local installation in collaboration with artist-instructor Peter Bruun. M&S practicum course. Cross-listed with Homewood Art Workshops; History of Art.
Instructor(s): P. Bruun
Area: Humanities.

AS.389.373. Encountering the Art of South Asia: Museum Display, Theory and Practice. 3 Credits.
Students reconsider the exhibition and interpretation of South Asian Art at the Walters Art Museum to suggest a new permanent display. Class meets at the Walters Art Museum. M&S practicum course.
Instructor(s): R. Brown; R. Mintz
Area: Humanities.
AS.389.440. Who Owns Culture?. 3 Credits.
This seminar explores the complicated, often explosive concept of cultural property, including questions surrounding the ownership, preservation, and interpretation of artifacts, monuments, heritage sites, and living traditions. Cross-listed with Anthropology and History of Art.
Instructor(s): E. Rodini
Area: Humanities, Social and Behavioral Sciences.

AS.389.460. Inventing the Middle Ages from the Renaissance to Today. 3 Credits.
Investigate the history of the collection, interpretation and display of medieval art by nations, museums and private collectors. Topics range from antiquarian interest to conception of medieval sculpture as "primitive", from the use of medieval objects in nationalistic displays and from early American museums such as the Cloisters in NY to current exhibits such as the Walters. Cross-listed with History and History of Art.
Instructor(s): J. Kingsley
Area: Humanities.

History of Science and Technology

The Department of the History of Science and Technology offers an undergraduate program leading to the degree of Bachelor of Arts with a major in science, medicine, and technology, and a graduate program leading to the degree of Doctor of Philosophy.

The department offers a variety of courses that deal with the history of the conceptual and technical development of the sciences, as well as the cultural and social impact of science and technology on Western civilization. These courses are open to all undergraduates in the Schools of Arts and Sciences and Engineering. A few of the courses require some background in an appropriate science, but others are accessible to those with no specialized knowledge who want to understand the part science has played in shaping modern culture. Students who have concerns about their technical competence for a given course should consult the professor involved.

Major in History of Science, Medicine, and Technology

Offered in cooperation with the Institute of the History of Medicine, this major allows students to combine substantive work in science with study of the social and historical context of modern science, medicine, and technology. The aim of the program is to produce graduates who are scientifically literate and technically competent, and who at the same time understand science and medicine not as static, autonomous enterprises but rather as modes of thought that have developed in specific social contexts.

The major is appropriate for any student planning a career in medicine or other areas of the health care industry. It is also flexible enough to serve as a basis for a variety of careers where an informed knowledge of science and technology and their impact on society is important. Such careers include broad areas of business and industry, journalism, teaching, museum work, and specialized areas of law and public policy.

Requirements for the B.A. Degree

- Sciences: In the sciences, engineering, and mathematics, students are required to have one semester of introductory calculus and a total of 30 credits coded (E, N, or Q), of which at least nine credits must be above the 100-level. These may be counted as part of the university’s distribution requirements. Laboratory courses in science count toward this requirement.
- History of Science, Medicine and Technology: A total of 24 credits of course work in the history of science, medicine and technology are required. These must include at least two survey courses and four additional courses above the 100-level (AS.140.103 Technology/ Western Traditions, AS.140.104, AS.140.105 History of Medicine, AS.140.106 History of Modern Medicine, AS.140.107 Introduction to Medicine, AS.140.108 Culture, Communication, and Technology, AS.140.109 Medicine: A Disciplinary View, AS.140.301 History of Science: Antiquity To Renaissance, AS.140.302 Rise of Modern Science, AS.140.303 Spaces of Inquiry: the Clinic, the Studio, or AS.140.321 Scientific Revolution.) Students in their senior year may take graduate courses, with permission. Students who demonstrate excellence in course work are eligible to write an honors thesis in their final year, for four additional credits. Students must have outstanding recommendations from two department members to be eligible for the thesis. Departmental honors are conferred if overall GPA is 3.5 and the thesis grade is A- or higher.
- Other Distribution Requirements: Students must take 12 credits outside the department and six credits in the Humanities, Social and Behavioral Sciences, Engineering, or Quantitative Studies. The choice of courses must be approved by the undergraduate advisor.

Minor in the History of Science, Medicine and Technology

The department offers a minor which may be combined with other science, social science, or humanities majors. To complete the requirements for the minor, students must have a total of 18 credits in the history of science, medicine, or technology, including at least one survey course. Students may elect one course outside the department, with the advisor’s approval.

Ph.D. in the History of Science and Technology

The graduate program in the history of science and technology leads to the Ph.D. degree. Although an M.A. degree is granted, candidates who seek only that degree are not ordinarily admitted. The object of the Ph.D. program is to provide the rigorous training necessary for a scholarly career in teaching and research; consequently, the focus of the student’s activity will be the research seminars of the department. Faculty from the Institute of the History of Medicine in the School of Medicine also participate in the program.

Admission

Application deadline is January 15. All supplemental materials (official transcripts, three letters of recommendation, official GRE scores, and, when applicable, official TOEFL scores) should be sent directly to the Graduate Admissions Office at:

Johns Hopkins University
Full-time Graduate Studies in Arts, Sciences, and Engineering
Graduate Admissions Office
Shriver Hall 28
3400 North Charles Street
Baltimore, Maryland 21218
Requirements for the Ph.D. Degree

Before candidates begin full-time research on their dissertations, they must prepare themselves adequately in the appropriate fields of knowledge, become skilled in the techniques of historical research, and be able to carry out a sustained piece of historical analysis and writing.

In the first year of the program students are introduced to the methods and techniques of research and complete a year-long survey course in the history of science or the history of medicine. Students in their second year of study present a research paper to the department. In the second and third years of study, students prepare a field in history and two specialized fields in the history of science, medicine, or technology. The fields are individually arranged and satisfied. The fields entail broad and intensive reading and the passing of a comprehensive examination and/or presentation of a major research paper. Before being admitted for formal candidacy for the degree, the student must also demonstrate a reading knowledge of two foreign languages. The final requirement for the Ph.D. degree is the completion of a dissertation that is an original contribution to historical knowledge and of a standard suitable for publication.

The History of Science and Technology is by its nature interdisciplinary, and students are encouraged to undertake study in related areas such as history, philosophy, and the natural and medical sciences.

Financial Aid

The department has several graduate fellowships and teaching assistantships. Students may also be eligible for federal financial support through the National Science Foundation. Information on these and other fellowships can be obtained through the fellowship advisor at the student’s college, or from the Fellowship Office of the National Academy of Sciences, National Research Council, Washington, D.C. 20025. In the recent past, doctoral candidates have also won support for their research in the United States and abroad through such sources as the Smithsonian Fellowships, the Fulbright-Hays grants, the Spencer Foundation, and the Deutscher Akademischer Austauschdienst (DAAD) Fellowship.

For current faculty and contact information go to http://host.jhu.edu/

Faculty

Chair
Sharon Kingsland

Professor (Chair): history of biology, especially ecology, genetics and behavioral biology; science in America.

Professors

Robert H. Kargon
Willis K. Shepard Professor of the History of Science: history of physics; science and social change; science in America.

Stuart W. Leslie
History of technology, history of science-based industry.

Lawrence M. Principe
Drew Professor of the Humanities, Professor: history of chemistry and alchemy, early modern science, science and religion.

Associate Professor

Maria Portuondo
History of science, science and exploration, science and technology in Latin America, early modern Spanish and Latin American Cosmography and geography.

Assistant Professor

Yulia Frumer
History of science, Japanese history.

Affiliated Faculty School of Medicine

Nathaniel C. Comfort
Associate Professor: history of biology, especially genetics, molecular biology, and biomedicine; history of recent science, oral-history and interviewing. Current project: History of human and medical genetics in America.

Mary E. Fissell
Professor: European health care and popular medicine, 17th and 18th centuries; early modern gender and the body.

Jeremy Greene
Elizabeth Treide and A. McGehee Harvey Chair in History of Medicine, Associate Professor: 20th century clinical medicine, therapeutics, pharmaceuticals, global health, history of disease.

Marta Hanson
Associate Professor: history of East Asian Medicine; History of Chinese science and medicine; history of epidemics and disease in China.

Graham Mooney
Assistant Professor: history of public health, 19th and 20th centuries; historical epidemiology; historical demography; disease surveillance and risk.

Randall M. Packard
William H. Welch Professor of History of Medicine: history of disease; public health; and medicine, health, and disease in Africa.

Gianna Pomata
Professor: medieval and Renaissance European medicine; natural history; Italy; history of history and of scholarship.

Daniel P. Todes
Professor: history of Russian medicine and science, social relations of scientific thought; history of biomedical sciences.
Part-Time and Joint Appointments

Elizabeth Rodini
Director, Program in Museums and Society.

For current course information and registration go to https://isis.jhu.edu/classes/

Courses

AS.140.105. History of Medicine. 3 Credits.
Course provides an overview of the medical traditions of six ancient cultures; the development of Greek and Islamic traditions in Europe; and the reform and displacement of the Classical traditions during the Scientific Revolution. Cross-listed with Public Health Studies
Instructor(s): M. Fissell
Area: Humanities, Social and Behavioral Sciences.

AS.140.106. History of Modern Medicine. 3 Credits.
The history of Western medicine from the Enlightenment to the present, with emphasis on ideas, science, practices, practitioners, and institutions, and the relationship of these to the broad social context.
Instructor(s): D. Todes
Area: Humanities, Social and Behavioral Sciences.

AS.140.111. Freshman Seminar. 3 Credits.
This Freshmen Seminar explores instances of first contact between different world cultures and western science (16th-20th c.). Some cases considered include Jesuits in the Chinese imperial court, Spanish missionaries and the Maya, etc.
Instructor(s): M. Portuondo
Area: Humanities, Social and Behavioral Sciences.

AS.140.113. Freshmen Seminar: Darwin, Freud, Pavlov: Perspectives on Human Nature. 3 Credits.
Instructor(s): D. Todes
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.115. Freshmen Seminar: Humans and Artifacts. 3 Credits.
Instructor(s): Y. Frumer
Area: Humanities, Social and Behavioral Sciences.

AS.140.117. Freshman Seminar: What was Enlightenment?. 3 Credits.
The 18th century movement known as "enlightenment" is the source for many of our Euro-American ideas about reason, modernity and progress. Enlightenment thinkers and traditions are also the main targets of contemporary post-modern critics. This course will examine key texts in the Enlightenment and anti-Enlightenment traditions. Course relies on weekly discussions based on close textual readings, and weekly writing assignments.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.118. Fresh Sem: Science and Utopia. 3 Credits.
Area: Humanities, Social and Behavioral Sciences.

AS.140.123. Johns Hopkins: The Idea of a University. 3 Credits.
Who was Ira Remsen and why is he interred in the building bearing his name? Was the School of Medicine's best surgeon really a life-long drug addict? This freshman seminar will explore the history of our university since its founding in 1876, including its schools of medicine, public health, nursing, the Applied Physics Laboratory and SAIS. We'll look carefully at the archives and develop a thematic class exhibit. Research and writing intensive.
Instructor(s): S. Leslie
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.125. The Hospital. 3 Credits.
You were probably born in one, will sooner or later find yourself being treated in one, and might just spend your career in one. This course will look at the history, economics, technology, and public policy debates surrounding the modern hospital. We will explore the hospital's role in health care delivery in rural and urban settings, in medical schools, and in mental asylums and other specialized hospitals. Special attention will be paid to the Johns Hopkins Hospital, America's top-ranked for 18 years and counting.
Area: Humanities.

AS.140.126. Modern Medicine. 3 Credits.
Area: Humanities, Social and Behavioral Sciences.

AS.140.127. History of Psychiatry: Medicine and Madness from Antiquity to the Present. 3 Credits.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.143. Genetics in Medicine & Society. 3 Credits.
If you ever become seriously ill, have children, or read the newspaper, you cannot afford to be ignorant of the science of heredity. In this class, we will explore some of the principle concepts of genetics and their social impact, from Gregor Mendel to the Human Genome Project. We will read some original papers as well as review articles and historical analyses. Topics covered will include: the rediscovery of Mendel's principles; eugenics; the introduction of genetics into medicine; concepts of genetic disease; genetic and biochemical individuality; genetics, race, and gender; and genetic screening and testing. This course will be discussion-heavy and include a term paper.
Instructor(s): N. Comfort
Area: Humanities, Social and Behavioral Sciences.

AS.140.152. The Roots of the Stem Cell Debate. 3 Credits.
For science & non-science majors. We will study the science of stem cells & related topics (e.g. cloning) and then put the stem cell debate into its cultural context. We will use these discussions to examine the interplay between science & culture, focusing on ethics, politics, and the education of the public while examining the role that the media plays.
Area: Humanities, Social and Behavioral Sciences.

AS.140.161. Thinking and Living with Animals: Human-Animal Relationships in History. 3 Credits.
The course analyzes the history of human-animal interactions focusing on the way in which discourses and knowledge about animals shaped fundamental concepts such as gender, culture, agency, and knowledge. Dean's Teaching Fellowship course
Instructor(s): M. Petrozzi
Area: Humanities, Social and Behavioral Sciences.
AS.140.215. Monuments and Memory. 3 Credits.
Why do some places, whether manmade or natural, capture and hold our imaginations? Why, and how, do we commemorate particular sites? This course will explore the construction or discovery, and the enduring significance, of selected monuments in the West, beginning with the Great Pyramid and ending with the World Trade Center. We will consider national memorials by which the West has measured itself. We will study how they were made, interpreted and represented in art, literature, popular culture, and tourism. Cross-listed with Program in Museums and Society.
Instructor(s): S. Leslie
Area: Humanities, Social and Behavioral Sciences.

AS.140.301. History of Science: Antiquity To Renaissance. 3 Credits.
The first part of a three-part survey of the history of science. This course deals with the concepts, practice, and the cultural roles of scientific thought from classical antiquity to the time of Copernicus. Topics include the pre-Socratics, the systems of Plato and Aristotle and their continuing influence, Islamic science, Latin medieval scholasticism and the universities, and Renaissance hermeticism/natural magic. Interactions across science, art, technology, and theology are highlighted.
Instructor(s): L. Principe
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

Survey of major scientific advances from 18th to 20th century, from Newtonian science to the age of Big Science.
Instructor(s): R. Kargon
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.303. Spaces of Inquiry: The Clinic, The Studio..... 3 Credits.
How have science, medicine and the arts informed and shaped one another? This undergraduate seminar traces the interaction of key sites of knowledge production from the early 19th to the late 20th c., with a focus on universities, museums, corporations, libraries and hospitals.
Instructor(s): R. Kargon; S. Leslie
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.304. Medicine for and by Women in Early Modern Europe. 3 Credits.
This course will examine women’s role in early modern European medicine through the reading of early modern medical texts written for or by women. The course is meant for students interested in women's history, the history of medicine, European history.
Instructor(s): G. Pomata
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.305. Science and Technology in East Asia. 3 Credits.
The course explores the historical and cultural context of scientific and technological developments in China, Japan and Korea, focusing especially on the rise of modern science in the 19th and the 20th century.
Instructor(s): Y. Frumer
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.306. Science And Religion. 3 Credits.
Science and religion are crucial influences on Western culture. This course examines their interrelations during the past 2000 years, including the Athens-Jerusalem debate, medieval theology, the Galileo affair, evolution, and current issues.
Instructor(s): L. Principe
Area: Humanities, Social and Behavioral Sciences.

AS.140.307. War and Technology in East Asia. 3 Credits.
Instructor(s): M. Son
Area: Humanities, Social and Behavioral Sciences.

AS.140.311. Ecology, Health, and the Environment. 3 Credits.
An interdisciplinary perspective on environmental history, including history of ecological science, urban ecology, human health and sustainability. Course has a historical emphasis but students can investigate current problems. Focus is on the Chesapeake region. Cross-listed with GECS
Instructor(s): S. Kingsland
Area: Humanities, Social and Behavioral Sciences.

AS.140.315. Spaceflight and Society: Exploring the History of the Final Frontier. 3 Credits.
This course explores the history of spaceflight, emphasizing its civil component, but also including national security and commercial activities, and the interactions among all components of spaceflight around the world.
Instructor(s): R. Launius
Area: Humanities, Social and Behavioral Sciences.

AS.140.320. Modernity on Display: Technology and Ideology in the Era of World War II. 3 Credits.
Seminar focuses on ideological warfare over technological modernity at world’s fairs 1937-1942. France, United States, Japan, Germany and Italy.
Instructor(s): A. Molella; R. Kargon
Area: Humanities, Social and Behavioral Sciences.

AS.140.321. Scientific Revolution. 3 Credits.
This course concerns developments in early modern Europe accepted as the origins of modern science. With a focus on the fundamental change in our understanding of nature, course topics include alchemy, astrology, astronomy, cosmology, humanism, mechanics, natural magic, and physics.
Instructor(s): M. Portuondo
Area: Humanities, Social and Behavioral Sciences.

AS.140.322. The Heavens and Earth in the History of Astronomy. 3 Credits.
How do we study the stars, and what do they tell us about the earth? In this course, we explore views of the heavens across history, from ancient Greece to international astrophysics. Special emphasis will be given to the ‘new stars’ of 1572 and 1604, whose remnants astronomers at Johns Hopkins University continue to study today. Cross-listed with Earth and Planetary Science, Physics and Astronomy
Instructor(s): P. Boner
Area: Humanities, Social and Behavioral Sciences.

AS.140.325. Cult/Communica/Technol. 3 Credits.
After examining oral communication, emergence of writing, printing, perspective, and extensions of senses (telescope, camera, radio, telephone, internet), seminar focuses on the emergence of visual culture in the 20th century.
Instructor(s): R. Kargon
Area: Humanities, Social and Behavioral Sciences.
AS.140.327. Science and Utopia. 3 Credits.
Seminar examines the changing role of science in planning the ideal community from the 17th century to the present. Readings include works by Campanella, Bellamy, H.G. Wells, Orwell, B.F. Skinner and Walt Disney.
Instructor(s): R. Kargon
Area: Humanities, Social and Behavioral Sciences.

AS.140.330. Oral History Theory and Method. 3 Credits.
Instructor(s): N. Comfort
Area: Humanities, Social and Behavioral Sciences.

AS.140.332. Science Moderne: Inventing a Culture for the Future. 3 Credits.
This undergraduate seminar examines the impact of new ideas of time and space and of the second Industrial Revolution (the transformations induced by science-based technologies) on art, music, dance, urban design, architecture, and social and political thought in the first half of the 20th century. Cross-listed with Program in Museums and Society.
Instructor(s): A. Mollela; R. Kargon
Area: Humanities, Social and Behavioral Sciences.

AS.140.333. The Idea of the Artificial Human in History. 3 Credits.
The course examines the concept of the artificial human as a mirror of changing world-views from late middle ages through the twentieth century. Readings include Mary Shelley, Wells, Capek, Piercy.
Instructor(s): R. Kargon
Area: Humanities, Social and Behavioral Sciences.

AS.140.334. Science in the Atomic Age. 3 Credits.
Transformation of science after WWII, including rise of interdisciplinary fields, Big Science, atomic science, molecular biology, and environmentalism. Research paper required.
Instructor(s): S. Kingsland
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.339. JHU Oxford: History & Philosophy of Sciences. 3 Credits.
Open to JHU Oxford participants only.
Instructor(s): J. Schildbach; Staff.

AS.140.346. History of Chinese Medicine. 3 Credits.
Students will study the most recent anthropological, philosophical, and historical scholarship on medicine in traditional and modern Chinese society. They will approach the topic from several angles including medical pluralism, the range of healers, domestic and literate medicine, gender, emergence of new disciplines, public health and the history of disease. The course relies on secondary sources and primary sources in English translation. Cross-listed with East Asian Studies.
Instructor(s): M. Hanson
Area: Humanities, Social and Behavioral Sciences.

AS.140.347. History Of Genetics. 3 Credits.
Intellectual and social history of the gene concept, including Mendelism, eugenics, medical genetics, DNA, genomics, and personalized medicine.
Instructor(s): N. Comfort
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.349. The Laboratory. 3 Credits.
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.352. Who Wants to be a Billionaire?: High Tech & the American University. 3 Credits.
Long before Facebook, faculty and students were creating startups on campus. This course examines college entrepreneurship from its 19th-century origins to today: the potential perils, profits, and promise for entrepreneurs and universities alike.
Instructor(s): S. Morris
Area: Humanities, Social and Behavioral Sciences.

AS.140.354. Science, Technology and Society in Modern East Asia. 3 Credits.
The course aims to survey the history of science and technology in East Asian countries—China, Japan and Korea—since the late 19th century. Since Japan was the only nation in East Asia that succeeded in modernizing itself by adopting western science, technology and politics, it will be studied first. The Chinese and Korean cases then will be reviewed from different angles. The course will emphasize the mutual influence between science & technology and society to answer how they became major industrial powers in the 21st century. Cross-listed with East Asian Studies.
Instructor(s): D. Kim; Y. Li
Area: Humanities, Social and Behavioral Sciences.

AS.140.359. Museums and Globalization. 3 Credits.
Examines how museums are linked to wider national, cultural, communities, and mobilize resources to address political, economic and social concerns and questions of heritage. Jointly with Case Western Reserve University. Cross-listed with Program in Museums & Society.
Instructor(s): R. Kargon
Area: Humanities, Social and Behavioral Sciences.

AS.140.360. Changes In The Land. 3 Credits.
The course examines environmentalism from Dust Bowl to global warming, with emphasis on scientific study of environmental problems. Students will do research papers.
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.362. The Communications Revolution. 3 Credits.
Investigates the nature and impact of phenomenal changes in transportation and communication since the 19th-century, including iconic developments such as the Panama Canal, Brooklyn Bridge, airplanes, automobiles, television, wireless communication and the internet.
Instructor(s): S. Morris
Area: Humanities, Social and Behavioral Sciences.

AS.140.363. Museums & Controversy: from the Enola Gay to Body Worlds. 3 Credits.
Exhibitions on Freud, Darwin, the Bomb, environment, the human body, and similar "hot" topics have stirred unexpected controversy. This seminar explores the origins of such heated public and scientific disagreements. Crosslisted with Program in Museums & Society.
Area: Humanities, Social and Behavioral Sciences.

AS.140.364. How Electricity Changed the World: A Cultural History. 3 Credits.
Traces emergence of electrical sciences and industries to understand how society and culture has been affected by electricity up to the early 20th century. Course also considers global expansion of electrical networks through capitalism, industrialization, and colonialism.
Area: Humanities, Social and Behavioral Sciences.
AS.140.365. From Colonial to Global Health: Health, Healing and European Expansion, 1500-1950. 3 Credits.
This course traces the impact of European expansion on health, medicine and disease control from the Age of Exploration to the emergence of international and global health in the early twentieth century. Dean’s Teaching Fellowship course.
Instructor(s): K. Arner
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.366. Technological Transformations. 3 Credits.
Course explores the historical development of revolutionary technologies and their transformations of the individual and society. Focus on computing, biotech, consumer goods, warfare, manufacturing, agriculture, imaging, energy, transportation, and sustainability.
Instructor(s): M. Portuondo
Area: Humanities, Social and Behavioral Sciences.

AS.140.368. The Cities of East Asia: A Cultural History. 3 Credits.
Instructor(s): M. Son
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.372. Science on Display. 3 Credits.
History of collecting, exhibiting and interpreting science and technology, from Renaissance cabinets of curiosity to modern world’s fairs, zoos, aquariums, films and science centers. Students will present their own exhibits as dioramas, web sites, documentaries or other formats. Cross-listed with Program in Museums and Society
Instructor(s): S. Leslie
Area: Humanities, Social and Behavioral Sciences.

AS.140.375. The History of Modern Science and Technology in East Asia. 3 Credits.
Area: Humanities, Social and Behavioral Sciences.

AS.140.376. A Second World Within the World of Nature: The History of Geographic Thought. 3 Credits.
This course traces the development of the science of geography from antiquity through the mid-nineteenth century. Readings explore the legal, political, cultural and theological resonances of geography during this period.
Instructor(s): M. Franco
Area: Humanities, Social and Behavioral Sciences.

AS.140.377. When the West Came East: Science & Technology in East Asia 19th-Early 20th Century. 3 Credits.
This course is an exploration of 19th - 20th century China, Japan and Korea. We will examine the links between technology and imperialism to understand why by the 19th and 20th centuries these East Asian countries began to fall behind in the race for technological superiority.
Instructor(s): M. Son
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.383. Thinking and Living with Animals. 3 Credits.
Area: Humanities, Social and Behavioral Sciences.

AS.140.385. A Patient’s History of Health and Healing (1600-1750) (DTF). 3 Credits.
This course explores themes in the history of medicine in early modern Europe from the patient’s point of view. Topics include patients’ conceptions of disease categories, articulations of suffering, use of popular medical texts, experiences of childbirth, negotiations with healers, and approaches to death. Dean’s Teaching Fellowship course Cross-listed with Public Health Studies
Instructor(s): O. Weisser
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.387. Understanding the Heavens: The History of Astronomy from Hipparchus to Hubble. 3 Credits.
Area: Humanities, Social and Behavioral Sciences.

AS.140.389. Exploration and Science. 3 Credits.
Instructor(s): M. Portuondo
Area: Humanities, Social and Behavioral Sciences.

AS.140.390. Science and Technology in Latin America. 3 Credits.
The course surveys various national contexts to illustrate major themes in western science and technology in Hispanic America (1492 to the present). Cross-listed with Program in Latin American Studies
Instructor(s): M. Portuondo
Area: Humanities, Social and Behavioral Sciences.

AS.140.392. Sexing the Body: Gender, Sexuality, and Medicine. 3 Credits.
Instructor(s): S. Eder.

AS.140.397. The Population Problem in Historical Perspective. 3 Credits.
This course will trace the major debates over the relationship of population growth to food supply, birth control, resources, and environmental change from the 18th century to present. Cross-listed with Public Health Studies
Instructor(s): T. Long
Area: Humanities, Social and Behavioral Sciences.

AS.140.398. Godzilla and Fukushima: Japanese Environment in History and Films. 3 Credits.
Juxtaposing Japanese environmental history and its reflection in popular media, the course will explore the intersection between technology, environment, and culture. The course will be accompanied by relevant movie screenings.
Instructor(s): Y. Frumer
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.411. Senior Research Seminar. 2 Credits.
Instructor(s): M. Portuondo
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.412. Research Seminar. 2 Credits.
Departmental Majors Writing a Senior Thesis Only
Instructor(s): M. Portuondo
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.140.413. The White Plague: History of Tuberculosis. 3 Credits.
Instructor's permission only. Examination of interrelated scientific,
medical, social, and cultural dimensions of tuberculosis from early
modernity to the present in various geographical and cultural settings.
Extensive reading, research based on primary sources. Cross-listed with
History, Anthropology
Instructor(s): D. Todes
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.418. Medicine for and by Women in Early Modern Europe. 3
Credits.
This course will examine women's role in early modern European
medicine through the reading of early modern medical texts written for
or by women. The course is meant for students interested in women's
history, the history of medicine, European history. Cross-listed with
History
Instructor(s): G. Pomata
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.425. Individualized Medicine from Antiquity to the Genome
Age. 3 Credits.
A seminar for graduate students and advanced undergraduates. We
will explore the notion of the individual in medicine over 25 centuries,
from the Hippocratics to the invention of the case study during the
Renaissance to the genetic, biochemical, and immunological individual
in recent biomedicine. Recommended Course Background: AS.140.105,
AS.140.106
Instructor(s): G. Pomata; N. Comfort
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.445. Mixing It Up: Interdisciplinarity in Science. 3 Credits.
Many landmark discoveries in science, such as the discovery of the
double helix, were achieved through an interdisciplinary approach.
Our course explores how institutions of research and education have
advanced science through the promotion of interdisciplinarity. Case
studies examine important problems in physical and biological sciences
whose solutions required interdisciplinary approaches. Research paper
required.
Instructor(s): R. Kargon; S. Kingsland
Area: Humanities, Social and Behavioral Sciences.

AS.140.451. History and Ethics of Body Modification. 3 Credits.
Explores the history and ethics of various forms of body modification,
including: cosmetic surgery, tattooing, transsexuality, transabilityism,
performance-enhancing and mood-altering drugs, prostheses, vampirism,
and bodybuilding. Co-listed with 140.651
Instructor(s): D. O’Connor
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.501. Independent Study. 3 Credits.
Instructor(s): M. Portuondo.

AS.140.502. Independent Study. NULL Credits.
Instructor(s): M. Portuondo.

AS.140.597. Research-Summer. 3 Credits.
Instructor(s): S. Leslie; Staff.

AS.140.598. Summer Internship. 1 Credit.
Instructor(s): S. Leslie; Staff.

AS.140.599. Independent Study-Summer. 3 Credits.
Instructor(s): S. Leslie.

An introductory course at the graduate level to the interpretation of
historical evidence; to the social, intellectual, and political analysis of
historical data; and to contemporary methods in the history of science,
medicine, and technology.
Instructor(s): M. Hanson.

Writing Intensive.

AS.140.617. Seminar in the History of Biological Sciences.

AS.140.618. Seminar in the History of Life Sciences.
For graduate students preparing fields in history of science.
Instructor(s): S. Kingsland.

AS.140.626. Advanced Seminar.
Seminar designed for Ph.D. students currently working on their
dissertation thesis.
Instructor(s): R. Kargon; Y. Frumer.

AS.140.629. Beyond the Panopticon: Observing, Representing, and
Managing People.

AS.140.635. The Postwar Reconstruction of Science.
Examines transformation of science after World War II in comparative
perspective. Students will do a research project.
Instructor(s): R. Kargon; S. Kingsland.

AS.140.639. Empire and Nation in Modern East Asia.

AS.140.641. Departmental Colloquium.
Reports by staff members, students, and invited speakers.
Instructor(s): M. Portuondo.

AS.140.642. Colloquium.
Reports by faculty, students, and invited speakers.
Instructor(s): M. Portuondo; S. Kingsland.

AS.140.647. Science and the State, 1500-1900.
Comparative analysis of rise of modern state and rise of modern science
from early modern period through 19th century. Students will write
research papers.
Instructor(s): R. Kargon; S. Kingsland.

The course explores how early modern natural philosophers engaged
with ancient philosophies to fashion the approaches to the study of
nature associated with the Scientific Revolution. Topics discussed include
Neoplatonism, Hermeticism, Skepticism, Atomism and various other
conceptions of nature and knowledge.
Instructor(s): M. Portuondo.

AS.140.651. The History and Ethics of Body Modification.
Explores the history and ethics of various forms of body modification,
including: cosmetic surgery, tattooing, transsexualism, transabilityism,
performance-enhancing and mood-altering drugs, prostheses, vampirism,
and bodybuilding. Co-listed with 140.451
Instructor(s): D. O’Connor.

AS.140.652. Advanced Seminar.
Reading seminar and general introduction to key historiographical, topical
and methodological issues of the field. Readings include contributions to
technological history from the perspectives of economics, cultural studies,
sociology and archeology.
Instructor(s): M. Portuondo.

AS.140.654. Putting Science to Use: Understanding Applied Science
Since the Second Industrial Revolution.
Instructor(s): R. Kargon.
AS.140.655. Early Modern Science in France.
AS.140.656. Science in the American Century.
Open to juniors and seniors without instructor’s permission. Selected topics in 20th century history of science and technology with emphasis on American science and its impact worldwide.
Instructor(s): R. Kargon; S. Kingsland; S. Leslie.

AS.140.657. Science on Display.
History of collecting, exhibiting and interpreting science and technology, from Renaissance cabinets of curiosity to modern world’s fairs, zoos, aquariums, films and science centers. Students will present their own exhibits as dioramas, web sites, documentaries or other formats. Cross-listed with Program in Museums and Society
Instructor(s): S. Leslie.

AS.140.658. Main Currents in American Science and Technology.
A graduate seminar focusing on major periods and selected themes from the colonial era to the present.
Instructor(s): R. Kargon; S. Leslie.

This graduate research seminar aims at the production of professional-quality research papers focusing on social, cultural and technical change in late 19th and 20th-century cities world-wide. Students are expected to present work-in-progress and engage in constructive criticism. Undergraduates by permission only.
Area: 2.00.

AS.140.705. History of Science: Antiquity To Renaissance.
The first part of a three-part survey of the history of science. This course deals with the concepts, practice, and the cultural roles of scientific thought from classical antiquity to the time of Copernicus. Topics include the pre-Socratics, the systems of Plato and Aristotle and their continuing influence, Islamic science, Latin medieval scholasticism and the universities, and Renaissance hermeticism/natural magic. Interactions across science, art, technology, and theology are highlighted. Lecture meets with AS.140.301
Instructor(s): L. Principe.

Seminar on major scientific developments from 18th-20th century. Weekly readings, discussion and class presentations. Students may attend lectures for 140.302.
Instructor(s): S. Kingsland.

AS.140.710. Scientific Revolution.
Course concerns developments in early modern Europe known as the Scientific Revolution. Topics include cosmology, astronomy, mechanics, natural history, and chemistry and issues involving magic, technology, humanism, and the social content of early modern science. Lecture meets with 140.321 Lec.
Instructor(s): M. Portuondo.

AS.140.722. Wretched Subjects.
While earlier generations of historians often considered the topics of alchemy, astrology, magic, etc. as "pseudosciences," current scholarship shows them to be crucial parts of the history of science. This graduate research seminar explores the content, contributions, context, exile, and revival of these "wretched subjects." Students will write a substantial paper based on their original research.
Instructor(s): L. Principe.

Instructor(s): G. Mooney.

Cross Listed Courses

German Romance Languages Literatures

AS.211.237. Literature and Medicine. 3 Credits.
Taught in English. The course will analyze literary representations of illness as well as explore interfaces between literary and medical knowledge in more general ways. Both literature and medicine can be considered semiotics as they deal with the study of signs; further, both are invested in interpretation. We will analyze the relation between literature and madness, explore “illness as metaphor” (Susan Sontag) and discuss case studies in relation to literary genres (for example, Freud is surprised to notice that his studies on hysteria read like novellas). As prominently depicted in Thomas Bernhard’s “In the Cold” and theoretically analyzed by Michel Foucault, the course will further address the nexus between medical institutions and power. Readings will include: Antonin Artaud, Thomas Bernhard, Georg Büchner, Michel Foucault, Sigmund Freud, Henry James, Franz Kafka, Thomas Mann, Daniel Paul Schreber, Susan Sontag, etc. Films: “Philadelphia” (Jonathan Demme, 1993), “Melancholia” (Lars von Trier, 2011).
Instructor(s): E. Strowick
Area: Humanities.

AS.211.358. Bodyworks: Body, Medicine and Technology in the 21st Century. 3 Credits.
Area: Humanities.

AS.212.303. Performing Madness: from Tristan to King Lear. 3 Credits.
For minors/majors in French, advanced level of French (AS.210.302) is required. For all other students, reading knowledge of French is recommended. The course explores the facets of madness in the medieval and Renaissance imaginary. Readings will include Tristan and Yseut, Play of Madness, The Praise of Folly, King Lear. The class will be taught in English. French majors/minors will have to write all assignments in French. Cross-listed with History of Science, Medicine and Technology Dean’s Teaching Fellowship
Instructor(s): A. Marculescu
Area: Humanities
Writing Intensive.

AS.213.237. Literature and Medicine. 3 Credits.
Taught in English. The course will analyze literary representations of illness as well as explore interfaces between literary and medical knowledge in more general ways. Both literature and medicine can be considered semiotics as they deal with the study of signs; further, both are invested in interpretation. We will analyze the relation between literature and madness, explore “illness as metaphor” (Susan Sontag) and discuss case studies in relation to literary genres (for example, Freud is surprised to notice that his studies on hysteria read like novellas). As prominently depicted in Thomas Bernhard’s “In the Cold” and theoretically analyzed by Michel Foucault, the course will further address the nexus between medical institutions and power. Readings will include: Antonin Artaud, Thomas Bernhard, Georg Büchner, Michel Foucault, Sigmund Freud, Henry James, Franz Kafka, Thomas Mann, Daniel Paul Schreber, Susan Sontag, etc. Films: “Philadelphia” (Jonathan Demme, 1993), “Melancholia” (Lars von Trier, 2011).
Instructor(s): E. Strowick
Area: Humanities.

AS.213.325. Johann Wolfgang von Goethe: Bridging Literature and Science. 3 Credits.
Open to Sophomores or higher standing. This course will examine the literary and scientific works of Goethe (1749-1832). We will explore the complex relations between literature and science at a point in history where the disciplinary boundaries were more porous than they are today. In this seminar, we will read those works, in which literature and science intersect, via style or subject matter, but most importantly, via their joint philosophical underpinnings, revealing that for Goethe science and literature are not two separate trains of thought but form a highly intricate discursive web. Goethe’s oeuvre offers the unique opportunity to discuss the relations between literature and science around 1800, the formation period of “modern” natural sciences and the beginning of their domination over literature and philosophy, by analyzing one author, who straddled both realms, and who reflects on the value of scientific and literary discourses. Cross-listed with History of Science and Technology Dean’s Teaching Fellowship - Taught in English
Instructor(s): C. Domenghino
Area: Humanities.

AS.213.362. Sigmund Freud. 3 Credits.
The course will examine Freud’s writings from a two-fold perspective: On the one hand, we will analyze the contributions of psychoanalysis to modern thought. Lining himself up with Copernicus and Darwin, Freud considers his concept of the “unconscious” a further insult to mankind’s narcissism and revolution of thought. In this respect, psychoanalysis affects a vast array of concepts of modern thought such as subject, language, sexuality, morality, culture, history, religion and art which we will discuss alongside with key terms of psychoanalysis (unconscious, repetition, transference etc.). On the other hand, the course will address the specific relation between psychoanalysis and literature. Throughout Freud’s writings, literature enjoys vivid interest. Not only are psychoanalytical concepts (e.g. Oedipus complex, narcissism, the uncanny) crucially informed by literary texts, but also Freud’s “Interpretation of Dreams” proves to be a theory of representation and reading. We will investigate the ways in which literature and psychoanalysis are involved with each other considering narrative forms, performative aspects and aspects of the genre (novel, novella). Readings and discussions in English.
Instructor(s): E. Strowick
Area: Humanities.
AS.213.684. Aesthetics of Description.
Since the enduring disavowal of description by Lessing, characteristics commonly assigned to description include structural endlessness and exorbitance; the simple succession of elements; the "breakdown of composition" (Lukács) in a proliferation of details; the purity of described details; its failed ability at illusion; also its tendency to mortify, insofar as it transforms its subject into something static, stagnant. The course will undertake a critical revision of these characteristics by analyzing aesthetical debates and literary descriptions from the 18th to the 20th centuries. Topics leading the discussion will be: text-image relations; description between literature and science; observation through description; dynamization of description; motion and motionlessness; poetics of perception; performativity of description; the boredom of reading. Readings include: Bodmer, Breitinger, von Haller, Winckelmann, Lessing, Alexander von Humboldt, Hebbel, Stifter, Darwin, Ossip Mandelstam, Aby Warburg, Lukács, Peter Weiss, Peter Handke. The course will be taught in German.
Instructor(s): E. Strowick.

AS.214.356. Science and Heresy in Galileo's Italy. 3 Credits.
The class will be conducted in English. In the wake of Copernicus, the still dominant geocentric model of the cosmos was challenged in Italy by two equally brilliant but very different thinkers: Giordano Bruno, iconoclastic philosopher and theorist of magic, and Galileo Galilei, who has been called the "father of modern science." Both of these revolutionary intellectuals faced strong opposition from within the Catholic Church: Bruno was executed as a heretic, while Galileo was forced to formally recant his heliocentric views. We will study the principal writings of both thinkers, focusing on both the literary qualities and the historical context of their works. We will also examine the cosmological visions of earlier writers, including Dante. Additional section will be offered for Italian majors (and others with a strong command of the language) in which we will read and discuss texts in Italian.
Instructor(s): J. Coleman.

AS.214.375. Documentary Production Practicum: "The Cure:" the History and Culture of Breast Cancer. 3 Credits.
This class will accompany Bernadette Wegenstein during some months of producing her feature documentary "The Cure" on the history and culture of breast cancer. It will be a hands-on experience with director/producer Bernadette Wegenstein, editor/producer Patrick Wright and cinematographer Allen Moore filming at the GBMC's Breast Care clinic, the Halsted Medical Archives, and some other Baltimore locations. This class will meet once a week, but some weeks the class will consist in the hands-on experience on the field rather than the actual class meeting.
Area: Humanities.

Program in Museums and Society
AS.389.275. Interpreting Collections: An Introduction to Museum Education-Community Based Learning. 3 Credits.
Part public history, part introduction to museum practices, this hands-on course invites students into a local collection to develop interpretive materials for diverse audiences. Students consider the issues and ideas that inform object-based learning and learn about the history, theory and practice of museum education. Course culminates in the creation of interpretive text for the Baltimore Museum of Industry. M&S practicum course.
Instructor(s): E. Maloney
Area: Humanities, Social and Behavioral Sciences.

East Asian Studies
AS.310.303. A World Upturned: Cultures of Catastrophe in Japan. 3 Credits.
Focusing on earthquake science and earthquake lore, radioactive mutation and nuclear decimation, this course will consider the relationship between technological culture and large-scale cataclysm. In addition to treating a broad array of written, graphic, and filmic representations of Japan's past and potential catastrophes, we will also be keeping a close and careful eye on present developments in Japan's 2011 earthquake/ tsunami/nuclear disaster.
Instructor(s): Staff
Area: Humanities, Social and Behavioral Sciences.

Humanities Center
The Humanities Center reflects a characteristic quality of Johns Hopkins University as an intellectual community. The coordinated study of Western civilization through its literature, art, philosophy, and history has been one of the oldest continuing concerns at Hopkins. Because it has remained by design and tradition the smallest of the major American universities and because of the interdisciplinary interests of some of its most distinguished faculty, Hopkins has fostered to a remarkable degree the free exchange between scholars and students across departmental boundaries. In addition to its programmatic concern with comparative literature, intellectual history, and feminist theory, the Humanities Center does much to coordinate such exchange, which it encourages among students and scholars at all levels of their careers.

Supplementing its regular course offerings, the Humanities Center from time to time sponsors conferences, colloquia, and short-term seminars on topics of special interest to its graduate students and to the intellectual community at large. The center is also responsible for publishing annually the Comparative Literature issue of MLN; graduate students may apply to work as editorial assistants in its production and are invited to contribute to its reviews of current publications.

A recent development has been the appointment of several distinguished scholars as associates of the Humanities Center for terms of variable length. Each associate visits the campus once a year to teach an intensive seminar open to graduate students (and in certain cases to advanced undergraduates) in the Humanities Center as well as in other departments. The associates also meet informally with interested students and faculty and in general play an active role in the intellectual life of the university.

The Humanities Center's activities for undergraduates address two different needs. For students interested in a general liberal arts preparation or one of the university's preprofessional programs, the Center provides a broad introduction to the documents and thought of Western culture. For freshmen the Center offers the Great Books at Hopkins course, as well as a variable array of courses taught by the Center's faculty. For students interested in preparing for graduate school, the Center also offers a fundamental preparation geared to the individual's specific talents that can be the basis for more specialized humanistic study at the graduate level. Qualified juniors and seniors, as well as sophomores planning to study abroad in their junior year, are provided the opportunity to pursue an independent and often interdisciplinary research project through the Honors Program. In either case, the Center stresses skill in critical reading and writing, sophistication in the use of research tools, and supervised independent study. The coherence of
each individual's program depends upon careful consultation with the faculty advisor.

The Humanities Center does not offer a departmental major. Students who wish to concentrate on the courses that it offers should consider the area major in Humanistic Studies or a major in another humanities department.

Honors Program in the Humanities

The Humanities Center Honors Program was initiated in 1976, the centennial of the founding of Johns Hopkins University. The program offers all qualified undergraduates the possibility of pursuing an independent and often interdisciplinary research project in the junior and senior year. Students can propose a topic in any humanistic discipline, including intellectual or cultural history, English and comparative literatures, women and gender studies, minority literatures and culture, film studies, anthropology, philosophy, and others. Past topics have also examined points of intersection between the arts and the sciences, so that the Honors Program in the Humanities also give majors outside the humanities a chance to broaden and combine their studies.

Requirements

To be eligible, a student’s performance in courses taken in the humanities, and particularly in the chosen field(s) of study, should be distinctly above average, and the proposed topic should show coherence, focus, and seriousness of purpose. Each project must be sponsored by two faculty members, one of whom will be the primary advisor. In appropriate cases, one of these sponsors may be external to the university. Successful completion of the Honors Program is conditional on completion of the student’s research thesis and participation in the Honors Seminar for two years, the second of which must be the student’s senior year.

Application process

This is a two-year program normally beginning in the junior year, with applications accepted in the spring semester of the sophomore year. Second-semester freshmen who plan to study abroad in their junior year or who already possess the necessary qualifications are also encouraged to apply. Applications can either be submitted by email to aekinmoss@jhu.edu or submitted in hard copy to Anne Eakin Moss in Gilman Hall 213. All applications should include:

1. A completed application form, including the name of at least one faculty member the student plans to work with
2. Brief statement of purpose outlining the proposed thesis topic, with initial bibliography
3. Unofficial transcript of undergraduate course work

Required Course Work

Sophomore year (optional)

It is recommended that sophomores who plan to study abroad in their junior year, as well as those who are ready to begin their honors research, should consider participating in the Honors Seminar during their sophomore year. In general, such students should follow the course work as described below for the junior year.

Junior year

1. Two courses chosen from relevant offerings in the Humanities Center curriculum. Students' work will be based on undergraduate courses offered by the core faculty of the Humanities Center and the course offerings of faculty with joint appointments in the Humanities Center.
2. A year-long Honors Seminar for all students in the program, in which the general progress of the students' writing and research will be discussed and senior students will present work-in-progress reports. In the 2013-2014 academic year the Honors Seminar text will be Fyodor Dostoevsky’s *Brothers Karamazov*, which will serve as a point of departure for discussing the relation between different intellectual disciplines and pursuits, including religion and literature, philosophy, politics, history, and the culture industry. The seminar meets once every two weeks and participation is mandatory for all students enrolled in the Honors Program.
3. Optional independent study course on thesis project with one or both sponsors.

Junior agenda

- September-October: Students should identify and meet with a prospective faculty advisor. Two faculty advisors are required for the final thesis; at least one of these advisors must be a Humanities Center faculty member or affiliate. Once students have received a commitment from two advisors to supervise the thesis, they should begin to compose a comprehensive reading list in consultation with their advisor.
- November-January: Using the reading list as a guide, students will conduct exploratory research in the field of their proposed project.
- February-March: Students will present a 3-5 page prospectus, formulating the central questions of the thesis, in the Honors Seminar.

Senior year

1. Independent study course in the spring semester toward completion of the thesis.
2. Two courses, as above, with Humanities Center faculty and affiliates.
3. Continued participation in the two-semester Honors Seminar (see above under “junior year” for description), with periodic “work-in-progress” reports and oral presentation of the thesis research in the spring semester.

Senior agenda

- Students will complete theses in consultation with their advisor and continue to attend the Honors Seminar. In April and May, students will present their final theses in the Honors Seminar.

Great Books at Hopkins

Great Books at Hopkins is an introduction to the humanities at Johns Hopkins and an exploration of some of the Western world’s most important literary works of art. It is a course designed for first-year undergraduates that examines some of the greatest works of the literary and philosophical tradition in Europe and the Americas. With lectures, panel discussions, multimedia presentations, and small seminars, professors from a variety of academic disciplines lead students in exploring authors from Homer to the present. Close reading and intensive writing instruction are hallmarks of the course, as is a varied reading list which has included Dante’s Inferno, Cervante’s Don Quixote, and Woolf’s *A Room of One’s Own*.

The Center sponsors programs of study leading to the Ph.D. degree in two general fields: comparative literature and intellectual history. These
Requirements for the Ph.D. Degree

Each student works with an ad hoc committee of three faculty members who help to design a coherent, individual program of studies. During the first two years the candidate works closely with each of his or her advisor. The course of studies, seminars, and tutorials leads to three area examinations administered by the advisory committee. During the second year, qualified students are invited to teach under faculty supervision, and on occasion advanced students have been allowed to offer undergraduate seminars of their own design.

Program in Comparative Literature

Normally, candidates for the Ph.D. in comparative literature should be competent in three national literatures and have a general familiarity with critical theory. Students in this program are encouraged to spend at least one year of study abroad, usually as members of groups working in Paris, Florence, Hamburg, Geneva, or Madrid in programs sponsored by the modern language departments and the Center. The University maintains the Villa Spelman in Florence as a study center, and the departments of German and Romance Languages and Literatures have regular programs of faculty exchange.

Program in Intellectual History

The Center’s doctoral program also allows flexibility in the construction of a course of study in intellectual history involving comparatist and interdisciplinary approaches. Candidates should also note related special programs at Hopkins, such as the program in political theory and the research facilities of the Institute of the History of Medicine.

Advisor

Upon their arrival, entering students should select, in consultation with the Director, a member of the Center’s faculty to serve as their academic advisor, pro tem. As time goes on and their interests further define themselves, they may wish to change advisors and may very well wind up working most closely with faculty in another department; should this become the case, they should nevertheless meet regularly—test that is, each semester—to discuss their progress with whomever in the Center is serving as Director of Graduate Studies.

Course Work

During their first two years, students are expected to take two seminars for credit each semester, in addition to whatever language courses they may enroll in and whatever courses they choose to audit. They should select seminars which need not be restricted to Humanities Center offerings—in consultation with their advisors. Students arriving after having taken graduate courses elsewhere should discuss with the director of graduate studies the possibility of having that work counted toward satisfying the Center’s course requirements.

Third-Year Review

At some point during their third year of residence-after completing all outstanding seminar papers, and preferably by mid-year-students will have their work reviewed by a faculty committee composed of three teachers from among the Humanities Center faculty and from among the faculty from the other departments with whom the student plans to conduct field exams. The purpose of the review is to allow the faculty to assess the student’s progress, to clarify her/his status as regards remaining course work, and to define future fields. In preparation for this review, the student will circulate, in advance of the meeting, materials that the student judges to be work that will best serve the purpose of the review.

Field Examinations

Students are expected, in their third and fourth years, to complete three field exams. The purpose of requirement is two-fold: the exams may serve to help a student refine her/his thinking about a dissertation topic, or they may be a means of extending and deepening a student’s knowledge of an area of studies in which s/he proposes to teach and conduct research. The examinations themselves may take a variety of forms: one could work further on a project begun in a seminar and produce a longer paper that would become part of a dissertation; one could read one’s way into and across a particular field, writing a series of short papers on one’s reading, or else sitting for a written or oral examination on the material studied; one could design and teach an undergraduate course in one’s area of interest; one could complete the requirements for a M.A. degree in another department, as a way of strengthening one’s claim to teach in that field. These are choices to be discussed with one’s committee at the third-year review.

Undergraduate Teaching

During one’s years at the Center one will have a number of opportunities to develop one’s skills and confidence as a teacher. In the second year and thereafter, students will ordinarily serve as assistants in courses taught by the Center’s faculty or, if appropriate, in courses in other departments: in the past, our students have taught in the French and German language programs, in English composition and literature courses, as well as assisting in history, philosophy and political science courses. More experienced students are encouraged to teach courses of their own invention—as a way of completing a field exam, or in competition for one of the Dean’s Teaching Fellowships, or simply to add to the Center’s array of offerings.

Dissertation Review

A second formal review of a student’s work will take place after the completion of field exams, either in the fourth or in the fall semester of a student’s fifth year. The aim of this review is to bring the student together with the faculty with whom s/he will write a dissertation. This review will not take place until the student believes that s/he has a substantial piece of work associated with the dissertation, e.g., the draft of a chapter. This work will be circulated before the review, along with a prospectus of 10-40 pages, to the faculty the student wishes to have as dissertation advisors. (If all of these advisors are from outside the Humanities Center, one of the Center’s faculty, selected by the student, will also sit in on the review.) This discussion is not intended to replace the Graduate Board Oral, which will take place after the dissertation has been completed, but will serve to...
mark the transition from work on the field exams to the preparation and writing of a thesis.

**Departmental Presentations**

Late in a student’s work on a dissertation—preferably in the fifth year or the beginning of the sixth—s/he will be asked to give a talk on material from her/his dissertation to the assembled students and faculty of the Center and invited guests. The aim of this requirement is to give students experience in the more formal presentation of their work, to make possible a wider range of response to that work than a dissertation committee can provide, and to allow all students of the Center—whose research interests vary widely—to become better acquainted with each other’s projects.

**Financial Aid**

Tuition grants, stipends, and teaching fellowships are available to doctoral candidates.

For current faculty and contact information go to http://humctr.jhu.edu/people/

**Faculty**

**Director**

Hent de Vries
Russ Family Chair in the Humanities (Director) (Philosophy): modern European thought, history and critique of metaphysics, philosophies of religion, political theologies, concepts of violence, literature and temporality.

**Professors**

Michael Fried
J. R. Herbert Boone Chair in the Humanities (History of Art): modern art and literature, critical theory, modern poetry.

Ruth Leys
Henry Wiesenfeld Chair in the Humanities (History): history and theory of psychoanalysis, history of psychiatry and psychology, history of the neurosciences; affect theory; history of the emotions; 19th- and 20th-century intellectual history, feminist theory.

Paola Marrati
Philosophy: modern and contemporary French thought, phenomenology, philosophies of life (Bergson, Dilthey, Canguilhem, Deleuze), philosophy and cinema, aesthetics.

**Assistant Professors**

Leonardo Lisi
European literature of the long nineteenth century; European modernism; Kierkegaard and German idealism; tragedy and the tragic; philosophical aesthetics and literary forms

Anne Eakin Moss
19th- and 20th-century Russian literature, Soviet cinema and film theory, concepts of friendship and community.

Yi-Ping Ong
19th- and 20th-century literature and philosophy, the novel, modernism, existentialism, ethics, and justice in contemporary Anglophone literature.

**Professors Emeriti**

Richard A. Macksey
Stephen G. Nichols
Nancy S. Struever

**Joint Appointments**

Christopher Celenza
Professor (German and Romance Languages and Literatures): Italian literature.

Veena Das
Krieger-Eisenhower Professor (Anthropology): history and myth, philosophy and anthropology, violence, social suffering, medical anthropology; South Asia, Europe.

Eckart Förster
Professor (Philosophy): metaphysics, history of philosophy, Kant and German idealism.

Yitzhak Melamed
Associate Professor (Philosophy): early modern philosophy, German idealism, metaphysics.

Jacques Neefs
James M. Beall Professor: French literature, history and theory of novel, modernity in Art and literature, literature and knowledge (19th- and 20th-century), genetic criticism.

Dimitrios Yatromanolakis
Associate Professor (Classics): Ancient Greek literature, thought, and sociocultural history; Platonic philosophy; historical and comparative anthropology; ritual theory; reception studies; comparative poetics.

**Visiting Assistant Professor**

Elizabeth Patton
Post-Reformation literature with special emphasis on women writers and early modern English Catholicism

For current course information and registration go to https://isis.jhu.edu/classes/

**Courses**

**AS.300.102. Moral Life. 3 Credits.**

This is an introductory course in moral philosophy, with a special focus on the dimensions of moral self–transformation in ancient and modern philosophy, contemporary literature, and film. Readings include: Plato, St. Augustine, Kant, Kierkegaard, Heidegger, Wittgenstein, Beckett, Faulkner, and Coetzee. No prior background in philosophy, literature, or film required.

Area: Humanities.
AS.300.111. Shakespeare and his ‘Goddess’. 3 Credits.
Shakespeare’s description of his lover’s eyes as ‘nothing like the sun’ is both an homage and a sendup of a 300-year-old poetic convention reaching back to the days of Petrarch and the early humanist poets. In this course we will trace that tradition from the perspective of Shakespeare and his contemporaries, finishing the semester with several plays, including ‘The Taming of the Shrew,’ that further illustrate and problematize Shakespeare’s ‘goddess’ reference. Readings will include poetic dialogues between male and female poets, such as those by the early Italian Petrarchans Vittoria Colonna, Michelangelo, Veronica Gambara, and Gasparo Stampaja; their French counterparts, Maurice Scève and Les Dames des Roches; and the later English reflections on the sonnet tradition by Sir Philip Sidney, Shakespeare, and Sidney’s niece, Lady Mary Wroth. All works will be read in translation. Freshmen only.
Instructor(s): E. Patton
Area: Humanities

Writing Intensive.

AS.300.207. A Mix of Voices: Chinese Literatures from Late Imperial through Modern. 3 Credits.
This course examines the arts and culture of China from 1368-2000, with major focus on writers. We will begin with artists of the Ming (1368-1644) and Qing (1644-1911), focusing first on canonical voices: court poets, authors of classical fiction, literati essayists, calligraphers and painters. Outside of the court urban artists observed a dramatically changing world around them. Fiction, drama, memoir and mass-produced arts explored new social alignments and freedoms. The twentieth century brought revolution and party governance, along with arts born of mass media: periodicals, film and wood block print. Finally, post-Mao avant-garde artists both retrieved traditional aesthetics and explored new venues and visions. This look at the literature of China will require both close reading of texts as well as an interdisciplinary examination of the cultural factors that shape literatures.
Instructor(s): V. Cass
Area: Humanities

AS.300.209. Chinese Literature and Culture of the Ancient and Early Medieval periods. 3 Credits.
We will read selections in the original, as well scholarship and criticism concerning the texts. We will consider issues specific to the variety of texts: the social and political context of the ‘philosophical schools’ and writers, the religious and ritual contexts of medical literature and poetry, especially the Elegies of Chu (Chu Ci), the development of literati traditions and the craft of historiography, artistic responses to the collapse of the Han, and the rise of religious literatures of the Six Dynasties.
We will introduce aspects of classical language texts: complex form characters, classical Chinese grammar and classical Chinese semantic values. Written assignments, classroom exercises and tests will be based on developing skills in reading and writing classical Chinese; however, tests, discussions, one short paper and one research paper will require interpretation of larger issues pertinent to the texts. Texts to be read in Chinese. Recommended Course Background: two years of Mandarin Chinese.
Area: Humanities.

AS.300.211. Great Poems of the Americas. 3 Credits.
This course investigates the long poem or post-epic in 20th- and 21st-century North and Latin America. The epic has been rearticulated in sequences and series, verse novels, lyric cycles, and collage poems: from T.S. Eliot’s The Waste Land, the encyclopedic Cantos of Ezra Pound, and the sweeping Canto General of Pablo Neruda to works by Derek Walcott and Gwendolyn Brooks and fragmented series by Gertrude Stein, Hart Crane, and César Vallejo. We will examine Aimé Césaire’s Notebook of a Return to the Native Land, Vicente Huidobro’s playful Altazor, and very recent epic poems from Canadian women poets such as Anne Carson, Lisa Robertson, and M. NourbeSe Philip. As we test the term post-epic against these texts, we will consider whether it may be applied equally to the heroic tale and the open field poem. How do poets interpret the idea of “the Americas” as lands and nations in these works, and in what tangled ways do their poetics develop through dialogue across linguistic and geographical distances? To situate the long poem in history, we’ll examine developments in poetic form alongside modernization and globalization, and technological and socio-political changes. We will draw on theories of poetry and poetics as well as critical theory, taking a comparative, Hemispheric Studies approach to literature.
Instructor(s): R. Galvin
Area: Humanities.

AS.300.213. Homelessness in America. 3 Credits.
This course examines homelessness in the United States from multiple perspectives. Students will hear first-hand from individuals who have experienced homelessness as well as experts in the field.
Instructor(s): T. Gottbreht
Area: Humanities.

AS.300.225. Blogs and Spies in Shakespeare’s England. 3 Credits.
This seminar celebrates the university’s recent acquisition of State Papers Online (1509-1714), which contains searchable digital images of thousands of contemporary manuscripts. While we read plays, poetry, and essays by such figures as Queen Elizabeth, William Shakespeare, members of the Sydney family, Elizabeth Cary, John Donne, Aemelia Lanyer, Robert Southwell, Andrew Marvell, William Marlowe, Jane Cavendish, Elizabeth Brackley, and Katherine Philips, we will also be carrying out on-line searches of correspondences, wills, court documents, spy reports (including play-by-play accounts of houses dismantled in searches for hidden priests), and letters of condolence from Queen Elizabeth alongside decoded messages revealing plots to unseat her. In addition to searching virtual archives students will be introduced to early modern paleography, in part through visits to Johns Hopkins University’s brick-and-mortar libraries to consult actual manuscripts, incunabula, and illegal imprints from the 16th and 17th centuries.
Instructor(s): E. Patton
Writing Intensive.

AS.300.231. Puppet, Vampire & Somnambulist. 3 Credits.
German cinema in the 1920s is haunted by figures of the inhuman – things turned animate through magic or science, corpses clinging to life after death, or men who under hypnosis become mindless instruments of murder. What do these films say about the human and the inhuman, sanity and insanity, and freedom and servitude? For this seminar we will watch the classics of German Expressionism, and read a series of theoretical and critical texts.
Area: Humanities.
AS.300.252. The Modern Novel and Realism. 3 Credits.
In this class we will be exploring the ways in which modern novels represent reality. Starting with the Nineteenth Century novel, and its claim for realism, we will follow the evolution of narrative modes and strategies that lead to modernist novel and its different claim for representing reality. The two main works which will guide our investigation will be Madame Bovary and Mrs. Dalloway. Alongside with the analysis of the novels we will engage in some of the fundamental critical texts that have defined realism and its stakes.
Area: Humanities.

AS.300.281. Sovereignty and Modern Drama. 3 Credits.
This course is interested in the relationship between sovereignty and drama. By placing the common individual center stage, twentieth-century modern drama achieved a theatrical revolution. And yet the modern theater has not completely shed itself of its former preoccupation with kings and their undoing, as evidenced by the royal figures who show up in plays by influential playwrights as various in their political and artistic commitments as Strindberg, Ibsen, Jarry, Yeats, Shaw, Pirandello, O’Neill, Anouilh, Brecht, Sartre, Ionesco, and others. This course seeks to examine how, when, and why royal personages are employed in modern drama. What does the theater have to say about sovereignty and authority? About humanism and anti-humanism? Is theater linked to sovereignty? If so, how? This course will consider the political, philosophical, and theological critiques implicit in the plays where sovereigns are found, paying close attention as well to the problem of theatricality. Dean’s Teaching Prize Fellowship Course.
Instructor(s): N. Jerr
Area: Humanities.

AS.300.282. Great Poems of the Americas: Post-Epics. 3 Credits.
“In America the natural man has triumphed over the imported book,” announced José Martí. The call to cast off the literary forms of Old Europe echoed throughout the hemisphere during the 20th century, as poets sought to write a new kind of “American” poetry. The epic has been rearticulated in sequences and series, verse novels, lyric cycles, and collage poems, such that it has become the “post-epic.” We will investigate the long poem in 20th-century North and Latin America, from the encyclopedic Cantos of Ezra Pound and the sweeping Canto General of Pablo Neruda to briefer works by Derek Walcott and Gwendolyn Brooks, and fragmented series by Gertrude Stein and César Vallejo. We will read texts including Charles Olson’s sprawling history of America, The Maximus Poems, and William Carlos Williams’s Paterson; Aimé Césaire’s Notebook of a Return to My Native Land and Kamau Brathwaite’s The Arrivants; Elizabeth Bishop’s cartographic North & South; Octavio Paz’s single, 584-line, cyclical sentence, Sunstone; and Vicente Huidobro’s Over the Nature of Life and Thought. Does this mean that humans are like machines whose history can be erased as easily as we delete files on a computer? Or are memories, like consciousness, not so easily reducible to brain structures? This class will examine how these and other questions shaped the history of modern biology and experimental psychology beginning in the nineteenth century. We will read the works of prominent biologists, psychologists, and philosophers who were all involved in a rich debate over the nature of life and thought.
Instructor(s): L. McGrath
Area: Humanities Writing Intensive.

AS.300.300. Cultivating the Self: A History of Spiritual Exercises. 3 Credits.
Dean’s Teaching Fellowship. We will examine spiritual exercises that seek to transform one’s thought and being from Greek antiquity to modernity. Readings from philosophical and religious texts include Plato, Epictetus, Augustine, Montaigne, Kierkegaard, Nietzsche, Sartre, Heidegger, Foucault. Particular attention will be paid to the constitutive role of reading, writing, and dialogue.
Instructor(s): D. Dubois
Area: Humanities.

AS.300.301. Life, Vitality, Thought. Philosophy and the Natural Sciences in Nineteenth Century Europe. 3 Credits.
Last year neuroscientists at MIT shined an optogenetic light on brain cells in order to artificially stimulate memories. If every detail of our past has a particular location in the brain, then we could alter, and even destroy, memories. Does this mean that humans are like machines whose history can be erased as easily as we delete files on a computer? Or are memories, like consciousness, not so easily reducible to brain structures? This class will examine how these and other questions shaped the history of modern biology and experimental psychology beginning in the nineteenth century. We will read the works of prominent biologists, psychologists, and philosophers who were all involved in a rich debate over the nature of life and thought.
Instructor(s): L. McGrath
Area: Humanities Writing Intensive.

AS.300.302. New American Cinema. 3 Credits.
This course offers a historical, critical, and theoretical approach to American avant-garde and independent film from the 1940s till the present. Filmmakers include Stan Brakhage, Michael Snow, Andy Warhol, Jim Jarmusch, Quentin Tarantino, and David Lynch.
Instructor(s): J. Gerrits
Area: Humanities.

AS.300.303. Modern Jewish Thought and Literature. 3 Credits.
This course studies a wide range of texts dealing with questions concerning the Jewish experience in the modern world. Relying on a comparative mode, we will analyze the historical, philosophical, ideological, and political aspects of these texts, as well as parallel literary and artistic depictions of similar topics. Crosslisted with Jewish studies.
Area: Humanities Writing Intensive.

AS.300.305. Asian American Literature. 3 Credits.
This course will explore the ways in which modern novels represent reality. Starting with the Nineteenth Century novel, and its claim for realism, we will follow the evolution of narrative modes and strategies that lead to modernist novel and its different claim for representing reality. The two main works which will guide our investigation will be Madame Bovary and Mrs. Dalloway. Alongside with the analysis of the novels we will engage in some of the fundamental critical texts that have defined realism and its stakes.
Area: Humanities Writing Intensive.

AS.300.307. Dostoevsky and Critical Theory. 3 Credits.
Examines novels by Dostoevsky, including The Idiot and The Brothers Karamazov, and works of literary theory and philosophy which grapple with his poetics and thought (Bakhtin, Girard, Shestov, Rozanov, Nietzsche, Freud, Levinas).
Instructor(s): A. Eakin Moss
Area: Humanities Writing Intensive.
AS.300.308. The Israeli Novel. 3 Credits.
This course studies the Israeli novel through close reading of the works of major Israeli writers such as, Ya’akov Shabtai, Amos Oz, A.B Yeshoshua, Amalia Kahana-Carmon, Yehoshua Knaz, David Grossman, Orly Castel-Bloom, Yoel Hoffmann and Etgar Keret. We will focus on questions of style, genres and thematic choices. Among the topics to be discussed are Jewish history and tradition, social and political critiques and minority representations. Classes conducted in English, but students with knowledge of Hebrew are encouraged to read texts in the original.
Instructor(s): N. Stahl
Area: Humanities.

AS.300.309. The Sense of Loss, 1900-1927. 3 Credits.
Area: Humanities.

AS.300.310. The Israeli Novel. 3 Credits.
Instructor(s): A. Eakin Moss
Readings in translation.

AS.300.311. Sovereignty and Modern Drama. 3 Credits.
What does the modern theater have to say about sovereignty and authority? Does this align with or challenge the political discourse? How is theater linked to sovereignty? Considering a wide range plays, this course explores the ways the notion of sovereignty persists as a theme in modern drama despite its commitments to the common, everyday hero. We will focus on the political, philosophical, and theological critiques implicit in the plays where sovereigns are found. From the short chamber plays of Yeats based on Noh drama, to the epic theatre of Brecht, from the Abstract drama of Jarry and the Absurd theatre of Ionesco, to the Naturalism of Strindberg and the Realism of O’Neill, from the meta-theatricality of Pirandello to the Minimalism of Beckett, students will encounter a variety of artistic styles and commitments, giving them an overview of many of the major movements that mark modern drama.
Dean’s Teaching Fellowship
Instructor(s): N. Perr
Area: Humanities.

AS.300.312. Imagining Revolution and Utopia. 3 Credits.
Examine theories of revolution and utopia and responses in literature, art and film. Primary case study is Russia and the Soviet Union, with comparative look at influential European works and contemporary politics. Topics include gender and the family, terror, communism and communualism, and the avant-garde in art and film. Cross listed with Studies of Women and Gender, and Sexuality, and Film & Media Studies
Instructor(s): A. Eakin Moss
Area: Humanities
Writing Intensive.

AS.300.313. Contemporary Israeli Cinema. 3 Credits.
This course examines Israeli cinema of the last two decades. Among the films to be discussed are: Oscar nominees Adjami and Waltz with Bashir, Late Marriage, A Matter of Size, Year Zero, Lemon Tree, Sweet Mud, and Lebanon. We will study the different influences and the innovative use of style and genres in these films, as well as the new themes and agendas that they offer.
Instructor(s): N. Stahl
Area: Humanities.

AS.300.314. The Sense of Loss, 1880-1930. 3 Credits.
A comparative study of the aesthetics and representation of loss (personal, political, historical, etc.) in a number of modernist texts. Authors to be studied will include J.P. Jacobsen, Ibsen, Unamuno, Kafka, Rilke, Woolf and T.S. Eliot. The class will focus on the twofold sense of “sense” (both as feeling and as meaning) in order to explore the way these texts seek to come to terms with and capture the nature of loss.
Instructor(s): L. Lisi
Area: Humanities.
AS.300.326. Comparative Modernisms. 3 Credits.
Dynamic, unprecedented literary innovation marks the first part of the 20th century. This course moves from Dadaism, Surrealism, and the Harlem Renaissance to Anglo-American, Caribbeanian, and Brazilian modernisms, and the Latin American vanguard. We’ll investigate literary experimentation in connection with the visual arts, modernization, colonialism, race, gender, and war. We will read novels, poetry, and essays from major writers who may include Apollinaire, André Breton, Marcel Proust; Gertrude Stein, HD, Djuna Barnes, Elsa von Freytag-Loringhoven, Mina Loy, T.S. Eliot; James Joyce, W.B. Yeats; Langston Hughes, Zora Neale Hurston, Jean Toomer; Claude McKay, Aimé Césaire, Louise Bennett, Jean Rhys, Nicolás Guillén; Oswald de Andrade, Julio Cortázar, Oliverio Girondo, Jorge Luis Borges.
Instructor(s): R. Galvin
Area: Humanities
Writing Intensive.

AS.300.327. Organism and Machine. 3 Credits.
Area: Humanities.

AS.300.330. Trauma in Theory, Film, and Fiction. 3 Credits.
An examination of the representation of trauma in literary theory, psychiatry, survivor literature, films, novels, and comics. Works by Sebald ("The Emigrants"), Lanzmann ("Shoah"), Spiegelman ("In the Shadow of No Towers"), McCarthy ("Remainder"), and others.
Instructor(s): R. Leys
Area: Humanities, Social and Behavioral Sciences.

AS.300.331. Modern Tragedy. 3 Credits.
Since the late 18th century, tragedy has repeatedly been declared dead on the grounds that the changed social, historical and philosophical conditions of modernity do not allow for the genre in a strict sense. This course looks at some versions of this argument in relation to modern works of drama in order to examine its validity and the extent to which the concept and experience of the tragic have changed in our time. Authors to be studied will include Schiller, Kleist, Strindberg, Maeterlinck, Lorca, Miller, Brecht and Beckett. Cross-listed with GRLL and English.
Instructor(s): L. Lisi
Area: Humanities.

AS.300.332. Tolstoy’s War and Peace. 3 Credits.
Called a "loose baggy monster" by Henry James, Leo Tolstoy’s War and Peace is a sui generis work of modern literature that offered a response and challenge to the European Realist novel and founded a Russian national myth. We will read the novel in translation alongside theoretical works examining issues of genre, narrative, perspective, theatricality, the everyday, domesticity, desire and violence.
Instructor(s): A. Eakin Moss
Area: Humanities
Writing Intensive.

AS.300.333. Models of Narrative: Shaping the Story. 3 Credits.
A comparative study of fictional forms in theory and practice since 1800.
Area: Humanities
Writing Intensive.

AS.300.334. Comic Evolution: Stages in Comedy. 3 Credits.
An eclectic tour of comic forms and theories from classical antiquity to contemporary practice. Although the textual focus will be on stage comedy, we’ll also consider the comic in other forms & media—film [Keaton], comic strip [Herriman], and parodic satire. Some of the familiar questions on the agenda: topical vs. 'perennial' material, the social functions of comedy, the shelf-life of humor, butts & scapegoats, symmetries & asymmetries between comedy and tragedy, verbal & non-verbal comic devices, the general rhetoric of comedy, & the possibility of a GUT.
Instructor(s): R. Macksey
Area: Humanities
Writing Intensive.

AS.300.335. Ethics of Fiction: The Rise of the Modern Short Story. 3 Credits.
Story-telling is an art and social practice that characterizes many cultures from antiquity to the present day. The modern short story, however, developed as a specific art form over the past 150 years, addressing perennial ethical issues, either directly or obliquely, in ways peculiar to its time. We will be reading a few stories by the earlier masters and shapers of the form (Flaubert, James, Chekhov, Joyce, Kafka) and then follow the trajectory of the short story in the hands of their modernist and postmodernist inheritors. The approach will be comparative with an emphasis on the close reading of the techniques and arguments of the exemplary texts. We will also examine the translation of several of these stories into the related narrative medium of film.
Instructor(s): R. Macksey
Area: Humanities.

AS.300.337. The Rise of the Modern Short Story. 3 Credits.
Instructor(s): R. Macksey
Area: Humanities
Writing Intensive.

AS.300.338. Art, Action, Intention. 3 Credits.
Since the publication of Monroe Beardsley and William K. Wimsatt’s “The Intentional Fallacy,” debate about the relevance of the artist’s intentions to the meaning and interpretation of the works she creates has been ongoing. How one understands the relevance of an artist’s intentions depends, in part, on how one understands the concept of “intention,” one of the central topics of Philosophy of Action. This course examines how resources in the philosophy of action have been brought to bear in order to illuminate the topic of artistic intention. It is also concerned to explore how accounting more adequately for the relevance of an artist’s intentions in particular might contribute to a more adequate analysis of the concept of “intention” more generally. This course is open to both graduates students and undergraduates.
Area: Humanities
Writing Intensive.

AS.300.339. Asian American Literature and Culture. 3 Credits.
Topics include conceptions of home, law, loyalty, and belonging as they come up within Asian American texts. Works by Chang-rae Lee, Mei-mei Berssenbrugge, Maxine Hong Kingston, John Okada, Bich Minh Nguyen and others. The course will also explore theoretical and historical questions about how a literary canon is formed, as well as the idea of a post-ethnic America. Cross-listed with East Asian Studies.
Instructor(s): S. Rhee
Area: Humanities
Writing Intensive.
**AS.300.340. Thinking the Body/The Body Thinking: Introduction to Aesthetics from the Perspective of Dance. 3 Credits.**

In the nineteenth and twentieth centuries, dance has developed into a serious art form. However, philosophers of art have paid little attention to dance. Why is this the case? Is dance perhaps too corporeal or too unreflective in some other way too marginal to be a fruitful topic for philosophical reflection? Or does the failure of mainstream philosophical aesthetics to take dance seriously perhaps signal unacknowledged biases in such approaches? Might dance, the art form whose medium is the human body, have something to contribute to current philosophical interest in rethinking the human body and, particularly, the relation between mind and body? Seeking responses to questions such as these, this course provides an introduction to the place of dance in the philosophy of art. The first half of the course examines portions of seven foundational texts in the philosophy of art and culture as well as philosophical accounts of dance that draw on these foundational texts in a range of ways. The aim is not only to explore dance from the perspective of traditional aesthetic theories, but also to explore such traditional theories from the perspective of arguably the art form which they have been most resistant to treating seriously. This oblique angle of entry into mainstream approaches to general aesthetic topics will bring into focus important questions that might be easily overlooked if one examines such theories only in light of their preferred examples of art. The second part of the course explores dance as itself a mode of philosophical reflection, examining how the work of choreographers such as George Balanchine, Jerome Bel, William Forsythe, Crystal Pite and Yvonne Rainer explore the possibilities and limits of their medium: the human body. One proposal will be of particular concern: Might such instances of the body thinking bring into focus more adequate ways of thinking about the body?

Instructor(s): K. Boyce
Area: Humanities
Writing Intensive.

**AS.300.341. East Asian Cinema. 3 Credits.**

A study of select films across East Asia in their aesthetic and institutional contexts. Highlighted directors will include Yasujiro Ozu and Akira Kurosawa, Chen Kaige, Wong Kar-wai, Im Kwon-Taek, and Gen Sekiguchi, Bong Joon-ho. Cross-listed with East Asian Studies and Film and Media Studies.

Instructor(s): S. Rhee
Area: Humanities
Writing Intensive.

**AS.300.342. The Bible and Philosophy I. 3 Credits.**

This course will examine several attempts by ancient, modern, and contemporary thinkers to come to terms with the Biblical concept of revelation and prophecy, law and election, apocalyptic and eschatology. We will put special emphasis on the first articulation of the idea of Christian universalism, faith and justification, time and eternity. Readings will include the entire corpus of St. Paul's authentic letters, in addition to the major Scriptural passages on which he draws, but also selections from Philo of Alexandria, St. Augustine, Spinoza, Luther, Nietzsche, Jakob Taubes, Alain Badiou, Giorgio Agamben, and Jean-Luc Nancy.

Instructor(s): H. de Vries
Area: Humanities, Social and Behavioral Sciences.

**AS.300.343. Philosophy and Literary Form. 3 Credits.**

This course examines the difference literary form can make to the shaping of philosophical content. Philosophers have tended to treat literary form as merely ornamental. For this reason, they have often underestimated the philosophical significance not only of certain works of literature but also the literary form of even those works uncontroversially considered to be philosophical. This course explores the philosophical significance of literary forms in both kinds of works. The first half examines how and why Anglo-American philosophers have incorporated the interpretation of individual literary works into their philosophical writing. We will concentrate on three works of literature—Ibsen’s A Doll’s House, James’s The Golden Bowl and Wordsworth’s Prelude—each of which has attracted significant philosophical attention. The second half of the course examines how philosophers have brought literary analysis to bear in order to illuminate the philosophical achievement of certain canonical philosophical texts. We will concentrate on three literary forms—dialogue, meditation and confession—as these forms are instantiated by three works of philosophy: Plato’s Republic, Descartes’ Meditations and Wittgenstein’s Philosophical Investigations.

Instructor(s): K. Boyce
Area: Humanities

**AS.300.344. Genocide as a Philosophical Problem. 3 Credits.**

This class will be an empirical and philosophical examination of genocide, particularly focused on perpetrators. In addition to looking at historical case studies of genocide in both the ancient and modern world, we will attempt to deal with the philosophical questions that emerge from these cases. These include but are not limited to genocide definition, legal issues in genocide prosecution, and meta issues such as the relationship between modernity and genocide.

Area: Humanities
Writing Intensive.

**AS.300.345. Between the Sacred and the Secular in Modern Hebrew Literature. 3 Credits.**

Area: Humanities
Writing Intensive.

**AS.300.346. Forms of Moral Community: The Contemporary World Novel. 3 Credits.**

Literary and philosophical imaginations of moral community in the post-WWII period (1950-2001). Texts include: Coetzee, Disgrace; McEwan, Atonement; Achebe, Things Fall Apart; Ishiguro, An Artist of the Floating World; Roy, The God of Small Things; Lessing, The Grass is Singing; Mistry, A Fine Balance; Morrison, Beloved; and essays by Levi, Strawson, Adorno, Murdoch, Beauvoir and Barthes on the deep uncertainly over moral community after the crisis of World War II. Close attention to novelistic style and narrative will inform our study of the philosophical questions that animate these works. What does it mean to acknowledge another person’s humanity? Who are the members of a moral community? Why do we hold one another responsible for our actions? How do fundamental moral emotions such as contempt, humiliation, compassion, gratitude, forgiveness, and regret reveal the limits of a moral community?

Instructor(s): Y. Ong
Area: Humanities.
AS.300.347. Humans, Animals, and Ghosts. 3 Credits.
This course analyzes philosophical texts, novels, and films that explore the boundaries among human, animal, and alien forms of life and discusses the significance of their haunting presence in scholarly literature and popular culture alike. Readings include: R. Descartes, D. Diderot, D. Haraway, O. Butler, F. Kafka, J. Derrida.
Instructor(s): P. Marrati
Area: Humanities
Writing Intensive.

AS.300.348. Korean Modernism. 3 Credits.
Area: Humanities.

AS.300.349. The Cinema of Andrei Tarkovsky. 3 Credits.
Course examines the films and theoretical writing of Andrei Tarkovsky, director of Andrei Rublev, Solaris, and Stalker.
Instructor(s): A. Eakin Moss
Area: Humanities
Writing Intensive.

AS.300.350. Skepticism on Stage and Page. 3 Credits.
This course explores influential interpretations of and responses to skepticism in literature, philosophy and theater. Case Studies will include: Descartes, Ibsen, James, Kafka, Kierkegaard, Poe, Shakespeare, and Wittgenstein.
Instructor(s): K. Boyce
Area: Humanities
Writing Intensive.

AS.300.351. Literature and Hasidism: The Tales of Nachman of Berslov. 3 Credits.
This course explores the tales of Nachman of Berslov as a literary, cultural and theological phenomenon. We will trace the Kabbalistic and messianic elements in these tales and evaluate their place and role within the wider context of Hassidic literature.
Area: Humanities
Writing Intensive.

AS.300.352. Fictions of Autobiography. 3 Credits.
A comparative survey of autobiographical writing as a creative process. Beginning with a few classic examples (Augustine, Petrarch, Montaigne, Rousseau), the seminar will proceed to more recent adventures in the first-person singular. Modern instances will include self-creation in several genres and media, including narrative, dramatic, and cinematic forms. Seminar meets at 107 St. Martin’s Road.
Instructor(s): R. Macksey
Area: Humanities
Writing Intensive.

AS.300.353. Henry James and the Art of the Novel. 3 Credits.
Instructor(s): L. Lisi
Area: Humanities.

AS.300.354. Philosophy, Films, and TV Series. 3 Credits.
This course explores how films and TV series can offer new perspectives on philosophical problems and how, in turn, philosophy can help understanding their power of conviction for contemporary culture.
Instructor(s): P. Marrati
Area: Humanities.

AS.300.355. The Literature of the Everyday. 3 Credits.
The ordinary, the common, the everyday: why does literary realism consider the experiences of the average individual to be worthy of serious contemplation? In this course, we will read works by Flaubert, Dickens, Zola, Eliot, Mann, Tolstoy, Ibsen, and Woolf in the context of critical theories of realism.
Instructor(s): Y. Ong
Area: Humanities.

AS.300.356. From Literature to Film - the case of Israeli Cinema. 3 Credits.
This course explores the differences and similarities between two artistic mediums: literature and cinema. Our case study will be the interesting transformation of Hebrew fiction into Israeli films-- a dominant phenomenon in Israeli cinema since its very beginning. Our main framework will be narrative theories, but we will also consider the specific historical, ideological and geo-political aspects involved in this transformation. By comparing the two artistic modes and studying the transformation of 5 literary works into films, students will become familiar with the history of modern Hebrew literature, contemporary Israeli cinema, and the relationship between these two artistic mediums. Cross-listed with Jewish Studies, Film and Media Studies, and Writing Seminars
Instructor(s): N. Stahl
Area: Humanities
Writing Intensive.

AS.300.357. Modern Korean Culture and Film. 3 Credits.
This course examines modern Korean culture through film and literature in translation. Emphasis will be on the politics of representation, especially in light of the many collective and personal traumas (caused by poverty and factionalism, colonial rule, war, and an accelerated pace of modernization) that mark twentieth century Korean history.
Instructor(s): S. Rhee
Area: Humanities

AS.300.358. Modern Korean Culture and Film. 3 Credits.
This course examines modern Korean culture through film and literature in translation. Emphasis will be on the politics of representation, especially in light of the many collective and personal traumas (caused by poverty and factionalism, colonial rule, war, and an accelerated pace of modernization) that mark twentieth century Korean history.
Instructor(s): S. Rhee
Area: Humanities.

AS.300.359. Homelessness in America: Interdisciplinary and Critical Perspectives. 3 Credits.
This course examines innovative research, writings, and other media concerning homelessness in the United States, with special emphasis on critical/philosophical and interdisciplinary approaches that shed new light on the issue.
Instructor(s): T. Gottbreht
Area: Humanities.

AS.300.360. Critical Thinking and its History. 3 Credits.
This course aims at discussing different conceptions of “critique” and “critical thinking” in modern and contemporary philosophy. Readings include: Descartes, Kant, Adorno, Foucault, Arendt, Said, Butler.
Instructor(s): P. Marrati
Area: Humanities.

AS.300.361. Fiction & Case History: Constructive Reading. 3 Credits.
A comparative seminar in the attentive reading of short fictions and other narratives. Attention to the reader's share as well as that of the author in the construction of stories; consideration of the diagnostic and therapeutic uses of the imagination.
Instructor(s): R. Macksey
Area: Humanities
Writing Intensive.
AS.300.362. Beauty and the Predicate Calculus. 3 Credits.
Frége’s development of a predicate calculus made possible the evolution of a distinctively “analytic” tradition in philosophy. But arguably that tradition has failed to fully appreciate the implications of this important development. The course will begin by examining how Frége himself understood the importance of his advance. It will then consider arguments to the effect that some of the most influential accounts of mind and action—namely those shaped by Donald Davidson—fail by failing to take this advance adequately into account. In light of these arguments in philosophy of mind and action, we will reconsider the implications of Frége’s advance for aesthetics. The principle aim of the course will be to construct an account of art and criticism that takes those implications fully into account. Efforts to construct alternatives that overcome this purported failing will be examined.
Instructor(s): K. Boyce
Area: Humanities
Writing Intensive.

AS.300.363. Reading Judith Shakespeare: Women Playwrights of Early Modern England. 3 Credits.
Virginia Woolf’s account of the thwarted career of Shakespeare’s hypothetical sister, Judith, frames our reading of women playwrights, poets, and diarists of 16th- and early 17th-century England.
Instructor(s): E. Patton
Area: Humanities
Writing Intensive.

AS.300.364. What is Intellectual History? 3 Credits.
Intellectual History today is a field with no hard and fast identity. This can be a problem but it can also offer unexpected opportunities. In this seminar we will read various books and essays that exemplify this state of affairs and perhaps point to ways beyond it. Texts include works by Foucault, Hayden White, Derrida, and others.
Instructor(s): R. Leys
Area: Humanities
Writing Intensive.

AS.300.365. Desire in the Fin de siècle. 3 Credits.
This course examines the obsession with desire at the turn of the 20th century in literature, drama, philosophy and social thought and its implications for notions of self and community in modernity. Primary focus will be Silver Age Russia with key texts drawn also from the European context. Readings in translation.
Area: Humanities
Writing Intensive.

AS.300.366. Russian Avant-Garde Cinema. 3 Credits.
Russian cinema was born out of the intense artistic experimentation of the fin-de-siècle avant-garde and developed in a climate of dramatic political and cultural change in the twenties and thirties. While subject to draconian censorship in the Soviet period, it nonetheless engaged in active dialogue with the film industries of Western Europe and America and had a lasting impact on world cinema. This course examines the extraordinary flourishing of avant-garde cinema in the Soviet Union in the 1920s and 30s including films by Eisenstein, Vertov, Pudovkin, and Dovzhenko, their theoretical writings, and their far-reaching influence on film and film theory. All readings in English, films subtitled in English.
Instructor(s): A. Eakin Moss
Area: Humanities
Writing Intensive.

AS.300.367. Seeing Like a Woman. 3 Credits.
This seminar examines the problems of female desire, subjectivity, spectatorship and performance in fiction, poetry, memoir and film from a variety of cultures and theorectical perspectives. Readings include: de Beauvoir, Riley, Butler, Cixous, Tolstoy’s “Family Happiness,” Woolf’s Orlando, Larsen’s Passing; Poetry by Moore, Bishop, Akhmatova, Tsvetaeva and Szymborska. Films by Deren, Ophuls, Hitchcock, Potter, Campion, Akerman, Varda, Denis.
Instructor(s): A. Eakin Moss
Area: Humanities
Writing Intensive.

AS.300.369. Laura Talks Back: a seminar on women poets of Renaissance Italy, France, Spain, and England. 3 Credits.
In the later Middle Ages and early Renaissance, generations of male poets wrote complex love sonnets to idealized and unattainable mistresses (such as Dante’s ‘Beatrice’ and, especially, Petrarch’s ‘Laura’). By the 15th and 16th centuries, however, women throughout Europe were writing sonnets in the same mode, and in this seminar we will explore the kinds of strategies used by female poets to position themselves in relation to idealized—but not always unattainable—male lovers. Knowledge of French, Spanish or Italian is welcome but not required; poems will be read in translation.
Area: Humanities
Writing Intensive.

AS.300.370. What Computers Can’t Do and other Controversies. 3 Credits.
A critical examination of recent debates over the interface between the humanities and the natural sciences. Topics include: computer models of the mind; consciousness and the brain; affect theory and the neurosciences; mirror neuron theory; literature and the natural sciences; the new trauma theory.
Instructor(s): R. Leys
Area: Humanities.

AS.300.371. The Modernist Novel: James, Woolf, and Joyce. 3 Credits.
The purpose of this course is to survey works by three of the greatest, most relentless innovators of the twentieth century - Henry James, Virginia Woolf, and James Joyce -- who explored and exploded narrative techniques for depicting what Woolf called the "luminous halo" of life. Selected novels include: The Portrait of a Lady, The Wings of a Dove, Jacob's Room, Mrs. Dalloway, To the Lighthouse, A Portrait of the Artist as a Young Man, and Ulysses.
Instructor(s): Y. Ong
Area: Humanities.

AS.300.372. Holocaust Testimonies. 3 Credits.
A seminar on topics and issues associated with Holocaust testimony. Crosslisted with History, History of Science and Technology, and Anthropology.
Area: Humanities, Social and Behavioral Sciences.

AS.300.373. Philosophies of Ecology. 3 Credits.
This course analyzes classical and modern philosophical conceptions of nature and environment in the context of present debates about ecology.
Area: Humanities.
AS.300.374. The Other in Israeli Culture. 3 Credits.
This course examines the representations of the Other in Israeli society and culture. Relying on Self-Other theories we will study the role of the Other in contemporary Israeli cinema, prose, poetry, theater and visual art, and will investigate the political, social and cultural context of its representations. Cross-listed with Jewish Studies and Film and Media Studies
Instructor(s): N. Stahl
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.300.375. The God of the Hebrew Writer. 3 Credits.
Who is the God of the Hebrew poet and what kind of being is he? This course will examine the ways in which Hebrew writers conceived God. Against the background of Medieval Hebrew poetry we will read modern Hebrew poetry, prose and drama and analyze the changes in the notion of God and its depictions from the Middle Ages through Jewish Enlightenment to modernity. We will study the role of the poet as a mediator between God and his people and his or her understanding of God in the aftermath of World War I and the Holocaust.
Area: Humanities.

AS.300.376. Cinema and Philosophy. 3 Credits.
Why is contemporary philosophy so interested in cinema? Do movies have anything to say about philosophical problems? What are the most productive ways of bringing films and philosophy into conversation?
Instructor(s): M. Shuster; P. Marrati
Area: Humanities.

AS.300.377. Israeli Film and Literature. 3 Credits.
This course examines representations of various aspects of Israeli society and culture in contemporary Israeli cinema and literature. The course will follow both a thematic and chronological path in order to study the ways in which Israeli cinema and literature reflect political, ideological, social, and cultural aspects of contemporary Israel. In this context, we will read well-known works by several major authors and will watch major Israeli films from the 1940s to these days. We will also use a comparative approach to study the different artistic means of both mediums and to evaluate their successes in representing the various tensions of Israeli society and culture.
Instructor(s): N. Stahl; Z. Cohen
Area: Humanities
Writing Intensive.

AS.300.378. Realism and Anti Realism in Modern Jewish Literature. 3 Credits.
This course seeks to trace the narrative dynamics and literary means of Modern Jewish Literature. The course will focus on the ideological, political and artistic context of the break with the conventions of realism in Jewish modernism. Reading includes: Erich Auerbach, Franz Kafka, S.Y Agnon, Sholem Asch, Yaakov Agnon, S.Y Abramovitch, Sholem Asch, A.B Yehoshua, Yoel Hoffmann and Orly Castel-Bloom. Cross-listed with Jewish Studies and GRLL
Instructor(s): N. Stahl
Area: Humanities.

AS.300.379. The Moses Complex. 3 Credits.
Instructor(s): R. Leys
Area: Humanities.

AS.300.380. What Makes Us Desire?. 3 Credits.
Area: Humanities.

AS.300.381. The God of the Hebrew Writer. 3 Credits.
Instructor(s): R. Leys
Area: Humanities.

AS.300.382. Modern Korean Literature and Film. 3 Credits.
We will examine twentieth century Korean culture through short stories that are canonical in modern Korean literature and through a series of films associated with New Korean Cinema. One aim of the course is to gain a sense of the history against which the literary and cinematic artifacts obtain their representative artistic status. A second aim is to inquire into the relationship between written and filmic texts in order to see the limits and advantages of one medium over another for representing national culture. No prior familiarity with Korean language is required.
Instructor(s): S. Rhee
Area: Humanities.

AS.300.383. The Rhetoric of Fiction. 3 Credits.
Area: Humanities
Writing Intensive.

AS.300.384. On Freedom and Subjection. 3 Credits.
This course analyzes classical and modern conceptions of freedom and subjection. Readings include, among others, Aristotle, Augustine, Kant, Bergson, Heidegger, and Einstein. Cross-listed with Philosophy
Instructor(s): N. Schott
Area: Humanities.

AS.300.385. Post-Soviet Cinema. 3 Credits.
After the fall of the Soviet Union, Russian filmmakers grappled with the legacy of Soviet power and the nature of the new democracy. This course examines the concept of sovereignty in philosophy and art through the lens of popular films and art cinema from this context. Cross-listed with Film and Media Studies
Area: Humanities.

AS.300.386. Obama and Philosophy. 3 Credits.
The course will investigate the theological and philosophical as well as rhetorical and literary backgrounds and guiding principles that have informed Barack Obama’s writings, speeches, and political strategies so far. While paying minute attention to a few pivotal controversial recent debates, both in domestic policy and international relations, our central focus will be on understanding the curious blend of Obama’s version of so-called Christian realism, influenced by Reinhold Niebuhr, among others, and of what we will call his deep pragmatism. Special attention will be paid to his early appeal to “simple ideas” and “small miracles,” each of them yielding the Biblical and sobered injunction of a “hope against hope.”
Cross-listed with Philosophy
Instructor(s): H. de Vries
Area: Humanities.
AS.300.391. Home and Exile. 3 Credits.
This course examines the concept of home and the condition of exile primarily through the case of 20th century Russian literature, film, art and essay, with comparative texts from other cultures. Attention will be paid to the aesthetic, philosophical and historical implications of home and exile as well as consideration of notions of diaspora and transnational literature and film. All texts will be read in English translation.
Instructor(s): A. Eakin Moss
Area: Humanities.

AS.300.392. Forms of Moral Community: The Contemporary World Novel. 3 Credits.
Literary and philosophical imaginations of moral community in the post-WWII period (1950-2001). Texts include: Coetzee, Disgrace; McEwan, Atonement; Achebe, Things Fall Apart; Ishiguro, An Artist of the Floating World; Roy, The God of Small Things; Lessing, The Grass is Singing; Mistry, A Fine Balance; Morrison, Beloved; and essays by Levi, Strawson, Adorno, Murdoch, and Beauvoir on the deep uncertainty over moral community after the crisis of World War II. Close attention to novelistic style and narrative will inform our study of the philosophical questions that animate these works. What does it means to acknowledge another person's humanity? Who are the members of a moral community? Why do we hold one another responsible for our actions? How do fundamental moral emotions such as contempt, humiliation, compassion, gratitude, forgiveness, and regret reveal the limits of a moral community? 
Instructor(s): Y. Ong
Area: Humanities.

AS.300.393. The Literature of the Everyday: Realism in the 19th- and 20th-Century Novel. 3 Credits.
The ordinary, the common, the everyday: why does literary realism consider the experiences of the average individual to be worthy of serious contemplation? In this course, we will read works by Austen, Flaubert, Dickens, Zola, Eliot, Mann, Tolstoy, and Woolf in the context of critical theories of realism.
Instructor(s): Y. Ong
Area: Humanities.

AS.300.394. Of Miracles and Special Effects. 3 Credits.
This course will investigate the relationship between traditional theologies of the miracle and contemporary media theories of special effects. We will ask why and how the current age of globalization and new technological media forces us to investigate and theorize the concept, event, and practice of religion in altogether novel ways. Readings and screenings will include Augustine, al-Ghazali, Hume, Rosenzweig, Benjamin, Wittgenstein, Arendt, Derrida, Carl Theodor Dreyer's Ordet, and Mamoru Oshii's Ghost in the Shell.
Instructor(s): H. de Vries
Area: Humanities.

AS.300.395. Stages of Comedy: Theory & Practice. 3 Credits.
A comparative survey of dramatic and cinematic events, with some attention to the various attempts to present a theory of comedy. Seminar will include some food and drinks to support the discussions.
Instructor(s): R. Macksey
Area: Humanities
Writing Intensive.

AS.300.396. How Freud Changed the Way We Think. 3 Credits.
An examination of aspects of the history and theory of psychoanalysis, focusing on the question of origins in Freud's work. Texts by Freud, Laplanche, Lacan, Derrida, and others.
Instructor(s): R. Leys
Area: Humanities.

AS.300.398. Zionism, Post-Zionism and Modern Hebrew Literature. 3 Credits.
This course studies the development of modern Hebrew literature through its relation to Zionism and Post-Zionism. Based on a close reading of both literary and non-literary Zionist and Post-Zionist texts, we will explore the thematic, social, political, aesthetic and stylistic influences that these two movements have had on modern Hebrew literature. Writers to be discussed include: Hertzl, Nordau, Achad ha-am, Jabotinsky, Kluasner, Brenner, Berdycewski, Agnon, Greenberg, Kahana-Carmon, Oz, Yehoshua, Grossman, Castel-Bloom, and Laor. Cross listed with: Jewish Studies and Political Science
Instructor(s): N. Stahl
Area: Humanities
Writing Intensive.

AS.300.399. Cinema and Philosophy. 3 Credits.
Do movies have anything to say about philosophical problems? Why is contemporary philosophy so interested in cinema? What are the most productive ways of bringing films and philosophy into conversation? Why is contemporary philosophy so interested in cinema?
Instructor(s): P. Marrati
Area: Humanities.

AS.300.400. Philosophy of Tragedy. 3 Credits.
Since the late eighteenth century, philosophers have repeatedly been drawn to investigations of tragedy and the tragic. In this course we will study some of the most important thinkers in this tradition, and examine the different implications (philosophical, historical, political, existential, aesthetic, etc.) that these concepts carry in their works. Authors to be read will include Schiller, Hegel, Kierkegaard, Nietzsche, Unamuno, Benjamin and Cavell.
Instructor(s): L. Lisi
Area: Humanities.

AS.300.401. Either/Or: Philosophy and Literature in Kierkegaard. 3 Credits.
A close study of one of Kierkegaard's central works, Either/Or, with particular attention to the relation between philosophical analysis and literary modes of representation in the text.
Instructor(s): L. Lisi
Area: Humanities.

AS.300.402. Honors Seminar. 3 Credits.
The Honors Program in the Humanities offers qualified undergraduates the possibility of pursuing an independent research project in their Junior and Senior years in any humanistic discipline or combination of disciplines: intellectual history, comparative literature, philosophy, critical theory, psychoanalysis, religion, film, etc., as well as points of intersection between the arts and the sciences. After one year qualified students may apply for admission to the concurrent BA/MA degree program. Sophomores who plan to study abroad in their Junior year should also consider attending this seminar.
Area: Humanities.
AS.300.403. Honors Seminar. 3 Credits.
The Honors Program in the Humanities offers qualified undergraduates the possibility of pursuing an independent research project in their Junior and Senior years in any humanistic discipline or combination of disciplines: intellectual history, comparative literature, philosophy, critical theory, psychoanalysis, religion, film, etc., as well as points of intersection between the arts and the sciences. After one year qualified students may apply for admission to the concurrent BA/MA degree program. Sophomores who plan to study abroad in their Junior year should also consider attending this seminar. Please keep the Special Note: Limited to Juniors and Seniors and Sophomores admitted to the Honors Program in the Humanities. Permission of instructor required.
Instructor(s): L. Lisi
Area: Humanities
Writing Intensive.

AS.300.404. The Israeli Novel. 3 Credits.
This course studies the Israeli novel through close reading of the works of major Israeli writers such as, Ya’akov Shabtai, Amos Oz, A.B Yeshoshua, Amalia Kahana-Carmon, Yehoshua Kraz, David Grossman, Orly Castel-Bloom, Yoel Hoffmann and Etgar Keret. We will focus on questions of style, genres and thematic choices. Among the topics to be discussed are Jewish history and tradition, social and political critiques and minority representations. Classes conducted in English, but students with knowledge of Hebrew are encouraged to read texts in the original. Cross-listed with Jewish Studies and Writing Seminars.
Area: Humanities.

AS.300.405. The Jewish Jesus. 3 Credits.
This course studies the different images of Jesus that accompanied Jewish thought and imagination for almost two thousand years and analyzes their contribution to the self-understanding of Jews over these millennia. We will study historical, religious, and literary texts.

AS.300.406. Marcel Proust, Literature and Art. 3 Credits.
Proust’s great sequence of novels À la recherche du temps perdu is also a theory of the Novel and indeed of Art. A close reading of Du côté de chez Swann and Le Temps retrouvé, will put this to the test. Required editions: Proust’s Du côté de chez Swann, Gallimard, Folio, Le Temps retrouvé, Gallimard, Folio, Contre Sainte-Beuve, Gallimard, Folio. The seminar is open to advanced undergrads, with authorization of the instructor. Cross-listed GRLL-French
Instructor(s): J. Neefs; M. Fried
Area: Humanities.

AS.300.407. Forms of Moral Community: The Post-1950 Anglophone Novel. 3 Credits.
This course will focus on works by post-war Anglophone novelists -- Lessing, Achebe, Ishiguro, Coetzee, Morrison, Roy, and McEwan -- that confront fundamental questions about what it means to acknowledge another person’s humanity and to belong to a moral community.
Instructor(s): Y. Ong
Area: Humanities.

AS.300.408. Lyric Modernity. 3 Credits.
A comparative literature course on modern lyric and poetics. The main issue of the course is how the lyric voice is constructed and sustained under the pressures of modernization in the United States, Europe, and Korea. We will also emphasize issues of translation and the relationship of music and poetry. Readings will include texts by Adorno, Benjamin, Grossman, von Hallberg and Waters, and poems by Dickinson, Rilke, and Kim among others. All readings available in English. Cross-listing requested with East Asian Studies, GRLL, and English
Instructor(s): S. Rhee
Area: Humanities.

AS.300.409. Proust and Philosophy. 3 Credits.
Open to graduate students. In addition to offering an extensive reading of Marcel Proust’s In Search of Lost Time, with special focus on the novel’s use of philosophical tropes, this course will investigate its reception in and significance for twentieth century and contemporary thought. Readings will include Bergson, Beckett, Bataille, Camus, Sartre, Adorno, Deleuze, Levinas, Blanchot, Ricoeur, Landy, Dancy, and Pippin.
Instructor(s): H. de Vries.

AS.300.411. Animal Minds. 3 Credits.
An examination of some of the scientific and philosophical literature on the nature of animal minds and the way(s) in which they differ from the human mind. The most important of these apparent differences are the use of language, the exercise of concepts, and instrumental reasoning, including the use of instruments. Co-list with AS.150.490
Instructor(s): M. Williams; R. Leys
Area: Humanities.

AS.300.412. Flaubert. 3 Credits.
Through a close reading of Flaubert’s novel, selective consideration of the drafts and of the historical, political and artistic context, we shall examine the making of that masterpiece of narrative prose, which Flaubert himself conceived under the sign of modernity. Our central concern, in other words, is with L’Éducation sentimentale as a second crucial event in aesthetic modernity, twenty two years after Madame Bovary. Seminar will be taught in French and English. L’Éducation sentimentale edition required: GF Flammarion, 2003. Co-listed with 300.604
Instructor(s): J. Neefs; M. Fried
Area: Humanities.

AS.300.413. Israeli poetry. 3 Credits.
This course examines the works of major Israeli poets such as Yehuda Amichai, Nathan Zach, David Avidan, Dalia Rabikovitch, Yona Wollach, Maya Bejerano, and Yitzhak Laor. These works will be read against the background of the poetry of previous literary generations of writers such as H.N Bialik, Avraham Shlonsky, Natan Alterman and Lea Goldberg in an attempt to uncover changes in style, themes and aesthetic. Through close reading of the poems, the course traces the unique style and aesthetic of each poet, and aims at presenting a wide picture of contemporary Hebrew poetry. Class will be conducted in English and texts will be read in both English translation and the Hebrew original. Open for both Hebrew and non-Hebrew speakers.
Instructor(s): N. Stahl.
AS.300.415. Law of the Cannibal: Trans-American Poetics. 3 Credits.
In this seminar on 20th-c. poetry of the Americas, we will explore the
relations between land, language, and identity. Our point of departure,
informing by de Andrade’s “Cannibal Manifesto,” will be the idea that
all literary texts form a body upon which writers may feast when they
compose new works. Devouring, plundering, and appropriating will be
central concepts for our seminar. We’ll debate the politics of literary
cultural and multilingual U.S. American poetry (Louisiana Creole poetry,
Nuyorican Poets Café, etc.). We will also investigate issues of authorship
and originality; constraint, sampling, and parody; and poetic hoaxes and
frauds. Readings may include theoretical texts from Édouard Glissant,
Ángel Rama, Néstor García Canclini, and Roberto Schwarz, as well as
Deleuze, Foucault, Kristeva, and Barthes. Poetry may be drawn from
Caribbean writers Césaire, Senghor, Walcott, Brathwaite, Martí, Palés
Matos; Brazilians Haroldo and Augusto de Campos; and North Americans
Langston Hughes, Claude McKay, Myung-Mi Kim, Kenneth Goldsmith,
Susan Howe, and Christian Bök.
Instructor(s): R. Galvin
Area: Humanities
Writing Intensive.

AS.300.416. Wittgenstein, Religion, and Ethics. 3 Credits.
Starting out from the Lecture on Ethics, this course will investigate
Wittgenstein’s approaches to religion and ethics, mysticism and the
spiritual, and contrast these with those of his contemporaries and later
interpreters. Readings will include Ludwig Wittgenstein, Martin Heidegger,
Elizabeth Anscombe, C.S. Lewis, Hilary Putnam, Richard Rorty, Stanley
Cavell, Martin Stokhof, and others.
Instructor(s): H. de Vries
Area: Humanities.

AS.300.417. Modern Jewish Thought and Literature. 3 Credits.
Open to graduate students. This course studies a wide range of texts
dealing with questions concerning the Jewish experience in the modern
world. Relying on a comparative mode, we will analyze the historical,
philosophical, ideological, and political aspects of these texts, as well as
parallel literary and artistic depictions of similar topics. Crosslisted with
Jewish studies.
Area: Humanities.

AS.300.421. Spiritual Exercises: Concepts and Practices. 3 Credits.
This course will introduce the concepts, practices, and history of spiritual
exercises and its modern transformations. Readings include Marcus
Aurelius, Philo of Alexandria, St. Augustine, St. Ignatius of Loyola, Henri
Instructor(s): H. de Vries
Area: Humanities.

AS.300.423. Contemporary Theory: New Materialisms, New Vitalisms,
and the Post-Traumatic Subject. 3 Credits.
A discussion of: recent versions of materialism and realism, including
materialisms informed by neuroscience; vital materialism; the latest
developments in trauma and affect theory; and related trends. Texts by
Zizek, Malabou, Damasio, Pippin, McDowell, Johnston, Brassier,
Churchland, LeDoux, and others.
Instructor(s): R. Leys
Area: Humanities.

AS.300.425. Literature and the Divine. 3 Credits.
This course studies various issues concerning literary representations
of the divine. We will investigate theoretical, theological, generic and
aesthetic aspects of the topic and will familiarize ourselves with the
general problem of the relation between religion and literature. Among
the topics to be discussed are, negative theology in literature, theocidy
and anti-theocidy, the question of religion and literary modernism and
providence and narratology in the modern novel.
Area: Humanities.

AS.300.501. Independent Study. 3 Credits.
Instructor(s): E. Patton; L. Lisi; P. Marrati.

AS.300.502. Independent Study. 0 - 3 Credit.
Area: Humanities.

AS.300.503. Indiv Honors Work-Junior. 3 Credits.
Instructor(s): Staff

Instructor(s): E. Patton.

AS.300.525. Editorial Internship. 1 Credit.
Instructor(s): R. Macksey
Writing Intensive.
AS.300.526. Editorial Internship. 1 Credit.
Students with a serious commitment to critical journalism may contract a supervised internship with one of the University publications or cooperating sponsors in the Baltimore community.
Instructor(s): R. Macksey.
Area: Humanities
Writing Intensive.

AS.300.599. Independent Study. 3 Credits.
Instructor(s): L. Lisi; R. Macksey.

AS.300.600. Beauty and the Predicate Calculus.
Fregé's development of a predicate calculus made possible the evolution of a distinctively "analytic" tradition in philosophy. But arguably that tradition has failed to fully appreciate the implications of this important development. The course will begin by examining how Fregé himself understood the importance of his advance. It will then consider arguments to the effect that some of the most influential accounts of mind and action—namely those shaped by Donald Davidson—fail by failing to take this advance adequately into account. Efforts to construct alternatives that overcome this purported failing will be examined. In light of these arguments in philosophy of mind and action, we will reconsider the implications of Fregé's advance for aesthetics. The principle aim of the course will be to construct an account of art and criticism that takes those implications fully into account.
Instructor(s): K. Boyce.

AS.300.601. Philosophy of Tragedy.
Since the late eighteenth century, philosophers have repeatedly been drawn to investigations of tragedy and the tragic. In this course we will study some of the most important thinkers in this tradition, and examine the different implications (philosophical, historical, political, existential, aesthetic, etc.) that these concepts carry in their works. Authors to be read will include Schiller, Hegel, Kierkegaard, Nietzsche, Unamuno, Benjamin and Cavell. Cross-listed with: English, German & Romance Languages & Literatures, Philosophy
Instructor(s): L. Lisi.

AS.300.602. Theory, Painting, Vision.
Reading in philosophy, theory, criticism. Texts by Merleau-Ponty, Heidegger, Foucault, Derrida, Cavell, and Pippin, among others.
Instructor(s): M. Fried.

AS.300.603. Readings in Russian Poetry, Prose and Theory.
Readings to be selected by mutual agreement among the students and instructor. Reading knowledge of Russian required.
Instructor(s): A. Eakin Moss
Area: Humanities.

AS.300.604. Flaubert.
Through a close reading of Flaubert's novel, selective consideration of the drafts and of the historical, political and artistic context, we shall examine the making of that masterpiece of narrative prose, which Flaubert himself conceived under the sign of modernity. Our central concern, in other words, is with L'Éducation sentimentale as a second crucial event in aesthetic modernity, twenty years after Madame Bovary. Seminar will be taught in French and English. L'Éducation sentimentale edition required: GF Flammarion, 2003. Co-listed with 300.412
Instructor(s): J. Neefs; M. Fried.

AS.300.606. Realism and Anti Realism in Modern Jewish Literature.
This course seeks to trace the narrative dynamics and literary means of Modern Jewish Literature. The course will focus on the ideological, political and artistic context of the break with the conventions of realism in Jewish modernism. Reading includes: Erich Auerbach, Franz Kafka, S.Y Agnon, S.Y Abramovitch, Sholem Asch, A.B Yehoshua, Yoel Hoffmann and Orly Castel-Bloom. Cross-listed with GRLL and Jewish Studies
Instructor(s): N. Stahl.

An examination of aspects of the history and theory of psychoanalysis, focusing on the question of origins in Freud's work. Texts by Freud, Laplanche, Lacan, Derrida, and others.
Instructor(s): R. Leys.

AS.300.608. Philosophy and the Event.
What constitutes or characterizes a genuine event, whether in history and politics or in individual lives and loves? This seminar explores several answers to this philosophical question, starting out from the major works of two contemporary thinkers, Alain Badiou and Jean-Luc Marion, whose central concerns in Being and Event and Being Given and elsewhere—namely, the so-called laicization of grace and the phenomenology of givenness—seem at once close and diametrically opposed to each other. Attention will further be paid to concrete historical and literary examples as well as to other conceptualizations of the event that would seem to either substantiate or contradict their respective claims. Readings will also include writings by Donald Davidson, Stanley Cavell, Sari Nusseibeh, Hannah Arendt, Isaiah Berlin, Barack Obama, and others.
Instructor(s): H. de Vries.

AS.300.609. Philosophy and/as of Criticism.
In its heyday in the 1950 and 60's, Philosophy of Criticism was the central topic of Anglo-American Philosophical Aesthetics, but that is no longer the case. In the first half of the course, we examine the history of Philosophy of Criticism, seeking to understand its change of fortune. We will explore the logical form of criticism, giving special attention to the difficult questions that arise about whether and how critical judgments can be rationally justified. The second half of the course explores the proximity between criticism and certain forms of philosophy. It is focused on two questions: 1) Can some instances of literary criticism be understood as ways of doing philosophy? 2) Are some forms of philosophy—the ordinary language philosophy of J. L. Austin and Ludwig Wittgenstein will be our central case study—best understood as forms of criticism?.

AS.300.611. The Good Life.
What is a good life? Philosophical and literary texts on the nature of virtue, autonomy, beauty, friendship, and integrity as necessary achievements for a good life. Plato, Aristotle, Montaigne, Shakespeare, Rousseau, Kant, Emerson, Pater, Murdoch, Tolstoy, Chekhov, James, Woolf, Naipaul, Coetzee, Ishiguro, Kundera. Please note: this is an graduate seminar, open to interested and qualified undergraduates.
Instructor(s): Y. Ong
Area: Humanities.

AS.300.612. Topics in Kierkegaard's Philosophy: Repetition, Revelation, Anxiety, and Fear.
Close study of the rhetoric and arguments of four of Kierkegaard's most important works from 1843-44: Repetition, Philosophical Fragments, The Concept of Anxiety, and Fear and Trembling. Contextualizing readings by Kant, Schelling, Hegel, and J.L. Heiberg.
Instructor(s): L. Lisi.
AS.300.613. The Ancient Quarrel: Literature and Philosophy.
Key turning points in the debate over which kind of knowledge, philosophical or literary, most benefits the soul and society. We will investigate the various ways in which literature has been construed as moral or immoral, and the use of literary modes of persuasion and argument in philosophical texts. Possible authors include: Homer, Plato, Aristotle, Sidney, Shakespeare, Rousseau, Kierkegaard, Tolstoy, Heidegger, Sartre, Beauvoir, Nussbaum, Cavell, Diamond, James, Coetzee, and Mulhall.
Instructor(s): Y. Ong.

This seminar aims at analyzing the relation between Cavell’s novel interpretation of both skepticism and moral perfectionism.

AS.300.615. Classics of Literary Criticism.
Readings will include key texts by Eric Auerbach, several Russian Formalists, Northrop Frye, Roland Barthes, Stanley Cavell, Eve Sedgwick Kosofsky, Friedrich Kittler, and Stephen Greenblatt.
Instructor(s): L. Lisi; M. Fried
Area: Humanities.

AS.300.616. Thinking the Body/The Body Thinking: Introduction to Aesthetics from the Perspective of Dance.
In the nineteenth and twentieth centuries, dance has developed into a serious art form. However, philosophers of art have paid little attention to dance. Why is this the case? Is dance perhaps too corporeal or too unreflective or in some other way too marginal to be a fruitful topic for philosophical reflection? Or does the failure of mainstream philosophical aesthetics to take dance seriously perhaps signal unacknowledged biases in such approaches? Might dance, the art form whose medium is the human body, have something to contribute to current philosophical interest in rethinking the human body and, particularly, the relation between mind and body? Seeking responses to questions such as these, this course provides an introduction to the place of dance in the philosophy of art. The first half of the course examines portions of seven foundational texts in the philosophy of art and culture as well as philosophical accounts of dance that draw on these foundational texts in a range of ways. The aim is not only to explore dance from the perspective of traditional aesthetic theories, but also to explore such traditional theories from the perspective of arguably the art form which they have been most resistant to treating seriously. This oblique angle of entry into mainstream approaches to general aesthetic topics will bring into focus important questions that might be easily overlooked if one examines such theories only in light of their preferred examples of art. The second part of the course explores dance as itself a mode of philosophical reflection, examining the work of choreographers such as George Balanchine, Jerome Bel, William Forsythe, Crystal Pite and Yvonne Rainer explore the possibilities and limits of their medium: the human body. One proposal will be of particular concern: Might such instances of the body thinking bring into focus more adequate ways of thinking about the body?
Instructor(s): K. Boyce
Area: Humanities.

AS.300.619. Trauma: Theorizing Terror Before and After 9/11.
Debates over the nature of trauma, testimony, and representation before and after 9/11. Texts by Shoshana Felman, Cathy Caruth, Giorgio Agamben, Don DeLillo, Marianne Hirsch, Art Spiegelman, Georges Didi-Huberman, and others.
Instructor(s): R. Leys.

AS.300.620. Tristram and His Kin.
Area: Humanities.

AS.300.621. Heidegger’s Being and Time I.
This seminar consists of an integral reading of Martin Heidegger’s 1927 magnum opus Being and Time (Sein und Zeit) in light of its historical and philosophical context as well as its contemporary reception in both the phenomenological, existentialist, hermeneutic, and analytic traditions. We will start out, this semester, from the First Division. Readings will include the commentaries by Ryle, Gadamer, Levinas, Derrida, Marion, Dreyfus, Brand, and others.
Instructor(s): H. de Vries; P. Marrati.

This seminar explores Derrida’s analyses of notions of life, death, and mourning in crucial figures such as Freud, Heidegger, and Levinas as well as their implications for important moral and political issues such as death penalty and human rights.
Instructor(s): P. Marrati.

AS.300.628. Contemporary Theory: New Materialisms, New Vitalisms, and the Post-Traumatic Subject.
A discussion of: recent versions of materialism and realism, including materialisms informed by neuroscience; vital materialism; the latest developments in trauma and affect theory; and related trends. Texts by Zizek, Malabou, Damasio, Pippin, McDowell, Johnston, Brassier, Churchland, LeDoux, and others.
Instructor(s): R. Leys
Area: Humanities.

AS.300.629. Narrative Memory.

AS.300.631. Topics in Esthetics and Criticism.
This seminar will be taught successfully by four “estheticians,” Richard Moran (Harvard), David Wellbery (University of Chicago), Michael Fried (JHU), and James Conant (University of Chicago).

This seminar revisits the debate between Derrida and Levinas about metaphysical, ethical, and political violence with a specific focus on the importance granted or denied to the animal life of humans. Cross-listed with Political Science
Instructor(s): P. Marrati.

AS.300.637. Faust and Philosophy.
This course combines the close reading of Goethe’s epic Faust with the study of a number of philosophical texts that either influenced Goethe’s work or were influenced by it. Particular attention will be paid to the relation between literary form and philosophical argument. Authors besides Goethe will include Fichte, Schelling, Schiller, Friedrich and August Wilhelm Schlegel, Hegel, Kierkegaard, Karl Rosenkranz and Theodor Vischer. Discussion in English; reading knowledge of German required
Instructor(s): L. Lisi
Area: Humanities.

AS.300.641. Literature and the Divine.
This course studies various issues concerning literary representations of the divine. We will investigate theological, theological, generic and aesthetic aspects of the topic and will familiarize ourselves with the general problem of the relation between religion and literature. Among the topics to be discussed are, negative theology in literature, theodicy and anti-theodicy, the question of religion and literary modernism and providence and narratology in the modern novel.
Area: Humanities.
AS.300.643. The Turn to Affect.
Why is there a turn to affect among cultural theorists today? How do affect theorists re-imagine the "relays" between body, brain, and culture? Texts by Damasio, Deleuze, Hansen, LeDoux, Massumi, Maturana, Sedgwick, Tomkina, Varela, and others.
Instructor(s): R. Leys.

AS.300.644. Theory, Painting, Vision.
Theory, Painting, Vision: Readings to be selected but they will definitely include texts by Barthes, Cavell, Wall, and Michaels.
Instructor(s): M. Fried.

AS.300.645. Stanley Cavell and the Problem of Moral Perfectionism.

In his later lectures on animality, sovereignty, and death penalty, Derrida engages with some of the most urgent philosophical, ethical, and political issues of our time. This seminar aims at analyzing these issues in the larger context of Derrida’s thought.
Instructor(s): P. Marrati.

AS.300.674. Literature and/as Ethics.
Arguments for the immorality of literature, the morality of literature, and the amoralities of literature. Can a literary text be evaluated on ethical grounds, and how? How do literary texts make ethical arguments? What does it mean to read literary texts or do literary criticism in an ethical mode? We will be concerned throughout with the philosophical uses, and abuses, of literary forms. Possible authors and texts: Plato, Chaucer, Shakespeare, Flaubert, Zola, Dostoevsky, Lawrence, Hardy, Woolf, Forster, Beauvoir, Coetzee, Oe, Cavell, The Wire, and Mad Men. Primary texts will be accompanied by a selection of essays from moral philosophy and ethical criticism.
Instructor(s): Y. Ong.

AS.300.675. Th Human and the Inhuman: Conversations between Philosophy and Anthropology.

AS.300.676. Heidegger’s Being and Time II.
This seminar consist of an integral reading and discussion of Martin Heidegger’s 1927 magnum opus Being and Time (Sein und Zeit) in light of its historical and philosophical context as well as its contemporary reception in both the phenomenological, existentialist, hermeneutic, and analytic traditions. We will focus primarily on the Second Division but also revisit central questions from Division One. However, it will not be necessary for students to have attended the previous seminar on this earlier part of Heidegger’s major work. Recommended readings will include the commentaries by Emmanuel Levinas, Jacques Derrida, Jean-Greisch, Jean-Luc Marion, Hubert Dreyfus, Robert Brandom, and others.
Cross-listed with Philosophy
Instructor(s): H. de Vries.

AS.300.682. Political Theologies: Old and New.
This seminar will investigate the historical transformation of the tradition of “political theology” and analyze several contemporary proposals for a so-called politics “beyond sovereignty.” Readings will include Kantorowicz, Lefort, Derrida, Nancy, Laclau, Agamben, Gauchet, Niebuhr, Obama, Roy, and Nussleibeh.
Instructor(s): H. de Vries.

AS.300.683. The Animal that I Am: Readings, Viewings, Controversies.
Area: Humanities.

AS.300.684. Marcel Proust, Literature and Art.
Proust’s great sequence of novels À la recherche du temps perdu is also a theory of the Novel and indeed of Art. A close reading of Du côté de chez Swann and Le Temps retrouvé, will put this to the test. Required editions: Proust’s Du côté de chez Swann, Gallimard, Folio, Le Temps retrouvé, Gallimard, Folio, Contre Sainte-Beuve, Gallimard, Folio. The seminar is open to advanced undergrads, with authorization of the instructor. Cross-listed with GRLL-French
Instructor(s): J. Neefs; M. Fried Writing Intensive.

AS.300.685. Seriousness and Sincerity in the Work of J.L Austin, Stanley Cavell, and Jacques Derrida.
Instructor(s): H. de Vries.

AS.300.686. Mysticism and Mechanicism.
This seminar will investigate the historical, conceptual, and practical intertwining of spirit and automatism, mind and machine, global religion and technological media. We will start out from the spiritual automaton motif as it appears in Spinoza and Leibniz and follow its echoes in more recent debates (concerning the ghost the machine, the idea of artificial intelligence, and all those realities often called virtual). Readings will include Henri Bergson, Ludwig Wittgenstein, Gilbert Ryle, Walter Benjamin, Henri Atlan, Lambert Wiesing, and others.
Instructor(s): H. de Vries.

AS.300.687. The Politics and Morality of Skepticism.
Instructor(s): P. Marrati.

AS.300.688. Autour de Baudelaire (Around Baudelaire).
Topics in Baudelaire’s art and thought and in that of various contemporaries (Courbet, Manet, Wagner) and successors (Mallarmé, Proust, Benjamin, Starobinski, Bonnefoy). Readings and discussion will be mainly in French. Co-listed with AS.212.604
Instructor(s): J. Neefs; M. Fried.

AS.300.689. Deleuze and Philosophy: Time, Life, Becoming.
This seminar aims at analyzing the major concepts of Deleuze’s philosophy and their ethical and political implications for contemporary debates.
Instructor(s): P. Marrati.

AS.300.691. The Jewish Jesus.

Instructor(s): P. Marrati.

AS.300.800. Independent Study.
Instructor(s): H. de Vries; M. Fried; P. Marrati; R. Leys.

AS.300.801. Ind Stdy-Field Exams.
Instructor(s): H. de Vries.

AS.300.802. Independent Study Field Exam.
Instructor(s): H. de Vries.

Instructor(s): H. de Vries.

AS.300.804. Dissertation Research.
Instructor(s): H. de Vries.

AS.300.805. Literary Pedagogy.
Instructor(s): H. de Vries.

AS.300.806. Literary Pedagogics.
Instructor(s): H. de Vries.

AS.300.808. In Study Field Exam.
Instructor(s): E. Forster.
AS.300.890. Research Practicum.  
Instructor(s): M. Fried.

Cross Listed Courses

History of Art
AS.010.337. Impressionism, Tradition, Originality: What’s new under the sun?. 3 Credits.  
The course will examine the genesis of modern art, focusing on Impressionism and its debt to earlier traditions. Topics of study include Impressionist painting (Monet, Pissarro, Cézanne, among others), 17th-century Dutch landscape (Hobbema, Jacob van Ruisdael), 18th-century French painting (Fragonard, Chardin), Barbizon school, Courbet, Manet, Impressionist print (Cassatt, Degas), theories of perception, aesthetics of sketch.  
Instructor(s): G. Cakmak  
Area: Humanities.

AS.010.618. Topics in 19th Century Art.  
AS.010.693. Classics Of Art Criticism.  
Readings include Diderot, Baudelaire, Fry, Greenberg, and Jeff Wall.  
Instructor(s): M. Fried.

AS.010.760. Agency and Other Topics in Contemporary Theory of Art History.  
A critical reading of texts by various thinkers including Alfred Gell, Horst Bredekamp, David Freedberg, Whitney Davis, and David Summers. Open to qualified undergraduates with the permission of the instructor. This course is being co-taught with Prof. Ruth Leys.  
Instructor(s): M. Fried; R. Leys.

AS.010.997. History of Modern Art.  
Writing Intensive.

Anthropology
AS.070.396. On the Question of Drugs. 3 Credits.  
Area: Humanities, Social and Behavioral Sciences.

AS.070.674. Creative Expression.  
Tackling between theoretical and ethnographic texts on art and poetry, visual image and dramatic performance, living body and natural landscape, this course seeks anthropological ground for an impersonal and asubjective philosophy of creative expression. Drawing from thinkers such as Nietzsche, Bergson, Whitehead, Merleau-Ponty, and Deleuze, and studies set in China, India, Indonesia, Melanesia, and aboriginal Australia, we will confront the working intuitions of artists and “creators” of various kinds with the unpredictable life of the worlds in which they work.  
Area: Humanities, Social and Behavioral Sciences.

History
AS.100.360. Literature as an Institution: The Russian Case. 3 Credits.  
Instructor(s): A. Eakin Moss; J. Brooks  
Area: Humanities, Social and Behavioral Sciences  
Writing Intensive.

AS.100.741. Recent Theoretical Issues in History.  
An examination of recent theoretical issues in history, including: history as/and memory; the return of presence in history; the turn to affect and the rise of “neurohistory”; posthistoricism and the uses of literary theory in history; and the uses of photography and visual cultures in history. Cross-listed with Humanities Center.  
Instructor(s): G. Spiegel; R. Leys  
Area: Humanities, Social and Behavioral Sciences.

German Romance Languages Literatures
AS.211.414. Body as Vehicle: The French 20th Century Approach to Theatrical Performance. 3 Credits.  
From Greek tragedy to postmodern stage productions: 20th century theater practitioners revisit performance through the ritual and emotional experience of physical action on the stage. Hence, the actor’s body operates as a bridge relating traditional forms of expression to theatrical performance, as well as a creative — and sensitive — source of emotions. This vehicle becomes in the hands of some 20th century practitioners an object of experimentation, initiating the concepts and practices of an Anthropology of the Theater. A thorough study of theoretical texts, music, as well as videos showing contemporary performances in France, will explore the variety of this theatrical approach and the way some revolutionary theories influenced theater practice in France and worldwide.  
Instructor(s): E. Vaou  
Area: Humanities.

AS.212.403. Flaubert’s Madame Bovary, Prose as a Modern Art. 3 Credits.  
AS.212.403 for advanced undergrads. Through a close reading of Flaubert’s novel and selective consideration of the drafts, we shall examine the making of that masterpiece of narrative prose, which Flaubert himself conceived under the sign of modern art. Our central concern, in other words, is with Madame Bovary as a crucial event in aesthetic modernity, one that has had a prodigious afterlife in both literature and visual arts. Seminar will be taught in French and English. Madame Bovary edition required: Le Livre de Poche Classique, 1999. Meets with AS.212.623 Cross-listed with Humanities Center  
Instructor(s): J. Neefs; M. Fried  
Area: Humanities.

AS.212.448. Baudelaire: Art, Poetry, Modernity. 3 Credits.  
Seminar taught in French and English. Charles Baudelaire is widely regarded as the decisive figure in 19th Century literary and artistic Modernity. In this seminar we will read his magnificent Les Fleurs du mal and Spleen de Paris and his equally remarkable art criticism, as well as various critical discussions of his achievement. Cross-listed with Humanities Center  
Instructor(s): J. Neefs; M. Fried  
Area: Humanities.

AS.212.623. Flaubert’s Madame Bovary, Prose as a Modern Art.

Departments, Program Requirements, and Courses

Taught by Visiting Professor Lydie Moudileno: The course will examine representation of Europe, mostly but not exclusively France and Paris in the fiction produced by writers from the former French colonies, from the 1950's to the present.
Instructor(s): L. Moudileno.

AS.213.362. Sigmund Freud. 3 Credits.
The course will examine Freud's writings from a two-fold perspective: On the one hand, we will analyze the contributions of psychoanalysis to modern thought. Lining himself up with Copernicus and Darwin, Freud considers his concept of the "unconscious" a further insult to mankind's narcissism and revolution of thought. In this respect, psychoanalysis affects a vast array of concepts of modern thought such as subject, language, sexuality, morality, culture, history, religion and art which we will discuss alongside with key terms of psychoanalysis (unconscious, repetition, transference etc.). On the other hand, the course will address the specific relation between psychoanalysis and literature. Throughout Freud's writings, literature enjoys vivid interest. Not only are psychoanalytic concepts (e.g. Oedipus complex, narcissism, the uncanny) crucially informed by literary texts, but also Freud's "Interpretation of Dreams" proves to be a theory of representation and reading. We will investigate the ways in which literature and psychoanalysis are involved with each other considering narrative forms, performative aspects and aspects of the genre (novel, novella). Readings and discussions in English.
Instructor(s): E. Strowick
Area: Humanities.

AS.213.610. The Idea of a University in Classical German Philosophy.
The role and function of a university in life and in society was a topic of considerable concern for some of the most prominent German philosophers of the late 18th and early 19th century. Their published (and unpublished) contributions led to a new understanding of what a university should be that proved to be very influential for the conception of the 'modern' university, as realized in Germany in the 19th century. The seminar will examine the writings of Kant, Fichte, Schelling, Schleiermacher, and Humboldt on the university with attention to the relation of the authors' thoughts on education to their more general philosophical positions. The seminar will begin on March 22 and continue to the end of the term.
Instructor(s): R. Horstmann.

AS.213.628. Literary Hermeneutics.

AS.213.634. Schiller's Aesthetic Writings.
Schiller's theoretical writings might be approached by the sentence 'it is only through beauty that man makes his way to freedom'. Discussing the assumption that humans live in a condition of unfreedom resulting from social and economic divisions. Schiller's notion of beauty crosses boundaries between ethics, politics and aesthetics to formulate a theory of modernity in which beauty functions as a medium to reconcile man's sensuous nature and his capacity for reason. The course will examine Schiller's concept of beauty in relation to the anthropological, political, ethical and aesthetic discourses of his time especially with respect to Kant's view of aesthetic judgment which Schiller at the same time embraced and criticized. Particular attention will be paid to Schiller's reflections on representation as well as to the poetics of his aesthetic discourse. Readings include: Kallias-Briefe (1793), Über Anmut und Würde (1793), Vom Erhabenen (1793), Über die ästhetische Erziehung des Menschen in einer Reihe von Briefen (1793), Uber naive und sentimentalische Dichtung (1795/96). Readings and discussions in German.
Instructor(s): A. Krauss.

AS.213.683. Dilettantism.

AS.213.684. Aesthetics of Description.
Since the enduring disavowal of description by Lessing, characteristics commonly assigned to description include structural endlessness and exorbitance; the simple succession of elements; the "breakdown of composition" (Lukács) in a proliferation of details; the parity of described details; its failed ability at illusion; also its tendency to mortify, insofar as it transforms its subject into something static, stagnant. The course will undertake a critical revision of these characteristics by analyzing aesthetic debates and literary descriptions from the 18th to the 20th centuries. Topics leading the discussion will be: text-image relations; description between literature and science; observation through description; dynamization of description; motion and motionlessness; poetics of perception; performativity of description; the boredom of reading. Readings include: Bodmer, Breitinger, von Haller, Winckelmann, Lessing, Alexander von Humboldt, Hebbel, Stifter, Darwin, Ossip Mandelstam, Aby Warburg, Lukács, Peter Weiss, Peter Handke. The course will be taught in German.
Instructor(s): E. Strowick.
AS.214.352. Writing and Wonder: Books, Libraries, and Discovery 1250-1550. 3 Credits.
The invention of printing occurred amid two centuries of intense development in the conduct and material means of European scholarship. The transition from writing by hand to moveable type was accompanied by a revolution in scholarship that involved a new attitude to Classical and Biblical antiquity, the recovery of neglected and "lost" works, the formation of secular libraries, and the development of tools for the study of ancient handwriting, writing materials, and the history of language and of history itself. The revolution in attitudes to and uses of the book eventually transformed every discipline related to reading, writing, and the organization of knowledge. Topics to be covered include writing as an object of wonder, the transformation of a mythology of writing into a true history of books, writing, and libraries, the scientific study of writing and language, and the representation of writing and books in the art and literature of the Middle Ages and Renaissance. Extensive use will be made of Johns Hopkins' large collection of books published before 1600, and student projects will be oriented toward reliving the experiences of scholars in this period, including via computer-assisted means. Open to all undergraduates. Knowledge of a foreign language helpful but not required.
Instructor(s): C. Celenza; W. Stephens
Area: Humanities.

AS.214.656. Media and Art Theory.
This class will read basic texts in media theory, history, and philosophy — from Marshall McLuhan, and the school of French structuralists, to film semiotics and current approaches to media analysis within ubiquitous computing. We will look at some media artists from Nam June Paik to Cindy Sherman and ask the question of how their art-work incorporates a specific media-theoretical and -philosophical background. Readings from Mark Hansen, Tom Mitchell, Ulrik Ekman, Vivian Sobchack, Amelia Jones a.o.
Instructor(s): B. Wegenstein.

AS.214.761. Reading & Writing in Pre-Moderne Europe.
This course has a fourfold aim: First, it is designed to familiarize participants with the basics of Latin paleography from Roman antiquity through the age of printing with moveable type; throughout, we will practice deciphering literary and documentary sources of various types, even as we concentrate on the evolution of different writing styles. Second, we will think about paleography's status as a "discipline." That is, the term "paleography" dates back to 1708 and Montfacon's classic work, Palaeographia Graeca. However, it was only in the late nineteenth century in the world of the German research university that paleography came into the orbit of the Geisteswissenschaften as a "Hilfswissenschaft." Both implicitly and explicitly throughout the seminar we shall be asking what consequences that move entailed. Third, we will study the manner in which printing with moveable type changed western graphic culture: was printing "revolutionary" or "evolutionary"? Did printing and its radical graphic changes introduce new forms of consciousness in readers? Fourth, we will become familiar with certain aspects of "the history of the book," discovering as we do what sorts of questions scholars in this broad field of scholarly endeavor have been asking recently.
Instructor(s): C. Celenza.

AS.215.441. Borges, Cortazar, Bioy Casares and Their Time. 3 Credits.
The course introduces students to the study of Argentine literary culture in the first three quarters of the twentieth century. Its objective is to instruct the students in methods of close reading and develop perspectives in critical thinking. Cross-listed with History, Humanities Center and Program in Latin American Studies.
Instructor(s): S. Castro-Klaren
Area: Humanities.

In this seminar we will explore the idea of the partial, not as secondary to wholeness, but as prior to and independent of any presumption of totality. From the partial drives of psychoanalysis to the Heideggerian concept of Eigentlichkeits to the deconstructive understanding of essences as being always secondary and parasitic, the concept of partiality can help us understand how human desire is as inextricably bound to temporality and incompletion as it is to corporate fantasies of eternity and wholeness. Weave together a series of literary and philosophical readings from sources like Borges, Kafka, Cervantes, Plato, Augustine, Maimonides, Derrida, Lacan, and Zizek, we will explore how being partial entails both the impossibility of truly impartial judgments and the inevitability of our being always partial to other people, experiences, and objects. Ultimately at stake will be the role literature and the reading of literature can have in taking stock of partiality in all its forms and effects.

Interdepartmental

AS.360.133. Great Books at Hopkins. 3 Credits.
Great Books at Hopkins is designed for first-year students and explores some of the greatest works of the literary and philosophical tradition in Europe and the Americas. In lectures, panel sessions, small seminars, and multimedia presentations, professors from a variety of academic disciplines lead students in exploring authors across history. Close reading and intensive writing instruction are hallmarks of this course, as is a changing reading list that includes, for this fall, Homer, Plato, Dante, Shakespeare, Douglass, and Woolf.
Instructor(s): E. Patton; K. Boyce
Area: Humanities
Writing Intensive.

This class will survey the various ways in which women, sexuality, and violence are linked in the Hebrew Bible (often referred to as the Old Testament). We will employ a variety of perspectives, including philosophical, historical, and literary. No prior familiarity with the Hebrew Bible is presupposed.
Area: Humanities, Social and Behavioral Sciences.

AS.360.234. Discipline and Fornication. 3 Credits.
Area: Humanities, Social and Behavioral Sciences.

AS.360.255. The Politics of Sexual Empowerment. 3 Credits.
This course will survey a range of political problems regarding sexual empowerment and disempowerment, in particular concerning feminism(s), rights within the family, sexual orientation, sex work, pornography, sex trafficking, and related topics. No previous political theory experience required. Cross-listed with Humanities Center
Area: Humanities, Social and Behavioral Sciences.
Study of Women, Gender, Sexuality
The Feminization of Poverty - This WGS course examines the intersection of gender and poverty in the US and internationally. Students will intern for a Baltimore-area organization that works to improve gender economic equality, and course discussions will situate student experiences in a broader framework of understanding.
Instructor(s): T. Gottbreht
Area: Humanities, Social and Behavioral Sciences.

Art
AS.371.140. Cartooning. 3 Credits.
Not open to Freshmen. A history-and-practice overview for students of the liberal arts. The conceptual basis and historical development of cartooning is examined in both artistic and social contexts. Class sessions consist of lecture (slides/handouts), exercises, and ongoing assignments. Topics include visual/narrative analysis, symbol & satire, editorial/political cartoons, character development, animation. Basic drawing skills are preferred but not required.
Instructor(s): T. Chalkley
Area: Humanities.

AS.371.146. Basic Black/White Photo. 3 Credits.
Students must have a 35mm camera with manual aperture and shutter speed ATTENDANCE AT 1ST CLASS IS MANDATORY An introduction to the technical and creative process of producing black & white photographs. Working in the darkroom, students learn the fundamentals of film processing and print development. In-class critiques, discussion, and analysis of historic images develop critical vision. With the instructor's guidance, students work on a project of their choice and produce a portfolio of ten mounted prints.
Area: Humanities.

AS.371.149. Visual Reality. 3 Credits.
In art, "Realism" is a simulation of visual reality. But art can also simulate alternative realities, those realities or truths which exist only in daydreams or nightmares. In this class, we will learn to explore and create representations of these additional moments of existence. This will require thinking creatively or "outside the box," a useful skill in any field. Using a variety of media, students are asked to solve problems to which there is no one correct answer.
Instructor(s): D. Bakker
Area: Humanities.

AS.371.151. Photoshop/Dig Darkroom. 3 Credits.
Photoshop and the Digital Darkroom Photoshop is not only the digital darkroom for processing images created with digital cameras; it is also a creative application for making original artwork. In this course, students use Photoshop software as a tool to produce images from a fine art perspective, working on projects that demand creative thinking while gaining technical expertise. Students will make archival prints, have regular critiques, and attend lectures on the history of the manipulated image and its place in culture. We will look at art movements which inspire digital artists, including 19th century collage, dada, surrealism, and the zeitgeist of Hollywood films. Students must have a digital camera. Prior knowledge of Photoshop is not required. Attendance at first class is mandatory.
Instructor(s): H. Ehrenfeld
Area: Humanities.

AS.371.152. Introduction to Digital Photography. 3 Credits.
Introduction to Digital Photography Students learn to use their digital cameras through a variety of projects, which will help them develop technical and creative skills. Students explore documentary, landscape and portrait photography. Critiques and slide lectures of historic photographs, which range from postmortem daguerreotypes to postmodern digital imagery, help students develop a personal vision. Students gain camera proficiency with one-on-one instruction in the field. Basics for print adjustment and output will be covered. Attendance at first class is mandatory.
Instructor(s): H. Ehrenfeld
Area: Humanities.

AS.371.157. Basic Black & White: Wet Darkroom. 3 Credits.
This film-based class guides students through the technical and creative process of producing black and white photographs. Working in the darkroom, students learn the fundamentals of film and print development. In-class critiques explore the elements which make this medium unique. Students develop critical vision through discussion and analysis of historic images as well as images they make themselves. With the instructor's guidance, students work on a project of their choice and produce a portfolio of ten mounted prints.
Instructor(s): P. Berger
Area: Humanities.

AS.371.158. Documentary Photography. 3 Credits.
Students explore different genres of Documentary Photography including: photojournalism, social documentary photography, the photo essay and photography of propaganda. In the process, they will learn the basics of digital photography as they work on a documentary series of their own. Weekly field trips give students time for one-on-one instruction with their professor. Students may submit their final portfolio as a slide show or giclee prints.
Area: Humanities.

AS.371.162. Black & White: Digital Darkroom. 3 Credits.
In this digital course, students explore the black-and-white aesthetic. They develop camera skills on numerous field trips, including Cylburn Arboretum and the John Brown Liberty Ship. Students meet frequently for critiques and discussions based on historic and contemporary imagery. Techniques such as high dynamic range, panorama and infrared are covered. Emphasis is on composition and developing a photographic style via shooting and post-processing. Students are encouraged to make work that is meaningful to them and which communicates its intent to their audience. Digital SLR cameras are provided. Attendance at first class is mandatory.
Instructor(s): P. Berger
Area: Humanities.

AS.371.163. Digital Photography II. 3 Credits.
In this class, students will have the opportunity to expand the photographic skills learned in Introduction to Digital Photography. Through advanced photographic techniques and exploration of new aesthetic concepts students will produce a portfolio of high quality prints. Students will be introduced to creative techniques such as flash photography, light painting, professional studio lighting for portraiture and still life, night photography, time-exposure, macro and cameraless photographic experiments.
Prerequisites: AS.371.152
Instructor(s): G. Salazar
Area: Humanities.
AS.371.303. Documentary Photography. 3 Credits.
In this upper-level course, we will explore different genres of documentary photography, including the fine art document, photojournalism, social documentary photography, the photo essay and photography of propaganda. Numerous field trips provide opportunities to explore the city and its neighborhoods. Students will work on a semester-long photo-documentary project on a subject of their choice. Digital SLR cameras are provided. Attendance at first class is mandatory.
Instructor(s): P. Berger
Area: Humanities.

AS.371.304. Photo Seminar: Wet Darkroom. 3 Credits.
In this film based course, students develop a project of their choice over the semester working independently in the darkroom and meeting for weekly critiques and discussions. Using the zone system (a method of pre-visualization developed by Ansel Adams) students will experiment with different film, paper and developer combinations specific to their projects. Writing in the form of a journal as well as critical analysis of images are integral parts of the seminar experience.
Prerequisites: AS.371.146 or Permission Required
Instructor(s): P. Berger
Area: Humanities.

Interdisciplinary Studies
The major in interdisciplinary studies allows students to combine two or more of the disciplines in Arts and Sciences to develop a major focused on a particular topic or intellectual theme. Therefore, courses proposed for this interdisciplinary major must have coherence and build toward a rich exploration of a clear set of principles or questions.

Students design their own academic programs with the assistance of a faculty advisor, who must be a full-time faculty member in Arts and Sciences, and in consultation of the Assistant Dean of Academic Advising, who oversees the program. Students write a proposal explaining the theme or topic to be explored. The proposal must include a list of courses and an explanation of how each course relates to the major’s themes. This proposal must be presented no later than the second semester of junior year, and must be approved by the Arts and Sciences Curriculum Committee. Once approved, students may not change the proposed requirements without additional approval.

Major Requirements
- All courses for the major must be taken for a grade. Students must earn a C- or better in all courses. Courses taken S/U or P/F do not count.
- Students must earn at least 45 credits in the completion of the major.
- At least 21 credits must be completed at the 300-level or higher and may not be counted toward another major or minor.

Distribution Requirements
- Students must complete 30 credits that meet distribution requirements outside the major.
- Students must complete no fewer than 12 credits of Natural Sciences, Quantitative Studies, or Engineering courses either in the major or as an elective.
- Students must complete no fewer than 12 credits of Humanities courses either in the major or as an elective.
- Students must complete no fewer than 12 credits of Social and Behavioral Sciences courses either in the major or as an elective.

International Studies
The International Studies major is an interdisciplinary program drawn from the departments of political science, history, economics, languages, sociology, and anthropology. There are three programs in International Studies: a regular undergraduate major leading to the B.A. degree in four years, and two accelerated programs leading to a B.A. and M.A. degree in five years. One of the accelerated programs is in partnership with the Johns Hopkins School of Advanced International Studies in Washington, D.C., and the other with political science institute Sciences Po in Paris. All three programs are described below. (For information on more advanced international study, see Political Science.)

Julia Galan, Associate Director.

Requirements for the B.A. Degree
(See also General Requirements for Departmental Majors (p. 33).)
Students who are thinking of majoring in International Studies should complete as many of the basic degree requirements as possible and make a decision by the middle or end of sophomore year. All prospective majors should include the following among their basic courses: an introductory history course at the 100-level, AS.180.101 Elements of Macroeconomics-AS.180.102 Elements of Microeconomics, and one of the following gateway courses: AS.190.209 Contemp Int’l Politics, AS.190.213 International Politics, or AS.190.229 Introduction to Comparative Politics.

Many of the policies are spelled out in greater detail on the International Studies website at http://krieger.jhu.edu/internationalstudies. In addition to the distribution requirements for departmental majors, the requirements for the B.A. degree with a major in International Studies are as follows:

Foreign Language
Proficiency in one major foreign language. This requirement may be met either by a year’s work beyond the intermediate level or by special examination. If the student can demonstrate proficiency through examination, s/he must take an additional two semesters of either a new language or upper-level literature and culture courses taught in the language of proficiency.

Core Courses
- Five courses in history, including one introductory course at the 100-level from the History Department at Johns Hopkins University. Three out of the five courses must be non-Western history (some introductory courses may count toward the non-Western history requirements). Two out of the five courses must be taken at the 300-level. Approved non-Western history courses are published on the International Studies website.
- One course in international politics, designated (IR) on the International Studies website, in addition to one of the core gateway courses listed above (AS.190.209 Contemp Int’l Politics, AS.190.213 International Politics, or AS.190.299 ).
- One course in American politics, designated as (AP) on the International Studies website.
- Two courses in comparative politics, designated (CP) on the International Studies website.
• One course in political theory, designated (PT) on the International Studies website.

• Four courses in economics. One must be an internationally-oriented course listed on the International Studies website. Two must be basic micro and macro (AS.180.101 Elements of Macroeconomics-AS.180.102 Elements of Microeconomics). The final course may be of the students’ choosing, taken in the Economics Department.

Concentration

Every major in International Studies selects a concentration field for intensive and specialized work. The field of interest may be organized in terms of area (Latin America, East Asia) or function (security studies, international economics). The student, in other words, has the widest possible choice. It consists of four semester courses or the equivalent that add up to a coherent field of interest.

Tracks and Focus Areas

In lieu of a concentration, students may pursue one of International Studies’ unique tracks or focus areas. These brand-new tracks and focus areas are offered in conjunction with affiliated departments, and allow students to gain an in-depth specialization within a specific department or program, while simultaneously benefiting from the interdisciplinary training offered by the International Studies major.

Students pursuing a track will receive a double major in International Studies and the affiliated department or program (for example, students pursuing the Global Social Change and Development track will receive a double major in International Studies and Sociology). The student’s faculty advisor will be a faculty member from the affiliated department or program.

Students pursuing a focus area will receive a major in International Studies and a minor in the affiliated department or program (for example, students pursuing the Global Modernity and the Jewish Experience focus area will receive a minor in Jewish Studies) and benefit from a faculty advisor in the affiliated department or program.

More information about the tracks and focus areas offered by International Studies can be found at the website.

Senior Thesis

Students also have the opportunity to write a senior research thesis. To be eligible to write a thesis, seniors must identify a faculty sponsor who will supervise the project. Once a faculty sponsor has approved a topic, students must enroll in a three-credit independent study during the fall semester. Students will work out a specific work plan with their faculty sponsor for the project. At the end of the fall semester the faculty sponsor will assess whether adequate progress has been made and the project warrants further work as an undergraduate thesis. If so, then the faculty sponsor will grant the student permission to enroll in the senior thesis course which will be worth six credits.

Study Abroad

Studying abroad is especially valuable for International Studies majors. JHU encourages all IS majors to spend one or both semesters of their junior year abroad. International Studies offers several of its own study abroad programs.

The Junior Year Abroad at SAIS Bologna, offered through the Bologna campus of the Paul H. Nitze School of Advanced International Studies (SAIS), allows motivated International Studies majors to spend their junior year taking graduate level classes at the SAIS Bologna campus. Students who spend their junior year in Bologna and subsequently apply for graduate studies at SAIS will receive one semester of credit at SAIS for their work in Bologna.

A similar exchange program with French political science institute Sciences Po allows students to spend a semester or a year studying at one of Sciences Po’s seven regional campuses: Paris, Menton, Reims, Poitiers, Le Havre, Nancy, or Dijon. Courses are offered in English as well as French, and thus are open to students regardless of their level of French. One of Europe’s most prestigious universities, Sciences Po has a strong international focus, and allows students to develop a cross-cultural and transatlantic perspective, while simultaneously offering a unique access to the field of international affairs.

More information about the SAIS and Sciences Po exchanges can be found at the International Studies website.

Additionally, the Office of Study Abroad also offers a wide range of study abroad opportunities across the globe catered to the student’s specific interests.

Five-Year Accelerated B.A./M.A. Program with the Paul H. Nitze School of Advanced International Studies (SAIS)

For students having a clear intent to pursue an M.A. after graduation from Hopkins, the university offers an accelerated and competitive International Studies B.A./M.A. Program drawing upon its resources at SAIS, located in Washington, D.C. Combining liberal arts with a strong concentration in international studies, it allows those enrolled to receive the B.A. and M.A. degrees in five years instead of the usual six.

Each year about eight sophomores are selected for the program. Admission is limited to those who are highly motivated toward careers for which a background in international studies is essential: research, teaching, or practice in international affairs. Financial assistance is available to those admitted. In accordance with university policies, it is based both on need and on superior academic achievement. Students interested in the B.A./M.A. program should see the International Studies website for details at: http://krieger.jhu.edu/internationalstudies/sais/index.html#program.

Five-Year Accelerated B.A./M.A. Program with Sciences Po

Students may also apply to participate in a five-year accelerated B.A./M.A. program with Sciences Po, one of Europe’s finest schools of political science. The B.A./M.A. Program is aimed principally at students who are interested in international affairs and who would like to develop their intellectual and professional capabilities from an international and multidisciplinary perspective. After the junior year, students spend two years at Sciences Po’s Paris campus completing graduate-level coursework. The Paris School of International Affairs (PSIA), which houses the majority of Sciences Po's internationally-oriented master’s programs, is
entirely bilingual, and students may choose to pursue either an English or French track of study. Students may also elect to pursue a master’s degree at the School of Journalism, School of Communication, or School of Law. Students interested in an academic career may also choose to pursue a Research master’s with the Doctoral Program at Sciences Po. Students who are not proficient in French will also pursue French language training during their course of study at Sciences Po. Students will earn a B.A. from Hopkins after their first year in Paris and a master’s from Sciences Po after their second year.

Applicants follow an application and review process similar to the one for the SAIS program, described above. About three to four sophomores are selected each year for the Sciences Po program. Students pay tuition to Johns Hopkins for the first year in Paris and to Sciences Po for the second. Financial aid from Johns Hopkins continues only through the end of a student’s fourth year.

More information can be found at the International Studies website: http://krieger.jhu.edu/internationalstudies/sciencespo/index.html#BA_MA_Program.

Progress Toward the B.A./M.A. Degrees

Students in both programs described above spend their first three years at the Homewood campus and the last two at either SAIS or Sciences Po. Students receive the B.A. degree at the end of their first year at either SAIS or Sciences Po and the M.A. at the end of their second year.

Students selected for either of the accelerated programs may not study abroad during their Homewood years, with the exception of summer or intersession programs.

Courses

Cross Listed Courses

German Romance Languages Literatures

Graduate students or advanced seniors. This seminar will explore the corpus of political thought in Latin America since independence (1810) to the present by focusing on the discourses that constructed and continue to construct 5 key questions in the negotiation of power in the post-colonial res politica: territory, nationhood, national subjectivation, cultural imagination, justice and regimes of inclusion and exclusion. Readings will include the work of Sarmiento, Euclides da Cunha, Gonzalez Prada, Mariategui, Marti, Revueltas, Paz, Dussel, Ribeiro, Freire, Arguedas, Liberation Theology and Sumac Kawasy authors.
Instructor(s): S. Castro-Klaren
Area: Humanities
Writing Intensive.

AS.215.327. Modern Political Thought in Latin America.
Sophomores, Juniors and Seniors only. This course is an introduction to modern political tough in Latin America. It draws on essays and novels written by major and influential political thinkers such as D.F. Sarmiento, Gonzalez Prada, J.C. Mariategui, Leopoldo Zea, J. E. Rodo, Octavio Paz, Jose Revueltas, Jose Maria Arguedas, Mario Vargas Llosa, Darcy Ribeiro, Enrique Dussel and the authors of the Sumac Kawasy as well as Liberation Theology central writings. The course will be taught in English. Students wishing to do work in the original Spanish or Portuguese will be encouraged to do so.
Instructor(s): S. Castro-Klaren
Area: Humanities
Writing Intensive.

AS.230.150. Issues in International Development. 3 Credits.
This course will provide an undergraduate level introduction to the study and practice, as well as the successes and failures, of international development. Students will be introduced to the various theoretical frameworks used to explain underdevelopment. Students will also explore the practice of development since the 1950s by examining specific strategies employed in Latin America, South Asia, East Asia, and Africa. Using a variety of country-specific case studies, students will have the opportunity to apply the theoretical and practical frameworks learned in the class to assess the successes and failures of real-life cases. Fulfills Economics requirement for GSCD track students only. Cross listed with International Studies (IR). Freshmen and sophomores only.
Instructor(s): R. Agarwala
Area: Social and Behavioral Sciences.

AS.230.175. Chinese Revolutions. 3 Credits.
This course introduces the origins, operation and impacts of five major revolutions in modern China between 1850 and 1950. These include the Taiping Rebellion, the republican revolutions, federalist and southern automatic movements, labor strikes as well as peasant rebellions. It draws on the existing historiography that examines China’s transition from an empire to a republic, impacts of western and Japanese influences to China, as well as the continuity and change of Chinese social organizations. Cross list with International Studies and East Asian Studies. Fulfills IS History requirement.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.228. Colonialism in Asia and Its Contested Legacies. 3 Credits.
This seminar examines the theories and historiography of colonialism in Asia, with special focus on the development of British Straits Settlements and Hong Kong as well as Japanese Taiwan. We will review the competing discourses about the impact of colonial dominations in these areas from the 1800s to the present-day. In the beginning of the era, the British built up the economic linkage between Hong Kong and Penang, Malacca as well as Singapore to sustain its dominance throughout the “Far East.” In the middle of the period, the expanding Japanese empire developed Taiwan as a foothold to compete with the British interests in South China and Southeast Asia. Hong Kong and the Straits Settlements, especially Singapore, became the contested terrain where two colonial powers vied for their influences in the region. The competition was not only about trade, but about the construction of a new East Asian regional order after the end of the Chinese hegemony. In the end of the period, the intervention of the US power in postwar Asia facilitated the retreat of the colonial establishments, British and Japanese ones included. The course that compares the colonial establishments and discourses on colonial legacies among the three areas points out that colonialism constituted an inalienable part of Asian history. Cross listed International Studies (CP) and East Asian Studies. Fulfills History requirement for IS GSCD track students only.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.265. Research Tools and Technologies for the Social Sciences. 3 Credits.
This course will introduce students to a range of digital technologies that are critical for conducting social scientific research in the 21st century. Students will develop competency in the use of computer programs for statistical analysis, database management, the creation of maps and timelines, and the presentation of research reports. The research tools and technologies will be taught using examples from ongoing social science faculty research projects at Johns Hopkins on global inequality and international development. Required for GSCD track students.
Instructor(s): S. Karatasli
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.230.343. Political Sociology of Latin America. 3 Credits.
This course provides an overview of Latin America through its historical, economic, social, and political dimensions. Emphasis will be given to the analysis of social structures: class, race and ethnicity, and the contemporary social movements. The course begins with an overview of the pre-Columbian civilizations and colonial legacies that gave rise to the multi-ethnic societies and the ethnic conflicts which characterize contemporary Latin America. Cross-listed with Program in Latin American Studies and International Studies (CP)
Instructor(s): M. von der Heydt-Coca
Area: Social and Behavioral Sciences.

AS.230.344. Health and Society in Contemporary China. 3 Credits.
This class examines the social and health consequences of systemic transformations in China, including collapse of the urban work-unit system, resurgence of infectious disease, and implementation of the One-Child Policy. Dean’s Teaching Fellowship; Cross listed with East Asian Studies, Public Health and International Studies.
Instructor(s): R. Core
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.346. Economic Sociology of Latin America. 3 Credits.
This course will offer an overview of Latin America’s economic reality as an intertwined process of economic and political domestic factors within the constraints of the world economy. Latin American development will be analyzed from a historical perspective. The first half of the semester the course will focus on the analysis of the economic developmental patterns starting in the middle of the 19th century to the populist era in the middle of the 20th century. In the second half of the semester, we will analyze in depth the contemporary neoliberal approach to development. Globalization is the force that drives economic, social and political processes in Latin America. The course will include case studies as well the social conflicts generated by the increasing polarization of the society. Students will be exposed to important sociological theories. Fulfills Comparative Politics and/or History requirement for International Studies. Fulfills Economics for GSCD students.
Instructor(s): M. von der Heydt-Coca
Area: Social and Behavioral Sciences.

AS.230.353. Global Social Change. 3 Credits.
This course introduces students to issues of global social change, with a particular focus on the challenges of international development and the contemporary globalization process. Specific themes include world income inequality and global poverty, the rise of supranational organizations (e.g. WTO and EU) and their relations with sovereign states, anti-globalization activism, the rise of China and India in the global economy, and the origins as well as consequences of the current global economic crisis, among others. Lectures will be aided by documentary films and other multi-media materials. Cross-listed with International Studies (IR). Fulfills Economics requirement for IS GSCD track students only.
Instructor(s): H. Hung
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.356. Contemporary African Social Movements. 3 Credits.
This course is a survey of contemporary social movements in sub-Saharan Africa. The course will begin with an introduction to social movement theory. Subsequent weeks will each focus on a different type of movement (e.g. independence movements, labor movements, women’s movements, environmental movements, etc.) The limited coverage of African issues in the US media tends to focus on either catastrophes or on development projects that are driven by international NGOs and the governments of northern countries. Through this course, students will gain a clear understanding of the broad range of actions that African civil society is using to address social problems throughout the continent. Materials used will include academic analysis of movements, writings by movement participants themselves, and films. The course will also introduce students to the most widely used social movement theories. Because these theories have been largely developed by social scientists in northern countries, the students will be asked to assess their applicability to African movements. Through this critical application of social theory, students will investigate the specific possibilities and constraints facing social and political actors in contemporary Africa. Cross listed with Dean’s Teaching Fellowship, International Studies (CP) and Africana Studies.
Instructor(s): B. Scully
Area: Social and Behavioral Sciences
Writing Intensive.
AS.230.362. Migration & Development. 3 Credits.
This course focuses on the relationship between international migration and development. The course first introduces theories of international migration, immigrant integration, and international development. Building on this foundation, we then examine how immigrants interact with their homeland and how sending country governments tap their diaspora to improve development outcomes. Cross-listed with International Studies (CP, IR). Fulfills Economics requirement for IS GSCD track students only.
Instructor(s): L. Hao; R. Agarwala
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.366. From Habeas Corpus to Eminent Domain: Urban Development and Urban Planning in Comparative-Historical Perspective. 3 Credits.
This course offers a broad survey of urban development in the United States by examining both the intended and unintended consequences of urban planning. Using a comparative-historical framework, issues of power, conflict, representation, participation, and planning within urban development and the American city will be addressed and critiqued with specific reference to Baltimore. Cross listed with International Studies (AP). Fulfills History requirement for IS GSCD track students only.
Instructor(s): D. Pasciuti
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.391. Theories of International Development. 3 Credits.
This course will cover major theoretical approaches to the study of development. We will begin with foundational political economic texts (including those of Adam Smith, Karl Marx, and Karl Polanyi). After setting the historical context of decolonization, we will then proceed to cover major theoretical approaches to the study of development in the past sixty years, including: modernization theory, dependency and world systems analysis, state-centered approaches, neo-institutionalism, the capabilities approach, political-ecology, post-development, feminism, the Washington consensus, social capital, experimental economics, and contemporary sociological reconstructions of Marx, Smith and Polanyi. Cross listed with International Studies (IR); fulfills IS Economics requirement for GSCD track students only.
Instructor(s): M. Levien
Area: Social and Behavioral Sciences.

East Asian Studies

AS.310.103. Modern Japan - 1800 to the Present. 3 Credits.
An introduction to the history of Japan from the 18th century to the present. In lectures and discussion we will draw upon a combination of primary source materials (political documents, memoirs, oral histories, journalism, fiction, film) and scholarly writings in order to gain insight into the complex and tumultuous process by which Japan became an industrialized society, a modern nation-state, and a world power.
Instructor(s): A. Bronson
Area: Humanities, Social and Behavioral Sciences.

AS.310.207. Mapping Migrations in East Asia. 3 Credits.
This seminar introduces students to the phenomenon of migration in Japan, South Korea, and Taiwan from theoretical, empirical, and comparative perspectives. The objectives of the course are to understand the 1) historical context behind present-day migrations in East Asia; 2) different patterns of migration flows and their consequences on receiving countries; 3) various theoretical frameworks for migration. The course is divided into three parts. In the first part, the course will examine theoretical approaches to migration, structured around the question of whether East Asia as a region represents a distinct model of migration. In the second, students will explore the empirical cases in greater detail by comparing and contrasting the different types of migrations. The third part addresses the responses to migration by host governments and societies and the implications of migration on citizenship and identity. Recommended Course Background: any class related to the history or politics of Japan, Korea, Taiwan, and/or China.
Instructor(s): D. Kim
Area: Humanities
Writing Intensive.

AS.310.356. The Buddhist Experience. 3 Credits.
This course is a survey of Buddhist practice across Asia, covering a span of nearly 2500 years (from ca 500 BCE until the present). In addition to studying the origins of Buddhism in India and its eventual spread across Asia, we will examine unique local interpretations of Buddhism. Particular focus will be on manifestations of Buddhism in art and material culture. Students will gain a critical understanding of the role of texts, art, doctrine, and practice play in the overall Buddhist experience. This course is a survey of Buddhist practice across Asia, covering a span of nearly 2500 years (from ca 500 BCE until the present). The Leonard and Helen R. Stulman Jewish Studies Program

The Leonard and Helen R. Stulman Jewish Studies Program was founded in 2002 to coordinate the many academic activities at Johns Hopkins dedicated to the study of Jewish history, literature, language, philosophy, politics, and religion. The program gives students the opportunity to explore over three millennia of Jewish culture, ranging from ancient Israel to the present. The Stulman Program sponsors visiting professors and course offerings in a wide variety of disciplines, awards undergraduate travel funds and graduate fellowships, and provides many opportunities for students, faculty, and the general public to participate in a wide range of lectures, conferences, and other special events.

The program offers a minor to students interested in the many dimensions of Jewish life, religion, and culture, from ancient times to the present. It will also interest students who wish to study cultures and civilizations in which thinking about Jews and Judaism played an important role, that is, students interested in Christianity, Islam, or the culture of global modernity. Because of its interdisciplinary nature, the Jewish studies minor offers students access to a broad array of humanities and social sciences disciplines. It therefore serves as a good complement to many
majors, as well as providing indispensable intellectual training to anyone interested in Jewish professional life.

**Minor in the Leonard and Helen R. Stulman Jewish Studies Program**

The requirements for a minor in Jewish studies are as follows:

- A minimum of six courses (amounting to at least 18 credits) selected from those approved by the Advisory Committee of the Jewish Studies Program. The courses must be from at least two departments, and at least three must be upper-level courses (300-level or above).
- One year of modern Hebrew, biblical Hebrew or Yiddish. Students must take one year at any level and cannot "place out" through pre-college coursework or prior knowledge.

For current faculty and contact information go to http://krieger.jhu.edu/jewishstudies/faculty_directory/index.html

**Faculty**

**Professors**

Steven R. David  
(Political Science): Vice Dean for Centers and Programs: international relations, security studies, comparative politics.

Hent DeVries  
Professor Russ Family Chair in the Humanities, (Humanities): modern European thought, history and critique of metaphysics, philosophies of religion, political theologies, concepts of violence, literature and temporality.

Benjamin Ginsberg  
David Bernstein Professor (Political Science): Director, Washington Center for the Study of American Government: American government and politics, political development.

Herbert L. Kessler  
(History of Art): Early Christian and medieval art.

Theodore J. Lewis  

Ruth Leys  
(Humanities): history and theory of psychoanalysis, history of psychiatry and psychology, 19th- and 20th-century intellectual history, feminist theory.

Kyle P. McCarter  

Yitzhak Melamed  
(Philosophy): Jewish Philosophy, (esp. Maimonides and Crescas), Rabbinics, Kabbalah and Hasidism.

Glenn M. Schwartz  

Rochelle Tobias  
(German): modern literature.

Eric Sundquist  
Andrew W. Mellon Professor of the Humanities: American Literature and Culture, including African American and Jewish American, Literature of the Holocaust.

**Associate Professors**

Kenneth B. Moss  
Felix Posen Associate Professor (History) and Director, Jewish Studies Program: modern Jewish history, Russia and Eastern Europe, Yishuv/Palestine and Israel, Jewish political thought, nationalism, theory and practice of cultural history.

Marina Rustow  
Charlotte Bloomberg Chair in the Humanities; Associate Professor History: Medieval and early modern Jewish history; medieval Arab politics and political cultures; rabbinic and karaitic Judaisms; religion and society in Fatimid Egypt.

**Assistant Professors**

Marc Caplan  
(Department of German and Romance Languages and Literatures): Zelda and Myer Tandetnik Professorship in Yiddish Language, Literature, and Culture.

Neta Stahl  
(Department of German and Romance Languages and Literatures): Comparative and Modern Hebrew literature, religion and literature.

**Lecturers**

Beatrice Caplan  
(Department of German and Romance Languages and Literatures): Zelda and Myer Tandetnik Lecturer in Yiddish.

Ellen Ann Robbins  
(Near Eastern Studies).

**Language Instruction**

Zvi Cohen  
Lecture (Center for Language Education).

**Scholar in Residence**

Piero Capelli  
(History).

For current course information and registration go to https://isis.jhu.edu/classes/

**Courses**

**AS.193.100. Yiddish Bibliography: a seminar for intermediate and advanced Yiddish students. 3 Credits.**

Yiddish Bibliography: a seminar for intermediate and advanced Yiddish students. The seminar’s aim is to introduce the students to a large set of Yiddish resources, along various topics and research areas, while improving their Yiddish reading and expression skills. Instructor(s): E. Niborski.
AS.193.200. Early Holocaust Literature: Jewish Poetry and Prose 1939-1949. 3 Credits.
Introduces the two earliest forms of Holocaust literature: literary writing by Jews under Nazi rule and literary writing by Jewish survivors of the Holocaust produced in its immediate wake (between liberation in 1945 and the decisive moment of the foundation of the State of Israel in 1948). Treats questions of literature as a form of immediate reaction to persecution and annihilation, literature as testimony, the relationship of poetics and early Holocaust memory and consciousness. Reference will be made mainly to professional writers in Yiddish and Polish. All readings in English translation.
Instructor(s): M. Trinh
Area: Social and Behavioral Sciences
Writing Intensive.

AS.193.201. Early Modern Jewry in Europe and the Mediterranean. 3 Credits.
The course examines the transition from medievalism to modernity among the Jews of Europe and the Mediterranean between the sixteenth and eighteenth centuries, paying attention to both material and intellectual life, and to women and children side by side with merchants and rabbis.
Instructor(s): E. Horowitz
Area: Social and Behavioral Sciences.

AS.193.202. Everyday Voices of the Holocaust: Popular Jewish Poetic Expression in the Ghettos and Camps. 3 Credits.
The course aims to encourage knowledge of a relatively unknown mass phenomenon - poetic creativity by Jews under Nazi Rule, in the Ghettos and Camps. The study of mostly unpublished, multilingual texts, written by non-professional writers, will enable to better understand the complexity of immediate Jewish reaction to Holocaust reality, in its multicultural contexts. Texts from selected ghettos and camps, originally written in Yiddish, Polish, German and Hebrew will be read in English translation and analyzed - also with emphasis on the differences and similarities between East and West European Jewry.
Instructor(s): M. Trinh.

AS.193.300. Readings in Yiddish. 3 Credits.
Instructor(s): E. Niborski
Area: Social and Behavioral Sciences.

AS.193.301. Reading the Bible and Encountering its World. 3 Credits.
The course examines the interactions between travel and biblical interpretation between the seventeenth and twentieth centuries, paying particular attention to the ways in which travelers to the Middle East and then scholars saw its residents as relics of an unchanging biblical world, whose practices could be used to interpret scriptural texts from both the Old and New Testaments.
Instructor(s): Staff
Area: Social and Behavioral Sciences
Writing Intensive.

Cross Listed Courses

English
AS.060.332. Jewish American Fiction. 3 Credits.
Instructor(s): E. Sundquist
Area: Humanities
Writing Intensive.

AS.060.371. Major American Authors: Philip Roth. 3 Credits.
Over the course of his long career Philip Roth has struck a precarious balance between identification as a Jewish American novelist and insistence that his art escapes such ethnic enclosures. This tension lies at the heart of his work, as indeed some would argue it lies at the heart of the American Jewish experience of the twentieth century. Having emerged as a decidedly rebellious figure who shocked the Jewish community and the nation at large in the 1950s and 60s, Roth has written more than twenty-five novels exploring issues that range from conflicts over assimilation to the roles of the Holocaust and Israel in American Jewish life to the countercultural turbulence of the 1960s to the identity politics of the 1990s. Roth has revealed in forms of fictive autobiography —“counter-lives,” “counter-plots,” and counterfactual histories—that have enlarged the scope of fiction while still grappling with the tensions and dangers of modern life. Works to be read include: “Goodbye, Columbus”; “Portnoy’s Complaint”; “Operation Shylock”; “American Pastoral”; “The Ghost Writer”; “The Anatomy Lesson”; “The Plot Against America”; “The Human Stain”; “The Facts”; “The Counterlife”; “Sabbath’s Theater”; and “Nemesis”. Requirements: two 8-10 page papers, a class presentation, and participation in discussion.
Instructor(s): E. Sundquist
Area: Humanities
Writing Intensive.
AS.060.375. Literature of the Holocaust. 3 Credits.
The course will focus on reactions to, and representations of, the Holocaust in European, Israeli, and American literature. In moving from the initial response of eyewitness testimony, through the emergence of fiction as one means to test the adequacy of historical accounts and memoirs, and on to more recent reflections on the problem of adequately “remembering” the event, we will consider how the Nazi genocide has entered into world consciousness. What does it mean to have an artistic or aesthetic response to such an event? Why has the Holocaust assumed so a significant role in contemporary life that there are entire genres of literature and film devoted to it? We will also look at some more contemporary writers whose work deals indirectly with the after-effects of the Holocaust. Readings may include: Levi, Survival in Auschwitz; Borowsky, This Way for the Gas, Ladies and Gentlemen; Delbo, Auschwitz and After; Kosinski, The Painted Bird; Grossman, See Under: Love; Oizik, The Shawl; Epstein, King of the Jews; Roth, The Plot against America; Appelfeld, Baddenheim 1939; Coetzee, Elizabeth Costello; Phillips, The Nature of Blood. Cross-listed with Jewish Studies. 
Instructor(s): E. Sundquist
Area: Humanities
Writing Intensive.

AS.060.628. Literature of the Holocaust.
The seminar will focus on reactions to, and representations of, the Holocaust in literature. In moving from eyewitness testimony and survivor memoir, through the emergence of fiction as one means to test the adequacy of such accounts or extend them into a new register, and on to more recent reflections on the problem of adequately “remembering" the event in which memory is constantly at issue, we will consider how the Nazi genocide has entered into world consciousness. Although the focus of the course will be on literature, primary readings will be studied with close attention to historical contexts as they bear on questions of authorship, representation, and reception, and to the theoretical vocabularies that have emerged from successive stages of post-Holocaust inquiry. American works will be emphasized but not the sole concern. Primary readings (all in English) will include some of the following: Elie Wiesel, "Night"; Primo Levi, "Survival in Auschwitz"; Charlotte Delbo, "Auschwitz and After"; Tadeusz Borowsky, "This Way for the Gas, Ladies and Gentlemen"; John Hersey, "The Wall"; Leon Uris, "Exodus"; Jerzy Kosinski, "The Painted Bird"; Jorge Semprun, "The Long Voyage"; Imre Kertesz, "Fatelessness"; David Grossman, "See: Under Love"; Leslie Epstein, "King of the Jews"; Cynthia Ozick, "The Shawl"; Philip Roth, "The Plot against America"; and William Gass, "The Tunnel", with various historical and theoretical works in accompaniment. Requirements: a circulated discussion paper; reports on critical/theoretical works; participation in discussion; a research paper.
Instructor(s): E. Sundquist
Area: Humanities

History

AS.100.129. Introduction to Modern Jewish History. 3 Credits.
An examination of the history of Jews over the past three hundred years. Explores the dramatic encounter at the close of the 18th century between rapidly changing European societies caught up in intellectual, political, and economic revolution and a 2000-year old traditional civilization living in their midst; the kaleidoscopic array of Jewish political, religious, cultural and social responses to this encounter; the new forms of Jewish communal and individual life and consciousness which emerged in the course of the 19th and 20th centuries; the extension of this new modern framework to the Jews of the Middle East in the context of European imperialism and colonialism; the key roles played by the Jews as agents and symbols of political, economic, and cultural modernity; the phenomenon of anti-Semitism and whether it is a pathology or integral part of modern European civilization; the extreme shifts in Jewish life from the mid-20th century in light of the Holocaust, the creation of the state of Israel, and integration into American society.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences.

AS.100.317. Jewish Music. 3 Credits.
What is “Jewish music,” and what roles has it played in global and Jewish cultures? This course will address these questions, considering genres and contexts of Jewish music from cantillation to klezmer and from art music to Yiddish cinema. Cross listed with Jewish Studies
Instructor(s): J. Walden
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.325. The Jewish Condition & the Interwar Crisis: Jewish Politics & Culture in Europe, America, Palestine. 3 Credits.
The twenty years following the First World War were characterized by manifold political crises: the apotheosis of radical left-wing and radical right-wing politics at the heart of Europe, hyper-nationalism in post-imperial Eastern and southern Europe, violent confrontations in Europe’s overseas colonies and mandates, and world-wide economic depression. This course asks how the 16-18 million Jews of Europe, America, and the Near East were affected by these processes and traces their opposing political, religious, and cultural responses to them.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.351. God, Self, Nation and Revolution in East European Jewish Life and Thought, 1860-1939. 3 Credits.
The divided Jewish community of modern Eastern Europe defined many of the key modern forms of Jewish identity, politics, culture, and religion and forged bewildering array of syntheses, hybrids, and even negations of Jewishness in relation to the unprecedented political, cultural, and social dilemmas of life in Eastern Europe. Focus on key texts of Jewish religious and secular thought created in Imperial Russia and interwar Poland.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.354. History of Israel, 1948-1970. 3 Credits.
The political, social, and culture history of the State of Israel and its inhabitants during its pivotal first two decades, as reconstructed in recent historiography.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences.
AS.100.363. Jewish Society and Selfhood in the Age of Nationalism: The Religious, Cultural, Civic, and Private Lives of Jews in the Russian Empire and Eastern Europe, 1860-1939. 3 Credits.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.412. Jewish History in British Mandatory Palestine 1917-1947. 3 Credits.
Recent historical writing on Jewish politics, culture, and society in British Mandatory Palestine, 1917-1947. Significant attention will also be paid to work on Palestinian Arab society and politics and to Jewish-Arab-British relations.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences

AS.100.415. Papyrus, Parchment, and Paper. 3 Credits.
The diffusion of writing before the industrial age, especially around the Mediterranean, the preservation of lightweight, portable texts; modern discoveries (Oxyrhynchus, Dead Sea Scrolls, Nag Hammadi, Cairo Geniza).
Instructor(s): M. Rustow
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.447. Christian-Jewish Polemics in the Middle Ages and the Construction of the Enemy. 3 Credits.
The four great public Christian-Jewish disputations of the high middle ages: Paris, Barcelona, Majorca, Tortosa. Original Hebrew and Latin sources in English translation; questions of the changing motives for anti-Judaism and the formation of a persecuting society.
Instructor(s): P. Capelli
Area: Humanities, Social and Behavioral Sciences.

AS.100.448. Jewish History in British Mandatory Palestine 1917-1947. 3 Credits.
Recent historical writing on Jewish politics, culture, and society in British Mandatory Palestine, 1880s-1947. English and Hebrew. With permission of the professor.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences

AS.100.455. Jewish History and Historiography in Ottoman and British Palestine.
Recent historiography on Jewish politics, culture, and society in late Ottoman and British Mandatory Palestine, 1880s-1947. English and Hebrew. With permission of the professor.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.667. Topics in Modern Jewish History.
Intensive readings in historiography of modern Jewry, with particular focus on Jewish life in 19th - 20th century Palestine and the State of Israel.
Recommended Course Background: AS.100.668
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences.

AS.100.759. The Cairo Geniza (Spring).
Documentary sources from the Cairo Geniza in Judaeo-Arabic, Arabic, and Hebrew. Paleography, genre, diplomatic, corpora and editorial technique; historical context, interpretation, historiography and history of the field. Cross listed with Jewish Studies.
Instructor(s): M. Rustow
Area: Humanities, Social and Behavioral Sciences.

Near Eastern Studies

AS.130.114. The Archaeology of Ancient Israel. 3 Credits.
This course will explore the intersection of sexuality and power relationships in the forging of ethnic, political, and religious identities as presented in the Bible and ancient Near Eastern literature. Cross-listed with Jewish Studies.
Instructor(s): L. Wright
Area: Humanities.

AS.130.118. Ancient Israel: In Their Own Words. 3 Credits.
This course will focus on the inscriptions of ancient Israel and its neighbors from the first millennium BCE. Texts speak to us directly in ways that other nonverbal archaeological remains – such as architecture or pottery – cannot. Also, secondary sources written by later historians and commentators are similarly limited, as they are separated from original events by space, time, and cultural situation. Considering how individuals from an ancient culture articulate thoughts “in their own words” is invaluable to any meaningful reconstruction of history. Participants will learn to glean information from inscriptions, including those that are fragmentary or seemingly mundane. They will experience hands-on history writing, using primary sources in translation, though those with any knowledge of ancient languages, especially Classical Hebrew, will be able and encouraged to engage with the texts in their original vernacular. Basic knowledge of world history will be helpful though not prerequisite.
Prerequisites: AS.130.134
Instructor(s): H. Parker
Area: Humanities.

AS.130.140. Hebrew Bible / Old Testament. 3 Credits.
The Bible is arguably the most read and yet most misinterpreted book of all time, one of the most influential and yet most misapplied work of literature. The Hebrew Bible (Old Testament) is Scripture to Jews and Christians yet also a rich collection of literature w/ numerous literary genres that has been highly influential on secular Western culture. At its core, it is our most important literary source that (when wed with archaeology) helps us to understand the people and culture of Iron Age Israel and Judah. This is an introductory course surveying of the books of the Hebrew Bible (Old Testament) giving primary attention to the religious ideas they contain and the ancient contexts in which they were composed. Topics include: The Academic Study of Religion, Ancient Creation Accounts, Ancestral Religion, The Exodus and Moses, Covenant, Tribalism and Monarchy, The Ideology of Kingship, Prophecy, Priestly Sources, Psalms, Wisdom Literature, and Apocalyptic Thought.
Instructor(s): T. Lewis
Area: Humanities.

AS.130.172. Introduction to Aramaic. 3 Credits.
Cross-listed with Jewish Studies Aramaic, a Semitic language attested from 1100 BCE and spoken to this day, is central to some of the core texts of Western culture such as the Hebrew Bible, the Talmuds and the New Testament. This course will focus on Babylonian Aramaic, as preserved in the Babylonian Talmud and parallel sources. After studying the basic forms and grammar we will read various texts from the Babylonian Talmud as well as karaitic and geonic literature and magical bowls. We will survey some of the main corpora written in Babylonian Aramaic and open a gateway to deeper understanding of this heritage.
Instructor(s): Y. Monnickendam
Area: Humanities.
AS.130.301. History of Ancient Syria-Palestine. 3 Credits.
A survey of the history of Ancient Syria and Cannan, including Ancient Israel.
Instructor(s): P. McCarter
Area: Humanities.

AS.130.302. History: Ancient Syria-Palestine II. 3 Credits.
A survey of the history of Ancient Syria and Cannan, including ancient Israel. Taught with AS.134.661. Cross-listed with Jewish Studies.
Instructor(s): P. McCarter
Area: Humanities.

AS.130.330. Sex And The Garden. 3 Credits.
A seminar on the history of interpretation of Genesis 2-3, with a focus on the uses of the biblical story of the Garden of Eden in Jewish, Christian, and Muslim traditions. Class attendance and participation are mandatory. Cross-listed with Jewish Studies and Study of Women, Gender, & Sexuality.
Instructor(s): E. Robbins
Area: Humanities.

AS.130.338. The Talmud as Read in the Middle Ages: The Sugya of Kavod HaBriot (Human Dignity). 3 Credits.
In the early Middle Ages the Talmud emerged as the defining document of official Jewish religion and culture, and remained so until the dawn of the Modern Era. Jewish scholars in many different countries, and in a wide variety of cultural contexts, developed certain ways of reading, interpreting, and applying the Talmud. In the process, they produced an immense corpus of commentary and law. This course will examine how and why the Talmud was studied in these centuries by Jews who mined it, subject by subject, for emotional, philosophical, and legal meaning.
Instructor(s): D. Katz
Area: Humanities.

AS.130.340. History Religion/Israel. 3 Credits.
A study of the origins of ancient Israelite religion, its emergence from and continuities with ancient West Semitic religion and culture. Students will be exposed to comparative and historical approaches for reconstructing this time period including the utilization of new sources of knowledge (e.g., Syro-Palestinian archaeology and epigraphy; neighboring ancient Near Eastern religions).
Instructor(s): T. Lewis
Area: Humanities, Social and Behavioral Sciences.

AS.130.341. Traditionalism vs. Orthodoxy in the Modern Era: The Case of Judaism. 3 Credits.
During the Modern Era in European history, the Traditionalist Jewish civilization of Europe that had evolved over many centuries went into deep crisis. The new political, social, and intellectual realities which characterized Modernity seriously challenged, overwhelmed, and indeed threatened to destroy the Jewish Traditionalist culture and society. In response, different Traditionalist thinkers and communities evolved a number of strategies for surviving in a modern environment, strategies that unexpectedly transformed Traditionalism into something different, which came to be called Orthodox Judaism. This course explores this process of transformation, which has had an important impact on Jewish life in the modern and post-modern eras. Cross-listed with Jewish Studies.
Instructor(s): D. Katz
Area: Humanities.

AS.130.343. Dead Sea Scrolls-English. 3 Credits.
Cross-listed with Jewish Studies A survey of the manuscripts found at Quran and other sites near the Dead Sea.
Instructor(s): P. McCarter
Area: Humanities.

AS.130.346. Introduction to the History of Rabbinic Literature. 3 Credits.
Instructor(s): D. Katz
Area: Humanities.

AS.130.348. Religious Law Wrestles With Change: The Case of Judaism. 3 Credits.
Description: "How does a religious system which defines its ancient laws as God-given and unchangeable apply them to radically different and changing social, political and intellectual situations? This course explores the literature of "Questions and Answers" (She’elot u-Teshuvot), the Jewish legal responsa which have struggled to match Jewish religious law to modern life for fifteen centuries. A sweeping survey of Jewish history as revealed by one of its most impenetrable yet fascinating sources. Cross-listed with Jewish Studies.
Instructor(s): D. Katz
Area: Humanities.

AS.130.352. History of Hasidism. 3 Credits.
Although it appears to be a relic of pre-modern Judaism, Hasidism is a phenomenon of the modern era of Jewish history. This course surveys the political and social history of the Hasidic movement over the course of the last three centuries. Students will also explore basic features of Hasidic culture and thought in their historical development. Cross-listed with Jewish Studies.
Instructor(s): D. Katz
Area: Humanities.

AS.130.359. Reading the Talmud in the Post-Talmudic Era. 3 Credits.
Instructor(s): D. Katz
Area: Humanities.

AS.130.361. The Politics of Sexuality in the Bible and the Ancient Near East. 3 Credits.
This course will explore the intersection of sexuality and power relationships in the forging of ethnic, political, and religious identities as presented in the Bible and ancient Near Eastern literature. Cross-listed with Jewish Studies and Women, Gender, and Sexuality.
Instructor(s): E. Fleming
Area: Humanities.

AS.130.366. Reading the Talmud in Pre-modern Jewish Culture. Attempting to Cope With Abusive Husbands: Annulment of Marriage in the Literature of Post Talmudic Rabbinic Judaism. 3 Credits.
The evolution of Talmudic thinking resulted in laws which made marriage too easy, divorce too difficult. This generated centuries of attempts to grapple with the consequences of this conundrum in real-life situations. This course analyzes the literature produced by these attempts. Students will read texts in original Hebrew.
Instructor(s): D. Katz
Area: Humanities.
AS.130.367. Jerusalem: The Holy City in History and Archaeology. 3 Credits.
Jerusalem has a global significance utterly disproportionate to its size or wealth, and it has been this way since the days when the city was first settled. On the one hand, this is due to Jerusalem’s role as a sacred space for all three of the world’s largest monotheistic religions: Christianity, Islam, and Judaism. On the other, Jerusalem has long been the fulcrum of geopolitical struggles in the Middle East and beyond. This lecture course explores Jerusalem’s political, cultural, and religious trajectory over the past three millennia through the lens of the city’s amazingly rich historical and archaeological records. In so doing, we unravel the mythical and historical threads that combine to create the powerful symbolic resonance of Jerusalem today, discovering en route that, when it comes to Jerusalem, identifying what is “myth” and what is “history” is a complex and contested undertaking.
Instructor(s): J. Osborne
Area: Humanities.

AS.130.372. Prophetic Lit-Hebrew Bib. 3 Credits.
A survey of the prophetic literature of the Hebrew Bible (Old Testament) as it is understood in its ancient Near Eastern cultural and historical context. Freshmen admitted with permission.
Instructor(s): A. Davis
Area: Humanities.

AS.130.373. Prophets and Prophecy in the Bible. 3 Credits.
From thundering voices of social justice to apocalyptic visionaries, biblical prophets have been revered by Jews, Christians and Muslims for thousands of years. They have inspired civic leaders such as Martin Luther King Jr. yet also provided fodder for modern charlatans promising a utopian future. Yet who were these individuals (orators? politicians? diviners? poets?) and what was the full range of their message as set against the Realpolitik world of ancient Israel, Iraq, Egypt, Syria and Jordan?
Instructor(s): T. Lewis
Area: Humanities.

AS.130.441. Elementary Biblical Hebrew. 3 Credits.
Survey of grammar and reading of simple texts. (Credit given only on completion of AS.130.440 and AS.130.441). May not be taken on a satisfactory/unsatisfactory basis.
Instructor(s): M. Simone
Area: Humanities.

AS.130.442. Readings - Hebrew Prose. 3 Credits.
Reading of biblical Hebrew prose, especially from the Pentateuch, Joshua, Judges, Samuel, and Kings. Cross-listed with Jewish Studies.
Instructor(s): E. Guinn-Villareal
Area: Humanities.

AS.130.443. Reading Of Hebrew Prose. 3 Credits.
Reading of Biblical Hebrew prose, especially from the Pentateuch, Joshua, Judges, Samuel, and Kings.
Instructor(s): Staff
Area: Humanities.

AS.134.604. The Book Of Job.
Reading the Hebrew text of the book of Job with attention to philology, textual criticism, and various aspects of interpretation.
Instructor(s): T. Lewis.

A rapid reading course aimed at increasing proficiency in reading the Hebrew text of the book of Ezekiel. Various aspects of translation and interpretation will be studied (e.g., grammar, textual criticism, Philology) including literary, historical, and theological questions. Cross-listed with Jewish Studies.
Instructor(s): T. Lewis.

AS.134.652. Seminar in Ancient Israelite Religion.
Topics include history of scholarship, methodology, representations of deity, the aniconic tradition, solar Yahwism, sacred space, blood rituals, passover, royal cult, family religion, divination, prophecy, incantations, etc.
Instructor(s): T. Lewis.

Philosophy

AS.150.428. Spinoza’s Theological Political Treatise. 3 Credits.
The course is an in-depth study of Spinoza’s Theological-Political Treatise. Among the topics to be discussed are: Spinoza’s Bible criticism, the nature of religion, truth and obedience, the nature of the Hebrew State, Spinoza’s Theory of the State, the freedom to philosophize, the metaphysics of Spinoza’s Theological-Political Treatise, and finally, the reception of the TTP. Cross-listed with Jewish Studies
Instructor(s): Y. Melamed.

AS.150.435. The Philosophy and Theology of Maimonides. 3 Credits.
This course will examine the philosophic and theological thought of Judaism’s most renowned philosopher, Moses Maimonides (1138-1204). After a brief overview of Maimonides’ multifaceted life as philosopher, scientist, physician, Talmudic scholar, rabbi, and communal leader; we will consider Maimonides’ philosophic and religious background and, in particular, the ancient Greek and medieval Islamic philosophic works that influenced him. The course will delve into his views on topics such as the relation between faith and reason, the existence of God, creation/eternity of the world, free will/determinism, the nature of prophecy, the purpose of law, human happiness, ultimate perfection, and the Afterlife. Special attention will be given to Maimonides’ method of philosophic writing and the tension in his life between the vita activa and the vita contemplativa. The course will also trace the impact of Maimonides’ Guide of the Perplexed upon later Jewish thought and upon Western philosophy and theology from Thomas Aquinas to Leibniz.
Instructor(s): S. Harvey
Area: Humanities.

AS.150.483. Topics in Jewish Philosophy: Heresy. 3 Credits.
This course will study the history and transformations of the Jewish concept of ‘Apikorsut’ – a unique kind of heresy that refers to a rabbinic scholar turned into a heretic, while maintaining a tense dialogue with mainstream Rabbinic culture and community. We will particularly interested in the following questions: What makes a dissenter into an Apikores? How does the Apikores defer from the apostate? Why was philosophy as a whole considered (since the Late Middle Ages) as a discipline of Apikorsut?
Instructor(s): Y. Melamed.
Political Science

AS.190.344. Seminar In Anti-Semitism. 3 Credits.
Jews exercise a good deal of power in contemporary America. They are prominent in a number of key industries, play important roles in the political process, and hold many major national offices. For example, though Jews constitute barely two percent of America's citizens, about one-third of the nation's wealthiest 400 individuals are Jewish and more than ten percent of the seats in the U.S. Congress are held by Jews. One recent book declared that, "From the Vatican to the Kremlin, from the White House to Capitol Hill, the world's movers and shakers view American Jewry as a force to be reckoned with." Of course, Jews have risen to power in many times and places ranging from the medieval Muslim world and early modern Spain through Germany and the Soviet Union in the 20th century. In nearly every prior instance, though, Jewish power proved to be evanescent. No sooner had the Jews become "a force to be reckoned with" than they found themselves banished to the political margins, forced into exile or worse. Though it may rise to a great height, the power of the Jews seems ultimately to rest on a rather insecure foundation. Cross-listed with Jewish Studies.
Instructor(s): B. Ginsberg
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.335. Arab-Israeli Conflict (IR). 3 Credits.
The course will focus on the origin and development of the Arab-Israeli conflict from its beginnings when Palestine was controlled by the Ottoman Empire, through World War I, the British Mandate over Palestine, and the first Arab-Israeli war (1947-1949). It will then examine the period of the Arab-Israeli wars of 1956, 1967, 1973, and 1982, the Palestinian Intifadas (1987-1993 and 2000-2005); and the development of the Arab-Israeli peace process from its beginnings with the Egyptian-Israeli treaty of 1979, the Oslo I and Oslo II agreements of 1993 and 1995. The scope of the course includes the period of peace talks between Israel and Syria. The conflict will be analyzed against the background of great power intervention in the Middle East, the rise of political Islam and the dynamics of Intra-Arab politics, and will consider the impact of the Arab Spring.
Instructor(s): R. Freedman
Area: Social and Behavioral Sciences.

AS.191.398. The International Politics of Genocide. 3 Credits.
This course examines the creation of the concept of genocide and explores its controversial evolution in international law, humanitarian efforts, and global politics. Dean's Teaching Fellowship course.
Instructor(s): B. Meiches
Area: Social and Behavioral Sciences
Writing Intensive.

German Romance Languages Literature

AS.210.163. Elementary Yiddish I. 3 Credits.
Year-long course. Includes the four language skills—reading, writing, listening, and speaking—and introduces students to Yiddish culture through text, song, and film. Emphasis is placed both on the acquisition of Yiddish as a tool for the study of Yiddish literature and Ashkenazic history and culture, and on the active use of the language in oral and written communication. Both semesters must be taken with a passing grade to receive credit.
Instructor(s): E. Niborski.

AS.210.164. Elementary Yiddish II. 3 Credits.
Year-long course that includes the four language skills—reading, writing, listening, and speaking—and introduces students to Yiddish culture through text, song, and film. Emphasis is placed both on the acquisition of Yiddish as a tool for the study of Yiddish literature and Ashkenazic history and culture, and on the active use of the language in oral and written communication. Both semesters must be taken with a passing grade to receive credit. Recommended Course Background: AS.210.163 or instructor permission.
Area: Humanities.

AS.210.263. Intermediate Yiddish I. 3 Credits.
This course will focus on understanding the Yiddish language as a key to understanding the culture of Yiddish-speaking Jews. Emphasis will be placed on reading literary texts and historical documents. These primary sources will be used as a springboard for work on the other language skills: writing, listening, and speaking. Recommended Course Background: AS.210.164 or equivalent, or two years of German and permission of instructor.
Area: Humanities.

AS.210.264. Intermediate Yiddish II. 3 Credits.
Continuation to Intermediate Yiddish I. This course will focus on understanding the Yiddish language as a key to understanding the culture of Yiddish-speaking Jews. Emphasis will be placed on reading literary texts and historical documents. These primary sources will be used as a springboard for work on the other language skills: writing, listening, and speaking. Recommended Course Background: AS.210.263 or instructor permission.
Instructor(s): B. Caplan
Area: Humanities.

AS.210.367. Advanced Yiddish. 3 Credits.
This course will provide students who have completed at least two years of Yiddish with the opportunity to hone their skills in all four language areas: reading, writing, listening, and speaking. In addition to advanced grammar study and readings in Yiddish literature, the course will take into account the interests of each individual student, allowing time for students to read Yiddish texts pertinent to their own research and writing.
Instructor(s): B. Caplan
Area: Humanities.

AS.210.368. Advanced Yiddish II. 3 Credits.
Continuation of Advanced Yiddish I (AS.210.367). Students will continue to hone their skills in all four language areas: reading, writing, listening, and speaking. In addition to advanced grammar study and readings in Yiddish literature, the course will take into account the interests of each individual student, allowing time for students to read Yiddish texts pertinent to their own research and writing.
Prerequisites: AS.210.367
Instructor(s): B. Caplan
Area: Humanities.
AS.211.174. Media of Propaganda. 3 Credits.

Today, promoting a particular political or personal point of view is not viewed as "propaganda," but rather as building a community of equally minded people. But where do we draw the line, and when does the use of a medium in service of a certain message become intrusive and misleading? What role do democracy and cultural values play in this use or abuse of media? In this class the term "propaganda" will be evaluated carefully and applied to such as the informational use of the radio in World War One, Leni Riefenstahl's Nazi propaganda films, the legendary success of advertisement campaigns in the 1950s and 1960s, the AIDS movement and other mobilization strategies from the 1980s to the 1990s, and the new values of friendship and propaganda in our current facebook nation.

Instructor(s): B. Caplan
Area: Humanities

AS.211.202. Freshman Seminar: A Thousand Years of Jewish Culture. 3 Credits.

This course will introduce students to the history and culture of Ashkenazi Jews through their vernacular, Yiddish, from the settlement of Jews in German-speaking lands in medieval times to the present day. Particular emphasis will be placed on the responses of Yiddish-speaking Jews to the challenges posed by modernity to a traditional society. In addition to studying a wide range of texts—including fiction, poetry, memoir, song, and film—students will learn how to read the Yiddish alphabet, and will prepare a meal of traditional Ashkenazi dishes. No prior knowledge of Yiddish is necessary for this course.

Instructor(s): B. Caplan
Area: Humanities

AS.211.212. Holocaust and Film. 3 Credits.

Taught in English. This class will examine the history of Holocaust films in regard to the possibilities of genre (documentary versus feature), the use of historical and archival materials, as well as general questions of representation and trauma. Taught in English. This class will examine the history of Holocaust films in regard to the possibilities of genre (documentary versus feature), the use of historical and archival materials, as well as general questions of representation and trauma. I CINEMA OF THE VICTIMS II CINEMA OF THE PERPETRATORS III CINEMA OF THE SECOND AND THIRD GENERATIONS WITNESSES Students will be writing weekly response papers to all screenings, and will choose to work with films in the original languages German, English, Italian, and French. This class will be writing-intensive. Cross-listed with Film and Media Studies, Political Science, History, and Jewish Studies.

Instructor(s): B. Wegenstein
Area: Humanities
Writing Intensive.

AS.211.344. Holocaust and Film. 3 Credits.

Taught in English. This class will examine the history of Holocaust films in regard to the possibilities of genre (documentary versus feature), the use of historical and archival materials, as well as general questions of representation and trauma. I CINEMA OF THE VICTIMS II CINEMA OF THE PERPETRATORS III CINEMA OF THE SECOND AND THIRD GENERATIONS WITNESSES Students will be writing weekly response papers to all screenings, and will choose to work with films in the original languages German, English, Italian, and French. This class will be writing-intensive. Cross-listed with Film and Media Studies, Political Science, History, and Jewish Studies.

Instructor(s): B. Wegenstein
Area: Humanities
Writing Intensive.

AS.211.430. L'Affaire Dreyfus. 3 Credits.

This course proposes to look at persuasive strategies that were engaged during the Dreyfus Affair in order to either incriminate or discriminate the Jewish captain falsely accused of having betrayed the French army. Course will focus on the socio-political events that framed the Dreyfus Affair (anti-Semitism in 19th-century France, caricatures and polemical writings in the press, the consequences of the Franco-Prussian War and of the Commune, the bipolar division that split French society into Dreyfusards and anti-Dreyfusards), as well as its long-term effects (the rise of the extreme right, the creation of the "intellectual", the consolidation of Zionism which ultimately led to the creation of a Jewish state). Recommended Course Background: AS.210.301-AS.210.302 or AS.210.301 or permission of instructor.

Instructor(s): K. Cook-Gailloud
Area: Humanities

AS.213.253. Freshman Seminar: Jewish Humor and the Construction of Cultural Discourse. 3 Credits.

With the fall of the Berlin Wall in 1989, one of the most powerful symbols of the Cold War came down. For decades, the division between East and West Germany had been a decisive factor in German literature and film from both states in several respects. Political censorship in the GDR and West German publishing policies determined the conditions for art production. They created specific audiences and shaped the role of the public intellectual. The Berlin Wall could also be said to have contributed to certain trends like the aesthetics of coldness and the poetics of observation. The course examines the relationship between aesthetics and politics in German-German literature and film from 1861 to the present. Readings include: Christa Wolf, Uwe Johnson, Reiner Kunze, Peter Schneider, Ingo Schulze, Anna Funder. Films: Wings of Desire (Wim Wenders, 1987), The Leading Role (Harun Farocki, 1994), The Tunnel (Roland Suso Richter, 2001), Good Bye, Lenin! (Wolfgang Becker, 2003), The Lives of Others (von Donnersmarck, 2007), Yella (Christian Petzold, 2007). The course will be taught in English.

AS.213.260. Modern Jewish Literature in North America. 3 Credits.
Tought in English. This course will survey the major trends in Yiddish, Hebrew, and English literature published in the United States, Canada, and Mexico since the turn of the 20th century. Our discussions will consider the connections this literature maintains with other “ethnic” schools of writing; what connections, or disruptions, it signifies with Jewish literatures in other eras or locales; to what degree Jewish writing in languages other than English participate in major trends of American literature—or whether this writing could even be considered to anticipate innovations in the American “mainstream.” Topics in this literature will include the disruptions of immigrant life, the shadows of the Holocaust and anti-Semitism, aspirations for social justice, the lure and trauma of the American suburbs, the collapse of the Great Society, gender in American Jewish life, and the new Jewish immigrants of the former Soviet Union. All readings and discussions available in English.
Instructor(s): M. Caplan
Area: Humanities.

AS.213.309. Walter Benjamin and His World. 3 Credits.
All readings and class discussions in English. This course will provide an introduction to the thought, writing, and world of Walter Benjamin—one of the most interesting and influential German writers of the early 20th century. Although he died in exile having published only a single book in his lifetime, in the past three decades his ideas and preoccupations have changed the way we think about Cultural Studies, Media Studies, Literary Studies, German thought, Jewish mysticism, and the philosophy of history. We will be examining some of his major writings in tandem with precursors such as Charles Baudelaire and Louis Aragon; contemporaries such as Theodor Adorno and Gershom Scholem; and the legacy of his work among contemporary theorists, critics, and artists.
Instructor(s): M. Caplan
Area: Humanities.

AS.213.317. Berlin at the Crossroads of the 20th Century. 3 Credits.
This course will examine the location of Berlin at the heart of European and global culture over the course of the 20th century. In addition to its centrality to German national identity and political culture, Berlin between the World Wars was a weigh station and meeting ground for a variety of languages, cultures, and artistic trends—whether expatriates, refugees, nomads, touring companies, or vagabonds. In what ways did these travelers to Berlin change German popular or intellectual culture? In what ways did Berlin function as a center for avant-garde culture, and in what sense did it remain a peripheral space, in the shadow of grander culture centers such as Moscow, Paris, New York, or Hollywood? What lessons might be taken from the supposed glamour of Berlin between the World Wars and the continued attraction of that period for post-Holocaust adaptation and contemplation? These questions, among others, will be considered with reference to a variety of narratives, dramas, and films taken from German, English, Hebrew, Russian, and Yiddish sources. Authors to be considered will include Walter Benjamin, Joseph Roth, Irmgard Keun, Erich Kästner, Bertolt Brecht, Christopher Isherwood, Sh. Y. Agnon, Vladimir Nabokov, Viktor Shklovsky, and David Bergelson. All readings and discussions in English.
Instructor(s): M. Caplan
Area: Humanities.

AS.213.332. Zionism in Modern Literature: Jewish or Israeli?. 3 Credits.
This course will be an examination of the themes of nationalism, Zionism, and the problems of the nation-state in modern Jewish literature of the past hundred years. Among the topics we will consider are the unique challenges of a diasporic culture relocating its national aspirations to an unfamiliar and often hostile environment, the controversies surrounding political nationalism within modern Jewish culture, the competition between languages in the formation of Israel society, the character of Israeli national culture, the relationship of Israel’s Jewish majority with its minority population, and the relationship of Israeli culture to the Jewish culture of the diaspora. To what extent does Israeli literature constitute a continuation of themes and techniques found in previous Jewish writing, and to what extent does it represent a new beginning? To what extent can Israeli literature be compared with other varieties of Jewish writing and to what extent is this writing a unique cultural phenomenon? Although the majority of works discussed will be translated from Hebrew—including such leading figures of Israeli literature as S. Y. Agnon, S. Yizhar, Amos Oz, and Orly Castel-Bloom—we will also be considering works translated from Yiddish (Mendele Moykher-Sforim), German (Theodor Herzl), and Arabic (Emile Habiby), as well as contemporary American writers such as Philip Roth and Michael Chabon. All readings and discussions conducted in English. Cross-listed with Jewish Studies, English, and the Humanities Center
Instructor(s): M. Caplan
Area: Humanities.

AS.213.336. Dancing About Architecture: Jewish Humor and the Construction of Cultural Discourse. 3 Credits.
Are all Jews funny, or only the ones from New York? This course will be an advanced-undergraduate examination of literary, theatrical, cinematic, and televised representations of Jewish culture focusing on the construction of cultural discourse through comedy. Taking as a point of departure Sigmund Freud’s Jokes and Their Relation to the Unconscious, we will consider the joke as a mode of narration and cultural coding with specific resonances for the Jewish encounter with modernity. Among the topics to be addressed in this course will be the origins of modern Jewish humor in traditional modes of storytelling and study; the problems of anxiety and otherness articulated and neutralized through humor; the significance of Jews in creating popular culture through the mass media (particularly though not exclusively in the United States) as well as the role of these mediums in transmitting and translating Jewish references to the general culture; the status of the Yiddish language as a vehicle for satire and a vehicle of resistance between tradition and modernity; the uses and abuses of Jewish stereotypes and the relationship of Jewish humor to anti-Semitism; the connections between Jewish humor and other modes of minority discourse; and the question of translation of Jewish humor both from Yiddish into other languages and from the Jewish “in-group” to a “post-ethnic” audience. Authors and performers to be examined will include Avrom Goldfaden, Sholem Aleichem, Franz Kafka, Dzigan and Szumacher, Lenny Bruce, the Marx Brothers, Mel Brooks, Phillip Roth, Woody Allen, Larry David, Sarah Silverman, and the Coen Brothers. All readings and discussions conducted in English.
Instructor(s): M. Caplan
Area: Humanities.
AS.213.344. Holocaust and Film. 3 Credits.
Taught in English. This class will examine the history of Holocaust films in regard to the possibilities of genre (documentary versus feature), the use of historical and archival materials, as well as general questions of representation and trauma. I CINEMA OF THE VICTIMS II CINEMA OF THE PERPETRATORS III CINEMA OF THE SECOND AND THIRD GENERATIONS WITNESSES Students will be writing weekly response papers to all screenings, and will choose to work with films in the original languages German, English, Italian, and French. This class will be writing-intensive. Cross-listed with Film and Media Studies, Political Science, History, and Jewish Studies.
Instructor(s): M. Caplan
Area: Humanities
Writing Intensive.

Though every conventional description of modernist aesthetics dates its origins to the era preceding World War I—in some versions several decades before 1914—there has always been an understanding of the War’s “catalytic” influence on the aesthetic of chaos, madness, violence, and despair that comes to characterize at least one major strain of modernist art. Taking the after-effects of the First World War as well as the Russian Revolution(s) as its point of origin, this graduate-level seminar will consider such writers as Sigmund Freud, Walter Benjamin, Sh. Y. Agnon, Sh. Ansky, Guillaume Apollinaire, Isaac Babel, Georges Perec, Erich Maria Remarque, Joseph Roth, Virginia Woolf, and Stefan Zweig. All readings and discussions available in English.
Instructor(s): M. Caplan
Area: Humanities
Writing Intensive.

AS.213.725. Proto-, Modern, and Post-: Locating the –ism in Modernism.
All discussions in English. This graduate seminar will seek to disentangle the interrelationship among “proto-modernism,” “modernism,” and “post-modernism” from the straitjacket of periodization and taxonomy by focusing instead on questions of temporality and phenomenology. When is the time of modernity? What precedes modernism? How is post-modernism a continuation of modernism and a break with modernity? What follows the “post” or precedes the “proto”? How does literature establish a dialogue not just across linguistic borders but temporal ones as well? And when do these processes repeat themselves due to historical and political factors? By way of complicating all of these questions we will be considering writers from “across” the 20th century, including Walter Abish, Thomas Bernhard, André Breton, Orly Castel-Bloom, Henry Dumas, Moyshe Kulbak, Machado de Assis, Mendele Moykher-Sforim, Joseph Roth, Anton Shammas, Gertrude Stein, and Robert Walser.
Instructor(s): M. Caplan.

AS.214.340. Holocaust & Film. 3 Credits.
Taught in English. This course examines the question of the Holocaust and its representation in the filmic media. We will analyze such themes as post-traumatic documentary (e.g., Night and Fog, Alain Resnais 1955), the resistance to representation (Shoah, Claude Lanzmann 1985), Holocaust drama and the ethics of entertainment (e.g., Schindler’s List, Steven Spielberg 1993), the question of filmic adaptation (e.g., The Grey Zone, Tim Blake Nelson 2002—based on Primo Levi’s The Drowned and the Saved 1986), and the new genre of confessional first person video-diary (e.g., Two or Three Things I know About him, Malte Ludin 2005). On this last theme we will also host the two-day symposium “The Holocaust: Children of the Perpetrators Confront Their Parents’ Nazi Past through Documentary Film,” in March 09. The symposium will feature three international documentary filmmakers and their recent films The End of the Neubacher Project, Marcus Carney 2007, Fatherland, Manfred Becker 2006, and Two or Three Things I know About him, Malte Ludin 2005, in which the filmmakers—children of Nazi perpetrators—are asking the question “who am I in relation to my father’s deeds?” The symposium will further include a number of experts on the topic of Holocaust, commemoration, and documentary film. Students will be involved in the preparation and, if interested, in the panel-discussions of the symposium. All films will be screened with English subtitles; this class is reading-intensive and writing-intensive; weekly response papers will be written about the films and the course topic at large. Cross-listed with Film and Media Studies, Political Science, History, and Jewish Studies.

AS.216.398. Zionism, Post-Zionism and Modern Hebrew Literature. 3 Credits.
This course studies the development of modern Hebrew literature through its relation to Zionism and Post-Zionism. Based on a close reading of both literary and non-literary Zionist and Post-Zionist texts, we will explore the thematic, social, political, aesthetic and stylistic influences that these two movements have had on modern Hebrew literature. Writers to be discussed include: Hertzl, Nordau, Achad ha-am, Jabotinsky, Klusasner, Brenner, Berdyczewski, Agnon, Greenberg, Kahana-Carmon, Oz, Yehoshua, Grossman, Castel-Bloom, and Laor.
Instructor(s): N. Stahl.
AS.216.412. The Divine in Literature and Cinema. 3 Credits.
This course studies various issues concerning literary and cinematic representations of the divine. We will investigate theoretical, theological, generic and aesthetic aspects of the topic and will familiarize ourselves with the general problem of the relation between religion, literature and cinema. Among the topics to be discussed are, negative theology in literature and film, theodicy and anti-theodicy, the question of religion and literary modernism, providence and narratology in the modern novel and in contemporary cinema.
Instructor(s): N. Stahl.

AS.216.612. The Divine in Literature and Cinema.
This course studies various issues concerning literary and cinematic representations of the divine. We will investigate theoretical, theological, generic and aesthetic aspects of the topic and will familiarize ourselves with the general problem of the relation between religion, literature and cinema. Among the topics to be discussed are, negative theology in literature and film, theodicy and anti-theodicy, the question of religion and literary modernism, providence and narratology in the modern novel and in contemporary cinema.
Instructor(s): N. Stahl.

Humanities Center

AS.300.308. The Israeli Novel. 3 Credits.
This course studies the Israeli novel through close reading of the works of major Israeli writers such as, Ya’akov Shabtai, Amos Oz, A.B Yeshoshua, Amalia Kahana-Carmon, Yehoshua Knaiz, David Grossman, Orly Castel-Bloom, Yoel Hoffmann and Elgar Keret. We will focus on questions of style, genres and thematic choices. Among the topics to be discussed are Jewish history and tradition, social and political critiques and minority representations. Classes conducted in English, but students with knowledge of Hebrew are encouraged to read texts in the original.
Instructor(s): N. Stahl
Area: Humanities.

AS.300.313. Contemporary Israeli Cinema. 3 Credits.
This course examines Israeli cinema of the last two decades. Among the films to be discussed are: Oscar nominees Adjami and Waltz with Bashir, Late Marriage, A Matter of Size, Year Zero, Lemon Tree, Sweet Mud, and Lebanon. We will study the different influences and the innovative use of style and genres in these films, as well as the new themes and agendas that they offer.
Instructor(s): N. Stahl
Area: Humanities.

AS.300.330. Trauma in Theory, Film, and Fiction. 3 Credits.
An examination of the representation of trauma in literary theory, psychiatry, survivor literature, films, novels, and comics. Works by Sebald ("The Emigrants"), Lanzmann ("Shoah"), Spiegelman ("In the Shadow of No Towers"), McCarthy ("Remainder"), and others.
Instructor(s): R. Leys
Area: Humanities, Social and Behavioral Sciences.

AS.300.345. Between the Sacred and the Secular in Modern Hebrew Literature. 3 Credits.
Area: Humanities
Writing Intensive.

AS.300.351. Literature and Hasidism: The Tales of Nachman of Berslov. 3 Credits.
This course explores the tales of Nachman of Berslov as a literary, cultural and theological phenomenon. We will trace the Kabbalistic and messianic elements in these tales and evaluate their place and role within the wider context of Hassidic literature.
Area: Humanities
Writing Intensive.

AS.300.356. From Literature to Film - the case of Israeli Cinema. 3 Credits.
This course explores the differences and similarities between two artistic mediums: literature and cinema. Our case study will be the interesting transformation of Hebrew fiction into Israeli films – a dominant phenomenon in Israeli cinema since its very beginning. Our main framework will be narrative theories, but we will also consider the specific historical, ideological and geo-political aspects involved in this transformation. By comparing the two artistic modes and studying the transformation of 5 literary works into films, students will become familiar with the history of modern Hebrew literature, contemporary Israeli cinema, and the relationship between these two artistic mediums. Cross-listed with Jewish Studies, Film and Media Studies, and Writing Seminars
Instructor(s): N. Stahl
Area: Humanities
Writing Intensive.

AS.300.372. Holocaust Testimonies. 3 Credits.
A seminar on topics and issues associated with Holocaust testimony. Cross-listed with History, History of Science and Technology, and Anthropology.
Area: Humanities, Social and Behavioral Sciences.

AS.300.374. The Other in Israeli Culture. 3 Credits.
This course examines the representations of the Other in Israeli society and culture. Relying on Self-Other theories we will study the role of the Other in contemporary Israeli cinema, prose, poetry, theater and visual art, and will investigate the political, social and cultural context of its representations. Cross-listed with Jewish Studies and Film and Media Studies
Instructor(s): N. Stahl
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.300.375. The God of the Hebrew Writer. 3 Credits.
Who is the God of the Hebrew poet and what kind of being is he?
This course will examine the ways in which Hebrew writers conceived God. Against the background of Medieval Hebrew poetry we will read modern Hebrew poetry, prose and drama and analyze the changes in the notion of God and its depictions from the Middle Ages through Jewish Enlightenment to modernity. We will study the role of the poet as a mediator between God and his people and his interpretation of God in the aftermath of World War I and the Holocaust.
Area: Humanities.
AS.300.379. Israeli Film and Literature. 3 Credits.
This course examines representations of various aspects of Israeli society and culture in contemporary Israeli cinema and literature. The course will follow both a thematic and chronological path in order to study the ways in which Israeli cinema and literature reflect political, ideological, social, and cultural aspects of contemporary Israel. In this context, we will read well-known works by several major authors and will watch major Israeli films from the 1940s to these days. We will also use a comparative approach to study the different artistic means of both mediums and to evaluate their successes in representing the various tensions of Israeli society and culture.
Instructor(s): N. Stahl; Z. Cohen
Area: Humanities
Writing Intensive.

AS.300.380. Realism and Anti Realism in Modern Jewish Literature. 3 Credits.
This course seeks to trace the narrative dynamics and literary means of Modern Jewish Literature. The course will focus on the ideological, political and artistic context of the break with the conventions of realism in Jewish modernism. Reading includes: Erich Auerbach, Franz Kafka, S.Y Agnon, S.Y Abramovitch, Sholem Asch, A.B Yehoshua, Yoel Hoffmann and Orly Castel-Bloom. Cross-listed with Jewish Studies and GRLL
Instructor(s): N. Stahl
Area: Humanities.

AS.300.381. The Moses Complex. 3 Credits.
Instructor(s): R. Leys
Area: Humanities.

AS.300.398. Zionism, Post-Zionism and Modern Hebrew Literature. 3 Credits.
This course studies the development of modern Hebrew literature through its relation to Zionism and Post-Zionism. Based on a close reading of both literary and non-literary Zionist and Post-Zionist texts, we will explore the thematic, social, political, aesthetic and stylistic influences that these two movements have had on modern Hebrew literature. Writers to be discussed include: Hertzl, Nordau, Achad ha-am, Jabotinsky, Kluasner, Brenner, Berdyczewski, Agnon, Greenberg, Kahana-Carmon, Oz, Yehoshua, Grossman, Castel-Bloom, and Laor. Cross listed with: Jewish Studies and Political Science
Instructor(s): N. Stahl
Area: Humanities
Writing Intensive.

AS.300.404. The Israeli Novel. 3 Credits.
This course studies the Israeli novel through close reading of the works of major Israeli writers such as, Ya’akov Shabtai, Amos Oz, A.B Yeshoshua, Amalia Kahana-Carmon, Yehoshua Knaz, David Grossman, Orly Castel-Bloom, Yoel Hoffmann and Elgar Keret. We will focus on questions of style, genres and thematic choices. Among the topics to be discussed are: Jewish history and tradition, social and political critiques and minority representations. Classes conducted in English, but students with knowledge of Hebrew are encouraged to read texts in the original. Cross-listed with Jewish Studies and Writing Seminars.
Area: Humanities.

AS.300.413. Israeli poetry. 3 Credits.
This course examines the works of major Israeli poets such as Yehuda Amichai, Nathan Zach, David Avidan, Dalia Rabikovitch, Yona Wollach, Maya Bejerano, and Yitzhak Laor. These works will be read against the background of the poetry of previous literary generations of writers such as H.N Bianik, Avraham Shlonsky, Natan Alterman and Lea Goldberg in an attempt to uncover changes in style, themes and aesthetic. Through close reading of the poems, the course traces the unique style and aesthetic of each poet, and aims at presenting a wide picture of contemporary Hebrew poetry. Class will be conducted in English and texts will be read in both English translation and the Hebrew original. Open for both Hebrew and non-Hebrew speakers.
Instructor(s): N. Stahl.

AS.300.417. Modern Jewish Thought and Literature. 3 Credits.
Open to graduate students. This course studies a wide range of texts dealing with questions concerning the Jewish experience in the modern world. Relying on a comparative mode, we will analyze the historical, philosophical, ideological, and political aspects of these texts, as well as parallel literary and artistic depictions of similar topics. Crosslisted with Jewish studies.
Area: Humanities.

AS.300.425. Literature and the Divine. 3 Credits.
This course studies various issues concerning literary representations of the divine. We will investigate theoretical, theological, generic and aesthetic aspects of the topic and will familiarize ourselves with the general problem of the relation between religion and literature. Among the topics to be discussed are: negative theology in literature, theodicy and anti-theodicy, the question of religion and literary modernism and providence and narratology in the modern novel.
Area: Humanities.

AS.300.606. Realism and Anti Realism in Modern Jewish Literature.
This course seeks to trace the narrative dynamics and literary means of Modern Jewish Literature. The course will focus on the ideological, political and artistic context of the break with the conventions of realism in Jewish modernism. Reading includes: Erich Auerbach, Franz Kafka, S.Y Agnon, S.Y Abramovitch, Sholem Asch, A.B Yehoshua, Yoel Hoffmann and Orly Castel-Bloom.
Cross-listed with GRLL and Jewish Studies
Instructor(s): N. Stahl.

AS.300.691. The Jewish Jesus.
Interdepartmental

This class will survey the various ways in which women, sexuality, and violence are linked in the Hebrew Bible (often referred to as the Old Testament). We will employ a variety of perspectives, including philosophical, historical, and literary. No prior familiarity with the Hebrew Bible is presupposed.
Area: Humanities, Social and Behavioral Sciences.

Center for Language Education

AS.384.115. First Year Hebrew. 4 Credits.
Designed to provide reading and writing mastery, to provide a foundation in Hebrew grammar and to provide basic conversational skills. Cross-listed with Jewish Studies. Final day/time will be determined during the first week of classes based on students' schedules.
Instructor(s): Z. Cohen.
AS.384.116. First Year Modern Hebrew II. 4 Credits.
Designed to provide reading and writing mastery, to provide a foundation in Hebrew grammar and to provide basic conversational skills. Cross-listed with Jewish Studies.
Prerequisites: AS.384.115
Instructor(s): Z. Cohen.

AS.384.215. Second Year Hebrew. 3 Credits.
Designed to enrich vocabulary and provide intensive grammatical review, and enhance fluency in reading, writing and comprehension. Cross-listed with Jewish Studies. Final day/time will be determined during the first week of classes based on students' schedules.
Prerequisites: ( AS.384.115 AND AS.384.115 ) OR ( AS.130.450 AND AS.130.451)
Instructor(s): Z. Cohen
Area: Humanities.

AS.384.216. Second Year Modern Hebrew II. 4 Credits.
Designed to enrich vocabulary and provide intensive grammatical review, and enhance fluency in reading, writing and comprehension. Recommended Course Background: AS.384.215 or permission required. Cross-listed with Jewish Studies.
Prerequisites: AS.384.215
Instructor(s): Z. Cohen

AS.384.315. Third Year Hebrew. 4 Credits.
Designed to: maximize comprehension and the spoken language through literary and newspaper excerpts providing the student with the language of an educated Israeli. Cross-listed with Jewish Studies. Final day/time will be determined during the first week of classes based on students' schedules.
Prerequisites: ( AS.384.215 AND AS.384.216) OR ( AS.130.452 AND AS.130.453 )
Instructor(s): Z. Cohen
Area: Humanities.

AS.384.316. Third Year Modern Hebrew II. 4 Credits.
Designed to: maximize comprehension and the spoken language through literary and newspaper excerpts providing the student with the language of an educated Israeli. Recommended Course Background: AS.384.315 or permission required. Cross-listed with Jewish Studies.
Prerequisites: AS.384.315
Instructor(s): Z. Cohen
Area: Humanities.

Program in Museums and Society
AS.389.350. Staging Suburbia with the Jewish Museum of Maryland-Community Based Learning. 3 Credits.
Work as a public historian alongside Jewish Museum of Maryland curators and staff, researching primary documents and artifacts to develop an exhibition about Baltimore’s Jewish suburbs. The show will travel throughout Baltimore. M&S practicum course. Cross-listed with History and Jewish Studies.
Area: Humanities, Social and Behavioral Sciences.

Center for Language Education
The Center for Language Education (CLE) was established in 1992 (with name change in 2010). The CLE presently offers foreign-language courses in Arabic, Chinese, Hebrew, Hindi, Japanese, Korean, and Russian.

The CLE also offers evening, non-credit English as a Second Language (ESL) courses, English for International Teaching Assistants (ITA), and a Summer Intensive English Language Program for visiting and pre-college students. The Summer Program consists of classes in Oral Communication, Academic and Professional Writing, Accent Reduction, American Culture, and TOEFL Preparation.

The Goucher-Hopkins Cooperative Program in Russian
The Goucher College–Johns Hopkins University Cooperative Program in Russian Language, Literature, and Culture offers a full range of courses to be drawn upon for an area major in humanistic studies (p. 417).

Minor and Double Major in Russian
The Russian double-major, designed to give students a working command of both the written and spoken language and a deeper understanding of the cultural and literary development of the Russian people from the advent of Christianity to the present day, consists of 30 credits beyond, but not including AS.377.208 Intensive Intermediate Russian. The minor consists of 18 credits.

Russian majors are strongly encouraged to enroll in a summer immersion or spend a semester abroad in Moscow, St. Petersburg, or Vladimir through the Bard-Smolny, ACTR, or CIEE programs. A three-week summer immersion to Odessa, Ukraine is offered some years as part of the language study. Completion of AS.377.209 Advanced Russian Grammar is prerequisite to study abroad. All credits earned on the summer and semester programs may be applied toward the minor or double-major.

For beginning courses, only AS.377.131 Elements of Russian I may be taken satisfactory/unsatisfactory. Other languages may be taken satisfactory/unsatisfactory only at the intermediate level and above. A student earning a D in a course is not eligible to pass to the next higher level course. Students are granted credit for each semester course successfully completed, regardless of enrollment or performance in a subsequent course. Students are advised to contact the Center for Language Education for language programs created on an ad hoc basis.

Courses

AS.370.010. Listening/Speaking - High Beginner.
This course is designed to help students develop their confidence to sepak in a variety of simple situations. Students will learn how to participate in social conversations, request information from others, explain their ideas and give opinions about subjects of their interests. Students must be able to read and write English and must be able to speak simple sentences at least in the present tense with limited vocabulary.
Instructor(s): K. Brillon.

Instructor(s): E. Zaroukian
Area: Humanities.

AS.370.022. Reading & Writing English - Intermediate.
Instructor(s): A. Carroll; Staff
Writing Intensive.

Instructor(s): D. McNeal.

AS.370.032. Reading & Writing English - Advanced.
Instructor(s): C. Waddail
Writing Intensive.

AS.370.034. American Culture Through Film.
Instructor(s): C. Waddail
Writing Intensive.

Instructor(s): A. Carroll.

AS.370.042. Reading & Writing English - Advanced Plus.
Instructor(s): D. McNeal
Writing Intensive.

AS.370.044. Accent Reduction.
In person registration only This course is designed to help non-native American English speakers tackle American English language skills and improve their pronunciation and manner of speaking dramatically. The course incorporates the learning of language skills such as the sounds, stress patterns, rhythm, and intonation patterns of American English. This is a separate process from learning the grammar and vocabulary of American English. The completion of this course will result in accent modification, accent improvement and easily understandable conversational speech and will help the learner to function more effectively at work and outside of work.
Instructor(s): E. Zaroukian.

AS.370.050. Strengthening English for the TOEFL.
Instructor(s): K. Brillon
Writing Intensive.

AS.370.060. English:Med Professional. 3 Credits.
Writing Intensive.

Perm. Req’d. No Auditors/Open to Graduate students only Oral Skills for International Teaching Assistants is intended for international TAs who are not native speakers of English. In addition to improving listening comprehension in everyday interactions, students will improve their fluency, accuracy, and intelligibility in a variety of speaking situations. The core curriculum is designed to include a wide range of performance-based communicative activities. Open to international TAs and other full-time graduate students in Arts and Sciences and Engineering.
Instructor(s): N. Gooding.

Perm. Req’d. Graduate students only. Communication Strategies in the American Classroom is designed to introduce international TAs to the culture of the American classroom. Students will continue to strengthen their English speaking skills, practice basic teaching techniques, and develop strategies for clear, cross-cultural communication. The core curriculum includes many performance-based activities intended to help students interact more effectively with undergraduates in a variety of speaking situations. Open to international TAs and other full-time graduate students in Arts and Sciences and Engineering.
Instructor(s): N. Gooding.

AS.370.602. Accent Reduction.
Perm. Req’d. No Auditors/Open to international TAs and other full-time graduate students in Arts & Sciences and Engineering.
Instructor(s): J. Yarmolinskaya.
AS.373.603. Culture and Communication in American Academia.
This course is intended for international Teaching Assistants (TAs) who are not well acquainted with the culture of American universities. It focuses on improving students' understanding of the culture and communication norms in American academia. Students learn the basics of conversation and e-mail etiquette in America, as well as the norms of interacting with college students they teach, professors, and colleagues in situations such as classes, office hours, lab meetings, and scientific meetings. Students practice designing and presenting lectures, supporting materials, tests, and assignments for classes they TA, as well as scholarly presentations of their research to the scientific community. This course is open only to graduate students in Arts & Sciences and Engineering. Permission Required.
Instructor(s): J. Yarmolinskaya.

AS.373.111. First Year Heritage Chinese. 3 Credits.
This course is designed for students who were raised in an environment in which Chinese is spoken by parents or guardians at home and for those who are familiar with the language and possess native-like abilities in comprehension and speaking. The course therefore focuses on reading and writing (including the correct use of grammar). Cross-listed with East Asian Studies
Instructor(s): L. Lievens.

AS.373.112. First Year Heritage Chinese II. 3 Credits.
For students who have significant previously-acquired ability to understand and speak Modern Standard Chinese. Course focuses on reading and writing. Teaching materials are the same as used in AS.373.115-116; however, both traditional and simplified versions of written Chinese characters are used. Lab required. Continuation of AS.373.111. Recommended Course Background: AS.373.111 or permission required.
Instructor(s): L. Lievens.

AS.373.115. First Year Chinese. 4 Credits.
This course is designed primarily for students who have no prior exposure to Chinese. The objective of the course is to help students build a solid foundation of the four basic skills—listening, speaking, reading, and writing—in an interactive and communicative learning environment. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. Note: Students with existing demonstrable skills in spoken Chinese should take AS.373.111-112. No Satisfactory/Unsatisfactory. Students may choose to attend either lecture at 9am or 3pm on TTh. Cross-listed with East Asian Studies
Instructor(s): N. Zhao; Y. Chiang.

AS.373.116. First Year Chinese II. 4 Credits.
Introductory course in Modern Standard Chinese. Goals: mastery of elements of pronunciation and control of basic vocabulary of 800-900 words and most basic grammatical patterns. Students work first with Pin-Yin system, then with simplified version of written Chinese characters. Continuation of AS.373.115. Note: Student with existing demonstrable skills in spoken Chinese should take AS.373.111-112. Recommended Course Background: AS.373.115 or permission required.
Instructor(s): N. Zhao; Y. Chiang.

AS.373.211. Second Year Heritage Chinese. 3 Credits.
This course is designed for students who finished AS.373.112 with C- and above (or equivalent). Students in this course possess native-like abilities in comprehension and speaking. The course focuses on reading and writing. Cross-listed with East Asian Studies
Instructor(s): A. Chen
Area: Humanities.

AS.373.212. Second Year Heritage Chinese II. 3 Credits.
For students who have significant previously-acquired ability to understand and speak Modern Standard Chinese. Course focuses on reading and writing. Teaching materials are the same as used in AS.373.115-116; however, both traditional and simplified versions of written Chinese characters are used. Continuation of AS.373.211. Recommended Course Background: AS.373.211 or permission required.
Instructor(s): A. Chen
Area: Humanities.

AS.373.215. Second Year Chinese. 4 Credits.
Consolidation of the foundation that students have laid in their first year of study and continued drill and practice in the spoken language, with continued expansion of reading and writing vocabulary and sentence patterns. Students will work with both simplified and traditional characters. Note: Students who have native-like abilities in comprehension and speaking should take AS.373.211-212. Cross-listed with East Asian Studies
Instructor(s): A. Chen; N. Zhao
Area: Humanities.

AS.373.216. Second Year Chinese II. 4 Credits.
Consolidation of the foundation that students have laid in their first year of study and continued drill and practice in the spoken language, with continued expansion of reading and writing vocabulary and sentence patterns. Students will work with both simplified and traditional characters. Note: Students who have native-like abilities in comprehension and speaking should take AS.373.211-212. Recommended Course Background: AS.373.215 or Permission Required. Cross-listed with East Asian Studies
Instructor(s): A. Chen; N. Zhao
Area: Humanities.

AS.373.261. Intermediate Workshop & Practicum in Engineering Chinese. 2 Credits.
JHU China-STEM Program: Engineering; Specialized intermediate language instruction for students of Mandarin in fields of science and engineering. Courses offered at the Nanning Center in Nanjing, China. By application only. Two years of College-level Mandarin required for admission to the China-STEM Program.
Instructor(s): N. Yu
Area: Humanities.

AS.373.271. Intermediate Workshop and Practicum in Health Sciences Chinese. 2 Credits.
JHU China-STEM Program: Engineering; Specialized intermediate language instruction for students of Mandarin in fields of science and engineering. Courses offered at the Nanning Center in Nanjing, China. By application only. Two years of College-level Mandarin required for admission to the China-STEM Program.
Instructor(s): N. Yu; Staff
Area: Humanities.

AS.373.303. Chinese Calligraphy. 3 Credits.
This is an introductory course on Chinese brush writing. Knowledge of the Chinese language is useful but not essential. You will hear lectures on history, theory and techniques of brush writing plus aspects of Chinese culture associated with characters used. Remaining time will be used for hands-on practice. Taught in English. Cross-listed with East Asian Studies
Instructor(s): R. Hsieh
Area: Humanities.
AS.373.313. Third Year Heritage Chinese. 3 Credits.
This course is designed for those who have already taken AS.373.212 or equivalent. Students need to have native-level fluency in speaking and understanding Chinese. The course focuses on reading and writing. In addition to the textbooks, downloaded articles on current affairs may also be included on a regular basis. Cross-listed with East Asian Studies
Prerequisites: Prereq: AS.373.211 AND AS.373.212 or instructor’s permission
Instructor(s): A. Chen
Area: Humanities.

AS.373.314. Third Year Heritage Chinese II. 3 Credits.
This course is a continuation of AS.373.313. Students need to have native-level fluency in speaking and understanding Chinese. The course focuses on reading and writing. In addition to the textbooks, downloaded articles on current affairs may also be included on a regular basis. Recommended Course Background: AS.373.313 or Permission Required. Lab required.
Prerequisites: AS.373.313 or equivalent
Instructor(s): A. Chen
Area: Humanities.

AS.373.315. Third Year Chinese. 3 Credits.
This two-semester course consolidates and further develops students’ knowledge of grammar and vocabulary and further develops reading ability through work with textbook material and selected modern essays and short stories. Class discussions will be in Chinese as feasible and written assignments will be given. Cross-listed with East Asian Studies
Prerequisites: Prereq: AS.373.216 or equivalent
Instructor(s): L. Lievens
Area: Humanities.

AS.373.316. Third Year Chinese II. 3 Credits.
This two-semester course consolidates and further expands students’ knowledge of grammar and vocabulary and further develops reading ability through work with textbook material and selected modern essays and short stories. Class discussions will be in Chinese as feasible, and written assignments will be given. Continuation of AS.373.315. Recommended Course Background: AS.373.315 or permission required.
Instructor(s): L. Lievens
Area: Humanities.

AS.373.361. Chinese for Engineers. 6 Credits.
JHU China-STEM Program: Engineering: Specialized intermediate language instruction for students of Mandarin in fields of science and engineering. Courses offered at the Nanging Center in Nanjing, China. By application only. Two years of College-level Mandarin required for admission to the China-STEM Program.
Instructor(s): N. Yu
Area: Humanities.

AS.373.362. Advanced Workshop & Practicum in Engineering Chinese. 2 Credits.
JHU China-STEM Program: Engineering: Specialized intermediate language instruction for students of Mandarin in fields of science and engineering. Courses offered at the Nanging Center in Nanjing, China. By application only. Two years of College-level Mandarin required for admission to the China-STEM Program.
Instructor(s): Staff
Area: Humanities.

AS.373.371. Health Sciences Chinese. 6 Credits.
JHU China-STEM Program: Engineering: Specialized intermediate language instruction for students of Mandarin in fields of science and engineering. Courses offered at the Nanging Center in Nanjing, China. By application only. Two years of College-level Mandarin required for admission to the China-STEM Program.

Area: Humanities.

AS.373.372. Advanced Workshop & Practicum in Health Sciences Chinese. 2 Credits.
JHU China-STEM Program: Engineering: Specialized intermediate language instruction for students of Mandarin in fields of science and engineering. Courses offered at the Nanging Center in Nanjing, China. By application only. Two years of College-level Mandarin required for admission to the China-STEM Program.
Instructor(s): N. Yu; Staff
Area: Humanities.

AS.373.415. Fourth Year Chinese. 3 Credits.
This course is designed for students who finished AS.373.316 with a C+ or above (or equivalent). Readings in modern Chinese prose, including outstanding examples of literature, newspaper articles, etc. Students are supposed to be able to understand most of the readings with the aid of a dictionary, so that class discussion is not focused primarily on detailed explanation of grammar. Discussion, to be conducted in Chinese, will concentrate on the cultural significance of the readings’ content. Cross-listed with East Asian Studies
Prerequisites: AS.373.315
Instructor(s): L. Lievens
Area: Humanities.

AS.373.416. Fourth Year Chinese II. 3 Credits.
Continuation of AS.373.415. Readings in modern Chinese prose, including outstanding examples of literature, newspaper articles, etc. Students should understand most of the readings with the aid of a dictionary, so that class discussion need not focus primarily on detailed explanations of grammar. Discussion, to be conducted in Chinese, will concentrate on the cultural significance of the readings’ content. Recommended Course Background: AS.373.415 or Permission Required. Cross-listed with East Asian Studies
Instructor(s): L. Lievens
Area: Humanities.

AS.373.421. Classical Chinese. 3 Credits.
Classical Chinese will introduce key features of grammar, syntax, and usage, along with the intensive study of a set of readings in the language. Readings are drawn from a variety of philosophical and historical texts. Students are required to have knowledge of traditional Chinese characters in order to read short selections of early literary prose. Recommended Course Background: Four years of Chinese Language courses at JHU or equivalent language skills.
Instructor(s): A. Chen
Area: Humanities.
**AS.373.451. Topics in Chinese Media. 3 Credits.**  
The main focus of this course is to expand the student's knowledge of four essential skills in Chinese language and to deepen the student's knowledge of Chinese culture. The course is taught based on various written and visual materials (including newspapers, journals, TV, movies, and short novels) to improve students' reading comprehension, maintain conversation skills through class discussion, increase understanding of the culture and society of China, and enhance writing ability through short compositions and a writing project. Recommended Course Background: Completion of four years of Chinese language or permission required.  
Instructor(s): N. Zhao  
Area: Humanities.

**AS.373.452. Topics in Chinese Media II. 3 Credits.**  
The main focus of this course is to expand the student's knowledge of four essential skills in Chinese language and to deepen the student's knowledge of Chinese culture. The course is taught based on various written and visual materials (including newspapers, journals, TV, movies, and short novels) to improve students' reading comprehension, maintain conversation skills through class discussion, increase understanding of the culture and society of China, and enhance writing ability through short compositions and a writing project. Continuation of 373.451. Recommended Course Background: AS.373.451 or its equivalent.  
Area: Humanities.

**AS.375.115. First Year Arabic. 4 Credits.**  
Introductory course in speaking, listening, reading, and writing Modern Standard Arabic. Presents basic grammatical structures and a basic vocabulary. Through oral-aural drill in classroom, tapes in Language Laboratory, and reading/writing exercises, students attain a basic level of competence on which they can build in subsequent years of study. No Satisfactory/ Unsatisfactory will be used, and culture will be further expanded on as a fifth skill. Recommended Course Background: AS.375.115-116 or equivalent.  
Accelerated students should register for Section 01. Recommended Course Background: AS.375.115-116 or equivalent.  
Instructor(s): F. Abdallah  
Area: Humanities.

**AS.375.116. First Year Arabic II. 4 Credits.**  
Continuation of AS.375.115. Introductory course in speaking, listening, reading, and writing Modern Standard Arabic. Presents basic grammatical structures and a basic vocabulary. Through oral-aural drill in classroom, tapes in Language Laboratory, and reading/writing exercises, students attain a basic level of competence on which they can build in subsequent years of study. Accelerated students should register for Section 01. May not be taken Satisfactory/ Unsatisfactory.  
Instructor(s): F. Abdallah; K. Tahrawi; M. Johnson.

**AS.375.119. Beginning Arabic I. 4 Credits.**  
Introductory course in speaking, listening, reading, and writing Modern Standard Arabic. Presents basic grammatical structures and a basic vocabulary. Through oral-aural drill in classroom, tapes in Language Laboratory, and reading/writing exercises, students attain a basic level of competence on which they can build in subsequent years of study.  
Instructor(s): K. Tahrawi.

**AS.375.120. Beginning Arabic II. 4 Credits.**  
Continuation of AS.375.115. Introductory course in speaking, listening, reading, and writing Modern Standard Arabic. Presents basic grammatical structures and a basic vocabulary. Through oral-aural drill in classroom, tapes in Language Laboratory, and reading/writing exercises, students attain a basic level of competence on which they can build in subsequent years of study. Recommended Course Background: AS.375.115 or permission of the instructor.  
Instructor(s): K. Tahrawi.

**AS.375.215. Second Year Arabic. 4 Credits.**  
Designed to bring students up to competency level required for third/fourth year Arabic. Students will consolidate and expand their mastery of the four basic skills acquired in AS.375.115-116. More authentic material--written, audio, and visual--will be used, and culture will be further expanded on as a fifth skill. Recommended Course Background: AS.375.115-116 or equivalent.  
Accelerated students should register for Section 01. Recommended Course Background: AS.375.215 or permission required.  
Instructor(s): F. Abdallah  
Area: Humanities.

**AS.375.216. Second Year Arabic II. 4 Credits.**  
Continuation of AS.375.215. Designed to bring students up to competency level required for third/fourth year Arabic. Students will consolidate and expand their mastery of the four basic skills acquired in AS.375.115-116. More authentic material--written, audio, and visual--will be used, and culture will be further expanded on as a fifth skill.  
Accelerated students should register for Section 01. Recommended Course Background: AS.375.215 or permission required.  
Instructor(s): F. Abdallah  
Area: Humanities.

**AS.375.301. Third Year Arabic. 3 Credits.**  
Designed to enhance students' ability to read, discuss, and write about various topics covered in traditional and contemporary Arabic texts. Recommended Course Background: AS.375.216 or equivalent.  
Instructor(s): F. Abdallah  
Area: Humanities.

**AS.375.302. Third Year Arabic II. 3 Credits.**  
Designed to enhance students' ability to read, discuss, and write about various topics covered in traditional and contemporary Arabic texts. Continuation of AS.375.301. Recommended Course Background: AS.375.301 or permission required.  
Instructor(s): F. Abdallah  
Area: Humanities.

**AS.375.401. Fourth Year Arabic. 3 Credits.**  
This is an introductory course to different periods of the Arabic literature. Selections of famous Arabic poetry and short prose works are the substance of the course.  
Instructor(s): K. Tahrawi  
Area: Humanities.

**AS.375.402. Fourth Year Arabic. 3 Credits.**

Instructor(s): K. Tahrawi.

**AS.375.502. Independent Study-Arabic. 0 - 3 Credit.**  
Instructor(s): K. Tahrawi.
AS.377.100. Linguistic Crossroads: Where Cultures (Con)/(Di)verge. 3 Credits.
This course provides an investigation of the world’s language families from a linguistic perspective. Students will be introduced to the IPA transliteration system, followed by an examination of the structures that are common to several families, as well as others that are uniquely their own. Emphasis will be placed on the historic context of language apropos to a discussion of phonetics, morphology, and basic syntax of representative languages from around the world, including English, German, Japanese, Russian, and Spanish. A course project will consist of students interviewing and noting in phonetics several words and phrases from two different languages (using native speakers) with an analysis of observed similarities and differences. In English.
Instructor(s): A. Czeczulin.

AS.377.131. Elements of Russian I. 4 Credits.
Designed to give student a firm foundation in the language, with special emphasis on the development of vocabulary, basic reading, and conversational skills. (Section 02 taught at Goucher College)
Instructor(s): A. Czeczulin; O. Samilenko.

AS.377.132. Elementary Russian II. 4 Credits.
Designed to give students a firm foundation in the language, with special emphasis on the development of vocabulary, basic reading, and conversational skills. Continuation of AS.377.131. Section 02 taught at Goucher. May not be taken Satisfactory/Unsatisfactory. Recommended Course Background: AS.377.131.
Instructor(s): A. Czeczulin; O. Samilenko.

AS.377.208. Intensive Intermediate Russian. 4 Credits.
Intensive oral work; continued emphasis on grammar and reading comprehension.
Prerequisites: AS.377.132
Instructor(s): A. Czeczulin
Area: Humanities.

AS.377.209. Advanced Russian Grammar. 4 Credits.
Continuation of AS.377.208. Intensive oral work; continued emphasis on grammar and reading comprehension.
Instructor(s): A. Czeczulin
Area: Humanities.

AS.377.210. Russian Conversation & Composition. 3 Credits.
Discussions based on readings, films, and multimedia exercises. Special attention is paid to the active use of grammar structures in fourth semester Russian. Taught at Goucher. Recommended Course Background: AS.377.209 or instructor’s permission.
Prerequisites: AS.377.135
Instructor(s): O. Samilenko
Area: Humanities.

AS.377.211. Introduction to Russian Literature I. 3 Credits.
This first intensive reading course of the literary sequence focuses on a survey of major writers, genres, and literary movements of mid-nineteenth century Russia including select works of Pushkin, Gogol, Lermontov, Turgenev, Tolstoy and Dostoevsky adapted to the intermediate level.
Prerequisites: AS.377.209 and AS.377.210 or permission of instructor.
Instructor(s): O. Samilenko
Area: Humanities.

AS.377.237. The Russian Press. 3 Credits.
Reading and discussion of topics drawn from the Russian press and contemporary literature. Designed to strengthen the student’s command of Russian vocabulary, especially in the areas of history, political science, and economics, while providing a deeper insight into the dynamics of everyday life in Russia today.
Prerequisites: AS.377.209 or AS.377.210
Instructor(s): A. Czeczulin
Area: Humanities.

AS.377.253. The Soul of Russia: Culture and Civilization. 3 Credits.
The evolution of Russian culture and civilization from the Mongol invasion to the present day conducted through a study of literary texts, architecture, art, music, film, and multimedia. Taught in English. Held at Goucher.

An examination of major poets, styles, and poetic genres of 18-21C Russian poetry.
Instructor(s): O. Samilenko
Area: Humanities.

AS.377.500. Ind Sty - Russian. 0 - 3 Credit.
Writing Intensive.

AS.377.501. Independent Study-Russian. 3 Credits.
Through arrangement with the instructor.
Instructor(s): A. Czeczulin; O. Samilenko.

AS.377.506. Russian-Independent Study. 0 - 3 Credit.
Instructor(s): O. Samilenko.
AS.378.101. Slow-Paced Beg Japanese I. 3 Credits.
Part one of a two-semester introductory course for students who want to study Beginning Japanese at a slower pace, attending three classes rather than five classes per week. Lab required. Note: Those who wish to continue beyond these two semesters must enroll in Beginning Japanese 378.116 the following spring. Cross-listed with East Asian Studies Instructor(s): S. Katagiri.

AS.378.102. Slow-Paced Beg Jap II. 3 Credits.
Part two of a four-semester introductory course for students who want to study Beginning Japanese at a slower pace, attending three classes rather than five classes per week. Lab required. A continuation of 378.101. Note: Students who wish to continue beyond these two semesters must enroll in Beginning Japanese 378.116 the following spring. Recommended Course Background: AS.378.101 or permission required. Instructor(s): S. Katagiri.

AS.378.115. First Year Japanese. 4 Credits.
This course is designed for students who have no background or previous knowledge in Japanese. The course consists of lectures on Tuesday/Thursday and conversation classes on Monday/Wednesdays/Fridays. The goal of the course is the simultaneous progression of four skills (speaking, listening, writing, and reading) as well as familiarity with aspects of Japanese culture. By the end of the year, students will have basic speaking and listening comprehension skills, a solid grasp of basic grammar items, reading and writing skills, and a recognition and production of approximately 150 kanji in context. Knowledge of grammar will be expanded significantly in AS.378.215. No Satisfactory/Unsatisfactory. Student may choose to attend either lecture at 10:30 am or 12 pm on TTh. Cross-listed with East Asian Studies Instructor(s): M. Johnson; S. Katagiri.

AS.378.116. First Year Japanese II. 4 Credits.
This course is designed for students who have no background or previous knowledge in Japanese. The course consists of lectures on Tuesday/Thursday and conversation classes on Monday/Wednesdays/Fridays. The goal of the course is the simultaneous progression of four skills (speaking, listening, writing, and reading) as well as familiarity with aspects of Japanese culture. By the end of the year, students will have basic speaking and listening comprehension skills, a solid grasp of basic grammar items, reading and writing skills, and a recognition and production of approximately 60 kanji in context. Knowledge of grammar will be expanded significantly in 2nd year Japanese. May not be taken Satisfactory/Unsatisfactory. Recommended Course Background: AS.378.115 Instructor(s): M. Johnson; S. Katagiri.

AS.378.215. Second Year Japanese. 4 Credits.
Training in spoken and written language, increasing their knowledge of more complex patterns. At completion, students will have a working knowledge of about 250 Kanji. Recommended Course Background: AS.378.115 and AS.378.116 or equivalent. Instructor(s): M. Johnson; M. Nakao Area: Humanities.

AS.378.216. Second Year Japanese II. 4 Credits.
Continuation of Beginning Japanese and Intermediate Japanese I. Training in spoken and written language, increasing students' knowledge of more complex patterns. At completion, students will have a working knowledge of about 250 Kanji. Lab required. Recommended Course Background: AS.378.215 or equivalent. Instructor(s): M. Nakao Area: Humanities.

AS.378.311. Japanese Conversation. 2 Credits.
Advanced training in spoken Japanese, at the completion of Intermediate Japanese, available to those with equivalent proficiency. Students will develop more interactive skills, using authentic audio/video materials. No reading/writing instructions. Recommended Course Background: AS.378.216 or equivalent. Instructor(s): K. Zon.

AS.378.312. Japanese Conversation. 2 Credits.
Instructor(s): K. Zon.

AS.378.315. Third Year Japanese. 3 Credits.
Emphasis shifts toward reading, while development of oral-aural skills also continues apace. The course presents graded readings in expository prose and requires students to expand their knowledge of Kanji, grammar, and both spoken and written vocabulary. Cross-listed with East Asian Studies Prerequisites: AS.378.215-216 Instructor(s): S. Katagiri Area: Humanities.

AS.378.316. Third Year Japanese II. 3 Credits.
Emphasis shifts toward reading, while development of oral-aural skills also continues apace. The course presents graded readings in expository prose and requires students to expand their knowledge of Kanji, grammar, and both spoken and written vocabulary. Lab required. Continuation of AS.378.315. Recommended Course Background: AS.378.315 or equivalent. Instructor(s): S. Katagiri Area: Humanities.

AS.378.317. Fundamentals of Japanese Grammar. 2 Credits.
This course is designed for students who have already studied 1st-year Japanese grammar and wish to develop a thorough knowledge of Japanese grammar in order to advance all aspects of language skills to a higher level. It is also appropriate for graduate students who need to be able to read materials written in Japanese. Recommended Course Background: AS.378.115-116 or equivalent. Instructor(s): M. Johnson Area: Humanities.

AS.378.318. Fundamentals of Japanese Grammar. 2 Credits.
Continued from 378.317: Fundamentals of Japanese Grammar. This course is designed for students who have already studied 1st-year Japanese grammar and wish to develop a thorough knowledge of Japanese grammar in order to advance all aspects of language skills to a higher level. It covers complex grammatical items introduced in the 2nd year level from a higher level, linguistic perspective. It is also appropriate for graduate students who need to be able to read materials written in Japanese. Prerequisites: 378.116 or equivalent or 378.396 Instructor(s): M. Johnson Area: Humanities.
AS.378.415. Fourth Year Japanese. 3 Credits.
By using four skills in participatory activities (reading, writing, presentation, and discussion), students will develop reading skills in modern Japanese and deepen and enhance their knowledge on Kanji and Japanese culture. Recommended Course Background: AS.378.315 and AS.378.316 or equivalent.
Instructor(s): M. Nakao
Area: Humanities.

AS.378.416. Fourth Year Japanese II. 3 Credits.
By using four skills in participatory activities (reading, writing, presentation, and discussion), students will develop reading skills in modern Japanese and deepen and enhance their knowledge on Kanji and Japanese culture. Lab required. Recommended Course Background: AS.378.415
Instructor(s): M. Nakao
Area: Humanities.

Instructor(s): M. Johnson.

This course is designed for graduate students (particularly in East Asian Studies) and undergraduate students whose proficiency level is higher than 4th-year Japanese as offered at Johns Hopkins University or equivalent and those who plan to pursue studies utilizing written Japanese materials. Students will learn effective methods for reading Japanese materials, varying from works of literature to modern academic articles on topics of students' interest.

AS.378.612. Readings in Japanese Studies II.
This course is designed for graduate students (particularly in East Asian Studies) and undergraduate students whose proficiency level is higher than 4th-year Japanese as offered at Johns Hopkins University or equivalent and those who plan to pursue studies utilizing written Japanese materials. Students will learn effective methods for reading Japanese materials, varying from works of literature to modern academic articles on topics of students' interest. Cross-listed with East Asian Studies.

AS.379.151. Beginning Kiswahili I. 3 Credits.
This introductory course presents some of the basic grammatical, phonological, and sociological elements of the Kiswahili language. Students are exposed to different facets of the cultures of eastern Africa (especially Tanzanian and Kenyan). The focus in the course is on vocabulary, which is developed through the use of pictures, dialogues, question and answer exercises, audio and/or video tapes. Resources in the Language Lab are incorporated in the course.
Instructor(s): J. Kamau

AS.379.152. Beginning Kiswahili II. 3 Credits.

AS.379.251. Intermed Kiswahili I. 3 Credits.
This course places emphasis on conversational skills as well as reading and writing skills. It includes analyses of the culture, history, and social aspects of this linguistic group. Resources in the Language Lab are incorporated in the course.
Prerequisites: AS.379.151-152
Instructor(s): J. Kamau
Area: Humanities.

AS.379.252. Intermediate Kiswahili. 3 Credits.
Instructor(s): J. Kamau
Area: Humanities.

AS.379.501. Indep Study Kiswahili. 0 - 3 Credit.
Instructor(s): J. Kamau.

AS.379.502. Ind Study - Kiswahili. 2 Credits.
Instructor(s): J. Kamau.

AS.380.101. First Year Korean. 3 Credits.
Introduces the Korean alphabet, hangeul. Covers basic elements of the Korean language, high-frequency words and phrases, including cultural aspects. Focuses on oral fluency reaching Limited Proficiency where one can handle simple daily conversations. No Satisfactory/ Unsatisfactory. Cross-listed with East Asian Studies
Instructor(s): C. Kang.

AS.380.102. First Year Korean II. 3 Credits.
Focuses on improving speaking fluency to Limited Proficiency so that one can handle simple daily conversations with confidence. It provides basic high-frequency structures and covers Korean holidays. Continuation of AS.380.101. Recommended Course Background: AS.380.101 or permission required.
Instructor(s): C. Kang.

AS.380.201. Second Year Korean. 3 Credits.
Aims for improving oral proficiency and confident control of grammar with vocabulary building and correct spelling intended. Reading materials of Korean people, places, and societies will enhance cultural understanding and awareness. Project due on Korean cities. Existing demonstrable skills in spoken Korean preferred.
Prerequisites: Prereqs: AS.380.101 and AS.380.102
Instructor(s): C. Kang
Area: Humanities.

AS.380.202. Second Year Korean II. 3 Credits.
Aims for improving writing skills with correct spelling. Reading materials of Korean people, places, and societies will enhance cultural understanding and awareness, including discussion on family tree. Continuation of AS.380.201. Recommended Course Background: AS.380.201 or equivalent.
Instructor(s): C. Kang
Area: Humanities.

AS.380.301. Third Year Korean. 3 Credits.
Emphasizes reading literacy in classic and modern Korean prose, from easy essays to difficult short stories. Vocabulary refinement and native-like grasp of grammar explored. Project due on Korean culture. Cross-listed with East Asian Studies
Instructor(s): C. Kang
Area: Humanities.

AS.380.302. Third Year Korean II. 3 Credits.
Emphasizes reading literacy in classic and modern Korean prose. By reading Korean newspapers and professional articles in one's major, it enables one to be well-versed and truly literate. Continuation of AS.380.301. Cross-listed with East Asian Studies Prerequisite: AS.380.301 or equivalent.
Instructor(s): C. Kang
Area: Humanities.

AS.381.101. First Year Hindi I. 3 Credits.
Course focuses on acquisition of additional vocabulary and grammatical structures in culturally authentic contexts, listening, speaking, reading, and writing comprehension. No Satisfactory/ Unsatisfactory Lab Req'd.
Instructor(s): U. Saini.
AS.381.102. First Year Hindi II. 3 Credits.
This course prepares students to function in everyday situations in the Hindi speaking world. Focuses on the acquisition of basic vocabulary and grammatical structures in culturally authentic contexts through listening, speaking, reading, and writing comprehension. Hindi reading and writing is taught in its original Dayva-nagari script. Oral-aural drills in class and work in the Language Lab is required.
Instructor(s): U. Saini.

AS.381.201. Second Year Hindi I. 3 Credits.
Course provides refinement of basic language skills in cultural context. Emphasis will be on expansion of vocabulary and grammatical structures and further development of communicative skills. Recommended Course Background: AS.381.101, AS.382.102
Instructor(s): U. Saini
Area: Humanities.

AS.381.202. Second Year Hindi II. 3 Credits.
Course provides refinement of basic language skills in cultural context. Emphasis will be on expansion of vocabulary and grammatical structures and further development of communicative skills. Continuation of AS.381.201. Recommended Course Background: AS.381.201 or permission required.
Instructor(s): U. Saini
Area: Humanities.

AS.381.301. Third Year Hindi I. 3 Credits.
Promotes the active use of Hindi in culturally authentic contexts. Development of fluency in oral and written communication is emphasized. Prerequisites: AS.381.201 AND AS.381.202
Instructor(s): R. Datla
Area: Humanities
Writing Intensive.

AS.381.302. Third Year Hindi II. 3 Credits.
This course is geared towards listening comprehension, enrichment of vocabulary and exposure to various social situations. Students will get an opportunity to learn to narrate and support their views in informal and formal styles. The course will promote a meaningful interaction to understand the cultural nuances. Prerequisites: AS.381.101 AND AS.381.201
Instructor(s): R. Datla
Area: Humanities.

AS.381.311. Hindi/Urdu Conversation Through Films. 3 Credits.
Advanced training in spoken Hindi for students who have completed Intermediate Hindi or have equivalent knowledge and fluency. Communicative activities such as task-oriented acts, role plays, and group discussions will assist in the development of good interactive skills. Recommended Course Background: AS.381.202 or equivalent.
Instructor(s): R. Datla; U. Saini.

AS.381.312. Hindi/Urdu Conversation through Movies and Songs. 3 Credits.
This course is geared towards listening comprehension, enrichment of vocabulary and exposure to various social situations. Students will get an opportunity to learn to narrate and support their views in informal and formal styles. The course will promote a meaningful interaction to understand the cultural nuances. The socio-cultural rules would help the students to monitor their own language performance and enhance one's appreciation for language. Attaining the native competency through films is quite exciting. It is an eye-tonic for students to learn language specific features.
Instructor(s): R. Datla.

AS.382.101. Beginning Persian I. 3 Credits.
The basic modern Persian enables students to learn the Persian alphabet’s phonology, morphology, and the basic syntax. Students will also be reading, writing, and translating basic sentences. Course taught in Persian.
Instructor(s): D. Dehghan.

AS.382.102. Beginning Persian II. 3 Credits.
Beginning Persian II (102) continues developing all four communicative skills. It will begin with a review of basic Persian structures and proceeds to more complex structures. Themes from Persian history, culture, and contemporary life are introduced.
Instructor(s): D. Dehghan.

AS.382.501. Independent Stdy-Persian. 0 - 3 Credit.
Instructor(s): D. Dehghan.

AS.383.111. Beginning Sanskrit. 3 Credits.
This course has been designed for students with no knowledge of the Sanskrit language. Emphasis will be placed on the basic listening, reading, and writing of the language. Language and writing system will be introduced in a very systematic manner, thereby, students will not have to learn all the vowels and the consonants at once before getting to read the words. Basic sentences will be drawn from the Sanskrit Literature. Simple Vedic Mantras from the Vedas and Ishopanishad, verses from the Bhagavad Gita and the sootras from the Yoga Sookas will be read.
Instructor(s): U. Saini.

AS.383.112. Beginning Sanskrit II. 3 Credits.
This course is a continuation of 381.111. Additional emphasis will be placed on listening, reading, and writing of the language. Basic sentences will be drawn from the Sanskrit Literature. Simple Vedic Mantras from the Vedas and Ishopanishad, verses from the Bhagavad Gita, and the sootras from the Yoga Sookas will be read.
Prerequisites: AS.383.111.

AS.384.215. Second Year Hebrew. 3 Credits.
Designed to provide reading and writing mastery, to provide a foundation in Hebrew grammar and to provide basic conversational skills. Cross-listed with Jewish Studies. Final day/time will be determined during the first week of classes based on students’ schedules.
Instructor(s): Z. Cohen.

AS.384.216. First Year Modern Hebrew II. 4 Credits.
Designed to provide reading and writing mastery, to provide a foundation in Hebrew grammar and to provide basic conversational skills. Cross-listed with Jewish Studies.
Prerequisites: AS.384.115

AS.384.215. Second Year Hebrew. 3 Credits.
Designed to provide reading and writing mastery, to provide a foundation in Hebrew grammar and to provide intensive grammatical review, and enhance fluency in reading, writing and comprehension. Cross-listed with Jewish Studies. Final day/time will be determined during the first week of classes based on students’ schedules.
Prerequisites: ( AS.384.115 AND AS.384.115 ) OR ( AS.130.450 AND AS.130.451)
Instructor(s): Z. Cohen
Area: Humanities.
AS.384.216. Second Year Modern Hebrew II. 4 Credits.
Designed to enrich vocabulary and provide intensive grammatical
review, and enhance fluency in reading, writing and comprehension.
Recommended Course Background: AS.384.215 or permission required.
Cross-listed with Jewish Studies.
Prerequisites: AS.384.215
Instructor(s): Z. Cohen
Area: Humanities.

AS.384.316. Third Year Hebrew. 4 Credits.
Designed to: maximize comprehension and the spoken language through
literary and newspaper excerpts providing the student with the language
of an educated Israeli. Cross-listed with Jewish Studies. Final day/time
will be determined during the first week of classes based on students’
schedules.
Prerequisites: (AS.384.215 AND AS.384.216) OR (AS.130.452 AND
AS.130.453)
Instructor(s): Z. Cohen
Area: Humanities.

AS.384.315. Third Year Modern Hebrew II. 4 Credits.
Designed to: maximize comprehension and the spoken language through
literary and newspaper excerpts providing the student with the language
of an educated Israeli. Recommended Course Background: AS.384.315
or permission required. Cross-listed with Jewish Studies.
Prerequisites: AS.384.315
Instructor(s): Z. Cohen
Area: Humanities.

AS.384.503. Summer Internship-Hebrew. 1 Credit.
Instructor(s): Z. Cohen.

Cross Listed Courses

East Asian Studies
AS.310.316. First Year Classical Chinese, Second Semester: Chinese
Language and Literature of the Ancient Period. 3 Credits.
Readings in prose and poetic texts of the Zhou and Han Dynasties. Class
emphasizes language acquisition, especially grammar and vocabulary
memorization. In addition we will read and discuss works in western
languages that treat the culture and writers of the Ancient period. Quizzes
and Tests (Midterm and Final) will cover both language and cultural data.
A short paper also required.
Instructor(s): V. Cass
Area: Humanities.

AS.310.321. Classical Chinese. 3 Credits.
This course introduces the basic syntax, grammar and vocabulary
of Classical Chinese or Literary Chinese (guwen##/wenyan wen #
##), the written language from Old Chinese to the early twentieth
century. Classical Chinese, which differs substantially from modern
colloquial Chinese, is the language in which traditional Chinese historical,
philosophical, religious and literary works are written. The structure,
grammar and vocabulary of Classical Chinese still has large influence on
modern Chinese formal documents and newspaper. Therefore, studying
Classical Chinese is crucial not only to those who wish to understand
original Chinese texts correctly but also to anyone who wants to attain a
high level of reading proficiency in modern Chinese.
Prerequisites: AS.373.111 OR AS.373.112 OR AS.373.115 OR
AS.373.116 AND AS.373.211 AND AS.373.212 OR AS.373.215 OR
AS.373.216
Instructor(s): F. Chao
Area: Humanities.

Latin American Studies

The Program in Latin American Studies (PLAS) at Johns Hopkins
University seeks to build interdisciplinary understanding among faculty
and students of the histories, cultures, societies, and politics of countries
in Latin America and the Caribbean.

PLAS courses enhance the Hopkins curriculum by offering students
an opportunity to explore the rich political, aesthetic, intellectual,
and scientific traditions of Latin America, and by encouraging critical
perspectives on Latin America’s history and role in the modern world.
Workshops by PLAS-affiliated faculty, graduate students, and visiting
scholars complement the curriculum with discussions of current events
and ongoing research projects.

PLAS offers an undergraduate major and minor in Latin American studies. The
program encourages undergraduate students to take an active
interest in Latin America; in their course work and extracurricular life, and
by engaging their other disciplinary and area interests through summer
research and study abroad programs in Latin America. The program also
supports graduate students whose research focuses on Latin America.

PLAS contributes to the professional training of graduate students
through interdisciplinary discussions of ongoing research projects,
pre-dissertation summer research travel grants, and student initiated
exhibitions, conferences, and special events.

Major/Minor in Latin American Studies

The Program in Latin American Studies aims to provide undergraduate
students with a broad understanding of the complexity of Latin American
social, political, and cultural problems. As a result of completing the major
(or minor) students will have a deeper understanding of Latin American
politics, economy, and culture, as well as of the intricate relationship
between the region and the U.S.

The Program in Latin American Studies at The Johns Hopkins University
offers a variety of courses across the disciplines and promotes research
partnerships between students and faculty.

1. The program offers both a major and a minor. To complete either
option, students are required to take either elementary Spanish or
Portuguese. Language requirements can be waived for those who
demonstrate suitable knowledge of either Spanish or Portuguese, of
in an Amerindian language such as Quechua or Guarani.

2. A general introductory course in Latin American studies is required
to start either the major or the minor.

3. Though students may choose to emphasize a particular area of
specialization within Latin American studies (such as politics, health,
literature, etc.), the program requires a distribution of courses in a
variety of areas, at different levels.

Students may declare a major in Latin American studies during the
second semester of the sophomore year. Students may major in this
program in conjunction with other departments. No more than two
independent studies are acceptable toward the major or minor in the
program.

Requirements for the Major

The requirements for a major in Latin American Studies are as follows:
• Four lower-level courses (100- and 200-level courses) dealing with Latin America, one of which must be the general introductory course to Latin America.
• Five upper-level courses (300-level courses and above) focused on Latin America.
• Three electives courses relevant or with reference to Latin America.
• Language proficiency (i.e., reading fluidity and basic conversational skills) through the intermediate level in either Spanish or Portuguese will be required.
• Language requirements can be waived for those who demonstrate a suitable proficiency in either Spanish or Portuguese.
• To be eligible for honors, a 3.3 GPA in the major’s courses as well as a senior thesis will be required.
• No grade below C- will be accepted for the major requirement.

Requirements for the Minor
The requirements for a minor in Latin American Studies are as follows:

• Four upper-level courses (300 or above) focused on Latin America. Intersession courses may not be used to fulfill this requirement.
• Two additional courses at any level dealing with Latin America.
• Language proficiency in either Spanish or Portuguese.
• No grade below C- will be accepted for the minor requirement.

For current course information and registration go to https://isis.jhu.edu/classes/

Latin American Studies

AS.361.124. Latin American Film: Mini-Course. 1 Credit.
This course provides a brief, four-week, one-credit introduction to the cultural, political and aesthetic domains of Latin American cinema through thematically focused discussions of four feature-length films.
Instructor(s): E. Cervone
Area: Humanities, Social and Behavioral Sciences.

AS.361.130. Introduction to Latin American Studies. 3 Credits.
Within a chronological frame that starts with early American-Indian civilizations and moves on to issues in contemporary culture and politics, the course introduces students to an interdisciplinary understanding of Latin American History and Culture. The course draws from historical geography, anthropology, history, politics, art, film, and literature.
Instructor(s): S. Castro-Klaren
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.361.215. Ni de aqui, ni de alla: An Introduction to Latino Culture in the U.S.. 3 Credits.
Area: Humanities, Social and Behavioral Sciences.

AS.361.502. Independent Study. 0 - 3 Credit.
Instructor(s): D. Poole; E. Cervone; E. Gonzalez; S. Castro-Klaren.

AS.361.550. Internship. 1 Credit.
Instructor(s): D. Poole
Area: Humanities, Social and Behavioral Sciences.

Cross-Listed Course Offerings

Africana Studies

AS.362.495. Afrormexican History. 3 Credits.
Area: Humanities
Writing Intensive.

Anthropology

AS.070.285. Understanding Aid: Anthropological Perspectives for Technology-Based Interventions. 3 Credits.
This course combines anthropological perspectives with the discussion and examination of technology-based interventions in the field of development and aid policies, with particular focus on activities related to water resources, sanitation, and hygiene. Readings and discussions analyze some of the theoretical, historically rooted, and practical issues that challenge those who hope to provide effective aid. A key aim of this course is to provide students with better understanding of cultural, social, environmental and economic issues relevant to technical intervention in developing countries.
Instructor(s): E. Cervone; W. Ball
Area: Humanities, Social and Behavioral Sciences.

AS.070.299. Visual Economies in the Americas. 3 Credits.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.378. Property-Politics Lat Am. 3 Credits.
Area: Humanities, Social and Behavioral Sciences.

AS.070.396. On the Question of Drugs. 3 Credits.
Area: Humanities, Social and Behavioral Sciences.

German and Romance Languages & Literatures

AS.211.380. Modern Latin American Culture. 3 Credits.
Taught in Spanish. This course will explore the fundamental aspects of Latin-American culture from the formation of independent states through the present—in light of the social, political, and economic histories of the region. The course will offer a general survey of history of Latin-America, and will discuss texts, movies, songs, pictures, and paintings, in relation to their social, political, and cultural contexts. May not be taken satisfactory/unsatisfactory.
Instructor(s): S. Castro-Klaren; Staff
Area: Humanities.

AS.211.394. Brazilian Cult & Civ. 3 Credits.
This course is intended as an introduction to the culture and civilization of Brazil. It is designed to provide students with basic information about Brazilian history, art, literature, popular culture, theater, cinema, and music. The course will focus on how indigenous Asian, African, and European cultural influences have interacted to create the new and unique civilization that is Brazil today. The course is taught in English, but ONE extra credit will be given to students who wish to do the course work in Portuguese. Those wishing to do the course work in English for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. The sections will be taught simultaneously. Section 01: 3 credits Section 02: 4 credits (instructor’s permission required)
Instructor(s): M. Bensabat Ott
Area: Humanities
Writing Intensive.
AS.215.340. Narrating Self and Nation in Modern Latin American Literature. 3 Credits.
The course will focus on a critical reading of major modern Latin American writers. We will read entire books as well as selections from major works from the following authors. J.F. Sarmiento, Euclides da Cunha, Machado de Assis, Gabriela Mistral, Pablo Neruda, Octavio Paz, J.M. Arguedas, Carlos Fuentes, Clarise Lispector, Diamela Eltit and Bolano. The course will view 5 Recent Latin American films also.
Area: Humanities
Writing Intensive.

AS.215.342. Latin Am: Formative Yrs. 3 Credits.
Area: Humanities.

AS.215.345. Gauchos, Negros, Gitanos. 3 Credits.
Study of the music and literature inspired by three groups of great liminal influence in the cultural and political affairs of their respective nations. Gauchos (Argentina), Afro Hispanics (Cuba, Puerto Rico, Santo Domingo), Gitanos (Spain). Attention given to popular and learned myths and stereotypes and the history of efforts to establish self-identity. Conducted in Spanish. Recommended Course Background: AS.210.326
Instructor(s): E. Gonzalez
Area: Humanities.

AS.215.458. Cuba and its Culture Since the Revolution. 3 Credits.
We will study the visual and textual arts, cinema, political culture, and blogosphere; reaching back to the first phases in the building of the revolutionary state apparatus and its sovereign mandate. Taught in Spanish.
Instructor(s): E. Gonzalez
Area: Humanities.

AS.215.460. Modern Mexico and the Culture of Death. 3 Credits.
We will examine the cultural resonance of death in Mexico’s colonial and postcolonial history and the impact of the 1910 revolution in the nation’s popular and elite self-image. Emphasis placed on the visual arts, literature, music, and the view of Mexico created by foreign writers and artists.
Area: Humanities.

AS.215.487. Islam in America. 3 Credits.
Area: Humanities.

History

AS.100.438. Modern Mexico and the Mexican Revolution. 3 Credits.
An examination of the political, social, and economic factors between 1810 and 2010 that produced incessant civil war in Mexico during the 19th century and a revolution in the early 20th century. Cross listed with PLAS
Instructor(s): F. Knight
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.439. Cuban Revolution and the Contemporary Caribbean. 3 Credits.
Instructor(s): F. Knight
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.440. The Revolutionary Experience in Latin America. 3 Credits.
Comparative examinations of revolutionary political changes in Haiti, Mexico, Bolivia, and Cuba. Cross-listed with Latin American Studies
Instructor(s): F. Knight
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.441. Society, Politics, and Economics in Latin America. 3 Credits.
This course traces the complex relationship between politics, economics, and social changes in Latin America and the Caribbean since World War II.
Instructor(s): F. Knight
Area: Humanities, Social and Behavioral Sciences.

AS.010.105. Art of the Ancient Americas. 3 Credits.
Surveys the art of Olmec, West Mexico, Teotihuacan, Maya, and Aztec.
Instructor(s): L. Deleonardis
Area: Humanities.

AS.010.320. Art of Colonial Peru. 3 Credits.
In this course we consider the painting, sculpture, and architecture of viceregal Peru (ca. 1520-1825) within the dynamic historical context of colonial society. Documentary sources inform our study by providing both institutional and personal accounts of events, histories, philosophies, and rebellion. We examine the role of religious orders, artisan guilds and cofradia, and consider the social and political implications of art patronage.
Instructor(s): L. Deleonardis
Area: Humanities
Writing Intensive.

AS.010.334. Problems in Ancient American Art. 3 Credits.
Selected topics which may include collecting the pre-Columbian past and connoisseurship, the formation of national museums, post-Columbian appropriations. Collections study in museums. May also be used toward credit for the Archaeology major. Cross-listed with PLAS and Program in Museum and Society
Instructor(s): L. Deleonardis
Area: Humanities
Writing Intensive.

AS.010.365. Art of the Ancient Andes. 3 Credits.
Course surveys the visual arts of Andean South America and includes discussion of royal Inka tunics, Nasca death imagery and the gold sculptural traditions of Colombia.
Instructor(s): L. Deleonardis
Area: Humanities
Writing Intensive.

AS.140.390. Science and Technology in Latin America. 3 Credits.
The course surveys various national contexts to illustrate major themes in western science and technology in Hispanic America (1492 to the present). Cross-listed with Program in Latin American Studies
Instructor(s): M. Portuondo
Area: Humanities, Social and Behavioral Sciences.
Political Science

**AS.190.331. Comparative Racial Politics. 3 Credits.**
Students will learn to utilize qualitative, interpretive methods of comparative politics to examine dynamics of racial and/or ethnic politics in the nation-states of Cuba, Brazil, Britain and France, Germany, and the United States. Readings will emphasize the role of the state, political economy, national culture, racist ideologies and anti-racist politics in the formation, maintenance and transformation of conditions of race-based inequalities. Students will also become familiar with theories and concepts of race and ethnicity, and the histories of social movements in the aforementioned societies founded, in part, on racial and/or ethnic identification as a response to inequality. Formerly titled: Race and Racism in Comparative Perspective.
Instructor(s): M. Hanchard
Area: Social and Behavioral Sciences.

**AS.190.392. Introduction to Latin American Politics. 3 Credits.**
Instructor(s): M. Keck
Area: Social and Behavioral Sciences.

**AS.190.411. Environment and Development in the Third World. 3 Credits.**
A research seminar examining the politics of environmental issues in developing countries, with special focus on Latin America.
Instructor(s): M. Keck
Area: Social and Behavioral Sciences
Writing Intensive.

**AS.190.419. Identity and Nations in Latin American Politics. 3 Credits.**
This seminar class explores formation and political mobilization of identities - group, ethnic, gendered, national, cosmopolitan - in Latin America. Although some of the reading will be broadly comparative, the spring 2013 version of the class will focus especially on Brazil. Requirements will include short response papers and a term paper. Portuguese or Spanish desirable but not required. Enrolled students must be juniors or seniors and must have taken at least one prior course in comparative politics.
Instructor(s): M. Keck
Area: Social and Behavioral Sciences
Writing Intensive.

Sociology

**AS.230.203. Intro Latin American Societies. 3 Credits.**
This course is designed as an introduction to Latin America’s societies for beginners. The course is organized thematically, providing a survey of Latin America through its historical, economic, social, political and cultural dimensions. We will analyze the pre-Columbian civilizations and the legacy of colonialism to understand the origins of the multiethnic societies and then focus on the contemporary development. It will offer fundamental background information to build a solid base for further specialization in a region or a theme.
Area: Social and Behavioral Sciences.

**AS.230.307. Sociology of Latin America. 3 Credits.**
Area: Social and Behavioral Sciences.

For current faculty and contact information go to [http://anthropology.jhu.edu/plas/people.html](http://anthropology.jhu.edu/plas/people.html)

Faculty

**Director**
Mary M. Bensabat-Ott
Director, Portuguese Language Program, Senior Lecturer (German and Romance Languages and Literatures): Portuguese language; Brazilian literature and culture.

**Associate Director**
Emma Cervone
Associate Director, Assistant Professor (Anthropology): social movements, Andes, Ecuador; indigenous movements, race and gender in Latin America; development and applied anthropology.

**Professors**
Sara Castro-Klarén
(German and Romance Languages and Literatures): Latin American literature, colonial studies, discourse analysis, contemporary novel.

Lisa DeLeonardis
Austen-Stokes Professor (History of Art): Art and archaeology of the ancient Americas.

William Egginton
(German and Romance Languages and Literatures): Spanish and Latin American literatures; literary theory; and the relation between literature and philosophy.

Eduardo González
Latin American Literature and Cinema, (German and Romance Languages and Literatures): Spain, Latin America and Caribbean literature and cinema.

James D. Goodyear
Associate Director of Public Health Studies Program, Professor (History of Science, Medicine and Technology): history of medicine, Latin American history, Brazil.

Michael Hanchard
(Political Science): comparative politics, Latin American politics, and comparative racial politics.

Ben Vinson III
(History): Latin American history with a particular interest in race relations, especially the experience of African Diaspora.

Richard L. Kagan
(History): Spain, Iberian expansion, and the Spanish Empire in the New World, especially iconography and cities.

Margaret E. Keck
(Political Science): comparative politics, Latin American politics, and the environment.

Franklin Knight
(History): Latin American and Caribbean social and economic history, comparative history, comparative slave systems.

Deborah Poole
(Anthropology): visuality and representation in Latin America, Peru, and Mexico; race and ethnicity; violence, liberalism, and the state; law and judicial reform.

Beverly J. Silver
and statistics offered in other departments of the Krieger School of Arts and Sciences and in the Department of Applied Mathematics in the Whiting School of Engineering.

Facilities
The Mathematics Department resides in Krieger Hall on the Keyser Quad of Homewood. Adjacent to Krieger Hall, The University’s Milton S. Eisenhower Library has an unusually extensive collection of mathematics literature, including all the major research journals, almost all of which are accessible electronically. The stacks are open to students. The department also has a useful reference library, the Philip Hartman Library. Graduate students share departmental offices, and study space can also be reserved in the university library. Graduate students may access the department’s Linux and Windows servers, as well as computers in graduate student offices. The department also hosts numerous research seminars, special lectures, and conferences throughout the academic year.

Course Scheduling
Students usually begin by taking Calculus I-II, which is offered in three versions to meet the needs of students with different goals and interests. Students in mathematics, the physical sciences, and engineering are encouraged to begin with the AS.110.108-AS.110.109 sequences or Honors Single Variable Calculus; students majoring in other subjects may wish to take the AS.110.106-AS.110.107 sequence which relates the methods of calculus to the biological and social sciences. A one-term per-calculus course is offered for students who could benefit from additional preparation in the basic tools (algebra and trigonometry) used in calculus.

Entering students may receive course credit for Calculus I or Calculus I-II on the basis of the College Board Advanced Placement (AP) or International Baccalaureate (IB) exams. Students with or without AP or IB credits must take a departmental placement exam to determine their appropriate first course in mathematics. For more information regarding placement, please visit www.math.jhu.edu.

, AS.110.202 Calculus III, and AS.110.302 Diff Equations/Applic may be taken in any order after completing AS.110.107 Calculus II (For Biological and Social Science) or AS.110.109 Calculus II (For Physical Sciences and Engineering). These courses are especially designed to acquaint students with mathematical methods relevant to engineering and the physical, biological, and social sciences. The department offers honors courses in both AS.110.212 Honors Linear Algebra and AS.110.211 Honors Multivariable Calculus.

Additional courses oriented toward applications include:

Mathematics
Mathematics, more than the fundamental language and underlying analytical structure of science and technology, is a formal way of thinking—an art that ties together the abstract structure of reason and the formal development of the logic that defines the scientific method. From the study of just how arguments and theories are formed in language and technology to the framework of quantitative and qualitative models of the natural and social sciences, mathematics is based upon the development of precise expressions, logical arguments, and the search for and exposure of pattern and structure.

The undergraduate program in the Department of Mathematics is intended both for students interested in attaining the proper preparation for graduate study and research in pure mathematics, and for students interested in using mathematics to define, properly pose, and solve problems in the sciences, engineering, and other areas. With either purpose, the focus of the program is to help those who wish to understand further the logical content, geometric meaning, and abstract reasoning of mathematics itself. A flexible program involving a broad selection of courses is a department tradition. The program begins by introducing students to the basics of algebra and mathematical analysis and then gives them the choice of exploring topics in theoretical mathematics or studying applications to physics, economics, engineering, computer science, probability, statistics, or mechanics.

The graduate program is designed primarily to prepare students for research and teaching in mathematics. It is naturally centered around the research areas of the faculty, which include algebraic geometry, algebraic number theory, differential geometry, partial differential equations, topology, several complex variables, algebraic groups, and representation theory. The program can be supplemented in applied directions by courses in theoretical physics, computer science, mechanics, probability, and statistics offered in other departments of the Krieger School of Arts and Sciences and in the Department of Applied Mathematics in the Whiting School of Engineering.

Assistant Professors
Ciara Han
(Anthropology): Medical Anthropology, Health and the Economy, Public Health, Social Studies of Medicine and Technology, Inequality, Latin America, Chile.

Juan Obarrio
(Anthropology): Law, temporality and the political, state and economy, memory and subjectivity, magic, value and violence, Southern Africa, Latin America.

Maria Portuondo
(History of Science): science and exploration, science and technology in Latin America, early modern Spanish and Latin American Cosmography and geography.

Lecturer
Magda von der Heydt-Coca
(Sociology): contemporary sociology, Andean region.
Students planning to pursue further study in mathematics should work toward taking these theoretical courses as early as possible in their undergraduate years and are encouraged to take graduate-level courses as soon as they are qualified.

### Requirements for the B.A. Degree

In addition to the General Requirements for Departmental Majors (p. 33), a candidate for the bachelor's degree in mathematics is required to have credit for the courses listed below. All courses used to meet these requirements must be completed with a grade of C- or better.

<table>
<thead>

**Economics**

- AS.180.301 Microeconomic Theory
- AS.180.302 Macroeconomic Theory

**Computer Science**

- EN.600.435 Artificial Intelligence
- EN.600.463 Algorithms I
- EN.600.464 Randomized Algorithms
- EN.600.488 Foundations of Computational Biology & Bioinformatics II

**Total Credits**: 44

* AS.110.211 Honors Multivariable Calculus can be taken instead. Majors are encouraged but not required to take honors variant.

** AS.110.212 Honors Linear Algebra can be taken instead. Majors are encouraged but not required to take honors variant.

### Requirements for a Minor in Mathematics

Students with a major in another department may be awarded a minor in mathematics upon completion of satisfactory work in the following courses:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>AS.110.106</td>
<td>Calculus I</td>
<td>4</td>
</tr>
<tr>
<td>or AS.110.108</td>
<td>Calculus I</td>
<td></td>
</tr>
<tr>
<td>AS.110.107</td>
<td>Calculus II (For Biological and Social Science)</td>
<td>4</td>
</tr>
<tr>
<td>or AS.110.109</td>
<td>Calculus II (For Physical Sciences and Engineering)</td>
<td></td>
</tr>
<tr>
<td>AS.110.202</td>
<td>Calculus III *</td>
<td>4</td>
</tr>
</tbody>
</table>

Four mathematics courses at the 200-level or above.

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>AS.110.106</td>
<td>Calculus I</td>
<td>4</td>
</tr>
<tr>
<td>or AS.110.108</td>
<td>Calculus I</td>
<td></td>
</tr>
<tr>
<td>AS.110.107</td>
<td>Calculus II (For Biological and Social Science)</td>
<td>4</td>
</tr>
<tr>
<td>or AS.110.109</td>
<td>Calculus II (For Physical Sciences and Engineering)</td>
<td></td>
</tr>
<tr>
<td>AS.110.202</td>
<td>Calculus III *</td>
<td>4</td>
</tr>
</tbody>
</table>

**Total Credits**: 28

* (excluding AS.110.202 Calculus III), of which at least three are at the 300-level. A course in the Applied Mathematics and Statistics Department (at the 300-level or above) may be substituted for one of the four courses.

All courses used to meet these requirements must be completed with a grade of C- or better.

### Honors Program in Mathematics

As a general guideline, departmental honors are awarded to recipients of the B.A. degree who have completed AS.110.311 Complex Analysis, as well as AS.110.401 Advanced Algebra I, AS.110.415 Honors Analysis I-AS.110.416 Honors Analysis II, and one more course at the 400-level or above with at least a 3.6 average in these six courses.

### J.J. Sylvester Prize

The J.J. Sylvester Prize in Mathematics, which carries a cash award, is given each year to the one of two top-performing graduating seniors majoring in mathematics for outstanding achievement.
The B.A./M.A. Program

By applying the same courses simultaneously toward the requirements for the B.A. and M.A. degrees, an advanced student can qualify for both degrees in four years. Admission to the program is by the standard graduate application form, which should be completed in the junior year. At least a 3.0 average is required in the 400-level mathematics courses taken while resident at the university. Students may contact the graduate program assistant for further information.

Undergraduate Teaching Assistantships

The department awards many upper-level undergraduates the opportunity to act as recitation instructors to our freshman courses, enabling them to practice the art of teaching and talking mathematics and to earn a valuable credential while studying for their degree.

Admission

Admission to the Ph.D. program is based on academic records, letters of recommendation, and Graduate Record Examination scores. International applicants are required to submit a TOEFL or IELTS score if English is not their native language.

Basic Program

Graduate study is centered around three core areas:

**Analysis**

<table>
<thead>
<tr>

</tbody>
</table>

These 600-level graduate courses are preliminary to research and are built upon the foundations constituted by the 400-level courses:

- AS.110.401 Advanced Algebra I
- AS.110.402 Advanced Algebra II
- AS.110.405 Analysis I
- AS.110.406 Analysis II
- AS.110.311 Complex Analysis
- AS.110.413 Introduction To Topology

The 700-level courses are designed to bring students abreast of recent developments and to prepare them for research in the area of their choice.

Requirements for the M.A. Degree

Although the Mathematics Department does not admit students seeking a terminal M.A. degree, students in the Ph.D. program may earn an M.A. degree. Advanced undergraduate students may also apply to be admitted to the accelerated B.A./M.A. program.

M.A. candidates must complete:

- Four graduate courses given by the Johns Hopkins Mathematics Department;
- Two additional courses at the graduate or 400-level, other than AS.110.401, AS.110.405, and AS.110.415, given by the Johns Hopkins Mathematics Department, or, with the permission of the graduate program director, graduate mathematics courses given by other departments or universities.

All courses used to satisfy the requirements must be completed with a grade of B- or better. (Advanced graduate courses completed with a grade of P can also be used to satisfy the requirements.)

Requirements for the Ph.D. Degree

The departmental requirements for the Ph.D. degree are:

1. Candidates must show satisfactory work in Algebra (AS.110.601-AS.110.602), Real Variables (AS.110.605), Complex Variables (AS.110.607), Algebraic Topology (AS.110.615), and one additional mathematics graduate course in their first year. The seminars and qualifying exam preparation course cannot be used to fulfill this requirement. The algebra and analysis requirements can be satisfied by passing the corresponding written qualifying exam in September of the first year; these students must complete at least two courses each semester. Students having sufficient background in topology can substitute an advanced topology course for AS.110.615, with the permission of the instructor.

2. Candidates must pass written qualifying exams by the beginning of their second year in Analysis (Real and Complex) and in Algebra. Exams are scheduled for September and May of each academic year.

3. Candidates must show satisfactory work in at least two mathematics graduate courses each semester of their second year, and, if they have not passed their oral qualifying exam, in the first semester of their third year.

4. Candidates must pass a departmental oral qualifying examination in the student's chosen area of research by April 8th of the third year. The topic of the exam is chosen in consultation with the faculty member who has agreed (provisionally) to be the student's thesis advisor, who will also be involved in administering the exam.

5. There is no longer a Mathematics Department foreign language requirement. With the vast majority of articles written in English, the importance of having the capability of reading another language has diminished. However, important earlier literature in certain areas of mathematics may be written in French, German, or Russian. Moreover, some articles are still being written in French. It is now at the discretion of the student's thesis advisor whether to impose a language requirement.

6. Candidates must produce a dissertation based upon independent and original research.

7. Candidates will gain teaching experience in mathematics as a teaching assistant for undergraduate courses. The student will be under the supervision of both the faculty member teaching the course and the director of undergraduate studies. First year students are given a reduced TA workload in the spring semester (this is related to item #2).
8. After completion of the thesis research the student will defend their dissertation by means of the Graduate Board Oral Exam. The exam must be held at least three weeks before the Graduate Board deadline the candidate wishes to meet.

Financial Aid
Students admitted to the Ph.D. program receive teaching assistantships and full tuition fellowships. Exceptional applicants become candidates for one of the university's George E. Owen Fellowships.

William Kelso Morrill Award
The William Kelso Morrill Award for excellence in the teaching of mathematics is awarded every spring to the graduate student who best exemplifies the traits of Kelso Morrill: a love of mathematics, a love of teaching, and a concern for students.

Excellence in Teaching Awards
Three awards are given each year to a junior faculty member and graduate student teaching assistants who have demonstrated exceptional ability and commitment to undergraduate education.

For current faculty and contact information go to http://www.mathematics.jhu.edu/new/people/people-faculty.htm

Faculty
Chair
Bernard Shiffman
Professor; several complex variables, differential geometry.

Professors
Caterina Consani
Arithmetic geometry, number theory, and non-commutative geometry.

Nitu Kitchloo
Director of Graduate Program; symplectic geometry, topology of Kac-Moody groups, classical algebraic topology.

Hans Lindblad
Harmonic analysis, PDE, fluid dynamics and relativity.

Chikako Mese
Geometric analysis.

Jack Morava
Algebraic topology, mathematical physics.

Vyacheslav V. Shokurov
Algebraic geometry.

Kate Okikiolu
Harmonic analysis, spectral theory, and geometry.

Christopher Sogge
J.J. Sylvester Professor; fourier analysis, partial differential equations.

Joel Spruck
J.J. Sylvester Professor; partial differential equations, geometric analysis.

W. Stephen Wilson
Algebraic topology, and homotopy theory.

Steven Zucker
Hodge theory, algebraic geometry.

Associate Professor
Richard Brown
Director of Undergraduate Studies; dynamical systems, low-dimensional topology.

Assistant Professors
Jacob Bernstein
Minimal surface theory, mean curvature flow.

Benjamin Dodson
Partial differential equations, harmonic analysis.

Brian Smithling
Arithmetic and algebraic geometry.

Emeriti
J. Michael Boardman
Differential and algebraic topology.

Philip Hartman
Differential equations and differential geometry.

Jun-ichi Igusa
Algebra, algebraic geometry, modular functions, and number theory.

Takashi Ono
Algebra, number theory, and algebraic groups.

J.J. Sylvester Assistant Professor
Carl McTague
Topology.

Jesus Martinez Garcia
Birational geometry, algebraic surfaces.

Jiuju Zhu
PDE, harmonic analysis, geometric analysis.

John Lind
Algebraic topology, bundle theory, category theory.

Jose Manuel Gomez
Algebraic topology.

Lu Wang
Geometric analysis and geometric PDEs.

Maxim Arap
J.J. Sylvester Assistant Professor; algebraic geometry.

Mihai Tohaneanu
Partial differential equations.

Vamsi Pingali
Differential geometry, PDE, several complex variables.

Associate Research Scientist/Lecturer
Jian Kong
IT Senior Lecturer; algebraic geometry.

Joint Appointments
Jonathan A. Bagger
Professor (Physics and Astronomy): particle theory, theory and phenomenology of supersymmetry, supergravity, and superstrings.

Gregory Eyink
Professor (Applied Mathematics): mathematical physics, fluid mechanics, turbulence, and dynamical systems.

For current course information and registration go to https://isis.jhu.edu/classes/

Courses

**AS.110.105. Introduction to Calculus. 4 Credits.**
This course starts from scratch and provides students with all the background necessary for the study of calculus. It includes a review of algebra, trigonometry, exponential and logarithmic functions, coordinates and graphs. Each of these tools will be introduced in its cultural and historical context. The concept of the rate of change of a function will be introduced. Not open to students who have studied calculus in high school.
Instructor(s): Staff; V. Lorman
Area: Quantitative and Mathematical Sciences.

**AS.110.106. Calculus I. 4 Credits.**
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, introduction to differential equations, functions of several variables, linear systems, applications for systems of linear differential equations, probability distributions. Many applications to the biological and social sciences will be discussed.
Instructor(s): R. Brown
Area: Quantitative and Mathematical Sciences.

**AS.110.107. Calculus II (For Biological and Social Science). 4 Credits.**
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, introduction to differential equations, functions of several variables, linear systems, and applications for systems of linear differential equations, probability distributions.
Instructor(s): V. Pingali
Area: Quantitative and Mathematical Sciences.

**AS.110.108. Calculus I. 4 Credits.**
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, introduction to differential equations, Taylor's theorem and applications, infinite sequences and series.
Instructor(s): B. Smithling
Area: Quantitative and Mathematical Sciences.

**AS.110.109. Calculus II (For Physical Sciences and Engineering). 4 Credits.**
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, polar coordinates, parametric equations, Taylor's theorem and applications, infinite sequences and series. Some applications to the physical sciences and engineering will be discussed, and the courses are designed to meet the needs of students in these disciplines.
Instructor(s): M. Arap
Area: Quantitative and Mathematical Sciences.

**AS.110.113. Honors Single Variable Calculus. 4 Credits.**
This is an honors alternative to the Calculus sequences AS.110.106-AS.110.107 or AS.110.108-AS.110.109 and meets the general requirement for both Calculus I and Calculus II (although the credit hours count for only one course). It is a more theoretical treatment of one variable differential and integral calculus and is based on our modern understanding of the real number system as explained by Cantor, Dedekind, and Weierstrass. Students who want to know the "why's and how's" of Calculus will find this course rewarding. Previous background in Calculus is not assumed. Students will learn differential Calculus (derivatives, differentiation, chain rule, optimization, related rates, etc), the theory of integration, the fundamental theorem(s) of Calculus, applications of integration, and Taylor series. Students should have a strong ability to learn mathematics quickly and on a higher level than that of the regular Calculus sequences.
Instructor(s): J. Lind
Area: Quantitative and Mathematical Sciences.

**AS.110.201. Linear Algebra. 4 Credits.**
Prerequisites: Grade of C- or better in 110.107 or 110.109 or 110.113, or a 5 on the AP BC exam.
Instructor(s): J. Martinez Garcia
Area: Quantitative and Mathematical Sciences.

**AS.110.202. Calculus III. 4 Credits.**
Calculus of functions of more than one variable: partial derivatives, and applications; multiple integrals, line and surface integrals; Green's Theorem, Stokes' Theorem, and Gauss' Divergence Theorem.
Prerequisites: Grade of C- or better in AS.110.107 OR AS.110.109 OR AS.110.113, or a 5 or better on the AP BC exam.
Instructor(s): J. Lind
Area: Quantitative and Mathematical Sciences.

**AS.110.211-AS.110.212. Honors Multivariable Calculus. 4 Credits.**
This course includes the material in AS.110.201 with some additional applications and theory. Recommended for mathematically able students majoring in physical science, engineering, or especially mathematics. AS.110.211-AS.110.212 used to be an integrated yearlong course, but now the two are independent courses and can be taken in either order.
Prerequisites: Pre/Co-Requisite: 110.201 or 110.212
Instructor(s): C. McTague; R. Brown
Area: Quantitative and Mathematical Sciences.

**AS.110.210. Honors Linear Algebra. 4 Credits.**
This course includes the material in AS.110.202 with some additional applications and theory. Recommended for mathematically able students majoring in physical science, engineering, or mathematics. AS.110.211-AS.110.212 used to be an integrated yearlong course, but now the two are independent courses and can be taken in either order. This course satisfies a requirement for the math major that its non-honors sibling does not.
Prerequisites: Grade of B+ or better in 110.107 or 110.109 or 110.113, or a 5 on the AP BC exam.
Instructor(s): S. Zucker
Area: Quantitative and Mathematical Sciences.

**AS.110.215. Fundamentals of Advanced Math. 4 Credits.**
Area: Quantitative and Mathematical Sciences.

**AS.110.225. Putnam Problem Solving. 2 Credits.**
Area: Quantitative and Mathematical Sciences.
AS.110.302. Diff Equations/Applic. 4 Credits.
This is an applied course in ordinary differential equations, which is primarily for students in the biological, physical and social sciences, and engineering. The purpose of the course is to familiarize the student with the techniques of solving ordinary differential equations. The specific subjects to be covered include first order differential equations, second order linear differential equations, applications to electric circuits, oscillation of solutions, power series solutions, systems of linear differential equations, autonomous systems, Laplace transforms and linear differential equations, mathematical models (e.g., in the sciences or economics).
Prerequisites: Grade of C- or better in 110.107 or 110.109 or 110.113, or a 5 on the AP BC exam.
Instructor(s): L. Wang
Area: Quantitative and Mathematical Sciences.

AS.110.304. Elementary Number Theory. 4 Credits.
The student is provided with many historical examples of topics, each of which serves as an illustration of and provides a background for many years of current research in number theory. Primes and prime factorization, congruences, Euler's function, quadratic reciprocity, primitive roots, solutions to polynomial congruences (Chevalley's theorem), Diophantine equations including the Pythagorean and Pell equations, Gaussian integers, Dirichlet's theorem on primes.
Prerequisites: Grade of C- or better in 110.201 or 110.212
Instructor(s): C. Mese
Area: Quantitative and Mathematical Sciences.

AS.110.306. Honors Differential Equations. 4 Credits.
Area: Quantitative and Mathematical Sciences.

AS.110.311. Complex Analysis. 4 Credits.
This course is an introduction to the theory of functions of one complex variable. Its emphasis is on techniques and applications, and it serves as a basis for more advanced courses. Functions of a complex variable and their derivatives; power series and Laurent expansions; Cauchy integral theorem and formula; calculus of residues and contour integrals; harmonic functions.
Prerequisites: Grade of C- or better in 110.202 or 110.211
Instructor(s): C. Mese
Area: Quantitative and Mathematical Sciences.

AS.110.328. Non-Euclidean Geometry. 4 Credits.
For 2,000 years, Euclidean geometry was the geometry. In the 19th century, new, equally consistent but very different geometries were discovered. This course will delve into these geometries on an elementary but mathematically rigorous level.
Instructor(s): O. Gjoneski
Area: Quantitative and Mathematical Sciences.

AS.110.401. Advanced Algebra I. 4 Credits.
An introduction to the basic notions of modern algebra. Elements of group theory: groups, subgroups, normal subgroups, quotients, homomorphisms. Generators and relations, free groups, products, commutative (Abelian) groups, finite groups. Groups acting on sets, the Sylow theorems. Definition and examples of rings and ideals. Introduction to field theory. Linear algebra over a field. Field extensions, constructible polygons, non-trisectability.
Prerequisites: Grade of C- or better in 110.201 or 110.212
Instructor(s): J. Kong; R. Brown
Area: Quantitative and Mathematical Sciences.

AS.110.402. Advanced Algebra II. 4 Credits.
Splitting field of a polynomial, algebraic closure of a field. Galois theory: correspondence between subgroups and subfields. Solvability of polynomial equations by radicals.
Instructor(s): C. Consani
Area: Quantitative and Mathematical Sciences.

AS.110.405. Analysis I. 4 Credits.
This course is designed to give a firm grounding in the basic tools of analysis. It is recommended as preparation (but may not be a prerequisite) for other advanced analysis courses. Real and complex number systems, topology of metric spaces, limits, continuity, infinite sequences and series, differentiation, Riemann-Stieltjes integration.
Prerequisites: Grade of C- or better in 110.201 or 110.212 and 110.202 or 110.211
Instructor(s): J. Bernstein
Area: Quantitative and Mathematical Sciences.

AS.110.406. Analysis II. 4 Credits.
This course continues AS.110.405 with an emphasis on the fundamental notions of modern analysis. Sequences and series of functions, Fourier series, equicontinuity and the Arzela-Ascoli theorem, the Stone-Weierstrass theorem, functions of several variables, the inverse and implicit function theorems, introduction to the Lebesgue integral.
Instructor(s): Y. Yuan
Area: Quantitative and Mathematical Sciences.

AS.110.413. Introduction To Topology. 4 Credits.
Topological spaces, connectedness, compactness, quotient spaces, metric spaces, function spaces. An introduction to algebraic topology: covering spaces, the fundamental group, and other topics as time permits.
Prerequisites: Grade of C- or better in 110.202 or 110.211
Instructor(s): B. Smithling
Area: Quantitative and Mathematical Sciences.

AS.110.415. Honors Analysis I. 4 Credits.
This highly theoretical sequence in analysis is reserved for the most able students. The sequence covers the real number system, metric spaces, basic functional analysis, the Lebesgue integral, and other topics.
Instructor(s): S. Zucker
Area: Quantitative and Mathematical Sciences.

AS.110.416. Honors Analysis II. 4 Credits.
Prerequisites: Grade of B+ or better in 110.405 or a grade of B- or better in 110.415 AND permission of the instructor.
Instructor(s): J. Zhu
Area: Quantitative and Mathematical Sciences.

AS.110.417. Partial Diff Equations. 4 Credits.
Prerequisites: Grade of C- or better in 110.202 or 110.211
Instructor(s): J. Zhu
Area: Quantitative and Mathematical Sciences.
AS.110.421. Dynamical Systems. 4 Credits.
This is a course in the modern theory of Dynamical Systems. Topic include existence and uniqueness of general ODEs, nonlinear analysis and stability, including bifurcation theory and stable and center manifolds, smooth flows, limit sets, Hamiltonian mechanics, perturbation theory and structural stability.
Prerequisites: Grade of C- or better in 110.201 or 110.212 OR 110.202 or 110.211 and 110.302
Instructor(s): M. Tohaneanu; R. Brown
Area: Quantitative and Mathematical Sciences.

AS.110.423. Lie Groups for Undergraduates. 4 Credits.
This course is an introduction to Lie Groups and their representations at the upper undergraduate level. It will cover basic Lie Groups such as SU (2), U(n), the Euclidean Motion Group and Lorentz Group. This course is useful for students who want a working knowledge of group representations. Some aspects of the role of symmetry groups in particle physics such as some of the formal aspects of the electroweak and the strong interactions will also be discussed. Recommended Course Background: AS.110.202; prior knowledge of group theory (AS.110.401) would be helpful.
Area: Quantitative and Mathematical Sciences.

AS.110.427. Intro Calc of Variations. 4 Credits.
The calculus of variations is concerned with finding optimal solutions (shapes, functions, etc.) where optimality is measured by minimizing a functional (usually an integral involving the unknown functions) possibly with constraints. This introductory (self-contained) course will cover one dimensional problems (often geometric): brachistochrone, geodesics, minimum surface area of revolution, isoperimetric problem, curvature flows. Additional material as required (some differential geometry of curves and surfaces) holding prerequisites to a minimum.
Prerequisites: Grade of C- or better in 110.202 or 110.211
Instructor(s): Y. Li
Area: Quantitative and Mathematical Sciences.

AS.110.439. Introduction To Differential Geometry. 4 Credits.
Linear Algebra Theory of curves and surfaces in Euclidean space: Frenet equations, fundamental forms, curvatures of a surface, theorems of Gauss and Mainardi-Codazzi, curves on a surface; introduction to tensor analysis and Riemannian geometry; theorema egregium; elementary global theorems.
Prerequisites: Grade of C- or better in 110.201 or 110.212 and 110.202 or 100.211
Instructor(s): L. Wang
Area: Quantitative and Mathematical Sciences.

AS.110.443. Fourier Analysis. 4 Credits.
Prerequisites: Grade of C- or better in (AS.110.201 OR AS.110.212 ) AND ( AS.110.202 OR AS.110.211)
Instructor(s): J. Zhu
Area: Engineering, Quantitative and Mathematical Sciences.

AS.110.586. Independent Study. 4 Credits.
Instructor(s): Staff
Area: Quantitative and Mathematical Sciences.

AS.110.595. Internship. 1 Credit.
Area: Quantitative and Mathematical Sciences.

AS.110.601. Algebra.
An introductory graduate course on fundamental topics in algebra to provide the student with the foundations for Number Theory, Algebraic Geometry, and other advanced courses. Topics include group theory, commutative algebra, Noetherian rings, local rings, modules, rudiments of category theory, homological algebra, field theory, Galois theory, and non-commutative algebras.
Instructor(s): V. Shoukurov
Area: Quantitative and Mathematical Sciences.

AS.110.602. Algebra.
An introductory graduate course on fundamental topics in algebra to provide the student with the foundations for Number Theory, Algebraic Geometry, and other advanced courses. Topics include group theory, commutative algebra, Noetherian rings, local rings, modules, and rudiments of category theory, homological algebra, field theory, Galois theory, and non-commutative algebras. Recommended Course Background: AS.110.401-AS.110.402
Instructor(s): H. Lindblad; S. Zucker
Area: Quantitative and Mathematical Sciences.

AS.110.605. Real Variables.
Measure and integration on abstract and locally compact spaces (extension of measures, decompositions of measures, product measures, the Lebesgue integral, differentiation, Lp-spaces); introduction to functional analysis; integration on groups; Fourier transforms.
Instructor(s): C. Mese
Area: Quantitative and Mathematical Sciences.

AS.110.607. Complex Variables.
Analytic functions of one complex variable. Topics include Mittag-Leffler Theorem, Weierstrass factorization theorem, elliptic functions, Riemann-Roch theorem, Picard theorem, and Nevanlinna theory. Recommended Course Background: AS.110.311, AS.110.405
Instructor(s): C. Mese.

AS.110.608. Riemann Surfaces.
Abstract Riemann surfaces. Examples: algebraic curves, elliptic curves and functions on them. Holomorphic and meromorphic functions and differential forms, divisors and the Mittag-Leffler problem. The analytic genus. Bezout’s theorem and applications. Introduction to sheaf theory, with applications to constructing linear series of meromorphic functions. Serre duality, the existence of meromorphic functions on Riemann surfaces, the equality of the topological and analytic genera, the equivalence of algebraic curves and compact Riemann surfaces, the Riemann-Roch theorem. Period matrices and the Abel-Jacobi mapping, Jacobian inversion, the Torelli theorem. Uniformization (time permitting).

AS.110.612. Complex Geometry.

AS.110.615. Algebraic Topology.
Polyhedra, simplicial and singular homology theory, Lefschetz fixed-point theorem, cohomology and products, homological algebra, Künneth and universal coefficient theorems, Poincaré and Alexander duality theorems.
Prerequisites: AS.110.401 AND AS.110.413
Instructor(s): J. Morava.
AS.110.616. Algebraic Topology.
Polyhedra, simplicial and singular homology theory, Lefschetz fixed-point theorem, cohomology and products, homological algebra, Künneth and universal coefficient theorems, Poincaré-Hopf; and Alexander duality theorems.
Prerequisites: AS.110.401 AND AS.110.413
Instructor(s): N. Kitchloo
Area: Quantitative and Mathematical Sciences.

AS.110.617. Number Theory.
Topics in advanced algebra and number theory, including local fields and adeles, Iwasawa-Tate theory of zeta functions and connections with Hecke’s treatment, semisimple algebras over local and number fields, adeles geometry.
Instructor(s): C. Consani
Area: Quantitative and Mathematical Sciences.

AS.110.619. Lie Groups/Lie Algebras.
Instructor(s): V. Shokurov.

Prerequisites: AS.110.605(C) AND AS.110.606(C)
Instructor(s): J. Spruck.

AS.110.633. Harmonic Analysis.
Fourier multipliers, oscillatory integrals, restriction theorems, Fourier integral operators, pseudodifferential operators, eigenfunctions.
Undergrads need instructor’s permission.
Instructor(s): C. Sogge
Area: Quantitative and Mathematical Sciences.

AS.110.635. Microlocal Analysis.
AS.110.640. Spectral Theory.

AS.110.643. Algebraic Geometry.
Affine varieties and commutative algebra. Hilbert’s theorems about polynomials in several variables with their connections to geometry. General varieties and projective geometry. Dimension theory and smooth varieties. Sheaf theory and cohomology. Applications of sheaves to geometry; e.g., the Riemann-Roch theorem. Other topics may include Jacobian varieties, resolution of singularities, geometry on surfaces, connections with complex analytic geometry and topology, schemes.
Instructor(s): V. Shokurov.

AS.110.644. Algebraic Geometry.
Affine varieties and commutative algebra. Hilbert’s theorems about polynomials in several variables with their connections to geometry. General varieties and projective geometry. Dimension theory and smooth varieties. Sheaf theory and cohomology. Applications of sheaves to geometry; e.g., the Riemann-Roch Theorem. Other topics may include Jacobian varieties, resolution of singularities, geometry on surfaces, schemes, connections with complex analytic geometry and topology.
Instructor(s): V. Shokurov
Area: Quantitative and Mathematical Sciences.

AS.110.645. Riemannian Geometry.
Differential manifolds, vector fields, flows, Frobenius’ theorem. Differential forms, deRham’s theorem, vector bundles, connections, curvature, Chern classes, Cartan structure equations. Riemannian manifolds, Bianchi identities, geodesics, exponential maps. Geometry of submanifolds, hypersurfaces in Euclidean space. Other topics as time permits, e.g., harmonic forms and Hodge theorem, Jacobi equation, variation of arc length and area, Chern-Gauss-Bonnet theorems.
Instructor(s): J. Bernstein.

AS.110.646. Riemannian Geometry.
The goal is to give a self-contained course on mean curvature flow, starting with the basic linear heat equation in Euclidean space and – hopefully – getting to topics of current research. Mean curvature flow is a geometric heat equation that shares many properties with Ricci flow, harmonic map heat flow, Yang-Mills flow and the Navier-Stokes equations. Recommended Course Background: AS.110.605 and an undergraduate course in differential geometry; AS.110.645 and AS.110.631
Instructor(s): C. Mese.

AS.110.660. Qualifying Exam Problems.
Instructor(s): Staff.

AS.110.665. Representation Theory.
Instructor(s): Staff.

AS.110.712. Topics in Mathematical Physics.
Instructor(s): H. Lindblad.

AS.110.723. Topics in Metric Geometry.

AS.110.726. Topics in Analysis.
Instructor(s): C. Sogge.

AS.110.727. Tpcs/Algebraic Topology.
Instructor(s): J. Lind.

AS.110.728. Topics in Algebraic Topology.
Instructor(s): N. Kitchloo.

AS.110.729. Tpcs In Complex Geometry.

AS.110.731. Topics In Geometric Analysis.

AS.110.733. Topics in Alg Num Theory.

AS.110.734. Topics in Algebraic Number Theory.
Instructor(s): T. Ono.

AS.110.735. Topics In Hodge Theory.
Instructor(s): S. Zucker.

AS.110.737. Topics Algebraic Geometry.
Instructor(s): C. Consani.

AS.110.738. Tpcs Algebraic Geometry.
Introduction to toric varieties. This class is a general introduction to toric varieties. Toric varieties are special kinds of algebraic varieties which can be described by lattices and convex sets. They provide a rich source of concrete examples in complex geometry or mathematical physics. If time permits, we discuss in the end the stability of toric embeddings. Students should know basic notions of algebraic geometry (schemes, sheaves, linear systems), as covered in AS.110.643.
Instructor(s): V. Shokurov
Area: Quantitative and Mathematical Sciences.

AS.110.740. Topics in Metric Geometry.
Area: Quantitative and Mathematical Sciences.

Instructor(s): H. Lindblad.

AS.110.742. Topics In Partial Differential Equations.
Instructor(s): J. Spruck.

AS.110.744. Topics in Harmonic Maps.
Instructor(s): W. Minicozzi.

AS.110.745. Introduction to Curvature Flows.

Area: Quantitative and Mathematical Sciences.

AS.110.747. Topics in Commutative Algebra.
Hopkins students are commissioned as a second lieutenant in the U.S. Army. Some are selected to attend a funded law school or several medical programs, while others serve in the Active Army, Reserves or National Guard. ROTC basic classes are open to all students: The Leadership and Management class specializes in leader development and is an excellent course for students aspiring to become leaders on campus and beyond. Additional information on military science or ROTC can be obtained at our building (behind the athletic center), by asking a current cadet, and by calling 1-800-JHU-ROTC or 410-516-7474. You can also email us at rotc@jhu.edu or visit the JHU ROTC website at http://jhurotc.com/page.php?page=home.

**Scholarship and Financial Assistance**

Army ROTC offers four-, three-, and two-year scholarships that pay full tuition (or room and board), $1,200 for books and a $300-500 monthly stipend. For students that join after their freshman year, a onetime $5,000 incentive bonus may be available and can be coupled with a loan repayment option. Additional incentives include a monthly language stipend ($100-250 credit), a study abroad program ($6,000), special incentives for nurses, and postgraduate programs for medical and law degrees.

Scholarship opportunities are regularly improved and incentives are added. Applications for scholarships by qualified students are awarded throughout the semester, and are often retroactive. A non-scholarship program is also available. For health profession and nursing students, ROTC can offer numerous opportunities to achieve specialized education, additional postgraduate scholarships and accession/graduation bonuses.

**Curriculum**

The curriculum normally consists of a two-year Basic Course (freshmen / sophomores) and a two-year Advanced Course (juniors / seniors). Some modification to this curriculum is common, as with graduate or transfer students. Completing the 30-day Leader’s Training Course (LTC) at Fort Knox, KY, is equivalent to the Basic Course. Successful graduates of LTC are normally offered ROTC scholarships and an opportunity to enroll in the Advanced Course. Junior-ROTC experience, prior military service and military academy attendance may also qualify for Basic Course completion.

All Advanced Course students are cadets and have a contractual agreement with the Army. These students attend the National Leadership Development and Assessment Course (LDAC) at Fort Lewis, WA, between the 300- and 400-level courses. This is a core requirement to commission in the Army and cannot be waived.

Army ROTC strives to develop values-based graduates who offer expert leadership to the campus, the community and the Army. As such, we offer and encourage cadets to participate in: paid leadership and technical internships; cultural and language immersion programs; a number of Army military school opportunities in: Europe, South America, the Republic of Korea, Alaska, Hawaii, and across the continental United States.

Extracurricular activities may also include: community assistance, Red Cross blood drives, tutoring for at-risk children, and volunteering at the Veterans Administration. Cadets may apply for additional military training such as skydiving, helicopter rappelling, mountaineering, and cold weather training. New and challenging opportunities routinely become available.

---

**Military Science**

The JHU Army Reserve Officers’ Training Corps (ROTC) was among the first to be established by Congress in 1916 and is routinely ranked at the top of the Nation’s 273 programs. Nearly 3,000 Hopkins students have received Army officer commissions through the program, with over 40 attaining the rank of general officer. Students can enter the program with as little as two years remaining as an undergraduate or may complete the requirements while pursuing a graduate degree. Upon graduation, Hopkins students are commissioned as a second lieutenant in the U.S.
Air Force ROTC Program

Admission to the Air Force ROTC program is available to JHU students through an agreement with UMCP. AFROTC courses have been scheduled to enable students to complete all the requirements in one morning per week at the College Park campus. JHU students are eligible to compete for all AFROTC scholarships and flying programs. The two-, three-, and four-year scholarships pay tuition, books, fees, and a stipend of $200 per month during the school year. After graduation and the successful completion of AFROTC requirements, students are commissioned second lieutenants in the Air Force.

Those interested in this program should call 301-314-3242 or write to:

AFROTC Det 330
University of Maryland
Cole Field House, Room 2126
College Park, MD 20742-1021

For more information see the website at http://www.afrotc.com/

Garth Ambersley
Master Sergeant.

Military Instructor
Brian O’Neill
Sergeant 1st Class.

Shane Seay
Sergeant 1st Class.

Courses

AS.307.407. Being a Platoon Leader. 1 Credit.
This course prepares Cadets for actual challenges not necessarily described in texts books that junior officers may face in today’s Army. Topics include: serving during war, conflict management, ethical dilemmas, time-constrained planning, and change management. This course also serves as prerequisite for the Basic Officer Leadership Course “B” phase by providing students with reinforced development on: deployment preparation, the military style of writing, supply management, human resources management, family support and operations management. Students will also learn how the Army’s organizational structure and administration affects Soldiers across ranks and over time. Finally, students will learn ways to leverage automation to improve their efficiency and effectiveness of records management and developing presentations for superiors.

AS.374.100. Leadership Lab. 1 Credit.
ROTC students only (Required for all ROTC cadets) Students practice their leadership skills in a variety of settings to build a better understanding of leadership strengths and weaknesses and to provide a forum for discussion of leader development.

AS.374.101. Leadership and Management I. 2 Credits.
This is an introductory course in basic leadership and management concepts, theories and principles of decision making for application to any professional environment. This course is recommended for those who have leadership aspirations or are currently in student leadership positions. This course is intended to provide a foundation for those desiring to establish and improve their personal leadership philosophy. It establishes a baseline understanding of the US Army’s leadership and management principles. This course is taught through a series of lectures and small group discussions. Students are required to conduct research in the areas of leadership and management and present their findings in an oral presentation or written report to their small group. In addition to learning the foundations of leadership, students will learn about the corporate and non-corporate aspects and operations of the US Army, time management, ethics, values, mission statements and goal setting. Corequisite: AS.374.110 for ROTC students; none for non-ROTC students.
Instructor(s): J. Wood.

AS.374.102. Introduction to Leadership II. 2 Credits.
Establishes a foundation of basic leadership fundamentals such as: problem solving, communications, effective writing, goal setting, improving speaking and listening skills, and an introduction to counseling. Freshmen only.
Instructor(s): J. Wood.

For current course information and registration go to https://isis.jhu.edu/classes/
AS.374.110. Basic Leadership Laboratory I. 1 Credit.
These introductory courses in a laboratory environment are designed to expose students to practical experiences, challenges and individual learning opportunities in a small group. Students learn the fundamentals of an organization and apply principles of leadership and management at the foundation level. Students develop military courtesy, organizational discipline, communication and basic leadership and management skills. Ultimately, students understand how to facilitate and lead a small group of four to five people as an integral part of a larger organization of 75-100 people through situational training opportunities in a variety of conditions. As a leadership practicum, students have the opportunity to serve in leadership positions and receive tactical and technical training. In addition to learning to lead groups of five to 100 people, students will also be exposed to training on first aid, operating Army equipment, Army activities such as rappelling and drill and ceremony. These laboratories are required for enrolled ROTC participants who desire to be considered for a commission in the Army. Corequisite: AS.374.101-AS.374.102. Instructor(s): J. Wood.

AS.374.120. Basic Leadership Laboratory II. 1 Credit.
Students learn and apply team echelon leadership at an entry level. They continue development of military courtesy, discipline, communication and basic Soldier skills. Ultimately, students understand how to operate in and lead 4-5 persons through a program of training opportunities in a variety of conditions. Freshmen only. Instructor(s): J. Wood.

AS.374.201. Leadership & Teamwork I. 2 Credits.
The focus of this course is on developing leadership and communication skills. Case studies will provide a tangible context for learning and applying aspects of team building, values, the Army Warrior Ethos, and principles of war as they apply in the contemporary operating environment. The key objective of this course is to develop knowledge of the Army’s leadership philosophies and integrate this knowledge into personal skills and team development. At the end of this course, students will be able to describe and perform tasks during the four basic phases of team building; demonstrate the types and elements of interpersonal communication; illustrate, explain, and apply the Principles of War; identify and apply problem solving steps, and apply basic leadership procedures in simple and complex situations. Corequisite: AS.374.210 for ROTC students; none for non-ROTC students. Instructor(s): J. Louden; J. Wood; S. Seay.

AS.374.202. Leadership & Teamwork II. 2 Credits.
Class examines how to build effective teams, various methods for influencing action, effective communication in setting and achieving goals, decision-making, creativity in problem solving, and providing feedback. Recommended Course Background: AS.374.201 or permission required. Instructor(s): M. Dusablon; P. Carroll; S. Seay.

AS.374.210. Basic Team Leadership. 1 Credit.
Students lead and assist in leading 4-5 person teams through a variety of training opportunities. They learn the troop-leading procedures, basic problem solving, and tactical skills aimed at military leadership. Students will mentor and assist members of their team with improving their own skills and leadership as well. Corequisite: AS.374.201. Instructor(s): J. Wood; M. Dusablon; S. Seay.

AS.374.220. Advanced Team Leadership. 1 Credit.
Students perform duties of and develop their leadership, as team leaders during a variety of induced training opportunities. Continued emphasis is placed on troop-leading-procedures and simple problem solving. Students lead physical fitness training and mentor subordinates in military, academic and extra-curricular activities. Successful completion of advanced team leadership allows students to progress into ROTC Advanced Courses. Sophomores only. Instructor(s): S. Seay.

AS.374.301. Leadership and Tactical Theory I. 2 Credits.
Students will be introduced to the tenets of Army leadership, officering, Army values, ethics and personal development. Students will learn the fundamentals of physical training, land navigation, orders production, and small unit tactics at the squad and platoon level. Each student will be given multiple opportunities to plan and lead squad level tactical missions in the classroom and during Leadership Laboratories. Corequisite: AS.374.310. Recommended Course Background: Basic Course completion.
Instructor(s): B. Sime; J. Wood Writing Intensive.

AS.374.302. Leadership and Tactics. 2 Credits.
Examines the role communications, values, and ethics play in effective leadership through application of principles in tactical scenarios. Emphasis is on improving written and oral communications skills and military tactics proficiency. ROTC cadets only. Corequisite: AS.374.320. Prerequisites: AS.374.301 in the Fall Corequisites : AS.374.320
Instructor(s): B. Sime; L. Forand; P. Carroll Writing Intensive.

AS.374.307. Leadership in Military History. 2 Credits.
This course provides students with a historical perspective to decisions made by American military leaders: battlefield complexity, resource limitations, and teamwork deficiencies. Students cover major military engagements from the colonial period through the current operating environment. Students examine how leaders motivated their men, devised battle strategies, implemented rules of engagement, and managed supplies, transportation, and logistics for their troops. Requires permission of the Director of Military Science. Registration restricted to contracted ROTC cadets only. Instructor(s): J. Wood Writing Intensive.

AS.374.310. Basic Tactical Leadership Lab. 1 Credit.
In Leadership Laboratory, students are given the opportunity to apply what they have learned in the classroom, in a tactical or field environment. Students learn and demonstrate the fundamentals of leadership by planning, coordinating, navigating, motivating, and leading squads in the execution of both garrison and tactical missions. Students are evaluated as part of the Leadership Development Program and FM 6-22, Army Leadership. Ultimately, prepares students to excel at the four-week National Leadership Development and Assessment Course at Fort Lewis, WA. Corequisite: AS.374.301. Instructor(s): B. Sime; J. Wood.

AS.374.320. Advanced Tactical Leadership. 1 Credit.
Students further develop their leadership skills by directing and coordinating the efforts of 9-60 personnel on offensive, defensive and civil-support tactical-tasks. Develop written plans for garrison and field environments while supervising its execution. Ultimately, prepares students to excel at the four-week National Leadership Development and Assessment Course at Fort Lewis, WA. Permission required. Juniors only. Instructor(s): B. Sime.
AS.374.401. Adaptive Leadership. 2 Credits.
Students are assigned the duties and responsibilities of an Army battalion staff officer and must apply the fundamentals of principles of training, the training management, the Army writing style and military decision making to weekly training meetings. Students plan, execute and assess ROTC training and other Mission Essential Tasks. Students will study how Army values and leader ethics are applied in the Contemporary Operating Environment and how these values and ethics are relevant to everyday life. The student will study the Army officer's role in developing subordinates via counseling and administrative actions, as well as managing their own career. Students will be given numerous opportunities to train, mentor and evaluate underclass students enrolled in the ROTC Basic Course while being mentored and evaluated by experienced ROTC cadre. Corequisite: AS.374.410. Recommended Course Background: AS.374.301-AS.374.302, AS.374.310-AS.374.320 and the Basic Course. Instructor(s): J. Wood; P. Carroll.

AS.374.402. Adaptive Leadership/Professionalism. 2 Credits.
Study includes practical exercises on establishing an ethical command climate and developing values required of a professional officer. Students apply their leadership skills in the ROTC battalion and prepare for commissioning. Corequisite: AS.374.002. ROTC cadets only. Instructor(s): P. Carroll.

AS.374.407. Being a Platoon Leader. 1 Credit.
This course prepares Cadets for actual challenges not necessarily described in text books that junior officers may face in today's Army. Topics include: serving during war, conflict management, ethical dilemmas, time-constrained planning, and change management. This course also serves as prerequisite for the Basic Officer Leadership Course "B" phase by providing students with reinforced development on: deployment preparation, the military style of writing, supply management, human resources management, family support and operations management. Students will also learn how the Army’s organizational structure and administration affects Soldiers across ranks and over time. Finally, students will learn ways to leverage automation to improve their efficiency and effectiveness of records management and developing presentations for superiors. Instructor(s): G. Stambone; P. Carroll.

AS.374.410. Advanced Planning & Decision Making I. 1 Credit.
Students develop a semester-long progression of programmed training activates that support completion of the unit’s Mission Essential Task List. The laboratory builds from fall to spring semester as students master advanced problem solving, resource synchronization and executive decision making. Students evaluate, mentor and develop subordinate leaders as part of the Leadership Development Program and FM 6-22, Army Leadership. The course serves as the final evaluation and determination on a student’s ability to lead Soldier’s as a Second Lieutenant in the US Army. Permission required. Seniors only. Instructor(s): P. Carroll.

AS.374.420. Advanced Organizational Planning. 1 Credit.
Students develop a semester-long progression of training activates that support completion of the unit’s Mission Essential Task List. The laboratory builds on the first semester’s achievements through advanced problem solving, resource synchronization and executive decision making. Students evaluate and develop subordinate leaders as part of the Leadership Development Program and FM 6-22, Army Leadership. The course serves as the final evaluation and determination on a student’s ability to lead Soldier’s as a Second Lieutenant in the US Army. Permission required. Seniors only. Instructor(s): P. Carroll.

AS.374.501. Independent Study. 1 Credit.
Instructor(s): J. Wood; P. Carroll Writing Intensive.

AS.374.512. Internship-Military Science. 0 - 3 Credit.
Students will select a topic relevant to the study of military leadership and will complete a project based on current military doctrine and the contemporary operating environment of current military operations. Permission required. Instructor(s): P. Carroll Writing Intensive.

AS.374.555. US Intelligence Community: Theory & Practice. 3 Credits.
US Intelligence Community (3 credits, letter grade) Taught by former U.S. Intelligence Officers and members of U.S. Defense and Intelligence Community, "US Intelligence Community: Theory & Practice" (USIC) is a course designed to introduce and familiarize the student with the function, organization, and operational elements of the U.S. Intelligence Community (IC). Explore the USIC and gain experience in developing raw data into intelligence products through individual coursework & group production. The full-spectrum of US intelligence will be covered to include All-Source Intelligence production, multi-source data fusion processes, Special Operations, Counter-Terrorism, current affairs and future projections. Instructor(s): E. Mineo; J. Wood
Area: Social and Behavioral Sciences.

AS.374.556. USIC Individual Research Topics (IRT) Independent Study Seminar. 3 Credits.
Extension of AS.374.555 USIC Theory and Practices to formalize the research, analysis and production processes of United States Intelligence Cycle (USIC). The research topics will focus on collaboration of USIC thru specific topics in USIC sectors of HUMINT, SIGINT, OSINT, MASINT, Cyber-Security and Intelligence affairs. Instructor(s): E. Mineo Writing Intensive.

AS.374.557. US Intelligence Community: National Security Analysis. 3 Credits.
Extension of AS.374.555 USIC Theory and Practices to formalize the research, analysis and production processes of United States Intelligence CommlMlt (USIC). The research topics will focus on US National Security issues. Prerequisites: (AS.374.555 AND AS.374.556) Instructor(s): E. Mineo; J. Wood
Area: Social and Behavioral Sciences Writing Intensive.

Museums and Society
The Program in Museums and Society is concerned with the institutions that shape knowledge and understanding through the collection,
preservation, interpretation, and/or presentation of material culture. It focuses on the role of museums (broadly defined) and their contents in societies past and present, including their cultural, intellectual, and political significance.

A minor in Museums and Society complements study in a range of fields, including but not limited to anthropology, archaeology, history, history of art, and history of science and technology. Many courses include visits to or focused work in local and regional institutions, as well as in on-campus collections (Archaeological Museum, Homewood Museum, Evergreen Museum and Library, and the Sheridan Libraries).

Whether they are researching a historical artifact or debating the obligations of public institutions, students in the program are challenged to approach their discipline from a new angle. While some may choose to pursue a museum career, the program has the larger goal of encouraging critical, careful thinking about some of the most influential cultural institutions of our day.

Requirements for a Minor in Museums and Society

Six different courses (minimum 18 credits) from those approved by the program, including:

- AS.389.201 Introduction to the Museum: Past and Present
- AS.389.202 Introduction to the Museum: Issues and Ideas

The remaining 12 credits must include:

- At least two courses from two different primary departments beyond Museums and Society (to be selected in consultation with the program’s director).
- At least three courses at 300-level or higher.
- At least three credits of practicum work, but no more than three of internship work, selected from:
  - Courses designated as M&S practicum courses

For current faculty and contact information go to http://krieger.jhu.edu/museums/directory/

Teaching Professor, History of Art: museum history, theory, and practice; histories of translation and exchange.

**Affiliates Board**

James Archer Abbott
Curator and Director, Evergreen Museum and Library.

Catherine Rogers Arthur
Curator and Director, Homewood Museum and Lecturer, Museums and Society.

Sanchita Balachandran
Curator/Conservator, Johns Hopkins Archaeological Museum and Lecturer, Near Eastern Studies.

Gabrielle Dean
Curator, Modern Literary Rare Books and Manuscripts and Lecturer, Museums and Society.

Lisa DeLeonardis
Austen Stokes Professor in Art of the Ancient Americas, History of Art.

Lori Beth Finkelstein
Vice-President of Education, Interpretation and Volunteer Programs, Maryland Zoo in Baltimore.

Jane Guyer
Professor, Anthropology.

Stuart W. Leslie
Professor, History of Science and Technology.

Mitchell Merback
Associate Professor, History of Art.

Mary Ryan
John Martin Vincent Professor, History.

Curator/Director/Conservator

James Archer Abbott
Curator and Director, Evergreen Museum and Library: 19th- and 20th-century American decorative arts and furniture; historic houses; curatorial practice, including collections management and exhibitions.

Catherine Rogers Arthur
Curator and Director, Homewood Museum and Lecturer, History: American decorative arts, historic house museums, museum practice.

Sanchita Balachandran
Curator/Conservator, Johns Hopkins Archaeological Museum and Lecturer, Near Eastern Studies: conservation history and ethics; archaeological conservation and site management; collections management and museum practice.

Gabrielle Dean
Curator, Rare Books and Manuscripts and Lecturer, Museums and Society: history of books, libraries, reading, literary culture; books as objects.

Earl Havens
William Kurrelmeyer Curator of Rare Books and Manuscripts and Adjunct Assistant Professor, Department of History: early modern Europe, history of collecting, early libraries.

Sophia Jordan-Mowery

Jacqueline M. O'Regan
Curator of Cultural Properties: acquisitions, documentation, and preservation of artifacts and art objects; development of institutional practices and guidelines; collection databases.

Teaching Professor

Rebecca M. Brown
History of Art: Southeast Asian art, politics of display.
Professors
Betsy M. Bryan
Alexander Badawy Chair in Egyptian Art and Archaeology, Near Eastern Studies: Egyptian art and archaeology, Egyptology.

Stephen Campbell
Henry M. and Elizabeth P. Wiesenfeld Professor and Chair, History of Art: Italian Renaissance art, the studiolo and Renaissance collecting.

Lisa DeLeonardis
Austen Stokes Professor in Art of the Ancient Americas, History of Art: ancient art of the Americas.

Robert H. Kargon
Willis K. Shepard Professor of the History of Science, History of Science and Technology: history of physics, science, social change.

Stuart W. Leslie
History of Science and Technology: history of technology, science-based industry, 20th-century American science.

Judith Walkowitz
History: modern European cultural and social history with special interest in Great Britain, comparative women’s history.

Ronald G. Walters
History: social and cultural history of the United States with special interest in radicalism, reform, race, and popular culture.

Lecturer
Jennifer P. Kingsley
Museums and Society: museum history, theory and practice, medievalism, history of early medieval and Byzantine art.

Archivist
Phoebe Evans Letocha
Collections Management Archivist, Alan Mason Chesney Medical Archive: archival management, history of medicine.

Associate Professor
Tobie Meyer-Fong
History: social, cultural history of China since 1600.

Adjunct/Visiting Appointments
Martina Bagnoli
Visiting Lecturer, History of Art: Associate Curator of Medieval Art, The Walters Art Museum.

Doreen Bolger
Adjunct Professor, History of Art: Director, The Baltimore Museum of Art.

Rena Hoisington
Visiting Lecturer, History of Art: Associate Curator of Prints, Drawings and Photographs, The Baltimore Museum of Art.

Walter G. Lehmann
Visiting Lecturer, Museums and Society: Managing Partner, law firm of Lehmann and Strobel.

Elizabeth Maloney
Visiting Lecturer, Museums and Society: Museum Educator and Independent Scholar.

Nancy Micklewright
Visiting Lecturer, Museums and Society: Head of Scholarly Publications and Programs, The Smithsonian Institution’s Freer and Sackler Galleries of Art.

Robert Mintz
Visiting Lecturer, Museums and Society: Mr. and Mrs. Thomas Quincy Curator of Asian Art and Chief Curator, The Walters Art Museum.

Arthur Molella
Visiting Lecturer, History of Science and Technology: Director, Lemelson Center for the Study of Invention and Innovation, National Museum of American History, Smithsonian Institution.

Thomas Primeau
Visiting Lecturer, Museums and Society: Head of Conservation and Associate Paper Conservator, The Baltimore Museum of Art.

Courses
AS.389.103. Freshman Seminar: Museum Matters. 3 Credits.
Museums are crucibles, places where public memory, identity, and cultural values are shaped and debated. We examine this premise through weekly visits to Baltimore museums of art, science, history (and many more), critical group discussion, and intensive writing assignments. Freshmen only.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.389.130. Mini Course: Conservation, An Introduction to Technical Art History. 1 Credit.
Look through the eyes of a conservator and learn how to answer historical questions by analyzing the physical nature of works of art. Objects examined will include paintings, sculpture and works on paper from the collection of the Baltimore Museum of Art. Class meets 4 times, on February 7, 14, 21 and 28, at the BMA. Syllabus and organizational meeting at JHU on Thursday, January 31, 5:30pm.
Instructor(s): T. Primeau
Area: Humanities.

AS.389.201. Introduction to the Museum: Past and Present. 3 Credits.
This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends. Anthropology, art, history, and science museums are considered. Cross-listed with Anthropology, History, and History of Art.
Instructor(s): E. Rodini
Area: Humanities, Social and Behavioral Sciences.

AS.389.202. Introduction to the Museum: Issues and Ideas. 3 Credits.
This course considers the practical, political, and ethical challenges facing museums today, including the impact of technology and globalization, economic pressures, and debates over the ownership and interpretation of culture.
Instructor(s): J. Kingsley
Area: Humanities, Social and Behavioral Sciences.

AS.389.203. Museum Matters. 3 Credits.
Through weekly field trips, group discussion, and analytical writing assignments, this course examines how museums organize, interpret, and present their holdings. Museum controversies, challenges, conflicts are examined. M&S practicum course.
Area: Humanities
Writing Intensive.
AS.389.205. Examining Archaeological Objects. 3 Credits.
This course considers the role of materials in the production, study and interpretation of objects by examining artifacts from the Johns Hopkins Archaeological Museum. Students will consider materials such as ceramics, stone, metal, glass, wood and textiles, and visit artists’ studios to gain an understanding of historical manufacturing processes. M&S practicum course. Cross-listed with Archaeology, Near Eastern Studies, Classics, and History of Art.
Instructor(s): S. Balachandran
Area: Humanities.

AS.389.261. Curating Homewood: Trades and Training in Early Baltimore. 3 Credits.
Students explore early American life related to the region and the Carroll family of Homewood. Primary research and object study culminate in student-curated thematic exhibition. Optional intersession practicum experience is also possible. Cross-listed with History. M&S practicum course.
Instructor(s): C. Arthur
Area: Humanities.

AS.389.275. Interpreting Collections: An Introduction to Museum Education-Community Based Learning. 3 Credits.
Part public history, part introduction to museum practices, this hands-on course invites students into a local collection to develop interpretive materials for diverse audiences. Students consider the issues and ideas that inform object-based learning and learn about the history, theory and practice of museum education. Course culminates in the creation of interpretive text for the Baltimore Museum of Industry. M&S practicum course.
Instructor(s): E. Maloney
Area: Humanities, Social and Behavioral Sciences.

AS.389.320. Photographs on the Edge: Ara Güler in Archives of the Smithsonian’s Freer and Sackler Galleries. 3 Credits.
Work as a curator alongside Smithsonian staff, researching the work of Turkish photographer Ara Güler to develop an exhibit that considers relationships between the history of photography, archives and the museum. Class will travel several times to the Freer and Sackler Galleries in Washington D.C. M&S practicum course.
Instructor(s): N. Micklewright
Area: Humanities, Social and Behavioral Sciences.

AS.389.330. Critique of the Museum in Contemporary Art. 3 Credits.
Since the 1960s, many artists have challenged art museum conventions, contesting the assumption that museums are ideologically neutral spaces of display. This institutional critique is examined in artworks, installations, literature. Cross-listed with History of Art.
Instructor(s): R. Haywood
Area: Humanities.

AS.389.340. Critical Issues in Art Conservation. 3 Credits.
The course examines recent controversies in the conservation of major global art works and sites, raising questions concerning the basic theoretical assumptions, practical methods and ethical implications of art conservation. Cross-Listed with History of Art and Anthropology
Instructor(s): S. Balachandran
Area: Humanities.

AS.389.342. Objects in Focus: Materials, Techniques, History. 3 Credits.
What can art and archaeological objects reveal about materials, their craftsmanship and preservation? We investigate artists’ treatises, visit studios and museum conservation laboratories and closely examine artworks. M&S practicum course. Cross-listed with Classics, History of Art, Near Eastern Studies.
Area: Humanities.

AS.389.343. Conservation of Modern and Contemporary Art. 3 Credits.
We examine how museums care for, interpret, and preserve modern and contemporary artworks that defy the traditional materials, display methods, and uses of ancient or historic art. Cross-listed with History of Art.
Area: Humanities.

AS.389.345. Introduction to Museum Practice. 3 Credits.
Taking the JHU Archaeological Museum as a case study and working closely with its holdings, we discuss the principles and practice of managing and preserving museum collections. Earns M&S Practicum credit. Cross-listed with History of Art, Anthropology, Near Eastern Studies, and Classics.
Instructor(s): S. Balachandran
Area: Humanities.

AS.389.349. Art, Museums and the Law. 3 Credits.
The course encourages students to consider how artistic processes and cultural institutions are shaped by legal principles and vice versa. The interplay between art, museums and the law will be explored from historical, cultural and legal perspectives using a variety of source material.
Instructor(s): W. Lehmann
Area: Humanities.

AS.389.350. Staging Suburbia with the Jewish Museum of Maryland-Community Based Learning. 3 Credits.
Work as a public historian alongside Jewish Museum of Maryland curators and staff, researching primary documents and artifacts to develop an exhibition about Baltimore’s Jewish suburbs. The show will travel throughout Baltimore. M&S practicum course. Cross-listed with History and Jewish Studies.
Area: Humanities, Social and Behavioral Sciences.

AS.389.354. Paper Museums: Exhibiting Prints at the BMA. 3 Credits.
In this advanced seminar, students work with BMA curator to organize an exhibition about the printed series. Covers various aspects of museum work, including research, installation, programming. M&S practicum course. Cross-listed with History of Art
Instructor(s): R. Hoisington
Area: Humanities.

AS.389.355. Reading Culture in the Nineteenth-Century Library. 3 Credits.
Students reconstruct the culture of reading in nineteenth-century America through an investigation of the Peabody Library (founded 1856) as a space and collection. Meets at Peabody. M & S practicum course. Cross-listed with English.
Area: Humanities Writing Intensive.
AS.389.356. Halls of Wonder: Art, Science, and Literature in the Age of the Marvelous, 1500-1800. 3 Credits.
Explore the material culture of "wonder" from the Renaissance to the Enlightenment in literature, science, and art, with Hopkins’ rare book collections and the Walters Art Museum. M&S practicum course.
Instructor(s): E. Havens
Area: Humanities.

AS.389.357. Heaven on Earth: Art, Culture and Wonder in the Vatican Museum and Library. 3 Credits.
This interdisciplinary course will explore the institutional, cultural, artistic and architectural history of St. Peter’s and the Vatican Museum and Library from Antiquity through the Renaissance, up to the present day. Class meets in the Dick Macksey Seminar Room of the Brody Learning Commons. Cross-listed with History.
Instructor(s): E. Havens
Area: Humanities.

AS.389.359. Literary Archive. 3 Credits.
This course invites students to grapple with the theory and practice of building literary archives in 19th- and 20th-century American culture. For the final project students will work collaboratively to build a digital archive and exhibit of selected materials from the JHU rare book and manuscript collections. Meets in Special Collections. Cross-listed with English. M&S practicum course.
Area: Humanities.

AS.389.360. American Literature on Display. 3 Credits.
Focusing on late 19th and early 20th c American literature, course examines representations of "display" within different literary genres and track how display simultaneously shapes print culture and social concerns of the period. Course culminates in the creation of a student-curated digital exhibit using archival and rare book materials to contextualize the work of the journalist, poet and fiction writer Stephen Crane. M&S practicum course.
Instructor(s): G. Dean
Area: Humanities.

AS.389.361. Introduction to Material Culture: Early Views of Baltimore. 3 Credits.
Students explore early American life relating to the region and Homewood House. Primary research, object study culminate in exhibit focused on trades and crafts, training and work practices. M&S practicum course. Meets at Homewood Museum. Cross-listed with History.
Instructor(s): C. Arthur
Area: Humanities.

AS.389.362. Behind the Scenes at the Walters Art Museum: Material Migrations. 3 Credits.
Work with Walters and STSci staff to learn about the workings of a professional art museum while developing an exhibition of images from the Hubble Space Telescope. M&S practicum course.
Instructor(s): E. Rodini
Area: Humanities.

AS.389.363. Curating Culture at JHU’s Evergreen Museum & Library: Excellence in Twentieth Century Design. 3 Credits.
In this hands-on course, students research Evergreen and develop an innovative, public exhibition or presentation. History of the house, grounds, book, artifacts are all subject to investigation. M&S practicum course. Cross-listed with History of Art.
Instructor(s): J. Abbott
Area: Humanities.

AS.389.364. History of the Artifact. 3 Credits.
By developing a small installation at the Baltimore Museum of Industry, students explore how museums use artifacts to present the past to diverse audiences. Earns M&S practicum credit. Cross listed with History. Area: Humanities, Social and Behavioral Sciences.

AS.389.365. Close Looking at the BMA: Van Dyck’s "Rinaldo & Armida. 3 Credits.
Music, drama, literature, history will all shed light on one of the BMA’s greatest paintings. Creative final projects will support the museum’s educational programming. Earns M&S practicum credit. Cross listed with History of Art Area: Humanities.

AS.389.366. Interpreting Warhol: An Introduction to Museum Education and Interpretation. 3 Credits.
A hybrid between art history and an introduction to museum practices, this course culminates in developing education programs for the BMA’s upcoming exhibition dedicated to Andy Warhol. M&S practicum course. Cross-listed with History of Art.
Instructor(s): P. Bautista
Area: Humanities.

AS.389.367. Walking with Reliquaries. 3 Credits.
Students will study medieval objects from the Walters Art Museum collection and design interpretative tools that will be used in an upcoming exhibition at the museum. The class meets at Walters, and is M&S practicum course. Cross-listed with History of Art.
Instructor(s): M. Bagnoli
Area: Humanities.

AS.389.368. Artists, Museums, and Social Purpose: Contemporary Models. 3 Credits.
How do artists working today engage with museums? Students explore these partnerships in theory and practice, proposing a local installation in collaboration with artist-instructor Peter Bruun. M&S practicum course. Cross-listed with Homewood Art Workshops; History of Art.
Instructor(s): P. Bruun
Area: Humanities.

AS.389.369. Encountering the Art of East Asia: Museum Display, Theory and Practice. 3 Credits.
Students reconsider the exhibition and interpretation of East Asian Art at the Walters Art Museum, developing a pilot installation to suggest a new permanent display. M&S Practicum Course. Class meets at the Walters Art Museum (extended time to allow for travel). Cross-listed with East Asian Studies.
Instructor(s): R. Mintz
Area: Humanities.

AS.389.370. Camera Arts: Photographing Evergreen Museum and Library. 3 Credits.
Instructor(s): P. Berger
Area: Humanities.

AS.389.371. The Artist in the Museum: Making Books. 3 Credits.
Hopkins curatorial staff and photography instructor introduce the concept of books as art. Students create artist’s books inspired by campus collections for inclusion in an Evergreen exhibition. FIRST CLASS IS MANDATORY. M&S practicum course. Cross-listed with Homewood Art Workshops.
Instructor(s): J. Abbott; P. Berger
Area: Humanities.
AS.389.373. Encountering the Art of South Asia: Museum Display, Theory and Practice. 3 Credits.
Students reconsider the exhibition and interpretation of South Asian art at the Walters Art Museum to suggest a new permanent display. Class meets at the Walters Art Museum. M&S practicum course.
Instructor(s): R. Brown; R. Mintz
Area: Humanities.

AS.389.385. Global Perspectives on the Museum. 3 Credits.
Course examines practices of collecting, display and preservation beyond the western museum tradition, focusing on how these practices reflect and construct political, historical, ethnic and nationalist narratives. Counts towards the international studies major. Cross-listed with Anthropology.
Instructor(s): E. Rodini; S. Balachandran
Area: Humanities, Social and Behavioral Sciences.

AS.389.390. Library / Laboratory. 3 Credits.
This interdisciplinary and project-driven class investigates the library as a site of experimentation and an expression of different knowledge regimes. Material includes literary treatments of the library, historical and critical readings, guest lectures, rare materials from special collections and field work.
Instructor(s): G. Dean
Area: Humanities.

AS.389.440. Who Owns Culture?. 3 Credits.
This seminar explores the complicated, often explosive concept of cultural property, including questions surrounding the ownership, preservation, and interpretation of artifacts, monuments, heritage sites, and living traditions. Cross-listed with Anthropology and History of Art.
Instructor(s): E. Rodini
Area: Humanities, Social and Behavioral Sciences.

AS.389.460. Inventing the Middle Ages from the Renaissance to Today. 3 Credits.
Investigate the history of the collection, interpretation and display of medieval art by nations, museums and private collectors. Topics range from antiquarian interest to conception of medieval sculpture as "primitive", from the use of medieval objects in nationalistic displays and from early American museums such as the Cloisters in NY to current exhibits such as the Walters. Cross-listed with History and History of Art.
Instructor(s): J. Kingsley
Area: Humanities.

AS.389.501. Independent Study-Museums & Society. 3 Credits.
Instructor(s): E. Rodini.

AS.389.502. Independent Study- Museum and Society. 0 - 3 Credit.
Instructor(s): E. Rodini.

AS.389.511. Museum & Society Internship. 1 Credit.
Instructor(s): E. Rodini
Area: Humanities.

AS.389.512. Museum & Society Internship. 0 - 3 Credit.
Instructor(s): J. Kingsley.

AS.389.522. Capstone in Museum and Society. 1 - 3 Credit.
The Capstone allows students to develop and carry out their own, hands-on research project in a museum, collection, archive, or other living resource. Final projects must involve some form of public presentation (exhibition, poster, web-based, etc.) and a work of self-reflection (journal, brief paper, blog, or other). Projects must be approved and overseen by a supervising faculty member and approved by the Program’s Director, in keeping with the University’s Independent Work Policy.
Prerequisites: AS.389.201
Instructor(s): E. Rodini
Area: Humanities, Social and Behavioral Sciences.

AS.389.594. Independent Study. 0 - 3 Credit.

AS.389.599. Museum & Society Internship. 1 Credit.

Cross Listed Courses

History of Art

AS.010.192. Move over Michelangelo: Renaissance Sculpture in Northern Italy. 3 Credits.
Michelangelo’s heroic figure has dominated our conception of Renaissance sculpture, but outside of Florence & Rome, a princely aesthetic for small, intimate, tactile works dominated. We will explore the alternate paradigms for the figure and sculpture in the North, centering around Padua, Mantua, and Venice. The course is built around the collection at the Walters Art Museum, from which students will choose an object as the subject of a semester-long research project. We also take advantage of MICA to visit a bronze workshop, and will visit the Antico exhibition in NY at the Frick. Dean’s Teaching Fellowship
Instructor(s): L. Blom
Area: Humanities.

AS.010.311. Japanese Print Culture and Western Collecting. 3 Credits.
The first half of this seminar will examine issues in Japanese print culture, especially the development and circulation of ukiyo-e prints, during the Edo and Meiji periods (1615-1912). Topics will include technological innovations, the role of publishers, censorship, and prints as didactic objects. The second half of the course will explore the popularity of Japanese prints in the West, including their impact on Japonisme and incorporation into Western collections Cross-list with East Asian Studies
Instructor(s): H. Snow
Area: Humanities.

AS.010.312. Surrealism. 3 Credits.
Topics include: art and the unconscious; “psychic automatism” and its implications for theories of medium, genre, and composition; objects, journals, and exhibitions. Visits to Special Collections and the BMA. Students will curate and install an exhibition of Surrealist journals from MSEL Special Collections, to open in April 2014.
Instructor(s): M. Warnock
Area: Humanities
Writing Intensive.

AS.010.334. Problems in Ancient American Art. 3 Credits.
Selected topics which may include collecting the pre-Columbian past and connoisseurship, the formation of national museums, post-Columbian appropriations. Collections study in museums. May also be used toward credit for the Archaeology major. Cross-listed with PLAS and Program in Museum and Society
Instructor(s): L. DeLeonardis
Area: Humanities
Writing Intensive.
Instructor(s): R. Brown.

AS.010.366. Native American Art. 3 Credits.
Survey of the principle visual arts of North America (1500 BC - AD 1600). Introduction to interpretive theory and methodology. Collections study in local and regional museums. Cross-listed with Programs in Museums and Society, Archaeology, and PLAS.
Instructor(s): L. Deleanardis
Area: Humanities
Writing Intensive.

AS.010.382. The Politics of Display in South Asia. 3 Credits.
Through examining collecting, patronage, colonial exhibitions, and museums, this course examines how South Asia has been constructed in practices of display. Themes: politics of representation, spectacle, ethnography, and economies of desire related to colonialism and the rise of modernity. Cross-list with Anthropology, Museums and Society and Political Science.
Instructor(s): R. Brown
Area: Humanities
Writing Intensive.

AS.010.392. Creating A Museum Exhibition: Micro-monuments. 3 Credits.
Area: Humanities.

AS.010.398. Tombs for the Living. 3 Credits.
Centering on the tomb as a unit of analysis, this course examines how death and funerary ritual reflect the cultural values of the living and are an active force in shaping them. Drawing on case studies from Mesoamerica and the Andes we consider various approaches to entombment and funerary ritual.
Instructor(s): L. Deleanardis
Area: Humanities
Writing Intensive.

AS.010.424. Collecting Roman Art: From Antiquity to Present. 3 Credits.
A survey of the most important collections of Greek and Roman sculpture, from the late-Republican age through the Middle Ages and the Renaissance, until the creation of the main museums in Europe and in the United States.
Instructor(s): P. Tucci
Area: Humanities
Writing Intensive.

AS.010.634. The Politics of Visual Culture.
In-depth reading and discussion at the intersection of visual culture and the political. Issues may include photography and colonialism, national symbolism, commodification of culture, visual and ethnographic display, the national museum, repatriation, modernity and the spectacle.
Instructor(s): R. Brown.

AS.010.666. Exhibiting the Other.
Despite challenges to museum practices in the 1970s and 1980s, the approach to displaying the art and visual culture of regions and periods outside of the European and North American mainstream remains caught between scholarly theorizing and demands for the commodification of the exotic. The ongoing exclusionary logic of collecting and display practices and the shrinking budgets for museums undermine efforts to rethink and challenge longstanding institutionalized patterns. In this seminar we will assess the politics, theory, and practice of displaying what still operates as the "other", reading across art history, museum studies, politics, and anthropology. Open to senior undergraduates with permission of instructor. Cross-listed with Political Science and Programs in Museums and Society.
Instructor(s): R. Brown.

Classics

AS.040.119. The World of Pompeii. 3 Credits.
This course will focus on the history and archaeology of Pompeii. Close attention will also be paid to the reception of Pompeian materials in European and American culture. Cross-listed with History of Art and the Program in Museums and Society.
Instructor(s): H. Valladares
Area: Humanities.

AS.040.137. Archaeology at the Crossroads: The Ancient Eastern Mediterranean through Objects in the JHU Archaeological Museum. 3 Credits.
Limited to Freshmen. This seminar investigates the Eastern Mediterranean as a space of intense cultural interaction in the Late Bronze Age, exploring how people, ideas, and things not only came into contact but deeply influenced one another through maritime trade, art, politics, etc. In addition to class discussion, we will work hands-on with artifacts from the JHU Archaeological Museum, focusing on material from Cyprus. Cross-listed with Museums and Society and Near Eastern Studies.
Instructor(s): E. Anderson
Area: Humanities
Writing Intensive.

AS.040.360. The Archaeology of Daily Life. 3 Credits.
Limited to juniors and seniors from Classics, History of Art, Archaeology, and Museum and Society. Others with permission of instructor only. This course will examine objects of daily life from the Greco-Roman world in the Johns Hopkins University Archaeological Museum. Students will collaborate on an online catalogue, featuring their research. Cross-listed with History of Art, Near Eastern Studies, and Museums and Society.
Instructor(s): H. Valladares
Area: Humanities.

AS.040.368. The Authority of Ruins: Antiquarianism in Italy, 1690-1890. 3 Credits.
(Same as 040.668) This seminar will focus on the transformation of antiquarianism in Italy after the discovery of Herculaneum and Pompeii. Students will work primarily with rare books from the collections at JHU, Cross-listed with History of Art and Museums and Society and Interdepartmental.
Instructor(s): H. Valladares
Area: Humanities.

Film and Media Studies

AS.061.223. Special Topics: Performance Art and Video. 3 Credits.
This course will explore the history and current state of video and performance art, two of the most important movements in contemporary art. How have they influenced each other and how have they affected mainstream media and cultural notions of art? Students will view significant works and their presentation in galleries, museums, and public spaces, and will create individual and collaborative performance pieces of their own.
Instructor(s): S. Barber
Area: Humanities.
### Anthropology

**AS.070.103. Community Based Learning - Africa & The Museum. 3 Credits.**

An introduction to Africa, artistic creativity, collection and exhibition: as African history, as anthropology of art and objects, and as public controversy in our national institutions. Works with the Baltimore Museum of Art. Cross-listed with Africana Studies and Programs in Museums and Society.

Instructor(s): J. Guyer
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.070.287. Displaying Race. 3 Credits.**

Through hands-on archival and museum research, students in this class will develop a proposal for displaying a small collection of plaster busts that were cast in the late 19th century from live indigenous subjects. Readings from the class will explore the ethical, legal and political issues surrounding the public display of anthropological and historical artifacts that were collected as part of now discredited regimes of racial classification. How can displays be used to reveal the distance that separates 19th century racial thought from our modern day understandings of physical and cultural difference? How can we responsibly display likenesses that may have been collected under coercive conditions? How can such objects be used to educate people about the place of indigenous peoples in the museum? What laws and ethical conventions govern the display of such objects? In addition to regular class meetings, students will be expected to carry out archival research and interviews in local archives and museums.

Instructor(s): D. Poole
Area: Humanities, Social and Behavioral Sciences

### History

**AS.100.350. The Art of Collecting in America's Gilded Age, 1880-1920. 3 Credits.**

Course is organized as an upper division seminar for students with interest in history, art history, and museum studies. Focuses on the art collections of wealthy Americans during the fabled Gilded Age, ca. 1880 - ca. 1920. Topics to be discussed include the motives, both personal and patriotic, underlying the formation of these collections, the ideas and circumstances that contributed to the creation of municipal museums such as New York City's Metropolitan Museum of Art, and the relationship between these collections, both private and public, and America's national identity. Cross-listed with Museums and Society.

Instructor(s): R. Kagan
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.100.372. The Victorians. 3 Credits.**

This course focuses on the politics of everyday life, consumption, intimate relations, and concepts of the self in Victorian Britain (1837-1901). Particular attention will be devoted to Victorian visual culture, including exhibitions, built environment, decorative arts and leisure culture. Other themes include popular nationalism, class cultures, feminism and body politics, Empire and racial thought. Cross-listed with WGS and Program in Museums and Society.

Instructor(s): J. Walkowitz
Area: Humanities, Social and Behavioral Sciences.

**AS.100.470. Monuments and Memory in Asian History. 3 Credits.**

Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

### Near Eastern Studies

**AS.130.128. Nubia: An African Kingdom in American Thought, 1767-2009. 3 Credits.**

This course will trace the archaeological rediscovery of ancient Nubia and explore its changing significance in American culture. No prior knowledge of ancient Nubia is expected. Cross-listed with Africana Studies, History, and Museums & Society.

Area: Humanities.

**AS.130.251. Made for the Gods: Votive Egyptian Objects in the Archaeological Museum. 3 Credits.**

This course investigates Egyptian votive objects made as gifts to the Gods. Students will learn about Egyptian religious practices and study groups of objects in the Archaeological Museum to learn to identify how they were produced, when, and for what functions. Physical analyses of the objects will be part of the class and facilitated by museum staff.

Instructor(s): B. Bryan
Area: Humanities.

**AS.130.334. Museum Study of Objects from the Eton College Myers Collection. 3 Credits.**

Students will be introduced to studying Egyptian objects through an investigation of some pieces from the Eton College Myers Collection to be on long term loan to the University. Cataloguing and research for these objects will be part of the course. Taught with AS.133.706 Cross-listed with Program in Museums and Society.

Instructor(s): B. Bryan
Area: Humanities.

**AS.133.706. Museum Study of Objects from the Eton College Myers Collection.**

Students will be introduced to studying Egyptian objects through an investigation of some pieces from the Eton College Myers Collection to be on long term loan to the University. Cataloguing and research for these objects will be part of the course. Taught with AS.130.334

Instructor(s): B. Bryan.

### History of Science Technology

**AS.140.123. Johns Hopkins: The Idea of a University. 3 Credits.**

Who was Ira Remsen and why is he interred in the building bearing his name? Was the School of Medicine’s best surgeon really a life-long drug addict? This freshman seminar will explore the history of our university since its founding in 1876, including its schools of medicine, public health, nursing, the Applied Physics Laboratory and SAIS. We’ll look carefully at the archives and develop a thematic class exhibit. Research and writing intensive.

Instructor(s): S. Leslie
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.140.215. Monuments and Memory. 3 Credits.**

Why do some places, whether manmade or natural, capture and hold our imaginations? Why, and how, do we commemorate particular sites? This course will explore the construction or discovery, and the enduring significance, of selected monuments in the West, beginning with the Great Pyramid and ending with the World Trade Center. We will consider national memorials by which the West has measured itself. We will study how they were made, interpreted and represented in art, literature, popular culture, and tourism. Cross-listed with Program in Museums and Society.

Instructor(s): S. Leslie
Area: Humanities, Social and Behavioral Sciences.
AS.140.332. Science Moderne: Inventing a Culture for the Future. 3 Credits.
This undergraduate seminar examines the impact of new ideas of time and space and of the second Industrial Revolution (the transformations induced by science-based technologies) on art, music, dance, urban design, architecture, and social and political thought in the first half of the 20th century. Cross-listed with Program in Museums and Society.
Instructor(s): A. Molella; R. Kargon
Area: Humanities, Social and Behavioral Sciences.

AS.140.359. Museums and Globalization. 3 Credits.
Examines how museums are linked to wider national, cultural, communities, and mobilize resources to address political, economic and social concerns and questions of heritage. Jointly with Case Western Reserve University. Cross-listed with Program in Museums & Society.
Instructor(s): R. Kargon
Area: Humanities, Social and Behavioral Sciences.

AS.140.363. Museums & Controversy: from the Enola Gay to Body Worlds. 3 Credits.
Exhibitions on Freud, Darwin, the Bomb, environment, the human body, and similar "hot" topics have stirred unexpected controversy. This seminar explores the origins of such heated public and scientific disagreements. Crosslisted with Program in Museums & Society.
Area: Humanities, Social and Behavioral Sciences.

AS.140.372. Science on Display. 3 Credits.
History of collecting, exhibiting and interpreting science and technology, from Renaissance cabinets of curiosity to modern world's fairs, zoos, aquariums, films and science centers. Students will present their own exhibits as dioramas, web sites, documentaries or other formats. Cross-listed with Program in Museums and Society.
Instructor(s): S. Leslie
Area: Humanities, Social and Behavioral Sciences.

AS.140.657. Science on Display. 3 Credits.
History of collecting, exhibiting and interpreting science and technology, from Renaissance cabinets of curiosity to modern world's fairs, zoos, aquariums, films and science centers. Students will present their own exhibits as dioramas, web sites, documentaries or other formats. Cross-listed with Program in Museums and Society.
Instructor(s): S. Leslie.

German Romance Languages Literatures

AS.211.330. Curating Media Artists in Residence at JHU. 3 Credits.
Curating Media Artists in Residence at JHU: students will be closely involved with JHU’s Program in Museum & Society, JHU’s Center for Advanced Media Studies (CAMS), and the Baltimore Museum of Art (curator Kristen Hileman) in efforts to research and propose new media artists in residence as well as prepare the residency for 2015. This process will include examining cutting-edge media artists whose work will be discussed both in the classroom as well as on sponsored class trips to media art exhibits in DC and NYC. Students will also assist with the CAMS media art residency of acclaimed French artist Camille Henrot in March 2014.
Instructor(s): B. Wegenstein
Area: Humanities.

Center for Africana Studies

AS.362.306. Seeing Baltimore History: Race & Community. 3 Credits.
This course will explore major topics in 20th century Baltimore history, using local newspapers and the archival collections of the Baltimore Afro American Newspaper.
Instructor(s): M. Hinderer
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

Music

The Peabody Institute of The Johns Hopkins University is an internationally acclaimed music conservatory. The Peabody campus, located at historic Mount Vernon Place, is on the university shuttle bus route between Homewood campus and the medical institutions in East Baltimore. Faculty of the Peabody Institute offer some classes on the Homewood campus that are open to all undergraduates.

Qualified Hopkins undergraduates may, for no extra charge, register for classes in music history, music theory, music education, recording techniques, and computer music offered on the Peabody campus. There are also limited opportunities to take private lessons and participate in ensembles.

Concerts

Homewood students are welcome to attend Peabody’s many concerts and are entitled to student prices for most concerts, provided they present their Hopkins ID and pick up the ticket during daytime Box Office hours, Monday through Friday, 10 a.m. to 4 p.m. Declared music minors can receive complimentary tickets to select concerts. The Box Office is in the lower level of the Grand Arcade in the Conservatory building; call 410-234-4800.

Private Lessons

Private lessons are available to students at varying levels of accomplishment on a musical instrument.

• Half-hour or hour lessons are offered for credit in the Peabody Conservatory for the intermediate to advanced musician.
• Non-credit lessons are available in the Peabody Preparatory, space permitting.

The annual registration fee will be waived for all JHU students. School of Arts and Sciences and Engineering students are eligible to receive a cross-registration discount of 25 percent for Preparatory lessons by obtaining a cross-registration form from their division each semester.

Students wishing to take advantage of this opportunity should consult the Peabody Conservatory and/or Preparatory catalogs for more information.

Auditions for lesson assignments at the intermediate or advanced level take place at the beginning of each term. Students wishing to audition should contact the Peabody Registrar’s Office, 410-234-4578, for information. Hopkins students may arrange for instrumental practice facilities through the Homewood Office of Student Activities, 410-516-8209.

Ensemble Membership

Membership in the Hopkins Symphony Orchestra, the Johns Hopkins University Band, and the Hopkins Glee Club, all of which rehearse and perform on the Homewood campus, is open to all university students.
Membership in the Hopkins Symphony Orchestra is by audition on a space-available basis. Seating is limited, especially in the winds. Contact the HSO Office in Shriver Hall at 410-516-6542 for audition information, which can also be found online at http://www.jhu.edu/jhso/about/audition_info.html.

Participation in the Peabody-Hopkins Chorus and Peabody Singers is open to all university students upon completion of a satisfactory audition. Please contact Senior Ensemble Coordinator Paul Faatz at pfaatz1@peabody.jhu.edu if you wish to schedule an audition or would like additional information.

Advanced instrumentalists who wish to be considered for membership in Peabody’s large instrumental ensembles—the Peabody Symphony Orchestra, Peabody Concert Orchestra, Peabody Wind Ensemble, Peabody Camerata (contemporary music), Peabody Improvisation and Multimedia Ensemble, and Peabody Jazz Orchestra—are welcome to take part in the placement audition process which takes place each fall during the week prior to Peabody’s registration process. In order to be given an audition slot, instrumentalists must be taking private minor lessons with a Peabody instructor, and that instructor must inform the Peabody Ensemble Office that they’ve evaluated the player’s ability to be on par with that of the student’s peers at Peabody. Occasional exceptions to this policy have been made for players of instruments which are uncommon or currently under-represented at Peabody. Due to the fact that each of the instrumental ensembles can accommodate only a certain number of players of each instrument, placement into these ensembles is made on a space-available basis, with priority given to Peabody instrumental majors for whom participation in large ensembles is a degree requirement.

Please direct any questions regarding participation in Peabody’s large ensemble program to Senior Ensemble Coordinator Paul Faatz at pfaatz1@peabody.jhu.edu.

Minor in Music
The School of Arts and Sciences offers a music minor to students majoring in other fields. The minor is intended for students who have some training and background in music and wish to pursue their interest in a systematic way without getting their degree in the field. It consists of a selection of music courses, including music history, music theory, ensembles, and/or lessons at Peabody.

* Class of 2016 and later: One must be 300-level or higher
** Two semesters of lessons or ensembles with the approval of minor advisor

Applied Music Experience
Since the study of music should always take place in the context of practical music making, students completing the minor in music must participate in an applied music experience for at least two semesters. Students must select an applied music experience in consultation with their advisor, who will approve the applied music experience on the minor checklist. Most students will select either private instrument lessons at Peabody or participation in an ensemble at Peabody or on the Homewood campus.

For current faculty and contact information go to http://www.peabody.jhu.edu/about/people/

Faculty

Peabody Faculty on Homewood Campus
Richard Giarusso
Department of Musicology: 19th- and 20th-century music, German song, Wagner, Mahler, English music, music appreciation.

Sharon Gail Levy
Department of Music Theory: Piano literature 1750–1950, music analysis, baroque counterpoint, music appreciation.

David Smooke
Department of Music Theory: Song Analysis, Theories of Rhythm, Popular Music.

Stephen Stone
Department of Music Theory: music theory courses. Advisor for the minor in music theory.

Andrew Talle
Department of Musicology: J.S. Bach, German music, 18th- and 19th-century music, music appreciation.

Elizabeth D. Tolbert
Department of Musicology: expressive culture and intercultural aesthetics, performance, gender, ritual, ethnomusicology, music and language.

Susan Forscher Weiss
Department of Musicology (joint appointment in Romance Languages and Literatures): medieval and Renaissance music, social history, performance practice, history of instruments.

Peabody Adjunct Faculty
Faye Chia
Adjunct Theory Faculty

John Crouch
Adjunct Theory Faculty

Travis Hardaway
Adjunct Theory Faculty

Mark Lackey
Adjunct Computer Music Faculty

Alexander Norris
Adjunct Jazz Faculty

For current course information and registration go to https://isis.jhu.edu/classes/
Courses

AS.376.111. Rudiments-Music Theory. 3 Credits.
This course introduces written and aural music fundamentals including notation, scales, intervals, chords, rhythm, meter and sight-singing. Students will compose melodies and short pieces and complete listening projects.
Instructor(s): F. Chiao; Staff.

AS.376.129. World Music, World Cultures. 3 Credits.
What is music? Is it pitch and harmony? Rhythm and pulse? Or just pure silence and noise? This course will explore this question by exposing students to the remarkably diversified music of the world, focusing on music from non-Western cultures. Multimedia materials such as film, dance and concert performances will be used throughout the course.
Area: Humanities.

Welcome to the world of J-rock. This course will introduce 100 of the hottest, most significant, and just plain terrific artists in Japanese rock history. We will discuss J-rock’s origins, its subgenres, and its gradual and recent enjoyment in the West. Learn to identify bands by their vocalists and musical styles. Discover the poetry of Japanese lyrics. Above all, get ready to listen to a whole lot of music!
Instructor(s): J. Yun
Area: Humanities, Social and Behavioral Sciences.

AS.376.211. Theory & Musicianship I. 3 Credits.
Introduction to basic principles of tonal music through listening, analysis and music making. Students study melody, harmony, voice leading, figured bass and dissonance treatment, and will also undertake short composition projects. Must have taken the qualifying examination or AS.376.111.
Instructor(s): F. Chiao; Staff.

AS.376.212. Theory/Musicianship II. 3 Credits.
This course continues the written and aural work of the previous course but focuses on chromatic harmony while continuing the study of melody, counterpoint and figured bass.
Instructor(s): S. Stone.

AS.376.213. Mus Theory Musician III. 3 Credits.
Continuation of written and aural work of the previous two semesters. Projects in four-voice writing from figured bass and counterpoint in two and three voices are completed, using as models a variety of styles and composers. Students study simple binary, rounded binary and ternary forms, and compose a short work in a tonal idiom. Recommended Course Background: AS.376.212.
Instructor(s): S. Stone.

AS.376.214. Music Theory III - Formal Analysis. 3 Credits.
An examination of the musical forms of the Common Practice Period and the logic of their structures. Forms studied will include variation, binary, rounded binary, ternary, rondo, sonata-allegro, and sonata-rondo. Recommended Course Background: AS.376.212
Instructor(s): S. Stone.

AS.376.215. Music Theory III - Twentieth Century Music. 3 Credits.
An exploration of the music and analytical tools of the twentieth century. Topics will include set analysis, serial techniques, exotic and synthetic scales, neo-tonality, and geometric proportions. Recommended Course Background: AS.376.212
Instructor(s): T. Hardaway.

AS.376.216. Theory III - Counterpoint. 3 Credits.
A study of contrapuntal music, emphasizing composition in both the sixteenth- and eighteenth-century styles as epitomized by Palestrina and Bach.
Instructor(s): S. Stone.

AS.376.217. Music Theory III - Song. 3 Credits.
An examination of text-setting and song-writing in a variety of eras and styles. Topics will include art song, lieder, jazz standards, and pop tunes.
Prerequisites: AS.376.212
Instructor(s): M. Rickelton.

AS.376.231. Western Classical Music. 3 Credits.
Students will learn aural strategies to focus their listening, as well as vocabulary, cultural and historical context for music of the Baroque, Classical, Romantic and 20th century periods. Composers studied will include Bach, Handel, Haydn, Mozart, Beethoven, Schubert, Chopin, Brahms, Debussy, Schoenberg, and Stravinsky.
Instructor(s): R. Giarusso
Area: Humanities.

AS.376.242. Introduction to Popular Music. 3 Credits.
A survey of the stylistic features and social contexts of American popular music since the 1950s.
Instructor(s): D. Smooke; R. Fulton; S. Stone
Area: Humanities.

AS.376.250. Introduction to Computer Music. 3 Credits.
Introduction to Computer Music is an opportunity for people with no specialized training in music to explore electronic art music as a long-standing, if obscure, body of art, then to participate in creative work in the style. Participants will gain a heuristic understanding of forms of musical composition that operate outside the conventions of regular rhythm and harmony as they record and manipulate sound to sculpt it into original musical works. The lecture portion combines an historical overview of electronic music, rudiments of acoustics and musical perception, and instruction in compositional techniques and in using computers as creative musical tools. The laboratory portion, given at the Digital Media Center, serves as a workshop for creative exploration and for the completion of assigned creative projects including original works of digital sound art.
Instructor(s): S. Burt
Area: Humanities.

AS.376.252. Jazz History. 3 Credits.
Survey, investigation, and study of Jazz music and how it shaped American history from its origins to current times.
Instructor(s): A. Norris
Area: Humanities.

AS.376.258. Jazz Improvisation and Theory. 3 Credits.
Study of the theory and practice of Jazz Improvisation. Basic knowledge of music notation skills is required.
Instructor(s): A. Norris.

AS.376.302. History of Opera from Monteverdi to Wagner. 3 Credits.
This course will provide a historical survey of opera from its origins in the early 17th century through the late 19th century. Focusing on a specific repertoire of works and representative genres of the tradition, we will emphasize critical listening and analytical skills to demonstrate characteristic musical, dramatic, literary, and sociological aspects of the operas under examination. We will also discuss contextual issues such as libretti, staging, operatic production, the role of singers, the reception of operas.
Area: Humanities

Writing Intensive.
AS.376.303. Musical Theater from Aristophanes to Leonard Bernstein. 3 Credits.
This course examines the birth of musical theatre from Greek tragedy through the liturgical and secular plays of the middle ages and Renaissance, to the classical and romantic singspiels, operettas, and zarzuelas of the modern era, by such figures as Aristophanes, Adam de la Halle, Hildegard of Bingen, Angelo Poliziano, Juan del Encina, Wolfgang Amadeus Mozart, Gilbert and Sullivan, Ernesto Lecuona, Igor Stravinsky, and Kurt Weill. These will serve as a backdrop for a closer examination of the musicals of Jerome Kern, Cole Porter, George Gershwin, Irving Berlin, Richard Rodgers, Harold Arlen, Frank Loesser, Leonard Bernstein and others. In addition to studying and placing the works of these Broadway giants into a social, political, and economic context, we will study and perform from representative musicals and attend a performance at the Lyric Theatre. Student will be expected to write a capstone project.
Instructor(s): S. Weiss
Area: Humanities
Writing Intensive.

AS.376.331. Music in Late Medieval and Early Modern Europe. 3 Credits.
In this class we will explore the repertoire, history, and current scholarship of Western European music in the period ca. 1380-1600. Topics will include compositional history, patronage, the dissemination of music, reception, performance practice, and authenticity. Class time will involve a moderate amount of lecturing, in addition to class discussion, musical analysis, and listening.
Instructor(s): Z. Saunders
Area: Humanities
Writing Intensive.

AS.376.335. Mozart's Piano Music. 3 Credits.
Instructor(s): S. Levy
Area: Humanities
Writing Intensive.

AS.376.340. Music and Literature: Thomas Mann's Doctor Faustus. 3 Credits.
Instructor(s): R. Giarusso
Area: Humanities
Writing Intensive.

AS.376.341. Music and Literature: 20th Century Opera. 3 Credits.
The varied repertoire of 20th-century opera offers a rewarding context for the study of the rich and complex relationship between music and text. In this course, we will study a select group of 20th -century operas and the source texts (plays, short stories, and poems) upon which they are based. We will consider the changes that occur in translating the texts from one genre to the other, along with ways in which each opera influences our understanding of the source, and vice versa. As part of this focused study, we will also gain a broader familiarity with the styles of some of the most important composers of the last century. Major works to be studied include Pelleas et Melisande (Maeterlinck & Debussy), Wozzeck (Büchner & Berg), Peter Grimes (Crabbe & Britten), Death in Venice (Mann & Britten), and The Tempest (Shakespeare & Adès).
Instructor(s): R. Giarusso
Area: Humanities
Writing Intensive.

AS.376.343. Nineteenth-Century Piano Music: Forms and Meanings. 3 Credits.
This course will explore some of the highlights of the 19th-century piano repertoire with a focus both on the composers' specific musical choices and the expressive effects of those choices. Works will be drawn from such diverse possibilities as the sonatas of Beethoven and Schubert, the titled and character pieces of Schumann and Liszt, and the masterworks of Chopin and Brahms. Live demonstration as well as recorded performances will be used. We will also read and consider the views of other scholars and musicians on this repertoire, all in an attempt to answer, at least in part, the question of why this music is so beloved and thought so great by so many.
Instructor(s): S. Levy
Area: Humanities
Writing Intensive.

AS.376.350. Ways of Learning Music from Aristotle to Leopold Mozart. 3 Credits.
Area: Humanities
Writing Intensive.

AS.376.351. Music and Literacy in Western Culture Before 1800. 3 Credits.
This seminar examines the history of written music in the larger context of western textual culture before the modern era, applying ideas from the fields of book history and history of literacy to the study of music. We will examine the history of notation and consider issues of orality, literacy, and education as they relate to the composition, copying, circulation, and use of written music. Issues include: the role of written music in religious and political contexts, the distinction between “popular” and “learned” culture, and the effects of textual technologies (especially printing) on the circulation of music. Students will work with rare books and manuscripts in the University's collections to examine these issues.
Instructor(s): E. Archibald
Area: Humanities.

AS.376.371. Topics in Music Cognition I. 3 Credits.
What underlies our aesthetic response to music? How and why are we able to identify certain sounds as music? To what extent are music and natural language similar? What is it about music that evokes such powerful emotions such as happiness and sadness? What is unique to musical creativity? Examining such questions from cognitive science, neuroscience, psychology, and philosophical perspectives, this course explores relevant research and theory in the emerging domain of music perception and cognition. Students will complete a final research paper on the topic of their choice that integrates the course material.
Instructor(s): M. Lopez-Gonzalez
Area: Natural Sciences, Social and Behavioral Sciences.

AS.376.372. Introduction to Music Cognition II. 3 Credits.
Continuing from Topics in Music Cognition I, this course explores further the similarities and differences between music and language, the effects of musical training on cognitive development, and the expressive power of music, with an introduction to music and its role in film. We will read relevant research and theory on these topics from cognitive science, neuroscience, psychology, musicology, and philosophical perspectives.
Instructor(s): M. Lopez-Gonzalez
Area: Natural Sciences, Social and Behavioral Sciences.
AS.376.404. History of Musical Instruments. 3 Credits.
The history, technology, and performance of Western European musical instruments, their precursors, and their non-western counterparts, addressed by experts and explored on visits to historic collections.
Instructor(s): S. Weiss
Area: Humanities
Writing Intensive.

AS.376.407. Music and Evolution. 3 Credits.
This course will examine the bio-cultural evolution of music in light of recent interdisciplinary research on the social bases of human cognitive evolution, and explore its implications for current debates in musicology, ethnomusicology, psychology of music, and human cognitive evolution.
Instructor(s): E. Tolbert
Area: Humanities
Writing Intensive.

AS.376.415. Transnationalism and Globalization in World Music. 3 Credits.
How has the increase in the speed and spread of people, information, symbols, capital and commodities affected the kinds of music that are created and consumed both locally and globally? How does music contribute to discourses of authenticity, difference, and global homogeneity? How do we understand the meanings of music when local, culture-bound explanations are insufficient? How has the historical development of Western ideologies of music and art contributed to current forms of hegemonic control over music such as copyright law and the transnational music business? What have been the political, musical, ideological, and financial consequences of the development of "world music"? In this course we will addresses issues such as the above, with emphasis on an ethnomusicological approach to music in its transnational and global contexts.
Instructor(s): E. Tolbert
Area: Humanities
Writing Intensive.

AS.376.510. Independent Study. 3 Credits.

Cross Listed Courses

History

AS.100.317. Jewish Music. 3 Credits.
What is "Jewish music," and what roles has it played in global and Jewish cultures? This course will address these questions, considering genres and contexts of Jewish music from cantillation to klezmer and from art music to Yiddish cinema. Cross listed with Jewish Studies.
Instructor(s): J. Waiden
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

German Romance Languages Literatures

AS.212.678. Guillaume de Machaut: exploring medieval authorship in the digital age.
Using new websites devoted to the lyrics and music of Guillaume de Machaut, the foremost poet and composer of the 14th-century French royal court, this seminar will explore the role of music and literature during the Hundred Years War. Students will learn to use digital tools to view and analyze original illustrated musical manuscripts of Machaut's work.
Instructor(s): T. Rose-Steel.

Interdepartmental

AS.360.133. Great Books at Hopkins. 3 Credits.
Great Books at Hopkins is designed for first-year students and explores some of the greatest works of the literary and philosophical tradition in Europe and the Americas. In lectures, panel sessions, small seminars, and multimedia presentations, professors from a variety of academic disciplines lead students in exploring authors across history. Close reading and intensive writing instruction are hallmarks of this course, as is a changing reading list that includes, for this fall, Homer, Plato, Dante, Shakespeare, Douglass, and Woolf.
Instructor(s): E. Patton; K. Boyce
Area: Humanities
Writing Intensive.

Natural Sciences Area Major

The natural sciences area major offers students an opportunity to fashion a major according to their needs from appropriate upper-level courses in two different areas of natural science. The student may elect to construct a program bridging biology and chemistry, chemistry and physics, or some other combination. The student is free to select the courses to be taken as long as the program forms a sensible, coherent whole.

The area major in natural sciences can be used as preparation for a career in medicine, dentistry, or veterinary science; if the introductory courses chosen by the student include those prescribed for admission to these professional schools. Students selecting the natural sciences area major can also go on to do graduate work in natural science, though they may find that they will have to take some remedial work in graduate school if their undergraduate program does not include the courses that are usually required by a traditional major in a particular subject.

Requirements

The requirements of the natural sciences area major are the following:

Introductory Science Courses

One year of introductory chemistry with laboratory, one year of general physics with laboratory, one year of calculus, and 20 credits of other introductory and/or upper-level science and mathematics courses. Premedical students normally take one year of organic chemistry with laboratory and one year of biology with laboratory.

Upper-Level Science Courses

Five one-semester courses at the 300-level or higher, totaling at least 15 credits. These courses are to be divided between two different science departments. Courses used to satisfy the introductory science requirement above cannot be used to fulfill this requirement. Three of the courses must be taken in one of the following departments: Biology, Biophysics, Chemistry, Earth and Planetary Sciences, or Physics and Astronomy. Two of the courses may be taken in appropriate areas of engineering, mathematics, mathematical science, or Natural Science-coded psychology.

Laboratory courses may not count as upper-level science courses but do count for lower-level science courses. Further information is available in the Office of Academic Advising.
Humanities and Social Science Courses

A minimum of 30 Humanities and Social Science credits. These credits must include five courses at or beyond the 300-level, totaling at least 15 credits, to be taken in at most three different departments.

Electives

Elective courses from any area can be used to fulfill the minimum degree requirements of 120 credits.

Foreign Language

Proficiency is required in a modern foreign language equivalent to one year of an elementary college-level course or at least one semester of an intermediate-level course. An SAT Achievement Test score of 450 or above can be presented to fulfill the language requirement.

Writing Requirement

(See Academic Information for Undergraduates/Academic Requirements (p. 33))

Academic Standards

Students must maintain an overall grade point average of 2.0 in their major. The requirement of five 300-level science courses and five 300-level humanities and social science courses must be fulfilled using courses taught during the regular academic year at Hopkins or in the Johns Hopkins University Arts and Sciences Summer Session. They cannot include Carey Business School or School of Education research, internship, or independent study credits. Satisfactory/unsatisfactory courses (except for the 300-level humanities and social science courses) may not count toward these requirements. (Checksheets are available in the Office of Academic Advising.)

Near Eastern Studies

The Department of Near Eastern Studies offers programs in four main areas: Egyptology, Assyriology, Northwest Semitic languages and literatures (including the Hebrew Bible), and Near Eastern Archaeology. The department approaches Near Eastern civilizations primarily through their own records, and language study is therefore an important part of the curriculum. However, many undergraduate courses require no knowledge of foreign languages and any interested student may take them.

Facilities

The university’s Milton S. Eisenhower Library contains an outstanding collection of books and journals in the branches of Near Eastern studies pursued by the department. The Johns Hopkins Archaeological Museum has a collection of Near Eastern antiquities, including excellent study collections of Egyptian artifacts and Palestinian pottery. The Baltimore-Washington area is especially rich in library and museum facilities. Of special interest to students of the Near East are the Walters Art Museum, the Smithsonian Institution, and the Library of Congress.

The ancient Near East is where history begins. It is where the first crops were sown, the first towns built, and where writing was first invented. The origins of Western culture are to be found in its great civilizations, from the three great monotheistic religions—Christianity, Islam, and Judaism—to everyday aspects of our life that we take for granted, such as the alphabet and marking time by hours and minutes. The Near Eastern studies major can be the focal point of a broad liberal arts education, as well as a basis for graduate study. An undergraduate major can specialize in one of the four main areas mentioned above or in the civilizations of the ancient Near East in general.

The graduate program, the oldest of its kind in the nation, is designed to train professional scholars and teachers in the above-mentioned areas. The courses listed below may be modified in particular years to suit the needs of students currently in residence. Reading and private study under the direction of the faculty are considered as important as work in class. The seminars allow small groups of students and faculty to engage in close study of special problems. As the program is intended to lead to the Ph.D., students are admitted as candidates for the M.A. only in unusual cases.

Requirements for the Ph.D. Degree

Students working full time toward the Ph.D. may expect to do three to four years of course work, after which comprehensive examinations must be written before work on the dissertation begins. The examinations cover a student’s major and minor fields of concentration. After passing these examinations, the student, in consultation with the faculty, prepares a dissertation proposal for faculty consideration and then proceeds to write the dissertation.

An ability to read scholarly French and German is necessary, and an examination in one of these must be passed within the first semester of residence at Hopkins. The examination in the other may be delayed not more than one year. Some command of Greek and Latin is necessary to pursue biblical studies.

Financial Aid

The department awards most students admitted to the Ph.D. program who are in need of financial aid a basic annual fellowship covering full tuition and a full stipend for living expenses for up to five years. For some of this period, the department’s support may take the form of a teaching assistantship. In addition, the period of support may be extended by the various competitive awards available to advanced students within the university. When appropriate, the department will award travel stipends for graduate students to participate in archaeological excavations in the Near East or visit collections in this country and abroad.

For further information on graduate study in Near Eastern Studies, visit the departmental website at http://neareast.jhu.edu/.

For current faculty and contact information go to http://neareast.jhu.edu/directory/

Faculty

Chair
Glenn M. Schwartz
Whiting Professor of Archaeology: Near Eastern archaeology.

Professors
Betsy M. Bryan
Alexander Badawy Chair in Egyptian Art and Archaeology: Egyptian art and archaeology, Egyptology.

Richard Jasnow
Egyptology.

Theodore J. Lewis
Departments, Program Requirements, and Courses

Blum-Iwry Professor: Hebrew Bible, Northwest Semitic philology and religion.

P. Kyle McCarter Jr.

Assistant Professors
Paul Delnero
Assyriology.

Michael Harrower
Archaeology.

Jacob Lauinger
Assyriology.

Professors Emeriti
Jerrold S. Cooper
W.W. Spence Professor Emeritus of Semitic Languages.

Courses

AS.130.101. Ancient Near Eastern Civilizations. 3 Credits.
Review of important issues in ancient Near Eastern history and culture from the Neolithic era to the Persian period. Included will be an examination of the Neolithic agricultural revolution, the emergence of cities, states and writing, and formation of empires. Cultures such as Sumer and Akkad, Egypt, the Hittites, Israelites, Assyrians, Babylonians, and Persians will be discussed.
Instructor(s): G. Schwartz
Area: Humanities

AS.130.106. Freshman Seminar: Ancient Empires. 3 Credits.
Freshman Only A case-study approach to the political, social, and cultural history of one of the ancient Near Eastern states commonly described as an “empire,” such as the Akkadian Empire, the Neo-Assyrian Empire, the Neo-Babylonian Empire, or the Achaemenid (Persian) Empire. Individual classes mix a discussion of theoretical issues relevant to the study of ancient empires with close attention to primary sources.
Instructor(s): J. Lauinger
Area: Humanities
Writing Intensive.

AS.130.107. Freshman Seminar - BIG: Monumental Buildings and Sculpture in Antiquity and Today. 3 Credits.
The building of sculpted monuments and monumental architecture seems to be a universal human trait in all parts of the world, from the pyramids of ancient Egypt to the inuksuit cairns of the Inuit. What explains our urge to create monumental things? Why are monuments built, and how do we experience them? This course explores various answers to these questions through the disciplines that most frequently address monuments: archaeology, architecture, and art history. We will examine the archaeological record through a series of famous case studies from around the world to investigate the social significance of monuments in their original ancient contexts. We will also determine whether lessons learned from the past can be applied to the study of monuments today, and whether studying modern monuments—including those from our immediate surroundings in Baltimore—can help us understand those of the past. As a writing intensive seminar, students will also be taught techniques in academic essay writing, culminating in a final paper analyzing the social significance of a monument from the past or present.
Instructor(s): J. Osborne
Area: Humanities
Writing Intensive.

AS.130.110. Introduction To Archaeology. 3 Credits.
An introduction to archaeology and to archaeological method and theory, exploring how archaeologists excavate, analyze, and interpret ancient remains in order to reconstruct how ancient societies functioned. Specific examples from a variety of archaeological projects in different parts of the world will be used to illustrate techniques and principles discussed. Cross-listed with Anthropology.
Instructor(s): G. Schwartz
Area: Humanities, Social and Behavioral Sciences.

AS.130.114. The Archaeology of Ancient Israel. 3 Credits.
This course will explore the intersection of sexuality and power relationships in the forging of ethnic, political, and religious identities as presented in the Bible and ancient Near Eastern literature. Cross-listed with Jewish Studies.
Instructor(s): L. Wright
Area: Humanities.
AS.130.118. Ancient Israel: In Their Own Words. 3 Credits.
This course will focus on the inscriptions of ancient Israel and its neighbors from the first millennium BCE. Texts speak to us directly in ways that other nonverbal archaeological remains – such as architecture or pottery – cannot. Also, secondary sources written by later historians and commentators are similarly limited, as they are separated from original events by space, time, and cultural situation. Considering how individuals from an ancient culture articulate thoughts “in their own words” is invaluable to any meaningful reconstruction of history. Participants will learn to glean information from inscriptions, including those that are fragmentary or seemingly mundane. They will experience hands-on history writing, using primary sources in translation, though those with any knowledge of ancient languages, especially Classical Hebrew, will be able and encouraged to engage with the texts in their original vernacular. Basic knowledge of world history will be helpful though not prerequisite.

Prerequisites: AS.130.134
Instructor(s): H. Parker
Area: Humanities.

AS.130.126. Gods and Monsters in Ancient Egypt. 3 Credits.
Not open to those that have taken AS.130.326, Egyptian Religion and Mythology. The world of Ancient Egypt was populated by a vast array of gods, goddesses, and demons of an amazing variety in nature and form. In this class we will explore that world in the hope of gaining some insight into Egyptian concepts of divinity and of the relationship between humans and deities.

Prerequisites: Not open if you have taken AS.130.326
Instructor(s): R. Jasnow
Area: Humanities.

This course will trace the archaeological rediscovery of ancient Nubia and explore its changing significance in American culture. No prior knowledge of ancient Nubia is expected. Cross-listed with Africana Studies, History, and Museums & Society
Area: Humanities.

AS.130.135. Pyramids, Temples and Tombs. 3 Credits.
Introduction to the monuments and culture of Egypt from 3500 B.C. to 100 A.D. From the pyramids at Giza to Hellenistic Alexandria, this course surveys in slide illustrated lectures the remains of one of the world’s greatest early cultures.
Instructor(s): B. Bryan
Area: Humanities
Writing Intensive.

AS.130.140. Hebrew Bible / Old Testament. 3 Credits.
The Bible is arguably the most read and yet most misinterpreted book of all time, one of the most influential and yet most misapplied work of literature. The Hebrew Bible (Old Testament) is Scripture to Jews and Christians yet also a rich collection of literature w/ numerous literary genres that has been highly influential on secular Western culture. At its core, it is our most important literary source that when wed with archaeology helps us to understand the people and culture of Iron Age Israel and Judah. This is an introductory course surveying of the books of the Hebrew Bible (Old Testament) giving primary attention to the religious ideas they contain and the ancient contexts in which they were composed. Topics include: The Academic Study of Religion, Ancient Creation Accounts, Ancestral Religion, The Exodus and Moses, Covenant, Tribalism and Monarchy, The Ideology of Kingship, Prophecy, Priestly Sources, Psalms, Wisdom Literature, and Apocalyptic Thought.
Instructor(s): T. Lewis
Area: Humanities.

AS.130.142. Discover Hopkins Archaeology: The Technologies of Clay. 1 Credit.
Get your hands dirty as you experience firsthand the production of ancient clay artifacts that tell the stories of history. In lab, we will work with clays of different molecular structures to determine the technological constraints under which ancient craftsmen worked. We will also examine ancient clay artifacts in local archaeological collections. Then we will discuss how history is constructed with these artifacts.
Area: Humanities, Social and Behavioral Sciences.

AS.130.170. Diplomacy and Conflict in the Ancient Middle East. 3 Credits.
The Middle East is home to the invention of agriculture, cities, and writing. It is also in the Middle East that we find evidence of humanity’s earliest diplomatic activity in, for instance, the actual letters sent by ancient kings to one another, the treaties drawn up after their conflicts, and the inscriptions that commemorate their conquests. In this course, we examine texts such as these to explore questions such as: How do we characterize the international system of the ancient Middle East? Does this system change over the approximately two millennia for which we have documentation? Is it better to approach ancient diplomacy through present-day eyes or in the context of ancient world-views? Is an understanding of diplomacy in the ancient Middle East relevant to our understanding of modern international relations? All texts read in translation.
Instructor(s): J. Lauinger
Area: Humanities.

AS.130.172. Introduction to Aramaic. 3 Credits.
Cross-listed with Jewish Studies Aramaic, a Semitic language attested from 1100 BCE and spoken to this day, is central to some of the core texts of Western culture such as the Hebrew Bible, the Talmuds and the New Testament. This course will focus on Babylonian Aramaic, as preserved in the Babylonian Talmud and parallel sources. After studying the basic forms and grammar we will read various texts from the Babylonian Talmud as well as karaite and geonic literature and magical bowls. We will survey some of the main corpora written in Babylonian Aramaic and open a gateway to deeper understanding of this heritage.
Instructor(s): Y. Monnickendam
Area: Humanities.

AS.130.177. World Prehistory. 3 Credits.
An introduction to the archaeology of pre- and protohistoric cultures in key regions of the world, from the Neolithic revolution to the rise of complex societies. Discussions will focus on how they interacted with their neighbors, how this interaction would have played a part in their development, and the different approaches archaeologists use to understand their interconnections. Regions to be examined include the Near East, the Aegean, East Africa, East Asia, the Andes, and Central America. Cross-listed with Anthropology.
Instructor(s): M. Harrower
Area: Humanities, Social and Behavioral Sciences.

AS.130.201. Cleopatra. 3 Credits.
Few individuals in history have left as lasting an impression as that of Cleopatra. In this seminar-style class we will examine both the “fact” and “fiction” associated with her eventful life (and death). All readings in translation.
Instructor(s): R. Jasnow
Area: Humanities
Writing Intensive.
AS.130.212. The Archaeology of Death, Burial and The Human Skeleton. 3 Credits.
This course will introduce students to the archaeological investigation of past human populations through their mortuary and physical human remains. To this end, major theories and methodologies will be introduced, along with pertinent case studies for discussion. Dean’s Teaching Prize Fellowship Course.
Instructor(s): C. Brinker
Area: Humanities.

AS.130.215. David and Solomon in History and Legend. 3 Credits.
TBD
Area: Humanities.

AS.130.220. Mummies at the Movies. 2 Credits.
Ancient Egypt has captured the imaginations of people from all over the world for centuries. Hollywood has used Egypt as a setting, plot device, and character since the early days of film. Some are masterworks of the craft, but most leave some historical accuracy to be desired. We will watch some of the many films on the topic from the '30s to the present, and discuss their historical and cinematic value.
Area: Humanities.

AS.130.241. Introduction to Christianity in Late Antiquity. 3 Credits.
In the first century CE, a century of crisis and change, a Jew named Jesus was born, and with him Christianity. In this course we will discuss the development of Christianity in late antiquity, its historical background and its later influences. We will survey the main texts which are the foundation of this new religion, starting from sectarian literature, through the New Testament and ending with patristic literature. Using the main Christian dogmas as test cases, we will get acquainted with the main writers and literary sources of late antiquity, and discuss some of the arguments and agreements between Jews, Christians and Pagans of the era. We will seek to reveal the different sources of Christianity, Judaism on the one hand, and Greek and Latin cultures on the other, and try to understand the processes which led the early Christians to separate themselves from their Jewish origin and become an independent religion.
Area: Humanities.

AS.130.242. Aramaic for Beginners. 3 Credits.
Aramaic, a Semitic language dating from 1100 BCE, is spoken to this day. In this period it developed various dialects, and was used in some of the core texts of the western culture such as the Bible, the Talmud and the New Testament. It is used today in various modern vernacular, spoken by Jews and Christians across the middle east. In this course we will focus on Palestinian Aramaic, as preserved in the Palestinian Talmud and the Targum. After studying the basic forms and grammar we will read various Jewish Palestinian texts, and will also refer to some verses from the New Testament and the Dead Sea scrolls.

AS.130.251. Made for the Gods: Votive Egyptian Objects in the Archaeological Museum. 3 Credits.
This course investigates Egyptian votive objects made as gifts to the Gods. Students will learn about Egyptian religious practices and study groups of objects in the Archaeological Museum to learn to identify how they were produced, when, and for what functions. Physical analyses of the objects will be part of the class and facilitated by museum staff.
Instructor(s): B. Bryan
Area: Humanities.

AS.130.255. From Feast to Famine in the Ancient World. 3 Credits.
Biological life, on its most basic level, is the quest for sustenance. However, in human societies, food transcends mere sustenance to become a major actor in each society’s structure and beliefs. This dual nature of food as basic necessity and cultural touchstone makes its study of great importance to our understanding of civilization, both past and present. This class will explore the role food has played in Mesopotamian, Egyptian, Mesoamerican, and Andean cultures as evidenced in the archaeological record. Dean’s Teaching Prize Fellowship Course.
Instructor(s): A. Maskevich
Area: Humanities, Social and Behavioral Sciences.

AS.130.257. The Archaeology of Food. 3 Credits.
Area: Humanities.

AS.130.258. Ceramic Analysis in Archaeology. 3 Credits.
At archaeological sites following the invention of pottery roughly 10,000 BCE, ceramics are the single most frequent and ubiquitous class of artefact that archaeologists uncover. This class, which will be conducted in the Hopkins Archaeological Museum as a combination of lectures, discussions, and hands-on interactions with ancient and modern ceramics, surveys the methods and interpretive techniques that archaeologists use when studying this important category of material culture. Specific topics include manufacturing techniques, craft specialization, typology and chronology, production and exchange, scientific analyses, stylistic and functional analysis, and socio-political organization.
Instructor(s): J. Osborne
Area: Humanities.

AS.130.270. Ancient Demonology. 3 Credits.
After identifying the character of demons, ghosts, and zombies in modern literature and popular culture, this class will investigate similar disruptive and threatening creatures in the literature of Ancient Egypt, Mesopotamia, Israel, and Greece, as well as early Christian traditions. By the end of the term, students will be able to address the question, “What makes an evil spirit ‘evil’?”
Instructor(s): M. Simone
Area: Humanities.

AS.130.300. History Anc Mesopotamia. 3 Credits.
Area: Humanities.

AS.130.301. History of Ancient Syria-Palestine. 3 Credits.
A survey of the history of Ancient Syria and Cannan, including Ancient Israel.
Instructor(s): P. McCarter
Area: Humanities.

AS.130.302. History: Ancient Syria-Palestine II. 3 Credits.
A survey of the history of Ancient Syria and Cannan, including ancient Israel. Taught with AS.134.661. Cross-listed with Jewish Studies.
Instructor(s): P. McCarter
Area: Humanities.

AS.130.304. Ancient Cities. 3 Credits.
This course is a survey of cities in the ancient world from Uruk, around 3000 BC until the conquest of Babylon in 539 BC. The most important cities from this period will be studied and discussed from a historical, literary, and anthropological perspective. The topics covered include (1) the archaeological and textual evidence for these cities, (2) the depiction of these cities in literary and mythological works, and (3) contemporary theoretical approaches to understanding ancient urbanism.
Instructor(s): P. Delneri
Area: Humanities.
AS.130.305. Introduction to Ancient Law. 3 Credits.
Introduction to Ancient law is a survey of the legal systems of the ancient Near East from the third millennium to 4th century BC. It covers subjects like sources of law, constitutional law (the form of the government and the role of the king), family law (sex and gender issues), private and criminal law. Ancient legal concepts will be compared with modern concepts. All ancient sources will be read in translation.
Area: Humanities.

AS.130.306. Creation: Man, the Gods, and the Cosmos in Ancient Myth. 3 Credits.
Instructor(s): M. Sullivan
Area: Humanities.

AS.130.309. The Obelisks of Ancient Egypt. 3 Credits.
Instructor(s): M. Seidel; R. Schulz
Area: Humanities.

AS.130.310. Mythology of the Ancient World. 3 Credits.
This course explores the mythology of the ancient Near East from the invention of writing in Sumer in 3000 B.C. until the conquest of Alexander the Great near the end of the first millennium B.C. Mythological texts from Mesopotamia, Egypt, Anatolia, the Levant, and the Bible will be read from a comparative perspective. Special attention is paid to the origin and development of the epic, culminating in the great Epic of Gilgamesh, but considerable time is also given to the vast mythological and historical literature, and such diverse genres as love poetry, proverbs, humorous dialogues, Omens, and legal and medical texts. All readings are in English translation.
Instructor(s): P. Delnero
Area: Humanities.

AS.130.311. Gilgamesh. 3 Credits.
An examination of the development of both the character of Gilgamesh and the composition of epic narrative in ancient Mesopotamia, beginning with the earliest Sumerian Gilgamesh stories of the third millennium B.C. The bulk of the course will consist of a close reading in English of the Akkadian Gilgamesh epic, focusing on its concerns with homosocial bonding, human sexuality, and mortality. Some attention will be paid to the influence of Gilgamesh on Greek epic, and the reception of Gilgamesh in the modern world since its recovery in the late 19th century.
Instructor(s): M. Sullivan
Area: Humanities
Writing Intensive.

AS.130.312. Ancient Medicine. 3 Credits.
A study of medicine in the ancient Near Eastern and Aegean worlds, including an examination of the practices of medicine in these ancient societies but with primary emphasis given to ideas about health and disease. Readings are selected from primary sources in the writings of ancient Egypt, Mesopotamia, Israel, Greece, and Rome. Topics treated include the sources of our knowledge; the nature of medical practitioners, medical treatment, and surgery; beliefs about disease and the etiology of illness; concepts of contagion and ritual purity. Special attention is given to Hippocratic medicine, the synthesis of Galen, and the rise of humoralism.
Instructor(s): P. McCarter
Area: Humanities.

AS.130.317. Akhenaten, Nefertiti and the Armana Period. 3 Credits.
This seminar will consider some of the historical and art historical issues of the time of Akhenaten, Nefertiti, and Tutankhamun. Why and in what ways did Akhenaten change traditional Egyptian religion? Was all of Egypt transformed by the king’s new sole god Aten? Who were the Atenists, and what happened to them in the time of Tutankhamun? Did Akhenaten have an unusual physical form, a genetic disorder, or other medical condition? Or was his image in sculpture solely an artistic fiction? Who was Nefertiti and did she become king after Akhenaten’s death? The course will investigate the primary evidence regarding these fascinating questions and will look into a variety of scholarly responses to them.
Area: Humanities.

AS.130.320. A Good Scribe & Learned Man: Wisdom & Knowledge in Ancient Egypt. 3 Credits.
Already in Antiquity, the Egyptians had a reputation for wisdom and “secret” knowledge. But what was the reality behind this reputation? Who was a “wise man” or “wise woman” in Egypt? How did they organize and teach scientific ideas and concepts? How did they compose, maintain, and transmit the “books” containing their canon of knowledge? From the abundant ethical, scientific, literary, magical, and religious writings of the Egyptians we will attempt to understand what wisdom and knowledge meant to the Ancient Egyptians.
Instructor(s): R. Jasnow
Area: Humanities.

AS.130.323. Cleopatra’s Egypt: Ptolemaic-Roman Egypt. 3 Credits.
This lecture course is a survey of the history, society, and culture of Graeco-Roman Egypt. We will concentrate on Ptolemaic Egypt (ca. 332-30 B.C.), but will also devote some time to Roman Egypt, especially to the subjects of the decline of paganism and spread of Christianity in Egypt.
Instructor(s): R. Jasnow
Area: Humanities.

AS.130.328. Ancient Egypt /Africa. 3 Credits.
Recent excavation and research have shed light on several ancient cultures of the Nile and its tributaries. We will look at the available archaeological and textual (all Egyptian) evidence for these societies and their interactions with Egypt between 3500 and 300 B.C. We will also discuss research aims and methods employed now and in the past in Egypt and the Sudan.
Instructor(s): B. Bryan
Area: Humanities
Writing Intensive.

AS.130.329. Ancient Egyptian Art and Archaeology. 3 Credits.
A survey of Egyptian art as seen in the temples, tombs, funerary, and minor arts of Egypt between 3000 and 100 B.C. Slide lectures will provide a survey of art from the Pyramids to Augustus Caesar and will focus on such topics as the principles of Egyptian art; can the term art apply to early Egypt? How were artisans trained and what techniques and materials were utilized in their work? Co-listed (meets with) AS.133.750.
Instructor(s): B. Bryan
Area: Humanities
Writing Intensive.

AS.130.330. Sex And The Garden. 3 Credits.
A seminar on the history of interpretation of Genesis 2-3, with a focus on the uses of the biblical story of the Garden of Eden in Jewish, Christian, and Muslim traditions. Class attendance and participation are mandatory. Cross-listed with Jewish Studies and Study of Women, Gender, & Sexuality.
Instructor(s): E. Robbins
Area: Humanities.
AS.130.331. Sex, Drugs, and Rock & Roll in Ancient Egypt. 3 Credits.
This seminar explores the social roles of sexuality, alcohol, other drugs, music, fragrance, and sensuality in secular and religious areas of Egyptian life, largely but not exclusively during the New Kingdom, ca. 1500 to 1000 B.C. The ancient attitudes towards these elements will be explored through the ancient textual sources in translation and the artistic representations.
Instructor(s): B. Bryan
Area: Humanities
Writing Intensive.

AS.130.334. Museum Study of Objects from the Eton College Myers Collection. 3 Credits.
Students will be introduced to studying Egyptian objects through an investigation of some pieces from the Eton College Myers Collection to be on long term loan to the University. Cataloging and research for these objects will be part of the course. Taught with AS.133.706 Cross-listed with Program in Museums and Society
Instructor(s): B. Bryan
Area: Humanities.

AS.130.336. Human Sacrifice in the Ancient Near East and Beyond. 3 Credits.
A survey of the phenomenon of human sacrifice, primarily focusing on the practice in the ancient Near East but also covering examples from other societies, both ancient and modern
Instructor(s): H. Dewrell
Area: Humanities, Social and Behavioral Sciences.

AS.130.338. The Talmud as Read in the Middle Ages: The Sugya of Kavod HaBriot (Human Dignity). 3 Credits.
In the early Middle Ages the Talmud emerged as the defining document of official Jewish religion and culture, and remained so until the dawn of the Modern Era. Jewish scholars in many different countries, and in a wide variety of cultural contexts, developed certain ways of reading, interpreting, and applying the Talmud. In the process, they produced an immense corpus of commentary and law. This course will examine how and why the Talmud was studied in these centuries by Jews who mined it, subject by subject, for emotional, philosophical, and legal meaning.
Instructor(s): D. Katz
Area: Humanities.

AS.130.340. History Religion/Israel. 3 Credits.
A study of the origins of ancient Israelite religion, its emergence from and continuities with ancient West Semitic religion and culture. Students will be exposed to comparative and historical approaches for reconstructing this time period including the utilization of new sources of knowledge (e.g., Syro-Palestinian archaeology and epigraphy; neighboring ancient Near Eastern religions).
Instructor(s): T. Lewis
Area: Humanities, Social and Behavioral Sciences.

AS.130.341. Traditionalism vs. Orthodoxy in the Modern Era: The Case of Judaism. 3 Credits.
During the Modern Era in European history, the Traditionalist Jewish civilization of Europe that had evolved over many centuries went into deep crisis. The new political, social, and intellectual realities which characterized Modernity seriously challenged, overwhelmed, and indeed threatened to destroy the Jewish Traditionalist culture and society. In response, different Traditionalist thinkers and communities evolved a number of strategies for surviving in a modern environment, strategies that unexpectedly transformed Traditionalism into something different, which came to be called Orthodox Judaism. This course explores this process of transformation, which has had an important impact on Jewish life in the modern and post-modern eras. Cross-listed with Jewish Studies.
Instructor(s): D. Katz
Area: Humanities.

AS.130.343. Dead Sea Scrolls-English. 3 Credits.
Cross-listed with Jewish Studies A survey of the manuscripts found at Qumran and other sites near the Dead Sea.
Instructor(s): P. McCarter
Area: Humanities.

AS.130.346. Introduction to the History of Rabbinic Literature. 3 Credits.
Instructor(s): D. Katz
Area: Humanities.

AS.130.348. Religious Law Wrestles With Change: The Case of Judaism. 3 Credits.
Description: "How does a religious system which defines its ancient laws as God-given and unchangeable apply them to radically different and changing social, political and intellectual situations? This course explores the literature of "Questions and Answers"(She’elot u-Teshuvot), the Jewish legal responsa which have struggled to match Jewish religious law to modern life for fifteen centuries. A sweeping survey of Jewish history as revealed by one of its most impenetrable yet fascinating sources. Cross-listed with Jewish Studies.
Instructor(s): D. Katz
Area: Humanities.

AS.130.350. Near East Archaeology Issues. 3 Credits.
Selected problems are reviewed within a time span ranging from the Neolithic to the Hellenistic period. The focus is on the reasons for societal change (and societal stasis), with particular reference to transformations in social organization, economy, and ideology.
Instructor(s): G. Schwartz
Area: Humanities, Social and Behavioral Sciences.

AS.130.351. The Emergence of Civilization: A Cross-Cultural Examination. 3 Credits.
A comparative study of the origins of urban, literate civilizations in five culture areas: Mesopotamia, China, the Indus Valley, Egypt, and Mesoamerica. For each area, we will review the physical setting, the archaeological and textual evidence for the development of states and urban civilization, and theories advanced to explain the rise (and eventual collapse) of these complex societies.
Instructor(s): G. Schwartz
Area: Humanities, Social and Behavioral Sciences.
AS.130.352. History of Hasidism. 3 Credits.
Although it appears to be a relic of pre-modern Judaism, Hasidism is a phenomenon of the modern era of Jewish history. This course surveys the political and social history of the Hasidic movement over the course of the last three centuries. Students will also explore basic features of Hasidic culture and thought in their historical development. Cross-listed with Jewish Studies.
Instructor(s): D. Katz
Area: Humanities.

AS.130.353. Space Archaeology: An Introduction to Satellite Remote Sensing, GIS and GPS. 3 Credits.
This course introduces technologies archaeologists use to map ancient landscapes. These include Geographic Information Systems (GIS) mapping software, advanced Global Positioning System (GPS) receivers, and various types of satellite imagery. Taught together with AS.131.653.
Instructor(s): M. Harrower
Area: Humanities, Natural Sciences, Social and Behavioral Sciences.

AS.130.354. Archaeological Method and Theory. 3 Credits.
What questions do archaeologists ask about the ancient past, how do they collect relevant evidence, and how do they arrive at satisfying answers to their questions? This course will review approaches to method and theory including evolutionary archaeology, culture-historical archaeology, processualist and post-processualist archaeologies, and explores the future of archaeology as a scientific and humanistic discipline. Previous coursework in archaeology or Permission of instructor required. Meets with AS.131.654.
Instructor(s): M. Harrower
Area: Humanities, Social and Behavioral Sciences.

Introduces students to the methods of analysis involved in the study of archaeological ceramics. In addition to the history of ceramic analysis and its place in archaeology, students will be introduced to the basic skills needed for processing ceramics in an archaeological setting, and introduce them to the basic corpus of ancient Eastern Mediterranean ceramics, from the Neolithic until the Hellenistic period, with an emphasis on assemblages from the region of Near East, Egypt, Aegean, Greece, and Rome. They will learn more technical forms of analysis aimed at identifying methods of production, and the function and use of ceramic vessels. The aim is to prepare students who intend to participate in archaeological field projects with the appropriate knowledge of the ceramics of the Eastern Mediterranean Region. Emphasis will be placed on linking analytical methods with the appropriate research questions they can address. Students will have the opportunity to work directly with existing collections at the university, and in the Walters Art Gallery.
Instructor(s): S. Batiuk
Area: Humanities.

AS.130.356. Ancient Magic and Divination. 3 Credits.
Area: Humanities.

AS.130.357. Geographic Information Systems in Archaeology. 3 Credits.
Applications of GIS in archaeology have recently expanded dramatically and GIS has now become an indispensable tool for archaeological research worldwide. This course will introduce the major applications of Geographic Information Systems (GIS) in archaeology. These include the history of GIS in archaeology, air photography and satellite imagery, predictive modeling, hydrological modeling, viewsheds, and least-cost routes. It will grapple with theoretical issues manifest in archaeological GIS including conflicts between environment and social understandings of the ancient past, and will foster discussion of issues that affect outcomes of analyses including spatial scale and boundary delineation choices that can dramatically influence results. Students will learn the basics of ESRI’s ArcGIS software. Taught with AS.131.657.
Instructor(s): M. Harrower
Area: Humanities, Natural Sciences.

AS.130.359. Reading the Talmud in the Post-Talmudic Era. 3 Credits.
Instructor(s): D. Katz
Area: Humanities.

AS.130.361. The Politics of Sexuality in the Bible and the Ancient Near East. 3 Credits.
This course will explore the intersection of sexuality and power relationships in the forging of ethnic, political, and religious identities as presented in the Bible and ancient Near Eastern literature. Cross-listed with Jewish Studies and Women, Gender, and Sexuality.
Instructor(s): E. Fleming
Area: Humanities.

AS.130.364. Archaeology of Arabia. 3 Credits.
This course examines the archaeology of the Arabian Peninsula from the earliest Paleolithic in the region (c. 1.5 million years ago) through the first few centuries of the Islamic era (c. 1000 AD). We will review basic geology and environmental conditions, examine the development of animal herding and crop cultivating lifeways, and scrutinize the rise of ancient South Arabian complex societies and civilizations. Co-listed with AS.131.664.
Instructor(s): M. Harrower
Area: Humanities.

AS.130.366. Reading the Talmud in Pre-modern Jewish Culture. Attempting to Cope With Abusive Husbands: Annulment of Marriage in the Literature of Post Talmudic Rabbinic Judaism. 3 Credits.
The evolution of Talmudic thinking resulted in laws which made marriage too easy, divorce too difficult. This generated centuries of attempts to grapple with the consequences of this conundrum in real-life situations. This course analyzes the literature produced by these attempts. Students will read texts in original Hebrew.
Instructor(s): D. Katz
Area: Humanities.
AS.130.367. Jerusalem: The Holy City in History and Archaeology. 3 Credits.
Jerusalem has a global significance utterly disproportionate to its size or wealth, and it has been this way since the days when the city was first settled. On the one hand, this is due to Jerusalem's role as a sacred space for all three of the world's largest monotheistic religions: Christianity, Islam, and Judaism. On the other, Jerusalem has long been the fulcrum of geopolitical struggles in the Middle East and beyond. This lecture course explores Jerusalem's political, cultural, and religious trajectory over the past three millennia through the lens of the city's amazingly rich historical and archaeological records. In so doing, we unravel the mythical and historical threads that combine to create the powerful symbolic resonance of Jerusalem today, discovering en route that, when it comes to Jerusalem, identifying what is "myth" and what is "history" is a complex and contested undertaking.
Instructor(s): J. Osborne
Area: Humanities.

AS.130.371. Ritual and Magic in Ancient Egypt. 3 Credits.
This course will serve to introduce students to the study of religion, ritual, and magic through the lens of a specific culture: ancient Egypt. Throughout the course students will be introduced to ancient Egyptian culture and will interact with Egyptian texts and artifacts, including those found in the collections of The Johns Hopkins Archaeological Museum, in order to illustrate key concepts. Dean's Teaching Fellowship course.
Instructor(s): M. Fraser
Area: Humanities.

AS.130.372. Prophetic Lit-Hebrew Bib. 3 Credits.
A survey of the prophetic literature of the Hebrew Bible (Old Testament) as it is understood in its ancient Near Eastern cultural and historical context. Freshmen admitted with permission.
Instructor(s): A. Davis
Area: Humanities.

AS.130.373. Prophets and Prophecy in the Bible. 3 Credits.
From thundering voices of social justice to apocalyptic visionaries, biblical prophets have been revered by Jews, Christians and Muslims for thousands of years. They have inspired civic leaders such as Martin Luther King Jr. yet also provided fodder for modern charlatans promising a utopian future. Yet who were these individuals (orators? politicians? diviners? poets?) and what was the full range of their message as set against the Realpolitik world of ancient Israel, Iraq, Egypt, Syria and Jordan?
Instructor(s): T. Lewis
Area: Humanities.

AS.130.374. The Archaeology of Imaginary, Entangled, Hybrid Globalizations. 3 Credits.
In this course students will read and examine two recent books, Michael Shanks’ (2012) “The Archaeological Imagination”, Ian Hodder’s (2012) “Entangled: An Archaeology of the Relationships between Humans and Things” and critically compare them with readings on archaeologies of world systems, colonialism, hybridity, and globalization. In particular, we will examine how post-colonial social theory can inform and enhance understandings of ancient past and how it might interface with scientific, empirically oriented archaeological field research and history building. Course requirements will include a short weekly written response to the readings - no exams or term paper will be required. (Taught jointly with AS.131.674)
Instructor(s): M. Harrower
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.130.400. Introduction to Middle Egyptian. 3 Credits.
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2055-1650 B.C.). In the second semester, literary texts and royal inscriptions will be read. Course meets with AS.133.600.
Instructor(s): K. Davis
Area: Humanities.

AS.130.401. Introduction To Middle Egyptian. 3 Credits.
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2011-1700 B.C.). Co-listed with AS.133.601.
Instructor(s): K. Davis
Area: Humanities.

AS.130.402. Intermediate Middle Egyptian. 3 Credits.
Second year reading course in Middle Egyptian. In this course we will read a variety of Middle Egyptian hieroglyphic compositions and documents. Knowledge of Middle Egyptian required.
Instructor(s): A. Arico; M. Fraser.

In this writing intensive seminar, we will explore how the Ancient Egyptians engaged with their own past and how they understood “history.” AS.130.420 is required of NES Majors, who usually will take it in their senior year. This seminar will also be open to non-majors who have taken at least one 100-level Near Eastern Civilization course and one 300-level Near Eastern Civilization course.
Instructor(s): B. Bryan; R. Jasnow
Area: Humanities
Writing Intensive.

AS.130.436. Seminar on Amarna Art and History. 3 Credits.
This course will tackle several topics relating to the reigns of Akhenaten through Tutankhamun, combining historical and art/archaeological methodologies. The seminar will be taught at a graduate level but will accept undergraduate majors with the instructor’s permission. Background knowledge of ancient Egypt is required. A separate section will meet in addition to read primary sources in original language. Topics will include the nature of the Aten and Amarna monotheism; foreign policy in the period; extent of Akhenaten’s control and his administration, etc.; the DNA evidence and its evaluation.
Prerequisites: EN.600.107
Instructor(s): B. Bryan
Writing Intensive.

AS.130.440. Elem Biblical Hebrew. 3 Credits.
Introduction to the grammar, vocabulary, and writing system of biblical Hebrew.
Instructor(s): M. Simone
Area: Humanities.

AS.130.441. Elementary Biblical Hebrew. 3 Credits.
Survey of grammar and reading of simple texts. (Credit given only on completion of AS.130.440 and AS.130.441). May not be taken on a satisfactory/unsatisfactory basis.
Instructor(s): M. Simone
Area: Humanities.

AS.130.442. Readings - Hebrew Prose. 3 Credits.
Reading of biblical Hebrew prose, especially from the Pentateuch, Joshua, Judges, Samuel, and Kings. Cross-listed with Jewish Studies.
Instructor(s): E. Guinn-Villareal
Area: Humanities.
AS.130.443. Reading Of Hebrew Prose. 3 Credits.
Reading of Biblical Hebrew prose, especially from the Pentateuch, Joshua, Judges, Samuel, and Kings.
Instructor(s): Staff
Area: Humanities.

AS.130.501. Readings & Research. 3 Credits.
Instructor(s): P. Delnero; R. Jasnow; Staff.

AS.130.502. Readings & Research. 3 Credits.

AS.130.503. Independent Study. 3 Credits.
Instructor(s): G. Schwartz; R. Jasnow.

AS.130.504. Independent Study. 1 - 4 Credit.
Instructor(s): B. Bryan; G. Schwartz; P. Delnero; P. McCarter; R. Jasnow.

AS.130.505. Independent Study-Archaeology Fieldwork. 1 Credit.
Instructor(s): G. Schwartz
Area: Humanities, Social and Behavioral Sciences.

AS.130.506. Independent Study-Archaeology Fieldwork. 3 Credits.
Instructor(s): G. Schwartz
Area: Humanities, Social and Behavioral Sciences.

AS.130.510. Archaeology Major Honors Thesis. 3 Credits.
Must be conducted in fall semester, senior year.
Instructor(s): G. Schwartz
Area: Humanities.

AS.130.590. Independent Study. 1 Credit.
Instructor(s): M. Harrower.

A detailed study of selected problems in Near Eastern history.
Instructor(s): P. Delnero.

A three-year history cycle required of all graduate students and forming the core of our graduate program. One year each will be devoted to Egyptian history, Mesopotamian history, and Syro-Palestinian history.
Instructor(s): J. Lauinger.

Instructor(s): M. Harrower
Area: Humanities.

AS.131.622. Archeaology of Iron Age Palestine.
This course provides insight into the nature of archaeological evidence and the difficulties involved in critically evaluating, interpreting and applying this evidence to fundamental cultural and historical problems in the archaeology of ancient Israel.
Instructor(s): B. Gittlen.

Topic varies but can include the archaeology of Mesopotamia, Syria, or Palestine, or thematic discussions (e.g., on ideology, state collapse, etc.).
Instructor(s): G. Schwartz.

AS.131.635. Seminar: Near East Archaeology.
Topic varies but can include the archaeology of Mesopotamia, Syria, or Palestine, or thematic discussions (e.g., on ideology, state collapse, etc.).
Instructor(s): G. Schwartz; M. Feldman.

AS.131.653. Space Archaeology: An Introduction to Satellite Remote Sensing, GIS and GPS.
This course introduces technologies archaeologists use to map ancient landscapes. These include Geographic Information Systems (GIS) mapping software, advanced Global Positioning System (GPS) receivers, and various types of satellite imagery. Taught together with AS.130.353.
Instructor(s): M. Harrower
Area: Humanities, Natural Sciences, Social and Behavioral Sciences.

What questions do archaeologists ask about the ancient past, how do they collect relevant evidence, and how do they arrive at satisfying answers to their questions? This course will review approaches to method and theory including evolutionary archaeology, culture-historical archaeology, processualist and post-processualist archaeologies, and explores the future of archaeology as a scientific and humanistic discipline. Previous coursework in archaeology or Permission of instructor required. Meets with AS.130.354.
Instructor(s): M. Harrower
Area: Humanities, Social and Behavioral Sciences.

Applications of GIS in archaeology have recently expanded dramatically and GIS has now become an indispensable tool for archaeological research worldwide. This course will introduce the major applications of Geographic Information Systems (GIS) in archaeology. These include the history of GIS in archaeology, air photography and satellite imagery, predictive modeling, hydrological modeling, viewsheds, and least-cost routes. It will grapple with theoretical issues manifest in archaeological GIS including conflicts between environment and social understandings of the ancient past, and will foster discussion of issues that affect outcomes of analyses including spatial scale and boundary delineation choices that can dramatically influence results. Students will learn the basics of ESRI's ArcGIS software, Taught with AS.130.357.
Instructor(s): M. Harrower
Area: Humanities, Natural Sciences.

AS.131.664. Archaeology of Arabia.
This course examines the archaeology of the Arabian Peninsula from the earliest Paleolithic in the region (c. 1.5 million years ago) through the first few centuries of the Islamic era (c. 1000 AD). We will review basic geology and environmental conditions, examine the development of animal herding and crop cultivating lifeways, and scrutinize the rise of ancient South Arabian complex societies and civilizations. Co-listed with AS.130.364.
Instructor(s): M. Harrower.

AS.131.674. The Archaeology of Imaginary, Entangled, Hybrid Globalizations.
In this course students will read and examine two recent books, Michael Shanks’ (2012) “The Archaeological Imagination”, Ian Hodder’s (2012) “Entangled: An Archaeology of the Relationships between Humans and Things” and critically compare them with readings on archaeologies of world systems, colonialism, hybridity, and globalization. In particular, we will examine how post-colonial social theory can inform and enhance understandings of ancient past and how it might interface with scientific, empirically oriented archaeological field research and history building. Course requirements will include a short weekly written response to the readings - no exams or term paper will be required. (Taught jointly with AS.130.374)
Instructor(s): M. Harrower
Area: Humanities, Social and Behavioral Sciences.

AS.131.800. Readings & Research.
Instructor(s): Staff.
AS.131.801. Readings and Research.
Instructor(s): Staff
Area: Humanities.

AS.131.848. Dissertation Research.
Instructor(s): Staff.

Instructor(s): Staff.

AS.132.600. Elementary Akkadian.
An introduction to the paleography, grammar and lexicon of the Akkadian language, and the reading of simpler texts in that language. Undergraduates admitted to this course earn 4.5 credits per semester.
Instructor(s): A. Glenn.

AS.132.601. Elementary Akkadian.
An introduction to the paleography, grammar and lexicon of the Akkadian language, and the reading of simpler texts in that language. Undergraduates admitted to this course earn 4.5 credits per semester.
Instructor(s): Staff.

In this course a selection of intermediate level Akkadian texts from different genres and period will be read, analyzed and discussed. To build on skills learned in Introduction to Akkadian, specific emphasis will be placed on understanding more advanced grammatical forms and learning how to critically use research tools like the Chicago Assyrian Dictionary and von Soden’s Akkadisches Handwoerterbuch.
Instructor(s): J. Bowen.

In this course a selection of intermediate level Akkadian texts from different genres and period will be read, analyzed and discussed. To build on skills learned in Introduction to Akkadian, specific emphasis will be placed on understanding more advanced grammatical forms and learning how to critically use research tools like the Chicago Assyrian Dictionary and von Soden’s Akkadisches Handwoerterbuch.
Prerequisites: AS.132.600 OR AS.132.601
Instructor(s): J. Lauinger
Area: Humanities.

This course introduces students to letters written in the Akkadian language from a variety of historical periods.
Prerequisites: AS.132.600 AND AS.132.601
Instructor(s): J. Lauinger
Area: Humanities.

Instructor(s): P. Delnero.

AS.132.640. Historical Texts.
Instructor(s): J. Lauinger.

AS.132.641. Historical Texts.
Instructor(s): P. Delnero.

AS.132.644. Treaties And Diplomacy.
Instructor(s): J. Lauinger.

AS.132.650. Peripheral Akkadian.
Instructor(s): J. Lauinger.

AS.132.651. Peripheral Akkadian.

AS.132.658. Akkadian Wisdom Literature.
This course introduces students to the group of Akkadian compositions typically described as ‘Wisdom Literature,’ such as The Babylonian Theodicy, the Poem of the Righteous Sufferer, fables, proverbs, instructions, and disputes.
Instructor(s): J. Lauinger.

Instructor(s): J. Lauinger.

AS.133.320. Wisdom and Knowledge in Ancient Egypt. 3 Credits.
Already in Antiquity, the Egyptians had a reputation for wisdom and “secret” knowledge. But what was the reality behind this reputation? Who was a “wise man” or “wise woman” in Egypt? How did they organize and teach scientific ideas and concepts? How did they compose, maintain, and transmit the “books” containing their canon of knowledge? From the abundant ethical, scientific, literary, magical, and religious writings of the Egyptians we will attempt to understand what wisdom and knowledge meant to the Ancient Egyptians.
Area: Humanities.

AS.133.600. Introduction to Middle Egyptian.
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2135-2000 B.C.). In the second semester, literary texts and royal inscriptions will be read.
Instructor(s): K. Davis.

AS.133.601. Introduction To Middle Egyptian (Hieroglyphs).
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2111-1700 B.C.). Co-listed with AS.130.401
Instructor(s): K. Davis.

AS.133.610. Middle Egyptian Texts.
In this course we read a variety of Middle Egyptian hieroglyphic compositions and documents. Knowledge of Middle Egyptian Required.
Instructor(s): B. Bryan; R. Jasnow.
AS.133.611. Middle Egyptian Texts.
In this course we read a variety of Middle Egyptian hieroglyphic compositions and documents. Knowledge of Middle Egyptian Required. Instructor(s): B. Bryan; R. Jasnow.

AS.133.614. Funerary Texts.
Advanced Middle Egyptian texts course covering Coffin Texts and the Book of the Dead, and other afterlife ritual texts. Instructor(s): B. Bryan; R. Jasnow
Area: Humanities.

AS.133.620. Hieratic.
Instructor(s): R. Jasnow.

AS.133.630. Old Egyptian.
Instructor(s): B. Bryan.

AS.133.631. Old Egyptian.
Instructor(s): B. Bryan.

AS.133.640. Late Egyptian.
Instructor(s): R. Jasnow.

AS.133.641. Late Egyptian Texts.
An introduction to the grammar and texts of Late Egyptian. Instructor(s): R. Jasnow
Area: Humanities.

AS.133.646. Demotic Texts.
Instructor(s): R. Jasnow.

AS.133.647. Demotic Texts.
Instructor(s): R. Jasnow.

AS.133.648. Intro To Coptic.
Instructor(s): R. Jasnow.

AS.133.649. Advanced Coptic.
In this class we will read Coptic texts of various genres. Instructor(s): R. Jasnow.

AS.133.652. The "Chapelle Rouge" of Queen Hatshepsut at Karnak.
Despite its undeniable importance, the Red Chapel of Hatshepsut at Karnak is still not fully understood. The class will deal in detail with the following main issues: • Formal structure and dogma of the relief program. • The historical value of the coronation inscription. • The significance of the Red Chapel in the religious landscape in Karnak under Queen Hatshepsut. Instructor(s): M. Seidel; R. Schulz
Area: Humanities.

AS.133.653. Introduction to Ptolemaic Hieroglyphs.
An introduction to the grammar and hieroglyphic writing system employed in Graeco-Roman Period Egyptian temple texts. Instructor(s): R. Jasnow
Area: Humanities.

AS.133.656. Advanced Demotic Texts.
Reading of texts of varying content in Demotic Egyptian. Instructor(s): R. Jasnow.

AS.133.706. Museum Study of Objects from the Eton College Myers Collection.
Students will be introduced to studying Egyptian objects through an investigation of some pieces from the Eton College Myers Collection to be on long term loan to the University. Cataloguing and research on these objects will be part of the course. Taught with AS.130.334 Instructor(s): B. Bryan.

AS.133.717. Akhenaten, Nefertiti and the Armana Period.
This seminar will consider some of the historical and art historical issues of the time of Akhenaten, Nefertiti, and Tutankhamun. Why and in what ways did Akhenaten change traditional Egyptian religion? Was all of Egypt transformed by the king's new sole god Aten? Who were the Atenists, and what happened to them in the time of Tutankhamun? Did Akhenaten have an unusual physical form, a genetic disorder, or other medical condition? Or was his image in sculpture solely an artistic fiction? Who was Nefertiti and did she become king after Akhenaten's death? The course will investigate the primary evidence regarding these fascinating questions and will look into a variety of scholarly responses to them. Area: Humanities.

AS.133.721. Egyptian Art of the Old thru Middle Kingdom.
Instructor(s): B. Bryan.

AS.133.736. Seminar on Amarna Art and History.
This course will tackle several topics relating to the reigns of Akhenaten through Tutankhamun, combining historical and art/archaeological methodologies. The seminar will be taught at a graduate level but will accept undergraduate majors with the instructor’s permission. Background knowledge of ancient Egypt is required. A separate section will meet in addition to read primary sources in original language. Topics will include the nature of the Aten and Amarna monotheism; foreign policy in the period; extent of Akhenaten’s control and his administration, etc.; the DNA evidence and its evaluation. Instructor(s): B. Bryan.

AS.133.750. Seminar in Egyptian Art and Archaeology.
The theme for this course will be archaeology of the Mut precinct in Luxor where Johns Hopkins is excavating. Study of the comparative materials from other sites will be central with the publication of the work approaching. Instructor(s): B. Bryan.

Instructor(s): B. Bryan.

AS.134.300. Who Wrote the Bible? The Documentary Hypothesis in Modern Research.
In the course “Who wrote the Bible? The Documentary Hypothesis in Modern Research” we will explore Wellhausen’s thesis according to which the first five books of the Bible consist of four sources: J, E, D and P. In our discussions we will focus on the historical and cultural background of the individual sources and their alleged authors. Area: Humanities.

AS.134.602. Wisdom Literature of the Hebrew Bible.
Instructor(s): S. Garfein
Area: Humanities.

AS.134.603. Graduate Seminar in Rabbinic Text.
Readings from the Talmud, the Sugya, and the Codes, in the original Hebrew and Aramaic: Emphasis on skills in reading, interpreting, and historical and cultural contextualization. Instructor(s): D. Katz
Area: Humanities.

AS.134.604. The Book Of Job.
Reading the Hebrew text of the book of Job with attention to philology, textual criticism, and various aspects of interpretation. Instructor(s): T. Lewis.
A rapid reading course aimed at increasing proficiency in reading the Hebrew text of the book of Ezekiel. Various aspects of translation and interpretation will be studied (e.g., grammar, textual criticism, Philology) including literary, historical, and theological questions. Cross-listed with Jewish Studies.
Instructor(s): T. Lewis.

AS.134.610. Historic Hebrew Grammar.
Phonology and morphology of Biblical Hebrew.
Instructor(s): P. McCarter.

AS.134.621. Textual Criticism.
An introduction to the ancient witnesses of the biblical text and the principles of textual criticism.
Instructor(s): P. McCarter.

AS.134.630. Qumran (Dead Sea) Texts.
Instructor(s): P. McCarter.

AS.134.650. Seminar in Hebrew.
Translation and analysis of selected texts in Biblical Hebrew giving attention to advanced features of grammar and syntax. Subject announced each year.
Instructor(s): P. McCarter; T. Lewis.

AS.134.652. Seminar in Ancient Israelite Religion.
Topics include history of scholarship, methodology, representations of deity, the aniconic tradition, solar Yahwism, sacred space, blood rituals, passover, royal cult, family religion, divination, prophecy, incantations, etc.
Instructor(s): T. Lewis.

AS.134.656. Comparative Semitics.
Comparative and historical analysis of the Semitic languages in their Afro-Asiatic context.
Instructor(s): P. McCarter.

AS.134.660. History of Ancient Syria/Palestine.
A survey of the history of Ancient Syria and Cannan, including Ancient Israel.
Instructor(s): P. McCarter.

AS.134.661. History: Ancient Syria-Palestine II.
Instructor(s): P. McCarter.

AS.134.700. N.W. Semitic Epigraphy.
Instructor(s): P. McCarter.

Instructor(s): P. McCarter.

Instructor(s): P. McCarter.

AS.134.711. Alphabetic Cuneiform.
Study of alphabetic writing in cuneiform script during the second half of the second millennium B.C.E.
Instructor(s): P. McCarter.

AS.134.720. Ugaritic I.
A year-long course studying Ugaritic language and literature. The first semester will focus on grammar and translating a representative selection of mythological texts. The second semester will concentrate on ritual texts. The course will also be epigraphic in nature using both conventional and digital techniques.
Instructor(s): T. Lewis.

AS.134.721. Ugaritic II.
A continuation of AS.134.720 with emphasis on the mythological and ritual texts from Ugarit. A digital epigraphy lab will also form part of the course.
Instructor(s): T. Lewis
Area: Humanities.

Instructor(s): Y. Monnickendam.

AS.134.744. Survey Of Aramaic Texts.
Instructor(s): T. Lewis
Area: Humanities.

An advanced course in Aramaic devoted to the study of Old Aramaic inscriptions. We will be translating and analyzing a selection of texts from Northern Syria (e.g. Bar-Rakib; Hadad; Kuttamwuwa, Nerab, Panamwuwa, Sefire, Zakkur), Southern Syria (e.g. Bar-Hadad/Melqart Stela, Hazael, Tel Dan) and Northern Mesopotomia (e.g. Tell Fakhariyah). Students will be expected to vocalize such texts as a study in historical and comparative linguistics and to clarify their understanding of the morphology and syntax.
Instructor(s): T. Lewis
Area: Humanities.

Cross Listed Courses

History of Art

AS.010.105. Art of the Ancient Americas. 3 Credits.
Surveys the art of Olmec, West Mexico, Teotihuacan, Maya, and Aztec.
Instructor(s): L. Deleonardis
Area: Humanities.

AS.010.236. Palaces, Temples and Tombs in Mesopotamia. 3 Credits.
Mesopotomia, the “land between the rivers,” is considered the cradle of civilization. Its earliest urban centers appeared by 3500 BCE in the region of modern-day Iraq, Iran, and Syria. Along with urbanism came the emergence of temples and palaces as large-scale elite institutions (replete with written records). Their arts manifest some of the earliest complex representations. This course explores the art and architecture within the social, political and cultural context of ancient Sumer, Babylonia and Assyria. It provides an integrated picture of the arts of Mesopotamia from 3500 to 330 BCE with an emphasis on the development of visual narrative and the use of art in the expression of authority and legitimacy.
Instructor(s): M. Feldman
Area: Humanities.

AS.010.364. Babylon: Myth and Reality. 3 Credits.
“Babylon - the name resonates, from the Biblical whore of Revelations to sci-fi. But what do we really know about the ancient city and its civilization?”
Instructor(s): M. Feldman
Area: Humanities.

AS.010.389. The Stone and the Thread. 3 Credits.
This course examines the built environment of the Inka and considers architecture in its social, historical, and cultural contexts. Shared forms and ideas implicit in the fiber arts offer comparative points for analysis and discussion.
Instructor(s): L. Deleonardis
Area: Humanities
Writing Intensive.

AS.010.392. Creating A Museum Exhibition: Micro-monuments. 3 Credits.
Area: Humanities.
AS.010.398. Tombs for the Living. 3 Credits.
Centering on the tomb as a unit of analysis, this course examines how death and funerary ritual reflect the cultural values of the living and are an active force in shaping them. Drawing on case studies from Mesoamerica and the Andes we consider various approaches to entombment and funerary ritual.
Instructor(s): L. Deleonardis
Area: Humanities
Writing Intensive.

AS.010.470. Power and Politics in Assyrian Art. 3 Credits.
Assyria, centered in northern Iraq, created one of the world’s first great empires that dominated the ancient Near Eastern world from around 900 to 612 BCE. In concert with imperial expansion came an explosion of artistic production ranging from palace wall reliefs to small-scale luxury objects. This seminar examines the close relationship between the arts and politics in the Assyrian empire. Some themes that will be explored are: historical narrative, text and image, portable luxury arts and gender, politics and religion. The course will engage in close visual analysis of the ancient materials and readings of critical scholarship.
Instructor(s): M. Feldman
Area: Humanities
Writing Intensive.

Classics

AS.040.137. Archaeology at the Crossroads: The Ancient Eastern Mediterranean through Objects in the JHU Archaeological Museum. 3 Credits.
Limited to Freshmen. This seminar investigates the Eastern Mediterranean as a space of intense cultural interaction in the Late Bronze Age, exploring how people, ideas, and things not only came into contact but deeply influenced one another through maritime trade, art, politics, etc. In addition to class discussion, we will work hands-on with artifacts from the JHU Archaeological Museum, focusing on material from Cyprus. Cross-listed with Museums and Society and Near Eastern Studies.
Instructor(s): E. Anderson
Area: Humanities
Writing Intensive.

AS.040.360. The Archaeology of Daily Life. 3 Credits.
Limited to juniors and seniors from Classics, History of Art, Archaeology, and Museum and Society. Others with permission of instructor only. This course will examine objects of daily life from the Greco-Roman world in the Johns Hopkins University Archaeological Museum. Students will collaborate on an online catalogue, featuring their research. Cross-listed with History of Art, Near Eastern Studies, and Museums and Society.
Instructor(s): H. Valladares
Area: Humanities

AS.040.363. Craft and Craftpersons of the Ancient World: Status, Creativity and Tradition. 3 Credits.
This course explores the dynamic work and social roles of craftpersons in early Greece, the eastern Mediterranean and Near East. Readings and discussion will query the identities and contributions of these people—travelers, captives, lauded masters, and even children—through topics including gender, class, and ethnicity. Special focus on late third-early first millennia BCE; local field trips. Cross-listed with Near Eastern Studies.
Instructor(s): E. Anderson
Area: Humanities
Writing Intensive.

AS.040.366. The Archaeology of Ancient Cyprus: Investigating a Mediterranean Island World in the JHU Museum. 3 Credits.
This course explores the visual and materials worlds of ancient Cyprus from the earliest human evidence through the Iron Age. Class involves regular analysis of artifacts based in the Archaeological Museum.
Instructor(s): E. Anderson
Area: Humanities
Writing Intensive.

AS.040.668. The Authority of Ruins: Antiquarianism in Italy, 1690-1890.
(Same as 040.368) This seminar will focus on the transformation of antiquarianism in Italy after the discovery of Herculaneum and Pompeii. Students will work primarily with rare books from the collections at JHU. Cross-listed with History of Art and Near Eastern Studies.
Instructor(s): H. Valladares
Area: Humanities.

Earth Planetary Sciences

AS.270.205. Introduction to Geographic Information Systems and Geospatial Analysis. 3 Credits.
The course provides a broad introduction to the principles and practice of Geographic Information Systems (GIS) and related tools of Geospatial Analysis. Topics will include history of GIS, GIS data structures, data acquisition and merging, database management, spatial analysis, and GIS applications. In addition, students will get hands-on experience working with GIS software.
Instructor(s): X. Chen
Area: Engineering, Natural Sciences.

Program in Museums and Society

AS.389.205. Examining Archaeological Objects. 3 Credits.
This course considers the role of materials in the production, study and interpretation of objects by examining artifacts from the Johns Hopkins Archaeological Museum. Students will consider materials such as ceramics, stone, metal, glass, wood and textiles, and visit artists' studios to gain an understanding of historical manufacturing processes. M&S practicum course. Cross-listed with Archaeology, Near Eastern Studies, Classics, and History of Art.
Instructor(s): S. Balachandran
Area: Humanities.

AS.389.342. Objects in Focus: Materials, Techniques, History. 3 Credits.
What can art and archaeological objects reveal about materials, their craftsmanship and preservation? We investigate artists' treatises, visit studios and museum conservation laboratories and closely examine artworks. M&S practicum course. Cross-listed with Classics, History of Art, Near Eastern Studies.
Area: Humanities.

AS.389.345. Introduction to Museum Practice. 3 Credits.
Taking the JHU Archaeological Museum as a case study and working closely with its holdings, we discuss the principles and practice of managing and preserving museum collections. Earns M&S Practicum credit. Cross-listed with History of Art, Anthropology, Near Eastern Studies, and Classics.
Instructor(s): S. Balachandran
Area: Humanities.

Neuroscience

Neuroscience is the study of the nervous system and how it functions. Neuroscientists study the nervous system from all levels, ranging
from molecules interacting with cell membranes to brain systems
suberving cognitive functions such as language. Dramatic progress
has been made at all levels, and the field continues to grow. On the
Homewood campus, researchers studying the nervous system are
in the departments of Biology, Biomedical Engineering, Biophysics,
Cognitive Science, and Psychological and Brain Sciences and in the
Krieger Mind/Brain Institute. Their presence provides the opportunity for
an innovative, interdepartmental program which offers a broad overview of
the neuroscience field, as well as more advanced training in one of three
areas of concentration.

**Cellular and Molecular Neuroscience (CM)** focuses on the mechanisms by
which information flows within and between cells in the nervous system,
and the mechanisms through which the cellular structure of the nervous
system develops and is maintained. Topics include the molecular basis of
membrane permeability, action potentials, sensory transduction, synaptic
transmission, neuronal modulation, mechanisms of drug action, and the
molecular basis of genetic disorders of the nervous system.

**Systems Neuroscience (ST)** seeks to relate brain structure and
functioning to behaviors and related physiological processes. Research
in this area explores the description and analysis of neural circuits. This
includes identifying the brain nuclei and interconnections making up a
circuit, identifying and investigating the implicated neurotransmitters,
and characterizing the intrinsic and extrinsic factors that modulate the
development and adult functioning of the circuit. Topics as diverse as
learning and memory, communication, sensory systems, and motivated
behaviors (e.g., reproduction, feeding, and aggression) are explored from
this perspective.

**Cognitive Neuroscience (CG)** focuses on how cognitive functions, such as
vision or language, are implemented by the brain. Drawing upon a variety
of techniques for probing the working brain at cognitive and neural levels,
including functional neuroimaging, analysis of cognitive impairments in
brain-damaged patients, and electrophysiological techniques, research
in cognitive neuroscience seeks to relate mental representations and
computations to brain mechanisms and processes.

**Neuroscience Program Committee**

The Neuroscience Program Committee coordinates course offerings,
oversees the program’s interdepartmental courses, reviews and updates
the administration of the program, makes decisions about admission
to the B.A./M.S. program, approves proposed research programs and
mentors for students in the B.A./M.S. mentored research program, and
evaluates the final reports and presentations from the research year.

The neuroscience major consists of two degree programs: a four-year
B.A. based primarily on course work and 6 credits of research; and a
five-year concurrent B.A./M.S. involving additional course work and a
yearlong intensive laboratory experience. (Under special circumstances,
a student may be able to complete the B.A./M.S. program in less than five
years.) Both programs are designed to provide rigorous preparation for
advanced study in either a Ph.D., M.D. or Ph.D./M.D. programs. All of the
mathematics and sciences courses required of premedical students are
included in the requirements for the neuroscience major. The concurrent
B.A./M.S. program accepts students every spring semester.

Additional information regarding the undergraduate degree and the B.A./M.S. programs is available through our website at http://krieger.jhu.edu/neuroscience. You may also contact our Program Administrator, Ms. Hope Stein, hope.stein@jhu.edu or 410-516-6196.

This curriculum is being reviewed on a regular basis. Please consult our website for the most recent updates, http://krieger.jhu.edu/neuroscience/courses/index.html.

**Requirements for the B.A. Degree**

(See also General Requirements for Departmental Majors (p. 33).)

Degree requirements are the same for each concentration, except in the
specific advanced courses and the nature of the laboratory research.

**Optional Introductory Course**

& AS.020.315 and Biochemistry Laboratory
& AS.020.306 and Cell Biology
& AS.020.316 and Cell Biology Lab

Research

Six credits of research # 6

Total Credits 70

* An introductory course is recommended but not requirement for neuroscience majors; they are intended for freshmen considering the neuroscience major as an introduction to the field.

** These courses are normally completed during the sophomore and junior years. We recommend that students complete these courses in the sequence listed.

*** Students may not substitute Advanced Placement credits for this requirement.

~ At least nine of the 12 credits must be from the chosen area of concentration, plus three additional credits from a different area. Credits for research may not be applied toward this requirement. ‘Advanced/upper level’ list of approved courses are posted on our website each semester.

^ AS.030.205 Organic Chemistry I is required. AS.030.206 Organic Chemistry II and AS.030.225 Introductory Organic Chemistry Lab are optional.

# Work in one of the neuroscience laboratories participating in the program. Students must register AS.080.500 Scientific Communication: Neuroscience concurrently with neuroscience research.

Requirements for the B.A./M.S. Degree

Students who wish to apply for the B.A./M.S. Program in their junior or senior year must meet the following minimum requirements (prior to applying):

• A minimum 3.5 grade-point average in all required courses for the undergraduate major and cumulative GPA of 3.5,
• Completion of no fewer than three credits of undergraduate research, and,
• Completion of all courses required for the B.A. degree.

Advanced Seminars in Neuroscience (6 credits)
The Advanced Seminar in Neuroscience is offered in the fall and spring terms.

Final Spring Courses (12 credits)
Degree requirements include 12 credits of additional advanced course work (300-level or above). At least three credits must be at 400-level or above. Courses must be related to the study of neuroscience and ideally focused on the student’s concentration of study and area of research. Students may choose courses from the approved list of undergraduate advanced courses. (In addition, up to six additional credits of the Advanced Seminar in Neuroscience, and/or statistics courses, graduate courses and seminars may be taken with the approval of the program director.)

Mentored Research (24 credits)
During the research year, students will complete a total of 24 credits of mentored research. Students must complete nine credits of research in a spring academic term, six in the summer and an additional nine in the fall.

B.A./M.S. Commencement Project (1 credit)
After completing the research year, students must register for a one-credit independent study course intended to track the progress and defense of the student’s final research project.

**Courses**

**AS.080.105. An Introduction to Neuroscience. 3 Credits.**
Our knowledge of brain function from the level of single molecules to human behavior continues to expand at something approaching light speed. That knowledge invades our lives every day. And decisions are made based on that knowledge from every corner of life...from physician to politician and every stop in between. This course is meant to provide a fundamental understanding of how the cells and molecules as well as the regions and systems of the brain work to have you see and hear and move and remember. The course is divided into four sections that progress from the cells of the brain and spinal cord to circuits then systems and finally behaviors. Introduction to Neuroscience is designed for any college student who has an interest in the range of disciplines we call neuroscience.

Instructor(s): F. Madison
Area: Natural Sciences.

**AS.080.203. Cognitive Neuroscience. 3 Credits.**
This course surveys theory and research concerning how the human brain carries out mental processes. Co-listed as AS.050.203 in Cognitive Science.

Instructor(s): B. Rapp; S. Park
Area: Natural Sciences, Social and Behavioral Sciences.

**AS.080.250. Neuroscience Laboratory. 3 Credits.**
This course will give students the “hands-on” experience of the inter-disciplinary nature of neuroscience. Students will use anatomical and neuro-physiological techniques to understand the basic underlying principles of neuroscience.

**Prerequisites:** (AS.080.305 AND AS.080.306) OR AS.200.141 or instructor’s permission.

Instructor(s): J. Trageser; L. Gorman
Area: Natural Sciences, Social and Behavioral Sciences.

**AS.080.301. Stress and the Brain. 3 Credits.**
The purpose of this course is to explore the phenomenon of stress by investigating the neural, endocrine and molecular mechanisms involved. By reviewing both animal and human research, this course will consider disorders of the stress control system and the adverse impact of stress on human physical and mental health. Topics in this class will include, but are not limited to I) disorders such as PTSD, anxiety, major depression; II) interactions between stress and neurodegenerative disorders; III) stress-immune-inflammatory interactions; IV) the role of stress in obesity, hypertension, and other metabolic syndromes; V) stress effects on reproduction. Students will finish this course with a greater understanding for the fundamental neuroendocrine responses to stress and its consequent and/or associated adverse effects on human health.

**Prerequisites:** AS.050.203 AND AS.080.305 AND AS.080.306

Instructor(s): F. Madison
Area: Natural Sciences.

**AS.080.302. Applied Neuroscience & Neurotechnology. 1 Credit.**
Seminar course in which applications of neuroscience and neurotechnologies are explored. The class meets once a week for an hour. Each week, an application of neuroscience or a neurotechnology will be discussed. Readings will be assigned in preparation for each class. At each meeting of the class, the readings will be discussed, and if possible there will be a demonstration of the technology or application. Each student will choose one neurotechnology or application of neuroscience and prepare a short presentation, which will be given towards the end of the semester. Topics to be covered include but are not limited to: brain recording technologies, neuroimaging, deep brain stimulation, transcranial magnetic stimulation, optogenetics, brain-computer interfaces, neuroprosthetics, neuroeconomics, neurolaw, and neuromorphic engineering. Grading is pass/fail.

**Prerequisites:** AS.080.305 OR AS.080.306 OR AS.200.141 OR AS.020.306
Area: Natural Sciences.

**AS.080.303. Structure of the Nervous System. 3 Credits.**
This course takes a structural biological approach to studying the nervous system. In using a systems approach it provides students of cellular-molecular and computational neuroscience with a thorough introduction to functional, microscopic and submicroscopic organization of the brain, spinal cord and peripheral nervous system.

**Prerequisites:** AS.080.305 AND AS.080.306

Instructor(s): S. Hendry
Area: Natural Sciences.

**AS.080.305. The Nervous System I. 3 Credits.**
The Nervous System is a fully integrated, two-semester course that surveys the cellular and molecular biology of neurons as well as the structure and function of the nervous system. Cross-listed with Biology. No Freshmen.

**Prerequisites:** AS.080.203 OR AS.050.203 OR AS.200.141 or 080.105 or Permission

Instructor(s): H. Zhao; S. Hendry
Area: Natural Sciences.

**AS.080.306. The Nervous System II. 3 Credits.**
The course uses the functional organization of the somatosensory system as a means to examine mechanisms of neutral development. Generation and maturation of neurons, guidance of axons, formation of synapses and the regressive events that shape the adult nervous system will be examined. At the same time we will explore the structure and function of brain regions that allow us to feel pain and temperature, detect vibration, recognize shape and perceive where we are in space. Finally, the single-neuron events that lead to adaptive changes in function will be explored in the context of central nervous system control of movement and of higher order functions of speech and memory.

**Prerequisites:** Prereq: AS.080.305

Instructor(s): H. Zhao; S. Hendry
Area: Natural Sciences.
AS.080.307. Neurobiology of Addiction. 3 Credits.
Broadly defined, addiction is a chronic, relapsing brain disease. It is a compulsive, uncontrolable behavior to seek and use a substance, even in the face of negative social consequences or health consequences. But, addiction is also a condition in which an individual overindulges in just about anything that is reinforcing....from physical exercise, to video games, to food, and to sex. In this course, we will use current literature to try and understand what is currently known about the underlying neural mechanisms of this very real disorder. Recommended Course Background: AS.080.305 and AS.080.306 or AS.020.312 or AS.020.306 or AS.200.141 and AS.020.306 or permission.
Instructor(s): L. Gorman.

AS.080.308. Neuroeconomics. 3 Credits.
Every day decisions often require us to weigh the costs and benefits of engaging in a particular course of action in order to obtain some expected outcome. Unfortunately, we often lack the information necessary to obtain our desired goal with complete certainty. Economists have long been interested in understanding human decision-making under these circumstances. In parallel, neuroscientists have made great strides at describing the underlying neural basis of simple decision-making. However, despite much progress in both fields, our understanding of how the brain makes decisions is incomplete. In order to strengthen and further research in both fields, the interdisciplinary field of Neuroeconomics arose. This course will survey the field of Neuroeconomics focusing on theoretical concepts developed by economists and the role these theories are playing in guiding current experimental neuroscience. Recommended Course Background: AS.080.305 and AS.080.306 or AS.020.312 and AS.020.306 or AS.200.141 and AS.020.306 or permission.
Instructor(s): J. Trageser
Area: Natural Sciences.

AS.080.309. Frontiers in Neuroscience. 1 Credit.
Modern neuroscience has advanced enough for us to contemplate some issues we could not address before. In this course, we will examine the recent advances in neuroscience research such as neuroprosthetics, deep brain stimulation (DBS), brain computer interface (BCI), and optogenetics. We will focus on understanding the new technology and its limits, and learn how it may shape the future of science, medicine, and society. We will also explore issues related to carbon-nanotube molecular computing and the latest neuro-imaging techniques in lectures and reading original articles. Recommended Course Background: AS.080.305, AS.080.306 or AS.020.203 or permission of instructor.

AS.080.310. Synaptic Function and Plasticity. 3 Credits.
The function of the nervous system is based on synaptic transmission between neurons. Synapses are not static structures, but dynamically change with experience. Experience-dependent synaptic plasticity not only allows proper development of the nervous system in tune with the environment, but also is the basis for learning and memory. This course will cover the structure and function of synapses, and how they are altered by experience to encode information.
Prerequisites: (AS.020.305 OR AS.020.306) OR (AS.080.305 OR AS.080.306)
Instructor(s): A. Kirkwood; H. Lee
Area: Natural Sciences.

AS.080.311. Neural Control of Movement. 3 Credits.
This course will explore how neural activity controls movement. We will examine the neural basis of both reflexive as well as volitional motor control focusing on cortical and sub-cortical neural circuits. Additionally, because it is becoming increasingly evident that "motor" regions of the brain process sensory information as well, we will discuss how sensory and motor information is integrated in order to influence and coordinate appropriate action.
Prerequisites: AS.080.305 and AS.080.306 or permission of instructor.
Area: Natural Sciences.

AS.080.313. The Biology of Neural Development. 3 Credits.
Discoveries of the molecular and cellular mechanisms of nervous system development have come at a rapid pace over the past two decades. We will explore those discoveries with the use of the primary scientific literature and scientific reviews. Topics we will examine include proliferation, migration, specification, differentiation, axon pathway finding, synapse formation and regressive events. Lectures by faculty will alternate with student presentations. This course requires students to write extensively about one of the above topics and present their understanding of the material twice during the semester.
Prerequisites: 080.305 (Nervous System I) 080.306 (Nervous System II) 020.305 (Biochemistry) 020.306 (Cell Biology)
Instructor(s): S. Hendry
Area: Natural Sciences, Social and Behavioral Sciences Writing Intensive.

AS.080.318. Practicum in Language Disorders. 1 Credit.
Please see additional instructions on http://krieger.jhu.edu/neuroscience/courses/index.html This course provides the opportunity to learn about adult aphasias; language disorders which are one of the most common consequences of stroke. You will receive training in Supportive Communication Techniques and work as a communication partner with an individual with aphasia for two hours per week. Three class meetings for orientation and reading assignments will be held on campus; training and practicum will be conducted at a local aphasia support center. Transportation required.
Prerequisites: Juniors and Seniors Only Prerequisite: An A - or above in one of the following courses: AS.080.203[C] OR AS.050.203[C] OR AS.050.105[C] OR AS.050.311[C]
Instructor(s): B. Rapp

AS.080.319. Practicum in Language Disorders. 1 Credit.
This course provide the opportunity to learn about adult aphasias; language disorders which are one of the most common consequence of stroke. You will receive training in Supportive Communication Techniques and work as a communication partner with an individual with aphasia for two hours per week. Three class meetings for orientation and reading assignments will be held on campus; training and practicum will be conducted at a local aphasia support center. Transportation required. A valid driver's license for zip car; use of public transportation or van certification for student van driver.
Prerequisites: 1 - JR Status 2- An A- or above in one of the following courses: 080.203 Cognitive Neuroscience, 050.203 Cognitive Neuroscience: Exploring the Living Brain,050.105 Introduction to Cognitive Neuropsychology050.311 Written Language: Normal Processing and Disorders 3 - Minimum major GPA of 3.5
Instructor(s): B. Rapp
Area: Natural Sciences, Social and Behavioral Sciences.
AS.080.320. The Auditory System. 3 Credits.
This course will cover the neuroanatomy and neurophysiology of the human auditory system from the ear to the brain. Behavioral, electrophysiological, and neuroimaging methods for assessing peripheral and central auditory function will be discussed. Acquired and developmental disorders of auditory function will be reviewed using clinical case studies.
Prerequisites: Prereqs: AS.080.305 OR AS.020.312 AND AS.020.306 OR AS.200.141
Instructor(s): D. Boatman
Area: Natural Sciences.

AS.080.322. Cellular and Molecular Biology of Sensation. 3 Credits.
Leading scientists in sensory biology from the Johns Hopkins community will present the most current knowledge in the cellular and molecular biology of sensation. A lecture and a student presentation of an exemplar manuscript will be presented each week on a different topic of sensory systems.
Prerequisites: AS.080.304 OR AS.080.305 OR AS.080.306 OR AS.020.306 OR AS.020.305.
Instructor(s): P. Fuchs; S. Hendry
Area: Natural Sciences.

AS.080.323. Modeling & Identifying Neurosystems. 3 Credits.
Students in this course will be trained to perform an assigned original research in computational neuroscience. The course will cover mathematical modeling of neurons, useful for understanding the computations of single cells. The student’s research will test software, adapted by the instructor from methods of other disciplines, for systematically creating models of neurons using experimental data. For the tests, data will come from another known model, rather than from a biological neuron. To perform the research, students will be given a thorough understanding of the biophysical mechanisms of neurons and of the basic paradigms of neural modeling and system identification.
Prerequisites: (AS.110.106 AND AS.110.107) AND (AS.080.306 OR AS.080.304) or permission of instructor
Area: Natural Sciences.

AS.080.324. Neuroscience Journal Club. 1 Credit.
Classic Journal Club course where the students will read and discuss and review articles on differing topics depending on student interests. Open to Neuroscience and Behavioral Biology sophomores, juniors and seniors.

AS.080.325. Neuroscience Journal Club. 1 Credit.
Open to Neuroscience and Behavioral Biology Sophomores, Juniors and Seniors. Classic Journal Club course where the students will read and discuss and review articles on differing topics depending on student interests.

AS.080.327. Neuroscience Journal Club. 1 Credit.
Being able to meet with a small group and discuss some key journal articles in a particular area of Neuroscience is one of the experiences that we hope to fulfill with this course. Topics will be chosen every semester. Classes will consist of reading an assortment of journal articles; both review and primary literature. Students will take turn leading the discussions of the theoretical and practical implications of the papers.
Prerequisites: AS.080.203 AND AS.080.305 AND AS.080.306.

AS.080.329. Practicum in Language Disorders. 1 Credit.
This course provides the opportunity to learn about adult aphasias; language disorders which are one of the most common consequence of stroke. You will receive training in Supportive Communication Techniques and work as a communication partner with an individual with aphasia for two hours per week. Three class meetings for orientation and reading assignments will be held on campus; training and practicum will be conducted at a local aphasia support center. Transportation required.
Prerequisites: 1 - SR Status 2- An A- or above in one of the following courses: 080.203 Cognitive Neuroscience, 050.203 Cognitive Neuroscience: Exploring the Living Brain, 050.105 Introduction to Cognitive Neuropsychology 050.311 Written Language: Normal Processing and Disorders 3 - Minimum major GPA of 3.5
Instructor(s): B. Rapp
Area: Natural Sciences, Social and Behavioral Sciences.

AS.080.330. Brain Injury & Recovery. 3 Credits.
This course investigates numerous types of brain injuries and explores the responses of the nervous system to these injuries. The course’s primary focus is the cellular and molecular mechanisms of brain injury and the recovery of function. Discussions of traumatic brain injury, stroke, spinal cord, and tumors, using historical and recent journal articles, will facilitate students’ understanding of the current state of the brain injury field. Cross-listed with Psychological and Brain Sciences and Behavioral Biology.
Prerequisites: AS.080.305 AND AS.080.306 OR AS.020.312 AND AS.020.306 OR AS.200.141 AND AS.200.376
Area: Natural Sciences
Writing Intensive.

AS.080.333. Writing About the Nervous System. 3 Credits.
To write clearly and cogently about the nervous system demands two things in equal measure. One is serious understanding and the other is skill. Neither is a gift since both must be acquired. We will strive to do both in this course by taking an extant document – either a slim text on a restricted subject in neuroscience or a set of class notes – and, through revision and addition of recently published findings, substantially improve that document. Students will be required to read, write and revise extensively – at least two assignments each week.
Instructor(s): S. Hendry
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive.

AS.080.340. Neuropsychology. 3 Credits.
Prerequisites: (AS.080.305 AND AS.080.306) OR (AS.020.312 AND AS.020.306) OR (AS.200.141 AND AS.020.306)
Instructor(s): L. Gorman
Area: Natural Sciences
Writing Intensive.

AS.080.345. Great Discoveries in Neuroscience. 3 Credits.
This course examines the historical and intellectual context of selected, key advances in neuroscience, how they were made and the impact they had on an understanding of the nervous system. Particular attention will be paid to advances in cellular and molecular neuroscience. Among the topics covered will be the discovery of monoamine neurotransmitters and of endocannabinoids, the role of neurotrophins in neural development, and prion-based diseases of the brain.
Prerequisites: (AS.080.305 AND AS.080.306) OR AS.020.306 OR AS.020.312 OR Permission of Instructor
Instructor(s): J. Baraban
Area: Natural Sciences.
AS.080.346. Sensorimotor Processing. 3 Credits.
Our brains evolved the capacity to sort this madness into reliable and coherent perceptual representations of not only our environment, but also our corporeal selves. Through lectures and reading discussions, this course explores how our sensory modalities work together with our movements, enabling us to perceive and interact with our environment. Topics include object and body perception, motor command, and memory mechanisms. Lectures are given by faculty whose research explores these issues. Each subject is explored as a three-lecture sequence: 1) a background lecture that lays out the general principles and over-riding questions of the field; 2) an in-depth lecture that covers the most recent scientific literature; and 3) a summary lecture that brings together the major questions and their Resolution. Recommended Course Background: AS.080.305
Instructor(s): S. Hendry
Area: Natural Sciences.

AS.080.355. Visual System. 3 Credits.
From outer segments of photoreceptors to the Fusiform Face Area of the cerebral cortex we have come to understand how the visual system works at each of many fundamental levels. This course examines the basis for perception of visible objects at each of these levels. We will use the secondary literature (scientific reviews) to accent the hard-won truths about visual system functional organization and to highlight ongoing controversies. Students will be lead through carefully chosen reviews in a series of lectures and written summaries prepared by faculty. Three exams and a final exam will test students not on their memorization of minutiae but on their understanding of fundamental principles.
Prerequisites: AS.080.306 OR AS.020.306 OR Permission
Instructor(s): S. Hendry
Area: Natural Sciences.

AS.080.360. Diseases & Disorders of the Nervous System. 3 Credits.
Prerequisites: (EN.580.421 AND EN.580.422) OR (AS.020.305 AND AS.020.306) OR (AS.080.305 AND AS.080.306) OR By Permission
Instructor(s): G. McKhann; S. Hendry
Area: Natural Sciences.

AS.080.362. Neurobiology of Hearing. 3 Credits.
The course focuses on sound processing, including current research topics in Auditory Neuroscience, including synaptic physiology, neural circuitry, acoustics, physiology, and behavior. Course taught in Salamanca. This course fulfills upper-level Neuroscience electives. Course must be taken for a grade.
Instructor(s): L. Gorman
Area: Natural Sciences
Writing Intensive.

AS.080.364. Methods in Neuroscience and Orgo?. 3 Credits.
Who would have thought that organic chemistry would be playing a role in our understanding of the anatomy of the nervous system!!! In this course, you will work in both the Organic Chemistry and Neuroscience labs to compare the new CLARITY technique, introduced by Karl Deisseroth, with another technique known as SeeDB, introduced by Takeshi Imai. Both techniques are used to make the brain “invisible” and allow subsequent staining to visually examine neuronal circuits. Students will work independently in teams to determine which technique is more amenable to use by students in the Neuroscience Lab course. Permission Required from Instructor to register.
Instructor(s): L. D’Souza; L. Gorman
Area: Natural Sciences.

AS.080.370. The Cerebellum: Is it just for motor control?. 3 Credits.
The cerebellum is traditionally thought to be involved in movement and motor control, and observations of patients with cerebellar damage do in fact show motor deficits. However, since the proliferation of functional MRI, cerebellar activations have been observed in a surprising number of brain activation studies that were designed to investigate the neural correlates of cognitive function. Over the past 2 decades, an increasing number of investigators have tried to characterize the role of the cerebellum in cognitive function. Through lectures and reading discussions this course will survey cerebellar circuitry, neuroimaging and neuromodulatory methods for investigating the cerebellum, and traditional and non-traditional functions of the cerebellum, including cerebellar involvement in cognitive functions such as language, working memory, and executive control.
Prerequisites: Prereqs: AS.080.305 AND AS.080.306 AND AS.080.203 OR AS.050.203
Instructor(s): J. Desmond
Area: Natural Sciences, Social and Behavioral Sciences.

AS.080.400. Research Practicum: Language Disorders-Community Based Learning. 2 Credits.
This course provide the opportunity to learn about adult aphasias; language disorders which are one of the most common consequence of stroke. You will receive training in Supportive Communication Techniques and work as a communication partner with an individual with aphasia for two hours per week. Three class meetings for orientation and reading assignments will be held on campus; training and practicum will be conducted at a local aphasia support center. Transportation required. A valid driver’s license for zip car; use of public transportation or van certification for student van driver.
Instruction(s): B. Rapp
Area: Natural Sciences, Social and Behavioral Sciences.

AS.080.401. Research Practicum: KEEN (Kids Enjoying Exercise Now)-Community Based Learning. 1 Credit.
KEEN (Kids Enjoying Exercise Now) This is a one (1) credit S/U course, organized by the Undergraduate Neuroscience Program Committee. This course provides the opportunity to learn and interact with children who have neurological disabilities, including autism, cerebral palsy and Down syndrome in weekend exercise and recreational activities. You will receive a profile for the KEEN athlete that you will be paired with during a session. You will receive initial training and then volunteer three (3) hours per week for 3 weeks on consecutive Sundays during the first or second half of the semester. One class meeting for orientation will be held on campus; one exit meeting will be held on campus; practicum will take place at KEEN centers in Maryland. Transportation will be either a zip car (you will need a driver’s license), public transportation or JHU bus. Neuroscience and Behavioral Biology Majors ONLY.
Instructor(s): L. Gorman.
AS.080.402. Teaching Practicum: Making Neuroscience Fun (MNF). 1 Credit.
ZIP CAR CERTIFICATION SUGGESTED: All visits are Monday - Friday either 7am-11am OR 11am-3pm. Making Neuroscience Fun (MNF) is a community outreach program which brings age-appropriate interactive presentations about the brain and nervous system to Baltimore City and County elementary school students. MNF is an effort aimed at fostering appreciation for science in general, emphasizing the importance of the brain and the nervous system in everyday life, and enhancing the science curriculum in Baltimore's City and County schools. You will receive initial training and then volunteer four (4) hours per week for four (4) weeks. One class meeting for orientation will be held on campus; one exit meeting will be held on campus; the practicum will take place at Baltimore City and County Schools. Students willing to drive are encouraged to register. Zip Cars will be provided.
Instructor(s): L. Gorman.

AS.080.403. Teaching Practicum: HOP Kids. 1 Credit.
This course provides the opportunity to learn and interact with children recovering from brain, spinal, and musculoskeletal injuries. You will travel to the Kennedy Krieger Institute to volunteer in the Child Life Department where you will participate in a variety of therapeutic activities including playing with the children and helping them achieve goals. Students will gain valuable clinical experience while learning patient empathy. You must attend (3) three sessions per semester either from 2-4 on Fridays, or 2-4 on the first Saturday of each month.
Instructor(s): L. Gorman.

AS.080.411. Advanced Seminar: Neuroscience I. 3 Credits.
For students in the first semester of the BA/MS Program. Instructor permission required.
Instructor(s): J. Baraban
Area: Natural Sciences.

AS.080.412. Advanced Seminar: Neuroscience II. 3 Credits.
For students in the 2nd semester of the BA/MS Program. Permission Required.
Instructor(s): J. Baraban
Area: Natural Sciences.

AS.080.413. Advanced Seminar: Neuroscience III. 3 Credits.
For students in the 3rd semester of the BA/MS Program. Permission Required.
Instructor(s): J. Baraban; L. Gorman
Area: Natural Sciences.

AS.080.414. Advanced Seminar: Neuroscience. 3 Credits.
For students in 4th year of the Neuroscience BA/MS Program only. Permission Required.
Instructor(s): J. Baraban
Area: Natural Sciences.

AS.080.499. Mentored Research. 1 Credit.

Scientific communication is crucial to advancing science. The Scientific Communication section is taken concurrently with Neuroscience Research and consists of a two hour research orientation session held at the beginning of the semester and a two hour exit session held at the end of the semester. The student is also expected to meet with their lab supervisor or attend a lab meeting once a week to understand the research the lab is currently working on and receive feedback on the work they are doing. See special notes section for specific meeting day/time.
Instructor(s): J. Trageser; L. Gorman.

AS.080.511. Independent Study. 3 Credits.
AS.080.601. Neuroeconomics -Graduate Level.
Every day decisions often require us to weigh the costs and benefits of engaging in a particular course of action in order to obtain some expected outcome. Unfortunately, we often lack the information necessary to obtain our desired goal with complete certainty. Economists have long been interested in understanding human decision-making under these circumstances. In parallel, neuroscientists have made great strides at describing the underlying neural basis of simple decision-making. However, despite much progress in both fields, our understanding of how the brain makes decisions is incomplete. In order to strengthen and further research in both fields, the interdisciplinary field of Neuroeconomics arose. This course will survey the field of Neuroeconomics focusing on theoretical concepts developed by economists and the role these theories are playing in guiding current experimental neuroscience. Only graduate students can register for this course. Instructor signature is required.
Prerequisites: ( AS.080.305 AND AS.080.306) OR (AS.020.312 AND AS.020.306) OR (AS.200.141 AND AS.020.306) OR Permission
Instructor(s): J. Trageser.

AS.080.620. Theoretical Neuroscience.
Topics of theoretical neuroscience and computational neuroscience will be discussed based on the original literature. Students are expected to actively participate in the discussion and also to present selected material to the class.
Instructor(s): E. Niebur.

AS.080.621. Theoret/Comp Neuroscience.
Permission Required
Instructor(s): E. Niebur.

AS.080.630. Bodian Seminar Series.
The Bodian Seminar is an interdisciplinary colloquium for discussion of current research into the neural basis of mental processes. Leading researchers, generally from outside the University, are invited to give lectures, which will be announced per e-mail. Undergraduate students who register for this course are asked to study a publication by the speaker, as provided with the announcement, and to prepare a question for each speaker together with a brief discussion of the possible answers. Permission required for undergraduate students.
Instructor(s): J. Von Der Heydt.

Graduate students and Seniors with instructor permission. The Bodian Seminar is an interdisciplinary colloquium for discussion of current research into the neural basis of mental processes. Leading researchers, generally from outside the University, are invited to give lectures. About 12 lectures are scheduled per semester (see http://www.mb.jhu.edu/seminars.asp). Speakers, titles of lectures, and dates are announced to participants per e-mail (contact Debby Kelly, 410 516-8640). The announcements also include links to one or two recent publications of the speaker. Undergraduate students who register for this course are asked to study these papers and to prepare a question for each speaker together with a brief discussion of the possible answers. Question and discussion have to be in writing and turned in the day before the lecture. Undergraduates must e-mail the instructor for permission (von.der.heydt@jhu.edu) prior to registering for the course.
Instructor(s): J. Von Der Heydt.

Perm. Req’d.

AS.080.660. Commencement Project.
BA/MS students only. Signature required.
Instructor(s): J. Baraban.

AS.080.810. Readings_Systems Neuro I.
This is a graduate-level seminar series on current literature in systems neuroscience. It also serves as a discussion group/journal club for students and faculty at the Krieger Mind/Brain Institute, and is open to the wider systems/cognitive neuroscience community at Homewood and other Hopkins campuses. Each week, a student or faculty member will present a recent article selected in consultation with the course directors. The selected readings will focus on the neural mechanisms of perception, attention, motor behavior, learning and memory. Pass/Fail only. Permission required for undergraduate students.
Instructor(s): E. Niebur; V. Stuphorn.

AS.080.811. Readings/System Neuro II.
Graduate students only or permission required. The combined journal club functions as a graduate-level seminar series on the current literature in systems neuroscience. It will also serve as a discussion group for systems neuroscience post-docs and faculty from the Homewood and Medical School campuses. All participants interested in systems/cognitive neuroscience are welcome. Each week, a student or faculty member will present a recent article selected in consultation with the course directors. The selected readings will focus on the neural mechanisms of perception, attention, motor behavior, learning and memory, as studied using physiological, psychophysical, computational and imaging techniques. Discussions and open exchanges of opinions are strongly encouraged.
Instructor(s): E. Niebur; V. Stuphorn.

Permission Required. For students in the BA/MS Program.
Instructor(s): J. Baraban.

Instructor(s): L. Gorman
Writing Intensive.

Permission Required. For students in the BA/MS Program.
Instructor(s): J. Baraban.

For students in the BA/MS Program Permission required.
Instructor(s): J. Baraban.

Cross Listed Courses

Biology

AS.020.317. Signaling in Development and Disease. 3 Credits.
An advanced undergraduate level seminar on current topics on signal transduction mechanisms underlying neuronal morphology, development and function. The proper functioning of the nervous system relies on the establishment of precise neuronal circuits through a developmental program including proliferation, neuronal migration, axonal growth, and neuronal survival. This course pertains to the extracellular cues and downstream neuronal signaling pathways that coordinate these key events during neuronal development. The course will also cover the role of aberrant signaling mechanisms in neuronal degeneration and disease. Recommended Course Background: AS.020.305, AS.020.306, and AS.080.306
Instructor(s): R. Kuruvilla; Staff
Area: Natural Sciences.
AS.020.370. Emerging Strategies and Applications in Biomedical Research. 3 Credits.
Up-to-date primary literature manuscripts related to new discoveries and new strategies that are allowing scientists to make amazing progress in biomedical research will be presented. Examples include: labeling neurons with up to 90 different colors to trace their circuitry, evolution studies in glowing bacteria, detecting several viruses on a single chip and using fiber optics and channel rhodopsin to induce sleep. Students should be interested in reading primary literature research papers and discussing them in class. Recommended Course Background: AS.020.305 or AS.020.306 or AS.080.305 or AS.080.306. Juniors and Seniors only.
Instructor(s): S. Hattar
Area: Natural Sciences.

Cognitive Science

AS.050.102. Language and Mind. 3 Credits.
Introductory course dealing with theory, methods, and current research topics in the study of language as a component of the mind. What it is to “know” a language: components of linguistic knowledge (phonetics, phonology, morphology, syntax, semantics) and the course of language acquisition. How linguistic knowledge is put to use: language and the brain and linguistic processing in various domains. This course is restricted to freshmen and sophomores. Juniors and seniors must seek instructor approval to enroll. Cross-listed with Neuroscience and Psychology.
Instructor(s): A. Omaki
Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.105. Intro To Cognitive Neuropsychology. 3 Credits.
When the brain is damaged or fails to develop normally, even the most basic cognitive abilities (such as the ability to understand words, or perceive objects) may be disrupted, often in remarkable ways. This course explores a wide range of cognitive deficits, focusing on what these deficits can tell us about how the normal brain works. Topics include brain anatomy and causes of brain damage, reading and spelling deficits, unilateral spatial neglect, hemispheric disconnection, cortical plasticity, and visual perception of location and orientation. Students read primary sources: journal articles that report deficits and discuss their implications. Cross-listed with Neuroscience.
Instructor(s): M. McCloskey
Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.303. Mind, Brain and Beauty. 3 Credits.
What underlies our aesthetic response to art, music, and other facets of human experience? Do identifiable properties of objects and events evoke consistent aesthetic responses, or is beauty mostly in the eye of the beholder? Examining such questions from cognitive science, neuroscience, and philosophical perspectives, this course explores relevant research and theory in the visual, auditory, and tactile domains. Several researchers will discuss their ongoing studies with the class, and students will also have the opportunity to participate in demonstration experiments that illustrate phenomena under discussion. (Same as AS.050.803) Recommended Course Background: One or more courses in one of these: Cognitive Science, Neuroscience, Philosophy, or Psychology or permission of instructor.
Instructor(s): M. McCloskey
Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.311. The Literate Mind and Brain. 3 Credits.
This course surveys both the historical development of written language as well as current cognitive theories that account for the manner in which the written language is represented and processed by “readers/writers” of a language. Issues regarding the relationship between the written and spoken language, the acquisition of written language skills, as well as developmental and acquired disorders of reading and writing will be examined.
Prerequisites: AS.050.101 or AS.050.102 or AS.050.105 or Instructor’s Permission
Instructor(s): B. Rapp
Area: Natural Sciences, Social and Behavioral Sciences Writing Intensive.

AS.050.312. Cognitive Neuroimaging Methods in High-Level Vision. 3 Credits.
This course is an advanced seminar and research practicum course. It will provide the opportunity to learn about fMRI methods used in the field of vision science and for students to have hands-on experience to develop, design and analyze a research study on topics in the cognitive neuroscience field of high-level vision. In the first part of the course students will read recent fMRI journal papers and learn about common fMRI designs and analysis methods; in the second part of the course students will conduct a research study as a group to address a research question developed from readings. Students are expected to write a paper in a journal article format at the end of the course and to present their results in front of the class. Research topics will vary but with special focus on topics in object, scene and space recognition. Cross-listed with Neuroscience and Psychology. Instructor’s permission required.
Prerequisites: AS.050.204 OR AS.050.319 OR AS.050.315 OR AS.200.312 OR AS.050.203 OR AS.080.203 or equivalent; instructor’s permission required.
Instructor(s): S. Park
Area: Natural Sciences, Social and Behavioral Sciences.

When we think about our ability to see, we tend to think about our eyes, but in fact vision happens mostly in the brain. This course explores the remarkable perceptual deficits that occur when the visual regions of the brain are damaged or fail to develop normally, focusing on what these perceptual malfunctions tell us about normal visual perception. Topics include visual system anatomy and physiology; functional specialization in the lower visual system as revealed by cerebral achromatopsia (color blindness resulting from brain damage) and akietopsia (impaired motion perception); cortical plasticity in the visual system; spatial deficits in perception and action; and the implications of high-level visual deficits, including prosopagnosia (impaired face recognition), Charles Bonnet syndrome (complex visual hallucinations in blind areas of the visual field), blindsight (accurate responding to visual stimuli despite apparent inability to see them), and Anton’s syndrome (denial of blindness).
Instructor(s): M. McCloskey
Area: Natural Sciences, Social and Behavioral Sciences.
AS.050.326. Foundations In Cognitive Science. 3 Credits.
This course explores general issues and methodologies in cognitive science through the reading of classic works (from Plato and Kant through Skinner and Turing) and recent research articles to begin construction of a coherent picture of many seemingly divergent perspectives on the mind/brain. Recent brain-based computational models serve to focus discussion. Recommended Course Background: at least one course at the 300-level or higher in cognitive science, computer science, neuroscience, philosophy, or psychology. Co-listed with AS.050.626.
Instructor(s): P. Smolensky
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive.

AS.050.332. Development Cog Neurosci. 3 Credits.
Prerequisites: AS.050.101 (Cognition) or AS.050.339/639 (Intro to Cog. Development) or AS.200.132 (Introductory Developmental Psychology) or instructor's permission required. In-depth examination of the current literature on cognitive development in the context of development cognitive neuroscience. Same as 050.632.
Instructor(s): B. Landau
Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.339. Cognitive Development. 3 Credits.
This is a survey course in developmental psychology, designed for individuals with some basic background in psychology or cognitive science, but little or none in development. The course is strongly theoretically oriented, with emphasis on issues of nature, nurture, and development. We will consider theoretical issues in developmental psychology as well as relevant empirical evidence. The principle focus will be early development, i.e., from conception through middle childhood. The course is organized topically, covering biological and prenatal development, perceptual and cognitive development, the nature and development of intelligence, and language learning. Also listed as AS.050.639. Cross-listed with Neuroscience. Instructor's approval required.
Instructor(s): J. Yarmolinskaya
Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.603. Mind, Brain and Beauty.
Instructor(s): M. McCloskey
Area: Natural Sciences, Social and Behavioral Sciences.

Instructor's permission required. (Also offered as AS.050.312.)
Instructor(s): S. Park
Area: Natural Sciences, Social and Behavioral Sciences.

This course explores general issues and methodologies in cognitive science through the reading of classic works (from Plato and Kant through Skinner and Turing) and recent research articles to begin construction of a coherent picture of many seemingly divergent perspectives on the mind/brain. Recent brain-based computational models serve to focus discussion. (Same as AS.050.326) Recommended Course Background: at least one course at the 300-level or higher in cognitive science, computer science, neuroscience, philosophy, or psychology.
Instructor(s): P. Smolensky
Writing Intensive.

Also offered as AS.050.339. Instructor approval required.
Instructor(s): J. Yarmolinskaya
Area: Natural Sciences, Social and Behavioral Sciences.

Psychological Brain Sciences

AS.200.141. Foundations of Brain, Behavior and Cognition. 3 Credits.
Formerly listed as Introduction to Physiopsychology. A survey of neuropsychology relating the organization of behavior to the integrative action of the nervous system. Cross-listed with Behavioral Biology and Neuroscience.
Instructor(s): L. Gorman
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.304. Neuroscience of Decision Making. 3 Credits.
This course will survey the neural mechanisms of decision-making. Current experimental research and theory concerning selection, control, and evaluation of actions are examined in humans and animals. Topics will range from simple perceptual judgements to complex social behavior. The course involves a weekly lecture about a specific topic followed by a student presentation of a current research paper. Cross-listed with Neuroscience
Prerequisites: AS.080.305 OR AS.080.205 OR AS.200.141
Instructor(s): V. Stuphorn
Area: Natural Sciences.

AS.200.308. Neurobiology of Learning and Memory. 3 Credits.
This course is an advanced survey of the scientific study of learning and memory. An interdisciplinary approach is used to integrate the state of the field across levels from the cellular-molecular basis of synaptic plasticity to functional circuitry implicated in learning to memory systems in the brain. The course is designed to provide a deep understanding of the outstanding issues and current debates in learning and memory research with a specific emphasis on animal models. This is an interactive lecture/ seminar course with active student participation. Recommended Course Background: AS.200.370 or AS.200.141 or AS.080.305/AS.080.306 or AS.020.306.
Instructor(s): M. Yassa
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.344. Behavioral Endocrinology. 3 Credits.
An examination of the effects of hormones on behavior in non-human and human animals. Topics will include the effects of hormones on sexual differentiation, reproductive behavior, parental behavior, homeostasis and biological rhythms, regulation of body weight, learning and memory. Cross-listed with Behavioral Biology and Neuroscience.
Prerequisites: Prereqs: (AS.200.141 OR AS.080.305 ) OR (AS.020.151 AND AS.020.152) OR ( AS.020.305 AND AS.020.306 ) or instructor's permission
Instructor(s): F. Madison; G. Ball
Area: Natural Sciences, Social and Behavioral Sciences.
AS.200.368. Altered States of Consciousness. 3 Credits.
Sleep, dreaming, resting and arousal to waking represent very different states of consciousness which differ dramatically both psychologically and physiologically. This course focuses on cognitive, psychological, physiological, biological and genetic aspects characterizing each of these states with some reference to other altered states. The course includes a focus on the major pathologies affecting sleep-wake states. Clinical cases will be considered. These inform about both psychological and biological aspects of these states. The relative biological functions of each state will be evaluated with particular attention to the mystery of why we have and apparently need REM and NREM sleep. Actual physiological recordings of sleep states will be reviewed and the student will learn how these are obtained and how to evaluate these. The circadian rhythms, ontogeny and evolution of these sleep-wake states will also be covered. This will include a review of information learned from non-human animal sleep. The change from sleep to full awakening reflects change toward increasing brain organization supporting consciousness. Understanding of the neurobiology of these states will be used to explore some of the more modern and scientific concepts of human self-awareness or consciousness.
Prerequisites: AS.080.203 OR AS.050.203 OR AS.200.101 or permission required.
Instructor(s): R. Allen
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.370. Functional Human Neuroanatomy. 3 Credits.
Cross-listed with Behavioral Biology and Neuroscience.
Instructor(s): S. Courtney-Faruque
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.376. Psychopharmacology. 3 Credits.
Designed to provide information about how drugs affect the brain and behavior. The course focuses on the interaction of various classes of drugs with the individual neurotransmitter systems in the brain. A brief historic review is followed by a discussion of clinical relevance. Cross-listed with Behavioral Biology and Neuroscience.
Instructor(s): H. Adwanikar; L. Gorman
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.381. Research Seminar: Learning and Memory.
This laboratory meeting is for graduate students studying learning and memory mechanisms, alterations with age or neurologic disease, and advanced neuroimaging methods. Meetings will focus on experimental design, presentation of data, analytical techniques. Undergraduates allowed to add the course with permission as Satisfactory/Unsatisfactory only. Recommended Course Background: AS.200.370 or AS.200.141 or AS.080.305/AS.080.306 or AS.020.306.
Instructor(s): M. Yassa.

Philosophy

The Department of Philosophy offers programs and courses at the undergraduate and graduate levels. The courses cover major periods in the history of Western philosophy and many of the main topics of systematic investigation: epistemology, metaphysics, ethics, aesthetics, philosophy of language, mathematical logic, and philosophy of science.

The undergraduate courses are designed to introduce students to the history of philosophy and its place in Western civilization, to teach them how to read philosophical texts, and to help them think about philosophical problems, including those that arise in other disciplines. Students may major in philosophy or use it as a concentration for an area major in Humanistic Studies. They may also study philosophy along with another subject, either by constructing a double major or by taking courses designed to help them develop philosophical perspectives on their own fields of interest.

The graduate program is intended primarily for those planning to teach philosophy and make their own contributions to it. While the acquisition of a broad background in the history and different systematic fields of philosophy is required, students will have ample opportunity to develop their own special interests.

The Department of Philosophy encourages its students to take advantage of the rich resources of other departments at Johns Hopkins University. As a look at their offerings will show, numerous philosophically important courses are offered by such departments as Political Science (political philosophy), History of Science and Technology (philosophy of science), the Humanities Center (hermeneutic, interpretive, and literary theory), and Cognitive Science.

(See also General Requirements for Departmental Majors (p. 33).)

Philosophy is a discipline of the mind as well as a cluster of closely related subjects. It is an excellent preparation for professional studies such as law and medicine; it provides perspective on other disciplines such as psychology, mathematics, literature, political science, and physics; and it centers on a set of questions that thinking people cannot avoid. At Hopkins it can be studied in a variety of ways.

A number of our courses are designed to provide broad introductions to the subject. Both AS.150.111 Philosophic Classics and AS.150.112 Philosophical Problems cover a wide range of topics, the former through the study of some of the major texts of Western thought, the latter by more systematic examination of representative issues. Either one will show a student a variety of approaches to philosophical problems. The courses AS.150.201 and AS.150.205 offer historically oriented introductions to the subject, giving the student a basic grasp of the development of philosophy in two of its major periods. Other courses, such as AS.150.118 Introduction to Formal Logic, and AS.150.220 Introduction to Moral Philosophy, are designed for students with an interest in the particular areas they cover. All of these courses are readily available without prior study of philosophy.

The 400-level courses are open to graduate students as well as to undergraduates. Some require no previous course in philosophy. Others presuppose some familiarity with philosophy, such as would be provided by one of the introductory courses. Still others require more specific preparation. A student with questions about whether he/she has the background for a particular 400-level course should consult either the instructor or the departmental undergraduate advisor.

A student who wants to study an area of philosophy not provided for in the regular curriculum or to undertake a special project of writing and research should consult with a faculty member about taking AS.150.511 Directed Study-AS.150.512 Directed Study. An undergraduate who has the proper background may enroll in a graduate seminar if the instructor approves.

Requirements for the B.A. Degree

Philosophy majors must take 11 departmental courses.

A minimum of six courses must be at the 300-level or higher. Of the two general introductory courses, AS.150.111 Philosophic Classics and AS.150.112 Philosophical Problems, only one may count toward the major, and only two 100-level courses may count toward the major.
Majors are required to take the “Undergraduate Seminar”, preferably in the junior year.

Other courses must be distributed by taking at least one course in each of the five following categories:

- Ancient philosophy
- Modern philosophy
- Logic, philosophy of science, or philosophy of mathematics
- Philosophy of mind, theory of knowledge, philosophy of language, or metaphysics
- Ethics, aesthetics, or political philosophy

The first two categories are normally satisfied by taking Introduction to Greek Philosophy and Introduction to the History of Modern Philosophy.

The student thus has four or five further electives after satisfying the distribution requirements. Well-qualified majors may be admitted to a graduate seminar during the senior year. They should consult their major advisor. Courses in which a grade of D is received may not count toward the major, nor may courses taken pass/fail.

Double Majors

The department encourages linking the study of philosophy with the study of other disciplines. For example, the subject matter and course requirements of the Philosophy and Psychological and Brain Sciences departments are such as to make a double major both practical and intriguing. Similarly, knowledge of literature or the history of art is pertinent to the study of aesthetics; a solid understanding of science is valuable for those interested in the philosophy of science; and students of ethics benefit considerably by combining their work with study of political theory and of the political realities amidst which morality must function. Members of the department will be happy to assist students in planning double majors particularly suited to their interests.

Honors Program in Philosophy

Students with an overall GPA of 3.0 and a Philosophy GPA of 3.5 or higher (or outstanding recommendations from three department members) are eligible for the Senior Honors Thesis Program. In addition to the 10 courses required for the major, successful applicants take AS.150.551 Honors Project, to write a thesis of about 50 pages under the supervision of a faculty member. The thesis must be completed prior to spring vacation of senior year. If the student withdraws prior to completion of a thesis, a satisfactory/unsatisfactory grade will be awarded.

The grade for the thesis will depend on the thesis itself and an oral examination about it, conducted by the thesis advisor and two other faculty members. Graduation Honors will be awarded to those whose work receives an A- or better. For more information about the Honors Program, consult the departmental major advisor.

Minor in Philosophy

Philosophy minors must take seven departmental courses, which should include the following:

- At least one course in the history of philosophy, either ancient or modern.
- At least one course in two of the following areas:
  - Logic, philosophy of science, or philosophy of mathematics
  - Ethics, aesthetics, or political philosophy
  - Systematic studies of problems central to the tradition arising from the work of Frege, Russell, Moore, Tarski, Carnap, and Wittgenstein
  - Either AS.150.111 Philosophic Classics or AS.150.112 Philosophical Problems, but not both, may count as one of the seven courses. Neither is a required course.

The Bioethics Program offers an interdisciplinary minor in which philosophy plays a large role. See Bioethics Program (p. 141) for more details.

When The Johns Hopkins University was founded in 1876, it was the first university in the United States designed as a center for research and doctoral education. Among its earliest graduate students were Josiah Royce and John Dewey; C. S. Peirce was an early faculty member. The department today continues this tradition, devoting a major part of its effort to preparing graduate students to make original contributions to the field and to pursue careers in college and university teaching.

The department’s purpose is to provide opportunities for students to develop special interests within a program that also ensures breadth of knowledge. We offer classes, seminars, and directed study in the history of ancient, modern, and contemporary Western philosophy, and in the systematic areas of epistemology, metaphysics, ethics, philosophy of science, philosophy of physics, philosophy of biology, philosophy of language, philosophy of mind, philosophy of mathematics, mathematical logic, and aesthetics. Philosophy courses are frequently offered in other departments, such as Political Science, German and Romance Languages and Literatures, and Classics, and students are encouraged to take advantage of these opportunities.

The department offers the M.A. and the Ph.D. degrees. The graduate program is designed primarily for those seeking the Ph.D., but under exceptional circumstances students aiming at the M.A. may be admitted.

For full details on the requirements for the Ph.D. program, see the department website at philosophy.jhu.edu.

Program in the History and Philosophy of Science

Graduate students with an interest in the history and philosophy of science receive their Ph.D. from either the Department of Philosophy or the Department of the History of Science and Technology, in accordance with each department’s requirements. Students in both departments, however, may apply to enroll in a special program of studies in history and philosophy of science coordinated by the Johns Hopkins Center for the History and Philosophy of Science. Students who fulfill the requirements will be certified by the center as having completed this special program. Further information can be obtained by writing to Professor Peter Achinstein, of the Department of Philosophy.

Program in Political and Moral Thought

Currently inactive except for year-long colloquia series.

Admission

In addition to submitting an application, applicants are asked to submit a sample of written work. While an undergraduate major in philosophy is good preparation for graduate study in the department, applications
are welcomed from students with other majors whose interests are now turning toward philosophy.

The deadline for those applying both for admission and financial aid is January 15. Awards will be announced by April 1. Inquiries should be addressed to Admissions Chair, Department of Philosophy, The Johns Hopkins University, Baltimore, Maryland, 21218. Graduate applications can also be downloaded from the admissions office website.

Financial Aid

All students admitted to the program receive financial assistance. Support is guaranteed for five years provided that a student continues to make satisfactory progress toward completion of the Ph.D. degree. Department fellowships cover tuition and pay a stipend. Outstanding applicants may be nominated for a George Owen Fellowship, which also covers tuition and for which the stipend is higher. All students receive fellowship support for the first two years; no teaching is required. Third- and fourth-year students are supported by teaching assistantships, which carry full tuition and a stipend. Fifth-year students are generally supported through teaching assistantships, though fellowship support may also be available. In practice, the department is often able to offer teaching assistantships to students beyond their fifth year, though this support is not guaranteed. In addition, a generous bequest by a former member of the department, David Sachs, has established the Sachs Fellowship Fund. Sachs Fellowships are dissertation-year fellowships awarded on a competitive basis to outstanding students who are making substantial progress toward completing their dissertations.

Leon Gilbert Barnhart Memorial Fellowship

A fellowship in memory of Leon Gilbert Barnhart, B.A. ’67, currently set at $3,000, may be awarded annually to support a student working on a dissertation on one of the topics which most interested Leon Barnhart himself: German philosophy, up to and including current German philosophy, and the history of philosophy more generally.

William Miller Essay Prize

The William Miller Essay Prize is awarded annually for a self-contained essay of outstanding quality in any field of philosophy. The monetary award is open to students in philosophy at the pre-dissertation stage of their graduate work. Submissions should be no longer than 10,000 words. Students may submit only one essay per year. Details are available from the Philosophy Department office.

For current faculty and contact information go to http://philosophy.jhu.edu/people/

Faculty

Chair

Richard Bett
Professor (Chair): ancient Greek philosophy, ethics.

Professors

Peter Achinstein
philosophy of science, analytic philosophy.

Eckart Förster
metaphysics, history of philosophy, Kant and German idealism.

Robert Rynasiewicz
logic, philosophy of science, history and philosophy of physics.

Meredith Williams
philosophy of mind, philosophy of psychology, Wittgenstein.

Michael Williams
Krieger-Eisenhower Professor: theory of knowledge, philosophy of language, history of modern philosophy, epistemology.

Associate Professors

Hilary Bok
Henry R. Luce Professor in Bioethics and Moral and Political Theory: moral philosophy, bioethics, freedom of the will Kant.

Steven Gross
philosophy of language, philosophy of mind, metaphysics.

Yitzhak Melamed
Early Modern Philosophy, German idealism, metaphysics.

Dean Moyar
German idealism, social and political philosophy, ethics.

Assistant Professors

Justin Bledin
logic, epistemology, philosophy of language.

L. Nandi Theunissen
Peterson Assistant Professor in: ethics.

Emeriti

Stephen Barker

Jerome B. Schneewind

Joint/Adjunct Appointments

Jeffrey Bub
Professor (Philosophy, University of Maryland, College Park): philosophy of quantum mechanics.

Paola Marrati
Professor (Humanities Center): contemporary French thought.

Maria Merritt
Assistant Professor (Bloomberg School of Public Health): bioethics.

Lawrence Principe
Professor (History of Science and Technology): history and philosophy of science.

Andrew Siegel
Core Faculty (Berman Institute of Bioethics).

Hent de Vries
Professor (Humanities Center): modern European thought.

For current course information and registration go to https://isis.jhu.edu/classes/
Courses

AS.150.105. Introduction to Eastern Philosophy. 3 Credits.
What is the nature of reality? What is the mind? What is the meaning of life? How ought we to live? In this course, we will explore how some of the better known philosophical systems of India, China and Japan have attempted to answer these most central philosophical questions. We will focus on the following systems: Nyaya, Samkhya-Yoga, Vedanta, Buddhism, Carvaka, Confucianism, Taoism, and Zen.
Instructor(s): B. Miller
Area: Humanities.

AS.150.107. Introduction to Moral Philosophy. 3 Credits.
This course will introduce students to some topics in the areas of normative ethics (What should we do?) and moral psychology (Where do moral judgments come from?) through discussion of classic texts in the Western philosophical tradition. We will also look at contemporary approaches to both moral theory and moral psychology.
Instructor(s): J. Gilmore
Area: Humanities
Writing Intensive.

AS.150.111. Philosophic Classics. 3 Credits.
The course introduces students to philosophy by critically examining selected texts in the Western philosophical tradition. Philosophers whose ideas will be examined include Plato, Descartes, Kant and Nietzsche.
Instructor(s): D. Moyar
Area: Humanities

AS.150.112. Philosophical Problems. 3 Credits.
An introduction to philosophy through several central problems. Topics might include the nature and limits of human knowledge, reason and religion, freedom of the will, and the objectivity of moral standards.
Instructor(s): S. Gross
Area: Humanities.

AS.150.113. Objectivity. 3 Credits.
This course examines the notion of objectivity and challenges to it. Its topics include the status of objective facts and beliefs, the structure of social reality, and rational disagreement. Dean’s Prize Teaching Fellowship course.
Instructor(s): N. Goldberg
Area: Humanities.

AS.150.114. Philosophy of Medicine. 3 Credits.
Dean’s Teaching Prize Fellowship course.

AS.150.118. Introduction to Formal Logic. 3 Credits.
The fundamentals of symbolic logic, including truth-functions, quantification theory, and identity; probability and decision theory. Co-listed with AS.150.632
Instructor(s): P. Achinstein
Area: Humanities, Quantitative and Mathematical Sciences.

AS.150.119. Existentialism. 3 Credits.
Existentialism is a philosophical movement that made a dramatic entry into the 20th century intellectual scene and has a profound and long lasting influence on it. The central themes developed by existentialist thinkers transgressed the boundaries of academic philosophy and found their expression in plays, novels, cinema, poetry, political tracts, etc. Through close reading of the seminal texts by Kierkegaard, Nietzsche, Heidegger, Sartre, and Merleau-Ponty, we will explore the core tenets of the existentialist legacy. The philosophical texts will be supplemented by related works of fiction and films.
Instructor(s): G. Lebanidze
Area: Humanities.

AS.150.125. Introduction to Modern Philosophy. 3 Credits.
The course will examine four major figures of early modern philosophy: Descartes, Leibniz, Hume, and Kant. Although the most recent of these thinkers died more than 200 years ago, we still refer to them as “modern” philosophers, revealing their great influence on the way we think about ourselves and our place in the world. The course will look at what these philosophers thought about questions such as: What kind of beings are we and how are we related to the world around us? Is knowledge of the world possible and if so what are its sources? Can we answer the question of God’s existence? Is order something we find in the world or impose on it? etc.
Instructor(s): G. Lebanidze
Area: Humanities
Writing Intensive.

AS.150.126. Relativism. 3 Credits.
More than any other modern philosophical doctrine, relativism has found currency outside of the academy. Talk of "equally valid" points of view has become a commonplace, even when the matter under discussion is a straightforwardly factual. We will examine many different relativistic doctrines, including the views that people coming from very different backgrounds or with very different beliefs do not have the grounds to criticize one another, and that such individuals cannot so much as understand one another. In the first two-thirds of the course we will evaluate arguments for and against views such as these. Towards the end of the semester we will explore what the fall-out for our everyday lives would be (or should be) if some kind of relativism were true. Freshmen only.
Instructor(s): N. Tebben
Area: Humanities.

AS.150.127. Realism and Antirealism in the Philosophy of Science. 3 Credits.
Are our best scientific theories approximately true, or useful but false? Does science converge on the truth over time? This course addresses such questions by surveying the scientific realism debate. Dean’s Prize Teaching Fellowship course.
Instructor(s): J. Hricko
Area: Humanities.

AS.150.128. Cognitive Science & Political Philosophy. 3 Credits.
Cognitive Science & Political Philosophy: Is a person born a republican, or are they raised that way? Are democrats Democrats because they have emotional personalities? Is politics the product of evolution, or of culture? Should the brain sciences determine public policy and law? In this course we will consider these questions and many more like them by looking at recent work in philosophy and the brain sciences.
Instructor(s): J. Waterman
Area: Humanities.

AS.150.129. The Theory of Knowledge: Classic and Contemporary Questions. 3 Credits.
How do we learn about things like Knowledge or Reason when they don’t have physical properties? Can there be a science of them if we can’t directly observe them? In this course we’ll investigate these questions and others by examining classic and contemporary philosophical works, from Plato to modern cognitive science.
Instructor(s): J. Waterman
Area: Humanities.
AS.150.131. Introduction to Social Philosophy. 3 Credits.
An introduction to social philosophy through critical reading of selected texts of two major figures: Adam Smith and Karl Marx. These two thinkers offered opposing theories of capitalism, which continue to shape our basic understanding of the world. We will address the method and foundations of their theories, as well as the normative concepts that inform their thought (e.g., freedom, human flourishing, alienation, exploitation, etc).
Instructor(s): A. Abazari
Area: Humanities, Social and Behavioral Sciences.

AS.150.191. Freshman Seminar: Ethical Topics in Plato. 3 Credits.
The class takes a problem-oriented approach to select dialogues in Plato. Central questions will include: the nature of motivation, and in particular, whether it is true that everyone desires the good; and the role of knowledge in leading a good life, in particular, whether it is true that that virtue is knowledge. We will focus on Ion, Apology, Euthyphro, the Meno, and the ethical books of the Republic.
Instructor(s): L. Theunissen
Area: Humanities
Writing Intensive.

AS.150.192. Freshman Seminar: Self and Self-Knowledge. 3 Credits.
Instructor(s): M. Williams
Area: Humanities.

AS.150.193. Philosophy of Language Seminar: Proper Names and Definite Descriptions. 3 Credits.
In talking with each other, we often use proper names like ‘Juliet’ and definite descriptions like ‘The most beautiful fresco in Italy’ to pick out persons and objects in our world. But what do these expressions mean exactly? In this seminar, we’ll slowly and carefully work through some classic philosophical texts that address this issue. These texts will provide an introduction to the philosophy of language, and to analytic philosophy in general.
Instructor(s): J. Bledin
Area: Humanities
Writing Intensive.

AS.150.201. Introduction to Greek Philosophy. 3 Credits.
A survey of the earlier phase of Greek philosophy. Socrates, Plato, and Aristotle will be discussed, as well as two groups of thinkers who preceded them, usually known as the pre-Socratics and the Sophists.
Instructor(s): R. Bett
Area: Humanities.

AS.150.202. Philosophy of Medicine. 3 Credits.
This course explores philosophical issues that are of central importance to medicine. Topics to be covered include: history of medicine, relationship between medicine and science, distinction between health and disease. Recommended Course Background: At least one philosophy course or permission from the instructor.
Instructor(s): B. Miller
Area: Humanities.

AS.150.203. Contemporary Metaphysics. 3 Credits.
This course will provide students with a survey of major topics in contemporary metaphysics, including such issues as the identity of objects through change and the metaphysical status of persons. Dean’s Teaching Fellowship course.
Instructor(s): J. Brandau
Area: Humanities
Writing Intensive.

AS.150.205. Introduction to the History of Modern Philosophy. 3 Credits.
An introduction to early modern philosophy, examining Descartes’ Meditations on First Philosophy, Locke’s Essay Concerning Human Understanding, Hume’s Enquiry Concerning Human Understanding, and selections from Kant’s Critique of Pure Reason. We will consider such topics as the relation between philosophy and science, the nature and scope of human knowledge, the nature of the human mind, and the nature of human freedom. Gilman course in the Humanities.
Instructor(s): Y. Melamed
Area: Humanities.

AS.150.217. Neuroethics. 3 Credits.
Neuroethics: Can electroencephalography show that we lack free will? Can modern neuroimaging show that someone will commit a crime in the future? Is it ethical to use this Promethean knowledge to put them in jail before they even commit a crime? In Neuroethics, we’ll consider these and other pressing questions emerging at the frontiers of neuroscience and modern moral theory. Freshman/Sophomore-level section of AS.150.472. The course will be taught by the same instructor and will run as a concurrent section meeting on the same days/times/locations as the upper-level class. In lieu of two research papers, students will be evaluated by midterm and final exam.
Prerequisites: This course is equivalent to AS.150.472
Instructor(s): P. Stojanovic
Area: Humanities.

AS.150.218. Introduction To Symbolic Logic. 3 Credits.
An introduction to the basic concepts and techniques of symbolic logic, with considerable emphasis on translating from English into formal languages, constructing formal proofs, and understanding semantic criteria for validity.
Area: Humanities.

AS.150.219. Introduction to Bioethics. 3 Credits.
Introduction to a wide range of moral issues arising in the biomedical fields, e.g., physician-assisted suicide, human cloning, abortion, surrogacy, and human subjects research. Cross listed with Public Health Studies.
Instructor(s): H. Bok
Area: Humanities
Writing Intensive.

AS.150.220. Introduction to Moral Philosophy. 3 Credits.
The class serves as an introduction to ethics. We consider select topics in meta-ethics (on the nature of reason and value), and we survey three prominent theories within normative ethics (utilitarianism, Kant’s moral theory, and virtue theory). We will read classic works from the history of philosophy, and important contemporary papers.
Instructor(s): L. Theunissen
Area: Humanities.

AS.150.227. Introduction to Asian Philosophy. 3 Credits.
What is the nature of reality? What is the mind? What is the meaning of life? How ought we to live? In this course, we will explore how some of the better known philosophical systems of India, China and Japan have attempted to answer these most central philosophical questions. We will focus on the following systems: Nyaya, Samkhya-Yoga, Vedanta, Buddhism, Carvaka, Confucianism, Taoism, and Zen.
Instructor(s): B. Miller
Area: Humanities.
AS.150.228. Introduction to the Foundations of Logic, Mathematics and Computation. 4 Credits.
This course replaces 150.218 Introduction to Symbolic Logic and 150.420 Intermediate Symbolic Logic. These courses were based on the sort of basic logic course that has been standardly taught by Philosophy departments for at least fifty years. But much has happened since then, and it is high time to begin introducing students to the more exciting developments earlier on so that they can get a sense for where the action is. Since the 1950’s there have been major developments in the areas of lambda calculus and category theory and results such as the Curry-Howard isomorphism showing how these are related to logic. For example, conclusions of arguments correspond to the existence of data types and proofs correspond to programs. In general, the course explores fundamental formal systems and their formal interpretations. Apart from covering basic systems of logic, we will look at different manners of interpreting basic mathematical concepts such as those of set, element, number, ordered pair, function, and mapping. Students enrolled at the 420 level will attend the same lectures and sections as 228 students but will investigate the material at a deeper level through more penetrating homework assignments.
Instructor(s): R. Rynasiewicz
Area: Quantitative and Mathematical Sciences.

AS.150.229. Religion and/or Science?. 3 Credits.
Are Religion and Science necessarily in conflict, can they coexist, or do they in fact require each other’s existence? Is scientific method so different from religious thinking? Can science discredit God? Is it possible to be rational and remain religious? In this course, we will explore these and other related questions and examine possible answers. In the process, we will read the texts of both classical and contemporary philosophers and scientists who tackled with these problems.
Instructor(s): P. Stojanovic
Area: Humanities.

AS.150.235. Philosophy of Religion. 3 Credits.
Philosophical arguments for and against religious belief; rational and anti-rational conceptions of faith; the will to believe and the ethics of belief; evil and omnipotence; myth and the miracles.
Instructor(s): S. Gross
Area: Humanities.

AS.150.237. Foundations of Modern Political Philosophy. 3 Credits.
This course is an introduction to modern political philosophy through an intensive study of the classic texts. The focus will be on the nature and limits of political authority under modern social conditions. Authors included are Machiavelli, Hobbes, Locke, Rousseau and Mill.
Instructor(s): D. Moyar
Area: Humanities.

AS.150.245. Introduction to Philosophy of Mind. 3 Credits.
This is an introduction to the central problems of philosophy of mind: the mind-body problem and the problem of self-knowledge. Of particular interest in contemporary work is the relation of mind and brain and whether, or how, we acquire self-knowledge.
Instructor(s): M. Williams
Area: Humanities.

AS.150.300. Prometheus Editorial Workshop. 1 Credit.
Prometheus is an international undergraduate philosophy journal published by students at Johns Hopkins University. The purpose of the journal is to promote philosophic discourse of the highest standard by offering students an opportunity to engage in open discussion, participate in the production and publication of an academic journal, and establish a community of aspiring philosophers. Students enrolled in this workshop will act as the staff readers for the journal. For more information, please visit www.prometheus-journal.com.
Area: Humanities.

AS.150.301. Undergraduate Seminar: Ethics. 3 Credits.
This course will focus on contemporary ethical theory. While the details of the course are still being worked out, possible topics include: What makes life meaningful or worth living? Should ethical theory tell us what makes life good, or simply what our obligations to others are? Can ethical theory help us find happiness?
Instructor(s): L. Papish
Area: Humanities
Writing Intensive.

AS.150.302. Topics in Bioethics: Bioethics and the Human Genome. 3 Credits.
Instructor(s): M. Lewis
Area: Humanities.

AS.150.303. Heidegger: Being and Time. 3 Credits.
This course will be a close reading of Heidegger’s 1927 masterwork Being and Time. From his attempt to provide a new beginning for Western metaphysics, to his analysis of “being towards death,” Heidegger offers an unparalleled synthesis of theoretical and practical concerns. In addition to examining the arguments in detail, the course will also consider the historical sources of Heidegger’s claims and the influence of his writings on subsequent philosophy.
Instructor(s): D. Moyar
Area: Humanities.

AS.150.304. The Ethics of Human Experimentation. 3 Credits.
This course will explore ethical theory, key historical events, and operational requirements of research involving human beings. Weekly discussions will focus on seminal literature and case studies that highlight conceptual and practical challenges related to informed consent; research ethics review; risk/benefit analysis; justice/fairness; globalization of research; participation of vulnerable populations; clinical equipoise; obligations to research participants and communities during studies and after research is completed; and deception in psychological and behavioral research. The course will also explore the emergence and development of the rules governing the protection of human subject research.
Instructor(s): J. Ali
Area: Humanities.

AS.150.305. Global Health & Human Rights: Theoretical Foundations & Practical Implications. 3 Credits.
This course systematically examines the human right to health. Topics will include the theoretical foundation(s) of human rights; how human rights compare and contrast to other dominant views of global justice (including Rawlsian versions, cosmopolitanism, and capabilities, among others); and whether (or under what circumstances) health can be properly called a “right”. Special scrutiny will be given to access to essential medicines as a recent example of the invocation of a right to health.
Instructor(s): M. DeCamp
Area: Humanities.
AS.150.306. The Epicurians, the Stoics, & the Skeptics on How to Live. 3 Credits.
The question “How to live?” is eternal. The Epicureans said that pleasure is the goal of life that is to be pursued, thus paving the way to modern Utilitarianism. The Stoics argued that the goal of life is virtue, which consists in living in agreement with nature; in this, they anticipated contemporary virtue ethics. Both schools thought that although we live in a material and causally determined universe, our moral actions and characters are nevertheless “up to us” and that we have moral freedom and responsibility. The Skeptics, on the other hand, tried to demonstrate that no moral principles have sufficient rational justification and that, because of this, the only option is some kind of moral relativism and the pursuit of freedom from emotional disturbance. In this, they anticipated moral relativism and moral nihilism. By examining of the arguments of the Epicureans, the Stoics, and the Skeptics in this course, you will not only learn about them, but also have an opportunity to do philosophy yourself, and perhaps clarify how you should live your own life.
Instructor(s): P. Stojanovic
Area: Humanities.

AS.150.308. What is Philosophy?. 3 Credits.
What is philosophy? Is it purely theoretical inquiry, or does it spill over into the way we live our lives? How is it different from other academic disciplines or from religion? The course will examine what some of the most influential contemporary philosophers think about these questions. But in addition to this, we will trace the story of the emergence of philosophy in the ancient Greece and its development up to present day. We will read the works of Plato, Kant, and Nietzsche as well as such prominent contemporary philosophers as Rorty, Foucault, and Taylor.
Area: Humanities.

AS.150.309. Introduction to Philosophy of Physics. 3 Credits.
In this course, we will sample philosophical issues surrounding quantum and relativity theories. We will begin by looking at the measurement problem in quantum mechanics, assess various proposed solutions to it, and the frailties to which they are prone. We will then focus on the concept of non-locality which stems from the notion of entanglement in quantum systems. The second part of this course is meant as an introduction to the philosophy of relativity physics. Our goal will be to understand the nature of space-time theories and various fundamental aspects of relativistic physics such as the conventionality of simultaneity thesis and the speed of light postulate from a philosophical perspective.
No previous background in physics will be required as the necessary formalisms will be developed as we go.
Instructor(s): G. Guralp
Area: Humanities, Natural Sciences.

AS.150.311. Undergraduate Seminar: Philosophy of Ludwig Wittgenstein. 3 Credits.
We will read Wittgenstein’s two great works: Tractatus Logico-Philosophicus (1921) and Philosophical Investigations (1953). If you have previously taken AS.150.442 you may not register for AS.150.311.
Prerequisites: If you have previously taken AS.150.442 you may not register for AS.150.311.
Instructor(s): M. Williams
Area: Humanities.

AS.150.312. Philosophy and Complexity. 3 Credits.
This course aims to engage with philosophical problems that stem from sciences of complexity in an interdisciplinary way. We will pose questions concerning how disciplines such as biology, economics, neuroscience, astrophysics etc. deal with the problem of complexity, and we will look at the basic problems philosophers of science single out in this context. After introducing the general problematic of the course, we will have two main parts under which we examine the philosophy of complex systems. The first part will be devoted to the epistemological aspects of the problem such as models, laws, explanation and evidence, and the second part will examine the metaphysical aspects of emergence and reduction.
Instructor(s): G. Guralp
Area: Humanities.

AS.150.313. Philosophy of Race and Gender. 3 Credits.
TBA
Instructor(s): L. Papish
Area: Humanities.

AS.150.330. Decisions, Games & Social Choice. 3 Credits.
This course is an introduction to decision theory, game theory, and social choice theory with an emphasis on their philosophical underpinnings and philosophical applications. Topics covered include the Prisoner’s Dilemma, Newcomb’s Problem, convention and social contracts, risk, and Arrow’s Theorem.
Instructor(s): J. Bledin
Area: Humanities.

AS.150.400. Realism & Antirealism in the Philosophy of Science. 3 Credits.
Are our best scientific theories approximately true, or useful but false? Does science converge on the truth over time? This course addresses such questions by surveying the scientific realism debate.
Instructor(s): J. Hricko
Area: Humanities, Social and Behavioral Sciences.

AS.150.401. Greek Philosophy: Plato and His Predecessors. 3 Credits.
A study of pre-Socratic philosophers, especially those to whom Plato reacted; also an examination of major dialogues of Plato with emphasis upon his principal theses and characteristic methods.Cross-listed with Classics.
Instructor(s): R. Bett
Area: Humanities
Writing Intensive.

AS.150.402. Aristotle. 3 Credits.
A study of major selected texts of Aristotle.
Instructor(s): R. Bett
Area: Humanities
Writing Intensive.

AS.150.403. Hellenistic Philosophy. 3 Credits.
A study of later Greek philosophy, stretching roughly from the death of Aristotle to the Roman imperial period. Epicureans, Stoics, and Skeptics will be the main philosophical schools examined.
Instructor(s): R. Bett
Area: Humanities
Writing Intensive.
AS.150.404. Ethics and History of Body Modification. 3 Credits.
This course examines the ethical, historical and political issues surrounding body modifications. It explores the ways in which medical technologies have intersected with cultural constructions of gender, age, sexuality and race to produce ways of altering the human corporeal form. The course looks at a myriad of difference body modifications, concentrating mostly upon the Twentieth Century, but reaching as far back as the early modern period. Topics include: cosmetic surgery, transsexuality, bodybuilding, sports doping, dieting, anorexia, piercing, tattooing, fashion, make-up, and mythic modifications, such as vampires and werewolves. The course looks at the ways in which these modifications have been used variously to conform to, subvert and expose social norms about bodily appearance, as well as interrogating the means by which medicine and science are implicit in the cultural construction of those norms.
Instructor(s): D. O'Connor
Area: Humanities
Writing Intensive.

AS.150.405. Alienation. 3 Credits.
In this course we will study the topic of alienation both historically and systematically. We will examine the concept’s historical roots at the turn of the 19th century and engage with contemporary discussions by authors working in philosophy of mind, ethics and political philosophy.
Instructor(s): D. Moyar
Area: Humanities
Writing Intensive.

AS.150.406. Can Science Explain Everything?. 3 Credits.
What is scientific explanation? We will examine various theories about this in order to determine whether and how science can explain everything physical and everything mental (including consciousness, emotions, purposes, and values). In addition to science are non-scientific theories, for example, religious ones, necessary? Do they compete with or complement scientific ones?
Instructor(s): P. Achinstein
Area: Humanities.

AS.150.409. Classics of Analytic Philosophy. 3 Credits.
A reading of some of the classic philosophical works in 20th Century Analytic Philosophy, beginning with G. Frege and ending with V.O. Quine.
Instructor(s): M. Williams
Area: Humanities.

AS.150.410. American Philosophy. 3 Credits.
Studies of major figures in the history of American Philosophy beginning with the 19th century. The course focuses on the development of pragmatism in the work of Peirce, James and Dewey. Other philosophers, such as Royce and Mead, may also be studied.
Instructor(s): D. Moyar
Area: Humanities.

AS.150.412. Kant’s Critique of Practical Reason. 3 Credits.
A historical and systematic study of Kant’s ethics and philosophy of religion, with special attention to his Critique of Practical Reason.
Instructor(s): E. Forster
Area: Humanities.

AS.150.414. Topics in Political Philosophy: Liberalism. 3 Credits.
This course will examine recent liberal political philosophy, with particular emphasis on the work of John Rawls and Jürgen Habermas.
Instructor(s): D. Moyar
Area: Humanities.

AS.150.417. Kant’s ‘Critique Of Pure Reason’. 3 Credits.
An examination of the philosophy of Immanuel Kant, with emphasis on The Critique of Pure Reason.
Instructor(s): E. Forster
Area: Humanities.

AS.150.418. Hermeneutics and Critical Theory. 3 Credits.
An introduction to two of the most important and influential schools in twentieth-century German philosophy. This course examines the works of four leading representatives of these schools, i.e. Heidegger, Gadamer, Horkheimer, and Habermas.
Instructor(s): E. Forster
Area: Humanities.

AS.150.419. Kant’s Critique/Judgment. 3 Credits.
Instructor(s): E. Forster
Area: Humanities.

AS.150.420. Mathematical Logic I. 3 Credits.
This is the first semester of a two semester course in mathematical logic. The first semester covers the syntax and semantics of sentential and predicate logic, proof, entailment, completeness. Course formerly listed as Symbolic Logic.
Prerequisites: If you have completed AS.150.421 you may not register for AS.150.420.
Instructor(s): R. Rynasiewicz
Area: Humanities.

AS.150.421. Mathematical Logic II. 3 Credits.
Gödel’s two incompleteness theorems regarding, first the unaxiomatizability of arithmetic and, second, the impossibility of proving the consistency of arithmetic using arithmetic methods (unless arithmetic is inconsistent). Computability and Church’s Thesis.
Prerequisites: Prereq: AS.150.420 or equivalent
Instructor(s): R. Rynasiewicz
Area: Humanities, Quantitative and Mathematical Sciences.

AS.150.422. Axiomatic Set Theory. 3 Credits.
Axiomatic development of set theory, including the theory of transfinite ordinals and cardinals. Relative consistency proofs. Independence of the axiom of choice, and of the continuum hypothesis. Implications for the foundations of mathematics.
Prerequisites: AS.150.421
Instructor(s): R. Rynasiewicz
Area: Humanities, Quantitative and Mathematical Sciences.

AS.150.424. Foundations of Probability & Induction. 3 Credits.
An examination of various interpretations of probability, including classical and priori, frequency, propensity, subjective, and logical. Also, we will study views about evidence as well as paradoxes of inductive reasoning, including Hume’s skepticism, and the grue and ravens paradoxes. No previous knowledge of probability is required.
Instructor(s): P. Achinstein
Area: Humanities, Quantitative and Mathematical Sciences.

AS.150.425. The Nominalism/Realism Debate II: The Modern Debate. 3 Credits.
A study of four exemplary modern thinkers with respect to their theories of universals: Locke, Kant (Nominalism), Goethe, Hegel (Realism).
Area: Humanities.
AS.150.426. Kant’s Transcendental Philosophy. 3 Credits.
This course will focus on how Kant understands his philosophical method, how he takes it to be different from that of his predecessors, and why he thinks it can solve outstanding philosophical problems. The greatest part of the course will be spent on excerpts from the Critique of Pure Reason, though we will also cover the Groundwork for the Metaphysics of Morals and several short works.

AS.150.427. Relativism. 3 Credits.
The central questions of this class are: (1) what is epistemic relativism? and (2) is it true? The focus of this class will be exclusively on epistemic (not moral) relativism. We will draw on work from analytic philosophy and the history of science. Topics to be discussed include: conceptual schemes (are there any?), non-representational views of language, and cognitive pluralism.”
Instructor(s): N. Tebben
Area: Humanities.

AS.150.428. Spinoza’s Theological Political Treatise. 3 Credits.
The course is an in-depth study of Spinoza’s Theological-Political Treatise. Among the topics to be discussed are: Spinoza’s Bible criticism, the nature of religion, truth and obedience, the nature of the Hebrew State, Spinoza’s Theory of the State, the freedom to philosophize, the metaphysics of Spinoza’s Theological-Political Treatise, and finally, the reception of the TTP. Cross-listed with Jewish Studies
Instructor(s): Y. Melamed.
Area: Humanities.

AS.150.429. Topics in Logic: Ontology and Knowledge Representation. 3 Credits.
Knowledge representation deals with the possible structures by which the content of what is known can be formally represented in such a way that queries can be posed and inferences drawn. Ontology concerns the hierarchical classification of entities from given domains of knowledge together with the relations between various classes, subclasses, or individuals. The main framework in which we will work is that of description logics, which are decidable fragments of varying degrees of first order predicate logic. In ontology development we will examine RDF (Resource Description Framework), its extension to RDFS, and OWL (Web Ontology Language), and use the software Protegé for specific applications. Finally, we will take a look at query languages such as SPARQL (SPARQL Protocol and RDF Query Language).
Instructor(s): R. Rynasiewicz
Area: Humanities, Natural Sciences.

AS.150.430. Hegel’s Phenomenology of Spirit. 3 Credits.
An in-depth study of Hegel’s masterpiece, the Phenomenology of Spirit. We will be concentrating on the first half of the text.
Instructor(s): E. Forster.

AS.150.431. Introduction to Philosophy of Science. 3 Credits.
This course introduces students to some major philosophical problems about science, including these three: (1) Is there a universal set of rules constituting the “scientific method” that scientists must always follow in order to be rational? (2) Can science provide knowledge of an “unobservable” world underlying our experiences, and if so how? Or is science confined to speaking about the world of observation? (3) Are there important differences between philosophy and science? We will consider disputes between rationalists (e.g., Descartes) and empiricists (e.g., Newton) on scientific method, historical and contemporary debates between scientific realists and instrumentalists about the reach of science, as well as different viewpoints concerning the relationship between philosophy and science. No particular science or philosophy background is presupposed.
Instructor(s): P. Achinstein
Area: Humanities.

AS.150.432. Morality & Rules. 3 Credits.
This course will consider some of the primary approaches in contemporary moral philosophy, including consequentialism, Kantianism, non-Kantian deontology, virtue theory, and particularism. An important (though not the exclusive) focus of our coverage will be the role that these approaches assign to rules and rule-following. The course will also address some topics in the philosophy of practical reasoning. Students should have taken a prior course in philosophy.
Instructor(s): T. Rosenkoetter.

AS.150.433. Philos/Space & Time. 3 Credits.
Beginning with Poincaré, there has been an influential school of thought maintaining that there is no fact of the matter as to whether the geometry of space is Euclidean or, instead, some form of non-Euclidean geometry – rather, one can arbitrarily choose a metric geometry and then modify the physics in order to fit the empirical facts. This claim has been extended to affine geometry (inertial structure of spacetime) and distant simultaneity (in relative theory). We will critically examine this tradition, beginning with a careful examination of the relation of non-Euclidean to Euclidean geometry.
Instructor(s): R. Rynasiewicz
Area: Humanities, Natural Sciences.

AS.150.434. History and Philosophy of Quantum Physics I. 3 Credits.
Planck, Einstein, Bohr model, “old quantum theory,” correspondence principle, dispersion, BKS theory, Heisenberg’s Umdeutung (1925 invention of matrix mechanics) and its development.
Instructor(s): R. Rynasiewicz
Area: Humanities, Natural Sciences.

AS.150.435. The Philosophy and Theology of Maimonides. 3 Credits.
This course will examine the philosophic and theological thought of Judaism’s most renowned philosopher, Moses Maimonides (1138-1204). After a brief overview of Maimonides’ multifaceted life as philosopher, scientist, physician, Talmudic scholar, rabbi, and communal leader; we will consider Maimonides’ philosophic and religious background and, in particular, the ancient Greek and medieval Islamic philosophic works that influenced him. The course will delve into his views on topics such as the relation between faith and reason, the existence of God, creation/eternity of the world, free will/determinism, the nature of prophecy, the purpose of law, human happiness, ultimate perfection, and the Afterlife. Special attention will be given to Maimonides’ method of philosophic writing and the tension in his life between the vita activa and the vita contemplativa. The course will also trace the impact of Maimonides’ Guide of the Perplexed upon later Jewish thought and upon Western philosophy and theology from Thomas Aquinas to Leibniz.
Instructor(s): S. Harvey
Area: Humanities.

AS.150.436. Philosophy of Psychology. 3 Credits.
This will be a critical examination of Chomsky’s and Fodor’s conception of language. Our approach will be genealogical. We want to understand the theoretical changes each undergoes and why.
Instructor(s): M. Williams
Area: Humanities.

AS.150.438. Spinoza’s The Ethics. 3 Credits.
The seminar is an in depth study of Spinoza’s major work, The Ethics.
Instructor(s): Y. Melamed
Area: Humanities.
AS.150.439. Epistemology. 3 Credits.
Is knowledge (or even strong evidence) required, or possible, in science and in philosophy? We will focus on whether standard forms of non-demonstrative reasoning are justified, how if at all one can gain knowledge of the observable and unobservable world, whether and how theories in philosophy can be established, and what to do in science and philosophy when you can’t prove or get strong evidence for your theory. Instructor(s): P. Achinstein
Area: Humanities.

AS.150.442. The Philosophy of Ludwig Wittgenstein. 3 Credits.
We will read Wittgenstein's two great works: Tractatus Logico-Philosophicus (1921) and Philosophical Investigations (1953). Instructor(s): M. Williams
Area: Humanities.

AS.150.447. Law and Philosophy. 3 Credits.
In this course we will examine major issues in the philosophy of law, including the relation of law to moral theory, the role of democratic political institutions in legal decisions, and the justification of punishment. No previous knowledge of law or philosophy is required. Instructor(s): D. Moyar
Area: Humanities.

AS.150.452. Freedom of Will & Moral Responsibility. 3 Credits.
What are freedom of the will and moral responsibility? Are they compatible with determinism or naturalism? This course will examine various philosophers’ answers to these questions. Instructor(s): H. Bok
Area: Humanities
Writing Intensive.

AS.150.453. Contemp Moral Philosophy: Responses to Wrongdoing. 3 Credits.
Instructor(s): L. Papish
Area: Humanities.

AS.150.454. The Value of Humanity. 3 Credits.
This is an upper-level undergraduate course on the value of human beings. Are human beings distinctively valuable? What makes us valuable? And how should we respond to the value of human beings? The course is divided into three parts. The first part takes up metaphysical questions about the basis and explanation of human value. We consider various proposals, including Kant’s, on the valuable feature or capacity of human beings. Are we valuable in virtue of having a good will, in virtue of being agents, in virtue of being valuers, or something further? And we consider various accounts of how the proposed basis makes us valuable: does it make us valuable in ourselves, or simpliciter? Or does it make us valuable-for something or someone? The second part of the course takes up normative questions about the appropriate mode of responding to human beings. We consider whether it makes sense to say that human beings are ‘ends-in-themselves’, and what it would mean to treat a person as an end-in-itself. We also consider various accounts of respect. A guiding question is whether human beings are the only appropriate objects of respect, or whether we can respect other beings, and even artifacts. The third section of the course turns to more applied philosophical questions. We ask about the relationship between humans and animals, and consider the claim that to accord human beings special value amounts to specieism—prejudicial favoring of our own kind. Instructor(s): L. Theunissen
Area: Humanities.

AS.150.455. Ethics And Animals. 3 Credits.
Instructor(s): H. Bok
Area: Humanities
Writing Intensive.

AS.150.459. Theory Of Knowledge. 3 Credits.
An advanced introduction to the central problems, concepts and theories of contemporary philosophical epistemology (theory of knowledge). Topics to be explored will include: what is knowledge (and why do we want it)?; theories of justification (foundationalism, the coherence theory, etc.); externalism and internalism in epistemology; skepticism, relativism and how to avoid them. Readings from contemporary sources. Instructor(s): M. Williams
Area: Humanities
Writing Intensive.

AS.150.463. Theories of Rationality. 3 Credits.
Foundations of Rationality: How should we reason about reasoning? Understanding the nature of our ability to reason is among the most important parts of understanding who we are as human beings. This course will investigate the foundations of rationality through an examination of philosophical texts and contemporary empirical research. Instructor(s): J. Waterman
Area: Humanities.

AS.150.464. Objectivity. 3 Credits.
This course examines the notion of objectivity and challenges to it. Its topics include the status of objective facts and beliefs, the structure of social reality, and rational disagreement. Instructor(s): N. Goldberg
Area: Humanities.

AS.150.465. Genetics, Genomics and Society. 3 Credits.
This course will examine the ethical, legal and social implications (ELSI) of human genetics through the lens of significant and field-defining periods and events in the history of the field. We will study the ELSI issues raised by those events, and how the events have shaped and defined the current state of the science and emerging scientific, ethical, policy and public health issues. Juniors and Seniors only. Instructor(s): D. Mathews
Area: Humanities, Natural Sciences, Social and Behavioral Sciences.

AS.150.468. Spinoza and Deleuze. 3 Credits.
The seminar is an in depth study of Spinoza’s major work, the Ethics, and of Deleuze’s interpretation of the Ethics. Discussion will focus on the following topics: the style and structure of the book, the definition of attribute, the substance-mode relation, infinity, duration and eternity, Spinoza’s proof of substance-monom, infinite modes, necessitarianism, parallelism, individuals and their limits, the nature of bodies. Special attention will be given to the principle of sufficient reason and to the priority of the infinite over the finite as the two metaphysical principles that motivate many of Spinoza’s claims. We will current analytic scholarship on Spinoza’s metaphysics, side by side with Deleuze’s major book on Spinoza.
Course open to graduate and undergraduate seniors only.

AS.150.469. Spinoza and German Idealism. 3 Credits.
Instructor(s): E. Forster; Y. Melamed.

AS.150.470. Spinoza and the Pantheism Debate. 3 Credits.
In this course we will examine the philosophical significance of the so-called Pantheism Debate which shook Germany at the end of the 18th century after it was revealed that Lessing, the main representative of the German Enlightenment, was a Spinozist. Readings will be drawn from Spinoza, Jacobi, Mendelssohn, Herder, Goethe, and Kant.
Instructor(s): E. Forster; Y. Melamed
Area: Humanities.
AS.150.472. Neuroethics. 3 Credits.
Neuroethics: Can electroencephalography show that we lack free will? Can modern neuroimaging show that someone will commit a crime in the future? Is it ethical to use this Promethean knowledge to put them in jail before they even commit a crime? In Neuroethics, we'll consider these and other pressing questions emerging at the frontiers of neuroscience and modern moral theory.
Instructor(s): P. Stojanovic
Area: Humanities.

AS.150.473. Classics of Analytic Philosophy. 3 Credits.
This will be an examination of the classic articles of 20th Century Anglo-American philosophy. Included are Frege, Russell, Wittgenstein, Austen, Carnap, Quine.
Area: Humanities.

AS.150.474. Justice and Health. 3 Credits.
Course will consider the bearing of theories of justice on health care. Topics will include national health insurance, rationing and cost containment, and what justice requires of researchers in developing countries.
Instructor(s): H. Bok
Area: Humanities.

AS.150.475. Addiction, Depression, and the Self. 3 Credits.
An examination of the moral implications and effects of addiction, depression and Pharmacological treatments for depression on our conception of our own agency. Recommended Course Background: AS.150.219, AS.150.220, or permission required.
Instructor(s): H. Bok
Area: Humanities Writing Intensive.

AS.150.476. Philosophy and Cognitive Science. 3 Credits.
This year's topic is "cognitive penetrability." What is the relationship between thought and perception? We will address this question through contemporary readings in both psychology and philosophy. Included among the specific questions to be addressed: do the terms, 'perception' and 'cognition' designate functionally distinct parts of the mind? To what extent is conscious experience (for example, how things look) influenced by changes in belief, expectations, and motivation? To what extent are we capable of observation that is independent of belief, and what is the role of perceptual evidence in scientific theorizing? Is there a level of visual processing that is encapsulated from higher cognition? What role does language play in how we see? What role does/can attention play in mediating between cognition and perception? Readings from Fodor, Pylyshyn, Siegel, Churchland, Bargh, Balcetis, and others. [Note: This course meets concurrently with AS.200.316 and AS.200.616.] Instructor permission required.
Instructor(s): J. Flombaum; S. Gross
Area: Humanities Writing Intensive.

AS.150.477. Existentialism. 3 Credits.
Through a close reading of the seminal texts by Kierkegaard, Nietzsche, Heidegger, Sartre, and Merleau-Ponty the course will examine one of the most influential philosophical movements of the last century.
Instructor(s): G. Lebanidze
Area: Humanities.

AS.150.480. Philosophy and Geometry in History: Episodes from the Early Modern Period. 3 Credits.
Area: Humanities Writing Intensive.

AS.150.481. Philosophical Implications of Clinical Neuroscience. 3 Credits.
The intersection of philosophy and neuroscience has become a popular topic of late. Research in this area, what some have termed 'neuroethics', has, among other things, motivated a reassessment of some of the metaphysical, epistemological, and moral assumptions at the heart of common philosophical theories. This course will critically survey some of these 'reassessments' using cases in clinical neurology as a starting point.

AS.150.482. The Ethics of Food. 3 Credits.
Eating is an essential human activity: we need to eat to survive. But alas, we need not eat well to survive, and many of us don’t. This course is about eating well—eating in a way that’s morally responsible, aesthetically pleasing, healthy, and that gives meaning to our lives. We’ll consider these ethical questions: Is it morally wrong to make animals suffer and to kill them in order to eat them? Does it depend upon the animal (e.g. cows vs. clams)? What are the environmental and social consequences of various eating habits (e.g. vegetarianism, veganism, eating locally, eating organic)? Do these environmental and social consequences generate moral obligations to adopt (or to abandon) the relevant eating habits? Should we eat in ways that express and honor our humanity, our cultures, our religions, and our family traditions—or is this comparatively unimportant? We’ll also consider government policies that affect our food choices: How can government policy shape our food choices? Given the individual and collective costs of certain food choices, should government policy aim to shape our food choices, or is that unacceptably paternalistic? Does the government have different responsibilities to shape children’s food choices than adults’ food choices?
Instructor(s): A. Barnhill Writing Intensive.

AS.150.483. Topics in Jewish Philosophy: Heresy. 3 Credits.
This course will study the history and transformations of the Jewish concept of ‘Apikorsut’ – a unique kind of heresy that refers to a rabbinic scholar turned into a heretic, while maintaining a tense dialogue with mainstream Rabbinic culture and community. We will particularly interested in the following questions: What makes a dissenter into an Apikor? How does the Apikors defer from the apostate? Why was philosophy as a whole considered (since the Late Middle Ages) as a discipline of Apikorus? 
Instructor(s): Y. Melamed.

AS.150.484. Is Knowledge Possible: Epistemic Problems, Puzzles & Paradox. 3 Credits.
How is knowledge possible in view of various intractable problems and paradoxes, including the problem of justifying induction, the realism-anti-realism dispute, and the grue and ravens paradoxes about evidence? Are philosophical claims knowable? A study of contemporary views about evidence, probability, inference, and philosophy.
Instructor(s): P. Achinstein Area: Humanities.
AS.150.485. Introductions to the Foundations of Logic, Mathematics and Computation. 4 Credits.
This course replaces 150.218 Introduction to Logic and 150.420 Intermediate Symbol Logic. These courses were based on the sort of basic logic course that has been standardly taught by Philosophy departments for at least fifty years. But much has happened since then, and it is high time to begin introducing students to the more exciting developments earlier on so that they can get a sense for where the action is. Since the 1950’s there have been major developments in the areas of lambda calculus and category theory and results such as the Curry-Howard isomorphism showing how these are related to logic. For example, conclusions of arguments correspond to the existence of data types and proofs correspond to programs. In general, the course explores fundamental formal systems and their formal interpretations. Apart from covering basic systems of logic, we will look at different manners of interpreting basic mathematical concepts such as those of set, element, number, ordered pair, function, and mapping. Students enrolled at the 420 level will attend the same lectures and sections as 228 students but will investigate the material at a deeper level through more penetrating homework assignments.
Instructor(s): R. Rynasiewicz
Area: Quantitative and Mathematical Sciences.

AS.150.486. Philosophy of Religion from Plato to Nietzsche. 3 Credits.
How should one understand the relation between reason and religious faith? Are there rationally compelling arguments for belief in the existence of God? If not, are the ethical demands of religious faith problematic? And if religious faith is not founded on reason, what is the best explanation for it? We will examine these and related questions via influential writings from Plato, Augustine, Anselm, Aquinas, Descartes, Hume, Kant, Kierkegaard, Marx, and Nietzsche.
Instructor(s): P. Leland.

AS.150.487. Experimental Ethics. 3 Credits.
Can ethical truths be uncovered through experimental methods? In this course we look at research in the psychology of moral judgment and its impact on how we ought to act.
Instructor(s): J. Maynes
Area: Humanities.

AS.150.488. Enlightenment Moral and Political Theory. 3 Credits.
Instructor(s): H. Bok
Area: Humanities
Writing Intensive.

AS.150.489. Spinoza’s Metaphysics. 3 Credits.
The seminar is an in depth study of Spinoza’s major work, the Ethics. We will concentrate on Parts II-IV of the Ethics, though we will try to cover the entire book. Among the topics to be discussed are: the style and structure of the book, the meaning of being and the question of ontology in Spinoza, the nature of Spinoza’s attributes, necessitarianism, teleology, the nature of ideas, parallelism, individuals and their limits, the nature of bodies, the three kinds of knowledge, the conatus and the affects, Spinoza’s view of good and evil, blessedness and divine intellectual love.
Instructor(s): Y. Melamed
Area: Humanities.

AS.150.490. Animal Minds. 3 Credits.
An examination of some of the scientific and philosophical literature on the nature of animal minds and the way(s) in which they differ from the human mind. The most important of these apparent differences are the use of language, the exercise of concepts, and instrumental reasoning, including the use of instruments. Co-listed 300.411
Instructor(s): M. Williams
Area: Humanities.

AS.150.491. Kant and Newton on the Foundations of Science. 3 Credits.
Kant attempted to provide a philosophical foundation for Newtonian science. In this class we will read Kant’s work “Metaphysical Foundations of Natural Science,” and philosophical and foundational parts of Newton’s “Principia,” and we will critically compare and evaluate both. No particular scientific background is presupposed.
Instructor(s): E. Forster; P. Achinstein
Area: Humanities.

AS.150.493. Introduction to Scientific Methods. 3 Credits.
Are there universal methods that make scientific inquiry superior to any other? We will study methods proposed by Descartes, Newton, Mill, Popper, and others; and critiques of these methods by Kuhn and Feyerabend.
Instructor(s): P. Achinstein
Area: Humanities.

AS.150.494. Descartes. 3 Credits.
The course is an introduction to the philosophy of Rene Descartes. We will read most of his main philosophical works, and part of his correspondence. The class is open to both undergraduate and graduate students.
Instructor(s): Y. Melamed
Area: Humanities.

AS.150.495. Sex, Drugs, and Bioethics: Medicine and Morality in Modern America. 3 Credits.
Alongside rock n’ roll, sex and drugs have classically been seen as sites of moral or ethical transgression, particularly in post-war America. Unlike rock n’ roll, however, sex and drugs have always been bound up with the practice of medicine. This course explores the interaction of medical science with the moral and ethical issues which surround i) reproduction, sexual pleasure, and gender roles and ii) the use of drugs, both therapeutic, enhancing and recreational. Bridging these two sides of the course is the question of medicalisation, and how medical science is used to construct socially normative ideals about sexuality, behavior, emotion and physical capacity, and how in turn those moral norms are used to justify or argue for the development of particular medical practices. The aim of the course is to illuminate the mutually constitutive interplay of medicine and morality in modern America. Topics covered include: abortion, contraception, IVF, sex-selection, gene selection, adolescent sexualities, prostitution, STD surveillance, medicalisation of sexual dysfunction, medicalisation of emotion and behavior, ‘moral enhancement’, ADHD, Performance Enhancing Drugs, cosmetic surgery, neuroenhancement, recreational drugs, the war on drugs, the purpose of medicine.
Instructor(s): D. O’Connor
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.150.496. Topics in the Theory of Value. 3 Credits.
We ask a basic question in value theory: what is it for something to be good, or of value? Is it for something to instantiate the simple value property ‘good’? Can goodness be identified with some natural property, perhaps, the property ‘pleasant’, or some dispositional property, perhaps, ‘what we desire to desire’? Is goodness a relation between some object, state of affairs, or activity and a subject, so that the good is benefit? On the other hand, are reasons and not values primitive in value theory, so that we should theorize about the good in terms of appropriate responses to it? We will read classic works by G. E. Moore, Peter Geach, Judith Jarvis Thomson, Connie Rosati, Nicholas Sturgeon, Richard Kraut, Donald Regan, T. M. Scanlon, and others.
Instructor(s): L. Theunissen
Area: Humanities.

AS.150.497. Kant and the Early Moderns. 3 Credits.
A critical examination of Kant’s dialogue with his Early Modern predecessors (Descartes, Spinoza, Leibniz, Locke, Berkeley, Hume), and of their own respective positions.
Instructor(s): E. Forster; Y. Melamed
Area: Humanities.

AS.150.498. Modal Logic and Its Applications. 3 Credits.
In the first part of the course, we’ll investigate the theory of modal logic, considering its syntax, semantics, and proof theory. We’ll then turn to some of its philosophical applications: epistemic logic, counterfactuals, deontic logic, intuitionistic logic, and the metaphysics of time.
Instructor(s): J. Bledin
Area: Humanities, Quantitative and Mathematical Sciences.

AS.150.511. Directed Study. 3 Credits.
Individual study of special topics, under regular supervision of a faculty member. Special permission is required.
Instructor(s): Staff
Writing Intensive.

AS.150.512. Directed Study. NULL Credits.
Instructor(s): Staff.

AS.150.551. Directed Study. 3 Credits.
Instructor(s): Staff.

AS.150.552. Honors Project. NULL Credits.
Instructor(s): Staff.

AS.150.598. Internship. 1 Credit.
Instructor(s): D. Moyar; M. Tumulty.

AS.150.600. Rules and Rule Following.
A close critical examination of the rule-following issues that arise from Wittgenstein’s Philosophical Investigation.

AS.150.601. Graduate Seminar: Topics in the Theory.
Graduate students from non-Philosophy departments need instructor permission. We ask a very basic question in value theory: what is it for something to be good, or of value? Is it for something to instantiate the simple value property ‘good’? Can goodness be identified with some natural property, perhaps, the property ‘pleasant’, or some dispositional property, perhaps, ‘what we desire to desire’? Is goodness a relation between some object, state of affairs, or activity and a subject, so that the good is benefit? On the other hand, are reasons and not values primitive in value theory, so that we should theorize about the good in terms of appropriate responses to it? We will read classic works by G. E. Moore, Peter Geach, Judith Jarvis Thomson, Connie Rosati, Nicholas Sturgeon, Michael Smith, Richard Kraut, Donald Regan, T. M. Scanlon, and others.
Instructor(s): L. Theunissen
Area: Humanities.

AS.150.602. Causation and Exploration.

AS.150.604. Probability and Evidence.
Leading theories about the meaning of probability, and about the concept of evidence. No previous course in probability is necessary.
Instructor(s): P. Achinstein
Area: Humanities.

AS.150.605. Foundations of Ethics.
The seminar will serve as an advanced, topical introduction to normative theories in ethics, and will include some meta-ethics. Our central question is: what is the foundation, or motivational basis, of ethics? Is it the individual asking what she wants for her life? Is it the determination of rational requirements on action? We think about the relationship between reason, reasons, and motivation. We consider the debate over internalism and externalism about reasons. We work through the distinction between agent-neutral and agent-relative reasons and values. Among others, we will read Thomas Nagel, Phillippa Foot, Shelly Kagan, Samuel Scheffler, Derek Parfit, G. E. M. Anscombe, and Bernard Williams.
Instructor(s): L. Theunissen
Area: Humanities.

Course will focus on ancient skepticism as a way of life, and on the role of epistemological argument in skepticism so conceived. The seminar will end with a brief look at early modern reactions to ancient skepticism.
Instructor(s): M. Williams; R. Bett.

AS.150.608. Topics in Contemporary Axiology and Moral Theory.
This course will examine, first, alternative conceptions of how value is normative for agents. Should we promote value and increase its amount? Or should we honor and respect instances of value? We will also devote attention to some of the fundamental questions of axiology, focusing on the question of which ontological types have value, states of affairs or persons? This has been a contentious issue between two groups of philosophers, who tend to regard either Moore or Kant as a hero. There will be some attention to Moore and Kant themselves, though the bulk of the reading will be drawn from contemporary authors such as Anderson, Bradley, Chisholm, Darwall, Feldman, Hurka, Kagan, Lemos, Parfit, Raz, Scanlon, Sumner, Velleman, and Zimmerman.

AS.150.609. Graduate Seminar - Philosophy.
An examination of Derek Parfit’s “On What Matters”.
Instructor(s): H. Bok
Area: Humanities.

AS.150.610. Graduate Seminar: Virtue Ethics.
A study of recent work in virtue ethics.
Instructor(s): H. Bok.
AS.150.611. Topics in Metaphysics: Mereology.  
Mereology, the study of the relationship between parts and whole, has recently become a major subfield in contemporary metaphysics. In the seminar we will read classical as well as recent literature on the subject. Topics to be discussed include: the univocity of the term ‘part’, priority relations between parts and whole, universal composition, the nature of simples, boundaries, mereology and set theory, spatial parts, temporal parts, metaphysical monism and nihilism. For an introductory survey of the field, please see: Varzi, Achille, “Mereology”, The Stanford Encyclopedia of Philosophy (Spring 2011 Edition), Edward N. Zalta (ed.), URL = <a href="http://plato.stanford.edu/archives/spr2011/entries/mereology/">http://plato.stanford.edu/archives/spr2011/entries/mereology/</a>.  
Instructor(s): Y. Melamed.

Schelling's Philosophical Investigations into the Nature of Human Freedom counts among his most important works – Heidegger called it "one of the deepest works of Western philosophy." It is also one of the most enigmatic ones. In this course, we will contrast it with Schelling's philosophy of nature and investigate the extent to which his theory of freedom is necessitated by problems in his philosophy of nature.  
Instructor(s): E. Forster  
Area: Humanities.

AS.150.619. Topics in Hegel’s Philosophy: Morality and Right.  
In this course we will examine Hegel’s attempt to reconcile the normative domains of morality and right or law. Central topics include Hegel’s criticism of social contract theory, his phenomenological history of Spirit, and his conception of Ethical Life.  
Instructor(s): D. Moyar.

AS.150.621. Seminar in Hegel’s Phenomenology of Spirit.  
The course will consist of close reading of Hegel’s text along with readings from the extensive secondary literature. Particular attention will be given to Hegel’s methodology, his uses of recognition, and the various treatments of agency.  
Instructor(s): D. Moyar.

AS.150.625. Fichte’s Theory of Self-Consciousness.  
An in-depth study of Fichte’s 1794 Science of Knowledge together with his "Outline of the Distinctive Character of the Wissenschaftslehre with respect to the Theoretical Faculty."  
Instructor(s): E. Forster.

AS.150.629. Graduate Seminar: Knowledge, Meaning, and Necessity: Themes from Wilfrid Sellars.  
Instructor(s): M. Williams.

AS.150.630. Seminar In Metaphysics: Mind and Cosmos.  
We will begin by reading Thomas Nagel’s new book: Mind and Cosmos. This will be followed by other works to be selected in class.  
Instructor(s): P. Achinstein.

AS.150.632. Formal Logic.  
Co-listed with AS.150.118  
Instructor(s): P. Achinstein  
Area: Humanities, Quantitative and Mathematical Sciences.

AS.150.633. Kant’s Opus Postumum.  
This research seminar examines the reasons that led Kant to revise his transcendental philosophy late in life. Special attention to problems in the Metaphysics of Nature and the Metaphysics of Morals. Students should be familiar with Kant’s theoretical and practical philosophy.  
Instructor(s): E. Forster.

AS.150.634. Seminar in Philosophy of German Idealism: Explanation or Construction? The Question of Method in the Philosophy of Nature.  
“We must do away with all explanation, and description alone must take its place.” This sentence, although written over a century later and in a different context, could serve as a motto for what is perhaps the most important debate about the proper method of Naturphilosophie in German Idealism. In this seminar we will examine the philosophical significance of this debate over the role of explanation in our knowledge of nature. Readings will come from Jacobi, Goethe, Schiller, Kant, Schelling, Hegel, as well as from Pascal, Spinoza, and Newton.  
Instructor(s): E. Forster  
Area: Humanities.

This seminar will be an examination of Wittgenstein's On Certainty. We will be concerned with detailed readings of the passages as well as more general interpretative claims.  

This seminar will focus on the ethical system of the Stoics. Stoic ethics is notorious for a number of apparently extreme assertions, such as “Virtue is the only good”, “Virtue is sufficient for happiness”, and “The wise man is happy on the rack”. Yet the system has a wide following, over several centuries, in both Greek and Roman worlds; and it devotees (including at least one Roman emperor) were certainly not all fanatics. We will attempt to make sense of this ethical outlook, with particular focus on the relations among virtue, wisdom and happiness. This will involve some examination of other aspects of Stoic philosophy, especially their epistemology and their “physics” (that is, their conception of the nature of the world); it will also involve some examination of antecedents to Stoic ethical positions in earlier Greek philosophy, especially Plato. Finally, the Stoics have often been assimilated – particularly on account of their ethical views – to certain figures in modern philosophy, especially Kant and Spinoza; we will discuss these connections, real or imagined, to the extent that time permits and student interests dictate.  

AS.150.648. The Identity of Indiscernibles.  
Can two things (such as bodies, events, moments, thoughts, possible worlds) have precisely the same qualities? If so, what makes them different from each other? In this course we will study various theories of individuation in the early modern period and in contemporary metaphysics. Readings will include texts by Aristotle, Thomas, Spinoza, Locke, Leibniz, Clarke, Kant, Maimon, Russell, Max Black, Ayer, Ian Hacking, Saul Kripke, Robert Adams, and Michael Della Rocca.  

AS.150.649. Graduate Seminar: Kant’s Moral Theory.  
A study of Kant’s major works in moral philosophy.  
Instructor(s): H. Bok.

AS.150.652. Seminar in the Philosophy of Science.  
Recent developments in the realism-antirealism debate. Constructivism, structuralism, and suppositionalism.  
Instructor(s): R. Rynasiewicz.

AS.150.653. Seminar: Philosophy - Physics.  
Philosophical problems in space-time physics.  
Instructor(s): R. Rynasiewicz  
Area: Humanities.

AS.150.658. Topics in the Philosophy of Language.  
An examination of recent work in the philosophy of language and/or related work in the philosophy of mind  
Instructor(s): S. Gross.
AS.150.659. Graduate Seminar: Topics in Formal Semantics.
After an introduction to both static and dynamic semantics, we home in
on two issues: the content of epistemic modal claims, and the logic and
semantics of interrogative sentences.
Instructor(s): J. Bledin
Area: Humanities.

AS.150.661. Topics in the History & Foundations of Special &
General Relativity.
Readings from Hertz, Lorentz, Poincaré, Einstein, Minkowski, Abraham,
Laue, Weyl, Pauli, and others, tracing the evolution in the foundations
of physics, from classical dynamics to the electromagnetic world view
and then on through relativistic continuum mechanics / field theory.
Special emphasis on how fields and matter couple to the space-time
metric. Other problems considered include the hole argument, absolute
vs. relational conceptions of space-time, separation of empirical from
conventional components of theory (especially as regards simultaneity),
the Minkowski-Abraham controversy and the recent development of
"premetric" electrodynamics. Of special interest for graduate students in
the history of science and for undergraduate and graduate students in
physics, as well as for philosophy graduate students interested in natural
philosophy.
Instructor(s): D. Moyar.

AS.150.662. Topics in Ethics: Kantian Ethics.
This course will ask the question "What makes an ethics Kantian?" It
will look both to Kant’s texts and to various contemporary ethicists who
understand their projects to be Kantian. Students will have the option
to write on topics in the history of philosophy or on topics in contemporary
moral theory.
Instructor(s): T. Rosenkoetter.

AS.150.663. “Self-Consciousness, Recognition, and Right”.
This course will involve a close reading of J.G. Fichte’s Foundations of
Natural Right and G.W.F. Hegel’s Philosophy of Right. The focus will be
on how these authors ground the category of right and its applicability in
claims about self-consciousness and mutual recognition.
Instructor(s): D. Moyar.

AS.150.664. What is Naturphilosophie.
In recent year, there has been a resurgence of interest in idealist
philosophy of nature (Naturphilosophie). In this research seminar, we will
study some of the recent literature on this topic, together with the classic
texts from Plato to Hegel.
Instructor(s): E. Forster.

AS.150.665. Philosophy of Psychology.
Instructor(s): M. Williams.

AS.150.810. Independent Study.
Instructor(s): Staff.

AS.150.811. Directed Study.
Please see AS.150.810 for section numbers to use when registering.
Instructor(s): Staff.

AS.150.812. Directed Study.
Please see AS.150.810 for section number to use when registering.
Instructor(s): Staff.

AS.150.821. Research Seminar in Language and Mind.
A workshop for current departmental research in language and mind.
Permission required.
Instructor(s): S. Gross
Area: Humanities.

Cross Listed Courses

Cognitive Science
AS.050.303. Mind, Brain and Beauty. 3 Credits.
What underlies our aesthetic response to art, music, and other facets
of human experience? Do identifiable properties of objects and events
evoke consistent aesthetic responses, or is beauty mostly in the eye
of the beholder? Examining such questions from cognitive science,
neuroscience, and philosophical perspectives, this course explores
relevant research and theory in the visual, auditory, and tactile domains.
Several researchers will discuss their ongoing studies with the class, and
students will also have the opportunity to participate in demonstration
experiments that illustrate phenomena under discussion. (Same as
AS.050.603) Recommended Course Background: One or more courses
in one of these: Cognitive Science, Neuroscience, Philosophy, or
Psychology or permission of instructor.
Instructor(s): M. McCloskey
Area: Natural Sciences, Social and Behavioral Sciences.

English
AS.060.282. Moral Philosophy and the Novel in Nineteenth-Century
England. 3 Credits.
Can novels ask philosophical questions? What do literary narratives and
moral arguments have to do with each other? Everyone who has read
a novel recognizes that it is in part an expression of ideas: characters,
narrators, authors, and so forth say and do things that express a way
of thinking. In this course we’ll examine the connections between moral
philosophy and literature in nineteenth-century England in a series of four
units, each of which pairs a novelist and a philosopher. The novelists
will be Jane Austen, Charles Dickens, George Eliot, and E.M. Forster; the
major philosophers will include Edmund Burke, John Stuart Mill, Immanuel
Kant, and G.E. Moore, and we’ll read excerpts from Jeremy Bentham,
Ludwig Feuerbach, F.H. Bradley, and Henry Sigwick. Assignments
will include reading quizzes, response papers, and a final essay with
a research component. Dean’s Teaching Fellowship course. Pre 1800
course.
Instructor(s): P. Fessenbecker
Area: Humanities
Writing Intensive.

Psychological Brain Sciences
AS.200.206. Foundations of Mind. 4 Credits.
An interdisciplinary investigation into the innateness of concepts:
perception, number, language, and morality, physics discussed. Evidence
from animals, infants, patients, brains. Students collect data in sections
investigating claims from the readings. Cross-listed with Cognitive
Science and Philosophy.
Area: Social and Behavioral Sciences.
German Romance Languages Literatures

AS.211.235. Panorama of German Thought I. 3 Credits.
Taught in English. German thought is a broad intellectual tradition that encompasses works in an astonishing number of fields including philosophy, aesthetics, sociology, epistemology, psychology, anthropology, history, religious studies, and cultural analysis. The most prominent representatives of this tradition include Luther, Kant, Humboldt, Hegel, Nietzsche, Marx, Warburg, Freud, Benjamin, Kracauer, Weber, Simmel, Cassirer, Auerbach, Adorno, Arendt, Heidegger, and Luhmann. Indeed, the study of cultural, historical, and social phenomena as well as of literary and artistic forms would not have been possible without the German intellectual tradition which, beginning with the Enlightenment, emphasized the role of the subject in constituting objects of knowledge and experience. This two-semester survey course will highlight important topics of German Thought, e.g., the subject, consciousness and unconsciousness, Bildung and the idea of the university, the sublime and the uncanny, irony, hermeneutics and translation, the desire for knowledge, tragedy and repetition, civilization, symbolic forms and medial reproduction, memory, and authority in a historical scope. While the first semester (Fall) covers until 1850 (from Luther to Hegel/Kierkegaard), the second (Spring) focuses on Modern German Thought after 1850 (from Marx to Luhmann). Meets with AS.213.235
Instructor(s): E. Strowick
Area: Humanities.

AS.211.265. Panorama of German Thought. 3 Credits.
German thought is a broad intellectual tradition that encompasses works in an astonishing number of fields including philosophy, aesthetics, sociology, epistemology, psychology, anthropology, history, religious studies, and cultural analysis. The most prominent representatives of this tradition include Luther, Leibniz, Kant, Humboldt, Hegel, Nietzsche, Marx, Warburg, Freud, Benjamin, Kracauer, Weber, Simmel, Cassirer, Auerbach, Adorno, Arendt, Heidegger, and Luhmann. Indeed, current approaches to understanding cultural, historical, and social phenomena as well as literary and artistic forms would not have been possible without the German intellectual tradition which, beginning with the Enlightenment, emphasized the role of the subject in constituting objects of knowledge and experience. This survey course will highlight important topics in German Thought, which may include the subject, consciousness and unconsciousness, Bildung and the idea of the university, the sublime and the uncanny, irony, hermeneutics and translation, the desire for knowledge, tragedy and repetition, civilization, symbolic forms and medial reproduction, memory, and authority in a historical scope. Taught in English.
Instructor(s): W. Egginton
Area: Humanities.

AS.213.235. Panorama of German Thought I. 3 Credits.

Instructor(s): E. Strowick
Area: Humanities.

AS.213.236. Panorama of German Thought II. 3 Credits.
Panorama of German Thought from Nietzsche to Habermas. Course will examine major thinkers in nineteenth and twentieth-century German thought with emphasis on the response to Enlightenment philosophy, the critique of reason, the questions about the autonomy of the subject and the search for new individual and collective identities. Reading will include traditional philosophical texts (Nietzsche, Cassirer, Heidegger, Adorno, Habermas) as well as works in anthropology (Gehlen, Scheler), sociology (Simmel, Weber), psychology (Mach, Freud), political theory (Marx, Schmitt) and aesthetics (Benjamin, Warburg, Panofsky). This course is a continuation of Panorama of German Thought I, though the first semester is not a prerequisite for the second. Taught in English.
Instructor(s): R. Tobias
Area: Humanities.

AS.213.309. Walter Benjamin and His World. 3 Credits.
All readings and class discussions in English. This course will provide an introduction to the thought, writing, and world of Walter Benjamin—one of the most interesting and influential German writers of the early 20th century. Although he died in exile having published only a single book in his lifetime, in the past three decades his ideas and preoccupations have changed the way we think about Cultural Studies, Media Studies, Literary Studies, German thought, Jewish mysticism, and the philosophy of history. We will be examining some of his major writings in tandem with precursors such as Charles Baudelaire and Louis Aragon; contemporaries such as Theodor Adorno and Gershom Scholem; and the legacy of his work among contemporary theorists, critics, and artists.
Instructor(s): M. Caplan
Area: Humanities.

AS.213.368. German Political Thought. 3 Credits.
This course will introduce students to major figures in German political thought from Martin Luther to Karl Marx and Immanuel Kant to Carl Schmitt. The class will explore such issues as the notion of sovereignty, the relationship between church and state, the theory of parliamentary democracy, and the political and economic ramifications of liberalism. Reading and discussion in English.
Instructor(s): R. Tobias
Area: Humanities.
The course analyzes the transformations of the relationship between form – life – aesthetics with regard to Goethe's morphological writings as well as the complex history of the reception in the philosophy of life (Spengler, Klages), in literary Modernism (Rilke, Einstein, Benn, Kafka) and in the early cultural studies of the 20th century (Simmel, Cassirer, Blumenberg). The "doctrine of the shape of formation (Bildung) and transformation (Umbildung) of organic bodies," Goethe's morphology considers shape (Gestalt) not as something static but in constant change, taking particular interest in the movable ("das Bewegliche"), ie, processes of transformation in their temporality: "Observing all shapes, particularly organic ones, nowhere do we find something established, something inactive, but rather everything oscillates in constant movement. Hence our language uses the word Bildung for both, the emerged as well as the emerging." A nexus between life and form, Bildung raises the problem of representation: A force towards representation, it itself escapes representation. It is by way of metamorphosis and dynamization of representation that the relationship between life and form is arranged anew, again and again – imposing questions of Bildung, representability (Bildlichkeit), morphological methods and poetics on modern literature and the humanities. Taught in German. Recommended Course Background: AS.210.311-AS.210.312 or instructor permission.
Instructor(s): E. Strowick
Area: Humanities.

AS.213.604. Small Forms.
Small forms cover the broad field from aphorism, epigram, fable and riddle to anecdote, short story, novella, ... and treatise. In each of those 'compressional arts' the smallness unfolds in different and historically specific ways. Spanning a period from 1770 to 1940 and focusing (not exclusively) on aphorisms, the seminar will explore the manifold poetics of the small in literature and philosophy: What can small mean on the level of (literary) form? What (historically specific) kind of readings do small forms facilitate? What readings do they thwart? What happens to aphorisms when they become parts of a monstrously large overall composition? What distinguishes small forms from (e.g.) fragments? How do small forms relate to simple forms (Jolles) or minor literature (Deleuze)? To what extent do small forms gain epistemological impact, e.g. with respect to the critique of system and systematic philosophy since 1870? Readings include Lichtenberg, Schlegel, Novalis, Nietzsche, Kafka, Robert Walser, Benjamin, Adorno. Readings and discussions in German.
Instructor(s): A. Krauss
Area: Humanities.

AS.213.610. The Idea of a University in Classical German Philosophy.
The role and function of a university in life and in society was a topic of considerable concern for some of the most prominent German philosophers of the late 18th and early 19th century. Their published (and unpublished) contributions led to a new understanding of what a university should be that proved to be very influential for the conception of the 'modern' university, as realized in Germany in the 19th century. The seminar will examine the writings of Kant, Fichte, Schelling, Schleiermacher, and Humboldt on the university with attention to the relation of the authors' thoughts on education to their more general philosophical positions. The seminar will begin on March 22 and continue to the end of the term.
Instructor(s): R. Horstmann.

AS.213.629. The Art of Framing.
Frames and Framings in art and literature are aesthetic means of creating focus. They draw a distinction between interiority and exteriority, foreground and surroundings; they cut out segments from space-time continuum and thus provide basic instruments of orientation, they constitute pictorial representation as well as the compositional structure of literature. From an epistemological perspective one can say that frames create a paradoxical threshold in-between which facilitates both the differentiation and transgression of spheres. It is further remarkable that frames while spectacularly making visible something specific at the same time expose the instances of their own 'showing': by implementing frames representation observes itself in the very process of representing. Through constellating systematic and historical readings the seminar will analyze theoretical concepts of frame and framing (Simmel, Genette, Marin, Derrida) and at the same time explore the transformation of frame forms and functions in literature and aesthetic discourse between 1720 and 1830 (Brockes, v. Haller, Wieland, Lessing, Herder, Lichtenberg, Goethe, Moritz, Jean Paul, Schlegel, Brentano, Tieck, Hoffmann). Among the topics to be discussed will be the conceptualization of subject-object relations as an analytical tool to reconstruct how the organizing principles of framing in Enlightenment (point of view, Guckkasten, chain of pictures, landscape/camera obscura) drift into the twilight of epistemological reflection: Around 1800 frame structures (and its doublings/transgressions) present the "Produzierende mit dem Produkt" and thus articulate the insights of transcendentental philosophy, they turn into a medium of romantic irony.
Instructor(s): A. Krauss
Area: Humanities.

AS.213.634. Schiller's Aesthetic Writings.
Schiller's theoretical writings might be approached by the sentence 'it is only through beauty that man makes his way to freedom'. Discussing the assumption that humans live in a condition of unfreedom resulting from social and economic divisions, Schiller's notion of beauty crosses boundaries between ethics, politics and aesthetics to formulate a theory of modernity in which beauty functions as a medium to reconcile man's sensuous nature and his capacity for reason. The course will examine Schiller's concept of beauty in relation to the anthropological, political, ethical and aesthetic discourses of his time especially with respect to Kant's view of aesthetic judgment which Schiller at the same time embraced and criticized. Particular attention will be paid to Schiller's reflexions on representation as well as to the poetics of his aesthetic discourse. Readings include: Kallias-Briefe (1793), Über Anmut und Würde (1793), Vom Erhabenen (1793), Über die ästhetische Erziehung des Menschen in einer Reihe von Briefen (1793), Über naive und sentimentalische Dichtung (1795/96). Readings and discussions in German.
Instructor(s): A. Krauss.
AS.213.654. „Stimmung“: Mood – Attunement – Atmosphere in Literature and Literary Criticism.
Taught in German. The course title marks a problem of translation which already Leo Spitzer in his “Prolegomena to an interpretation of the word “Stimmung” underscores: “It is a fact that the German word Stimmung as such is untranslatable.” Mood, attunement, atmosphere are facets of an aesthetics of Stimmung as it developed in literature and philosophy from the 18th to the 20th century. Most recently, Stimmung has had a renaissance as a methodological term in a Literary Criticism which seeks to overcome the paradigm of post-structuralism. As David Wellbery has demonstrated, the linguistic usage of the word Stimmung comprises three aspects: a subjective mode of experience/perception, an atmospheric dimension and a communicative efficacy. It is along those lines that the course analyzes the poetics and aesthetics of Stimmung in German Literature and Thought from the 18th through the 20th century. Stimmung proves to be fertile ground for contagious forms of communication, specific modes of representation (i.e. coloring, nuance), and the dissolution of subject/object boundaries. Furthermore, we will discuss Stimmung as a term of Literary Criticism from the 20th century to the present. Readings will include: Kant, Schiller, Stifter, Fontane, Hofmannsthal, Hermann Bahr, Thomas Mann, Georg Simmel, Martin Heidegger, Leo Spitzer, Erich Auerbach, Gernot Böhme, Hans-Ulrich Gumbrecht.
Instructor(s): E. Strowick
Area: Humanities.

In the [eighteen-]forties,” Benjamin writes in “The Arcades Project,” “boredom began to felt on an epidemic scale”. It is, however, as early as in German Enlightenment that boredom (“Langeweile”) haunts aesthetics and discourses on sensitivity: The construction of the sensitive man is beleaguered by figures of insensitivity – boredom among others. In boredom, aesthetics encounters its anesthetic pendant. From the beginning of its discursive emergence, boredom combines an “existential and a temporal connotation” (Goodstein): an emotional emptiness/apathy with a particular experience of time. Against the backdrop of the discursive history of boredom from the 18th to the 20th century, the course addresses the specific connection between boredom and modern literature. How can we understand the “ecstasy glimpsed from the banks of desire”, the “warm gray muffle lined with glowing silk” in which “we wrap ourselves when we dream” – as Barthes and Benjamin describe boredom respectively – with regard to literary representation? How does modern literature transform boredom into the empty time of writing? We will analyze poetics of boredom with respect to their temporal structures, the monotony of the everyday, the loss of meaning, the differentiation of perception and the time of reading/reading time. Readings include: Kant, Herder, Tieck, Büchner, Kierkegaard, Schopenhauer, Stifter, Nietzsche, Hofmannsthal, Thomas Mann, Heidegger, Benjamin, Barthes, Max Frisch, Hans Blumenberg. Readings and discussions in German. Cross-listed with Philosophy
Instructor(s): E. Strowick.

The course will be taught in German. With Alexander Gottlieb Baumgarten’s thesis “Philosophical meditations pertaining to some matters concerning poetry” (1735) the term “aesthetics” was introduced to philosophical discourse. The new name for the discipline did not signify a complete break with previous philosophical positions, that is, with the perfectionist aesthetics of Leibniz and Wolff. However, by conceptualizing sensible cognition as “analogue of reason” (analogon rationis) Baumgarten depicted the aesthetic sense as a locus of perfection in its own right and, thus, did transform the Wolffian model and paved the way for much more radical revisions of aesthetic experience in Germany. The course will study the emergence and specificity of Baumgarten’s concept of aesthetics in relation to the Wolffian framework, Gotthsched’s poetics, (Georg Friedrich) Meier’s adaptions of Baumgarten, and Herders response to Baumgarten. Readings include Baumgarten’s early Meditations on Poetry (Meditationes philosophicae de nonnulis ad poema pertinentibus, 1735), excerpts from his Metaphysics (Metaphysica, 1739) and Aesthetics (Aesthetica, 1750-58). Cross-listed with Philosophy
Instructor(s): A. Krauss.

Taught in German. The course analyzes the performative on the basis of the very field that John L. Austin’s speech act theory excludes: literature. What challenges Austin’s speech act theory indeed opens up the question of the performative towards iterability and theatricality and thus calls for the performative as a methodological category of literary criticism. According to Shoshana Felman’s readings of Austin, the performative act can be accentuated as an act of the “speaking body” in which the body is conceived of not as a means of linguistic expression but rather as a spillover of the act of utterance into the statement. How then is the corporeality or materiality of writing asserted in acts of narrating and reading? The course will examine theories of the performative from the perspective of literature and literary criticism as well as analyze literary speech acts (promises, pacts, etc.) in detail. Readings will include: Austin, Derrida, Felman, Freud, Nietzsche, de Man, Hamacher, Goethe, Büchner, Kafka, Henry James, Thomas Mann etc.
Instructor(s): E. Strowick
Area: Humanities.

AS.213.761. Reading & Writing in Pre-Modern Europe.
This course has a fourfold aim: First, it is designed to familiarize participants with the basics of Latin paleography from Roman antiquity through the age of printing with moveable type; throughout, we will practice deciphering literary and documentary sources of various types, even as we concentrate on the evolution of different writing styles. Second, we will think about paleography’s status as a “discipline.” That is, the term “paleography” dates back to 1708 and Montfaucon’s classic work, Palaeographia Graeca. However, it was only in the late nineteenth century in the world of the German research university that paleography came into the orbit of the Geisteswissenschaften as a “Hilfswissenschaft.” Both implicitly and explicitly throughout the seminar we shall be asking what consequences that move entailed. Third, we will study the manner in which printing with moveable type changed western graphic culture: was printing “revolutionary” or “evolutionary”? Did printing and its radical graphic changes introduce new forms of consciousness in readers? Fourth, we will become familiar with certain aspects of “the history of the book,” discovering as we do what sorts of questions scholars in this broad field of scholarly endeavor have been asking recently.
Instructor(s): C. Celenza.
Theatre Arts Studies

AS.325.328. The Existential Drama: Philosophy and Theatre of the Absurd. 3 Credits.
Existentialism, a powerful movement in modern drama and theatre, has had a profound influence on contemporary political thought, ethics, and psychology, and has transformed our very notion of how to stage a play. Selected readings and lectures on the philosophy of Kierkegaard, Nietzsche, Camus and Sartre -- and discussion of works for the stage by Sartre, Ionesco, Genet, Beckett, Albee, Pinter, Athol Fugard (with Nkani & Nshone), Heiner Müller and the late plays of Caryl Churchill. Opportunities for projects on Dürrenmatt, Frisch, Havel, Witkiewicz, and Mrozek.
Instructor(s): K. Boyce
Area: Humanities
Writing Intensive.

Humanities Center

AS.330.319. Skepticism and Theology. 3 Credits.
This course examines the relation between the history of philosophical theology and the foundations of modern skepticism by focusing on their mutual point of departure: the concept of the human being as an essentially "finite" being "limited" in its capacity to know others, the world, and God.
Instructor(s): T. Dika
Area: Humanities
Writing Intensive.

AS.330.342. The Bible and Philosophy I. 3 Credits.
This course will examine several attempts by ancient, modern, and contemporary thinkers to come to terms with the Biblical concept of revelation and prophecy, law and election, apocalyptic and eschatology. We will put special emphasis on the first articulation of the idea of Christian universalism, faith and justification, time and eternity. Readings will include the entire corpus of St. Paul's authentic letters, in addition to the major Scriptural passages on which he draws, but also selections from Philo of Alexandria, St. Augustine, Spinoza, Luther, Nietzsche, Jakob Taubes, Alain Badiou, Giorgio Agamben, and Jean-Luc Nancy.
Instructor(s): H. de Vries
Area: Humanities, Social and Behavioral Sciences.

AS.330.343. Philosophy and Literary Form. 3 Credits.
This course examines the difference literary form can make to the shaping of philosophical content. Philosophers have tended to treat literary form as merely ornamental. For this reason, they have often underestimated the philosophical significance not only of certain works of literature but also the literary form of even those works controversially considered to be philosophical. This course explores the philosophical significance of literary forms in both kinds of works. The first half examines how and why Anglo-American philosophers have incorporated the interpretation of individual literary works into their philosophical writing. We will concentrate on three works of literature—Ibsen's A Doll's House, James's The Golden Bowl and Wordsworth's Prelude—each of which has attracted significant philosophical attention. The second half of the course examines how philosophers have brought literary analysis to bear in order to illuminate the philosophical achievement of certain canonical philosophical texts. We will concentrate on three literary forms—dialogue, meditation and confession—as these forms are instantiated by three works of philosophy: Plato's Republic, Descartes' Meditations, and Wittgenstein's Philosophical Investigations.
Instructor(s): K. Boyce
Area: Humanities.

AS.330.381. The Moses Complex. 3 Credits.
Instructor(s): R. Leys
Area: Humanities.

AS.330.388. Introduction to the Philosophy of Time. 3 Credits.
This course explores answers to the question "What is time?" that take account of time as something both inside and outside of us. Readings include, among others, Aristotle, Augustine, Kant, Bergson, Heidegger, and Einstein. Cross-listed with Philosophy
Instructor(s): N. Schott
Area: Humanities.

AS.330.390. Obama and Philosophy. 3 Credits.
The course will investigate the theological and philosophical as well as rhetorical and literary backgrounds and guiding principles that have informed Barack Obama's writings, speeches, and political strategies so far. While paying minute attention to a few pivotal controversial recent debates, both in domestic policy and international relations, our central focus will be on understanding the curious blend of Obama's version of so-called Christian realism, influenced by Reinhold Niebuhr, among others, and of what we will call his deep pragmatism. Special attention will be paid to his early appeal to "simple ideas" and "small miracles," each of them yielding the Biblical and sobered injunction of a "hope against hope.
Cross-listed with Philosophy
Instructor(s): H. de Vries
Area: Humanities.

AS.330.399. Cinema and Philosophy. 3 Credits.
Do movies have anything to say about philosophical problems? Why is contemporary philosophy so interested in cinema? What are the most productive ways of bringing films and philosophy into conversation? Why is contemporary philosophy so interested in cinema?
Instructor(s): P. Marrati
Area: Humanities.

AS.330.400. Philosophy of Tragedy. 3 Credits.
Since the late eighteenth century, philosophers have repeatedly been drawn to investigations of tragedy and the tragic. In this course we will study some of the most important thinkers in this tradition, and examine the different implications (philosophical, historical, political, existential, aesthetic, etc.) that these concepts carry in their works. Authors to be read will include Schiller, Hegel, Kierkegaard, Nietzsche, Unamuno, Benjamin and Cavell.
Instructor(s): L. Lisi
Area: Humanities.

AS.330.411. Animal Minds. 3 Credits.
An examination of some of the scientific and philosophical literature on the nature of animal minds and the way(s) in which they differ from the human mind. The most important of these apparent differences are the use of language, the exercise of concepts, and instrumental reasoning, including the use of instruments. Co-list with AS.150.490
Instructor(s): M. Williams; R. Leys
Area: Humanities.

AS.330.601. Philosophy of Tragedy.
Since the late eighteenth century, philosophers have repeatedly been drawn to investigations of tragedy and the tragic. In this course we will study some of the most important thinkers in this tradition, and examine the different implications (philosophical, historical, political, existential, aesthetic, etc.) that these concepts carry in their works. Authors to be read will include Schiller, Hegel, Kierkegaard, Nietzsche, Unamuno, Benjamin and Cavell. Cross-listed with: English, German & Romance Languages & Literatures, Philosophy
Instructor(s): L. Lisi.
AS.300.608. Philosophy and the Event.
What constitutes or characterizes a genuine event, whether in history and politics or in individual lives and loves? This seminar explores several answers to this philosophical question, starting out from the major works of two contemporary thinkers, Alain Badiou and Jean-Luc Marion, whose central concerns in Being and Event and Being Given and elsewhere—namely, the so-called laicization of grace and the phenomenology of givenness—seem at once close and diametrically opposed to each other. Attention will further be paid to concrete historical and literary examples as well as to other conceptualizations of the event that would seem to either substantiate or contradict their respective claims. Readings will also include writings by Donald Davidson, Stanley Cavell, Sari Nusseibeh, Hannah Arendt, Isaiah Berlin, Barack Obama, and others.
Instructor(s): H. de Vries.

AS.300.676. Heidegger’s Being and Time II.
This seminar consists of an integral reading and discussion of Martin Heidegger’s 1927 magnum opus Being and Time (Sein und Zeit) in light of its historical and philosophical context as well as its contemporary reception in both the phenomenological, existentialist, hermeneutic, and analytic traditions. We will focus primarily on the Second Division but also revisit central questions from Division One. However, it will not be necessary for students to have attended the previous seminar on this earlier part of Heidegger’s major work. Recommended readings will include the commentaries by Emmanuel Levinas, Jacques Derrida, Jean-Greisch, Jean-Luc Marion, Hubert Dreyfus, Robert Brandom, and others.
Cross-listed with Philosophy
Instructor(s): H. de Vries.

Center for Africana Studies
AS.362.357. Black Existential Thought. 3 Credits.
Black existentialism is a branch of Africana philosophy—the philosophical tendencies that arose out of the experience of the African Diaspora. This course is a philosophical interrogation into the meaning of the lived experience of being black in the context of an anti-black world through addressing such existential questions as freedom, identity, anguish, dread, responsibility, embodied agency, evil, resentment, liberation, and nihilism.
Instructor(s): F. Hayes
Writing Intensive.

Computer Science
EN.600.430. Ontologies and Knowledge Representation. 3 Credits.
Knowledge representation (KR) deals with the possible structures by which the content of what is known can be formally represented in such a way that queries can be posed and inferences drawn. Ontology concerns the hierarchi-cal classification of entities from given domains of knowledge together with the relations between various classes or subclasses. We begin with KR, examining the standard variety of frameworks developed or implemented over the last twenty years, including 1st-order logic and automated theorem proving, networks, frames, and description logics. Then we move on to a study of the problems inherent in ontology development and examine some of the currently prevalent environments, including Universal Modeling Language, OWL and Protege’, RDFS and semantic web applications. [Analysis] Recommended Course Background: EN.600.107 and EN.600.271
Instructor(s): R. Rynasiewicz
Area: Humanities, Quantitative and Mathematical Sciences.

Henry A. Rowland Department of Physics and Astronomy
Johns Hopkins is the nation’s first research university. That emphasis on research continues to this day and forms the backbone of the undergraduate and graduate programs in the Department of Physics and Astronomy. The department’s research program is focused into four areas of excellence: Astrophysics, Condensed Matter Physics, Elementary Particle Physics, and Plasma Physics. For graduate students interested in these fields, the department offers world-class research opportunities in a friendly and supportive setting. For undergraduates, JHU offers exposure to cutting-edge research combined with a level of personal attention that is typically found only in liberal arts colleges. Nearly all physics majors at JHU work on research projects and many begin as freshmen or sophomores.

All research builds upon an established body of knowledge. To be effective researchers, teachers, or professionals, both undergraduate and graduate students must acquire a core knowledge of physics. Our undergraduate and graduate courses are designed to cover the core subjects at the appropriate levels, leading to advanced courses on a variety of specialized topics. As a consequence, students having different backgrounds or different ultimate objectives can select those parts that are most appropriate for them. The selections are made under the guidance of a faculty advisor. The advisor aids the student in making the most efficient use of his or her time and ensures that his or her program contains a reasonable balance among classroom and laboratory, mathematics, seminars, and introduction to research.

Research Programs
The department’s research program is focused into four areas of excellence: Astrophysics, Condensed Matter Physics, Elementary Particle Physics and Plasma Physics.

Astrophysics
Astrophysical research at Johns Hopkins University had its beginnings with departmental namesake Henry Rowland. Since his day, its subject matter has broadened to include the entire span of modern work, from the solar system to cosmology. Today, Baltimore is one of the principal centers of world astronomy. JHU astrophysicists enjoy close relations with their colleagues at the Space Telescope Science Institute located on the Homewood campus and also collaborate with scientists and engineers at the JHU Applied Physics Lab and NASA Goddard Space Flight Center.

Work in the department’s Center for Astrophysical Sciences (CAS) focuses on three areas: developing instrumentation for astronomical observations, particularly from space; observational astronomy from the ground and space; and theoretical astrophysics. Hopkins is one of a small number of universities that builds, flies, and analyzes data from space instrument. Examples include:

- JHU scientists have played a continuing role, working with NASA, in developing plans for the WFIRST mission (ranked the number one priority in the recent decadal survey).
- Johns Hopkins was a major partner in the Galaxy Evolution Explorer (GALEX) satellite, which surveyed the entire sky for stars, galaxies, and quasars that are bright in the ultraviolet. JHU scientists played a major role in developing the GALEX data archive.
- Johns Hopkins is the Principal Investigator institution for the Wilkinson Microwave Anisotropy Probe (WMAP). Launched in June 2001, the
WMAP satellite mapped the oldest light in the universe, providing a critical probe of cosmological models—and of the nature of the mysterious dark energy—by making precision measurements of temperature and polarization fluctuations observed in the infant universe.

• JHU has a vibrant rocket program, now aiming to calibrate infrared objects for the benefit of future dark energy measurements and to develop new capabilities for ultraviolet imaging and spectroscopy.

• CAS led the construction of the Advanced Camera for Surveys which was installed in the HST during a shuttle visit in 2002. The Advanced Camera science team at JHU has used the camera to study the evolution of galaxies and clusters of galaxies at high redshift, to study Jupiter and Io, and to search for planets and proto-planetary disks around nearby stars.

• JHU, with CAS oversight, built the Far Ultraviolet Spectroscopic Explorer (FUSE), a satellite for high-resolution spectroscopy. Its primary scientific accomplishments were the measurement of the deuterium abundance in different environments throughout the galaxy, a key parameter in models of Big Bang cosmology, and a wide variety of other studies including the interstellar medium, the extragalactic medium, hot stars, stellar discs, and planets. FUSE is the largest astrophysics project that NASA has ever awarded to a university to develop and operate.

Several members of the faculty are major users of large ground-based telescopes such as Gemini, Keck, Magellan, Arecibo, and IRAM, studying such diverse subjects as the large-scale structure of the universe, galaxy formation and evolution, active galactic nuclei, galaxy clusters, the internal dynamics of galaxies, and stellar populations within our own galaxy.

Hopkins is a member of the Astrophysical Research Consortium (ARC) and a participant in its two major activities. First, ARC is operating Sloan Digital Sky Survey III. This project is probing the nature of Dark Energy and studying the evolution of galaxies (including our own Milky Way). Second, Hopkins owns a share of the ARC 3.5 meter telescope of the Apache Point Observatory in New Mexico. The faculty is active in observations from space across the electromagnetic spectrum, using the Chandra, XMM-Newton, Suzaku, HST, Spitzer, Herschel, SOFIA, and other observatories to investigate a broad range of topics in galactic astronomy, extragalactic astronomy, and cosmology.

Hopkins is a member of both the Large Synoptic Survey Telescope (LSST) consortium and the Pan-STARRS 1 Science Consortium. The latter is using a special 1.8 m telescope and 1.4 gigapixel camera located at Haleakala, HI, to repeatedly map 75% of the entire sky in five colors. These data are being used to investigate the time domain (including adhesion, fracture, friction, and the deformation of glassy materials), and other observatories to investigate a broad range of topics in galactic astronomy, extragalactic astronomy, and cosmology.

Condensed Matter Physics

Condensed matter physics research in the department spans a wide range of topics, including magnetism, magnetoelectronics, nonequilibrium processes, artificially structured solids, frustrated magnetism, topological insulators, high Tc superconductivity, complex fluids, disordered systems, molecular electronics, quantum computing, and biological physics. In recent years, the program has involved studies of magnetic nanostructures and magnetic/superconducting multilayers, giant magnetoresistance, half-metallic ferromagnets, frustrated and low dimensional quantum magnetism, strongly correlated electron systems, liquid crystals, and glassy materials.

Theoretical astrophysical research, by its nature, moves rapidly from topic to topic. Recent studies have included such subjects as the nature of dark matter in the universe, accretion disks, galaxy formation, the evolution and structure of active galactic nuclei, gravitational lenses, interstellar molecules, star formation, pulsars, and the nature of gamma-ray bursts. Working with analytic pencil-and-paper calculations and large-scale numerical simulations, astrophysical theorists at JHU are recognized leaders in subjects ranging from the physics of accretion onto black holes to MHD dynamos to interstellar chemistry.

Experimental techniques used in these studies include synchrotron X-ray scattering, ultra-low temperature cryogenics, neutron scattering, magnetotransport measurements, magnetic susceptibility, vibrating sample magnetometry, specific heat, terahertz and microwave spectroscopies, SQUID magnetometry, dielectric spectroscopy, microchemistry, scanning electron microscopy, and transmission electron microscopy. A variety of nanofabrication techniques, as well as laser machining, molecular beam epitaxy, multisource sputtering systems, and floating zone single-crystal growth are used for sample fabrication.

activities in condensed-matter theory are often closely correlated with those of the experimental groups. Computational and analytic tools that span a wide range of length and time scales are used to uncover new behavior in matter as dimensions approach the nanometer scale and to understand the atomic origins of macroscopic behavior, including adhesion, fracture, friction, and the deformation of glassy metals and polymers. Studies in magnetism focus on ground states and excitations of strongly frustrated systems, topological defects in nanoscale ferromagnets, and artificial magnetic arrays.

The Department is home to the Institute for Quantum Matter (http://iqm.jhu.edu), an interdisciplinary research center that combines materials synthesis, spectroscopy, and theory to discover, expose and understand new materials functionality from quantum correlations. The Institute is a collaboration between the Johns Hopkins and Princeton Universities and is funded by the US Department of Energy. IQM scientists are presently...
exploring materials where interacting atomic spins, rather than forming a magnet, self-organize into an entangled singlet and materials where magnetism and superconductivity intertwine. The Institute includes a state of the art crystal growth laboratory and IQM scientists are developing new instrumentation for neutron and THz spectroscopies. Enjoying early access to the latest experimental results, the theoretical program employs advanced analytical methods to predict and account for quantum-correlated properties in magnets and superconductors. Fundamental materials research at the IQM is conducted with a view toward energy applications.

Elementary Particle Physics

The elementary particle physics group engages in experimental and theoretical investigations of the behavior of elementary particles and their interactions. More information about the activities of the group can be found at www.pha.jhu.edu/~morris/jhu_hep.

The experimental group belongs to the CDF Collaboration at Fermilab Tevatron Collider, the BaBar Collaboration at the SLAC PEP-II Collider, and the CMS Collaboration at the CERN Large Hadron Collider (LHC). CDF and BaBar have ceased taking data and are finishing final analyses. CMS is currently taking data and is expected to continue to do so for many years. The group has a long-standing technical expertise in silicon-based precise tracking technology, which is used principally to identify very short-lived particles in high energy collisions. This technological expertise has been leveraged to perform studies (and discoveries) of b-hadrons produced in hadronic collisions at the Tevatron. It has been used to study CP Violation in the B-meson system at the Tevatron and at PEP-II. This experience evolved into our participation in the construction, installation commissioning and operation of the silicon pixel tracking system of the CMS experiment at the LHC.

The CMS experiment is a huge (14,500 metric ton) detector that is investigating proton-proton collisions at the LHC. Experiments at the LHC are expected to revolutionize the field of particle physics. They will reveal the mechanism by which the W and Z bosons (and probably all other fundamental particles) acquire mass and recently announced the discovery of a new particle with properties consistent with those of the predicted Higgs Boson. They are searching for physics beyond the Standard Model, and should discover or rule out theories ranging from supersymmetry and extra dimensions to new forces of nature. All signs point to major discoveries to be made at the LHC.

In order to best exploit the possibilities of the LHC, the experimental and theoretical particle physics groups at JHU operate in a more highly integrated fashion than has been traditional in the field. Achieving good understanding of new phenomena observed in the difficult environment of the LHC will require the close cooperation of experimental and theoretical physicists.

The theoretical particle physics group at JHU has a strong phenomenological orientation. It possesses considerable expertise in formal quantum field theory, Standard Model of particle physics and its major extensions, including supersymmetry and extra dimensions. Group members also study cosmology and astroparticle physics and have connections with astrophysics group at JHU.

Plasma Spectroscopy

The plasma spectroscopy program has grown out of the nuclear fusion and astrophysics research. Under grants from the Department of Energy, the plasma spectroscopy group develops far ultraviolet and soft X-ray spectroscopic instrumentation for the diagnostic of Magnetic Fusion Energy (MFE) experiments and applies it to the study of high temperature plasmas. The research covers topics central to the fusion plasma physics, like magneto-hydrodynamic stability, particle and energy transport, as well as atomic physics topics, like the spectroscopy of the highly ionized species relevant to these plasmas.

Complex diagnostic systems, integrating state-of-the-art detectors and X-ray optics, have been developed for leading MFE experiments, like the National Spherical Torus Experiment (NSTX) at the Princeton Plasma Physics Laboratory and the C-Mod tokamak at MIT. The spherical torus is a new and promising path toward economical fusion energy, relying on the achievement of near unity beta (plasma pressure to magnetic pressure ratio), in a tight aspect-ratio configuration. The Johns Hopkins systems enable experiments that cannot be performed by conventional instrumentation, like imaging of peripheral magnetic islands, or determination of the hot plasma resistivity. The plasma spectroscopy group has also an active role in the NSTX research team, which has the mission of advancing the spherical torus concept toward its assessment as a viable fusion reactor.

Recent research topics of the group include the development of 2-D and 3-D ultrafast imaging techniques in the soft X-ray range, for the study of localized MHD perturbations, like the neo-classical tearing modes. Such perturbations seem to have a profound effect on the stability and confinement properties of high beta plasmas. A new research subject is also the study of turbulence in fusion plasma using focusing, soft X-ray telescopes. Such instruments have been first developed in astrophysics.

The atomic physics packages necessary for retrieving the plasma parameters from the spectroscopic data are developed in collaboration with researchers at the Lawrence Livermore National Laboratory and NIST and bench-marked on various fusion experiments in the U.S. and Europe. Recent international collaborations also include the development of a 2-D Far Ultraviolet imaging system for the measurement of local particle transport in the Large Helical Device, the largest fusion experiment in Japan.

Facilities

The Department of Physics and Astronomy’s first facility was Rowland’s measuring engine for determining the solar spectrum in the 1880s. Ever since that time the Department has maintained a long and continuous history in instrumentation. In recent decades this has extended to instrumentation for space missions. The Department maintains a Class-1000 clean room for microfabrication and nanofabrication, a high bay lab, professional and student machine shops, and supports a world-renowned Instrument Development Group (IDG) with six full-time engineers and three full-time machinists.

Among the diverse techniques used for studying condensed matter physics are magnetometry/susceptometry, specific heat and transport measurements, atomic force and magnetic force microscopy, X-ray and electron diffraction, terahertz spectroscopy, and neutron scattering at the nearby NIST Center for Neutron Research and at the Spallation Neutron Source, ORNL. A variety of cryostats, He3 refrigerators, and He3-He4 dilution refrigerators together with high temperature ovens, electromagnets, and superconducting magnets allow measurements to be made from 0.05 K to 1100 K and in magnetic fields up to 14 Tesla. Apparatus for the preparation of samples includes two image furnaces for floating zone growth, single-crystal growth vacuum furnaces, box and tube furnaces, arc furnaces, several high vacuum and ultra-high vacuum chambers for thin film fabrication using evaporation, MBE, pulsed laser deposition, sputtering, and focused ion beam (FIB) milling. Also available
on campus are cutting-edge transmission electron microscopes and scanning electron microscopes.

In astrophysics, research groups have state-of-the-art laboratories for testing cryogenic transition-edge bolometer detectors with SQUID read-out electronics, and closed-cycle helium cryogenics. Recent instrumentation advances include the design and manufacture of large free-standing polarization grids and novel high-bandwidth smooth-wall feed horns. Current activities include development of microwave and millimeter-wave instruments for far-infrared and microwave astronomy and cosmology.

The research groups in the department have a wide range of state-of-the-art computer facilities including high performance clusters with over a thousand processors and the largest database at a university—over a petabyte. All undergraduate majors and graduate students have access to high performance workstations.

The department offers degrees designed for students with a wide range of future career goals. As described below, students can choose to minor in physics, opt for a more flexible B.A. degree in physics, or choose a B.S. program in physics with a focus in any science or engineering discipline. The department also offers a variety of courses and research opportunities in astronomy and astrophysics that provide an ideal preparation for graduate work in those fields. Many recent graduates have gone on to graduate study in physics, astronomy/astrophysics, biophysics, or one of the many engineering disciplines. Others chose professional schools in medicine or law, went into teaching, or entered the work force directly.

The department also offers general interest introductory and intermediate courses aimed at non-majors. Recent general survey courses have included:

- AS.172.114 Introduction To Frontier Physics 1
- AS.171.118 Stars and the Universe: Cosmic Evolution 3
- AS.171.113 Subatomic World 3
- AS.171.115 Physics of the Everyday World 3

At the introductory level there are three two-semester physics sequences designed to meet the needs of a variety of students. AS.171.101 General Physics:Physical Science Major I-AS.171.102 General Physics: Physical Science Majors II and AS.171.107 General Physics for Physical Sciences Majors (AL)-AS.171.108 General Physics for Physical Sciences Majors (AL) is a comprehensive one-year sequence in general physics intended for physical science and engineering majors who do not plan to pursue further studies in the department. This sequence can be started in either semester and is offered in the summer. AS.171.103 General Physics I for Biological Science Majors-AS.171.104 General Physics/ Biology Majors II is similar to AS.171.101 General Physics:Physical Science Major I-AS.171.102 General Physics: Physical Science Majors II, but is tailored to students with a biological science or engineering major. AS.173.111 General Physics Laboratory I-AS.173.112 General Physics Lab II is a corequisite with any of the above courses. All students who plan to complete more than a year of physics are encouraged take the AS.171.105 Classical Mechanics I-AS.171.106 Electricity and Magnetism I, and the associated labs, AS.171.115 Physics of the Everyday World-AS.171.116 . This sequence is less comprehensive than the sequences for physical (AS.171.101 General Physics:Physical Science Major I-AS.171.102 General Physics: Physical Science Majors II and AS.171.107 General Physics for Physical Sciences Majors (AL)-AS.171.108 General Physics for Physical Science Majors (AL)) and biological (AS.171.103 General Physics I for Biological Science Majors-AS.171.104 General Physics/Biology Majors II) science majors, but covers classical mechanics and electricity and magnetism in greater depth and with more mathematical sophistication. Note: Students should be aware that the AS.171.105 Classical Mechanics I-AS.171.106 Electricity and Magnetism I sequence alone is not adequate preparation for the physics portion of the MCAT exam.

There are also two year–long intermediate physics sequences from which students may choose (AS.171.201 Special Relativity/Waves-AS.171.202 Modern Physics and AS.171.309 Wave Phenomena with Biophysical Application-AS.171.310 Biological Physics). AS.171.201 Special Relativity/Waves and AS.171.202 Modern Physics provide an in-depth study of the physics of wave phenomena and an introduction to modern topics in physics such as quantum mechanics and statistical physics. AS.171.309 Wave Phenomena with Biophysical Application and AS.171.310 Biological Physics cover similar topics but with an emphasis on their relevance to the biological sciences. Physics majors typically take one of the two sequences (or switch between the two between the fall and spring semesters) during their sophomore year. (Majors who choose AS.171.309 Wave Phenomena with Biophysical Application rather than AS.171.201 Special Relativity/Waves and AS.171.202 Modern Physics must also take the one-credit course AS.171.207 Special Relativity.) Combined with AS.171.105 Classical Mechanics I-AS.171.106 Electricity and Magnetism I, these sequences provide an integrated four-semester introduction to physics.

The intermediate and advanced courses treat the various areas of physics in greater depth, and in sufficient variety to broaden the student’s background and to provide appreciation of the relation of physics to other scientific areas. Concomitant study of mathematics supplies part of the conceptual framework and the natural language for description of physical phenomena.

Physics majors are strongly urged to supplement the regular course work by participation in seminars and by independent study and research under the guidance of a faculty member. This study may be related to the research program of a faculty member; thus at an early stage the student can experience the satisfaction of activity in the forefront of physics. It is through seminars and such independent study that he or she can best learn what physics is, how physics research is carried out, and whether he or she may wish to continue with graduate study in the field.

Requirements for the B.A. Degree

(See also General Requirements for Departmental Majors (p. 33.).)

**Physics**

In addition to the core courses, student is required to take a total of two more courses (at least 3 credits each) at the 300-level or above.

**First year**

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>

B.S. in Physics Degree

Students who plan to continue in science or engineering after graduation, whether in graduate school or in the workforce, may wish to obtain the degree of Bachelor of Science in Physics. This program is designed to supplement the core physics courses with a concentration at an advanced level in a scientific or engineering discipline.

The total number of credits required for the B.S. is 126, rather than 120. The required core course work in physics is the same as for the B.A., as are the mathematics requirements. However, the two electives required for the B.A. are replaced, for the B.S., by five courses at the 200-level or above (at least three credits each). These must be in the departments of Physics and Astronomy, Biology, Biophysics, Chemistry, Cognitive Science, Earth and Planetary Sciences, or Mathematics, or in any of the departments of the School of Engineering. At least four must be taken within a single science department (including Physics and Astronomy) of the Krieger School, or within a single department or program of the Whiting School of Engineering. Considered as a whole, these courses must constitute a coherent and rigorous program of study, whether oriented toward graduate school or the job market. To ensure this, the Director of Undergraduate Studies must approve these courses as satisfactory for the B.S. no later than the registration period for the fall semester of the senior year. None of the electives may be used simultaneously to satisfy either the university distribution requirements or the standard mathematics requirements listed above.

Senior Thesis

Any student majoring in the department may write a senior thesis, based on original research conducted under the supervision of a member of the faculty. Arrangements for this research will be made on an individual basis. The department views the writing of a senior thesis as an excellent capstone experience to an undergraduate education in physics, and encourages all students to consider it.

Minor in Physics

A student may earn a minor in physics by completing:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>

</tr>
</tbody>
</table>

Additional 300-level or above Mathematics courses **

Suitable courses in the departments of Computer Science and Applied Mathematical Sciences and Statistics

---

* Students with previous calculus experience are urged to place out of Calculus I and II if possible, either through the Advanced Placement examinations or through the placement examinations administered by the Department of Mathematics during the first week of the fall semester.

** A recommended 300-level Mathematics course is AS.110.311 Complex Analysis.

*** It is recommended that the student become proficient in a computer programming language such as Java, FORTRAN, C++, or C, either independently or through course work in the Department of Computer Science.

Language Requirement

There is no language requirement.

---

Minor in Space Science and Engineering

This minor is open to all students in the Whiting School of Engineering and the Krieger School of Arts and Sciences who have the prerequisites for the required courses. The objective of the Minor is to prepare students...
for a career in Space Science and Space Engineering, either directly as an entering professional in industry, government laboratories and other organizations or as a student in a graduate program. The educational goal of the Minor is to enable students to:

- Apply their understanding and mastery of the fundamental scientific, engineering, and mathematical principles obtained through their major subject of study to space science and space engineering.
- Develop an understanding and capacity for interdisciplinary approaches to technical activities.
- Improve their ability to work in multidisciplinary teams, which are typical in space and other complex technical activities, through interdisciplinary education and internship(s) or equivalent experience(s).

**Donald E. Kerr Memorial Prize**

In recognition of Dr. Kerr’s work in microwave physics, the department awards the Donald E. Kerr Memorial Prize each year to the most outstanding undergraduate major graduating in physics.

**Graduate Programs**

Graduate study in physics and astronomy at Hopkins is intended primarily to prepare Ph.D. graduates for careers in teaching and research in physics and astronomy, or in applications such as biophysics, space physics, and industrial research. Entering students may elect to work toward a Ph.D. in physics or a Ph.D. in astronomy and astrophysics. The two programs are similar in structure but have somewhat different course requirements (see below). A wide range of research projects—both theoretical and experimental—are available for graduate students in Astrophysics, Condensed Matter Physics, Particle Physics, and Plasma Spectroscopy.

**Admission**

To obtain admission, a student is expected to submit evidence that he or she has a good chance to succeed. Such evidence will ordinarily consist of transcripts of previous academic work, Graduate Record Examination scores (including advanced physics), letters of recommendation, and, for international students, a Test of English as a Foreign Language (TOEFL) score.

**Requirements for the Ph.D. Degree**

The Ph.D. program has strong emphasis on early and active involvement in graduate research. Thus, students are required to have a research advisor and file a research summary every semester they are enrolled in the program, starting with the first one. Furthermore, students must complete the required courses with a grade of B- or better; the coursework is typically done over the first two years. In the beginning of the second year, students complete the research examination, and in the beginning of the third year – the University’s Graduate Board Oral examination, both of which are based on completed or proposed research. During the first two years, students are typically involved in introductory research projects, which may or may not be related to their thesis work, and sometimes work with several different advisors, but they must identify (and have an agreement with) a thesis advisor no later than the beginning of their third year in the program, after which point students focus on their thesis research. The thesis is to be completed by no later than the end of the 6th year, ending with an oral presentation of the thesis to a faculty committee.

**Course Requirements**

**Ph.D. in Physics**

Students must complete the following courses:

- AS.171.603 Electromagnetic Theory
- AS.171.605 Quantum Mechanics
- AS.171.600 and Quantum Mechanics
- AS.171.703 Advanced Statistical Mechanics
- AS.172.632 Physics Seminar

**Ph.D. in Astronomy and Astrophysics**

Students must complete the following courses:

- AS.171.611 Stellar Structure & Evolution
- AS.171.612 Interstellar Medium and Astrophysical Fluid Dynamics
- AS.171.613 Radiative Astrophysics
- AS.171.627 Astrophysical Dynamics
- AS.172.633 Language Of Astrophysics

The department offers a wide range of graduate physics, astrophysics, mathematical methods and statistics classes, and while only five are required, the students are encouraged to use the flexibility of the graduate program and the available classes to design programs of study that best prepare them for their chosen area of research. In addition to the required courses listed above, below is the list of the graduate courses that have been taught in recent years:

- AS.171.601 Theoretical Mechanics
- AS.171.602 Order of Magnitude Physics
- AS.171.609 Mathematical Methods for Physicists
- AS.171.610 and Numerical Methods-Physics
- AS.171.614 Astrophysical Spectroscopy
- AS.171.617 Extragalactic Astronomy
- AS.171.618 Observational Astronomy
- AS.171.621 Condensed Matter Physics
- AS.171.622 and Condensed Matter Physics
- AS.171.625 Experimental Particle Physics
- AS.171.626 Data Analysis: Theory & Practice
- AS.171.628 Practical Scientific Analysis of Big Data
- AS.171.633 Graphics Processor Programming in CUDA
- AS.171.672 Introduction Plasma Physics
- AS.171.699 Planets, Life and the Universe
- AS.171.701 Quantum Field Theory
- AS.171.702 and Quantum Field Theory II
- AS.171.704 Phase Transitions and Critical Phenomena
- AS.171.713 Magnetic Materials and Spintronics
- AS.171.746 General Relativity
- AS.171.750 Cosmology
- AS.171.751 Neutron Scattering and Quantum Condensed Matter Physics
- AS.171.754 Active Galactic Nuclei
- AS.171.755 Fourier Optics and Interferometry in Astronomy
- AS.171.756 Astrophysics of Compact Objects
the dissertation can be carried out not only within the Department of formal annual review of each student's progress. Research leading to their progress and problems with several faculty. They also conduct one as extended advisory bodies; students have the opportunity to discuss two full-time faculty from the department). These committees function department forms his/her Thesis Committee consisting of the advisor of the third year. After the student chooses a thesis advisor, the Students are required to find a thesis advisor no later than the beginning classwork), although they are typically merged with RA-supported addition to other graduate student responsibilities (teaching and graduate research projects are not research assistantships and are performed in advisor to determine what the written summary should entail. These cases, they may comprise reading or independent-study projects to they may be first steps in a longer-term research project. And in some student, from one advisor to another, and from one sub-field of physics to another. In some cases they lead to published research. In other cases, they may be first steps in a longer-term research project. And in some cases, they may comprise reading or independent-study projects to develop background for subsequent research. It is left to the individual advisor to determine what the written summary should entail. These research projects are not research assistantships and are performed in addition to other graduate student responsibilities (teaching and graduate classwork), although they are typically merged with RA-supported research for those students supported by RAs.

First and Second Year Research Requirement

First year students must find, by the end of the third week of class in the fall semester, and by the end of the first week of class the second semester, as well as before the summer term begins, a member of the professorial faculty to advise them in some type of research project. The students are required to submit a short written summary of that research experience at the end of the semester. Students may continue with one advisor through all three semesters, or they may choose to cycle through several different research advisors. In some cases, one of these first-year research advisors may become a thesis advisor, but in others, the thesis advisor may change. This research requirement continues until the end of the second year, or until the student finds a thesis advisor. The nature of these first-year research projects may vary from student to student, from one advisor to another, and from one sub-field of physics to another. In some cases they lead to published research. In other cases, they may be first steps in a longer-term research project. And in some cases, they may comprise reading or independent-study projects to develop background for subsequent research. It is left to the individual advisor to determine what the written summary should entail. These research projects are not research assistantships and are performed in addition to other graduate student responsibilities (teaching and graduate classwork), although they are typically merged with RA-supported research for those students supported by RAs.

Thesis Research and Defense

Students are required to find a thesis advisor no later than the beginning of the third year. After the student chooses a thesis advisor, the department forms his/her Thesis Committee consisting of the advisor and two other faculty members (all Thesis Committees contain at least two full-time faculty from the department). These committees function as extended advisory bodies; students have the opportunity to discuss their progress and problems with several faculty. They also conduct one formal annual review of each student’s progress. Research leading to the dissertation can be carried out not only within the Department of Physics and Astronomy, but with appropriate arrangements, either partly or entirely at other locations if necessitated by the project goals. At the conclusion of thesis research, the student presents the written dissertation to the faculty committee and defends the thesis in an oral examination.

Requirements for the M.A. Degree

Although the department does not admit students who intend to pursue the master's degree exclusively, students in the department's Ph.D. program and students in other Ph.D. programs at Johns Hopkins may apply to fulfill the requirements for the M.A. degree in the Department of Physics and Astronomy. Students from other JHU departments must seek approval from their home department and from the Department of Physics and Astronomy before beginning their M.A. studies.

Course Requirements for the M.A.

Students must master the basic undergraduate material covered by the following courses:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>AS.171.204</td>
<td>Classical Mechanics II</td>
<td>4</td>
</tr>
<tr>
<td>AS.171.301</td>
<td>Electromagnetic Theory II</td>
<td>8</td>
</tr>
<tr>
<td>&amp; AS.171.302</td>
<td>and Topics in Advanced Electromagnetic Theory</td>
<td>8</td>
</tr>
<tr>
<td>AS.171.303</td>
<td>Quantum Mechanics I</td>
<td>8</td>
</tr>
<tr>
<td>&amp; AS.171.304</td>
<td>and Quantum Mechanics II</td>
<td></td>
</tr>
<tr>
<td>AS.171.312</td>
<td>Statistical Physics/Thermodynamics</td>
<td>4</td>
</tr>
</tbody>
</table>

Courses taken elsewhere may qualify at the discretion of the Graduate Program Committee.

Students must also complete six one-semester graduate-level (at least three hours/week) courses offered by the Department of Physics and Astronomy. For this purpose, each semester of AS.171.609 Mathematical Methods for Physicists-AS.171.610 Numerical Methods-Physics (Formerly AS.171.415 Math Methods - Physics and AS.171.416 Numerical Mthds-Physics, counts as a graduate-level course). In addition, AS.171.801 Independent Research-Graduates-AS.171.802 Independent Research-Graduate may be substituted for any of the above-mentioned graduate or undergraduate courses. The research course must include an essay supervised and approved by a faculty member of the Department of Physics and Astronomy.

The student must receive a grade of B- or above in each of the courses. The graduate-level courses may be retaken once; the undergraduate courses cannot be repeated.

Furthermore, the student must complete at least two semesters of research projects, as described in the requirements for the Ph.D., and complete the departmental research exam. The deadline to fulfill all requirements is the date of the Ph.D. thesis defense.

Financial Aid

Students in good standing are normally supported by a combination of fellowships, research assistantships and teaching assistanships. The financial package covers full tuition, individual health insurance, and an academic year salary commensurate with that of other leading research institutions. Teaching assistantship is a common mode of financial support; experience in teaching is a valuable part of the Ph.D. program. A teaching assistantship supports the student during the academic year and is supplemented by a research assistantship during the summer. The assistant is expected to help in the teaching of the general physics course and other introductory and major courses. The typical teaching duties include leading a problem-solving section or laboratory exercises and

<table>

</tr>
</thead>
<tbody>
<tr>
<td>AS.171.784</td>
<td>Advanced Particle Theory: &quot;What to Expect at the LHC</td>
<td></td>
</tr>
<tr>
<td>AS.173.608</td>
<td>Advanced Laboratory</td>
<td></td>
</tr>
<tr>
<td>AS.270.623</td>
<td>Planetary Atmospheres</td>
<td></td>
</tr>
<tr>
<td>AS.270.661</td>
<td>Planetary Fluid Dynamics</td>
<td></td>
</tr>
</tbody>
</table>

Students in both programs must receive at least a B- in each required course, or they will be required to retake the specific course once more and pass it.

Advising

All entering students are assigned to a first-year advisor who works closely with the student through the first two years of graduate study, or until a thesis advisor is found. The first-year advisor advises the student on courses of study, helps familiarize them with the department and provides guidance in finding research opportunities. In the beginning of each fall semester, the department holds a “research jamboree” where incoming students are introduced to the research in the department through a series of brief talks, lab tours, and research group open houses. Thus the students are familiar, immediately upon their arrival, with the scope of research in the department and can identify prospective research advisors they may wish to work with.

First and Second Year Research Requirement

First year students must find, by the end of the third week of class in the fall semester, and by the end of the first week of class the second semester, as well as before the summer term begins, a member of the professorial faculty to advise them in some type of research project. The students are required to submit a short written summary of that research experience at the end of the semester. Students may continue with one advisor through all three semesters, or they may choose to cycle through several different research advisors. In some cases, one of these first-year research advisors may become a thesis advisor, but in others, the thesis advisor may change. This research requirement continues until the end of the second year, or until the student finds a thesis advisor.

The nature of these first-year research projects may vary from student to student, from one advisor to another, and from one sub-field of physics to another. In some cases they lead to published research. In other cases, they may be first steps in a longer-term research project. And in some cases, they may comprise reading or independent-study projects to develop background for subsequent research. It is left to the individual advisor to determine what the written summary should entail. These research projects are not research assistantships and are performed in addition to other graduate student responsibilities (teaching and graduate classwork), although they are typically merged with RA-supported research for those students supported by RAs.

Thesis Research and Defense

Students are required to find a thesis advisor no later than the beginning of the third year. After the student chooses a thesis advisor, the department forms his/her Thesis Committee consisting of the advisor and two other faculty members (all Thesis Committees contain at least two full-time faculty from the department). These committees function as extended advisory bodies; students have the opportunity to discuss their progress and problems with several faculty. They also conduct one formal annual review of each student’s progress. Research leading to the dissertation can be carried out not only within the Department of Physics and Astronomy, but with appropriate arrangements, either partly or entirely at other locations if necessitated by the project goals. At the conclusion of thesis research, the student presents the written dissertation to the faculty committee and defends the thesis in an oral examination.

Requirements for the M.A. Degree

Although the department does not admit students who intend to pursue the master’s degree exclusively, students in the department’s Ph.D. program and students in other Ph.D. programs at Johns Hopkins may apply to fulfill the requirements for the M.A. degree in the Department of Physics and Astronomy. Students from other JHU departments must seek approval from their home department and from the Department of Physics and Astronomy before beginning their M.A. studies.

Courses taken elsewhere may qualify at the discretion of the Graduate Program Committee.

Students must also complete six one-semester graduate-level (at least three hours/week) courses offered by the Department of Physics and Astronomy. For this purpose, each semester of AS.171.609 Mathematical Methods for Physicists-AS.171.610 Numerical Methods-Physics (Formerly AS.171.415 Math Methods - Physics and AS.171.416 Numerical Mthds-Physics, counts as a graduate-level course). In addition, AS.171.801 Independent Research-Graduates-AS.171.802 Independent Research-Graduate may be substituted for any of the above-mentioned graduate or undergraduate courses. The research course must include an essay supervised and approved by a faculty member of the Department of Physics and Astronomy.

The student must receive a grade of B- or above in each of the courses. The graduate-level courses may be retaken once; the undergraduate courses cannot be repeated.

Furthermore, the student must complete at least two semesters of research projects, as described in the requirements for the Ph.D., and complete the departmental research exam. The deadline to fulfill all requirements is the date of the Ph.D. thesis defense.

Financial Aid

Students in good standing are normally supported by a combination of fellowships, research assistantships and teaching assistantships. The financial package covers full tuition, individual health insurance, and an academic year salary commensurate with that of other leading research institutions. Teaching assistantship is a common mode of financial support; experience in teaching is a valuable part of the Ph.D. program. A teaching assistantship supports the student during the academic year and is supplemented by a research assistantship during the summer. The assistant is expected to help in the teaching of the general physics course and other introductory and major courses. The typical teaching duties include leading a problem-solving section or laboratory exercises and
homework grading. Research assistantships are based on the availability of funding to the research advisor and are arranged directly with him/her. Research assistantships provide an opportunity for deep engagement in ongoing experimental or theoretical research. In addition, the department and the University offer several fellowships on a competitive basis, some covering travel, supplies or research expenses and some covering a semester’s or a year’s worth of the entire financial package. Some students are supported by external fellowships, such as the pre-doctoral fellowship of the National Science Foundation.

All fellows and teaching and research assistants in the Department of Physics and Astronomy register as full-time students and thus fulfill their residence requirements while holding appointments. Loans and work-study arrangements are available from the Office of Financial Aid.

For current faculty and contact information go to http://physics-astronomy.jhu.edu/people/

Faculty
Chair
Daniel Reich
Professor and Chair: experimental condensed matter physics.

Professors
Jonathan A. Bagger
Krieger-Eisenhower Professor (Interim Provost and Senior Vice President for Academic Affairs): theoretical elementary particle physics.

Bruce A. Barnett
experimental elementary particle physics.

Charles L. Bennett
Alumni Centennial Professor: experimental cosmology.

Barry J. Blumenfeld
experimental elementary particle physics.

Collin Broholm
Gerhard H. Dieke Professor (Director, Institute for Quantum Matter): experimental condensed matter physics.

Chia-Ling Chien
Jacob L. Hain Professor (Director, Materials Research Science and Engineering Center): experimental condensed matter physics, nanostructured solids.

Riccardo Giacconi
University Professor: astrophysics.

Timothy Heckman
A. Hermann Plund Professor (Director, Center for Astrophysical Sciences): galaxy evolution, starburst galaxies, active galactic nuclei.

Marc Kamionkowski
theoretical particle astrophysics and cosmology.

David Kaplan
theoretical elementary particle physics.

Julian H. Krolik
theoretical astrophysics.

Petar Maksimovic
experimental elementary particle physics.

Charles Mattias Mountain
(Director, Space Telescope Science Institute): Star formation in galaxies, capabilities of second generation telescope.

David A. Neufeld
theoretical astrophysics, interstellar medium, astrophysical masers, submillimeter astronomy.

Colin A. Norman
theoretical astrophysics.

Adam Riess
Krieger Eisenhower Professor and Nobel Laureate: astrophysics, experimental cosmology.

Mark O. Robbins
theoretical condensed matter physics.

Morris Swartz
experimental elementary particle physics.

Alexander Szalay
Alumni Centennial Professor: theoretical astrophysics, galaxy formation.

Rosemary F. G. Wyse
(Director, Theoretical Interdisciplinary Physics and Astrophysics Center): astrophysics, galaxy formation and evolution.

Associate Professors
Andrei V. Gritsan
experimental elementary particle physics.

Robert Leheny
experimental condensed matter physics.

Nina Markovic
experimental condensed matter physics.

Kril Melnikov
theoretical particle physics.

Oleg Tchernyshyov
theoretical condensed matter physics, magnetism.

Assistant Professors
N. Peter Armitage
experimental condensed matter physics.

Jared Kaplan
theoretical elementary particle physics.

Tobias Marriage
cosmology and astrophysics.

Brice Menard
extragalactic astrophysics, cosmology, large surveys.

Nadia Zakamska
astrophysics; galaxy formation and evolution.

Research Professor
Luciana Bianchi
astrophysics, nearby galaxies, stellar populations, hot stars, UV instrumentation.

William P. Blair
astrophysics, shockwaves, spectroscopy of plasmas.

Paul D. Feldman
astrophysics, spectroscopy, space physics, planetary and cometary atmospheres.

Michael Finkenthal
plasma and atomic physics.

Holland Ford
stellar dynamics, evolution of galaxies, active galactic nuclei, astronomical instrumentation.

Richard Conn Henry
(Director, Maryland Space Grant Consortium): astronomy and astrophysics.

Stephan McCandliss
Experimental Astrophysics; sounding rocket space astronomy in the far UV.

H. Warren Moos
astrophysics, plasma physics.

Stephan Murray
X-ray astronomy.

Joseph Silk
Research Professor and Homewood Professor: cosmology.

Harold Weaver
solar system science.

Associate Research Professor
Tamas Budavari
Observational cosmology; Large-scale structure, galaxy clustering. Data-intensive parallel computing.

Professors Emeriti
Chih-Yung Chien
experimental elementary particle physics.

Gabor Domokos
theoretical elementary particle physics, astroparticle physics.

Gordon Feldman
quantum field theory, theory of elementary particles.

Brian R. Judd
Gerhard H. Dieke Professor Emeritus: theoretical atomic and molecular physics, group theory, solid state theory.

Chung W. Kim
theory of elementary particles, nuclear theory, cosmology.

Susan Kávesi-Domokos
theoretical elementary particle physics, astroparticle physics.

Yung Keun Lee
nuclear physics.

Aihud Pevsner
Jacob L. Hain Professor Emeritus: elementary particle physics.

J. C. Walker
condensed matter physics, thin films and surfaces, nuclear physics.

Adjunct and Visiting Appointments
Ronald J. Allen
Adjunct Professor (Space Telescope Science Institute): spiral structure of galaxies, interstellar medium, radio and optical imaging.

Henry Ferguson
Adjunct Professor (Space Telescope Science Institute): observational cosmology, galaxy evolution, dwarf galaxies, space instrumentation, and calibration.

Michael G. Hauser
Adjunct Professor (Space Telescope Science Institute): cosmology, especially infrared background radiation.

Ann E. Hornschemeier
Adjunct Assistant Professor (NASA Goddard Space Flight Center): high energy and astrophysics.

Roeland van der Marel
Adjunct Professor (Space Telescope Science Institute): black holes, cluster of galaxies, dark halos, galaxy structure and dynamics.

Peter McCullough
Adjunct Associate Professor (Space Telescope Science Institute): Astronomy.

Predrag Nikolic
Adjunct Assistant Professor (George Mason University): condensed matter theory.

Cedomir Petrovic
Adjunct Professor (Brookhaven National Laboratory): condensed matter experiment.

Mark Stiles
Adjunct Professor (NIST): condensed matter theory.

Kimberly Weaver
Adjunct Professor (NASA Goddard Space Flight Center): high energy astrophysics.

Robert Williams
Adjunct Professor (Space Telescope Science Institute): novae, emission line analysis.

Joint Appointments
Gregory Eyink

Michael Falk
Associate Professor (Materials Science and Engineering): theory of systems far from equilibrium: deformation, failure, fracture and friction.

Tyrell McQueen
Assistant Professor (Chemistry): solid state and inorganic chemistry/condensed matter physics.

Jack Morava
Professor (Mathematics): algebraic topology, mathematical physics.

Peter C. Searson
Professor (Materials Science and Engineering): nanostructured materials, nanotechnology in biology and medicine.

Darrell F. Strobel
Professor (Earth and Planetary Sciences): planetary atmospheres and astrophysics.

For current course information and registration go to https://isis.jhu.edu/classes/

Courses

AS.171.101. General Physics: Physical Science Major I. 4 Credits.
One-year course in general physics covering mechanics, heat, sound, electricity and magnetism, optics, and modern physics.
Instructor(s): B. Barnett
Area: Engineering, Natural Sciences.

AS.171.102. General Physics: Physical Science Majors II. 4 Credits.
One-year course in general physics covering mechanics, heat, sound, electricity and magnetism, optics, and modern physics. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Recommended Course Background: C- or better in AS.171.101 or AS.171.103; Corequisite: AS.110.109, AS.173.112.
Instructor(s): C. Broholm
Area: Engineering, Natural Sciences.

AS.171.103. General Physics I for Biological Science Majors. 4 Credits.
Standard calculus based physics tailored to students majoring in one of the biological sciences. Topics in modern physics and in fluid dynamics will be covered in this course.
Prerequisites: AS.173.111 AND (AS.110.106 OR AS.110.108 OR AS.110.113)
Instructor(s): D. Kaplan
Area: Engineering, Natural Sciences.

AS.171.104. General Physics/Biology Majors II. 4 Credits.
This two-semester sequence is designed to present a standard calculus-based physics preparation tailored to students majoring in one of the biological sciences. Topics in electricity & magnetism, optics, and modern physics will be covered in this semester. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Recommended Course Background: C- or better in AS.171.101 or AS.171.103; Corequisite: AS.110.109, AS.173.112.
Instructor(s): T. Heckman
Area: Engineering, Natural Sciences.

AS.171.105. Classical Mechanics I. 4 Credits.
An in-depth introduction to classical mechanics intended for physics majors/minors and other students with a strong interest in physics. This course treats fewer topics than AS.171.101 and AS.171.103 but with greater mathematical sophistication. It is particularly recommended for students who intend to take AS.171.201-AS.171.202 or AS.171.309-AS.171.310.
Prerequisites: AS.173.115 AND AS.110.108
Instructor(s): N. Armitage
Area: Engineering, Natural Sciences.

AS.171.106. Electricity and Magnetism I. 4 Credits.
Classical electricity and magnetism with fewer topics than 171.101-103, but with greater mathematical sophistication. Particularly recommended for students who plan to take AS.171.201-AS.171.202 or AS.171.209-AS.171.210. Recommended Course Background: C- or better in AS.171.105; Corequisite: AS.173.116, AS.110.109
Instructor(s): M. Robbins
Area: Engineering, Natural Sciences.

AS.171.107. General Physics for Physical Sciences Majors (AL). 4 Credits.
This two-semester sequence in general physics is identical in subject matter to AS.171.101-AS.171.102, covering mechanics, heat, sound, electricity and magnetism, optics, and modern physics, but differs in instructional format. Rather than being presented via lectures and discussion sections, it is instead taught in an "active learning" style with most class time given to small group problem-solving guided by instructors. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Restricted to Freshmen Only.
Prerequisites: Corequisites: (AS.173.111 AND AS.173.112) OR (AS.110.106 AND AS.110.107) OR (AS.110.108 AND AS.110.109)
Prerequisite: A grade of C- or better in Physics I is required for Physics II.
Instructor(s): R. Leheny
Area: Engineering, Natural Sciences.

AS.171.108. General Physics for Physical Science Majors (AL). 4 Credits.
This two-semester sequence in general physics is identical in subject matter to AS.171.101-AS.171.102, covering mechanics, heat, sound, electricity and magnetism, optics, and modern physics, but differs in instructional format. Rather than being presented via lectures and discussion sections, it is instead taught in an "active learning" style with most class time given to small group problem-solving guided by instructors. Restricted to Freshmen Only.
Prerequisites: Corequisites: (AS.173.111 AND AS.173.112) AND (AS.110.106 AND AS.110.107 OR AS.110.108 AND AS.110.109)
Prerequisite: A grade of C- or better in Physics I is required for Physics II.
Instructor(s): P. Maksimovic
Area: Engineering, Natural Sciences.

AS.171.113. Subatomic World. 3 Credits.
Introduction to concepts of physics of the subatomic world: Symmetries, relativity, quanta, neutrinos, particles, and fields. Emphasis on ideas of modern physics, not on the mathematics. Intended for nonscience majors.
Instructor(s): B. Blumenfeld
Area: Natural Sciences.

AS.171.115. Physics of the Everyday World. 3 Credits.
Area: Natural Sciences.

AS.171.118. Stars and the Universe: Cosmic Evolution. 3 Credits.
Evolution of the universe: from origin in a cosmic explosion to emergence of life on Earth and possibly other planets throughout the universe.
Instructor(s): A. Riess
Area: Natural Sciences.
AS.171.120. Physics of Modern Technologies. 3 Credits.
This course for non-scientists offers accessible non-mathematical explanations of modern technologies: electric power generation and distribution (AC versus DC), florescent lighting, lasers, computers, the internet, GPS, and student suggested topics.
Area: Natural Sciences.

AS.171.201. Special Relativity/Waves. 4 Credits.
Course continues introductory physics sequence (begins with AS.171.105-AS.171.106). Special theory of relativity, forced and damped oscillators, Fourier analysis, wave equation, reflection and transmission, diffraction and interference, dispersion. Meets with AS.171.207.
Prerequisites: Corequisites: (AS.110.202 OR AS.110.211) AND AS.110.302 is desirable.
Instructor(s): N. Zakamska
Area: Natural Sciences.

AS.171.202. Modern Physics. 4 Credits.
Course completes four-semester introductory sequence that includes AS.171.105-AS.171.106 and AS.171.201. Planck's hypothesis, de Broglie waves, Bohr atom, Schrodinger equation in one dimension, hydrogen atom, Pauli exclusion principle, conductors and semiconductors, nuclear physics, particle physics.
Instructor(s): N. Markovic
Area: Natural Sciences.

AS.171.204. Classical Mechanics II. 4 Credits.
Principles of Newtonian and Lagrangian mechanics; application to central-force motion, rigid body motion, and the theory of small oscillations.
Recommended Course Background: AS.110.108-AS.110.109, AS.110.202, AS.171.201, or AS.171.309
Instructor(s): B. Blumenfeld
Area: Natural Sciences.

AS.171.207. Special Relativity. 1 Credit.
Three-week introduction to special relativity for students who elect to take AS.171.209 in place of AS.171.201.
Prerequisites: Corequisite: (AS.110.202 OR AS.110.211 OR AS.110.302 OR AS.110.212)
Instructor(s): N. Zakamska
Area: Natural Sciences.

AS.171.221. Physics of Human Energy Use. 3 Credits.
Course explores the basic nature of energy and heat, the physical principles underlying how we derive energy from various sources (fossil fuels, nuclear power, solar energy, and others), and the physics of energy production's environmental consequences. Recommended Course Background: AS.171.101, AS.171.103, or AS.171.105 or AS.171.102, AS.171.104, or AS.171.106
Area: Natural Sciences.

AS.171.301. Electromagnetic Theory II. 4 Credits.
Static electric and magnetic fields in free space and matter; boundary value problems; electromagnetic induction; Maxwell's equations; and an introduction to electrodynamics.
Prerequisites: (AS.171.102 or AS.171.104 or AS.171.106) and Calculus III (AS.110.202 or AS.110.211) and Linear Algebra (AS.110.201 or AS.110.212)
Instructor(s): A. Gritsan
Area: Natural Sciences.

AS.171.302. Topics in Advanced Electromagnetic Theory. 4 Credits.
Topics include electromagnetic waves; reflection and refraction; waveguides; retarded potentials and electromagnetic radiation; relativistic electrodynamics. Recommended Course Background: AS.171.301
Instructor(s): K. Melnikov
Area: Natural Sciences.

AS.171.303. Quantum Mechanics I. 4 Credits.
Fundamental aspects of quantum mechanics. Uncertainty relations, Schrodinger equation in one and three dimensions, tunneling, harmonic oscillator, angular momentum, hydrogen atom, spin, Pauli principle, perturbation theory (time-independent and time-dependent), transition probabilities and selection rules, atomic structure, scattering theory. Recommended Course Background: AS.171.202, AS.171.204, AS.110.113.
Instructor(s): C. Chien
Area: Natural Sciences.

AS.171.304. Quantum Mechanics II. 4 Credits.
Instructor(s): C. Chien
Area: Natural Sciences.

AS.171.309. Wave Phenomena with Biophysical Application. 4 Credits.
Introduction to wave phenomena, primarily through study of biophysical probes that depend on the interaction of electromagnetic radiation with matter. Topics include Fourier Analysis; standing waves; sound and hearing; diffraction and crystallography; geometrical and physical optics – the physics of modern light microscopy; quantum mechanics – how living things absorb light; NMR and MRI. Occasional laboratory exercises are included.
Prerequisites: (AS.171.102 or AS.171.104 or AS.171.106) and Calculus II (AS.110.107 or AS.110.109 or AS.110.113)
Instructor(s): M. Robbins
Area: Natural Sciences.

AS.171.310. Biological Physics. 4 Credits.
Introduces topics of classical statistical mechanics. Additional topics include low-Reynolds number hydrodynamics and E&M of ionic solutions, via biologically relevant examples. Recommended Course Background: AS.110.109, AS.171.101-AS.171.102 or AS.171.103-AS.171.104 or AS.171.105-AS.171.106.
Instructor(s): R. Leheny
Area: Natural Sciences.

AS.171.312. Statistical Physics/Thermodynamics. 4 Credits.
Undergraduate course that develops the laws and general theorems of thermodynamics from a statistical framework.
Prerequisites: AS.171.202 and Calculus II (AS.110.107 or AS.110.109 or AS.110.113). It is recommended that students have also taken Quantum Mechanics (AS.171.303), Linear Algebra (AS.110.201 or AS.110.212) and Calculus III (AS.110.202 or AS.110.211)
Instructor(s): T. Marriage
Area: Natural Sciences.
AS.171.313. Intro To Stellar Physics. 3 Credits.
Survey of stellar astrophysics. Topics include stellar atmospheres, stellar interiors, nucleosynthesis, stellar evolution, supernovae, white dwarfs, neutron stars, pulsars, black holes, binary stars, accretion disks, protostars, and extrasolar planetary systems. Recommended Course Background: AS.110.108-AS.110.109, AS.171.202
Instructor(s): R. Wyse
Area: Natural Sciences.

AS.171.314. Introduction to Galaxies and Active Galactic Nuclei. 3 Credits.
This course will introduce student to the physics of galaxies and their constituents: stars, gas, dust, dark matter and a supermassive black hole in the central regions.
Prerequisites: AS.171.105 AND AS.171.106 AND AS.110.108 AND AS.110.109
Instructor(s): R. Wyse
Area: Natural Sciences.

AS.171.316. Intro To Plasma Physics. 2 Credits.
Course will be a combination between an introduction to plasma physics and an overview of the basic atomic processes which determine the properties of hot, laboratory and astrophysical plasmas.
Instructor(s): M. Finkenthal
Area: Natural Sciences.

AS.171.321. Introduction to Space, Science, and Technology. 3 Credits.
Topics include space astronomy, remote observing of the earth, space physics, planetary exploration, human space flight, space environment, orbits, propulsion, spacecraft design, attitude control and communication. Crosslisted by Departments of Earth and Planetary Sciences, Materials Science and Engineering and Mechanical Engineering. Recommended Course Background: AS.171.101-AS.171.102 or similar; AS.110.108-AS.110.109.
Instructor(s): H. Moos; S. Murray
Area: Engineering, Natural Sciences.

AS.171.323. Physics of Human Energy Use. 3 Credits.
Course explores the basic nature of energy and heat, the physical principles underlying how we derive energy from various sources (fossil fuels, nuclear power, solar energy, and others), and the physics of energy production's environmental consequences. Recommended Course Background: AS.171.101, AS.171.103, or AS.171.105 or AS.171.102, AS.171.104, or AS.171.106.
Instructor(s): J. Krolik
Area: Natural Sciences.

AS.171.333. Planets, Life and the Universe. 3 Credits.
This multidisciplinary course explores the origins of life, planets' formation, Earth's evolution, extrasolar planets, habitable zones, life in extreme environments, the search for life in the Universe, space missions and planetary protection. Meets with AS.171.699.
Prerequisites: Students may not register for this class if they have already received credit for AS.020.334 or AS.270.335.
Instructor(s): C. Norman
Area: Engineering, Natural Sciences.

AS.171.404. General Relativity. 3 Credits.
Area: Natural Sciences.
AS.171.426. Practical Scientific Analysis of Big Data. 3 Credits.
Students will learn to work with databases, write parallel analysis code with emphasis on Graphics Processing Units (CUDA), and explore new approaches to data processing, namely streaming and robust statistics. Students should have basic knowledge of C/C++ and Introduction Numerical Methods. Co-taught with AS.171.628
Instructor(s): T. Budavari
Area: Natural Sciences, Quantitative and Mathematical Sciences.

AS.171.472. Introduction to Plasma Physics & Atomic Processes in Hot Plasmas. 3 Credits.
Course will be a combination between an introduction to plasma physics and an overview of the basic atomic processes which determine the properties of hot, laboratory and astrophysical plasmas. Undergraduate students may register online for this course and will be assigned 3 credits during the add/drop period. Co-taught with AS.171.672
Instructor(s): M. Finkenthal
Area: Natural Sciences.

AS.171.501. Independent Research- Undergraduate. 3 Credits.
Students may register for independent research with a faculty member in the Department of Physics and Astronomy. A research plan should be sent to the Director of Undergraduate Study before the add/drop date that includes project details, the number of hours of effort each week and the number of credits. This course may not be used for one of the two electives required for a BA, but one semester of research may be used as one of four focused electives in a BS program.
Instructor(s): Staff.

AS.171.502. Undergraduate Independent Research. 0 - 3 Credit.
Research done in senior year in conjunction with experimental equipment of intermediate laboratory or as special project in research group. Credit for independent study given to junior and senior students who act as tutors.
Instructor(s): Staff.

AS.171.503. Senior Thesis. 3 Credits.
Preparation of a substantial thesis based upon independent student research, supervised by at least one faculty member in Physics and Astronomy. This course may only be taken for credit during one semester. However, students are expected to have engaged in their research project during previous semesters through 171.501-502, summer research, etc. This course may not be used as one of the two electives required for a BA, but can be used as one of the four focused electives in a BS program. Open to senior department majors only.
Instructor(s): N. Markovic; R. Wyse; Staff; T. Marriage
Writing Intensive.

AS.171.504. Senior Thesis. 0 - 3 Credit.
Preparation of a substantial thesis based upon independent student research, supervised by at least one faculty member in Physics and Astronomy.
Instructor(s): O. Tchernyshyov; R. Leheny; Staff; T. Marriage
Writing Intensive.

AS.171.595. Internship. 1 Credit.
Instructor(s): Staff.

AS.171.597. Independent Research. 3 Credits.
Instructor(s): A. Gritsan; A. Riess; N. Markovic; P. Maksimovic; T. Marriage.

The Lagrangian, Hamiltonian, and Hamilton-Jacobi methods of mechanics, with applications to some vibrational and rotational problems. A discussion of classical perturbation theory is included.
Instructor(s): R. Henry.

Using basic physics—order of magnitude estimates, scaling arguments, and similar devices—to understand the gist of complicated natural systems. Examples will be selected from properties of materials, geophysics, weather, astrophysics, cosmology, biomechanics, technology of various sorts, etc. Open to upper-level undergraduates and graduates.
Instructor(s): J. Krolik
Area: Natural Sciences.

AS.171.603. Electromagnetic Theory.
Theory of the Maxwell equations, with static and dynamic applications, boundary-value problems, guided and free waves, diffraction, scattering, special relativity, electron theory.
Instructor(s): G. Domokos.

Theory of the Maxwell equations, with static and dynamic applications, boundary-value problems, guided and free waves, diffraction, scattering, special relativity, electron theory.
Instructor(s): G. Domokos.

AS.171.605. Quantum Mechanics.
Review of wave mechanics and the Schrodinger equation, Hilbert space, harmonic oscillator, the WKB approximation, central forces and angular momentum, scattering, electron spin, density matrix, perturbation theory (time-independent and time-dependent), quantized radiation field, absorption and emission of radiation, identical particles, second quantization, Dirac equation.
Instructor(s): M. Kamionkowski.

AS.171.606. Quantum Mechanics.
Review of wave mechanics and the Schrodinger equation, Hilbert space, harmonic oscillator, the WKB approximation, central forces and angular momentum, scattering, electron spin, density matrix, perturbation theory (time-independent and time-dependent), quantized radiation field, absorption and emission of radiation, identical particles, second quantization, Dirac equation. Recommended Course Background: AS.171.303 and AS.171.304
Instructor(s): M. Kamionkowski.

Selection of topics in applied mathematics most frequently used by physicists. First term focuses on analytic methods: functions of complex variables, series and perturbation methods for solving differential equations, Sturm-Liouville theory and special functions, Fourier series and transforms. Recommended Course Background: AS.110.201-AS.110.202
Instructor(s): C. Norman
Area: Natural Sciences.

Topics in applied mathematics used by physicists, covering numerical methods: linear problems, numerical integration, pseudo-random numbers, finding roots of nonlinear equations, function minimization, eigenvalue problems, fast Fourier transforms, solution of both ordinary and partial differential equations. Undergraduate students may register online for this course and will be assigned 3 credits during the add/drop period.
Instructor(s): C. Norman.
AS.171.611. Stellar Structure & Evolution.
Basic physics of stellar structure and evolution will be discussed with
emphasis on current research.
Instructor(s): R. Wyse.

AS.171.612. Interstellar Medium and Astrophysical Fluid Dynamics.
Instructor(s): C. Norman.

AS.171.613. Radiative Astrophysics.
A one-term survey of the processes that generate radiation of
astrophysical importance. Topics include radiative transfer, the theory
of radiation fields, polarization and Stokes parameters, radiation from
accelerating charges, bremsstrahlung, synchrotron radiation, thermal
dust emission, Compton scattering, properties of plasmas, atomic
and molecular quantum transitions, and applications to astrophysical
observations.
Instructor(s): C. Bennett.

This course is designed as a complement to Radiative Astrophysics
(171.613). It focuses on: atomic and molecular spectroscopy; the
calculation of quantum transition rates for both radiative and collisional
processes; and applications to various astrophysical environments,
including stellar and planetary atmospheres and the interstellar medium.
This course will also discuss the various experimental techniques used for
spectroscopy across the electromagnetic spectrum, from X-rays to radio
with an emphasis on space instrumentation.

AS.171.615. Galactic Structure and Stellar Dynamics.
Potential theory; stellar orbits, equilibrium of collisionless systems; stability
of collisionless systems; disk dynamics and spiral structure; galactic
rotation and the galactic potential; globular cluster evolution.

AS.171.617. Extragalactic Astronomy.
Establishing the extragalactic distance scale; kinematics of an expanding
universe; light element nucleosynthesis; formation of the microwave
background. Clusters of galaxies. The Hubble sequence and inventory of
internal galactic structures: bulges, disks, star clusters; measurements of
distance within the galaxy; stellar kinematics; stellar populations; chemical
evolution.

AS.171.618. Observational Astronomy.
How do we observe the Universe at each wavelength and what do we
see? This course will present the knowledge required for astronomical
observations across the entire spectrum. For each wavelength range
(gamma rays, X-rays, UV, visible, IR, radio) we will discuss the type
of detector used, the range of possible observations and current open
questions. We will also discuss the dominant astronomical and terrestrial
sources across the spectrum, and study the differences between ground-
and space-based observations.
Instructor(s): B. Menard.

An advanced graduate level course that emphasizes the importance of
molecules in astrophysical environments as diverse as interstellar clouds,
circumstellar outflows, cometary comae, and active galactic nuclei. Topics
will include the chemistry and photochemistry of astrophysical molecules;
molecular excitation; astrophysical masers; interstellar molecular clouds;
interstellar shock waves; circumstellar outflows; cometary comae;
molecular accretion disks.
Instructor(s): D. Neufeld.

This sequence is intended for graduate students in physics and
related fields. Topics include: metals and insulators, diffraction and
crystallography, phonons, electrons in a periodic potential, transport.
Instructor(s): N. Markovic.

This sequence is intended for graduate students in physics and related
fields. Topics include superconductivity, magnetism, metal-insulator
transitions, low dimensional materials, quantized hall effect.
Instructor(s): N. Armitage.

AS.171.625. Experimental Particle Physics.
For graduate students interested in experimental particle physics, or
theory students, or students from other specialties. Subjects covered:
experimental techniques, including particle beams, targets, electronics,
and various particle detectors; and a broad description of high energy
physics problems. Undergraduate students may register online for this
course and will be assigned 3 credits during the add/drop period.
Instructor(s): A. Gritsan.

AS.171.626. Data Analysis: Theory & Practice.
Half theory, half practice with real data: signal/noise estimation, object
detection, match filtering, bayesian techniques, principal component
analysis, dimensionality reduction, data compression, outlier detection,
parameter estimation, pattern recognition, visualization, clustering, tree
codes, etc.

AS.171.627. Astrophysical Dynamics.
This is a graduate course that covers the fundamentals of galaxy
formation, galactic structure and stellar dynamics and includes topics in
current research.
Instructor(s): N. Zakamska.

AS.171.628. Practical Scientific Analysis of Big Data.
Students will learn to work with databases, write parallel analysis code
with emphasis on Graphics Processing Units (CUDA), and explore new
approaches to data processing, namely streaming and robust statistics.
Students should have basic knowledge of C/C++ and Introduction
Numerical Methods. Co-taught with AS.171.426
Instructor(s): T. Budavari.

AS.171.629. First Year Research.
Instructor(s): Staff.

AS.171.630. First Year Research.
Instructor(s): B. Menard; O. Tchernyshyov.

The course will cover parallel computing on modern general-purpose
graphics processors. Graduate students will learn to design and
implement scientific problems in C for CUDA, the Compute Unified Device
Architecture. Students should have basic knowledge of C/C++. Co-taught
with AS.171.426 and AS.171.628.
Instructor(s): T. Budavari.

AS.171.634. Topics In Magnetism.
Instructor(s): C. Broholm.
AS.171.636. Modeling Matter Across Multiple Length & Time Scales. Many physical phenomena are difficult to model because they involve coupled processes on a wide range of length and time scales. This course will cover recent developments in multiscale methods for such phenomena. One focus will be hierarchical methods for coarse-graining models to fewer degrees of freedom. Atomistic simulations may be used to construct molecular models, phase-field models or continuum models. A second focus will be methods for concurrently simulating different regions of space with different levels of spatial and temporal resolution. For example, interfacial regions or regions of high strain gradient may require different physical models and resolutions. Recommended Course Background: Course in Condensed Matter Physics, Statistical Mechanics, EN.550.695, or permission of the instructor.

AS.171.641. Second Year Research. Instructor(s): Staff.

AS.171.642. Second Year Research. Instructor(s): B. Menard; O. Tchernyshyov.

AS.171.646. General Relativity. An introduction to the physics of general relativity. Principal topics are: physics in curved spacetimes; the Equivalence Principle; the Einstein Field Equations; the post-Newtonian approximation and Solar System tests; the Schwarzschild and Kerr solutions of the Field Equations and properties of black holes; Friedmann solutions and cosmology; and gravitational wave propagation and generation.

Instructor(s): J. Krolik. Area: Natural Sciences.

AS.171.672. Introduction Plasma Physics. Course will be a combination between an introduction to plasma physics and an overview of the basic atomic processes which determine the properties of hot, laboratory and astrophysical plasmas. Undergraduate students may register online for this course and will be assigned 3 credits during the add/drop period. Co-taught with AS.171.472. Instructor(s): M. Finkenthal.

AS.171.697. Astro-Particle Physics. Topics include: Dark matter, dark energy, ultra-high energy cosmic rays, neutrino astrophysics, black holes, WIMPS, sterile neutrinos, axions, gamma ray bursts, particle acceleration, cosmic backgrounds, dark energy equation-of-state. Senior undergraduates with permission.

AS.171.699. Planets, Life and the Universe. This multidisciplinary course explores the origins of life, planets’ formation, Earth’s evolution, extrasolar planets, habitable zones, life in extreme environments, the search for life in the Universe, space missions and planetary protection. Graduate students only. Meets with AS.171.333. Instructor(s): C. Norman.

AS.171.701. Quantum Field Theory. Introduction to relativistic quantum mechanics and quantum field theory. Canonical quantization; scalar, spinor, and vector fields; scattering theory; renormalization; functional integration; spontaneous symmetry breaking; Standard Model of particle physics.

Instructor(s): K. Melnikov.

AS.171.702. Quantum Field Theory II. Introduction to relativistic quantum mechanics and quantum field theory. Recommended Course Background: AS.171.605-AS.171.606 or equivalent.

Instructor(s): K. Melnikov.

AS.171.703. Advanced Statistical Mechanics. Brief review of basic statistical mechanics and thermodynamics. Then hydrodynamic theory is derived from statistical mechanics and classical treatments of phase transitions, including Ginzburg-Landau theory.

Instructor(s): O. Tchernyshyov.

AS.171.704. Phase Transitions and Critical Phenomena. Course covers phase transitions and critical phenomena. Building on the ideas of spontaneous symmetry breaking and scale invariance at a critical point we develop Landau’s theory of phase transitions and the apparatus of renormalization group using both analytic and numerical techniques for studying interacting systems.

Prerequisites: AS.171.312 OR AS.171.703. Instructor(s): O. Tchernyshyov.

AS.171.713. Magnetic Materials and Spintronics. Explore magnetic materials, the results of interactions of spin and charge of electrons, and spintronic phenomena, such as interlayer coupling, giant magnetoresistance, spin tunneling, spin transfer torque, spin Hall effect.

Instructor(s): C. Chien.

AS.171.731. Exper Particle Physics. Instructor(s): B. Blumenfeld.

AS.171.732. Elementary Particle Physics. Description TBA. Instructor(s): M. Swartz.

Instructor(s): J. Krolik.

AS.171.750. Cosmology. Review of special relativity and an introduction to general relativity, Robertson-Walker metric, and Friedman equation and solutions. Key transitions in the thermal evolution of the universe, including big bang nucleosynthesis, recombination, and reionization. The early universe (inflation), dark energy, dark matter, and the cosmic microwave background. Development of density perturbations, galaxy formation, and large-scale structure.

Instructor(s): C. Bennett.

Prerequisites: AS.171.621 or AS.171.622. Instructor(s): C. Broholm.

AS.171.754. Active Galactic Nuclei.
AS.171.755. Fourier Optics and Interferometry in Astronomy.
A course for advanced undergraduate and beginning graduate students covering the principles of optics and image formation using Fourier Transforms, and a discussion of interferometry and other applications both in radio and optical astronomy.
Instructor(s): R. Allen.

AS.171.756. Astrophysics of Compact Objects.
A graduate-level course devoted to the physical understanding of black holes, white dwarfs, neutron stars and associated objects. Many astrophysical observations will be discussed where these objects may be relevant including galactic nuclei, quasars, compact X-ray sources and gamma-ray bursts.
This course is designed for graduate students interested in learning the language, techniques, and problematic of modern quantum many-body theory as applied to condensed matter physics.

This course will be a survey of modern techniques in experimental condensed matter physics and is intended for graduate students interested in this area, but others interested in this topic (especially condensed matter theory students) are encouraged to enroll. Topics include low temperature techniques, transport, the SQUID and other magnetic probes, digital and analog signal processing, scattering (neutron, X-ray, and light), EPR, NMR, data analysis, and Monte Carlo. Sample preparation, including crystal and film growth and lithography will also be covered.
Instructor(s): C. Chien.

AS.171.783. Advanced Particle Theory.
Advanced course on the AdS/CFT correspondence and its relationship with contemporary research topics.
Instructor(s): J. Kaplan.

AS.171.784. Advanced Particle Theory: "What to Expect at the LHC."
The course will focus on scenarios and principles for new particle physics that can be tested at the CERN Large Hadron Collider and other particle experiments.
Instructor(s): D. Kaplan.

AS.171.102, AS.171.103-AS.171.104, or AS.171.105-AS.171.106.
Written presentation. Recommended Course Background: AS.171.101-
Area: Natural Sciences
Writing Intensive.

AS.172.203. Contemporary Phys Sem. 1 Credit.
This seminar exposes physics majors to a broad variety of contemporary experimental and theoretical issues in the field. Students read and discuss reviews from the current literature, and are expected to make an oral or written presentation. Recommended Course Background: AS.171.101-
Area: Natural Sciences
Writing Intensive.

AS.172.333. Planets, Life, and the Universe Seminar. 1 Credit.
Based on the course Planets, Life and the Universe in the Fall, this seminar series is for students who would like to read and discuss interesting current papers in the field, including the latest developments that may lead to interesting ideas on interdisciplinary research.
Recommended Course Background: AS.171.333/AS.333.699 Reading material Papers will be assigned to read each week.
Instructor(s): B. Garcia-Moreno; C. Norman; J. Diruggiero
Area: Engineering, Natural Sciences.

AS.172.601. Department Colloquium.
Instructor(s): D. Reich; Staff.

AS.172.613. Physics Seminar.
First year graduate students only. Study of the methods and results of modern physics and other topics of interest. Each student will discuss some phase of the subject.
Instructor(s): D. Kaplan.

Intended for beginning graduate students. Study of the methods and results of modern physics and other topics of interest. Each student will discuss some phase of the subject. Graduate students only.
Instructor(s): D. Kaplan.

AS.172.633. Language Of Astrophysics.
Survey of the basic concepts, ideas, and areas of research in astrophysics, discussing general astrophysical topics while highlighting specialized terms often used compared to physics.
Instructor(s): R. Wyse.

Based on the course Planets, Life and the Universe in the Fall, this seminar series is for students who would like to read and discuss interesting current papers in the field, including the latest developments that may lead to interesting ideas on interdisciplinary research.
Recommended Course Background: AS.171.333/AS.171.699 or AS.020.334/AS.020.616
Instructor(s): Staff.

Non-specialized seminar in which second-year graduate students discuss subjects of general interest, supplementing the material of the standard courses and including recent advances in physics.
Instructor(s): M. Swartz.
Non-specialized seminar in which second-year graduate students discuss subjects of general interest, supplementing the material of the standard courses and including recent advances in physics.

AS.172.722. Hot Topics in Astrophysics.
Instructor(s): C. Norman.

AS.172.731. CAS Research Seminar.
Instructor(s): S. McCandliss.

AS.172.732. CAS Research Seminar.
Instructor(s): S. McCandliss.

Instructor(s): T. Heckman.

AS.172.751. Elementary Particle Physics Seminar.
Instructor(s): A. Gritsan.

AS.172.752. Elementary Particle Physics Seminar.
Instructor(s): P. Maksimovic.

AS.172.753. Advanced Particle Theory Seminar.
Instructor(s): D. Kaplan.

AS.172.754. Advanced Particle Theory Seminar.
Instructor(s): D. Kaplan.

Instructor(s): N. Markovic.

Instructor(s): N. Markovic.

AS.173.111. General Physics Laboratory I. 1 Credit.
Experiments are chosen from both physical and biological sciences and are designed to give students background in experimental techniques as well as to reinforce physical principles.
Instructor(s): M. Swartz
Area: Natural Sciences.

AS.173.112. General Physics Laboratory II. 1 Credit.
Experiments are chosen from both physical and biological sciences and are designed to give students background in experimental techniques as well as to reinforce physical principles. Recommended Course Background: AS.173.111; Corequisite: AS.171.102 or AS.171.104 or AS.171.106
Instructor(s): M. Swartz
Area: Natural Sciences.

AS.173.115. Classical Mechanics Laboratory. 1 Credit.
Experiments chosen to complement the lecture course Classical Mechanics I, II AS.171.105-AS.171.106 and introduce students to experimental techniques and statistical analysis. Corequisite: AS.171.105.
Instructor(s): M. Swartz
Area: Natural Sciences.

AS.173.116. Electricity and Magnetism Laboratory. 1 Credit.
Experiments chosen to complement Electricity and Magnetism AS.171.106 and introduce students to experimental techniques and statistical analysis.
Instructor(s): M. Swartz
Area: Natural Sciences.

AS.173.308. Advanced Physics Laboratory. 3 Credits.
A broad exposure to modern laboratory procedures such as holography, chaos, and atomic, molecular, and particle physics.
Instructor(s): T. Marriage
Area: Natural Sciences
Writing Intensive.

AS.173.310. Mentoring in General Physics Lab. 1 Credit.
Area: Natural Sciences.

AS.173.311. Mentoring in General Physics Laboratory. 1 Credit.
This course provides students who have taken General Physics I and II and General Physics Laboratory I and II with the opportunity to mentor new students in General Physics Laboratory I and II. Mentors collaborate General Physics laboratory Teaching Assistants to interact with students to help them to complete laboratory assignments and to master the concepts of General Physics. Mentors must have a strong background in Physics. They are expected to interact with students during one three-hour laboratory section per week and to attend the associated TA training once per week. Permission of the instructor required. S/U only.
Prerequisites: AS.173.111 and AS.173.112
Instructor(s): M. Swartz
Area: Natural Sciences.

AS.173.312. Mentoring in General Physics Laboratory. 1 Credit.
This course provides students who have taken General Physics I and II and General Physics Laboratory I and II with the opportunity to mentor new students in General Physics Laboratory I and II. Mentors collaborate General Physics laboratory Teaching Assistants to interact with students to help them to complete laboratory assignments and to master the concepts of General Physics. Mentors must have a strong background in Physics. They are expected to interact with students during one three-hour laboratory section per week and to attend the associated TA training once per week. Permission of the instructor required. S/U only.
Prerequisites: AS.173.111 AND AS.173.112
Instructor(s): M. Swartz
Area: Natural Sciences.

AS.173.608. Advanced Laboratory.
Experiments carried out on cosmic rays, X-ray scattering Möllbauer effect, atomic beams, and optical spectroscopy.
Instructor(s): T. Marriage.

Cross Listed Courses
Chemistry
AS.030.691. Solid State Chemistry.
The course is designed to provide the essential principles and concepts underlying the modern study of the structure and properties of solids in bulk crystals, thin films, and nanoscale objects. Topics include basic crystallography, structure determination by x-ray, neutron, and electron diffraction, fundamental concepts of bonding in solids, lattice dynamics, electronic band structure, magnetism, and strongly correlated electron behavior. Particular emphasis is placed on the impact of the structure, dimensionality, and electron count on electrical and magnetic properties (electric conduction, superconductivity, thermoelectricity, etc.). More course info available at <a href="http://occamy.chemistry.jhu.edu">http://occamy.chemistry.jhu.edu</a>. Cross-listed with Physics and Astronomy Instructor(s): T. McQueen.

History of Science Technology
AS.140.322. The Heavens and Earth in the History of Astronomy. 3 Credits.
How do we study the stars, and what do they tell us about the earth? In this course, we explore views of the heavens across history, from ancient Greece to international astrophysics. Special emphasis will be given to the ‘new stars’ of 1572 and 1604, whose remnants astronomers at Johns Hopkins University continue to study today. Cross-listed with Earth and Planetary Science, Physics and Astronomy Instructor(s): P. Boner
Area: Humanities, Social and Behavioral Sciences.
Applied Mathematics Statistics

EN.550.693. Turbulence Theory.
An advanced introduction to turbulence theory for graduate students in the physical sciences, engineering and mathematics. Both intuitive understanding and exact analysis of the fluid equations will be stressed. Students should have previous familiarity with fluid mechanics. Instructor(s): G. Eyink.

Political Science

The programs of the Political Science Department are designed to help students attain a deeper understanding of politics and civic life in its various dimensions. The department encourages students to become sophisticated theoretically and to study politics in global and comparative perspective. We divide the curriculum into American politics, law and politics, comparative politics, political theory, and international relations, and students are encouraged to develop expertise in several of these areas.

The department has 22 faculty members. The undergraduate program offers a broad range of courses about politics and government at local, state, national, and international levels. In addition to taking courses on the Homewood campus, students can do independent research under the guidance of a faculty mentor, take courses at the Nitze School of Advanced International Studies (SAIS) in Washington, D.C., and participate in the Aitchison Public Service Undergraduate Fellowship Program at the Johns Hopkins Washington Center.

Intellectual Orientation

In addition to our work within the traditional fields of Political Science, faculty research engages four clusters of activity that cut across the various subfields while speaking to core questions of politics: power and inequality, identities and allegiances, agency and structures, and borders and flows.

Power and Inequality

In many ways, political science is the study of power. This includes the wide array of rules, authority structures, and forms of violence at the local, national, transnational and international levels, as well as how the value, distribution, and accumulation of resources create conditions of security and insecurity among nation states, regions, economic classes, or populations.

Identities and Allegiances

A second cluster of research centers on questions of identity and the various allegiances and attachments organized around them. These include how racial, ethnic, gender, and sexual identities inform citizenship and nationalism, the organization of civil society, or the formation of social movements.

Agency and Structure

A third cross-cutting area of activity in the department explores questions of agency and structures. Agency includes entrepreneurship, innovation and creative action, and the agency of material things. Structures include formal and informal institutions, particularly the rules, roles, and regulations that guide human relations in the public, private, and non-profit worlds, among states and within them, at the global level and in local communities.

Borders and Flows

A fourth cluster examines borders and flows. Research in this area examines the movement of people, ideas, material objects, and natural forces across space and over time. A focus on borders and flows informs the study of territorial regimes, sovereignty, religious intensities, immigration and diasporas, globalizing capital, information, and ecological politics.

The department offers a broad range of courses in American politics, law and politics, comparative politics, international relations, and political theory. These courses can contribute to two different majors:

Major in Political Science

The major in political science described below is designed for students interested in intensive study of the institutions, theory, and problems of modern political culture and government.

Major in International Studies

The department offers an interdisciplinary program leading to B.A. or B.A./M.A. degrees in International Studies. This program and its requirements are described under International Studies (p. 439).

Requirements for the B.A. Degree

(See also General Requirements for Departmental Majors (p. 33).)

In addition to the university distribution requirements, majors must take a total of at least 13 courses in political science and achieve a grade of C or better in each of these courses, including courses taken in the first semester of the freshman year. These 13 courses must include at least one course in each of the following subfields: American politics (AP or LP designation), comparative politics (CP), political theory (PT), and international relations (IR). Students then need to take an additional nine classes in political science for a total of 13 political science courses. Students may count one letter-graded, three-credit independent study course toward the 13 courses required. Internships, which are not letter-graded, do not count toward meeting the requirements of the major.

Outside the department, majors must take at least two courses in the social sciences (Anthropology, Economics, Geography, Psychology, Sociology), and two courses in history (History, History of Art, History of Science and Technology). The Department of Political Science does not award credit for the Advanced Placement examination in government.

Comparative Racial Politics

The undergraduate program in Comparative Racial Politics is designed to introduce undergraduate students to the study of racism in comparative, cross-spatial perspective. Beginning with an introductory course designed to familiarize students with key concepts and approaches in the examination of racism, students will be able to distinguish the race concept and the practice of racism from the concepts and phenomena such as ethnicity and nationalism.

The curriculum includes two mandatory courses and two elective courses. The mandatory courses are Introduction to Ethnic and Racial Politics, and Comparative Racial Politics. The elective courses include Nationalism, Asian American Politics, Politics of East Asia, Black Politics, and courses on race and immigration offered outside of the department (with approval).
Honors Thesis Program

Seniors also have the opportunity to write a senior research thesis. To be eligible to write this thesis, seniors must identify a faculty sponsor who will supervise the project. Once a faculty sponsor has approved a topic, students must enroll in a three credit independent study during the fall semester of their senior year. If at the end of the fall semester adequate progress has been made and the project warrants further work, the student may enroll in the senior thesis (AS.190.499 Senior Thesis:International Relations/Political Science) which will be worth 6 credits. Students who complete a senior thesis and have a final major GPA (including final semester grades) of 3.7 will be awarded departmental honors. All students may write a thesis, regardless of GPA, provided they have a detailed proposal approved by a faculty member at the beginning of the fall semester of their senior year.

The graduate program in political science reflects the distinctive strengths of Johns Hopkins University, where graduate education holds a central place in the life of an attractive urban campus of comparatively small size, and where graduate students from several departments in the social sciences and humanities form a vibrant intellectual community. The JHU Department of Political Science promotes close interdependence between American politics, comparative politics, law and politics, international relations, and political theory. Our objective is to be a place where most faculty and graduate students are fluent in theory and where many contribute to the global and comparative dimensions of politics. This objective is reflected in the range of the faculty, with most members contributing to more than one field and several engaged actively with colleagues and graduate students in other departments. Much political research in the next few decades will study the United States comparatively, explore connections between contemporary global politics and the durable interests of political theory, and cultivate growing convergences between international relations and comparative politics. Our program is designed for graduate students who seek broad training, who are inspired by large questions about politics, and who aspire to develop considerable strength in more than one field. We encourage students to do some work in allied departments such as Anthropology, Economics, German and Romance Languages and Literatures, History, the Humanities Center, Philosophy, Public Policy, and Sociology. The program also speaks to the future teaching responsibilities of students.

Admission

The department admits approximately 10 to 12 new graduate students each year, selecting them from the approximately 200 applications that it receives annually. The deadline for application for admission to graduate study and the award of financial assistance is January 15 (EST). Decisions are made exclusively in late February or early March and announced by March 15. A B.A., B.S., or their equivalent, and results of the Graduate Record Examination are required for application. Students whose native language is not English must take the TOEFL examinations or provide other evidence of fluency in English (such as a degree from an institution in which the language of instruction is English.) A broad background in the liberal arts and sciences is preferred. Further information, and the materials necessary to apply for admission and aid, will be sent on request.

Financial Aid

The department ordinarily provides financial aid to all students admitted to the graduate program unless they hold fellowships from sources outside the university. Departmental fellowships cover full tuition and an annual stipend, currently set at $22,000. Assuming satisfactory progress toward the Ph.D., students can normally expect to receive funding for five years. All students receiving financial aid are expected to serve as teaching assistants for one semester of each academic year.

Progress Toward the Ph.D.

The time necessary to obtain a Ph.D. in the department varies according to the preparation individual students bring to the program, the scope and complexity of their dissertation topics, and other factors. Students are encouraged to satisfy the department’s foreign language requirement by the time of their comprehensive exams. Doctoral students fulfill the foreign language requirement when they demonstrate successful completion of four semesters of college-level foreign language instruction or its equivalent, or pass a translation test administered by an appropriate faculty member. Most students take their comprehensive examinations in the third year in the program. The Master of Arts degree is offered only to students who have been admitted into the Ph.D. program. For the M.A., the student must complete at least seven one-semester courses at the 600-level with a grade of B or better, and demonstrate an effective reading knowledge of one approved foreign language.

Requirements for the Ph.D. Degree

The requirements for the Ph.D. are divided between those that must be satisfied by all candidates for that degree and those particular to the subdisciplinary fields into which work in the department is divided.

All candidates for the Ph.D. must satisfy the following requirements:

Course Requirements

A minimum of 12 semester courses at the 600-level with a grade of B or better.

Comprehensive Examinations in two approved fields

One major and one minor. The “take-home” comprehensive examination in the major field is two days (16 hours) in length. It is conducted by the members of the department faculty whose teaching and research are in the field in question. The comprehensive examination in the minor field is one day (8 hours) in length. Both the major and the minor field are to be chosen from among the five fields of political science into which study in the department is primarily organized: American politics, law and politics, political theory, comparative politics, and international relations. Students may, if they wish, take an optional second minor examination in one of these fields or in a program outside of the Department of Political Science.

In the latter case, the student must devise a coherent program of study in an area related to political science, in consultation with his or her department advisor and faculty from other departments; complete with a grade of B or better a minimum of three courses at the 600-level in the area in question; pass a comprehensive examination prepared and evaluated, in consultation with faculty of the Department of Political Science, by the instructors in those courses.

Dissertation

Preparation of the dissertation will be supervised and must be approved by two members of the faculty, at least one of whom (the dissertation director) must be a member of the Department of Political Science.
Defense

The final examination of the dissertation will take the form of a defense conducted under the rules of the Graduate Board of The Johns Hopkins University.

Fields

The five departmental fields from which students may choose a major and a minor are:

- American Politics
- Law and Politics
- Comparative Politics
- International Relations
- Political Theory

Basic expectations, procedures, and requirements concerning work in all these fields are stated below. These are implemented, interpreted, and adjusted in the light of the intellectual orientations and objectives of individual students. It is of great importance that students work closely with their advisors and with the faculty in their major and minor fields in constructing and pursuing their programs of study.

American Politics

The Department offers both a major and a minor in American politics. In both cases, students will work with at least two faculty members to develop a plan of study that includes recommended course work and other preparation needed to pass a comprehensive exam. Students completing a major are expected to demonstrate a breadth of knowledge sufficient for framing a dissertation in the relevant disciplinary literature and teaching undergraduate courses in the field; students who pursue a minor may focus more narrowly on an area of study in which they demonstrate fluency. These may include, but are not limited to, the following areas of faculty interest:

- American Political Institutions (Congress, Courts, and the Executive)
- Urban Politics
- American Political Development
- Race and Politics
- Political Behavior and Public Opinion
- Public Policy
- American Political Thought
- Political Parties and Elections

In addition, students majoring in the field are strongly encouraged to take AS.190.602 Introduction to Quantitative Political Science as part of their course of study.

Comparative Politics

All students working in this field will become conversant with major substantive and methodological debates in comparative politics, and be able to comment on the key theoretical literature in several of those debates. They will normally also develop knowledge of at least one world region. We offer core courses in Theories of Comparative Politics, Quantitative Methods, and Qualitative Methods, and expect all students to master the materials covered in these courses, as well as others with more specialized topics.

Students will take a comprehensive exam that will test their ability to engage with several areas of theoretical debate in Comparative Politics, and their ability to use comparative examples to support their arguments. Students may focus on (but are not limited to):

- Civil Society
- Institutional Theories
- Transnational Relations, Social Movements, and Contentious Politics
- Political Parties, Interest Groups, Representation, and Political Behavior
- Comparative Political Economy
- Comparative Racial Politics, Nationalism, and Migration and Citizenship
- The Political Economy of Development
- Economic and Political Transitions
- Ideas and Politics

Within the spirit of this division of the overall field, students may propose alternative delineations of thematic subfields.

Students working in specific thematic and substantive subfields within Comparative Politics will be required to demonstrate competence in methodologies and bodies of theory judged by the faculty to be necessary for quality research and teaching in those subfields.

Students majoring in Comparative Politics will also take a comprehensive examination in at least one minor field from among the following:

- American Politics
- International Relations
- Political Theory
- Law and Politics

They may choose their second minor field from within or from outside the Department of Political Science, including Johns Hopkins' School for Advanced International Studies.

Students minoring in Comparative Politics will take a comprehensive examination in Comparative Politics. Students majoring or minoring in Comparative Politics are required to take AS.190.625 Theories of Comparative Politics and at least one seminar in quantitative or qualitative methods.

Comparative Racial Politics

The graduate certificate program in Comparative Racial Politics is designed to help train graduate students who are developing empirically based and/or theoretically informed scholarship on citizenship, racism and immigration in contemporary societies, whether in a single national society or cross-spatially. There are two required courses: Comparative Racial Politics, and Qualitative Methods. In addition the student must take two electives from this (preliminary) list:

- Nationalism
- Comparative Citizenship and Immigration
- Politics
- Topics in Black Political Thought
- Race and Political Theory
- Civil Society
- States, Regimes and Governmentality
- American Political Development
- Political Economy of Development
International Relations

Students majoring in International Relations will take an examination covering two subfields. The first subfield must be International Politics. The other subfield is to be determined in consultation with faculty teaching in International Relations. Choices include but are not restricted to:

- International Law and Diplomacy
- International Relations Theory
- International Security Studies
- International Political Economy

Students majoring in International Relations will also take at least one minor field from among the following:

- American Politics
- Law and Politics
- Comparative Politics
- Political Theory

Students may choose a second minor field from within or from outside the Department of Political Science, including Johns Hopkins' School for Advanced International Studies.

Students minoring in International Relations will take a comprehensive examination in International Politics. Students majoring or minoring in International Relations are required to take at least one seminar in political theory or quantitative methods, the seminar to be chosen in consultation with faculty in International Relations.

Political Theory

Students majoring in Political Theory will take a comprehensive examination covering the following two subfields:

- Contemporary Political Theory
- History of Political Thought

Each student preparing for a major comprehensive exam will propose six or seven thinkers in the history of thought, six or seven recent or contemporary thinkers, and three or four issue areas. Examination questions are composed in light of the theorists and issues articulated in the exam prospectus.

The minor comprehensive exam in political theory asks the student to select half the number of thinkers required for the major exam and three issue areas.

Preparation for these examinations will be arranged in consultation with relevant faculty.

Students majoring in political theory will also take at least one minor field from American Politics, Law and Politics, Comparative Politics, or International Relations.

For current faculty and contact information go to http://politicalscience.jhu.edu/directory/

Faculty

Chair

Richard S. Katz

Comparative politics (parties, elections, European politics), American politics.

Professors

Jane Bennett
Political theory, American political thought, ecophilosophy.

William E. Connolly
Krieger-Eisenhower Professor: political theory, international relations.

Steven R. David
Professor and Vice Dean for Undergraduate Education: international relations, security studies, comparative politics.

Benjamin Ginsberg
David Bernstein Professor and Director of the Washington Center for the Study of Government: American government and politics, political development.

Siba N. Grovogui
International relations theory, political theory.

Michael Hanchard
SOBA Presidential Professor and co-director of the Racism, Immigration and Citizenship Program: comparative politics, political theory.

Margaret E. Keck
Comparative politics, international relations (Latin American politics, the environment, social movements).

Renée Marlin-Bennett
International relations, political economy of information.

Kellee S. Tsai
Professor and Vice Dean for Humanities, Social Sciences, and Graduate Programs: comparative politics, political economy of development, Chinese politics, international political economy.

Associate Professors

Samuel Chambers
Political theory, feminist and queer theory, cultural politics.

Erin Chung
Charles D. Miller Associate Professor of East Asian Politics and co-director of the Racism, Immigration and Citizenship Program: comparative politics, East Asian politics, international migration, comparative racial politics.

Jennifer L. Culbert
Political theory, jurisprudence.

Daniel H. Deudney
International relations, political theory.

Nicolas Jabko
Comparative politics, international political economy, European politics.

Adam Sheingate
American politics, comparative politics.

Lester Spence
Black politics, race and politics, urban politics, American political behavior and public opinion.

Steven Teles
Social policy, law and public policy, political analysis.

**Assistant Professors**

Bentley Allan  
International relations, science and politics, global governance, global environmental politics.

P.J. Brendese  
Political theory, comparative political thought, race and politics.

Daniel Schlozman  
American politics, political parties, and the welfare state.

Emily Zackin  
Constitutional law, American politics.

**Professors Emeriti**

Joseph Cooper  
Legislative politics, executive-legislative relations, institutional theory.

Matthew A. Crenson  
Urban government, American political development.

Richard E. Flathman  
Professor Emeritus and George Armstrong Kelly Professor: political theory, legal philosophy.

Joel B. Grossman  
Constitutional law, law and politics, American politics.

**Adjunct Faculty**

Robert Freedman  
Arab-Israeli politics and Russian politics.

For current course information and registration go to https://isis.jhu.edu/classes/

**Courses**

**AS.190.101. Introduction to American Politics. 3 Credits.**

This course examines the ideals and operation of the American political system. It seeks to understand how our institutions and politics work, why they work as they do, and what the consequences are for representative government in the United States. Emphasis is placed on the federal government and its electoral, legislative, and executive structures and processes. As useful and appropriate, attention is also given to the federal courts and to the role of the states. The purpose of the course is to understand and confront the character and problems of modern government in the United States in a highly polarized and plebiscitary era.

Instructor(s): B. Ginsberg  
Area: Social and Behavioral Sciences.

**AS.190.102. Introduction To Comparative Politics. 3 Credits.**

An introduction to the comparative study of political regimes, institutions and processes, with illustrations drawn from selected countries in different world regions. These may include Great Britain, Germany, Japan, Mexico, China, India, Iran, Nigeria, and Russia, or others.

Instructor(s): N. Jabko  
Area: Social and Behavioral Sciences.

**AS.190.104. International Politics. 3 Credits.**

Intensive analysis of major approaches to international politics (realism, liberalism, Marxism). Topics include: anarchy, geopolitics, states, nations, balance of power, hegemony, empire, democratic peace, regimes, nuclear weapons, European Union.

Instructor(s): D. Deudney  
Area: Social and Behavioral Sciences.

**AS.190.105. A Normal Country? - German Politics and Identity. 3 Credits.**

This seminar deals with questions pertaining to the formation of modern German nationalism and national identity through the perspective of German politics and history. This case study focused seminar will provide students with a framework to research wider questions on nationalism and political identity. Freshmen Only.

Instructor(s): F. Bauwens  
Area: Humanities, Social and Behavioral Sciences.

**AS.190.106. International Relations in East Asia. 3 Credits.**

International Relations Theory as a discipline emerged out of Western political and social thought on how global coexistence and governance ought to be as—thus the discipline tends to privilege the Western experience and seek to apply Western categories to non-Western regions of the world. Through examining the history of Asia’s encounter with the West in the reconfiguration of international relations in East Asia (through the influence of Western expansion into Asia as well as the impact of Japan’s Westernization effort) this course emphasizes the need for a plural, open and critical thinking of how we theorize global politics so as to cultivate an appreciation of multiplicity of experiences including that of the non-West. Freshmen Only.

Instructor(s): H. Koyama  
Area: Social and Behavioral Sciences.

**AS.190.205. Develop/Democracy/Global. 3 Credits.**

Instructor(s): M. Blyth  
Area: Humanities, Social and Behavioral Sciences.

**AS.190.206. Global Environmental Politics. 3 Credits.**

This course will combine empirical, theoretical, and moral perspectives to explain and understand global environmental problems such as climate change and worldwide biodiversity decline. In the first part of the course, we will examine the central social, economic, and political causes of ecological problems. In the second part, we will analyze proposed solutions to these problems at the local, national, and global levels.

Instructor(s): B. Allan  
Area: Social and Behavioral Sciences  
Writing Intensive.

**AS.190.207. Political Freedom, Race and Resistance. 3 Credits.**

This course examines core questions about the relationship between political power and political freedom. A critical investigation of how resistance to racial inequality has been expressed in political theory and political practice will illuminate and contest the limits and possibilities for political freedom today.

Instructor(s): P. Brendese  
Area: Social and Behavioral Sciences.
AS.190.209. Contemp Int’l Politics. 3 Credits.
An introduction to international politics. Emphasis will be on continuity and change in international politics and the causes of war and peace. The first half of the course will focus on events prior to the end of the Cold War, including the Peloponnesian War, the European balance of power, imperialism, the origins and consequences of WWI and WWII, and the Cold War. The second half will focus on international politics since 1990, including globalization, whether democracies produce peace, the impact of weapons of mass destruction, terrorism, and the prospects for peace in the 21st century. Theories of realism and liberalism will also be considered.
Instructor(s): B. Meiches; S. David
Area: Social and Behavioral Sciences.

AS.190.210. The American Congress. 3 Credits.
An introduction to legislative politics and policymaking in the US, and their place in the political system. Special attention to issues of representation, and the consequences of institutional design.
Instructor(s): D. Schlozman
Area: Social and Behavioral Sciences.

AS.190.211. Intro Political Econ I. 3 Credits.
This historically oriented course examines the politics of “the economy” through an examination of the major contributions to the “political” study of the economy from the 17th century to the present.
Prerequisites: Students who are taking or have taken AS.190.216 are not eligible to register for AS.190.211.
Instructor(s): I. Kamola
Area: Social and Behavioral Sciences.

AS.190.213. International Politics. 3 Credits.
Intensive analysis of major approaches to international politics (realism, liberalism, Marxism). Topics include: anarchy, geopolitics, states, nations, balance of power, hegemony, empire, democratic peace, regimes, nuclear weapons, European Union. (IR)
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

AS.190.214. Introduction to Racial and Ethnic Policy. 3 Credits.
What do scholars mean when they use concepts of race and ethnicity, and what are the political implications of these concepts in everyday life? One aim of this course is to answer this question. The second aim of this course is to help first-year college students develop familiarity with these concepts and an understanding of how ideas about racial and ethnic difference have impacted the formation of societies, governments, laws, policies and individuals, even themselves. Comparative in scope, this course will lead students through readings about racial and ethnic relations in countries like Brazil, England, Northern Ireland and China, often utilizing the United States as a referent. (AP) Cross-listed with Africana Studies
Instructor(s): L. Spence
Area: Social and Behavioral Sciences.

AS.190.216. Global Political Economy. 3 Credits.
This lecture course explores the governance of the global economy, focusing on rules and institutions affecting global trade and finance, development, the environment, production, and resources.
Prerequisites: Students who are taking or have taken AS.190.211 or AS.190.235 are not eligible to register for AS.190.216.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences.

AS.190.221. Political Theory of Gender and Sexuality (PT). 3 Credits.
Feminist theory and queer theory have been important resources for contemporary political thought, at the same time that key issues concerning gender and sexuality have proved central to both political theory and contemporary politics. This course focuses on theories of gender and sexuality through a selective encounter with feminist and queer theories, and it examines political theories that draw from and speak to those other fields. Texts may include: Beauvoir, Sedgwick, Butler, Scott, Warner, Halperin, and Edelman.
Area: Social and Behavioral Sciences.

AS.190.225. Introduction to International Studies. 3 Credits.
Instructor(s): S. Grovogui
Area: Social and Behavioral Sciences.

AS.190.226. Global Governance. 3 Credits.
Global problems like poverty, financial instability, human rights abuses, and climate change threaten both international order and human well-being. In the absence of a world state, these problems must be addressed by an increasingly complex, transnational network of organizations and social groups. First, we will aim to understand and explain how global problems are governed through detailed case studies of International Organizations and Non-Governmental Organizations such as the United Nations, World Bank, Intergovernmental Panel on Climate Change, Amnesty International and more. Second, we will critically evaluate the successes and failures of these organizations and explore the possibilities for improving democratic governance at the global level.
Instructor(s): B. Allan
Area: Social and Behavioral Sciences.

AS.190.228. The American Presidency. 3 Credits.
This course is an introduction to the study of the presidency. It assumes a basic understanding of the American political system as provided in a course such as Introduction to American Politics or its equivalent. We explore the evolution of the modern presidency, how contemporary presidents operate in the political System, and the sources of successful presidential leadership.
Instructor(s): A. Sheingate
Area: Social and Behavioral Sciences.

AS.190.229. Introduction to Comparative Politics. 3 Credits.
An introduction to political institutions and processes with illustrations drawn from selected countries of the world. These will include Great Britain, Japan, Brazil, China, India, Nigeria, and Russia. (CP)
Instructor(s): J. Wang
Area: Social and Behavioral Sciences.

AS.190.230. Introduction to the European Union. 3 Credits.
This lecture course introduces students to the European Union (EU) by examining the history and institutions in order to understand the EUs policies, strengths and weaknesses. Requires extensive reading, mid-term, final.
Prerequisites: Students who have taken AS.180.233 are not eligible to register.
Instructor(s): A. McCartney
Area: Social and Behavioral Sciences.

AS.190.235. Introduction to International Political Economy. 3 Credits.
Focusing on the politics of international economic relations, this course examines how political economics differs from "regular" economics. Alternative analytical and theoretical perspectives are examined. Requires extensive reading, mid-term, final.
Prerequisites: AS.180.101 and AS.180.102
Area: Social and Behavioral Sciences.
AS.190.244. Weapons Mass Destruction. 3 Credits.
Instructor(s): S. David
Area: Social and Behavioral Sciences.

AS.190.255. Political Inquiry: How to Conduct Research in Political Science and International Studies. 3 Credits.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.265. Comparative Political Behavior. 3 Credits.
An introduction to the study of political behavior, emphasizing electoral behavior in democratic countries.
Instructor(s): R. Katz
Area: Social and Behavioral Sciences.

AS.190.266. Religion, Economics and Terror. 3 Credits.
This course will engage a series of questions about how religion and fear are used as tools of political power that shape human values and desires in an age of neoliberal capitalism.
Instructor(s): P. Brendese
Area: Social and Behavioral Sciences.

AS.190.280. Political Persuasion (Classics of Political Thought I). 3 Credits.
An introduction to Euro-American political thought through a close examination of six thinkers: Socrates, Machiavelli, Locke, Marx, Whitman, and Foucault.
Instructor(s): J. Bennett
Area: Social and Behavioral Sciences.

AS.190.281. Virtue, Labor, and Power (Classics of Political Thought II). 3 Credits.
This is not a class in the history of political thought. Instead, it is an opportunity for a selective, circumscribed, but very focused engagement with some of the most powerful and provocative texts in that history. We will read selections from six thinkers (Socrates, Machiavelli, Locke, Marx, Nietzsche, and Foucault), focusing on three themes (Virtue, Labor, and Power). These texts have all profoundly shaped the way we think about politics, and they are texts that resonate with our own political problems today.
Instructor(s): S. Chambers
Area: Social and Behavioral Sciences.

AS.190.282. Authority and Liberty (Classics of Political Thought III). 3 Credits.
Beginning with Plato, and using Nietzsche’s history of metaphysics as a guide, this course serves as an introduction to Euro-American political thought by analyzing the philosophical foundations of political authority. In addition to works by Plato and Nietzsche, readings will include works by Kant, Mill, Hart, and Foucault.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences.

AS.190.300. Class Politics. 3 Credits.
Instructor(s): L. Spence
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.301. Global Political Economy. 3 Credits.
Examines the intersection of politics and economics in global affairs. Focuses on theoretical approaches to global political economy; institutions of governance of the global political economy; flows of goods, services, capital, and information; and transborder problems. Recommended Course Background: AS.190.209
Prerequisites: Not open if you have previously taken AS.190.216.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.302. How to be a Capitalist. 3 Credits.
Everyone usually assumes that they know what capitalism is and how it works. Yet some of us often make very poor choices given the framework of a capitalist system, and many of us continually express shock and outrage over outcomes and results that are perfectly reasonable (and to be expected) given the operation of capitalism. This advanced seminar will engage with readings in political theory and political economy that explore the fundamental logic of capitalism. Previous course in Political Theory or Instructor’s Permission.
Instructor(s): S. Chambers
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.303. The Cultural Politics of Television. 3 Credits.
Instructor(s): S. Chambers
Area: Social and Behavioral Sciences.

AS.190.304. Constructivism: How Ideas Shape International Relations. 3 Credits.
In this course we will explore the power of culture, symbols, and values in global politics. We will achieve a deep understanding of constructivist theories by way of their important contributions to the study of historical change, war and peace, ethnic and religious conflict, international economics, human rights, environmental politics, and global justice movements.
Instructor(s): B. Allan
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.305. Globalization and Culture. 3 Credits.
Instructor(s): W. Hazbun
Area: Social and Behavioral Sciences.

AS.190.306. The Political Economy of European Union. 3 Credits.
The existence of the European Union has come to profoundly shape the governance of Europe’s national economies. In the context of a rapidly changing global economy, the EU has helped its member states to modernize their economies. At the same time, the EU has become the locus of important problems and tensions, as the eurozone crisis vividly illustrates. Going back to the foundation of the European Union, this course will survey developments in the political economy of the EU and put them in theoretical perspective.
Instructor(s): N. Jabko
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.309. Politics and Policy Design. 3 Credits.
Instructor(s): S. Teles
Area: Social and Behavioral Sciences.
AS.190.311. Middle East Politics. 3 Credits.
A survey of political change and ideological trends across the Middle East. Topics include legacies of colonialism and external intervention, politics of nationalism and state building, impact of oil wealth, challenge of political Islam, prospects for democracy and political inclusion in Lebanon and elsewhere.
Instructor(s): W. Hazbun
Area: Social and Behavioral Sciences.

AS.190.312. Power. 3 Credits.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences.

AS.190.313. Dreams of America. 3 Credits.
An exploration of recurrent themes and aspirations in American political thought, focused around three dimensions of the American dream: Tabula Rasa, Upward Mobility, and Landed Independence. The master narratives of American democracy—of incorporation and assimilation— are in tension with perspectives drawn from histories of formal and informal exclusion: native Americans, US African Americans, Latinos and other groups have often been excluded from dominant portraits of America. Our course will consider the various ways in which marginalized groups have incorporated elements from dominant Dreams of America, refashioned them and claimed them as their own.
Prerequisites: AS.190.280 OR AS.190.281 OR AS.190.282
Instructor(s): J. Bennett; M. Hanchard
Area: Social and Behavioral Sciences Writing Intensive.

AS.190.315. Asian American Politics. 3 Credits.
This course examines issues of political identity, political incorporation, and political participation of Asian Americans. Themes include Asian American panethnicity, the struggle for immigration and citizenship, Asian American electoral politics, political activism and resistance since the 1960s, and the impact of Asian Americans on the politics of race and ethnicity in the United States.
Instructor(s): E. Chung
Area: Social and Behavioral Sciences Writing Intensive.

AS.190.320. Politics Of East Asia. 3 Credits.
Examines some of the central ideas and institutions that have transformed politics in the contemporary world through the lens of East Asia, focusing on Japan, South Korea, Taiwan, and China. Topics include state-society relations, late development, nationalism, democratization, political culture, social movements, and globalization.
Instructor(s): E. Chung
Area: Social and Behavioral Sciences.

AS.190.322. Business, Government and the International Economy. 3 Credits.
Seminar focuses on the relations between business and government throughout the world. Class will read historical and contemporary author’s conceptualizations of the relationship. 30 Page term paper is required.
Instructor(s): D. Heisenberg
Area: Social and Behavioral Sciences Writing Intensive.

AS.190.325. Finding Democracy (PT). 3 Credits.
An examination of most aspects of democratic elections with the exception of the behavior of voters. Topics include the impact of various electoral systems and administrative reforms on the outcome of elections, standards for evaluations of electoral systems, and the impact of the Arrow problem on normative theories of democratic elections.
Instructor(s): R. Katz
Area: Social and Behavioral Sciences.

AS.190.326. Democracy And Elections. 3 Credits.
A limited survey of international law, its sources, and uses in international relations. It has five basic aims: 1) to explore the place, origins and changing contexts of international law and its instrumentality in international life; 2) to examine the sources of personalities and institutions that influence its development; 3) to survey select international legal dispositions concerning the peaceful resolutions of conflict and the immunities that apply to certain legal subjects; 4) to examine the immunities that apply to certain legal subjects; 5) to examine differing views on the future of international law in light of recent events.
Instructor(s): S. Grovogui
Area: Social and Behavioral Sciences.

AS.190.328. Black Visual Politics. 3 Credits.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences.

AS.190.330. Japanese Politics. 3 Credits.
This course introduces students to the major debates and issues of postwar Japanese politics. Topics include nationalism, electoral politics, civil society, and immigration.
Instructor(s): E. Chung
Area: Social and Behavioral Sciences.
AS.190.331. Comparative Racial Politics. 3 Credits.
Students will learn to utilize qualitative, interpretive methods of comparative politics to examine dynamics of racial and/or ethnic politics in the nation-states of Cuba, Brazil, Britain and France, Germany, and the United States. Readings will emphasize the role of the state, political economy, national culture, racist ideologies and anti-racist politics in the formation, maintenance and transformation of conditions of race-based inequalities. Students will also become familiar with theories and concepts of race and ethnicity, and the histories of social movements in the aforementioned societies founded, in part, on racial and/or ethnic identification as a response to inequality. Formerly titled: Race and Racism in Comparative Perspective.
Instructor(s): M. Hanchard
Area: Social and Behavioral Sciences.

AS.190.332. Research Seminar: Great Constitutional Issues. 3 Credits.
An exploration of free speech, privacy, and equality issues through readings, discussion, and student research.
Instructor(s): J. Grossman
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.333. American Constitutional Law. 3 Credits.
This course covers enduring debates about the way the Constitution has structured the U.S. government and about which powers the Constitution assigns to the federal government and to the states. We will examine these debates in the context of American political history and thought by studying the writings of prominent participants, and landmark Supreme Court cases.
Instructor(s): E. Zackin
Area: Social and Behavioral Sciences.

AS.190.334. Constitutional Law. 3 Credits.
The second semester of a two semester course. Topics include executive and emergency power, racial and gender equality, and selected free speech and religious freedom issues.
Prerequisites: AS.190.333
Area: Social and Behavioral Sciences.

AS.190.335. Imagining Borders. 3 Credits.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences.

AS.190.336. Public Opinion (AP). 3 Credits.
(formerly 'Racial Politics and Public Opinion')
Area: Social and Behavioral Sciences.

AS.190.337. The Constitution and the Criminal Justice System. 3 Credits.
Explores how the Constitution has shaped the theory and practice of the American criminal justice system, including arrests, searches and seizure of evidence, interrogation, prosecution, adjudication and plea bargaining, and sentencing. What is a "fair trial?" What is "due process?" What is "equality before the law?" What are the limits of capital punishment?
Instructor(s): J. Grossman
Area: Social and Behavioral Sciences.

AS.190.338. American Racial Politics. 3 Credits.
Recommended Course Background: AS.190.214
Instructor(s): L. Spence
Area: Social and Behavioral Sciences.

AS.190.340. Black Politics. 3 Credits.
(AP)
Instructor(s): L. Spence
Area: Social and Behavioral Sciences.

AS.190.341. Korean Politics. 3 Credits.
This course introduces students to the historical and institutional foundations of modern South Korean politics. Topics include nationalism, political economic development, civil society, globalization, and ROK-DPRK relations. (CP)
Instructor(s): E. Chung
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.343. Nationalism. 3 Credits.
Despite the clamor over globalization and regionalization in the contemporary world, nationalism remains a central preoccupation for both political actors and students of politics. Though motivated by questions resonant within the discipline of political science (and the field of comparative politics in particular), this course is designed to familiarize students with key texts and debates in the literatures on nationalism in political science, sociology, history and anthropology. The objective of this course is to provide students with a comprehensive overview of major themes, scholarly approaches and forms of nationalist mobilization in national and cross-spatial perspective. Some of the questions to be addressed in this course are: a) what are the roots and routes of nationalism? b) who are nationalist political actors, and where do they come from? c) what is nationalism's relation to race, racism and ethnicity d) what is the relationship between various forms of nationalism and contemporary considerations of regionalism and globalization?
Instructor(s): M. Hanchard
Area: Social and Behavioral Sciences.

AS.190.344. Seminar in Anti-Semitism. 3 Credits.
Jews exercise a good deal of power in contemporary America. They are prominent in a number of key industries, play important roles in the political process, and hold many major national offices. For example, though Jews constitute barely two percent of America's citizens, about one-third of the nation's wealthiest 400 individuals are Jewish and more than ten percent of the seats in the U.S. Congress are held by Jews. One recent book declared that, "From the Vatican to the Kremlin, from the White House to Capitol Hill, the world's movers and shakers view American Jewry as a force to be reckoned with." Of course, Jews have risen to power in many times and places ranging from the medieval Muslim world and early modern Spain through Germany and the Soviet Union in the 20th century. In nearly every prior instance, though, Jewish power proved to be evanescent. No sooner had the Jews become "a force to be reckoned with" than they found themselves banished to the political margins, forced into exile or worse. Though it may rise to a great height, the power of the Jews seems ultimately to rest on a rather insecure foundation. Cross-listed with Jewish Studies.
Instructor(s): B. Ginsberg
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.346. US in the Middle East (IR). 3 Credits.
Area: Social and Behavioral Sciences.

AS.190.348. Domestic Politics: Contemporary China (CP). 3 Credits.
This course examines key issues in contemporary Chinese politics, spanning the period from the Communist Revolution (1949) through the Mao (1949-1976) and reform eras (1978 to present). Particular emphasis will be placed on contemporary challenges, including the political economy of reform and alternative forms of political participation.
Area: Social and Behavioral Sciences.
AS.190.354. Politics of Health Policy. 3 Credits.
Traces the evolution of the American Health care system, emphasis on the political forces that shape public and private provision of health care in the United States. Cross-listed with Public Health Studies.
Instructor(s): P. Longman
Area: Social and Behavioral Sciences.

AS.190.355. The Social Contract and its Discontents. 3 Credits.
This seminar will engage selected articulations and criticisms of social contract theory in Europe from the mid-17th century to the early 20th. It will attend in particular to differences between the three classic expressions of consent theory--Hobbes, Locke, and Rousseau--as well as to differences between significant challenges to these earlier notions of a social contract. The latter may include writings by Hume, Burke, Wollstonecraft, Marx and Freud, among others.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences.

AS.190.356. Pluralism. 3 Credits.
This seminar will explore the theory and politics of pluralism: from European debates over religious tolerance to American debates over constitutional founding; from liberal political philosophy to radical democracy. Authors may include Bentley, Dahl, Locke, Madison, Ranciere, Rawls, Young. Recommended Course Background: Previous course in political theory or permission of instructor.
Instructor(s): S. Chambers
Area: Social and Behavioral Sciences.

AS.190.357. Political Economy of the Information Age. 3 Credits.
Prerequisites: AS.190.301 OR AS.190.479 or permission of instructor
Area: Social and Behavioral Sciences.

AS.190.358. Law, Morality, & the State. 3 Credits.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences.

AS.190.359. Global Environmental Politics. 3 Credits.
Prerequisites: Not open if you have taken AS.190.206
Instructor(s): B. Allan
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.360. Baltimore Food System Research. 3 Credits.
This course examines the political, social, and economic aspects of the Baltimore food system. Through a mixture of in-class study and hands-on research, students learn about the challenges to healthy eating in Baltimore and some recent innovations designed to improve health and nutrition in the city. Visits to a soup kitchen, an urban farm, and local farmers market will inform a collaborative project using various social science research methods learned in class.
Instructor(s): A. Sheingate
Area: Social and Behavioral Sciences.

AS.190.361. Urban Politics & Policy. 3 Credits.
An analysis of public policy and policy-making for American Cities. Special attention will be given to the subject of urban crime and law enforcement, poverty and welfare, and intergovernmental relations. Cross-listed with Africana Studies.
Instructor(s): L. Spence; R. Katz
Area: Social and Behavioral Sciences.

AS.190.362. Urban Politics and Policy. 3 Credits.
An analysis of public policy and policy-making for American Cities. Special attention will be given to the subject of urban crime and law enforcement, poverty and welfare, and intergovernmental relations. Cross listed with Africana Studies.
Instructor(s): L. Spence
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.363. Parties and Elections in America. 3 Credits.
Considers how parties and elections structure political conflict, and facilitate (or not) democratic control of government. Topics include campaigns, voting behavior, election administration, money in politics, presidential nomination, and party coalitions.
Instructor(s): D. Schlozman
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.364. Understanding Congress. 3 Credits.
Instructor(s): J. Cooper
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.365. Seminar on the Institutional Development of the Congress and Presidency. 3 Credits.
An examination of the development of the modern Congress and the presidency. Emphasis will be placed on the evaluation of patterns of structure, process and leadership, and their impact on the roles of Congress in the American political system. (AP)
Instructor(s): J. Cooper
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.366. Introduction to Latin American Politics. 3 Credits.
Cross-listed with Program for Latin American Studies.
Instructor(s): M. Keck
Area: Social and Behavioral Sciences.

AS.190.367. Understanding Congress. 3 Credits.
Instructor(s): J. Cooper
Area: Social and Behavioral Sciences.

AS.190.368. Pluralism. 3 Credits.
This seminar will explore the theory and politics of pluralism: from European debates over religious tolerance to American debates over constitutional founding; from liberal political philosophy to radical democracy. Authors may include Bentley, Dahl, Locke, Madison, Ranciere, Rawls, Young. Recommended Course Background: Previous course in political theory or permission of instructor.

Writing Intensive.

AS.190.382. Law, Morality, & the State. 3 Credits.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences.

AS.190.383. Baltimore Food System Research. 3 Credits.
This course examines the political, social, and economic aspects of the Baltimore food system. Through a mixture of in-class study and hands-on research, students learn about the challenges to healthy eating in Baltimore and some recent innovations designed to improve health and nutrition in the city. Visits to a soup kitchen, an urban farm, and local farmers market will inform a collaborative project using various social science research methods learned in class.
Instructor(s): A. Sheingate
Area: Social and Behavioral Sciences.

AS.190.384. Urban Politics & Policy. 3 Credits.
An analysis of public policy and policy-making for American Cities. Special attention will be given to the subject of urban crime and law enforcement, poverty and welfare, and intergovernmental relations. Cross-listed with Africana Studies.
Instructor(s): L. Spence; R. Katz
Area: Social and Behavioral Sciences.
AS.190.396. Capitalism and Ecology. 3 Credits.
This is a discussion seminar. The class will explore diverse theories of capitalism advanced by theorists such as Marx, Hayek, Hirsch, Polanyi and Deleuze/Guattari in relation to recent work in complexity theory on evolution, climate, ocean currents, and beyond. Texts by Jane Bennett, Connolly, Stuart Kauffman, Fred Pearce and Clive Hamilton (Requiem for a Species) will be consulted on these latter issues. The course involves student presentations, class discussions, and two essays. Recommended Course Background: previous theory course
Instructor(s): W. Connolly
Area: Natural Sciences, Social and Behavioral Sciences Writing Intensive.

AS.190.397. Why Human Security. 3 Credits.
Area: Social and Behavioral Sciences.

AS.190.398. Politics of Good & Evil. 3 Credits.
One previous class in Political Theory recommended. A seminar in elemental theory exploring contending conceptions of good and evil as they appear in Sophocles, The Book of Job, Genesis, Augustine, Friedrich Nietzsche and William James. Elemental theory probes the dicey relations between evil and creeds already installed in us. It also presupposes previous work in theory. This is a discussion seminar, in which students make class presentations on assigned texts and write two 12 page papers.
Instructor(s): W. Connolly
Area: Social and Behavioral Sciences Writing Intensive.

AS.190.399. Capitalism & Christianity. 3 Credits.
Exploring the history of imbrications between capitalism and Christianity up to the contemporary era. Texts include the gospels, Calvin, Weber, Deleuze, George Gilder and Linda Kintz. Recommended Course Background: One course in theory or permission required.
Instructor(s): W. Connolly
Area: Social and Behavioral Sciences.

AS.190.401. Wash Internship Program. 3 Credits.
Corequisite: AS.190.403
Instructor(s): B. Ginsberg
Area: Social and Behavioral Sciences.

AS.190.402. Washington Seminar. 3 Credits.
Corequisite: AS.190.402
Instructor(s): B. Ginsberg
Area: Social and Behavioral Sciences.

AS.190.403. Food Politics. 3 Credits.
This course examines the politics of food at the local, national, and global level. Topics include the politics of agricultural subsidies, struggles over genetically modified foods, government efforts at improving food safety, and issues surrounding obesity and nutrition policy. Juniors, seniors, and graduate students only. Cross-listed with Public Health Studies.
Instructor(s): A. Sheingate
Area: Social and Behavioral Sciences Writing Intensive.

AS.190.404. The Executive Branch. 3 Credits.
In the 19th Century America was noted for its courts, political parties and representative institutions. Today, America’s political parties and representative institutions have declined in importance while the institutions of the executive branch have increased in importance. This seminar will examine the nation’s key executive institutions and aspects of executive governance in the U.S. Students will alternate primary responsibility for week’s readings. Every student will prepare a 10-15 page review and critique of the books for which they are responsible in class.
Instructor(s): B. Ginsberg
Area: Social and Behavioral Sciences.

AS.190.405. The Geopolitics of Outer Space. 3 Credits.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

AS.190.406. Geopolitics, Nuclear Weapons and World Order. 3 Credits.
Intensive assessment of competing theories of the nuclear revolution and its implications for world order.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

AS.190.407. Comp/Politics/Social Mov. 3 Credits.
Course examines major approaches to social movement organizations, dynamics, and significance. Case materials come from U.S., Europe, and Third World examples.
Instructor(s): M. Keck
Area: Social and Behavioral Sciences Writing Intensive.

AS.190.408. Environment and Development in the Third World. 3 Credits.
A research seminar examining the politics of environmental issues in developing countries, with special focus on Latin America.
Instructor(s): M. Keck
Area: Social and Behavioral Sciences Writing Intensive.

AS.190.409. Political Violence. 3 Credits.
An examination of the ways in which violence has been used to secure political ends. Topics include terrorism, assassination, genocide, coups, rebellions and war itself. Students examine what makes types of political violence unique and what unites them. (Formerly AS.190.372)
Instructor(s): S. David
Area: Social and Behavioral Sciences.

AS.190.410. Global Security Politics. 3 Credits.
An intensive examination of the security politics of nuclear weapons, outer space, biological weapons, and emerging information technologies.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

AS.190.411. America and the World. 3 Credits.
Intensive examination of the United States from the founding to the present in comparative and international perspective. Senior or graduate students.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

AS.190.412. The Geopolitics of Outer Space. 3 Credits.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

AS.190.413. The Executive Branch. 3 Credits.
AS.190.417. American Welfare State. 3 Credits.
This seminar analyzes the distinctive US welfare state in historical and comparative perspective. Special attention to policy development over time in health care, pensions, taxes, and work and poverty.
Instructor(s): D. Schlozman
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.419. Identity and Nations in Latin American Politics. 3 Credits.
This seminar class explores formation and political mobilization of identities - group, ethnic, gendered, national, cosmopolitan - in Latin America. Although some of the reading will be broadly comparative, the spring 2013 version of the class will focus especially on Brazil. Requirements will include short response papers and a term paper. Portuguese or Spanish desirable but not required. Enrolled students must be juniors or seniors and must have taken at least one prior course in comparative politics.
Instructor(s): M. Keck
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.422. Republicanism. 3 Credits.
Readings in classical and contemporary texts (Polybius, Machiavelli, Montesquieu, Rousseau, Kant, the Federalist, Calhoun, World Federalism, and nuclear arms control). Focus on security, freedom, and geopolitics, both domestic and international.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

AS.190.423. Planetary Geopolitics. 3 Credits.
With the tools of geopolitics, course explores political debates over globalization of machine civilization and changes in scope and pace, space and place, and role of nature in human affairs.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.424. Policy Disasters. 3 Credits.
Investigates the causes of large-scale policy disasters, examining the role of ideology, psychology, organization design and political incentives. Examples may be drawn from the Iraq War, Bay of Pigs, Hurricane Katrina, the U.S. Financial crisis, Shuttle Challenger disaster, economic development policy, privatization, and the Great Society. Limited to seniors or with permission of instructor. (CP / AP)
Instructor(s): S. Teles
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.425. The New Deal and American Politics. 3 Credits.
This seminar explores how the New Deal, the fundamental moment in the post-Civil War United States, has structured politics and government across a variety of domains ever since. Topics include presidential leadership, executive power, political parties, labor, race, and the welfare state.
Instructor(s): D. Schlozman
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.427. The Politics of Travel in the Middle East. 3 Credits.
Instructor(s): W. Hazbun
Area: Social and Behavioral Sciences.

AS.190.429. The Political Bases of the Market Economy. 3 Credits.
Although "the market" is conventionally understood as separate from "politics", the modern market economy did not arise in a political vacuum. In fact, the very separation between the economy and politics is itself the product of a politically potent set of ideas. This course is an upper-division reading seminar on the origins and evolution of the modern market economy. Readings will include Smith, Marx, Weber, Polanyi, Keynes, Hayek, Friedman, Becker, and Foucault. Recommended course background: Introduction to comparative politics OR any college-level course in social or political theory.
Instructor(s): N. Jabko
Area: Social and Behavioral Sciences.

AS.190.433. Constructivism: How Ideas Shape International Relations. 3 Credits.
Can not have taken AS.190.304.
Instructor(s): B. Allan
Area: Social and Behavioral Sciences.

AS.190.434. Adv Tpcs in Chinese Politics. 3 Credits.
This seminar is structured around key concerns in China's domestic politics, including the politics of economic reform, central-local relations, corruption, increasing inequality, the role of intellectuals, the rise of quasi-governmental organizations, various channels for political participation and protest, and other contemporary issues. For undergraduates only. Recommended Course Background: AS.190.348
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.435. Law and Literature. 3 Credits.
This course will examine the relationship between law and literature. As many have observed, law and literature have much in common as well as much to teach each other. Topics this course will discuss include practices of interpretation, issues of authority, the rule of law, and the power of narrative. In addition to reading essays by scholars in the field, students will read a selection of judicial opinions, short stories, novels, and plays. This writing intensive course is limited to undergraduates who have taken at least one "Classics of Political Thought" course.
Prerequisites: AS.190.280 OR AS.190.281 OR AS.190.282
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.436. China and the Global Political Economy. 3 Credits.
Prerequisites: AS.190.348 or 190.316 or permission of instructor or graduate students
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.440. European Politics in Comparative Perspective. 3 Credits.
Europe has been in a sense the first testing ground for theories of comparative politics, but many outsiders now see Europe as a pacified and somewhat boring place. This course will question conventional wisdom through an examination of European politics in historical and cross-national perspective. We will apply the comparative method to the study of European politics today, and conversely we will ask what Europe tells us more generally about politics. We will see that Europe is still a locus of intense conflict as well as remarkably diverse experimentation. Topics will include: political, legal, and economic governance; the evolution of democracy and fundamental rights, the welfare state, class stratification, immigration and race, the role of religion; European integration and globalization. Juniors and seniors only.
Instructor(s): N. Jabko
Area: Social and Behavioral Sciences.
AS.190.450. Power. 3 Credits.
Power is a -- if not the -- key concept of international relations, yet there is no single definition of power that is accepted by all scholars in the field. In this course we will critically examine definitions of power from classic and contemporary works of international relations, political science, and related areas of study.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences.

AS.190.455. Transborder Flows. 3 Credits.
Area: Social and Behavioral Sciences.

AS.190.456. Global Security Politics Workshop. 3 Credits.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.471. Sen Sem: Internat Study. 3 Credits.
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.472. The Power of Speech. 3 Credits.
Drawing from literary theory, political philosophy, and jurisprudence, this course will explore the unique relationship between speech (broadly conceived) and politics. In addition to reviewing classic arguments about freedom of speech and the significance of this freedom in and for democratic government, the course will study debates about the need to limit this freedom, taking into consideration not only how we do things with words but how words affect us. In addition to court cases and critical legal studies, we will read texts by, among others, Aristotle, Arendt, Mill, Austin, Fish, Butler, and Fanon. Recommended Course Background: AS.190.200, AS.190.201, or AS.190.202 or permission of the professor.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences.

AS.190.475. Courts, Politics and Public Policy. 3 Credits.
Examines the causes of American legal change, with particular focus on the role of social movements, and whether and how legal change produces social change. Among the particular cases examined will be civil, prisoners' and women's rights.
Instructor(s): S. Teles
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.479. Imag(in)ing Cities. 3 Credits.
In The City and The City, China Mvieille uses a traditional crime procedural to tell the story of two distinct cities existing within the same space, with the residents of each city forced to literally unsee the residents, buildings, etc. of the other. In Imag(in)ing Cities I take this idea literally...arguing that the cities we live, play, and work in are in fact several cities layered on top of and through each other with the content of these cities shaped by a combination of (political, social, economic) theory of how cities work (and are supposed to work), a series of practical policies and actions that dictate how cities in fact work, and our popular imaginations. The class will place these theories, policies, and imaginations in dialogue with each other through readings, viewings, and "listenings".
Instructor(s): L. Spence
Area: Social and Behavioral Sciences.

AS.190.490. Thoreau and Whitman. 3 Credits.
Permission of instructor required. Upper level undergraduates and grads only. An intensive study of the writings of Henry Thoreau and Walt Whitman, with a focus on their conceptions of citizenship, community, urbanization, and materiality. (PT)
Instructor(s): J. Bennett
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.499. Senior Thesis:International Relations/Political Science. 6 Credits.
Seniors also have the opportunity to write a senior research thesis. To be eligible to write this thesis, students must identify a faculty sponsor who will supervise the project. Once a faculty sponsor has approved a topic, students must enroll in a three credit independent study during the fall semester of their senior year. At the end of the fall semester, if the faculty sponsor determines that adequate progress has been made and the project warrants further work, the student may enroll in the senior thesis (AS.190.499) which will be worth 6 credits.

AS.190.543. Independent Research. 3 Credits.
Instructor(s): Staff.

AS.190.544. Independent Research. NULL Credits.
Instructor(s): Staff.
AS.190.607. Comparative Racial Politics.
This course surveys the major trends in the comparative study of race in political science and critically examines the link between race and politics. Topics include the racial state, neo-racism, and immigration politics. Instructor(s): M. Hanchard
Area: Social and Behavioral Sciences.

AS.190.606. Language, Order, Action.
Graduate students only.
Instructor(s): S. Chambers.

AS.190.605. Women in Dark Times.
A survey of contemporary female voices—feminist and nonfeminist—in political theory. Questions raised and addressed: How is power defined and distributed? What constitutes political action? What is the relationship of bodies to politics? Among others we will read Cristina Beltrán, Judith Butler, Jodi Dean, Bonnie Honig, and Melissa Lane.
Instructor(s): J. Bennett; J. Culbert.

AS.190.604. Rethinking Freedom in a Neoliberal Age.
This seminar will start with forays into the traditions of negative, positive and Republican freedom, exploring the conceptions of agency, self, language, citizenship, state, economy and global politics associated with each. It then turns to conceptions of freedom tied more actively to the elements of creativity, self-organization, and planetary politics. How do you bring the former images of freedom into productive conversations with the latter? Texts by Machiavelli, Berlin, Skinner, Foucault, Ritzolatti, Butler, and Holland (Nomad Citizenship) will probably be consulted. Graduate students only.
Instructor(s): W. Connolly
Area: Social and Behavioral Sciences.

AS.190.603. Political Data Analysis.

AS.190.602. Introduction to Quantitative Political Science.
An introduction to measurement and data analysis in contemporary American political science. Measurement topics will include the formation of indices and cumulative scales. Analytic topics will include sampling variations, statistical association and causation, as manifested in contingency tables and correlation and regression. Emphasis will be on fundamental concepts and assumptions, and on comprehension and evaluation of the scholarly literature. Advanced undergraduates by permission only.
Instructor(s): R. Katz
Area: Social and Behavioral Sciences.

AS.190.601. Qualitative Research.
Instructor(s): M. Keck
Area: Social and Behavioral Sciences.

AS.190.599. Research-Summer. 3 Credits.
Instructor(s): E. Chung; M. Crenson; R. Hsieh.

AS.190.598. Independent Study. 3 Credits.
Instructor(s): Staff.

AS.190.597. Summer Internship. 1 Credit.
Instructor(s): Staff.

AS.190.596. Internship. 1 Credit.
Instructor(s): A. Sheingate.

AS.190.616. American Political Development.
An examination of state-building and nation-building throughout American political history. (AP)
Instructor(s): A. Sheingate.
AS.190.617. Romanticism and Radicalism.
A selective examination of European and American writers, including Rousseau, Schiller, Shelley, Emma Goldman, Walt Whitman, and Herbert Marcuse, in order to explore connections between romantic themes and aspirations for a dramatic transformation of political life. Can Art heal social wounds and political divisions? How closely tied is Romanticism to a harmonious, organic model of collectivity? Can politics dispense with some model of the whole or the collective? Graduate students only.
Instructor(s): J. Bennett
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.618. Nationalism.
Grad students only Despite the clamor over globalization and regionalization in the contemporary world, nationalism remains a central preoccupation for both political actors and students of politics. Though motivated by questions resonant within the discipline of political science (and the field of comparative politics in particular), this course is designed to familiarize students with key texts and debates in the literatures on nationalism in political science, sociology, history and anthropology. The objective of this course is to provide students with a comprehensive overview of major themes, scholarly approaches and forms of nationalist mobilization in national and cross-spatial perspective. Some of the questions to be addressed in this course are a) what are the roots and routes of nationalism?; b) who are nationalist political actors, and where do they come from?; c) what is nationalism’s relation to race, racism and ethnicity?; d) what is the relationship between various forms of nationalism and contemporary considerations of regionalism and globalization?
Instructor(s): M. Hanchard
Area: Social and Behavioral Sciences.

Since 1945, the great powers have enjoyed their longest period of peace in history. Interstate conflict between lesser powers is also at an all time low. What accounts for this “long peace?” This course will look at various explanations including the spread of democracy, the proliferation of nuclear weapons, globalization, American hegemony, and fundamental changes in attitudes regarding the use of force. Students will present draft versions of their research papers during the last weeks of the course.
Instructor(s): S. David.

AS.190.620. Law and Literature, Language and Politics.
Drawing from scholarship identified with the Law and Literature movement, scholarship that focuses on legal themes in literary texts and literary elements in legal ones, this course will engage an ongoing conversation in contemporary political theory about the relationship of language to the human condition. Readings will include texts by Arendt, Austin, Benjamin, Blanchot, Brooks, Butler, Derrida, Goodrich, Merleau-Ponty, Nancy, Weisberg, White, and Wittgenstein, as well as stories by Borges, Kafka, and Melville. Students will be required to do an in-class presentation and a 20-30 page final paper. Graduate students only.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences.

AS.190.621. Liberal IR Theory.
Intensive investigation of classic and major recent texts about liberal democratic constitutional states, their international relations, and their implications for world order. Graduate students only.
Instructor(s): D. Deudney.

AS.190.622. Contemporary IR Theory.
This course will focus on recent work (from approximately the past 10 years) in International Relations Theory. Emphasis will be placed on examining schools of thought and often divergent means of determining what counts as good theory.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.624. Poiesis Like Politics.
This course explores three thinkers-Plato, Heidegger, and Whitman—who imagine politics as a creative act or artistic composition.

AS.190.625. Theories of Comparative Politics.
This seminar is intended for graduate students planning to take the comprehensive exam in comparative politics, either as a major or as a minor. In addition to exploring central methodological debates and analytic approaches, the seminar reviews the literature on state-society relations, political and economic development, social movements, nationalism, revolutions, formal and informal political institutions, and regime durability vs. transition. Graduate students only. CP
Instructor(s): M. Keck
Area: Social and Behavioral Sciences.

AS.190.626. Arendt and the Poets.
This course examines the role of poetry in the work of Hannah Arendt. Observing how Arendt’s writing plays not only with history (as many historians have complained) but also with the “word-thing” relationship, the course looks at how Arendt’s references to poetry as well as her own poetic practices open a space in which the spirit of a primary text may reveal itself and inspire the constitution of something new. Among others, readings will include texts by Heidegger, Benjamin, Derrida, Honig, and Villa, as well as Auden, Rilke, and Kafka. Graduate students only.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.627. Race and the City: A Global Perspective.
Graduate students only
Area: Social and Behavioral Sciences.

AS.190.628. Race and Segregated Time.
This graduate seminar examines how time is used as a vehicle of political power that perpetuates racial inequality. We will also explore how thinking and acting in untimely ways can challenge white supremacy and further transracial democracy. Grad students only.
Instructor(s): P. Brendese.

AS.190.629. American Racial Politics.
Race is not a biological fact but rather a social construction. However, it is a social construction with very real consequences. Definitions of citizenship, allocation of state resources, attitudes about government and government policy, the creation of government policy, all shape and are shaped by race and racial classifications. Serving as a critical corrective to American politics treatments that ignore race, this class will examine how race functions politically in the United States. While not required, some knowledge of statistics is helpful.
Instructor(s): L. Spence
Area: Social and Behavioral Sciences.
AS.190.630. Politics of Territory and Boundaries.
This seminar will explore territorial dimensions of politics and political action, including the political construction of territorial space and the territorial construction of political space, and borders as spatial markers of fixity and flows. As supra-, sub-, multi-, trans-, inter-, and pluri-national political arenas proliferate, how are they connected, institutionally and in practice? How are they structured by – and how do they structure – the actions of individuals and groups? How does location affect the nature of political authority? Graduate students only.
Instructor(s): M. Keck; R. Marlin-Bennett.

Examines American social policy in comparative perspective. Special attention to issues of poverty and inequality, and their relation to the political system.
Instructor(s): D. Schlozman.

AS.190.632. The Development of American Political Institutions.
This seminar explores the historical development of American political institutions since the Civil War. Particular attention will be paid to development and change in American political parties, Congress, and the Presidency. Our guiding assumption is that such an exploration will illuminate the dynamics of institutional change in American politics, enhance understanding of key features of the contemporary political system, and cast light on the manner in which changes in rules, organizations, or other structural features of institutions have both shaped and responded to political agency. Finally, on a more practical level, this seminar is intended to provide an introduction to several literatures that could be included in a major or minor field exam in American politics.
Instructor(s): A. Shengate; J. Cooper.

The seminar will explore to what extent Hegel can be read as contributing to a feminist philosophy. We will focus on Hegelian openings onto the emotional in Phenomenology of Spirit. In addition, we will study feminist philosophers who have drawn on or offered critical readings of Hegel (Irigaray, Butler, Cavraro, Malabou, and others).
Instructor(s): J. Bennett; K. Pahl
Area: Social and Behavioral Sciences.

AS.190.634. Interest Groups.
Graduate students only.
Instructor(s): S. Teles
Area: Social and Behavioral Sciences.

AS.190.635. Theories of Constitutional Governance.
Graduate students only.
Instructor(s): E. Zackin
Area: Social and Behavioral Sciences.

AS.190.636. The Many Machiavellis.
Often serving as the hinge between classical and modern thought, Machiavelli obviously stands as a central and prominent thinker in the historical canon. But Machiavelli is also the central figure for some of the most important works of political theory in the 20th century. In each of the past 8 decades a major text has been published on Machiavelli, the authors of which include the following leading thinkers: Gramsci, Strauss, Wolin, Althusser, Pocock, Pitkin, Skinner, and Honig. This graduate seminar will be devoted not necessarily to Machiavelli the historical writer, but to Machiavelli as a varied and contested figure, to the trope of Machiavelli that has emerged in 20th and 21st century political thought.
Graduate students only.
Instructor(s): S. Chambers
Area: Social and Behavioral Sciences.

AS.190.637. Environment and Politics.
Grad students only.
Instructor(s): B. Allan; D. Deudney
Area: Social and Behavioral Sciences.

AS.190.638. Contentious Politics.
Social movements and revolution in comparative and global perspective. Exploration of the major theoretical approaches and of what difference globalization makes.
Instructor(s): M. Keck.

AS.190.639. American Political Thought.
Graduate Students Only
Instructor(s): J. Bennett; J. Culbert
Area: Social and Behavioral Sciences.

AS.190.640. Systems and Things.
Graduate students only. This course will examine how various political thinkers have conceptualized society, polity, history, and nature as complex "systems," and how they have individuated the elements ("things") thereof. How do systems hang together? How to theorize the changing relationship between parts and wholes? What is the import for political action and intervention of a given figure of systemicity and its related theory of the thing? Key texts include sections from Hegel's Phenomenology of Spirit; Heidegger's Identity and Difference and "What is a Thing?:" Foucault's The Order of Things; Deleuze's, Difference and Repetition; Graham Harman's, Prince of Networks; and Stuart Kauffman, Reinventing the Sacred; and readings in actor-network theory, including Annamarie Mol's The Body Multiple.
Instructor(s): J. Bennett; W. Connolly
Area: Social and Behavioral Sciences.

AS.190.641. International Relations Theory (IR).
Seminar on theories of international relations. Surveys schools of thought through critical reading of seminal texts. Focuses on key concepts such as order/disorder, agents/structures, power, causality, sovereignty and the nature of the state, and differing epistemologies.

AS.190.645. Immigration, Difference and Citizenship.
Area: Social and Behavioral Sciences.

AS.190.646. The Development of the American Conservative Movement.
Area: Social and Behavioral Sciences.

AS.190.647. Black Political Thought.
Graduate students only. This course will focus on black political thought's engagements with and relevance to nationalism, feminism and diasporic identification as a means of highlighting the ways in which black political thought has both paralleled and distinguished itself from dominant themes, concerns and investigations of Western political and social theory in the 20th century. This aspect of the course will trace black political thought's relation to Marxism, Cultural Studies, Surrealism, Liberalism and other critical methodologies and perspectives.
Instructor(s): L. Spence
Area: Social and Behavioral Sciences.

Graduate students only. This seminar affords an opportunity to discuss and explore some basic legal philosophy and jurisprudential issues, including the origin and justification of legal systems, theories of natural law, legal positivism, formalism, realism, and critical legal studies. Also to be explored are selected problems in jurisprudence, such as sovereignty, citizenship, constitutionalism, and constitutional interpretation.
Instructor(s): J. Culbert; J. Grossman.
This course discusses select dimensions and issues of globalization and related debates: the rise of transnational corporations in international politics, as well as growing concerns over human rights, the environment, migration and pandemic diseases. It also explores the relationships between ideology, identity, and interest in the political action and ethics of the various agents and actors of global politics.

AS.190.651. Policy Dynamics.
Policy dynamics is the study of changes of the political system in its entirety, from the point of view of the system's outputs—what government actually does, or fails to do. It is dynamic in that it seeks to explain changes in what matters governments feel can or must be addressed, the tools that are available to deal with problems, and the interactions of government and non-government actors that generate change. Particular emphasis will be placed on studying policy dynamics over long periods of time, including such post-enactment issues as implementation, policy feedback on political identities and group formation, and policy durability. Instructor(s): S. Teles.

AS.190.652. Comparative Democratization.
This seminar surveys the major debates about democracy and political development in comparative politics. We will examine how scholars have explained the emergence, consolidation, and endurance of democratic regimes. Although the process of democratization serves as the organizing theme, the readings also cover related topics in comparative politics, including revolutions, modernization theory, political and institutional change, socialist transition, authoritarian durability, and the relative analytic value of different methodological approaches. Instructor(s): E. Chung.

AS.190.653. Organizations.
Graduate students only. "Organizations are the fundamental building blocks of economic, social and political life. This course will examine how different disciplines (sociology, economics, political science) approach the problem of explaining how organizations operate, as well as exploring the structure and development of a very wide range of organizations (firms, interest groups, charitable foundations, universities, militaries, bureaucracies, international organizations, and professions). Instructor(s): S. Teles
Area: Social and Behavioral Sciences.

AS.190.654. The Political Economy of Neoliberalism.
Grad students only.
Instructor(s): N. Jabko.

AS.190.655. Figures of Time and Politics.
A comparative exploration of contending figures of time, including Parmenides, linear progress, evolution, and process. Readings from Parmenides, Darwin, Bergson, Dewey, Whitehead and Evan Thompson. We will explore the interrelations between practices of time, nature, aesthetics, and political agency within each problematic and experiment with how to move this or that element across problematics. Graduate students only.
Instructor(s): J. Bennett; W. Connolly
Area: Social and Behavioral Sciences.

AS.190.656. Critical Law and Society.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences.

AS.190.657. Hannah Arendt's Phenomenology.
This graduate-level course will focus on Hannah Arendt's phenomenological approach to political philosophy. In addition to reading some of Arendt's major works, including The Human Condition and Life of the Mind, students will read texts by Martin Heidegger and Maurice Merleau-Ponty, as well as texts by feminist critics of phenomenology (and readers of Arendt) such as Judith Butler.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences.

AS.190.658. Paradigms of Political Economy.
A book reading seminar in past and present political economy. Each week, we read one book and discuss it in great detail. We start with canonical authors in political economy (Smith, Marx,...). We move on to leading figures of political economy since the 1980s (Hall, Katzenstein, Esping-Andersen, Ostrom,...). We finish with a few first books authored by a younger generation of scholars and published after 2000. Special attention will be paid to the evolution of research questions, theories, and methodologies. The relevance of existing literature to the crafting of doctoral dissertations will also be discussed.
Instructor(s): N. Jabko
Area: Social and Behavioral Sciences.

AS.190.659. Crisis and Change.
The topic of institutional change has drawn intense scholarly interest in the social sciences since the 1990s. Most of the theoretical debate has revolved around the different notions of institutions that scholars bring to the table. Yet the meaning of “change”, and especially the role of crises, is often left implicit and under-theorized. The objective of this course will be to step back from the most recent debate and think about change from a broader perspective. First, we will go back to some classics of the comparative politics literature and read about different figures of change – revolutions, political and economic development, political and policy regime change, emerging and incremental change. Second, we will read about different sources and actors of change – material and ideational, collective and individual, and non-human. Themes for discussion throughout the course will include dictatorship and democratic consolidation, marketization and neoliberalism, mass politics and elite conflicts. Graduate students only.
Instructor(s): N. Jabko
Area: Social and Behavioral Sciences.

AS.190.660. Sovereignty.
Instructor(s): S. Grovogui
Area: Social and Behavioral Sciences.

AS.190.661. Empire and Discipline.
The term ‘empire’ denotes a state of dominion of one political entity over key dimensions of the public and private lives of populations who are culturally and ethnically distinct from that of the ruling or imperial class. The structures, institutions, and values that give effect to empire are assembled under the rubric of ‘imperial’ while the ambition to or desire for it is ‘imperialism’. In any case, the advent of empire is a temporal, geo-strategic, ethical, and moral event predicated upon practices and traditions with deep roots in history, theology, philosophy, and economic and political theory among others. This course examines how modern empires produced the object and discipline of international relations and how disciplinary theories and associated systems of thought and their modes of inquiry may still foster a pervasive yet unacknowledged dedication to empire. Graduate students only.
Instructor(s): S. Grovogui
Area: Social and Behavioral Sciences.
AS.190.662. Spinoza and Ecophilosophy.
Instructor(s): J. Bennett; W. Connolly
Area: Social and Behavioral Sciences.

Intensive examination of theories, old and new, which attempt to employ geographical, technological and ecological factors to explain political outcomes. Graduate students only.
Instructor(s): D. Deudney.

AS.190.664. Global Political Economy.
Arguably, the vast majority of interactions that cross borders are related to some form of exchange — the topic of international political economy and global political economy — rather than security concerns. This course focuses on key scholarship in IPE and GPE, emphasizing the critical contributions of GPE. Graduate students only.
Area: Social and Behavioral Sciences.

AS.190.666. Political Economy Of Development.
Graduate students only.
Instructor(s): E. Chung.

AS.190.667. Modes of Knowledge and Theories of International Relations.
We will explore the role of scientific, religious, ethical and other forms of knowledge in global politics by reading classic works in the sociology of knowledge alongside IR theory. Substantively, we will seek to explain and understand the effects of knowledge on, inter alia, historical change, economic policy, and global environmental politics. Graduate students only.
Instructor(s): B. Allan
Area: Social and Behavioral Sciences.

AS.190.668. Nuclear Weapons and World Order.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

Instructor(s): S. Grovogui
Area: Social and Behavioral Sciences.

AS.190.670. A World of Becoming.
Graduate students only, except for permission of instructor A comparative exploration of Friedrich Nietzsche and Alfred North Whitehead on the following issues: cosmic, subjective and historical time, the nature and distribution of agency, the problematic relations between the human estate and other agentic forces, contending spiritual responses to the vicissitudes of time, and the upshot of these inquiries for thought about imbrications between nature, mind, ethics and politics. Readings will include major texts by the two philosophers, with cameo appearances by Bergson and Deleuze.
Instructor(s): W. Connolly
Area: Social and Behavioral Sciences.

AS.190.671. States, Regimes and Governmentality.
The state has long been a central preoccupation in political science, and for much of the discipline’s history, the source of its distinction from other social science disciplines. Increasingly, the state’s role and function has become an object of inquiry across the social sciences, as well as in fields of the humanities and biological sciences. In the contemporary world, the ability of states to maintain geographical borders, distinguish between public and private, and in some instances, monopolize the use of force without sanction (the Weberian definition), has led some scholars, elites and political actors to question its continued primacy as the foremost unit of political recognition in the modern world. This course will provide a broad overview of the modern state as concept, institution and effect. Students will be introduced to conceptual, philosophical and empirically based scholarship on the modern state and its European precursors—such as the absolutist state. Civil society, citizenship and nation, though clearly related themes and categories of analysis, are not the focus of this course. Students will be introduced to key normative perspectives on the state: Marxist, Liberal, Anarchist, and Republican, as well as scholarly accounts of state formation, development, administration and transformation in a variety of regional and temporal contexts. In addition, students will engage literatures that offer insight into the state’s evolving complexity over historical time, its variations in regimes, and its relation to what Foucault conceptualized as governmentality, modes of discipline, territorial and population management that are neither immediately nor necessarily linked to individual (citizen) nor collective (statist) forms of sovereign power. Literatures examining colonial rule, racial and labor regimes, will provide with an opportunity to compare and contrast statist and non-statist articulations of power and authority, often within a single society and polity.
Instructor(s): M. Hanchard
Area: Social and Behavioral Sciences.

AS.190.672. Political Economy and Complexity Theory.
This seminar brings varieties of complexity theory to the study of political economy and vice versa, seeking to contribute to a theory in which new concepts of causality, nature/culture imbrications, and real creativity play an active role. Texts by Max Weber, William James, Karl Marx, Friedrich Hayek, Michel Foucault, Stuart Kauffman, Hans Joas, and Donald McKenzie will be summoned to engage each other.
Instructor(s): N. Jabko; W. Connolly.

Instructor(s): J. Cooper.

AS.190.674. Rsch/Writing Workshop.
Instructor(s): M. Keck.

AS.190.675. Global and Comparative Political Economy.
Graduate students only. An introduction to the influential scholarly works in the fields of global and comparative political economy.
Instructor(s): R. Marlin-Bennett
Writing Intensive.

AS.190.676. Field Survey of International Relations.
This course provides a scaffold for the study of international relations theory, organized historically and by major approaches. The focus is on close reading and discussion of exemplars of important bodies of theory. Intended for doctoral students with IR as their major or minor field.
Graduate students only.
Instructor(s): R. Katz; R. Marlin-Bennett
Area: Social and Behavioral Sciences.
AS.190.677. Civil Society in Comparative Perspective.
This course explores classic and contemporary debates on the concept of civil society and critically examines its analytical value in light of recent developments. Topics include the relationship between civil society, the state, and markets, the role of civil society in development and democratization, social capital, and transnational civil society.
Instructor(s): E. Chung.

AS.190.678. Theory for International Relations.
Grad Students Only
Instructor(s): S. Grovogui
Area: Social and Behavioral Sciences.

AS.190.679. State and Sovereignty.
Grad students only
Instructor(s): S. Grovogui
Area: Social and Behavioral Sciences.

AS.190.680. Nietzsche and Freud: Drive, Will and Eros.
A comparative study of the works of Freud and Nietzsche, with a focus on ideas about the drives, vital force, metamorphosis, and processes of subjectivity-formation.
Instructor(s): J. Bennett; S. Chambers.

AS.190.681. Immanence and Transcendence in Politics.
Area: Social and Behavioral Sciences.

AS.190.682. Rethinking State Capitalism.
Graduate students only. Co-taught with David Howarth, Essex University. How do Globalization, changes in sovereignty, new religious struggles and global warming affect the shape and trajectory of capitalism today? These issues will be engaged through readings by Marx, Etienne Balibar, Foucault, Wallerstein, Lepiert, and Phillip Goodchild. (PT)
Instructor(s): D. Howarth; W. Connolly
Area: Social and Behavioral Sciences.

AS.190.683. Research Seminar/Political Parties.
Instructor(s): R. Katz.

AS.190.684. ReReading Marx.
This graduate seminar will be based on the following working hypothesis: that the received readings of Marx in contemporary political theory over the past two decades have all been filtered by layers of interpretation provided by late 19th and early 20th century Marxism, mid 20th century Critical Theory, and late 20th century Analytical Marxism. We will work through, and slough off, some of those layers in order to go back and reread Marx. Grad students only.
Instructor(s): S. Chambers
Area: Social and Behavioral Sciences.

AS.190.686. The Politics of Intelligibility.
Graduate students only or Perm. Req’d An inquiry into the changing relations between capitalism and sovereignty. Texts by Hegel, Schmitt, Habermas, Deleuze/Guattari, Hardt/Negri, with cameo appearances by Saskia Sassen and Connolly.
Area: Social and Behavioral Sciences.

AS.190.687. IR Theory and the Middle East.
Instructor(s): W. Hazbun
Area: Social and Behavioral Sciences.

AS.190.688. Students of Althusser.
Instructor(s): S. Chambers
Area: Social and Behavioral Sciences.

AS.190.689. Race and the Neoliberal Turn.
Scholars conceive of neoliberalism as an ideology, as a set of public policies, as a governmentality, or as a combination of above. However while neoliberalism however it is conceptualized has been described as the contemporary doxa, the role of race both in the turn towards neoliberalism, and in the forms neoliberalism takes in a given space/time moment has gone relatively underexamined. In this course I seek to rectify this problem, by examining neoliberalism and then charting the ways that race shapes it and is shaped by it.
Instructor(s): L. Spence.

AS.190.690. Statelessness.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences.

This course examines contemporary nuclear issues through the prism of international relations theory. Topics to be considered include the origins and effect of nuclear proliferation, nuclear terrorism, the challenge of “rogue” states, the robustness of deterrence, the viability of defense, and the prospects for disarmament. These issues will be looked at through the lens of Realism, Liberalism and Constructivism, as well as other approaches. Students will be required to engage in formal and informal debates in class, present a draft of their paper to their fellow students, and (in light of comments received) complete a major research paper on some topic related to nuclear weapons. Grad students only.

AS.190.692. Race and the Neoliberal Turn.
What can the Greek tragic tradition teach the Enlightenment and the Enlightenment the tragic tradition? Texts by Sophocles and Kant will provide focal points, with responses to each provided by Knox, Nietzsche, Hesiod, B Williams and others.
Instructor(s): W. Connolly.

AS.190.693. Politics and Territory.
This seminar will explore territorial dimensions of [mainly] domestic politics and political action, including the political construction of territorial space and the territorial construction of political space. As supra-, sub-, multi-, trans-, inter-, and pluri-national political arenas seem to proliferate, how are they connected, institutionally and in practice? How are they structured by - and how do they structure - the actions of individuals and groups? How does its location affect the nature of political authority? Among other things, the class might consider questions involving transnational relations, federalism, decentralization, multi-level governance, networks, nested sovereignities, center-periphery dynamics, political identities and cleavage structures.
Instructor(s): M. Keck.

AS.190.695. The Executive Branch.
Instructor(s): B. Ginsberg
Area: Social and Behavioral Sciences.

Grad Students only
Area: Social and Behavioral Sciences.

Graduate students only.
Instructor(s): S. Grovogui
Area: Social and Behavioral Sciences.
AS.190.698. Qualitative Methods in the Social Sciences.
Some of the most important and enduring methodological innovations in the study of politics within political science have their origin in other disciplines. Quantitative and qualitative approaches alike share hold this basic fact in common. This course will trace the origin and development of several qualitative approaches to the study of politics, emphasizing methodologies culled or derived from the disciplines of anthropology, history, sociology and philosophy, utilized in some form in all subfields of the discipline of political science. Students will become familiar with debates concerning the relative merits and limitations of these approaches as methodological forms in their own right, and in relation to more quantitatively oriented methodologies often deployed in large N research design. Graduate students only.
Instructor(s): M. Hanchard.

AS.190.699. State and Sovereignty II.
Graduate students only.
Instructor(s): S. Grovogui.

AS.190.800. Independent Study.
Instructor(s): Staff.

Instructor(s): Staff.

AS.190.880. Independent Study.
Instructor(s): R. Katz.

AS.190.893. Political Science Practicum.
Instructor(s): R. Katz.

AS.191.101. Introduction to Comparative Politics. 3 Credits.
What is the benefit of studying politics from a comparative perspective? Simply put, by placing the political dynamics of one country in a wider, comparative setting we may enhance our understanding of them, and in the process, shed some light on why countries have followed different paths of political development. This "Introduction to Comparative Politics" class will examine methodological issues involved with making comparisons between countries and political phenomena and expose students to country studies in different continents of the globe, Europe, Asia, Africa, and Latin America. Thus students can expect to gain analytic tools necessary for thinking through and executing the comparative method as well as knowledge about the shape of capitalism, democracy, the state, and economic development (among other issues) in distinct places of the world. This course is a prerequisite for most upper-level comparative politics courses at JHU.
Area: Social and Behavioral Sciences.

AS.191.103. Issues in International Security. 3 Credits.
An analysis or various security issues, both theoretical and policy-oriented. Topics include the impact of regime type and trade on conflict, the future of the European Union, the rise of China and India, and the question of Japanese remilitarization.
Instructor(s): S. Vaswani
Area: Social and Behavioral Sciences.

AS.191.104. Capitalism, Democracy and Power. 3 Credits.
Freshmen Only. Dean’s Teaching Fellowship. This seminar will examine the political question of socioeconomic inequality in the contemporary United States. Using Karl Marx’s Capital as a starting-point, we will inquire into the complex relationship between capitalism and democracy, with a particular focus on issues of work, wealth, poverty, individuality, justice, time, and “value.” (AP)
Instructor(s): C. Dixon
Area: Social and Behavioral Sciences.

AS.191.105. Freshman Seminar: The Politics of Interpretation. 3 Credits.
How does one interpret a text? Is it possible to discern an author’s original intent? Or is a text’s meaning always determined by the reader’s cultural context? Who has the authority to interpret, and why? This interdisciplinary course combines political theory, literary theory, and religious studies. Readings from Augustine, Aquinas, Luther, Schleiermacher, Heidegger, Gadamer, and others. Dean’s Prize Freshman Seminar
Instructor(s): M. Suk
Area: Humanities, Social and Behavioral Sciences.

AS.191.108. Political/Science/Fiction. 3 Credits.
Science Fiction has long been recognized for its ability to speak to the concerns of the present. In Political/Science/Fiction we will explore one theme in particular: the cultural politics of alien encounter. “Alien encounter” in this case refers to encounters with the Other—those marked as outsiders, as less-than-human. In reading works of science fiction in conjunction with those of social science, our purpose will be less to seek out new worlds than to strive for a nuanced understanding of our own.
Instructor(s): L. Wilcox
Area: Social and Behavioral Sciences.

AS.191.110. International Relations Theory and it’s Margins: the case of East Asia. 3 Credits.
The advent of European International Society to East Asia in late nineteenth century is often characterized as an ‘opening’ of the East to the West: Korea as the hermit kingdom, Commodore Perry’s opening of Japan, and Open Door policy for China. For the Americas and ‘Westerners’, it was ‘discovery’. For Asia, it was ‘opening.’ However, the term ‘open’ is wanting in capturing the political turmoil this period witnessed, as this is a period in which the terms of global coexistence were contend and negotiated both between the East and the West, and among actors in East Asia. Seeing the period of late nineteenth century to mid-twentieth century as a period of political contestation of different visions of order in Asia, this course explores the role played by Sinocentrism, Westernization, the rise of Japan, and discourses of Asianism in reconfiguring the international relations of East Asia in modernity. Dean’s Prize Freshmen Seminar.
Area: Social and Behavioral Sciences Writing Intensive.

AS.191.201. Changing Faces of Conflict. 2 Credits.
Area: Social and Behavioral Sciences.

AS.191.202. War and Justice. 3 Credits.
This course introduces dominant and critical perspectives on questions relating to the morality of war and the use of force. We’ll discuss a variety of perspectives about what constitutes justice in war realism, to the just war tradition, and international law to feminist and post-colonial critiques of prevailing standards of conduct in war through a consideration of historical and contemporary controversies such as the dropping of the atomic bomb, what constitutes ‘terrorism’, what is the meaning of ‘self-defense’ in war, torture, the use of sanctions, civilian victimization in war, humanitarian intervention and the use of unmanned aerial vehicles (‘drones’). We’ll investigate both the content and historical formation of the norms of conduct in war and question whether these prevailing norms serve the interests of justice. Prior course work in International Relations is required. Writing Intensive course (around 20 pages of writing).
Instructor(s): L. Wilcox
Area: Social and Behavioral Sciences Writing Intensive.
AS.191.203. Expository Writing for Political Science and International Studies. 3 Credits.
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.204. Chinese Foreign Policy. 3 Credits.
The domestic sources of, and international constraints on, Chinese foreign policy-making will be examined. We will also study the development and evolution of Chinese foreign policy objectives and their implementation during and after the Cold War.
Instructor(s): P. Leon
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.206. Violence and World Orders. 3 Credits.
This class explores the relationship between two central concepts of International Relations: violence and world order. Some broad questions we will attempt to answer include: What is the role of violence in maintaining or producing certain world orders, both contemporary and historical? How do blatant and more hidden forms of violence work together to foreclose certain possibilities for social, political, and economic existence? How do different logics of violence produce hierarchies of gender, race, citizenship and class? What violence pasts and/or presents are concealed by contemporary ways of thinking about world order?
We will explore diverse literatures from International Relations and political theory that addresses these questions. Readings will include contemporary work from International Relations theory as well as Franz Fanon, Michel Foucault, Judith Butler, Achille Mbembe and others. Assignments will include several analytic essays.Cross-listed with Sociology.
Instructor(s): L. Wilcox
Area: Social and Behavioral Sciences.

AS.191.208. American Politics and its Discontents. 3 Credits.
This class explores the gap between the promise and shortcomings of American democracy. Topics include the Puritans, political participation, slavery, wealth and political power, equality, and the national security state.
Instructor(s): K. Anfinson
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.209. The Politics of Home. 3 Credits.
In our globalized world the experience of being at home is changing. This course will examine what it means to be at home today and related notions of belonging, nostalgia, place and homelessness. We will read works by Rousseau, Heidegger, Arendt, Rushdie and Bauman.
Instructor(s): A. Blomme
Area: Humanities, Social and Behavioral Sciences.

AS.191.214. Intro. to Contemporary Democracy. 3 Credits.
Area: Social and Behavioral Sciences.

AS.191.215. Modern Tibet: Politics, Religion, and Culture. 3 Credits.
Drawing on histories, autobiographies, literature, and film produced by Tibetans, this course explores modern Tibet, focusing on Sino-Tibetan relations and contemporary religion and culture.
Instructor(s): C. Hatchell
Area: Social and Behavioral Sciences.

AS.191.216. Freedom and Politics. 3 Credits.
Freedom is at the heart of modern political theory and practice. Yet what is freedom? What does it mean to enjoy freedom or to lack freedom? Is freedom a unitary concept or are there kinds of freedom? Is freedom essentially individual or is freedom collective? How is freedom articulated as a political ideal? We will consider these questions through a survey of theories of freedom, from Hobbes, Rousseau, and Marx to Arendt, Taylor, and Foucault.
Instructor(s): L. Plotica
Area: Social and Behavioral Sciences.

AS.191.219. Watching Global Politics: International Relations Through Film. 3 Credits.
This course will outline major ideas in the discipline of International Relations by an applied overview of the diverse theories, approached, and paradigms of global politics. This will include the development of conceptual frameworks and theories to facilitate the understanding and explanation of events and phenomena in world politics. Students will gain this knowledge through pop culture and film as well as through the writings of key IR Theorists of the 20th and 21st centuries. The class will be organized around the major theories of International relations: Realism, Liberalism, and Constructivism. These will be contrasted with theories of gender, postcolonialism, and ecology. A background in International Relations is not required, but an interest in contemporary global politics is strongly encouraged. (Subfield: IR)
Instructor(s): S. Fishel
Area: Social and Behavioral Sciences.

AS.191.221. International Relations/Global Issues. 3 Credits.
Area: Social and Behavioral Sciences.

AS.191.222. Democracy and Ancient Political Thought. 3 Credits.
What is “politics,” and how does it relate to questions of justice, knowledge, citizenship, war, nature, and morality? In this introductory course in political theory, we will examine these questions from the perspective of ancient Greek political thought. Aeschylus, Sophocles, Socrates, Plato, Thucydides, Aristotle, and Epicurus will be among the thinkers discussed. We will focus on the question of democracy, using the Athenian experience to illuminate modern democratic life. Class will meet as a seminar. Recommended for beginning and advanced students in political theory!
Instructor(s): C. Dixon
Area: Social and Behavioral Sciences.

AS.191.224. Climate Change & the Politics of Belonging. 3 Credits.
This class will look beyond the ecological impacts of climate change to examine its potential consequences for citizenship, sovereignty and statehood, national identity, and belonging. We will explore these issues through both theoretical texts and reports from organizations working with populations and in places on the front lines of climate change.
Instructor(s): A. Blomme
Area: Social and Behavioral Sciences.

AS.191.225. Race and Power in American Cinema. 3 Credits.
This course will examine changing norms of racial representation in American cinema. We will focus in particular on how different modes of representing racial difference imply different visions of American social and political life. Films will include The Birth of a Nation (1915), Casablanca (1942), Watermelon Man (1970), Cotton Comes to Harlem (1970), The Color Purple (1985), Do The Right Thing (1989), and Crash (2005), among others.
Area: Humanities, Social and Behavioral Sciences.
AS.191.226. Globalization and State-Society Relations in Contemporary East Asia. 3 Credits.
This course examines the extent to which globalization is reshaping state-society relations in contemporary East Asia, and how East Asian societies and political systems respond to, and influence, aspects of globalization in turn. Topics to be explored include the origins and trajectories of developmental states in East Asia, macroeconomic and industrial policy-making, social unrest and political organizing, export-led growth and political liberalization, the East Asian financial crisis and its aftermath, and today's East Asian political and economic landscapes in a globalization world.
Instructor(s): P. Leon
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.228. The Politics of Gender, Marriage, and Family. 3 Credits.
Debates around issues of same-sex marriage and adoption often employ the discourse of rights. This course will examine the terms of these debates in order to reconsider the assumptions underlying them. What are rights? Can rights bring about change? Why do marriage and childrearing spark so many political and moral debates? What models of sex and sexuality undergird these debates? Finally, we will consider the possibilities and limits of rights-based politics in general.
Area: Social and Behavioral Sciences.

AS.191.229. Introduction to International Relations: Theory and Practice. 3 Credits.
This course is divided into two parts. The first part examines theories from the three major traditions in International Relations – Realism, Liberalism, and Constructivism. The second part of the course applies these theories to contemporary issues in world politics such as America’s role in the world, the rise of China and India, the future of the European Union, and international terrorism. Requirements include two exams ( midterm and final) and a short paper.
Area: Social and Behavioral Sciences.

AS.191.231. The Politics of Plants and Animals. 3 Credits.
The premise of this course is simple: there is more to politics than just humans. The course is an introduction to green political thought and practice. We will examine the key issues concerning the significance of nonhumans for politics: animal rights, anthropocentrism, Green politics, consumption practices, and environmental law. What does it mean to “think green”? Were Machiavelli and Hobbes “closet” environmentalists? Can worms or spinach be considered political participants or members of a public? Do things and events, such as plastic bags, cans, hurricanes or fires, wield power over humans? Is it possible to bring political change through the food we eat? Where does the animal end and the human begin? We will use multi-media and texts from various disciplines and historical periods. Our goal is to become more alert to how the stories we tell ourselves about nature shape our identities as humans and political beings.
Area: Social and Behavioral Sciences.

AS.191.240. Political Individualism. 3 Credits.
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.251. Globalization and Development: The Clash of Civilizations or a New World Order? 3 Credits.
The course aims to introduce students to the major debates in globalization and development studies: Is globalization a new phenomenon? Does global interconnectedness lead to a clash of civilizations or to one-way diffusion from developed to developing countries, converting the globe into a giant mall? Are there processes of intermixing across time, space and identities? Is globalization an engine of progress or a vehicle of socio-economic polarization? Why has development been contested in some places and not in others? What would a completely developed world look like? These questions will be explored using multi-media and texts from various disciplines and historical periods.
Instructor(s): A. Ignatov
Area: Humanities, Social and Behavioral Sciences.

AS.191.261. Military Law. 1 Credit.
During the Civil War, the political situation in Maryland remained uncertain until May 13, 1861 when Union troops occupied the state, effectively preventing a vote in favor of Southern secession. Federal soldiers led by General B. F. Butler entered Baltimore, occupied the city and declared martial law, to prevent any further incidents. Mayor Brown, members of the city council and the police commissioner were arrested and imprisoned at Fort McHenry. One of the militia captains, John Merryman, was arrested and held in defiance of a writ of habeas corpus on May 25, sparking the case of Ex parte Merryman, heard just 2 days later on May 27 and 28, in which the Chief Justice Roger B. Taney held that the arrest of Merryman was unconstitutional: “The President, under the Constitution and laws of the United States, cannot suspend the privilege of the writ of habeas corpus, nor authorize any military officer to do so. A broad survey of military legal matters including Military Justice.

AS.191.283. Politics of Guilt and Sin. 3 Credits.
What role do guilt and sin play in politics? This course examines this problematic by addressing readings and case studies including religious texts such as the Bible, essays on economics of guilt, debt, and sacrifice, investigations into the concept of historical sin and reparation, and the contemporary psychology of lying in politics. The course includes extensive reading and weekly film viewings.
Instructor(s): B. Meiches; T. Hanafin
Area: Humanities, Social and Behavioral Sciences.

AS.191.300. Law, Politics, and Science Fiction. 3 Credits.
Science fiction (or speculative fiction) allows us to imagine new worlds and think creatively about social problems. In doing so, it raises numerous questions that have important resonance in politics and law. These include questions about the role and structure of government, equality, citizenship, criminal justice, and international relations. In this course we will explore these fundamental political and legal questions through a variety of sources including novels, short stories, films, and television shows.
Instructor(s): G. Jones
Area: Social and Behavioral Sciences.
AS.191.301. Theories of International Relations. 3 Credits.
This course focuses on the leading theories of international relations. After beginning with an introduction to the methodological issues in the field, it will examine the dominant theoretical approaches, including realism, liberalism, constructivism, and rational choice theory. It will explore explanations for both the causes of war and the conditions that enable cooperation. Additional topics include the origins of the state system as well as theories of international change. The aim of the course is to provide students with some of the necessary skills to evaluate the worth of these theories. It also introduces students to the way in which political scientists examine research problems. Students should have taken either “Contemporary International Politics” or “International Politics.” (IR)
Prerequisites: Students may have taken either AS.190.209 (Contemporary International Politics) OR AS.190.213 (International Politics)
Instructor(s): R. Griffiths
Area: Social and Behavioral Sciences.

AS.191.303. The Rise and Fall of the State. 3 Credits.
This course interrogates the state as a central institution of politics, its many meanings and its purposes. It will also analyze the politics of the rise of the state in domestic and international politics and assess whether it is currently being challenged by globalization and civil war
Instructor(s): A. Naseemullah
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.304. US-Cuba Decision Making. 3 Credits.
This course is a history of U.S.-Cuban relations since the Castro regime took power in 1959 and an effort to understand why the U.S. has not been able to deal successfully or even rationally with the government there even with the end of the Cold War. At this point, the U.S. is the only nation in the Western Hemisphere not to have full diplomatic and trade relations with the island. Why is that?
Instructor(s): W. Smith
Area: Social and Behavioral Sciences.

AS.191.305. Southeast Asia and US Security Strategy. 3 Credits.
This is a survey course designed to introduce students to Southeast Asia -- defined as the ten member countries of the Association of Southeast Asian Nations (ASEAN) plus Australia and New Zealand. Southeast Asia is an integral part of the broader region of East Asia and a geographic bridge to the Indian subcontinent (South Asia). Southeast Asia has been one of the great success stories in the saga of modernization and development of post-colonial Afro-Asia over the last six decades. Its resulting economic importance is matched by its strategic significance given the presence of imbedded jihadist networks and the emergence of China as a regional great power and aspirant superpower. Nevertheless, the region has been largely overlooked by senior foreign policy and defense officials in Washington. This course will equip students to fill that void by examining the region from the perspective of national security strategy -- broadly understood in its multiple dimensions. Students will be challenged to formulate some element of a viable U.S. national security strategy for the region.
Instructor(s): M. Ott
Area: Social and Behavioral Sciences.

AS.191.307. Ecologies of the Good Life: Politics for a More than Human World. 3 Credits.
This course explores the extent to which nonhuman actors influence politics. It aims to provide a new “green” lens through which to rethink power and political participation.
Instructor(s): A. Ignatov
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.309. Non-Western Political Theory. 3 Credits.
This course is designed to introduce and critically examine some of the most influential non-western traditions, thinkers, texts, and ideas in the global history of political thought. We will focus on material from the Middle East, South Asia, and East Asia. Thinkers covered in the course include: Al-Mawardi, Confucius, Lao Tzu, Sayyid Qutb, and Tiruvalluvar. We will also read key portions of the following texts: Qur’an, Law Code of Manu, and the Mahabharata.
Instructor(s): S. Gray
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.310. American Political Development. 3 Credits.
American political development (APD) is the study of how political institutions and the body politic in the U.S. have changed over time. In this advanced seminar, we will explore this subfield of political science. The course is concerned with attempting to identify historical patterns within American politics as well as the discontinuities that have reshaped the nation’s trajectory. Students will engage with the APD literature and in the process learn how scholars identify the evidence they use to support their analytical claims. The course is divided into four sections. First, we will survey the subfield’s rise and discuss how (or if) APD differs from other ways of studying American politics. Next, we turn to a discussion of political culture and the Constitution as a stabilizing influence within a changing political environment. From there we shift to the study of discontinuities through a careful examination of state-building as well as the impact of anti-statism. Finally, the course concludes with an analysis of associational life within the American state, focusing particularly on issues of race and gender.
Instructor(s): W. Adler
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.311. The Public Life of Personal Narrative. 3 Credits.
Michel Foucault once declared that “Western man has become a confessing animal.” In the era of Facebook and YouTube, we seem to be moving closer and closer to this definition, as we divulge increasingly private details about ourselves to increasingly broad publics. The hopes and anxieties that have attached themselves to these new media and technology, however, are not entirely novel. This course departs from a set of questions about contemporary uses of self-exposure, then turns to an examination of theoretical texts and autobiographical materials spanning several centuries, slowly winding our way back to the present. The aim of our journey will be to arrive at a fresh understanding of the political functions of personal narratives in our own time.
Instructor(s): N. Gies
Area: Social and Behavioral Sciences.
AS.191.312. Who Do We Think We Are?: The Politics of Being Human. 3 Credits.
Today the question of who - or what - is a human being animates many pressing political and cultural debates like human rights, abortion, climate change, the development of technology and artificial intelligence, and so on. This course will take up the question of what it means to "be human" and trace how answers to this question inform contemporary debates over the terms of political and ethical life.
Instructor(s): D. Walker
Area: Social and Behavioral Sciences.

AS.191.313. The Worlds of Globalization. 3 Credits.
The language of "globalization" is now widely used to describe the modern world—a world that is increasingly interconnected, economically homogenous, and culturally convergent. Even political and economic alternatives are commonly framed in terms of forging other "global" formations, be they justice globalism, grassroots globalization, or globalism from below. This class examines how the concept of globalization emerged as the definitive term for conceptualizing the modern world, debates the usefulness of this concept, and identifies alternative ways of conceptualizing the world as a social totality. In this class we look at four particular discourses of globalization—those of global cities, global activism, global capitalism, and global culture—while examining historical and contemporary alternatives to these discourses. The final project will use these theoretical tools to critically examine the city of Baltimore.
Instructor(s): I. Kamola
Area: Social and Behavioral Sciences.

AS.191.314. Historical Sociology in International Relations Theory. 3 Credits.
This course explores recent attempts to reintroduce historical sociology into international relations theory. Rather than relying on scientific methodologies for producing knowledge about the international historical sociologists have questioned the methodological assumptions that ground theorizations of global politics. In this course we will trace the impact of historical sociology upon international theory through the works of Mann, Tilly, Skocpol, and Wallerstein. We will also assess the potential impacts of "third wave" historical sociology for international relations theory.
Instructor(s): A. Barder
Area: Humanities, Social and Behavioral Sciences.

AS.191.315. Chinese Foreign Relations. 3 Credits.
This course examines China's foreign relations since the beginning of the economic reforms. Readings will draw on a diversity of perspectives, both Chinese and non-Chinese, to examine China's foreign policy debates and strategic choices.
Instructor(s): G. Christoffersen
Area: Social and Behavioral Sciences.

AS.191.317. Interest Groups, Social Movements and the Policy Process. 3 Credits.
Instructor(s): C. Thurston
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.320. Geopolitics, Geography, Technology, and Power. 3 Credits.
Geopolitics studies the natural world and the ways it constrains development, politics, conflict and sustainability. Societal resources and patterns of warfare are tied to humans' physical environment and technological level. Dean's Teaching Fellowship.
Instructor(s): T. Williams
Area: Social and Behavioral Sciences.

AS.191.321. War and Politics. 3 Credits.
Area: Social and Behavioral Sciences.

AS.191.322. Globalization, Development, Conflict in the Developing World. 3 Credits.
This course will focus on socio-economic changes and challenges that the developing world developing world faces in today's globalized world. It will introduce students to the interaction between politics and economics in developing countries by examining political and economic development (and underdevelopment). It will evaluate the role of globalization and neoliberal reforms not just as the engine of economic change, but also as the source of social conflict. The first part of the course will introduce conventional theories and approaches to development, and evaluate how globalization and open markets have significantly changed the trajectory of economic growth and development through various substantive and country-specific readings. The second part of the course will examine the contemporary debates relating to globalization, particularly whether and how it has affected growth, human development, equality, and poverty in the developing world. A key the me explored will be on the relationship of the state to social welfare and the delivery of public goods. Finally, the course will also analyze the implications of globalization for crucial contemporary problems such as immigration, transnational flows, women's rights/gender roles, state-building and democratization, civil society/NGOs and governance, and ethnic violence.
Instructor(s): S. Chidambaram
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.323. Asian Energy Security. 3 Credits.
This course is concerned with the relationship between energy security and human security. It will study the energy issues of East Asian countries as they make difficult energy policy choices, attempting to achieve simultaneously economic growth, energy security, and environmental sustainability.
Instructor(s): G. Christoffersen
Area: Social and Behavioral Sciences.

AS.191.325. Contentious Politics of East Asia. 3 Credits.
An examination of contentious politics and its applications to Japan, South Korea and China.
Instructor(s): J. Wang
Area: Social and Behavioral Sciences.

AS.191.326. Sex, Gender and War. 3 Credits.
In this course we will explore what different perspectives on sex and gender from feminist theory and the social sciences have to contribute to the understanding of key questions about the nature of war. Topics covered include nuclear politics, the concept of a just war, terrorism and the War on Terror, and humanitarian wars. This is a discussion seminar involving approximately 20 pages of writing. It also presupposes prior work in International Relations.
Instructor(s): L. Wilcox
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.327. Cities and Sovereignty. 3 Credits.
For the first time in history, the majority of the world population lives in cities. This course asks how this event and the ongoing process of global urbanization have transformed political life. From the Occupy movement's reclamation of a right to the city to the practices of urban warfare in Iraq and Afghanistan, this course will examine how the city has become a medium of politics.
Instructor(s): D. Denman
Area: Social and Behavioral Sciences.
AS.191.330. Politics of Self, Love and the Other. 3 Credits.
Area: Humanities, Social and Behavioral Sciences.

AS.191.331. Marx, Capitalism and Democracy. 3 Credits.
Area: Social and Behavioral Sciences.

AS.191.332. Civilians in the Path Of War. 3 Credits.
In this course, we will examine ideas about violence in international affairs by both states and non-state actors. More specifically, we will investigate some of the conditions that give rise to conflict in the international system, the range of actors engaged in violence, their diverse motives, and the strategies of governments and the international system to mitigate conflict. Instructor(s): M. Abrahms
Area: Social and Behavioral Sciences.

AS.191.333. International Human Rights Law in U.S. Courts. 3 Credits.
Area: Social and Behavioral Sciences.

AS.191.335. Arab-Israeli Conflict (IR). 3 Credits.
The course will focus on the origin and development of the Arab-Israeli conflict from its beginnings when Palestine was controlled by the Ottoman Empire, through World War I, The British Mandate over Palestine, and the first Arab-Israeli war (1947-1949). It will then examine the period of the Arab-Israeli wars of 1956, 1967, 1973, and 1982, the Palestinian Intifadas (1987-1993 and 2000-2005); and the development of the Arab-Israeli peace process from its beginnings with the Egyptian-Israeli treaty of 1979, the Oslo I and Oslo II agreements of 1993 and 1995, Israel's peace treaty with Jordan of 1994, the Road Map of 2003; and the periodic peace talks between Israel and Syria. The conflict will be analyzed against the background of great power intervention in the Middle East, the rise of political Islam and the dynamics of Intra-Arab politics, and will consider the impact of the Arab Spring.
Instructor(s): R. Freedman
Area: Social and Behavioral Sciences.

AS.191.336. On Diet: Are We What We Eat?. 3 Credits.
Tracing the history of the idea that "you are what you eat," this course explores the relationships between diets, bodies, selves, and politics. Readings will be both historical and contemporary and cover a variety of fields including political theory, philosophy, anthropology, and the history of science and medicine.
Instructor(s): A. Rebrovick
Area: Social and Behavioral Sciences.

AS.191.337. Rebels with a Cause: Latin American Protest and Democracy. 3 Credits.
This class meets in the new Pre-Session: May 17 - June 18. New political and social movements throughout Latin America and the world are challenging the traditional understanding of the nature of democracy and participation. How broadly should the notion of democratic participation be understood? Is protest as important to democracy as elections? This course examines challenges to traditional ideas of democratic participation in Latin America, focusing on contestation beyond partisan elections, such as protest, constituent assemblies, charismatic populism, deliberative negotiation, and violent insurgencies.
Instructor(s): J. Pugh
Area: Social and Behavioral Sciences.

AS.191.338. Courts, Judges, and Lawyers (AP/LP). 3 Credits.
(formerly 'The American Judiciary') An exploration of the changing role and function of courts, judges, and lawyers in the American legal system, and of our increasingly litigious, rights conscious and adversarial culture. It will address how and why people use the courts to resolve civil disputes, how the courts handle those disputes, and the increasing reliance on alternative and less formal dispute processing forums. It will also examine the role of courts in the criminal justice system.
Area: Social and Behavioral Sciences.

AS.191.340. Education Politics in Urban America. 3 Credits.
This seminar analyzes trends, developments, and future challenges related to the politics of urban public schooling with a concentration on community political dynamics and the struggle for equal educational opportunity and quality education. The course emphasizes the impact of socioeconomic class inequality, racial/ethnic conflict, and gender politics on the changing character of public school reform since the 1954 Supreme Court decision of Brown v. Board of Education. Cross-listed with Africana Studies.
Instructor(s): F. Hayes
Area: Social and Behavioral Sciences Writing Intensive.

AS.191.342. Nationalism and World Politics. 3 Credits.
Nationalism has been one of the most powerful forces of change over the last two centuries. This course will focus on the causes of nationalism, its persistence, and its consequences. Specific attention will be given to a number of topics including the relationship between nationalism and democracy, the malleability of national identities, the dangers that nationalist movements can pose, and the potential solutions to nationalist conflict. The aim of the course is to give students the theoretical and analytical tools necessary to think critically about nationalism and its role in world politics. Students should have taken either "Contemporary International Politics" or "International Politics."
Prerequisites: Students should have taken either AS.190.209 " (Contemporary International Politics) or AS.190.213 (International Politics.)
Instructor(s): R. Griffiths
Area: Social and Behavioral Sciences.

AS.191.343. US Foreign Policy in East Asia. 3 Credits.
(IR)
Instructor(s): J. Ryu
Area: Social and Behavioral Sciences.

AS.191.345. Russian Foreign Policy (IR). 3 Credits.
This course will explore the evolution of Russian Foreign Policy from Czarist times to the present. The main theme will be the question of continuity and change, as the course will seek to determine to what degree current Russian Foreign Policy is rooted in the Czarist(1613-1917) and Soviet(1917-1991) periods, and to what degree it has operated since 1991 on a new basis. The main emphasis of the course will be on Russia's relations with the United States and Europe, China, the Middle East and the countries of the former Soviet Union--especially Ukraine, the Baltic States, Transcaucasia and Central Asia. (IR) The course will conclude with an analysis of the Russian reaction to the Arab Spring and its impact both on Russian domestic politics and on Russian foreign policy.
Instructor(s): R. Freedman
Area: Social and Behavioral Sciences.
AS.191.346. Beyond Anarchy: Transformational Foreign Policies in International Relations. 3 Credits.
This course examines the foreign policies of four political entities – the early United States, post World War II Japan, post World War II India, and the European Union – that have attempted to create a post-anarchic international system through non-violent means. These foreign policies are contrasted with traditional foreign policies that are based on realist conceptions of world politics. Requirements include short written responses to reading assignments and a take-home final exam.
Instructor(s): S. Vaswani
Area: Social and Behavioral Sciences.

AS.191.347. U.S.-Chinese Relations. 3 Credits.
This course examines key issues in U.S.-Chinese relations. We will take an in-depth look at the politics, policies, and topics surrounding strategic balancing, trade, energy, nuclear proliferation on the Korean Peninsula, relations across the Taiwan Strait, China’s rise and the response of the United States and its allies. We will place the relationship between the United States and China in the context of its geopolitical implications not only for the two countries but also for the international system.
Instructor(s): P. Leon
Area: Social and Behavioral Sciences.

AS.191.348. Domestic Politics of Contemporary China. 3 Credits.
This course examines salient issues in the domestic politics of contemporary China. It begins with a brief historical overview of China’s developments that led to the revolutions of 1911 and 1949, as well as the Cultural Revolution. The main part of the course will explore the era of economic reform and opening that began in the late 1970s and that still continues today. Topics include the relationship between business and politics, obstacles to economic and political reforms, the interplay between foreign relations and domestic politics, institutional and bureaucratic sources of policy-making, the social and political impact of economic growth, the relationship between central and provincial governments, and the questions of political opening and leadership transitions.
Instructor(s): P. Leon
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.349. Global Urbanism: Planet of Slums or World Cities. 3 Credits.
This course will address the relationship between development and the political and economic structure of the world economy in the built environment of the city. By drawing upon both classical texts about cities (do they still work for us, what can they account for?) and on a diverse literature on cities and slums, we will focus our attention to the contemporary challenges faced in cities both in the more developed and in the developing world. Through a variety of disciplinary perspectives we will try to understand the underlying social and economic changes and the profound transformations under way throughout the global urban world.
Instructor(s): D. Pasciuti
Writing Intensive.

AS.191.351. Film and Politics. 3 Credits.
Instructor(s): R. Shogan
Area: Social and Behavioral Sciences.

AS.191.352. American Constitutionalism and War Making. 3 Credits.
Interstate anarchy is hostile to limited government constitutions given various power concentrations necessary for state survival. While the American Union created in 1787 accounted for this in various ways by effectively ending the balance of power on the continent, a second important feature of the founding period, effective distance from Europe ended with the industrial revolution and the advent of nuclear era technology. We explore how the United States adapted its security structures to these geopolitical changes. Dean’s Teaching Fellowship course.
Instructor(s): R. Fried
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.353. Africa and American Foreign Policy. 3 Credits.
This course examines the political, economic, and social relationships between the United States and various African countries. We start by critically examining various ways American foreign policy thinkers conceptualize Africa, before turning our attention to issues concerning conflict, intervention and peacekeeping, economic aid and development, and the Arab Spring. In particular, we will look at: the Rwandan genocide and the Congolese War, the Darfur conflict, Somali piracy, the Millennium Development goals, debates around foreign aid, NGO-based development, China’s presence in Africa, and the U.S.’s recent support of Libyan rebels.
Instructor(s): I. Kamola
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.354. History of US Latin American Relations. 3 Credits.
History of U.S. relations with Latin America, from founding of the U.S. until today.
Area: Social and Behavioral Sciences.

AS.191.355. The Military in American Politics. 3 Credits.
This course explores how Americans have wrestled with questions of military power. Topics include civil-military relations, the military-industrial complex, civil liberties during wartime and how coercion has shaped American identity.
Instructor(s): W. Adler
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.357. American Political Thought. 3 Credits.
Aitchison Fellows only. (Taught in Washington D.C.)
Instructor(s): D. Wolfson
Area: Humanities, Social and Behavioral Sciences.

AS.191.359. Politics and Thought in Japan. 3 Credits.
Instructor(s): N. Otobe
Area: Social and Behavioral Sciences.

AS.191.362. Foreign Relations India/Pakistan. 3 Credits.
Instructor(s): D. Hagerty
Area: Social and Behavioral Sciences.
What happens when our images of the good life seem to be harming us? When letting go of hopes, relationships, and attachments is so hard or painful that we cling to them and risk being destroyed? What might we do so that unmaking our lives becomes preferable to keeping a damaging one? This course explores such impasse matters, where political and personal life meet in struggles to endure, change, and thrive. Specific impasses that might arise in our discussions include the American Dream, intimacy, and climate change. We will engage readings and films of diverse genres to grapple with the threat and promise of the unmaking of our lives. Dean’s Teaching Fellowship course.
Instructor(s): C. Shomura
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.364. Free Expression in the 21st Century. 3 Credits.
This course will explore the theoretical underpinnings of free expression protection and some of the key contemporary debates that surround free expression in an age of mobilization, globalization, and digitization. Dean’s Teaching Fellowship course.
Instructor(s): G. Jones
Area: Social and Behavioral Sciences.

AS.191.365. The History of American Environmental Consciousness. 3 Credits.
This course explores the toward nature, the “environment” and non-human life, and examines the relationship between American environmentalism and traditions of Western political thought. Dean’s Teaching Fellowship
Instructor(s): J. Greear
Area: Social and Behavioral Sciences.

AS.191.366. Chinese Domestic Politics. 3 Credits.
This course provides an introduction to the key institutions and relationships that make up the modern Chinese political system. The course will examine both theoretical and historical understandings of Chinese politics, considering alternative models of Chinese politics. It examines a range of current Chinese domestic governance issues: the political impact of the economic reforms, state-society relations, the legitimacy of the Communist Party, and Chinese understandings of politics.
Instructor(s): G. Christoffersen
Area: Social and Behavioral Sciences.

AS.191.367. US Environmental Policy. 3 Credits.
This course provides an intensive introduction to the emergence, development, and functioning of key environmental policies in the United States.
Instructor(s): J. Greear
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.368. International Relations of the Asia-Pacific. 3 Credits.
This course will introduce and analyze the international relations of the Asia-Pacific, weighing the various approaches that scholars use for theoretical understanding and policy prescription. From the 19th c. to the 21st c., realist balance of power politics have prevailed. Since the early 20th c., liberal-institutionalism has emerged to challenge realist assumptions in both Track I and Track II organizations such as the Institute of Pacific Relations, APEC, the ASEAN Regional Forum, East Asian Summit, and CSCAP. Constructivism questions these older approaches, focusing on national and regional identity formation in explaining foreign policy outcomes. The course will consider realist, institutionalist and constructivist approaches to Pacific Asia in examining prospects for peace and stability.
Instructor(s): G. Christoffersen
Area: Social and Behavioral Sciences.

AS.191.369. Athenian Democracy. 3 Credits.
An introduction to the political thought of democratic Athens (508-322 BCE). A close study of classical texts of by theorists and critics of ancient democracy such as Thucydides, Sophocles, Aristophanes, Plato, Aristotle, and Demosthenes.
Instructor(s): P. Livingston
Area: Social and Behavioral Sciences.

AS.191.370. Theories of International Political Economy. 3 Credits.
This course is concerned with three general questions: What causes economic inequality among nations? Does free trade lead to economic growth? What causes financial crisis? How one answers these questions, however, depends upon one’s fundamental conceptualization of what constitutes “the economy.” To answer these questions, therefore, we will read seminal texts in the study of political economy, including Adam Smith’s Wealth of Nations, Karl Marx’s Capital, Vol. 1. and various thinkers who have built upon this theoretical work (for example, Hayek, Friedman, Keynes, Polanyi, Harvey etc).
Instructor(s): I. Kamola
Area: Social and Behavioral Sciences.

AS.191.371. Theorists of African National Liberation. 3 Credits.
The second half of the 20th century witnessed a number of anti-colonial struggles across the African continent. This course reads the work of various theorists, novelists and organic intellectuals from these struggles in order to examine a number of important theoretical questions, such as: What is ‘Africa’? How does colonial rule operate? What might political, economic and social liberation look like? These analyses will then be used to examine a number of contemporary issues facing the African continent. Cross-listed with Africana Studies
Instructor(s): I. Kamola
Area: Social and Behavioral Sciences.

Aitchison Students Only.
Instructor(s): S. Strom
Area: Social and Behavioral Sciences.

AS.191.373. Asian Americans and the Law. 3 Credits.
Instructor(s): Staff
Area: Social and Behavioral Sciences
Writing Intensive.
AS.191.374. Seminar in American Political Economy. 3 Credits.
This course examines the interplay of economic ideas, institutions and domestic politics in the United States, from the Founding through the financial crisis. Topics include industrialization, regulation, interest groups, voting behavior, and inequality.
Instructor(s): C. Thurston
Area: Social and Behavioral Sciences.

AS.191.375. Thinking Organizationally about Politics. 3 Credits.
Aitchison Students Only.
Instructor(s): S. Teles
Area: Social and Behavioral Sciences.

Instructor(s): M. Rom
Area: Social and Behavioral Sciences.

AS.191.379. Thinking Strategically. 1 Credit.
Aitchison Students Only.
Instructor(s): K. Mueller
Area: Social and Behavioral Sciences.

AS.191.380. First Amendment Freedoms. 3 Credits.
This course will explore the historical, political and legal dimensions of the First Amendment and the freedoms it protects: religion, speech, press, assembly, and petition. How have these freedoms grown and developed over time? How do contemporary issues like combating terrorism and developing new technologies re-frame First Amendment debates? Can language drafted over 220 years ago keep up with the challenges of the 21st century?
Instructor(s): G. Jones
Area: Social and Behavioral Sciences.

AS.191.381. Thinking Politically. 1 Credit.
Aitchison Students Only.
Instructor(s): S. Teles
Area: Social and Behavioral Sciences.

AS.191.382. Thinking Economically. 3 Credits.

AS.191.384. Thinking Legally. 1 Credit.
Aitchison Students Only.
Instructor(s): M. Greve
Area: Social and Behavioral Sciences.

AS.191.385. Thinking Probabilistically. 1 Credit.
Aitchison Students Only.
Instructor(s): D. Baker
Area: Social and Behavioral Sciences.

AS.191.386. American National Security in the 21st Century. 3 Credits.
Instructor(s): J. Meiser
Area: Social and Behavioral Sciences.

AS.191.387. Energy and Environmental Security. 3 Credits.
Instructor(s): J. Meiser
Area: Social and Behavioral Sciences.

AS.191.388. Ethnic Politics. 3 Credits.
Ethnic conflict has become one of the major sources of inter-state and within-state strife in many regions of the world today. This course is designed to provide a broad overview of the relationship between ethnicity and politics. The purpose is to introduce key concepts, debates and contemporary research in the field of ethnic politics, and to develop an understanding of how political institutions can influence the course and consequences of ethnic conflict. There are no text book required for this course.
Instructor(s): S. Chidambaram.

AS.191.389. Comparative Political Philosophy. 3 Credits.
An introduction to the field of cross-cultural, comparative political philosophy. This course critically compares Western and non-Western political ideas and arguments on topics such as nature and the political order, philosophy and the political order, the relationship between religion and the state, individuality and community, and equality versus hierarchy. We will examine central political thinkers and texts from East Asia, South Asia, the Middle East, Greece, and Europe.
Instructor(s): S. Gray.

AS.191.390. Terrorism and Counterterrorism. 3 Credits.
The purpose of this course is to critically examine the most important empirical and theoretical debates on terrorism, with a view toward formulating maximally effective counterterrorism responses. This is the only book to purchase: http://www.cqpress.com/product/Debating-Terrorism-and-Counterterrorism.html. The other readings can be accessed online.
Instructor(s): M. Abrahms
Area: Social and Behavioral Sciences.

AS.191.391. Organizing War: Military Organizations, Culture and Bureaucracy in the Modern Age. 3 Credits.
How are modern militaries built and how does it impact their world – and ours? This course will discuss major themes in modern military studies, with a focus on military organization. We will explore how and why militaries change and adapt – or fail to – and ask what exactly they are meant to do in the first place. The course gives special focus to the interrelatedness of military organization and culture – and part of our challenge will be to try and understand the nature(s?) of the relationship between the two. On the way, students will gain literacy in major topics in military studies and major issues in current military policymaking.
Instructor(s): R. Stol
Area: Social and Behavioral Sciences.

AS.191.392. Ancient and Medieval Political Philosophy. 3 Credits.
This discussion-intensive seminars carefully examines major texts and thinkers in the ancient and medieval periods. We will read works by Homer, Hesiod, Thucydides, Plato, Aristotle, Cicero, St. Augustine, as well as the Islamic political thought of the Qur’an and Alfarabi.
Instructor(s): S. Gray
Area: Social and Behavioral Sciences.
AS.191.394. Third World Environment and Development. 3 Credits.
The course examines how the interactions between ecological, political, economic and social processes shape world politics. It focuses on the connections between natural resource degradation, globalization, and development. Major themes include global environmental governance; consumption and sustainable development; environmental justice; changing patterns of food production and resource use.
Instructor(s): A. Ignatov
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.395. Law and Religion. 3 Credits.
The First Amendment to the U.S. Constitution contains the Establishment Clause, which prohibits the government from promoting religion, and the Free Exercise Clause, which guarantees religious liberty. Together, these are known as the Religion Clauses, and they have been at the center of some of the Supreme Court's most controversial decisions, such as school prayer, state funding for religious schools, and the placement of religious displays on public property. Many scholars, judges, and politicians have proclaimed that the Court's church-state decisions are "incoherent" and even "contradictory." This course will examine these criticisms of the Court's church-state jurisprudence and explore whether any consistent principles underlie this area of the law. Is there a basis on which "separationists," who advocate for a strict separation of church and state, and "accommodationists," who believe that government may promote some religious activities, can find common ground?
Instructor(s): J. Merriam
Area: Social and Behavioral Sciences.

AS.191.396. Politics of South Asia. 3 Credits.
This course is intended as an introductory seminar in comparative politics designed to acquaint participants with academic debates on a range of topics that are relevant to understanding the politics of contemporary South Asia. South Asia is a region that not only has a rich and complex history and culture, but also a region to study themes such as colonialism, nationalism, economic growth and development, democracy vs. authoritarianism, religious fundamentalism, and ethnic conflict. Whether it is the emerging radicalization of politics and consequent social strife in Pakistan, the paradox of democracy in India that is on the economic ascendant yet still beset by poverty and a poor track record in human development, whether it is the brutality of the military regime in Myanmar or the democratization of Bangladesh, whether it is the violent sectarian conflicts that have wracked the region or the grassroots social movements that have set an example, developments in the South Asian subcontinent continue to draw our attention to how developments within these countries shape global interactions as well as how international factors shape their political trajectories in turn. Drawing on multidisciplinary scholarship, this course will explore the history, culture, political economy, and contemporary debates in what has emerged as a strategically and economically vital region. Since the overwhelming majority of academic publications concerning the region use India as their case, the assigned readings may tend to have an India bias. However, we will use the theories developed in the Indian context to understand the politics of the other South Asian states, and ask how India-specific theories might be extended to capture the dynamics of its neighbors. The themes discussed during the course will be those that are crucial not only to understanding South Asia's trajectory, but also to a general study of politics in a developing country.
Instructor(s): S. Chidambaram
Area: Social and Behavioral Sciences.

AS.191.397. Freedom. 3 Credits.
This course will explore the concept of freedom as it develops in modern and contemporary political thought. We will examine contending conceptions of public (civic republican) and private (liberal) freedom, robust subjectivism, constraints of disciplinary power, and anarchism. This course concludes by tracking elements of these conceptions into contemporary American life. We will read the works of: Rousseau, J. S. Mill, Nietzsche, Foucault, Goldman, and Franzen.
Instructor(s): S. Gray
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.398. The International Politics of Genocide. 3 Credits.
This course examines the creation of the concept of genocide and explores its controversial evolution in international law, humanitarian efforts, and global politics. Dean's Teaching Fellowship course.
Instructor(s): B. Meiches
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.399. The Political Economy of Development. 3 Credits.
Ideas about the processes of economic development have undergone significant change since the end of World War II. The theory and practice of "development" has evolved over the intervening decades as both the structures of national economies and global markets have changed. Indeed, we might no longer agree what development is, who it is for and whether it is desirable. Today, development as a concept and a rallying cry is often expanded and reshaped to mean enforcing 'market reform,' monitoring multi;ateral aid programs, or even hastening globalization. How did this happen? What does it mean? How did we get to where we are today?
Instructor(s): A. Naseemullah
Area: Social and Behavioral Sciences.

AS.191.402. Numbers, Pictures, Politics. 3 Credits.
Aitchison students only.
Instructor(s): M. Rom
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.191.404. Damnation, Revolution and the American Experiment: Political Thought from Colony to Independence (PT). 3 Credits.
Area: Social and Behavioral Sciences.

AS.191.406. Corruption and Politics. 3 Credits.
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.407. Development of International Thought. 3 Credits.
This course proposes to read a series of foundational texts in international thought from the ancient Greeks to the middle of the 19th century. The goal will be to trace continuities and discontinuities between texts, to determine the impacts of historical events and to examine how such texts have impacted contemporary international thought. Special emphasis will be placed on questions of state formation, imperialism and attempts at European hegemony.
Area: Humanities, Social and Behavioral Sciences.

AS.191.412. Terrorism, Insurgency and Globalization. 3 Credits.
This course examines the globalization of non-state warfare in the 20th and 21st centuries by investigating technological and material changes that have increased the virulence and profile of non-state violence. (IR)
Dean's Teaching Fellowship
Instructor(s): J. Grove
Area: Social and Behavioral Sciences.
AS.191.413. American Foreign Policy: Power and Restraint. 3 Credits.
Instructor(s): J. Meiser
Area: Social and Behavioral Sciences.

AS.191.414. Slavery, Independence and the American Constitution. 3 Credits.
This course will explore a series of key issues in American intellectual and political life from the Declaration of Independence to the Civil War. It is divided in three parts: First we will examine the contentious political debates surrounding the adoption of the Constitution, paying close attention to the contending arguments, interests and ideological formations involved in establishing the federal government. We will then turn to the politics of the early 19th century to explore the development of American democracy, the distinctive contributions of American religious traditions, and the racial conflicts that shaped this period. Finally, we will turn to the decades immediately preceding the civil war to trace the new forms of contentious politics emerging in distinctly American modes of social criticism, literature, and political oratory. Throughout the course, we will be occupied with the following series of questions: In what ways have political institutions and political cultures shaped the American national identity? What can we learn from the continual oscillation between national unity and stark division in American politics? How have America’s distinctive religious traditions and religiously infused discourses contributed to political life despite its famously Godless constitution? To what extent has unresolved racial conflict been constitutive of American political experience?

AS.191.415. The Budgetary Process. 3 Credits.
Instructor(s): P. Weinstein
Area: Social and Behavioral Sciences.

AS.191.421. A Normal Country German Politics and Identity. 3 Credits.
This seminar deals with questions pertaining to the formation of modern German nationalism and national identity through the perspective of German politics and history. Dean’s Teaching Fellowship Instructor(s): F. Bauwens
Area: Social and Behavioral Sciences.

AS.191.429. American Foreign Politics. 3 Credits.
Pre requisites: “Contemporary International Politics” or “International Politics.” Requirements include a midterm, a small paper, and a final exam. (IR) This course examines the evolution of American foreign policy since the birth of the country. It investigates why American primacy came to be, what its consequences are, and what will drive American foreign policy in the future. Attention will be given to historical analysis, grand strategy, and a range of contemporary policy issues from the rise of China to the threat of terrorism. The aim of the course is to give students the theoretical and analytical tools necessary to think critically about the past, present, and future of American foreign policy, and its implications for international relations.
Instructor(s): R. Griffiths.

AS.191.430. Aitchison Law and Society. 1 Credit.
Area: Social and Behavioral Sciences.

AS.191.435. International Relations Theory and the Margins: The case of East Asia. 3 Credits.
This course explores how the concept of ‘international relations’ was introduced, challenged and negotiated in a region which we call ‘East Asia.’ Implicitly comparative, the course illuminates the divergent understanding of familiar terms such as “order,” “hierarchy,” “history,” “community,” “border/territoriality,” and “law” in light of the East Asian modernity. Students will be asked to reflect on questions of identity in relation to China, Korea and Japan and to ponder the extent to which those identities may be translated and understood in Western categories. Specifically this course will consider the role played by Sino-centrism, the rise of Japan later, and Westernization in shaping ‘international relations’ in East Asia. Dean’s Teaching Fellowship Instructor(s): H. Koyama
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.440. American Political Economy. 3 Credits.
Instructor(s): M. Lind
Area: Social and Behavioral Sciences.

AS.191.444. International Law. 3 Credits.
This course provides an introduction to international law, including its history and theoretical foundations; how it takes shape and is enforced, and the role it plays in modern foreign policy.
Instructor(s): P. Spector
Area: Social and Behavioral Sciences.

AS.191.450. Politics of Baltimore City. 3 Credits.
(AP)
Instructor(s): K. Mitchell
Area: Social and Behavioral Sciences.

Secessionist civil war is one of the chief sources of violence in the world today. Secession represents one of the most definitive challenges to the political legitimacy and authority of the modern state. This course will examine explanations for the causes of secessionism, why it has become more common over the last 60 years, and when it results in civil war. Consideration will also be given to normative questions such as: when do a people have the right to secession? These topics will be discussed in the context of a number of real world cases including Quebec, Tibet, Georgia, Catalonia, Kosovo, and Scotland.
Instructor(s): R. Griffiths.

AS.191.609. Historical Research Methods and the Study of Politics.
This course is designed for graduate students across the Social Sciences and the Humanities interested in the study of transnational politics from a historical perspective. Taught by Visiting Hinckley Professor Robert A. Hill, students will be introduced to methods of historical interpretation in the examination of archival documents and other sources of scholarly evidence. Utilizing materials and examples from Prof. Hill’s own extensive archive of Garveyism, Rastafarianism, Black Hebraism, and other transnational, millenarian political and social movements, students will become familiar with the unique research challenges posed by various forms of political and historical articulation, ranging from formal records of state governments, intelligence records, personal archives, to publications and memoirs of non-governmental actors and organizations.
Instructor(s): R. Hill.
Cross Listed Courses

History of Art

AS.010.147. South Asian Art, Culture and Politics: Empire, Colony, Nation. 3 Credits.
This course explores the visual culture and politics of South Asia from early archaeological settlements to contemporary installation art. Themes will include: the role of the patron, the relation of text and image, architecture and ritual/political space, colonialism, nationalism, modernity, and postcoloniality. Cross-listed with Political Science
Instructor(s): R. Brown
Area: Humanities.

AS.010.327. The Harem and the Veil: Space and Gender in the Islamic World. 3 Credits.
This course explores the constructed imagery of the harem and the veil in relation to politics and visual culture in the Middle East, North Africa, India, and Euro-America. Topics will include: Ottoman palace architecture, Orientalist painting, mandating/banning the veil, Islamic feminisms. We will address visual culture broadly, including advertising, architecture, contemporary art, film, news media.
Instructor(s): R. Brown
Area: Humanities
Writing Intensive.

AS.010.382. The Politics of Display in South Asia. 3 Credits.
Through examining collecting, patronage, colonial exhibitions, and museums, this course examines how South Asia has been constructed in practices of display. Themes: politics of representation, spectacle, ethnography, and economies of desire related to colonialism and the rise of modernity. Cross-list with Anthropology, Museums and Society and Political Science.
Instructor(s): R. Brown
Area: Humanities
Writing Intensive.

AS.010.607. The Epistemology of Photography.
This seminar will ask how photography produces ways of knowing: how does photography’s reality-effect shape its dissemination and absorption? Is photography’s emergence during the colonial era coincidental or catalytic? How is memory (re)constituted in a photography-saturated world? What kinds of histories does photography encourage and discourage? Is a photograph an object? We will read across disciplines (literature, anthropology, history, history of art, political science, theory) to investigate the epistemology of photography and the photograph.
Instructor(s): R. Brown.

AS.010.634. The Politics of Visual Culture.
In-depth reading and discussion at the intersection of visual culture and the political. Issues may include photography and colonialism, national symbolism, commodification of culture, visual and ethnographic display, the national museum, repatriation, modernity and the spectacle.
Instructor(s): R. Brown.

AS.010.666. Exhibiting the Other.
Despite challenges to museum practices in the 1970s and 1980s, the approach to displaying the art and visual culture of regions and periods outside of the European and North American mainstream remains caught between scholarly theorizing and demands for the commodification of the exotic. The ongoing exclusionary logic of collecting and display practices and the shrinking budgets for museums undermine efforts to rethink and challenge longstanding institutionalized patterns. In this seminar we will assess the politics, theory, and practice of displaying what still operates as the "other", reading across art history, museum studies, politics, and anthropology. Open to senior undergraduates with permission of instructor. Cross-listed with Political Science and Programs in Museums and Society
Instructor(s): R. Brown.

Anthropology

AS.070.200. On Secrets - Their concealment, Revelation & Beyond. 3 Credits.
We track secrecy as a social process. We examine secrets – their concealment and modes of existence (secret societies, esoteric rituals, state secrecy); the politics of their revelation (from colonial contexts to Wikileaks); and their modes of existence thereafter in the modern world (within public spheres, as intellectual property).
Instructor(s): U. Nair
Area: Humanities, Social and Behavioral Sciences.

AS.070.294. Political Anthropology of Africa. 3 Credits.
The course will explore classical and contemporary ethnographies of the political in Africa, examining how their authors address issues of power, hierarchy and symbol. We will study various articulations of state, ethnicity and community that are analyzed by observing relations between power and resistance or between law, economy and violence through war, custom and ritual. The seminar will also address the way in which Africa has been constituted as a key source of the sub-field of political anthropology through colonial trajectories, postcolonial detours and the political imagination of the past and the future.
Instructor(s): J. Obarrio
Area: Humanities, Social and Behavioral Sciences.

AS.070.321. Prisons and Police. 3 Credits.
How does incarceration generate sociality? How do prisons and policing figure in anthropological thought and social theory? This seminar explores both the emergence of prisons as forms of punishment and reform as well as sociality, and consider policing in relation to concepts of population as well as neighborhood. It draws from classic topics in anthropology of law, custom, and crime as well as explores contemporary engagements with topics of incarceration and security. It draws widely from ethnography, social and political theory, film, public health studies, and sociological works on incarceration.
Instructor(s): C. Han
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.070.344. Muslim Societies and Modern States: Ethnographic Encounters. 3 Credits.
Through a close reading of four recent ethnographies, this course explores the diverse ways Muslims encounter the power of modern states in the contemporary world. Topics include: state-led efforts to reform educational discipline and curricula in Yemen, the imaginary topos of dreams as a space of encounter in Egypt, and legal institutions in Egypt and Pakistan. Diverse ethnographic approaches to a common theme raise such questions as: how do legal reforms constrain, enable or express forms of moral striving in everyday life? what forms of knowledge are sanctioned by the state and what forms exceed its limits? what kinds of community become possible in the grip or the margins of modern governance?
Instructor(s): J. Bush
Area: Humanities, Social and Behavioral Sciences.

AS.070.368. Modern South Asia. 3 Credits.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.676. The Gift of Justice.
Area: Humanities, Social and Behavioral Sciences.

History
AS.100.203. Modern Japan. 3 Credits.
Instructor(s): T. Steen
Area: Humanities, Social and Behavioral Sciences.

AS.100.404. John Locke. 3 Credits.
Seminar style course in which John Locke’s major works will be read intensively, together with some of his contemporaries’ works, and select scholarly interpretations.
Instructor(s): J. Marshall
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.702. Race and Migration in Modern History.
Instructor(s): M. Shell-Weiss.

Public Policy
AS.195.477. Intro To Urban Policy. 3 Credits.
Perm. Req’d. 195.477 & 195.478 must be taken together by undergraduates Cross-listed with Political Science, Sociology, Public Health Studies, and Geography and Environmental Engineering
Instructor(s): S. Newman
Area: Social and Behavioral Sciences
Writing Intensive.

AS.195.478. Urban Policy Internship. 3 Credits.
195.478 & 195.477 must be taken together by undergraduates Cross-listed with Political Science, Sociology, Public Health Studies, and Geography and Environmental Engineering
Instructor(s): S. Newman
Writing Intensive.

German Romance Languages Literatures
AS.211.174. Media of Propaganda. 3 Credits.
Today, promoting a particular political or personal point of view is not viewed as "propaganda," but rather as building a community of equally minded people. But where do we draw the line, and when does the use of a medium in service of a certain message become intrusive and misleading? What role do democracy and cultural values play in this use or abuse of media? In this class the term "propaganda" will be evaluated carefully and applied to such historical media case studies as the informational use of the radio in World War One, Leni Riefenstahl’s Nazi propaganda films, the legendary success of advertisement campaigns in the 1950s and 1960s, the AIDS movement and other mobilization strategies from the 1980s to the 1990s, and the new values of friendship and propaganda in our current facebook nation.
Instructor(s): B. Wegenstein
Area: Humanities.

AS.211.212. Holocaust and Film. 3 Credits.
Taught in English. This class will examine the history of Holocaust films in regard to the possibilities of genre (documentary versus feature), the use of historical and archival materials, as well as general questions of representation and trauma. I CINEMA OF THE VICTIMS II CINEMA OF THE PERPETRATORS III CINEMA OF THE SECOND AND THIRD GENERATIONS WITNESSES Students will be writing weekly response papers to all screenings, and will choose to work with films in the original languages German, English, Italian, and French. This class will be writing-intensive. Cross-listed with Film and Media Studies, Political Science, History, and Jewish Studies.
Area: Humanities
Writing Intensive.

AS.211.344. Holocaust and Film. 3 Credits.
Taught in English. This class will examine the history of Holocaust films in regard to the possibilities of genre (documentary versus feature), the use of historical and archival materials, as well as general questions of representation and trauma. I CINEMA OF THE VICTIMS II CINEMA OF THE PERPETRATORS III CINEMA OF THE SECOND AND THIRD GENERATIONS WITNESSES Students will be writing weekly response papers to all screenings, and will choose to work with films in the original languages German, English, Italian, and French. This class will be writing-intensive. Cross-listed with Film and Media Studies, Political Science, History, and Jewish Studies.
Instructor(s): B. Wegenstein
Area: Humanities
Writing Intensive.

AS.211.394. Brazilian Cult & Civ. 3 Credits.
This course is intended as an introduction to the culture and civilization of Brazil. It is designed to provide students with basic information about Brazilian history, art, literature, popular culture, theater, cinema, and music. The course will focus on how indigenous Asian, African, and European cultural influences have interacted to create the new and unique civilization that is Brazil today. The course is taught in English, but ONE extra credit will be given to students who wish to do the course work in Portuguese. Those wishing to do the course work in English for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. The sections will be taught simultaneously. Section 01: 3 credits Section 02: 4 credits (instructor’s permission required)
Instructor(s): M. Bensabat Ott
Area: Humanities
Writing Intensive.
AS.211.446. Contemporary Italy: A Visual and Literary History. 3 Credits.
Taught in English. This introductory course will explore the main features of Italian society, culture, politics from 1945 to the present. Our discussions will be based upon a critical analysis of both visual and literary sources (in translation): excerpts of movies, videos, pictures, novels, short stories, etc. By the end of this journey through the past you will have better understanding of today's Italy. Topics include: the Cold War and the division between Catholics and Communists, the economic miracle, the '68 student revolt, political terrorism in the 70s, the second Republic and Berlusconi. Attention will be paid to issues such as the condition of women and the youth, organized crime, political corruption, migration, the Southern question.
Instructor(s): M. Rossi; W. Stephens.
Area: Humanities.

The seminar will explore to what extent Hegel can be read as contributing to a feminist philosophy. We will focus on Hegelian openings onto the emotional in Phenomenology of Spirit. In addition, we will study feminist philosophers who have drawn on or offered critical readings of Hegel (Irigaray, Butler, Cavarero, Malabou, and others). Co-listed with AS.190.633
Instructor(s): J. Bennett; K. Pahl
Area: Humanities
Writing Intensive.

AS.213.634. Schiller's Aesthetic Writings.
Schiller's theoretical writings might be approached by the sentence 'it is only through beauty that man makes his way to freedom'. Discussing the assumption that humans live in a condition of unfreedom resulting from social and economic divisions, Schiller's notion of beauty crosses boundaries between ethics, politics and aesthetics to formulate a theory of modernity in which beauty functions as a medium to reconcile man's sensuous nature and his capacity for reason. The course will examine Schiller's concept of beauty in relation to the anthropological, political, ethical and aesthetic discourses of his time especially with respect to Kant's view of aesthetic judgment which Schiller at the same time embraced and criticized. Particular attention will be paid to Schiller's reflexions on representation as well as to the poetics of his aesthetic discourse. Readings include: Kallias-Briefe (1793), Über Anmut und Würde (1793), Vom Erhabenen (1793), Über die ästhetische Erziehung des Menschen in einer Reihe von Briefen (1793), Über naive und sentimentalische Dichtung (1795/96). Readings and discussions in German.
Instructor(s): A. Krauss.

In this seminar we will examine a selection of literary reflections on and engagements with globalization and its mounting failures and burdens, as it has emerged in Europe and the Americas from the mid-twentieth century to the present. From the economic, constitutional, and cultural politics around the unification of Europe, to the ideological and imperial misfortunes of the U.S. after the collapse of the "End-of-History" thesis, to the resurgence of state populism in Latin America in the wake of neoliberal exhaustion, literary fiction has been deployed to posit, explore, and contest national and post-national myths of identity. The seminar will interrogate how this engagement functions both as aesthetic and theoretical discourse. Readings may include novels by Albert Camus, W. G. Sebald, Leonardo Sciascia, Orhan Pamuk, Javier Marías, Roberto Bolaño, and Jonathan Franzen, along with theoretical writings by Gianni Vattimo, Jürgen Habermas, Rodolphe Gasché, and others.
Instructor(s): E. Gonzalez; W. Egginton
Area: Humanities.

AS.213.344. Holocaust and Film. 3 Credits.
Taught in English. This class will examine the history of Holocaust films in regard to the possibilities of genre (documentary versus feature), the use of historical and archival materials, as well as general questions of representation and trauma. I CINEMA OF THE VICTIMS II CINEMA OF THE PERPETRATORS III CINEMA OF THE SECOND AND THIRD GENERATIONS WITNESSES Students will be writing weekly response papers to all screenings, and will choose to work with films in the original languages German, English, Italian, and French. Instructor(s): B. Wegenstein
Area: Humanities
Writing Intensive.

AS.213.366. German Political Thought. 3 Credits.
This course will introduce students to major figures in German political thought from Martin Luther to Karl Marx and Immanuel Kant to Carl Schmitt. The class will explore such issues as the notion of sovereignty, the relationship between church and state, the theory of parliamentary democracy, and the political and economic ramifications of liberalism. Reading and discussion in English.
Instructor(s): R. Tobias
Area: Humanities.
AS.214.340. Holocaust & Film. 3 Credits.
Taught in English. This course examines the question of the Holocaust and its representation in the filmic media. We will analyze such themes as post-traumatic documentary (e.g., Night and Fog, Alain Resnais 1955), the resistance to representation (Shoah, Claude Lanzmann 1985), Holocaust drama and the ethics of entertainment (e.g., Schindler’s List, Steven Spielberg 1993), the question of filmic adaptation (e.g., The Grey Zone, Tim Blake Nelson 2002—based on Primo Levi’s The Drowned and the Saved 1986), and the new genre of confessional first person video-diary (e.g., Two or Three Things I know About him, Malte Ludin 2005). On this last theme we will also host the two-day symposium “The Holocaust: Children of the Perpetrators Confront Their Parents’ Nazi Past through Documentary Film,” in March 09. The symposium will feature three international documentary filmmakers and their recent films: The End of the Neubacher Project, Marcus Carney 2007, Fatherland, Manfred Becker 2006, and Two or Three Things I know About him, Malte Ludin 2005, in which the filmmakers—children of Nazi perpetrators—are asking the question “who am I in relation to my father’s deeds?” The symposium will further include a number of experts on the topic of Holocaust, commemoration, and documentary film. Students will be involved in the preparation and, if interested, in the panel-discussions of the symposium. All films will be screened with English subtitles; this class is reading-intensive and writing-intensive; weekly response papers will be written about the films and the course topic at large. Cross-listed with Film and Media Studies, Political Science, History, and Jewish Studies Writing Intensive.

AS.214.342. Documentary Film and Ethics. 3 Credits.
This class will look at questions of how documentary filmmakers have attempted to and indeed changed the law by making such documentaries as “Capturing the Friedmans,” “Super Size Me,” and “The Corporation.” It will look at the area of human rights films, and the ethical filmic intention of mobilizing communities, or helping people in need with films such as “The Thin Blue Line,” “Darwin’s Nightmare” and “Sand and Sorrow.” We will analyze which documentary genre can address issues of information, mobilization, convincent, truth and propaganda with which means of expression (e.g., direct cinema). Overall, the ethics of all these attempts of filmmaking will be examined cross-culturally and historically.
Area: Humanities.

AS.214.345. Machiavelli’s World: Tyrants and Intellectuals in Renaissance Italy. 3 Credits.
Italy during the Renaissance was politically fragmented, a hodge-podge of small states organized under a wide variety of political systems: ostensibly democratic republics, states ruled by warrior-tyrants, the temporal authority of the papacy, and more. The struggle for dominance between these various states and systems was fought not only by armies but also by humanist intellectuals – a class that flourished during this period. We will focus on the particularly interesting career of Niccolò Machiavelli, who authored theoretical justifications both for republicanism (especially in his Discourses) and for tyranny (in his most famous and enigmatic work, The Prince). With close attention to historical context, we will read these and other works by Machiavelli. We will also study other Italian Renaissance intellectuals who responded to the political upheavals of their day in a variety of ways, including Coluccio Salutati, Leonardo Bruni, Leon Battista Alberti, and Pietro Aretino. The class will be conducted in English, and a separate section will be offered for Italian majors (and others with a strong command of the language) in which we will read and discuss texts in Italian.
Instructor(s): J. Coleman
Area: Humanities.

This class examines the areas of aesthetics, technology, and society critically in regard to media theory and practice following the 2010 anthology Critical Terms in Media Studies. The class also thematically accompanies the international conference Technologies of Meaning, March 3-4, 2011 with such speakers as Avital Ronell, Tom Gunning, and Sam Weber. Cross-listed with English, Political Science, and Anthropology
Instructor(s): B. Wegenstein.

In this seminar we will examine a selection of literary reflections on and engagements with globalization and its mounting failures and burdens, as it has emerged in Europe and the Americas from the mid-twentieth century to the present. AS.215.327. Modern Political Thought in Latin America. 3 Credits.
Sophomores, Juniors and Seniors only. The course is an introduction to modern political thought in Latin America. It draws on essays and novels written by major and influential political thinkers such as D.F. Sarmiento, Gonzalez Prada, J.C. Mariategui, Leopoldo Zea, J. E. Rodo, Octavio Paz, Jose Revueltas, Jose Maria Arguedas, Mario Vargas Llosa, Darcy Ribeiro, Enrique Dussel and the authors of the Sumac Kawasy as well as Liberation Theology central writings. The course will be taught in English. Students wishing to do work in the original Spanish or Portuguese will be encouraged to do so.
Instructor(s): S. Castro-Klaren
Area: Humanities
Writing Intensive.

In this seminar we will explore the idea of the partial, not as secondary to wholeness, but as prior to and independent of any presumption of totality. From the partial drives of psychoanalysis to the Heideggerian concept of Eigentlichkeit to the deconstructive understanding of essences as being always secondary and parasitic, the concept of partiality can help us understand how human desire is as inextricably bound to temporality and incompletion as it is to corporate fantasies of eternity and wholeness. Weaving together a series of literary and philosophical readings from sources like Borges, Kafka, Cervantes, Plato, Augustine, Maimonides, Derrida, Lacan, and Zizek, we will explore how being partial entails both the impossibility of truly impartial judgments and the inevitability of our being always partial to other people, experiences, and objects. Ultimately at stake will be the role literature and the reading of literature can have in taking stock of partiality in all its forms and effects.

Graduate students or advanced seniors. This seminar will explore the corpus of political thought in Latin America since independence (1810) to the present by focusing on the discourses that constructed and continue to construct key questions in the negotiation of power in the post-colonial res publica: territory, nationhood, national subjectivation, cultural imagination, justice and regimes of inclusion and exclusion. Readings will include the work of Samiento, Euclides da Cunha, Gonzalez Prada, Mariategui, Martí, Revueltas, Paz, Dussel, Ribeiro, Freire, Arguedas, Liberation Theology and Sumaz Kawsay authors.

Instructor(s): S. Castro-Klaren
Area: Humanities
Writing Intensive.

Sociology

AS.230.240. Introduction to Environmental Sociology. 3 Credits.

The first part of the course will critically examine the major theoretical perspectives on environmental sociology including nature as a social construction, ecological marxism and ecological modernization. The second part of the course will examine key aspects of the relationship between society and the environment including risk perception, the environmental effects of economic globalization, the distribution of environmental goods and bads, population growth, environmental movements, and debates about state-led environmental protection.

Instructor(s): A. Bonini
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.260. Political Sociology. 3 Credits.

This course explores the interaction between political power and social forces in macro-comparative and international perspectives, focusing on how political institutions (such as states, political parties, and international governing bodies) are shaped by actions of different social groups (such as classes, ethnic groups, social movements), and vice versa. The class will cover the historical emergence of sovereign nation-state as the most salient political organization across the world, as well as its evolution into the form as we know it today. The class will also discuss the array of challenges that modern nation-states are facing under globalization and restructuring of world order following the end of Cold War. Cross-listed with Political Science.

Instructor(s): H. Hung
Area: Social and Behavioral Sciences.

AS.230.307. Sociology of Latin America. 3 Credits.

Area: Social and Behavioral Sciences.

AS.230.318. State and Society in Modern India. 3 Credits.

This course examines the complex, at times conflicting, relationship that has emerged between Indian seats of power from above and Indian expressions of society from below. Attention will be placed on the period between 1947 to the present.

Instructor(s): R. Agarwala
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.321. Revolution, Reform and the Social Inequality of China. 3 Credits.

This course explores various aspects of social inequality in China during the Mao Zedong and the post-Mao reform eras. We will examine inequality within villages, the rural/urban divide, urban inequality, education and health policies, and gender and ethnic relations. Each of these issue areas will be tackled analytically, but the aim is also to understand what it was/is like to live in China during and after the Mao era. The course is designed for both undergraduate and graduate students. Cross-listed with East Asian Studies and International Studies (CP).

Instructor(s): J. Andreas
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.360. Globalization, Labor and the State in East Asia. 3 Credits.

The course will examine the relationship between labor, state policies, and globalization in China, South Korea and Japan in comparative perspective. We will look at debates about the role of developmentalist states on economic and social development, as well as transformation in the nature of work and labor relations in the three countries.

Instructor(s): L. Zhang
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.365. Labor and Globalization. 3 Credits.

The course will focus on the ways in which contemporary processes of globalization (including the current crisis) are transforming the nature of work and employment, using a wide range of local case studies from Africa, Asia, Europe, Latin America and North America. Themes include changes in business organization that impact labor (e.g., automation, outsourcing, subcontracting) and the role of inter- and intra-national labor migration. We will also look at present-day forms of workers’ protest (open and hidden, local and transnational) and how these are shaped by and are shaping global social change. Cross-listed with International Studies.

Instructor(s): B. Silver; L. Zhang
Area: Social and Behavioral Sciences.

Humanities Center

AS.300.398. Zionism, Post-Zionism and Modern Hebrew Literature. 3 Credits.

This course studies the development of modern Hebrew literature through its relation to Zionism and Post-Zionism. Based on a close reading of both literary and non-literary Zionist and Post-Zionist texts, we will explore the thematic, social, political, aesthetic and stylistic influences that these two movements have had on modern Hebrew literature. Writers to be discussed include: Hertzl, Nordau, Achad ha-am, Jabotinsky, Kluasner, Brenner, Berdyczewski, Agnon, Greenberg, Kahana-Carmon, Oz, Yehoshua, Grossman, Castel-Bloom, and Laor. Cross listed with: Jewish Studies and Political Science.

Instructor(s): N. Stahl
Area: Humanities
Writing Intensive.
This seminar revisits the debate between Derrida and Lévinas about metaphysical, ethical, and political violence with a specific focus on the importance granted or denied to the animal life of humans. Cross-listed with Political Science
Instructor(s): P. Marrati.

East Asian Studies
AS.310.214. Empire and Hierarchy in East Asia. 3 Credits.
This course investigates the spectrum of unequal political authority in international politics. Empire, as one pole of hierarchical politics, persists in today's multilateral, rule-based order. We will examine the theoretical foundations of hierarchy and empire in the study of international politics in East Asia. In addition, we will look at why empires arose at particular junctures, and contemporary directions in the debate on empire.
Instructor(s): J. Wang
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.310.215. Enlightenment, Empire, and Democracy: Transnational Political Cultures in East Asia, 1880-1980. 3 Credits.
This course explores the global circulation of political ideas and the formation of transnational social, intellectual, and aesthetic movements in Japan, China, and Korea from the 1880s to the 1980s.
Instructor(s): A. Bronson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.310.305. Southeast Asia and US Security. 3 Credits.
This survey course is designed to introduce students to Southeast Asia -- the ten member countries of the Association of Southeast Asian Nations (ASEAN) plus Australia and New Zealand. Southeast Asia is an integral part of the broader region of East Asia and a geographic bridge to the Indian subcontinent (South Asia). Southeast Asia has been one of the great success stories in the saga of modernization and development of post-colonial Afro-Asia over the last six decades. Its resulting economic importance is matched by its strategic significance given the presence of imbedded jihadist networks and the emergence of China as a regional great power and aspirant superpower. Nevertheless, the region has been largely overlooked by senior foreign policy and defense officials in Washington. This course will equip students to fill that void by examining the region from the perspective of national security strategy -- broadly understood in its multiple dimensions. Students will be challenged to formulate some element of a viable U.S. national security strategy for the region.
Instructor(s): M. Ott
Area: Social and Behavioral Sciences.

AS.310.214. Domestic Politics of Contemporary China. 3 Credits.
This course introduces students to China’s contemporary political history and current political system. It helps students develop a critical understanding of China’s governance institutions and processes, political economy, and state-society relations. The course focuses primarily on China’s domestic politics but also covers China’s changing role in Asia and the world.
Instructor(s): Staff
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.310.334. Southeast Asia: Contestations, Continuities, Changes. 3 Credits.
‘Southeast Asia’ designates a geographical region comprised of countries such as Thailand, Indonesia, Malaysia, Vietnam, the Philippines, and Singapore. These countries are often more different than alike, and their cultural, ethnic, religious and political diversity resists easy reduction. As such, this is not a survey course of the area. Rather, we will examine elements of the Southeast Asian experience that speak to contemporary debates on cultural, political, and religious diversity in globalization’s second wave, and what it can teach us about assimilation, acculturation, and acceptance. We will try to get a feel of the variegated texture of Southeast Asian societies through historically and theoretically oriented texts drawn from different disciplines. Specifically, we will concentrate on responses to European colonialism, nationalist identity formations, and the impact of these histories upon contemporary contentions over the role of religion in public life, migratory practices, and second-wave globalization.
Instructor(s): D. Kwek.

AS.310.435. International Relations Theory and the Margins: The Case of East Asia. 3 Credits.
This course explores how the concept of international relations was introduced, challenged, and negotiated in East Asia. Implicitly comparative, the course illuminates the divergent understanding of familiar terms such as order, hierarchy, history, community, border/territoriality, and law, in light of the East Asian modernity. Students will be asked to reflect on questions of identity in relation to China, Korea and Japan and to ponder the extent to which those identities may be translated and understood to Western categories. Specifically this course will consider the role played by Sino-centrism, the rise of Japan later, and Westernization in shaping international relations in East Asia.
Instructor(s): H. Koyama
Writing Intensive.

Sociology
AS.360.247. Introduction to Social Policy: Baltimore and Beyond. 3 Credits.
How can we address pressing social problems, such as inner city poverty, inequality in educational attainment among children from different backgrounds, and disparities in access to health care? Social policy refers to the programs, legislation and governmental activities that regulate access to important social, financial and institutional resources needed by members of a society to address these concerns. Social policy also aims to reduce inequality, especially in the areas of education, health, income, housing, neighborhoods, and employment. The study of social policy is interdisciplinary, and this course will introduce students to the basic concepts in economics, political science, and sociology relevant to the study of social problems and the programs designed to remedy them. We will cover issues of national policy importance, as well as issues specifically affecting Baltimore City and the metropolitan region. This course is open to all students, but will be require d for the new Social Policy Minor. The course is also recommended for students who are interested in law school, medical school, programs in public health, and graduate school in related social science fields. Cross list with Sociology, Economics and Political Science. Freshman, Sophomore and Juniors only.
Instructor(s): A. Sheingate; B. Morgan; S. Deluca
Area: Social and Behavioral Sciences
Writing Intensive.
**Interdepartmental**

**AS.360.255. The Politics of Sexual Empowerment. 3 Credits.**
This course will survey a range of political problems regarding sexual empowerment and disempowerment, in particular concerning feminism(s), rights within the family, sexual orientation, sex work, pornography, sex trafficking, and related topics. No previous political theory experience required. Cross-listed with Humanities Center
Area: Humanities, Social and Behavioral Sciences.

**Program in Latin American Studies**

**AS.361.313. Cuba and US Decision Making. 3 Credits.**
Area: Social and Behavioral Sciences.

**AS.361.318. Cuba and U.S. Decision Making. 3 Credits.**
This course consists of a series of case studies in US decision making related to Cuba from 1959 to the present, everything from the initial decision signed by Eisenhower to launch efforts to remove the Castro government (which led to the Bay of Pigs) to President Bush’s decision last May to launch new measures to remove the Castro regime. Cross-listed with Political Science
Area: Humanities, Social and Behavioral Sciences.

**AS.361.332. Third Wave Democracy in Latin America, 1980-2012. 3 Credits.**
This course explores the social and political history of third wave democracy in Latin America over the last three decades, including “neopopulism,” “delegative democracy” and “participatory democracy” and will compare fledgling democracies of the 1980s, neoliberal governments of the 1990s and radical populist regimes of recent years, with a special emphasis on Argentina’s populist tradition. Writing intensive. Cross-list with International Studies and Political Science
Instructor(s): E. Cervone; S. Ellner
Area: Humanities, Social and Behavioral Sciences.

**AS.361.341. Peronismo and the Iconic Presence of Evita: Challenges of Representation. 3 Credits.**
This course is designed to introduce students to the literary and artistic production originated by Peronismo and particularly by Evita. It explores the historical period that consolidated Peronismo and devotes great amount of time to the controversial figure of Evita. She has fed the popular imagination; her representations have reached far beyond the limits of Argentina. The materials will include different genres: biographical, historical, fictional, and documentary.

**AS.361.402. The Left Turn in Latin America: Causes, Consequences and Challenges. 3 Credits.**
The return of the Left to power throughout Latin America is an example of unexpected political change. In this course we examine the causes, consequences, and challenges of the on-going ‘Left Turn.’ It starts by addressing the historical foundations of the Left and then examines different literature that attempts to account for this shift and assess the trajectory of the current Leftist governments.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**Center for Africana Studies**

**AS.362.175. Freshman Seminar: Remembering the Black Power Movement. 3 Credits.**
This course critically examines trends, developments, contradictions, and dilemmas related to the Black Power Movement for black identity and self-determination in the late 1960s and 1970s.
Instructor(s): F. Hayes
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.362.340. Power and Racism. 3 Credits.**
This course investigates the impact of white supremacy and anti-black racism, as a global system of power, on the political development of the United States of America.
Instructor(s): F. Hayes
Area: Social and Behavioral Sciences
Writing Intensive.

**AS.362.355. The Obama’s: Race and Politics in Comparative Perspective. 3 Credits.**
This course will compare racial politics in the United States and Brazil by examining issues such as race, religion, and political behavior that arose during Barack Obama’s political campaign and time in office.
What are racial politics? How are they different in Brazil and the United States? Why was Michelle Obama’s skin complexion an issue important to African-descended women in the United States and Brazil? Does the election of an African-descended president mean there are no racial problems in the United States? Have white racial attitudes dramatically changed? Although Brazil historically touted itself as a racial democracy, why have they never elected and African descended president in a country where African-descended people now outnumber whites? Does blackness carry global currency to such an extent that it explains why five Brazilian politicians changed their names to Barack Obama when running for office? Students will learn about political opinion and behavior and racial identification in two different countries while considering these issues in a contemporary context.
Instructor(s): G. Mitchell
Writing Intensive.

**AS.362.357. Black Existential Thought. 3 Credits.**
Black existentialism is a branch of Africana philosophy—the philosophical tendencies that arose out of the experience of the African Diaspora. This course is a philosophical interrogation into the meaning of the lived experience of being black in the context of an anti-black world through addressing such existential questions as freedom, identity, anguish, dread, responsibility, embodied agency, evil, resentment, liberation, and nihilism.
Instructor(s): F. Hayes
Writing Intensive.

**AS.362.412. Black Political Thought and the Enlightenment. 3 Credits.**
This course examines how modern black political thought emerged through a series of critical engagements with Enlightenment ideas about universalism, progress, the authority of reason, and the foundations of citizenship. Course readings include texts by W. E. B. Du Bois, Paul Gilroy, Cornel West, Frantz Fanon, C. L. R. James, and others.
Instructor(s): A. Culver
Writing Intensive.

**AS.362.416. Black Nationalism and its Critics. 3 Credits.**
This seminar will pursue an in-depth, critical analysis of the history and philosophy of black nationalism and its relationship to other trends in black political thought. Readings from Alexander Crummell, Martin Delany, Frederick Douglass, W. E. B. DuBois, Marcus Garvey, Malcolm X, James Baldwin, and others.
Instructor(s): Staff
Area: Humanities, Social and Behavioral Sciences.

**Psychological and Brain Sciences**

Psychological and Brain Sciences are concerned with understanding the biological and psychological processes underlying animal and human
behavior, and with the effects of environmental influences on behavior at all stages of development.

The undergraduate program leading to the baccalaureate degree is intended to provide students with a sound background in psychological and brain sciences and, at the same time, to prepare them for advanced study.

The program for doctoral students in psychological and brain sciences is scientifically oriented and emphasizes research methodology. The broad aims of the graduate program are to train students to become scientists rather than practitioners, and to provide them with the knowledge and skills they need to help solve the problems of contemporary society.

Facilities

The department’s offices and laboratories contain dozens of desktop computers (PCs and Macintoshes) and UNIX workstations used for experimental control and for computational studies, simulation, data analysis, and manuscript preparation.

The F. M. Kirby Research Center for Functional Brain Imaging houses 3.0T and 7.0T Philips research-directed MRI scanners for fMRI studies of human perception, memory, and cognition.

The cognitive psychology and cognitive neuroscience laboratories contain a wide range of computer equipment and special-purpose research equipment, including image-processing and large-format graphics systems, eye-movement monitors, speech recognition and analysis systems, stereoscopic graphic systems, video equipment, and other stimulus-presentation and response-collection devices.

The biopsychology laboratories have all the facilities necessary to conduct modern behavioral neuroscience research, including equipment for behavioral and operant testing, electrophysiology, histology, surgery, neurochemistry, and systems for the analysis and synthesis of audio signals.

The courses in psychological and brain sciences have four purposes:

1. to acquaint all interested students with a sampling of topics through a variety of introductory and advanced courses;
2. to prepare majors for graduate work in psychology and related disciplines through a program that meets the admission requirements of the outstanding graduate departments in the United States;
3. to offer a distribution of courses for a minor concentration in psychology as well as several fields of concentration for area majors in the social and behavioral sciences; and
4. to provide an honors track designed for exceptional students who want training beyond that provided by the standard undergraduate curriculum.

I. Required Courses Outside the Department

* 200-level and above, with a minimum of three courses at the 300-level or higher.
** One upper level course in Cognitive Science may be used to satisfy these course credits with the approval of the director of undergraduate studies. Research Methods in Experimental Psychology, research, independent study, and internships may not be used to satisfy these course requirements.
*** Students who are planning advanced study in psychological and brain sciences are strongly encouraged to engage in psychological research and/or clinical internships.
~ You may use EN.550.111 Statistical Analysis I and EN.550.112 Statistical Analysis II/AS.110.201 Linear Algebra to fulfill this requirement.

Restrictions

No courses taken during Intersession or through the School of Education and the Carey Business School may be counted toward the requirements for the B.A. degree in Psychological and Brain Sciences (although a limited number of such courses may be counted toward the 120 credits required for graduation). Courses in the Summer at Hopkins daytime program do count toward the requirements for the B.A. in Psychological and Brain Sciences.
Preparation for Graduate Work in Psychology

The Department of Psychological and Brain Sciences provides preparation for graduate training in all areas of psychology, including clinical and counseling. Virtually all psychology graduate programs, including those that provide training in clinical or counseling psychology, expect students to have a strong background in scientific psychology, including statistics. The department encourages students to obtain additional practical experiences outside the classroom, including research in a laboratory and/or an internship in a mental health care setting. These additional experiences are particularly salient to graduate school admission committees.

Honors Program in Psychology

The B.A. degree with honors provides recognition for outstanding achievement in formal course work and research. The requirements for a degree with honors include those for the regular B.A. degree, plus the following:

- A minimum grade point average of 3.5 in psychology courses (exclusive of independent study or research) through the fall semester of the student’s junior year.
- A formal application to be submitted to the director of undergraduate studies by March 31 of the student’s junior year. The application must include a copy of the student’s transcript, a brief description of the proposed honors research project, and written endorsement of the application by the student’s faculty sponsor. The sponsor must have a full-time faculty appointment at Johns Hopkins and either a primary or a joint appointment in the Department of Psychological and Brain Sciences. Admission into the Honors Program is not guaranteed.
- Completion of two 300- or 600-level psychology courses, in addition to those required for the regular B.A. degree. Neither of these can be research or reading courses. These additional courses are not in addition to the 120 credits required for graduation.
- Completion of an independent research project under the supervision of a member of the department’s faculty, culminating in a written honors thesis. The student will enroll in AS.200.519 Seniors Honors Research and AS.200.520 Seniors Honors Research during both semesters of the senior year. The honors thesis must be submitted no later than March 31 of the senior year and must be read and approved in writing by two members of the faculty.
- Students considering application to the honors program should begin discussing possible thesis research topics with a faculty sponsor no later than the fall semester of their junior year.

Minor in Psychology

A minor in psychology is available to undergraduates majoring in any department. Students electing to minor in psychology should declare their intention directly to the director of undergraduate studies in the Department of Psychological and Brain Sciences by the end of junior year. The minor requires successful completion of the following:

Select three of the following:

- AS.200.101 Introduction to Psychology
- AS.200.110 Introduction to Cognitive Psychology
- AS.200.132 Introduction to Developmental Psychology
- AS.200.133 Introduction to Social Psychology

- Completion of a laboratory and/or an internship in a mental health care setting.
- Additional practical experiences outside the classroom, including research.
- Expect students to have a strong background in scientific psychology, including statistics.
- Virtually all psychology graduate programs require a strong background in scientific psychology.

Undergraduate Academic Awards

The Department of Psychological and Brain Sciences offers two undergraduate academic awards. The G. Stanley Hall Prize is awarded for outstanding achievement by an undergraduate in psychology. The Julian C. Stanley Award is given to the psychology major who most closely approximates Dr. Stanley’s personal and professional standards of excellence.

Master of Arts in Psychology

A student who has been admitted into the Ph.D. program can earn a Master of Arts degree in partial fulfillment of the requirements for the Ph.D. degree. Normally, candidates for the Ph.D. degree in psychology will qualify for the M.A. degree at the end of their second year, after having completed two area seminars and at least two courses in psychological research design and/or advanced statistics, provided that their performance is of the quality judged satisfactory for the M.A. level. There is no terminal master’s program.

Requirements for the Ph.D. Degree

The Department of Psychological and Brain Sciences emphasizes training and experience in the research methods essential to the development of new knowledge in the various fields of psychology. The core program for training doctoral students emphasizes scientific methodology and provides training in both pure research and research related to problems in the everyday world, with emphasis on the ways in which basic research methodology can be adapted to the study of applied problems. Each doctoral candidate is expected to become familiar with both a relatively narrowly defined area and a broad spectrum of knowledge related to the student’s topic of specialization.

In addition to general university requirements, the Department of Psychological and Brain Sciences has the following regulations:

Statistics

Most students will take AS.200.314 Advanced Statistical Methods during the first semester and AS.200.315 Advanced Research Design and Analysis during the second semester. Students with exceptional statistical training should take two more advanced courses by arrangement with the director of graduate studies.

Fundamentals and Core Topics in PBS

These courses offer an introduction to the fundamental principles of cognitive and physiological psychology and psychological and brain sciences. Students will read seminal and contemporary papers in topics that cover the breadth of the field.
First-Year Research Report
During the first year, the student, together with the faculty advisor, chooses a research project that will provide extended research experience. Normally, the student designs a study as a larger ongoing project. A project proposal must be submitted by April 15 of the first year; this presents the nature of the problem, reviews the relevant literature, and describes the study in detail, together with the anticipated data, means of analysis, and interpretations. A final report must be submitted by December 15 of the second year; this includes all the information appropriate for published work.

Advanced Examination
Each student must pass an in-depth examination in his/her chosen area. This examination which includes both a written and oral part, is graded by a committee of at least two faculty members. The student must pass the advanced examination by the beginning of the third year.

Advanced Study
Each student with a faculty advisor plans a course of study consisting of intermediate and advanced topical and research seminars.

Topical Seminars
One or more faculty members lead seminars on topics of special interest, such as cognitive processes, developmental psycholinguistics, neuro-physiological aspects of behavior, mathematical psychology, and information processing. Through these seminars a student gets intensive knowledge in particular specialties. Topics vary from semester to semester and are determined by the interests of both faculty and graduate students.

Research Seminars
Students and faculty engaged or interested in research in particular areas organize these seminars. Participants discuss their own research and other current research in the area.

Teaching Requirement
Teaching requirements are fulfilled by graduate students serving as teaching assistants to members of the department’s faculty, in courses taught in the School of Arts and Sciences. All graduate students are expected to TA a total of four semesters, as follows: second semester–first year students; first and second semester–second year students; first semester–third year students. A committee composed of graduate student representatives participates each semester in the selection of teaching assignments.

Advanced students may apply for a Dean’s Teaching Fellowship. A course is proposed by the student and is sponsored by a faculty member. These are highly competitive and prestigious awards. For details please visit http://krieger.jhu.edu/teachingfellowship/.

Literature Review
The literature review should be modeled on articles appearing in professional journals. Ordinarily the review provides a background for the thesis plan, but it may be prepared on a topic other than the one selected for the thesis. It is a separate document and is evaluated by the same committee that evaluates the thesis plan.

Thesis Plan
By the end of the third year or at least one calendar year before receiving the Ph.D. degree, each doctoral candidate must develop a plan for the dissertation research and present the plan before a departmental committee. With the committee’s approval, the student then prepares a dissertation.

Dissertation
The dissertation represents the student’s finest piece of scholarly work. It establishes the pattern for a research career and the basis for postgraduate employment. The Graduate Board of the University administers the final oral examination, a defense of the thesis. The doctoral dissertation must be in a form suitable for and worthy of publication.

Financial Aid
Financial support packages are available to all doctoral students, with 9-month stipends that are competitive with those of other universities. Financial support includes tuition remission. Summer research assistantships are available in the department.

For further information on graduate study in psychology, contact Academic Program Coordinator, Laura Dalrymple, Department of Psychological and Brain Sciences, 410-516-6175.

For current faculty and contact information go to http://pbs.jhu.edu/directory/

Faculty
Acting Chair
Susan Courtney
Professor: cognitive neuroscience, working memory, attention, and functional neuroimaging.

Professors
Gregory F. Ball
biopsychology, behavioral neuroendocrinology, neuroethology.

Howard Egeth
perception, memory, cognition, psychology and law.

Michela Gallagher
learning and memory, neurobiology of aging.

Peter Holland
learning, memory, motivation, behavioral ecology.

Steven Yantis
visual perception, attention, and functional neuroimaging.

Associate Professors
Lisa Feigenson
cognitive development, numerical cognition.

Justin Halberda
cognitive development, reasoning, language acquisition.

Assistant Professors
Marina Bedny
brain development and plasticity, cognitive neuroscience, concepts.
Jonathan Flombaum  
visual perception, attention and cognition.

Veit Stuphorn  
neurophysiological studies of decision-making.

Michael Yassa  
cognitive neuroscience, long-term memory, aging and dementia.

**Associate Faculty**

Richard Allen  
Associate Professor: (Neurology); School of Medicine.

Stephen Drigotas  
Teaching Professor and Undergraduate Advisor: social psychology.

David H. Edwin  
Associate Professor (Medical Psychology; School of Medicine): clinical and medical psychology.

Heather Roberts Fox  
Lecturer: industrial/organizational psychology.

Linda Gorman  
Teaching Professor: Neuroscience.

Paul J. Hofer  
Adjunct Associate Professor (U.S. Sentencing Commission, Washington, D.C.): law and psychology.

Ann Jarema  
Junior Lecturer: clinical psychology.

Chris Kraft  
Psychologist and Instructor, Psychiatry and Behavioral Sciences (Johns Hopkins Center for Marital and Sexual Health).

Meghan McGlaughlin  
Junior Lecturer: clinical psychology.

Aaron R. Noonberg  
Adjunct Assistant Professor (Clinical Practice): forensic psychology, neuropsychology, and behavioral medicine.

Herbert Petri  
Adjunct Professor (Department of Psychology, Towson University): motivational processes, neuropsychology of memory.

Lawrence Rallsman  
Adjunct Assistant Professor (Private Practice and Director of Forensic Services, Springfield Hospital Center): clinical applications of psychology and the law, behavioral finance.

**Joint Faculty**

Marilyn Albert  
Professor and Director at Division of Cognitive Neuroscience; School of Medicine: aging, cognition, memory.

Arnold Bakker  
Assistant Professor (School of Medicine Psychiatry): psychiatric neuroimaging.

Charles Connor  
Professor and Director of the Mind/Brain Institute: neurophysiology of visual perception and object recognition.

Barry Gordon  
Professor (Therapeutic Cognitive Neuroscience, Neurology & Cognitive Science); Dir. (Cognitive Neurology/Neuropsychology): language disorders, memory disorders, severe organic amnesia, focal amnesia, retrograde amnesia.

Steven Gross  
Associate Professor (Philosophy): philosophy of language, philosophy of mind, metaphysics.

Stewart Hendry  
Professor (Mind/Brain Institute): primate functional neuroanatomy.

Rudiger Von Der Heydt  
Professor (Mind/Brain Institute): perceptual organization in visual cortex.

Steven Hsiao  
Professor (Mind/Brain Institute): neurophysiology of tactile shape and texture perception.

Alfredo Kirkwood  
Associate Professor (Mind/Brain Institute): mechanisms of cortical modification.

James Knierim  
Associate Professor (Mind/Brain Institute): behavioral neurophysiology of the hippocampal formation.

Barbara Landau  
Dick and Lydia Todd Faculty Development Professor and Chair (Cognitive Science): language acquisition, cognitive development, spatial representation, acquisition of the lexicon.

Michael E. McCloskey  
Professor (Cognitive Science): language, memory, cognitive processes.

Guy McKhann  
Professor (Mind/Brain Institute): neurological and cognitive outcomes after coronary artery bypass surgery.

Ernst Niebur  
Associate Professor (Mind/Brain Institute): computational neuroscience.

Brenda Rapp  
Professor (Cognitive Science): cognitive neuropsychology, attention, reading and writing.

Peter R. Rapp  
Senior Investigative Chief (National Institute on Aging, Bayview).

**Professor Emeritus**

Bert F. Green Jr.  
psychological measurement, quantitative methods, and computer methods.

For current course information and registration go to https://isis.jhu.edu/classes/
Courses

AS.200.101. Introduction to Psychology. 3 Credits.
This course surveys all the major areas of scientific psychology, including the physiological bases of behavior; sensation and perception; learning, memory and cognition; developmental, social, and personality psychology; and psychopathology.
Instructor(s): S. Drigotas
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.106. Introduction to Clinical Psychology. 3 Credits.
This is a survey of the education and training requirements of mental health professionals; fundamentals of abnormal psychology; clinical diagnosis, assessment, and interventions; and professional activities of clinical/counseling/school psychologists. This course is meant as a precursor to AS.200.212, AS.200.313, and AS.200.328.
Area: Social and Behavioral Sciences.

AS.200.110. Introduction to Cognitive Psychology. 3 Credits.
Introductory survey of current research and theory on topics in cognitive psychology. The course will cover a range of topics in perception, attention, learning, reasoning, and memory, emphasizing relationships among mind, brain, and behavior.
Instructor(s): J. Flombaum
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.122. Introduction to Developmental Psychology. 3 Credits.
An introductory survey of human development from the prenatal period through adolescence. The developing child is examined in terms of cognitive, social, emotional, motor, and language development.
Instructor(s): L. Feigenson
Area: Social and Behavioral Sciences.

AS.200.123. Introduction to Social Psychology. 3 Credits.
An introductory survey of social psychology. Topics include social perception, social cognition, attitudes, prejudice, attraction, social influence, altruism, aggression, and group behavior.
Instructor(s): S. Drigotas
Area: Social and Behavioral Sciences.

AS.200.132. Introduction to Developmental Psychology. 3 Credits.
Formerly listed as Introduction to Psychophysiology. A survey of neuropsychology relating the organization of behavior to the integrative action of the nervous system. Cross-listed with Behavioral Biology and Neuroscience.
Instructor(s): L. Gorman
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.159. Evolutionary Psychology. 1 Credit.
In this course we discuss evolutionary psychology, which is the idea that the mind can be understood as an adaptation to our ancestral environment by means of natural selection. Freshmen only.
Instructor(s): H. Egeth
Area: Social and Behavioral Sciences.

AS.200.161. Illusions, delusions, and other confusions: Why what you think you know about human nature is (largely) wrong. 1 Credit.
This course is suitable for all, but would be especially useful for a student who does not expect to take many (or any) additional psychology or cognitive science courses. We will explore what modern psychology has uncovered about how our intuitions concerning human nature deceive us. Freshmen Only.
Instructor(s): H. Egeth
Area: Social and Behavioral Sciences.

AS.200.162. Childhood Disorders & Treatments. 3 Credits.
This course examines the psychological disorders that are usually first diagnosed prior to adulthood. Some of the specific disorders that will be discussed are Attention-Deficit and Disruptive Behavior Disorders, Pervasive Developmental Disorders, Learning Disorders and Mental Retardation. Students will become familiar with various diagnoses, etiologies, and methods of treatment. The course will follow deadlines for Term I for add/drop/withdraw and grade changes. This is an online course. The class will meet for ten weeks from May 29 to August 3.
Instructor(s): A. Jarema
Area: Social and Behavioral Sciences.

AS.200.204. Human Sexuality. 3 Credits.
Course focuses on sexual development, sexuality across the lifespan, gender identity, sexual attraction and arousal, sexually transmitted disease, and the history of commercial sex workers and pornography. Juniors and seniors only within the following majors/minors: Behavioral Biology, Biology, Neuroscience, Psychological & Brain Sciences, Public Health, and the Study of Women, Gender, & Sexuality. All registration will be done during the normal registration period and you must meet all requirements to register. Formerly taught as AS.200.302.
Instructor(s): C. Kraft
Area: Social and Behavioral Sciences
Writing Intensive.

AS.200.206. Foundations of Mind. 4 Credits.
An interdisciplinary investigation into the innateness of concepts: perception, number, language, and morality, physics discussed. Evidence from animals, infants, patients, brains. Students collect data in sections investigating claims from the readings. Cross-listed with Cognitive Science and Philosophy.
Area: Social and Behavioral Sciences.

AS.200.207. Research Methods in Experimental Psychology. 3 Credits.
Formerly known as Lab in the Analysis of Psychological Data (LAPD), this course is an overview of research methods used in psychology, experimental designs, interpreting results in psychology, and research ethics. Each student will complete an individual research project on a topic of his/her choosing as part of the course training. The class is taught interactively through lectures and labs.
Prerequisites: EN.550.111 (Statistical Analysis I) or EN.550.112 (Statistical Analysis II)
Instructor(s): H. Egeth
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
Writing Intensive.

AS.200.208. Animal Behavior. 3 Credits.
Examines basic principles of animal behavior (orientation, migration, communication, reproduction, parent-offspring relations, ontogeny of behavior and social organization). Evolution and adaptive significance of behavior will be emphasized.
Instructor(s): F. Madison; G. Ball
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.209. Personality Theory. 3 Credits.
An overview of the major theories of personality with their empirical bases and applications.
Area: Social and Behavioral Sciences.
AS.200.211. Sensation & Perception. 3 Credits.
A survey of the psychological and neurophysiological basis of seeing, hearing, touching, tasting, and smelling.
Instructor(s): M. Kibbe; S. Hendry; S. Yantis
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.212. Abnormal Psychology. 3 Credits.
A survey of the major syndromes of psychological disorders. Research and theory about the mechanisms, development, and diagnosis of psychopathology are emphasized.
Instructor(s): A. Noonberg
Area: Social and Behavioral Sciences.

AS.200.214. Brain Myths: Folk Psychology. 3 Credits.
This course examines popular “facts” about the brain and cognition, exploring the origins, how they are perpetuated in the media, and the empirical data that support or refute the claims. Recommended Course Background: One previous course in psychology or neuroscience.
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.216. Predictions Markets and the Wisdom of Crowds. 3 Credits.
Predictions markets and the wisdom of crowds: How cognitive psychology and behavior economics research inform forecasting & policy decisions. Dependent upon the collective wisdom of markets, prediction markets have risen from relative obscurity to relevance in a short time. Today, many regard these markets as the best forecasting tool available. This course looks at the mechanics of predictions markets, their history, and current application to electoral politics, policy decisions, and corporate finance. Finally, the consequence decision anomalies in prediction markets and regulatory reforms considered in hopes of developing deeper, more robust markets.
Instructor(s): L. Raitman
Area: Social and Behavioral Sciences.

AS.200.217. Psychology and Film: Perception of Mental Illness and Popular Cinema. 3 Credits.
In this course, we will discuss the influence of social beliefs, as well as the ethical and moral codes on the perception of mental illness. We will view this societal perception through the lens of film, with a particular focus on how mental illness has been portrayed in popular cinema throughout the 20th and 21st centuries. The class will not only explore how cinema reflects societal views, but also, how cinema informs those views.
Instructor(s): J. Dunn
Area: Social and Behavioral Sciences.

AS.200.220. Discover Hopkins Health Studies: Application of Abnormal Psychology to Forensic Cases. 1 Credit.
This introductory course will examine the basic diagnostic psychology principles with special application to forensic psychology. The class will focus on investigating forensic psychology queries including: Does my client have a mental illness? Why did he or she act in such a self-defeating way? Does the law require special disposition? Should my client be punished or rehabilitated? We will explore the reasons behind why a movie star would shoplift or a famous athlete would engage in a series of extra marital relationships; why a policeman would commit a series of bank robberies in broad daylight; or why someone would shoot a Congresswoman and kill and wound many others in the process.
Instructor(s): K. Hill; L. Raitman
Area: Social and Behavioral Sciences.

AS.200.222. Positive Psychology. 3 Credits.
The course will review the growing field of positive psychology and will review the research on positive human attributes such as optimism, happiness, hope, resiliency, self-esteem, altruism, empathy, and forgiveness. This course will explore the research on how such positive attributes are developed and how they relate to psychological and physical well-being.
Instructor(s): J. Halberda
Area: Social and Behavioral Sciences.

AS.200.301. History Of Psychology. 3 Credits.
A survey of leading figures, schools, and systems in the history of psychology. The course will emphasize the development of experimental psychology in late 19th century Germany and its establishment in America at Johns Hopkins, Harvard, Chicago, and Columbia. Special topics will include the development of clinical and applied psychology and psychological testing. Juniors and seniors only. Recommended Courses Background: two prior Psychology courses.
Instructor(s): P. Hofer
Area: Humanities, Social and Behavioral Sciences.

AS.200.303. Developmental Learning Disabilities. 3 Credits.
Area: Natural Sciences, Social and Behavioral Sciences

AS.200.304. Neuroscience of Decision Making. 3 Credits.
This course will survey the neural mechanisms of decision-making. Current experimental research and theory concerning selection, control, and evaluation of actions are examined in humans and animals. Topics will range from simple perceptual judgements to complex social behavior. The course involves a weekly lecture about a specific topic followed by a student presentation of a current research paper. Cross-listed with Neuroscience
Prerequisites: AS.080.305 OR AS.080.205 OR AS.200.141
Instructor(s): V. Stuphorn
Area: Natural Sciences.

AS.200.306. Psychology in the Workplace. 3 Credits.
Industrial-organizational (I-O) psychology is the scientific study of the workplace. Rigor and methods of psychology are applied to issues of critical relevance to business, including talent management, coaching, assessment, selection, training, organizational development, performance, and work-life balance.
Instructor(s): H. Roberts Fox
Area: Social and Behavioral Sciences.

AS.200.307. Clinical Psychology. 3 Credits.
This course is a survey of the field of clinical psychology. Accordingly, the primary objectives of the course are: (1) to familiarize students with the history of clinical psychology as a field, including the roles in which clinical psychologists serve and settings in which they work, as well as “hot topics” of current debate in the field; (2) to orient students to the range of theoretical orientations which guide how clinical psychologists approach their work, including assessment, prevention/intervention, and research; (3) to highlight controversies in assessment and treatment as well as emphasize critical thinking in clinical psychology; and (4) to clarify students’ interests and goals within the mental health field, generally, and clinical psychology, in particular, including client populations and research questions of interest to individual students.
Prerequisites: AS.200.101 AND AS.200.212
Instructor(s): J. Neemann.
AS.200.308. Neurobiology of Learning and Memory. 3 Credits.
This course is an advanced survey of the scientific study of learning and memory. An interdisciplinary approach is used to integrate the state of the field across levels from the cellular-molecular basis of synaptic plasticity to functional circuitry implicated in learning to memory systems in the brain. The course is designed to provide a deep understanding of the outstanding issues and current debates in learning and memory research with a specific emphasis on animal models. This is an interactive lecture/ seminar course with active student participation. Recommended Course Background: AS.200.370 or AS.200.141 or AS.080.305/AS.080.306 or AS.020.306.
Instructor(s): M. Yassa
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.309. Evolutionary Mechanisms of Human Behavior. 3 Credits.
This course examines the evolution of human adaptive behaviors. In particular it examines evolutionary contributions to behaviors concerned with problems of survival such as mating strategies, parenting, and group living. Recommended Course Background: AS.200.101
Instructor(s): H. Petri
Area: Social and Behavioral Sciences.

AS.200.310. Neural Basis of Cognitive Control. 3 Credits.
This course examines the neural basis of "cognitive control". What is happening in our brains that enables control our thoughts and behavior? What does it mean neurologically when we say someone has "lost control"? What contributions do the neural processes of attention, memory, habits and emotions make? This is a very active area of current research, and this upper-level seminar will make broad use of the primary cognitive and systems neuroscience literature.
Prerequisites: AS.080.203 OR AS.050.203 OR AS.200.141 OR AS.200.305
Instructor(s): S. Courtney-Faruqee
Area: Natural Sciences Writing Intensive.

AS.200.312. Imaging the Human Mind. 3 Credits.
Prerequisites: EN.550.111 AND (AS.080.203 OR AS.050.203)
Instructor(s): S. Courtney-Faruqee
Area: Natural Sciences, Social and Behavioral Sciences Writing Intensive.

AS.200.313. Advanced Personality. 3 Credits.
This is an advanced intensive writing and discussion course requiring original library research. Topics include the structure of affect/mood; the five-factor model; the person-situation debate; the idiographic/nomothetic debate; stability and change in personality over time; evolution, genetics, and biology of personality; effects of culture and geography on personality; intelligence and genius; the self and personal narratives; implicit motives and the dynamic unconscious; and self-regulation and psychopathology. Open to juniors or seniors. Recommended Course Background: two semesters of statistics and either AS.200.132 or AS.200.133. Those earning credit for AS.200.327 cannot also earn credit for AS.200.313.
Prerequisites: AS.200.132 OR AS.200.133
Area: Social and Behavioral Sciences Writing Intensive.

AS.200.314. Advanced Statistical Methods. 3 Credits.
Topics in applied probability and statistical inference; analysis of variance; experimental design. Intended for graduate students in psychology. Recommended Course Background: one statistics course.
Prerequisites: Statistics Sequence restriction: students who have completed any of these courses may not register: EN.550.211 OR EN.550.230 OR AS.280.345 OR AS.200.315 OR EN.550.310 OR EN.550.311 OR EN.560.435 OR EN.550.420 OR EN.550.430
Instructor(s): S. Yantis
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.200.315. Advanced Research Design and Analysis. 3 Credits.
Second half of graduate statistics sequence, covering complex research design and analysis. Signature required for undergrad registration.
Prerequisites: AS.200.314 or equivalent
Instructor(s): A. Shelton
Area: Quantitative and Mathematical Sciences.

AS.200.316. Thought and Perception. 3 Credits.
What is the relationship between thought and perception? We will address this question through contemporary readings in both psychology and philosophy. Included among the specific questions to be addressed: do the terms, 'perception' and 'cognition' designate functionally distinct parts of the mind? To what extent is conscious experience (for example, how things look) influenced by changes in belief, expectations, and motivation? To what extent are we capable of observation that is independent of belief, and what is the role of perceptual evidence in scientific theorizing? Is there a level of visual processing that is encapsulated from higher cognition? What role does language play in how we see? What role does can attention play in mediating between cognition and perception? Readings from Fodor, Pylyshyn, Siegal, Churchland, Bargh, Balatets, and others. Instructor’s approval only. This class will meet jointly with AS.200.616 and Professor Gross’ AS.150.476.
Instructor(s): J. Flombaum; S. Gross
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.200.317. Interpersonal Relations. 3 Credits.
This course will investigate interpersonal processes ranging from attraction and courtship to relationship functioning and distress. Open to Psychology and Behavioral Biology majors only.
Prerequisites: AS.200.133
Instructor(s): S. Drigotas
Area: Social and Behavioral Sciences.

AS.200.318. Quantitative Methods for Brain Sciences. 3 Credits.
Focus on frequently-used quantitative methods used in the study of brain sciences, including gaining conceptual understanding of techniques, analysis and summarization of data, extracting the process underlying a data set, explaining data as a function of variables, data visualization, etc. Instructor signature required for undergraduate registration.
Prerequisites: AS.200.314 or equivalent
Instructor(s): S. Mysore
Area: Quantitative and Mathematical Sciences.
AS.200.321. Developmental Psychopathology. 3 Credits.
Prereq: 200.132 Developmental psychopathology is the study of the development of psychological disorders such as psychopathy, autism, schizophrenia and depression from a lifespan perspective. Atypical development and typical development are mutually informative; therefore, developmental psychopathology is not the study of pathological development, but the study of the basic mechanisms that cause developmental pathways to diverge toward pathological or typical outcomes. Class participation, presentations, and written papers will be required in this course.
Prerequisites: AS.200.132
Area: Social and Behavioral Sciences
Writing Intensive.

AS.200.325. Law Psychology: Clinical Application. 3 Credits.
Introduction to legal standards governing criminal forensic psychology assessments, e.g., competence to stand trial, criminal responsibility, mitigation of death penalty, negation of mens rea, and other criminal law forensic applications. Cross-listed with Behavioral Biology.
Instructor(s): L. Raifman
Area: Social and Behavioral Sciences.

AS.200.326. Law, Psychology and Public Policy. 3 Credits.
An introduction to applications of psychological research in policy analysis. Special emphasis is given to the use of research in Supreme Court advocacy and decision making in the areas of children’s rights, adult sexuality, and educational and employment opportunity. Students should be familiar with statistics and regression analysis prior to taking this course.
Instructor(s): P. Hofer
Area: Social and Behavioral Sciences
Writing Intensive.

AS.200.327. Personality and its Measurement. 3 Credits.
Advanced intensive writing and discussion course using a text and original articles. Besides (co)leading class discussions, students will review a personality test of their choice, create and analyze their own personality test, and create a research proposal on a personality topic of their choosing. There will be no exams. Topics to be covered include a broad survey of personality tests, reliability and validity, test construction methods, the structure of affect/mood, the five-factor model, and the following personality-related topics: the person-situation debate; the idiographic/nomothetic debate; stability and change in personality over time; evolution, genetics, and biology of personality; effects of culture and geography on personality; intelligence and genius; the self and personal narratives; implicit motives and the dynamic unconscious; and self-regulation and psychopathology. For more information, please contact Dr. Jennifer Neemann at dr_jen@comcast.net or 410-516-4887.
Prerequisites: AS.200.207
Instructor(s): J. Neemann
Area: Social and Behavioral Sciences
Writing Intensive.

AS.200.328. Theory & Methods in Clinical Psychology. 3 Credits.
A critical examination of the methods of observation, description, reasoning, inference, measurement and intervention that underlie the clinical practice of psychology and psychiatry. Cross-listed with Behavioral Biology. Junior and senior Psychology, Behavioral Biology and Cognitive Science majors only OR instructor approval.
Instructor(s): D. Edwin
Area: Social and Behavioral Sciences
Writing Intensive.

The recent world financial crisis has arguably been the most important event of the new millennium. Understanding the financial crisis requires knowledge of: “What happened & how the crisis unfolded?” “Why did it happen?” “How was the crisis eventually managed?” “Further, who were hurt?” “Who succeeded well?” And finally, “what policy decisions intended to protect markets by government officials succeeded to forestall further damage. Taking a behavioral finance focus, the course offers an analysis of heuristic decision errors that lead to bubbles and crashes in markets, and the failure of market models to avoid them.
Instructor(s): L. Raifman
Area: Social and Behavioral Sciences.

AS.200.332. Counseling Psychology. 3 Credits.
This course provides an introduction to the field of counseling psychology. Professional identity and development, history, theories and processes of counseling are surveyed, as are a variety of specializations and settings in which counseling is practiced. Discussions, demonstrations, and exercises will give students an opportunity to explore counseling psychology as a career path. Recommended Course Background: AS.200.101
Instructor(s): C. Gasser
Area: Social and Behavioral Sciences.

AS.200.333. Advanced Social Psychology. 3 Credits.
The class is designed as a seminar including discussion of primary readings of social psychology articles ranging in topics from interpersonal relationship to behavior in large groups. Rising junior & senior Psychology majors only.
Prerequisites: AS.200.133
Instructor(s): S. Drigotas
Area: Social and Behavioral Sciences.

AS.200.334. Advanced Psychopathology. 3 Credits.
This is an advanced, discussion-based course covering the developmental, biological, environmental, and cultural bases of attentional, mood, psychotic, anxiety, trauma-based, eating, somatic, and personality disorders. Case formulations in class and review papers will be required.
Prerequisites: AS.200.212
Instructor(s): J. Neemann
Area: Social and Behavioral Sciences
Writing Intensive.

AS.200.336. Foundations of Mind. 4 Credits.
An interdisciplinary investigation into the innateness of concepts: perception, number, language, and morality, physics discussed. Evidence from animals, infants, patients, brains. Students collect data in sections investigating claims from the readings. Cross-listed with Cognitive Science and Philosophy.
Instructor(s): J. Haberda; L. Feigenson
Area: Social and Behavioral Sciences.

AS.200.339. Counseling/Mental Health. 3 Credits.
Priority to Psychology Majors This course examines important mental health issues in the context of contemporary clinical practice. It explores major theories of counseling and psychotherapy through readings, case narratives, accounts of clinical processes, and research studies of clinical effectiveness. Cross-listed with Behavioral Biology
Area: Social and Behavioral Sciences.
AS.200.341. Positive Psychology. 3 Credits.
This course is graded S/U and does not count toward the Psychology major. The course will review the growing field of positive psychology and will review the research on positive human attributes such as optimism, happiness, hope, resiliency, self-esteem, altruism, empathy, and forgiveness. This course will explore the research on how such positive attributes are developed and how they relate to psychological and physical well-being.
Instructor(s): J. Neemann
Area: Social and Behavioral Sciences.

AS.200.343. Motivation. 3 Credits.
Current biological, behavioral, and cognitive research and theory concerning the motivation of behavior are examined. Both human and non-human animal research is reviewed. Topics include the role of genetics, arousal, biological regulatory systems, incentives, expectancies, attributions, social processes and self-actualization in the general behavior. Recommended Course Background: AS.200.101 and AS.200.146 or instructor permission.
Instructor(s): H. Petri
Area: Social and Behavioral Sciences.

AS.200.344. Behavioral Endocrinology. 3 Credits.
An examination of the effects of hormones on behavior in non-human and human animals. Topics will include the effects of hormones on sexual differentiation, reproductive behavior, parental behavior, homeostasis and biological rhythms, regulation of body weight, learning and memory. Cross-listed with Behavioral Biology and Neuroscience.
Prerequisites: Prereqs: ( AS.200.141 OR AS.080.305 ) OR (AS.020.151 AND AS.020.152) OR (AS.020.305 AND AS.020.306) OR instructor’s permission
Instructor(s): F. Madison; G. Ball
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.345. Advanced Positive Psychology. 3 Credits.
Advanced Positive Psychology is a research seminar course where students will initiate, develop, and conduct a research study on a topic in the field of Positive Psychology. With the guidance of the instructor, students will learn how to develop research questions and hypotheses and will conduct a research study to address the research questions posed. Students will work in teams and will learn more about the field of positive psychology by conducting a study on a specific topic in the field.
Prerequisites: AS.200.207 AND AS.200.341 AND INSTRUCTOR’S CONSENT
Area: Social and Behavioral Sciences.

AS.200.345. Winners, losers, & market protectors-decision-making in the financial crisis. 3 Credits.
The recent world financial crisis has arguably been the most important event of the new millennium. The course will initially answer: “What happened?” “Why did it happen?” “How was the crisis temporarily fixed?” “Who was hurt?” “Who succeeded?” Thereafter, the focus shifts to an analysis of the quality of decisions made by the market protectors who chose to intervene with policies to protect markets, and a comparison of investors who made winning compared with losing investment decisions. The final segment considers whether behavioral economic/cognitive psychological research best explains those decisions, and ways to lessen the risk inherent in current volatile recovering financial markets. In sum, the course will review the recent financial crisis by evaluating strategic investment decisions of the market protectors, winners, and losers.
Area: Social and Behavioral Sciences.

AS.200.355. Psych of Decision Making. 3 Credits.
This course will apply insights from cognitive psychology decision-making research to the stock market. The course investigates whether investors can beat the market benchmarks by exploiting marketplace investor sentiment. Juniors and seniors only. Recommended Course Background: six credits of Psychology course work.
Area: Social and Behavioral Sciences.

AS.200.356. Special Topics in Applied Forensic Psychology. 3 Credits.
This course applies historical and current legal tests of insanity to special crimes in order to distinguish those defendants qualifying for special treatment under the insanity test from those that do not. In class, emphasis is placed upon presentation of the legal/psychiatric criteria, forensic argument, and diagnostic formulation. Topics include the application of insanity defense to: political assassination crimes, religious vs. delusional thinking in abortion doctors murder cases, student mass killing in high schools & universities, sex crimes, and crimes involving the "Stockholm syndrome" defense.
Instructor(s): L. Raifman
Area: Social and Behavioral Sciences.

AS.200.358. Decision Making in Neuro-Economic Terms. 3 Credits.
Is there “a tightwad (risk averse) brain” separate and distinct from “a spendthrift (risk seeking)” brain?” f-MRI study of decision making in neural terms has located brain regions that exhibit clues concerning spending and investing behavior. Students will survey current cognitive neuroscience & psychology research to identify neuro-behavioral insights about consumer spending, and reactions to financial gains vs. losses in the financial markets. Students will assess whether there is a neurological basis for pathological consumer behavior, investment behavior, and gambling addiction, as well as consider de-biasing techniques to counteract these problems.
Instructor(s): L. Raifman
Area: Social and Behavioral Sciences.

AS.200.359. The Psychology of Financial Crisis. 3 Credits.
The 2007-8 financial crisis, considered the most severe of its kind since the Great Depression, is our primary focus. The course will initially answer two critical questions: “What happened to bring about the financial crisis?” “Who was hurt and who succeeded well?” We will then study specific crisis decisions to determine if a behavioral finance analysis contributes to a better understanding of decision making under conditions of uncertainty.
Instructor(s): L. Raifman
Area: Social and Behavioral Sciences.

AS.200.360. Forensic Psychology Soup to Nuts. 3 Credits.
The course is based upon an integrative strategy that focuses upon: (1) scientific research underlying forensic psychology expertise, (2) the formulation of expert opinions, and (3) the presentation of expert witness testimony court cases. The course syllabus identifies examples from insanity defense that raises research questions answered by studies from psychology that focus on: battered spouse syndrome, sleep disorders/criminal behavior, pedophilia, settled psychosis, and the application of death penalty to juveniles or mentally ill persons.
Instructor(s): L. Raifman
Area: Social and Behavioral Sciences.
AS.200.361. Tests & Measurements. 3 Credits.
This course will consider the methodological, theoretical, legal, and ethical problems involved in test construction, the evaluation of instruments, and the uses of psychological tests in various settings and for different purposes.
Prerequisites: AS.200.207, Junior and Senior Psychology, Behavioral Biology and Cognitive Science majors only or Instructor permission.
Instructor(s): H. Roberts Fox
Area: Social and Behavioral Sciences.
AS.200.363. Mind, Brain & Experience. 3 Credits.
How do nature and nurture shape the human mind? How does experience contribute to the development of visual perception, language and social reasoning? This course explores insights into these age-old questions from neuroscience and psychology. Studies of infant behavior reveal rich knowledge about objects and people in the first months of life. At the same time, experience has profound effects on behavior and neurobiology. For example, temporary absence of vision (i.e. blindness) during development permanently alters visual perception and the visual cortex. Key evidence also comes from studies of naturally occurring variation in human experience (e.g. blindness, deafness, socioeconomic and cultural differences). We will discuss what such studies of cognitive and neural function tell us about the origins of human cognition. This is a writing intensive course with weekly lectures and seminar style discussion of primary sources. Students will be required to write weekly responses to readings and a term paper.
Prerequisites: AS.200.141 OR AS.050.105 OR AS.080.105 OR AS.050.203 OR AS.020.312 OR AS.200.386 OR (AS.080.305 AND AS.080.306) OR AS.080.203
Instructor(s): M. Bedny
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive.
AS.200.364. Advanced Topics in Cognitive Development. 3 Credits.
How do children acquire knowledge about the world? In this seminar course, we will explore how children understand the world, looking at concepts of objects, number, space, and other people. Students will read both empirical and theoretical writing on these topics and complete writing assignments. Classes will primarily be discussion-based.
Instructor(s): M. Kilbe
Writing Intensive.
AS.200.368. Altered States of Consciousness. 3 Credits.
Sleep, dreaming, resting and arousal to waking represent very different states of consciousness which differ dramatically both psychologically and physiologically. This course focuses on cognitive, psychological, physiological, biological and genetic aspects characterizing each of these states with some reference to other altered states. The course includes a focus on the major pathologies affecting sleep-wake states. Clinical cases will be considered. These inform about both psychological and biological aspects of these states. The relative biological functions of each state will be evaluated with particular attention to the mystery of why we have and apparently need REM and NREM sleep. Actual physiological recordings of sleep states will be reviewed and the student will learn how these are obtained and how to evaluate these. The circadian rhythms, ontogeny and evolution of these sleep-wake states will also be covered. This will include a review of information learned from non-human animal sleep. The change from sleep to full awakening reflects change toward increasing brain organization supporting consciousness. Understanding of the neurobiology of these states will be used to explore some of the more modern and scientific concepts of human self-awareness or consciousness.
Prerequisites: AS.080.203 OR AS.050.203 OR AS.200.101 or permission required.
Instructor(s): R. Allen
Area: Natural Sciences, Social and Behavioral Sciences.
AS.200.370. Functional Human Neuroanatomy. 3 Credits.
Cross-listed with Behavioral Biology and Neuroscience.
Instructor(s): S. Courtney-Faruque
Area: Natural Sciences, Social and Behavioral Sciences.
AS.200.372. Psychology Of Aging. 3 Credits.
Cross-listed with Behavioral Biology and Neuroscience.
Instructor(s): S. Courtney-Faruque
Area: Natural Sciences, Social and Behavioral Sciences.
AS.200.376. Psychopharmacology. 3 Credits.
Designed to provide information about how drugs affect the brain and behavior. The course focuses on the interaction of various classes of drugs with the individual neurotransmitter systems in the brain. A brief historic review is followed by a discussion of clinical relevance. Cross-listed with Behavioral Biology and Neuroscience.
Instructor(s): H. Adwanikar; L. Gorman
Area: Natural Sciences, Social and Behavioral Sciences.
AS.200.386. Animal Cognition. 3 Credits.
Examine relations between brain, mind, and behavior in nonhuman animals, focusing on topics such as learning, memory, attention, decision-making, navigation, communication, and awareness. We will take a variety of approaches, including behavioral, computational, evolutionary, neurobiological, and psychological perspectives.
Prerequisites: (AS.200.141 OR AS.200.208 OR AS.290.101) OR permission of instructor.
Instructor(s): P. Holland
Area: Social and Behavioral Sciences.
AS.200.387. The Social Brain/The Visual Brain. 3 Credits.
We tend to feel that we are thinking the hardest in social situations. In contrast, we barely feel the complicated processing that produces our vivid and salient visual experiences; in fact, we cannot even access most of this processing directly. This course will explore the relationship between visual perception and social cognition, especially the ways that the visual system supplies crucial raw materials for more elaborate social processing, and the ways that our social agendas may, in turn, influence vision. Topics will include what we find physically attractive in mates (and why); the quick formation of social impressions; the neural, cognitive, and evolutionary basis of aesthetic perception; and the extent to which perception might be socially constructed (i.e. whether vision can be influenced from the 'top-down'). All readings will come from primary scientific literature, and students should have some experience reading this kind of material. Limited to juniors, seniors, and graduate students.

AS.200.391. Sex Differences in the Brain, Behavior and Cognition. 3 Credits.
This course is designed to address the increasing gap in our knowledge on sex differences in the brain and cognitive abilities and how hormones play a pivotal role. Dean’s Teaching Fellowship. Recommended Course Background: AS.200.101 or AS.020.151
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.401. Careers in Psychology - Freshmen. 1 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.
Instructor(s): J. Halberda
Area: Social and Behavioral Sciences.

AS.200.402. Careers in Psychology - Sophomore. 1 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.
Instructor(s): J. Halberda
Area: Social and Behavioral Sciences.

AS.200.403. Careers in Psychology - Juniors. 1 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.
Instructor(s): J. Halberda
Area: Social and Behavioral Sciences.

AS.200.404. Careers in Psychology - Seniors. 1 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.
Instructor(s): J. Halberda
Area: Social and Behavioral Sciences.

AS.200.501. Psychological Research - Freshmen. 3 Credits.
S/U grading only.
Instructor(s): Staff.

AS.200.502. Psychology Research-Freshmen. 0 - 3 Credit.
Instructor(s): Staff.

AS.200.503. Psychological Research - Sophomores. 3 Credits.
S/U grading only
Instructor(s): Staff.

AS.200.504. Psychology Research-Sophomores. 0 - 3 Credit.
Grading Satisfactory/ Unsatisfactory only.
Instructor(s): Staff.

AS.200.505. Psych Readings - Fr. 3 Credits.
Instructor(s): Staff.

AS.200.506. Psychological Readings. 0 - 3 Credit.
Instructor(s): Staff.

AS.200.507. Psych Readings-Sophs. 3 Credits.
Instructor(s): Staff.

AS.200.509. Internship-Psychology. 1 Credit.
S/U grading only.
Instructor(s): Staff.

AS.200.510. Psychology Internship. 0 - 3 Credit.
Grading Satisfactory/ Unsatisfactory only.
Instructor(s): Staff.

AS.200.511. Psychological Research - Juniors. 3 Credits.
S/U grading only.
Instructor(s): Staff.

AS.200.512. Psychology Research-Juniors. 0 - 3 Credit.
Grading Satisfactory/ Unsatisfactory only.
Instructor(s): Staff.

AS.200.513. Psychological Research - Seniors. 3 Credits.
The student chooses some research problem with the advice and approval of a faculty member. S/U grading only.
Instructor(s): Staff.

AS.200.514. Psychology Research-Seniors. 0 - 3 Credit.
Instructor(s): Staff.

AS.200.517. Psych Readings - Srs. 3 Credits.
Instructor(s): Staff.

AS.200.519. Seniors Honors Research. 3 Credits.
Seniors working on the honors thesis enroll with the approval of the undergraduate coordinator.
Instructor(s): Staff.

AS.200.520. Seniors Honors Research. 0 - 3 Credit.
Instructor(s): Staff.

AS.200.536. Indep Study - Sophomores. 3 Credits.
Instructor(s): Staff.

AS.200.539. Indep Study - Juniors. 3 Credits.
Instructor(s): Staff.

AS.200.540. Independent Study-Seniors. 0 - 3 Credit.
Instructor(s): Staff.

AS.200.541. Independent Study - Juniors. 3 Credits.
Instructor(s): Staff.

AS.200.542. Independent Study - Sophomores. 3 Credits.
Instructor(s): Staff.

AS.200.545. Internship. 1 Credit.
Instructor(s): Staff.

AS.200.546. Psychology Research. 3 Credits.
Instructor(s): Staff.

AS.200.549. Independent Study. 3 Credits.
Instructor(s): Staff.

This is a journal club examining recent literature in the field related to the hippocampus and the medial temporal lobe memory system. Discussions are heavily based on animal models and theoretical accounts of the hippocampus' role in learning and memory. Graduate students only.
Instructor(s): J. Knierim; M. Yassa
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.604. Graduate Seminar on Topics in Working Memory.
Instructor(s): L. Gmeindl; R. Rosenberg.

AS.200.605. Topics in Attention and Cognition.

AS.200.606. The Semantics & Psychology.

Graduate course designed to address the increasing gap in our knowledge on sex differences in the brain and cognitive abilities, and how hormones play a pivotal role. Advanced undergraduates may attend with permission.

This graduate seminar will survey recent theory and research concerning the functional organization of prefrontal cortex for working memory, decision making, and cognitive control. Graduate students only.

An introduction to the fundamental principles of cognitive and physiological psychology. Required course of first-year graduate students. Graduate students only.
Instructor(s): S. Courtney-Faruqee
Area: Natural Sciences, Social and Behavioral Sciences.

Graduate students only or permission required.

Graduate student only.
Instructor(s): B. Anderson; K. Blacker.

AS.200.616. Thought and Perception.
Graduate students only. This class will meet jointly with AS.200.316 and Professor Gross' AS.150.476.
Instructor(s): J. Flombaum; S. Gross
Writing Intensive.

Often, languages are described as sets of expressions. But in acquiring a language, a child acquires a procedure that generates expressions. If Linguistic expressions pair pronunciations with mental representations, then one task shared by linguists and psychology is to specify the forms of these representations. This seminar explores this relationship in detail.

Instructor(s): P. Holland.

AS.200.627. Graduate Seminar: Memory.
Instructor(s): S. Courtney-Faruqee.

Instructor(s): A. Shelton.

AS.200.632. Topics: Spatial Cognition.
Graduate students only.
Instructor(s): A. Shelton.

AS.200.639. Grad Seminar - Memory.

AS.200.640. Review of Recent Literature in Biopsychology.
Instructor's approval required.
Instructor(s): G. Ball.

AS.200.642. Neural Circuits/Behavior.

This two-semester course will provide an overview of clinical, neuropsychological, imaging and neuropathological approaches to the study of cognitive systems altered in aging, AD and other neurodegenerative disorders. It will consider research using animal models as well as human subjects and clinical populations. The course is intended for graduate students and is open to advanced undergraduates only with permission of the professor.

AS.200.649. Aging, Cognition, and Neurodegenerative Disorders II.
Second part of a two-semester course. Course will provide an overview of clinical, neuropsychological, imaging and neuropathological approaches to the study of cognitive systems altered in aging, AD and other neurodegenerative disorders. It will consider research using animal models as well as human subjects and clinical populations. The course is intended for graduate students and is open to advanced undergraduates only with permission of the professor. Predoctoral and Postdoctoral students from A&S, SPH and SOM students participating in the NIA Training Program on Age-Related, Cognitive and Neuropsychiatric Disorders are required to take this course; meets concurrently with PH.330.802(01)
Instructor(s): M. Albert.

AS.200.654. Psychological & Brain Sciences Core Topics A.
This course is designed to introduce students to core topics in psychological and brain sciences. Students will read seminal and contemporary papers in topics that cover the breadth of the field. Graduate students in Psychological and Brain Sciences.
Instructor(s): L. Feigenson.

AS.200.655. Psychological & Brain Sciences Core Topics B.
This course is designed to introduce students to core topics in psychological and brain sciences. Students will read seminal and contemporary papers in topics that cover the breadth of the field. Graduate Students in Psychological & Brain Sciences.
Instructor(s): S. Courtney-Faruqee.

AS.200.661. Topics in Psychological & Brain Sciences.
An introduction to postdoctoral activities (e.g., grant applications, journal article submission, meeting presentations, the politics of psychology and American science) for Ph.D. candidates in psychology.
Instructor(s): S. Courtney-Faruqee.

AS.200.662. Psychological and Brain Sciences: Career Development.
Instructor(s): S. Courtney-Faruqee.

How do children acquire knowledge about the world? In this seminar course, we will explore how children understand the world, looking at concepts of objects, number, space, and other people. Students will read both empirical and theoretical writing on these topics and complete writing assignments. Classes will primarily be discussion-based.
Instructor(s): M. Kibbe.

This seminar will cover advanced topics in vision from the perspectives of several disciplines. Topics include human visual psychophysics, perception and cognition, and computational vision. Graduate students only. Cross-listed with Neuroscience.
Instructor(s): H. Egeth; J. Flombaum; J. Halberda; S. Yantis.
Instructor(s): S. Courtney-Faruqee.

AS.200.801. Research Seminar: Learning and Memory.
This laboratory meeting is for graduate students studying learning and memory mechanisms, alterations with age or neurologic disease, and advanced neuroimaging methods. Meetings will focus on experimental design, presentation of data, analytical techniques. Undergraduates allowed to add the course with permission as Satisfactory/Unsatisfactory only. Recommended Course Background: AS.200.370 or AS.200.141 or AS.080.305/AS.080.306 or AS.020.306.
Instructor(s): M. Yassa.

AS.200.804. Topics in Neurocognitive Aging.
This seminar will cover advanced topics in neurocognitive aging. Topics will include animal models of memory loss in normal aging and in Alzheimer’s disease (AD), including both behavioral and neurobiological findings. Special attention will be given to the relation between such findings and the effects of aging and AD on memory and the brain in man. Similar comparative analysis in other cognitive domains (e.g. attentional processes) will also be considered.
Instructor(s): M. Gallagher.

AS.200.805. Topics in Attention and Cognition.
Instructor(s): J. Flombaum.

Guided independent readings. The class is designed as a seminar including discussion of primary research articles of cognitive aging. Specific topics include human imaging and animal models of memory, aging, and neurodegenerative disease.
Instructor(s): R. Haberman.

AS.200.810. Research in Psychology.
Students plan and execute original research under guidance of advisers. Results are usually prepared in a form suitable for publication. Graduate students only.
Instructor(s): Staff.

Instructor(s): H. Egeth.

Instructor(s): L. Feigenson.

Instructor(s): J. Halberda.

Instructor(s): P. Holland.

Instructor(s): S. Courtney-Faruqee.

Instructor(s): V. Stuphorn.

Instructor(s): J. Halberda.

Guided independent readings and research in special fields. Graduate Students only.
Instructor(s): Staff.

Graduate students only.
Instructor(s): G. Ball.

Graduate students only.
Instructor(s): E. Fortune.

Graduate students only.
Instructor(s): M. Gallagher.

Graduate Students Only.

Graduate only.
Instructor(s): S. Yantis.

AS.200.830. Readings In Psychology.
Graduate students only.
Instructor(s): J. Flombaum.

Graduate students only. Permission Required.
Instructor(s): S. Courtney-Faruqee.

Instructor(s): S. Courtney-Faruqee.

AS.200.848. Current Advances in Psychological and Brain Sciences.
Introduces advanced research topics to graduate students (as well as faculty) through a series of speakers and discussions.
Instructor(s): J. Flombaum.

AS.200.849. Teaching Practicum.
All candidates are required to obtain special experience in various aspects of undergraduate teaching. Graduate students only.
Instructor(s): Staff.

AS.200.850. Advanced Teaching Practicum.
Instructor(s): J. Halberda; S. Courtney-Faruqee.

Cross Listed Courses

Cognitive Science

AS.050.102. Language and Mind. 3 Credits.
Introductory course dealing with theory, methods, and current research topics in the study of language as a component of the mind. What it is to “know” a language: components of linguistic knowledge (phonetics, morphology, syntax, semantics) and the course of language acquisition. How linguistic knowledge is put to use: language and the brain and linguistic processing in various domains. This course is restricted to freshmen and sophomores. Juniors and seniors must seek instructor approval to enroll. Cross-listed with Neuroscience and Psychology.
Instructor(s): A. Omaki
Area: Natural Sciences, Social and Behavioral Sciences.
AS.050.204. Visual Cognition. 3 Credits.
Vision is central to our daily interactions with the world: we can effortlessly navigate through a city, comprehend fast movie trailers, and find a friend in a crowd. While we take the visual experience for granted, visual perception involves a series of complicated cognitive processes beyond just opening our eyes. The goal of this course is to provide an introduction to visual cognition, including existing theoretical frameworks and recent research findings. We will explore questions such as: How do we see the stable world when our eyes are constantly moving? What is the relationship between seeing and knowing? Do Infants see the world the same way as adults do? What are the neural mechanisms underlying visual perception?
Instructor(s): S. Park
Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.303. Mind, Brain and Beauty. 3 Credits.
What underlies our aesthetic response to art, music, and other facets of human experience? Do identifiable properties of objects and events evoke consistent aesthetic responses, or is beauty mostly in the eye of the beholder? Examining such questions from cognitive science, neuroscience, and philosophical perspectives, this course explores relevant research and theory in the visual, auditory, and tactile domains. Several researchers will discuss their ongoing studies with the class, and students will also have the opportunity to participate in demonstration experiments that illustrate phenomena under discussion. (Same as AS.050.603) Recommended Course Background: One or more courses in one of these: Cognitive Science, Neuroscience, Philosophy, or Psychology or permission of instructor.
Instructor(s): M. McCloskey
Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.312. Cognitive Neuroimaging Methods in High-Level Vision. 3 Credits.
This course is an advanced seminar and research practicum course. It will provide the opportunity to learn about fMRI methods used in the field of vision science and for students to have hands-on experience to develop, design and analyze a research study on topics in the cognitive neuroscience field of high-level vision. In the first part of the course students will read recent fMRI journal papers and learn about common fMRI designs and analysis methods; in the second part of the course students will conduct a research study as a group to address a research question developed from readings. Students are expected to write a paper in a journal article format at the end of the course and to present their results in front of the class. Research topics will vary but with special focus on topics in object, scene and space recognition. Cross-listed with Neuroscience and Psychology. instructor’s permission required.
Prerequisites: AS.050.204 OR AS.050.319 OR AS.050.315 OR AS.200.312 OR AS.050.203 OR AS.080.203 or equivalent; instructor’s permission required.
Instructor(s): S. Park
Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.319. Visual Cognition. 3 Credits.
Vision is central to our daily interactions with the world: we can effortlessly navigate through a city, comprehend fast movie trailers, and find a friend in a crowd. While we take the visual experience for granted, visual perception involves a series of complicated cognitive processes beyond just opening our eyes. The goal of this course is to introduce students to the field of visual cognition, including existing theoretical frameworks and recent research findings. We will explore questions such as: How do we see the visual world? Do we see and remember correctly what’s in the physical world? How many items can we keep track of and remember at a time? How is the visual system structured and what are the neural mechanisms underlying visual perception? Meets with AS.050.619.
Prerequisites: AS.200.101 OR AS.050.101 OR AS.080.203 OR AS.050.203
Instructor(s): S. Park
Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.339. Cognitive Development. 3 Credits.
This is a survey course in developmental psychology, designed for individuals with some basic background in psychology or cognitive science, but little or none in development. The course is strongly theoretically oriented, with emphasis on issues of nature, nurture, and development. We will consider theoretical issues in developmental psychology as well as relevant empirical evidence. The principle focus will be early development, i.e., from conception through middle childhood. The course is organized topically, covering biological and prenatal development, perceptual and cognitive development, the nature and development of intelligence, and language learning. Also listed as AS.050.639. Cross-listed with Neuroscience. Instructor’s approval required.
Instructor(s): J. Yarmolinskaya
Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.603. Mind, Brain and Beauty.
Instructor(s): M. McCloskey
Area: Natural Sciences, Social and Behavioral Sciences.

Instructor’s permission required. (Also offered as AS.050.312.)
Instructor(s): S. Park
Area: Natural Sciences, Social and Behavioral Sciences.

Neuroscience
AS.080.330. Brain Injury & Recovery. 3 Credits.
This course investigates numerous types of brain injuries and explores the responses of the nervous system to these injuries. The course’s primary focus is the cellular and molecular mechanisms of brain injury and the recovery of function. Discussions of traumatic brain injury, stroke, spinal cord, and tumors, using historical and recent journal articles, will facilitate students’ understanding of the current state of the brain injury field. Cross-listed with Psychological and Brain Sciences and Behavioral Biology.
Prerequisites: AS.080.305 AND AS.080.306 OR AS.020.312 AND AS.020.306 OR AS.200.141 AND AS.200.376
Area: Natural Sciences
Writing Intensive.
Public Health combines a prevention orientation with a population perspective in pursuit of better health for all members of society. Public health professionals deal with critical large-scale issues such as access to health care; chronic disease control; mapping, predicting, and containing outbreaks of infectious disease; as well as researching factors that contribute to health outcomes such as gender, poverty, and education. Public Health has close ties with medicine through research, clinical practice, and formulating policy.

The Public Health Studies Program offers undergraduates a major that links them to the world of public health through core courses taken on the Homewood campus, as well as electives taken at the Johns Hopkins Bloomberg School of Public Health (JHSPH).

Core course work at Homewood includes Fundamentals of Epidemiology, Environment and Your Health, Fundamentals of Health Policy and Management, Biostatistics, Social and Behavioral Health, as well as a year of Biology and Calculus I. Students will select additional public health coursework from a range of options that include the natural sciences, health economics, medical anthropology, disparities in health and access to health care, the history of science and medicine, and demography. The major is flexible and easily adapted to further course work in the natural sciences and historically about two-thirds of Public Health Studies majors complete the premedical core curriculum.

Public Health Studies majors beginning with the class of 2013 also complete the Public Health Applied Experience as part of their undergraduate degree requirements. This involves a supervised, hands-on experience working with public health professionals. The goal of the applied experience requirement is to ensure that students have practical public health exposure in a clinical, research, or community setting. Find more information at http://krieger.jhu.edu/publichealth/academics/AE-Main.

The Johns Hopkins Bloomberg School of Public Health is the oldest and largest school of public health in the United States. Although its primary function is to serve as a graduate school, seniors majoring in public health studies take a semester’s worth of courses there in fulfilling their B.A. degree requirements. Many students get involved in ongoing research projects at JHSPH such as developing malaria vaccine, investigating hospital patient safety protocols or assessing the links between poverty and poor health.

Available course work at JHSPH includes the following areas: health education, environmental health sciences, epidemiology, health finance and management, health policy, human genetics, immunology and infectious diseases, international health, maternal and child health, mental health, nutrition, occupational medicine/health protection and practice, population studies, toxicology, and tropical medicine, among others.

An honors option is available to Public Health Studies majors with a major GPA of 3.3. Public Health Honors students work in a research capacity under the supervision of a JHU faculty member and with the guidance of the Director of the Public Health Studies program. Students register for 280.495 Honors in Public Health Seminar in the fall and 280.499 in the spring. Interested students should discuss their plans with the Director of the Public Health Studies program in the spring of their junior year.

Many Public Health Studies students have pursued international public health internships and study abroad opportunities both during the academic year and over the summer. In addition to a wide array of general options available through the JHU Office of Study Abroad, the PHS program has established two public-health specific annual programs: Intersession (3 1/2 weeks) in South Africa. Each includes both academic and applied components and allows students to earn graded JHU credits which can be used toward the Public Health Studies major. The Uganda program closely investigates the impact of the HIV epidemic on prevention measures and healthcare delivery in that country. For more information, go to http://krieger.jhu.edu/publichealth/academics/ studyabroad/index.htm.

The Public Health Studies office is located in the 3505 North Charles Building second floor, adjacent to the Homewood campus. Public Health Studies advisors may be consulted about the various courses, careers, and graduate programs in public health on a walk-in basis or by appointment. Information can also be obtained by emailing phstudies@jhu.edu or at http://krieger.jhu.edu/publichealth.

Bachelor of Arts/Masters Program

The Bachelor of Arts/Master of Health Sciences (BA/MHS) and Bachelor of Arts/Master of Sciences in Public Health (BA/MSPH) programs are a coordinated academic collaboration between the Krieger School of Arts and Sciences and the Johns Hopkins Bloomberg School of Public Health.
It enables talented and committed Public Health Studies Program majors to complete a BA and master's degree from the School of Public Health in five to six years.

The Department of Environmental Health Sciences, Department of Epidemiology and Department of Mental Health will consider JHU undergraduates majoring in Public Health Studies for admission to the BA/MHS program. The Department of Environmental Health Sciences also offers a BA/MSPH in Occupational and Environmental Hygiene. The Department of Health Policy and Management offers a BA/MSPH in Health Policy.

Public Health Studies students apply for early admission during their junior year. Admitted students must complete the BA degree before formally enrolling in the graduate school, but up to 16 of the public health credits earned inter-divisionally toward the BA may also apply toward the MHS or MSPH degree. In addition, students in this program will receive co-advising from both schools to optimize their academic experience. Find more information at http://krieger.jhu.edu/publichealth/academics/.

Public Health Studies Program Advisory Board

The Public Health Studies Program Advisory Board reviews the progress and status of the Public Health Studies Program. Members provide advice and guidance on issues that are vital to a successful program, such as faculty appointments, curriculum reviews, utilization of university resources, and new funding opportunities.

One designated Public Health Studies Alumni serves a 2-year term on the committee.

Board Members

Krieger School of Arts and Sciences

Steven David; Vice Dean (Undergraduate Education); Professor
Richard Cone; Professor (Biophysics); Advisory Board Chair
Andy Cherlin; Professor (Sociology)
Joel Schildbach; Professor (Biology)
Adam Sheingate; Associate Professor (Political Science)

Johns Hopkins Bloomberg School of Public Health

Stephen Gange; Professor (epidemiology); Senior Associate Dean for Academic Affairs
James Yager; Professor (Environmental Health Sciences, Toxicology)
Marie Diener-West; Professor (Biostatistics); Chair, Master of Public Health Program
John Groopman; Professor (Environmental Health Sciences); Chair;
Anna M. Baetjer Professor in Environmental Sciences
Ellen MacKenzie; Professor (Health Policy and Management); Chair; Fred and Julie Soper Professor in Health Policy and Management

Requirements for the B.A. Degree

All requirements must be taken as graded credits. For more information, see http://www.advising.jhu.edu/degree_checklist.php.

x Additional courses are available each semester on a rotating basis.
* Satisfies the core competency in social and behavioral health.
Applied Experience
Public health studies majors will complete one (1) approved applied clinical or community-based experience. A minimum of 80 hours of applied work is required along with a synthesizing assignment. Additional information about this requirement is posted on our website http://krieger.jhu.edu/publichealth/academics/AE-Main.

PHS Majors Electives
In order to satisfy requirements for the major, students must complete four (4) additional 3-or-more credit courses at Homewood. These may NOT be labs, independent research, special studies, or classes taken S/U. Students must complete one of the two categories listed below.

Category I: Natural Sciences—4 courses from the Natural Sciences/Engineering/Quantitative Studies area designations (any level)

Category II: Humanities—4 courses from the Humanities area designation

Requirements at JHSPH
Fifteen (15) units of courses are taken at the Johns Hopkins Bloomberg School of Public Health in the student’s fourth year. This is equivalent to 10 Homewood credits. Within the 15, students must create an 8 unit concentration in one particular area, topic, or department. Other courses may be taken in any department. These courses may not be independent research/special study, taken S/U or online.

Other General Requirements
Four (4) writing intensive courses (12 credits)

General electives as needed to bring the total number of credits to 120.

For current faculty and contact information go to http://krieger.jhu.edu/publichealth/directory/

Faculty
Program Director
Kelly Gebo
M.D., M.P.H.; Associate Professor (Medicine, Epidemiology).

Associate Director
James Goodyear
Ph.D.; Senior Lecturer (Public Health Studies Program); Academic Advisor.

Assistant Director
Lisa Folda
Assistant Director (Public Health Studies Program), Lecturer, Academic Advisor.

Joint Professors
David Bishai
Professor (Population, Family, and Reproductive Health); Director of Interdepartmental Health Economics.

Thomas LaVeist
Professor (Health Policy and Management); Director Hopkins Center for Health Disparities Solutions.

Philip Leaf

Professor (Mental Health); Director, Center for the Prevention of Youth Violence.

Donald Steinwachs
Professor (Health Policy and Management); Director, Health Services Research and Development Center.

Michael Trush
Professor (Environmental Health Sciences) Deputy Director, Johns Hopkins Center for Urban Environmental Health; Director Community Outreach and Education Core.

Barry Zirkin
Professor (Biochemistry and Molecular Biology).

Joint Associate Professors
Lee Bone
Associate Professor (Health, Behavior, and Society).

Lawrence Cheskin
Associate Professor, (Health, Behavior, and Society); Director, Johns Hopkins Weight Management Center.

Carolyn Furr-Holden
Assistant Professor (Mental Health); Director, DIVE Studies Laboratory.

Joint Assistant Professors
Miriam Alexander
Assistant Professor (Population and Family Health Sciences); Director General Preventive Medicine Residency Program, Director of Mid-Atlantic Public Health Training Center.

Jennifer Schrack
Assistant Professor (Epidemiology).

Academic Advisors
Mieka Smart
M.H.S., Lecturer (Public Health Studies Program).

Assistant Scientist
Darcy Phelan
Assistant Scientist (Epidemiology).

Margaret Taub
Assistant Scientist (Biostatistics).

Part-Time Lecturer
Peter Beilenson
Lecturer (Public Health Studies).

For current course information and registration go to https://isis.jhu.edu/classes/
Courses

AS.280.100. Public Health in Film and Media. 1 Credit.
This course uses film to explore and question the cultural landscape of public health in today’s society. Public health is a richly diverse field that reaches not only into many areas of daily life, but into our cultural imagination as well. The purpose of this class is to examine how public health matters such as epidemic disease, access to health care, health and the law, bioethics, neglected tropical diseases and other topics are portrayed in feature films and documentaries. Each week students will view and discuss a film or documentary that addresses a public health issue. Freshmen Only. S/U Grading Only.
Instructor(s): M. Smart
Area: Social and Behavioral Sciences.

AS.280.101. Introduction to Public Health. 3 Credits.
An overview of the major concepts and themes in Public Health utilizing the social and natural science disciplines in populations world-wide.
Instructor(s): M. Alexander
Area: Social and Behavioral Sciences.

AS.280.110. Global Health and Advocacy. 2 Credits.
This course will introduce students to a variety of topics that impact global public health practice. Students will hear professionals from NGOs, government and academia discuss challenges they face as they carry out program management, research and policy development. Attendance will be mandatory from the opening class. Grading is S/U only. Section 1 restricted to seniors Section 2 restricted to juniors Section 3 restricted to sophomores Section 4 restricted to freshmen.

AS.280.111. Urban Health and Advocacy. 2 Credits.
Student exploration of a wide range of psychosocial issues facing the poorest residents in urban centers. Coursework includes assigned readings, lively discussions, and experiential activities. Students will increase their awareness of health issues facing the poor and of the utility of advocacy in the health field.
Instructor(s): M. Smart
Area: Social and Behavioral Sciences.

AS.280.115. Issues in Public Health Ethics. 3 Credits.
Freshmen Seminar: Should overweight individuals pay more for health insurance like many smokers do? When is it appropriate to quarantine people during an infectious disease outbreak? Do we owe citizens universal access to quality, affordable health care? We will explore these questions, among others, through the lens of public health ethics.
Instructor(s): J. Leider
Area: Social and Behavioral Sciences.

AS.280.120. Lectures on Public Health and Wellbeing in Baltimore. 1 Credit.
An introduction to Urban Health with Baltimore as a case study: wellbeing, nutrition, education, violence and city-wide geographic variation. Lectures by JH Faculty, local government/service providers and advocates.
Instructor(s): P. Leaf
Area: Social and Behavioral Sciences.

AS.280.121. Chemical Karma: From Pollution to Disease. 3 Credits.
This course follows several pollutants from their industrial sources to their human health outcomes, and teaches how to rigorously/systematically search for and synthesize concepts in environmental health literature. Term paper. E'SH! Fellowships.
Instructor(s): M. Gribble
Area: Natural Sciences.

AS.280.125. Global Health and Advocacy. 1 Credit.
Sections restricted to certain class years. Relying on outside speakers this course will introduce students to a variety of topics that impact global public health practice. Students will hear professionals from NGOs, government and academia discuss challenges they face as they carry out program management, research and policy development. Attendance will be mandatory from the opening class. Grading is S/U only. Section 1 restricted to seniors Section 2 restricted to juniors Section 3 restricted to sophomores Section 4 restricted to freshmen.

AS.280.157. From Tropical Disease to Global Health: A History. 3 Credits.
Instructor(s): J. Goodyear
Area: Humanities, Social and Behavioral Sciences.

AS.280.215. Understanding Behavior Change: Theory and Application. 3 Credits.
This course will begin by exposing students to a variety of theories of behavior change - why and how we do it, and why we often don’t. From there they will apply this knowledge to, part of a semester-long group project, develop a health communication campaign designed to encourage changing a behavior among their peers. They will practice the skills necessary to analyze a problem, develop a campaign strategy, create persuasive materials, and implement and monitor that campaign. Some elements of impact evaluation will also be covered in this course. Sophomores Only. Recommended Course Background: AS.280.101
Instructor(s): L. Folda
Area: Social and Behavioral Sciences.

AS.280.217. Youth Bullying, Aggression, and Public Health. 3 Credits.
This course examines bullying and aggression among school-aged youth from a public health perspective. We will explore the prevalence of bullying, theories about its etiology, and recent prevention efforts.
Instructor(s): J. Duong
Area: Social and Behavioral Sciences.

AS.280.220. Baltimore and The Wire: A focus on major urban issues. 3 Credits.
Playing off the themes raised in the HBO series “The Wire”, this course will provide an introduction to major issues confronting Baltimore and other American urban centers through a series of lectures by policy makers in the region. Freshmen/Sophomores only.
Instructor(s): P. Beilenson
Area: Social and Behavioral Sciences.

AS.280.221. The Sciences Behind HIV: Is eradication imminent?. 3 Credits.
Students will obtain a fundamental understanding of HIV biology, including a review of its origin, routes of infection, host defenses and viral evasion strategies, and HIV treatment. Special focus will be on the evaluation of HIV prevention strategies including vaccines and microbicides. Recommended Course Background: one year of general biology, AS.020.151, AP Biology, or equivalent. This is a Public Health Teaching Prize Course.
Area: Natural Sciences.

AS.280.222. Applied Geographic Information Systems in Public Health. 3 Credits.
Course provides an introduction to Geographic Information Systems (GIS) and presents its utility in public health. Provides exposure to GIS as a tool for describing the magnitude of health problems, and for supporting quantitative methods in public health decision-making. Course topics include a historical overview of the intersection between geography and public health; current epidemiological use of GIS; experiential learning (thematic mapping of health phenomena that students observe in the field); and geospatial analysis of public health problems.
Instructor(s): B. Wittstadt
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.
AS.280.223. Health and the Internet. 3 Credits.
This course will examine how the internet and web based applications influence individual and societal health. Health information is one of the most searched for subjects online, yet despite the proliferation of health related sites, there is still a need for quality, accurate and useable information. Blogs and online communities can bring patients together and aid in treatment and recovery. However, many Web 2.0 applications such as social networking sites, wikis and mobile technology that have the potential to increase interactivity and collaboration have yet to reach their full potential in healthcare delivery and promotion. Indeed, as the internet and new technologies hold great promise, there are also pitfalls such as spread of inaccurate or potentially dangerous information. This course will provide an overview of how the internet has changed health care and how new technologies will continue to influence our health.
Instructor(s): M. Gilkey
Area: Humanities, Social and Behavioral Sciences.

AS.280.230. Public Health, Sexual Orientation, and Gender Identity. 3 Credits.
In recent years, lesbian, gay, bisexual, transgender (LGBT) health issues have become important public health concerns. This course will focus on key issues in LGBT health, including the health consequences of homophobia and heterosexism, racial and ethnic minorities and LGBT health, globalization, healthcare systems and services. Specific health topics to be addressed include mental health, substance use, violence, sexually transmitted infections, and access to health care. During this course, students will develop a greater understanding of health disparities among LGBT populations.
Instructor(s): T. Poteat
Area: Humanities, Social and Behavioral Sciences.

AS.280.304. Transforming Disease: HIV/AIDS and the production of chronic illness. 3 Credits.
Drawing primarily on public health, anthropology, and sociology literature, the course critically examines debates surrounding the production of chronic illness, and resulting contestations as practices, laws, and policy are transformed.
Instructor(s): M. Philbin
Area: Social and Behavioral Sciences.

AS.280.306. Revising the Sick Role: The Patient as Subject, Citizen, Consumer, Expert and Advocate. 3 Credits.
Prerequisites: Prereq: AS.280.340 OR AS.280.101 or by consent of instructor
Instructor(s): M. Gilkey
Area: Social and Behavioral Sciences Writing Intensive.

This course introduces students to the controversial topic of who should pay for healthcare. Examines four themes of financing, pooling, purchasing and provision of healthcare and considers the financial, political and social implications of distinct health financing methods. Explores major principles and practices of health financing across countries with different political and economic frameworks, featuring Japan, Cambodia, U.K., Canada, Germany and the U.S.
Prerequisites: Prereq: AS.180.102 OR AS.180.101
Instructor(s): S. Ozawa
Area: Social and Behavioral Sciences.

AS.280.308. The Environment and Infectious Disease: Public Health Perspectives. 3 Credits.
Junior & Senior PHS Majors Only: In this interactive course, students will explore environmental impacts on the spread of infectious diseases using public health tools. Topics include climate change, natural disasters, bioterrorism, agriculture, and emerging infections. Dean’s Teaching Fellowship course.
Instructor(s): M. Davis
Area: Natural Sciences, Social and Behavioral Sciences.

AS.280.309. Impact of Mass Communication on the Public’s Health: McLuhan to Oprah. 3 Credits.
This course will explore the role of mass communication on public health, from media and health behavior change theory to practical applications of current public health tools in communicating health. Dean’s Teaching Fellowship Course
Instructor(s): R. Limaye
Area: Social and Behavioral Sciences.

AS.280.310. Nutrition, Behavior, and Mental Health. 3 Credits.
What’s the relation between food and mood? This course will journey through topics as diverse as micronutrients, caffeine, and eating behaviors to seek nutrition’s connection to behavior and mental health. Recommended Course Background: AS.280.345 and/or AS.280.350
Area: Natural Sciences, Social and Behavioral Sciences.

AS.280.311. Math, Money and the Mind: Controversies in Medical Decision Making. 3 Credits.
How do doctors decide what to prescribe? How do clinical studies, elected officials, drug companies, personal beliefs, and insurance companies influence those decisions? This will not be on your MCATs. Recommended Course Background: course in Introductory Statistics or Biostatistics. Deans Teaching Fellowship Course.
Instructor(s): A. Turnbull
Area: Social and Behavioral Sciences.

AS.280.315. Nutrition: Concepts and Controversies. 3 Credits.
Nutrition is a fundamental component of human health and a challenging science, with individual and societal factors that span the country and the world. The primary objective of this course is to provide a fundamental understanding of human nutrition and its role in public health by addressing multiple components including the core micro- and macronutrients, and food choices and their implications for personal health. The secondary objective is to examine many of today’s nutrition controversies, both scientific and societal. Accordingly, this course will encourage students to think about nutrition and its critical contribution to public health on individual, societal, and global levels. A fundamental knowledge of biology and/or anatomy and physiology is recommended.
Instructor(s): B. Ha; J. Schrack; Z. Chowdhury
Area: Social and Behavioral Sciences.

AS.280.318. Food, Nutrition, and Public Health. 3 Credits.
This course explores an array of questions related to nutrition, food access, socioeconomic and demographic factors that affect individuals, communities, and public policy. Students will seek answers through field trips, guest lectures, and discussion seminars. Deans Teaching Fellowship Course.
Instructor(s): S. Lee
Area: Social and Behavioral Sciences.
AS.280.319. Water, Sanitation, and Hygiene in the 21st Century. 3 Credits.
The course provides an in-depth overview of current challenges related to water, sanitation, and hygiene (WASH) in the developing world with an emphasis on the links between WASH and epidemiology, climate change, population, gender, equity, and policy. Juniors and seniors Only.
Area: Natural Sciences, Social and Behavioral Sciences

AS.280.320. Seminar on Public Health and Wellbeing in Baltimore. 3 Credits.
Seminar combines lectures from AS.280.120 with additional readings and discussion to more deeply address urban health issues. If you register for this course you do NOT register for AS.280.120. Course is open to Sophomores and Juniors only, or by instructor’s permission.
Instructor(s): P. Leaf
Area: Social and Behavioral Sciences.

AS.280.325. Public Health in South Africa. 3 Credits.
This course provides an in-depth overview of Public Health in South Africa, including material on the political climate, health care services, and the impact of the HIV/AIDS epidemic. Course is taught in Cape Town, South Africa.
Instructor(s): J. Goodyear
Area: Humanities.

AS.280.326. Community-Based Learning in South Africa. 3 Credits.
3 Credit course taught in Cape Town, South Africa. This course may be used to satisfy the Public Health Applied Experience requirement. Students will participate in a community-based service learning program with a local NGO in Cape Town.
Instructor(s): J. Goodyear
Area: Social and Behavioral Sciences.

AS.280.335. The Environment and Your Health. 3 Credits.
This course surveys the basic concepts underlying environmental health sciences (toxicology, exposure assessment, risk assessment), current public health issues (hazardous waste, water- and food-borne diseases), and emerging global health threats (global warming, built environment, ozone depletion, sustainability). Public Health Studies, Global Environmental Change and Stability, and Earth and Planetary Science majors have 1st priority for enrollment. Your enrollment may be withdrawn at the discretion of the instructor if you are not a GECS, PHS, or EPS major.
Prerequisites: (Students may not have taken AS.270.320)
Instructor(s): M. Trush
Area: Natural Sciences.

AS.280.340. Fundamentals of Health Policy & Management. 3 Credits.
Through lectures and small group discussions, students will develop a framework for analyzing health care policy problems and gain familiarity with current issues including managed care, Medicare and the uninsured.
Instructor(s): D. Steinwachs
Area: Social and Behavioral Sciences.

AS.280.345. Public Health Biostatistics. 4 Credits.
Using problem-based learning focusing on public health topics, students learn to describe & summarize data, make inferences regarding population parameters, & test hypotheses. Recommended Course Background: Four years of high school math.
Prerequisites: Statistics Sequence restriction: students who have completed any of these courses may not register: EN.550.211 OR EN.550.230 OR AS.200.314 OR AS.200.315 OR EN.550.310 OR EN.550.311 OR EN.560.435 OR EN.550.420 OR EN.550.430
Instructor(s): M. Taub; S. Zeger
Area: Quantitative and Mathematical Sciences.

AS.280.346. Advanced Biostatistics Laboratory. 1 Credit.
The course objective is to enable each student to enhance his or her quantitative scientific reasoning including precise formulations of scientific questions, valid interpretation of data as evidence, and clear, accurately written and oral communication about the numerical evidence as it informs the questions posed. Public Health Biostatistics is about quantitative approaches - ideas and skills - to address public health problems. Biostatistics is a bit like clinical medicine or other technical skills; to achieve mastery, a student must “see one, do one, teach one”. Therefore, the course is organized to promote regular practice of new ideas and skills and to work together in small groups. Students are introduced to the statistical programming environment R in lecture and sections, and work realistic data analysis problems using R.
Corequisites: AS.280.345
Instructor(s): M. Taub; S. Zeger
Area: Quantitative and Mathematical Sciences.

AS.280.347. Health Data Analysis Practicum. 2 Credits.
Students will learn to formulate precise scientific and policy questions, design exploratory and confirmatory statistical analyses to address the questions, conduct appropriate analyses using the statistical package R, and communicate their findings through graphical and tabular displays that are presented in writing and in person. The course will be run seminar style in which students conduct data analysis to present to one another in one meeting per week. Evaluation will be through class participation and a final project in which students will analyze their own data set to address a question of their choice.
Instructor(s): S. Zeger
Area: Quantitative and Mathematical Sciences.

AS.280.350. Fundamentals of Epidemiology. 3 Credits.
A practical introduction to epidemiology focusing on the principles and methods of examining the distribution and determinants of disease morbidity and mortality in human populations. Juniors and seniors only.
Instructor(s): A. Arnold; D. Phelan-Emrick
Area: Quantitative and Mathematical Sciences.

AS.280.360. Clinical & Public Health Behavior Change. 3 Credits.
This course explores the theory and practice of changing the health behaviors of individuals, and the public health and medical impact of doing so. Theoretical concepts are integrated with practical clinical applications, especially in the areas of diet and fitness. Skill building in persuasive, health-related communication will be included in smaller group discussions.
Instructor(s): L. Cheskin
Area: Social and Behavioral Sciences.
AS.280.375. Cultural Factor Of Public Health. 3 Credits.
This course covers influence of culture on health policy, management and practice. Also, provides background in disparities in health in the US. Guest speakers include healthcare providers, managers, and policy-makers.
Instructor(s): T. Laveist
Area: Social and Behavioral Sciences.

AS.280.380. Global Health Principles and Practices. 3 Credits.
Global health addresses the staggering global disparities in health status, drawing on epidemiology, demography, anthropology, economics, international relations and other disciplines. We review patterns of mortality, morbidity and disability in low and middle income countries, starting with malnutrition, infectious diseases and reproductive health, and continuing to an emerging agenda including mental health, injury prevention, surgical care, chronic diseases, and health impacts of climate change. Gender, health systems and health workforce challenges, and career trajectories in global health are also discussed. Recommended course background: Minimum of one prior course in Public Health.
Instructor(s): P. Winch
Area: Social and Behavioral Sciences.

AS.280.399. Community Based Learning - Practicum Community Health Care. 3 Credits.
Instructor(s): J. Goodyear; L. Bone
Area: Social and Behavioral Sciences.

AS.280.401. Alcohol, Media & Health. 3 Credits.
Students will critically examine the public health impact of alcohol marketing and assess the consequences of the resulting change in patterns of alcohol use. Gordis Teaching Fellowship course. Public Health Majors only or permission required.
Instructor(s): S. Cukier
Area: Social and Behavioral Sciences.

AS.280.402. HIV, Behavior and Society. 3 Credits.
This class will examine the behaviors associated with the HIV epidemic. We will explore the importance of behavior and context that affect the transmission, prevention, and treatment of HIV. Gordis Teaching Fellowship course. Public Health Majors only or permission required.
Instructor(s): C. Sun
Area: Social and Behavioral Sciences.

AS.280.403. Introduction to Intimate Partner Violence and Public Health. 3 Credits.
This course provides an introduction to the public health implications of intimate partner violence and the spectrum of activities used to understand and combat it - from measurement to intervention. This course will cover a variety of topics, focusing on both research and programming, including: qualitative and quantitative research methods, individual- and community-level interventions, ethical challenges, and populations of interest. Gordis Teaching Fellowship course. Public Health Majors only or permission required.
Instructor(s): A. Robinson
Area: Social and Behavioral Sciences.

AS.280.404. Immunity and Infectious Diseases of Public Health Importance. 3 Credits.
Provides an overview of innate and adaptive immunity as they relate to the control of infection and the development of treatment and vaccination strategies for pathogens of public health significance. Gordis Teaching Fellowship course.
Prerequisites: AS.020.151 AND AS.020.152 or AP Biology
Instructor(s): J. Craig
Area: Natural Sciences.

AS.280.405. Public Health and Human Rights. 3 Credits.
This course explores the links between public health and human rights, applies human rights frameworks to public health policies, and explains why the human rights have been called "The conscience of public health." Gordis Teaching Fellowship course. Public Health Majors only or permission required.
Instructor(s): W. Davis
Area: Social and Behavioral Sciences.

How does U.S. military policy impact global and national public health? Do U.S. military missions promoted as humanitarian assistance, such as those in Africa and Afghanistan, compromise global development and independent humanitarian action programs? Did the CIA's covert use of a vaccination program in Pakistan as cover for intelligence gathering threaten the success of global immunization campaigns? How have vaccines and drugs developed for U.S. military use benefited global public health? These topics and much more will be the focus in this seminar that explores consequences within conflict zones and the developing world, and among military personnel and veterans. Gordis Teaching Fellowship course. Juniors and Seniors Public Health Studies majors only.
Instructor(s): R. Nevin
Area: Social and Behavioral Sciences.

AS.280.407. Public Health and Disasters. 3 Credits.
This course will introduce students to the public health component of preparedness and response to common emergencies, including the public health implications of such situations and the role of public health agencies and practitioners. The course will employ an all-hazard perspective, including emerging infections, natural disasters, and terrorism. Students will understand the public health community's role in preparing for and responding to disasters through case studies, discussion, debate, and material related to the national public health preparedness infrastructure. Juniors and seniors Public Health Studies majors only. Gordis Teaching Fellowship course. Recommended Course Background: AS.280.335
Instructor(s): N. Errett
Area: Social and Behavioral Sciences.

AS.280.408. Youth Violence Prevention: A Public Health Approach. 3 Credits.
Examines the causes, consequences, and prevention of violence committed by or against young people through a public health lens. Interrupts prevailing notions about crime and punishment and shifts the discourse to encompass an ecological and developmental understanding of the problem. Media representations and other case studies of youth violence, including mass shootings, child soldiers in armed conflict, interpersonal violence, bullying, suicide, and gang violence, provide the basis for in-class, interactive analysis applying current theories. Introduces effective prevention strategies, underscoring the important role of youth leadership and advocacy to prevent violence. Juniors and seniors Public Health Studies majors only. Gordis Teaching Fellowship course. Recommended Course Background: AS.280.350
Instructor(s): J. Bottani
Area: Social and Behavioral Sciences.
AS.280.409. Health Systems Challenges from Chronic Diseases in Low and Middle Income Countries. 3 Credits.
This course provides a multidimensional health systems approach to chronic diseases, presently the largest population health burden in low and middle income countries. Learning tools include patient interviews, in-class debates, and country case studies. Juniors and Seniors Public Health Studies majors only. Gordis Teaching Fellowship course. Recommended Course Background: AS.280.350
Instructor(s): M. Socal
Area: Social and Behavioral Sciences.

AS.280.410. Disease Detectives and the History of Epidemiology. 3 Credits.
Through a series of historical case studies we will explore the changing ideas and assumptions that have shaped our struggles to understand and improve health in the United States. Juniors and Seniors Public Health Studies majors only. Gordis Teaching Fellowship course. Recommended Course Background: AS.280.350
Instructor(s): A. Buttress
Area: Social and Behavioral Sciences.

AS.280.411. Where You Live Matters: The Role of “Place” in Racial/Ethnic Health Disparities. 3 Credits.
This course will critically examine the impact of place of residence on health outcomes, and on racial/ethnic health disparities. This will be accomplished by examining different definitions and levels of “place”, and assessing the impact of each on various health outcomes and racial/health disparities. The role of “place” will be examined in the development of interventions targeting racial/ethnic health disparities. Gordis Teaching Fellowship course.
Instructor(s): C. Bell
Area: Social and Behavioral Sciences.

AS.280.412. The HIV/AIDS Pandemic: An Enquiry Concerning Epidemiologic Understanding. 3 Credits.
Students will gain an understanding of the epidemiology of HIV/AIDS that will serve as basis for illustrating modern epidemiologic theory, methods, and practice. Topics will include a review of the natural history and pathogenesis of HIV/AIDS, the spread and current geography of the disease, contemporaneous prevention strategies, and the impact of antiretroviral therapies at the individual and population level. Throughout, a focus on the methods and mindset of epidemiologic enquiry will be emphasized. This will include how epidemiological approaches for characterizing populations, measurements, and inference can be used to build the evidence for public health action. Students will learn through critical analysis and discussion of the peer-reviewed literature coupled with evaluations using short quizzes and a final group presentation.
Gordis Teaching Fellowship course. Recommended Course Background: AS.280.345
Prerequisites: Prerequisite/Corequisite: AS.280.350
Instructor(s): P. Rebeiro
Area: Natural Sciences, Social and Behavioral Sciences.

AS.280.495. Honors in Public Health - Seminar. 3 Credits.
Using lectures, oral presentations, and writing assignments, this seminar is designed to assist Public Health Studies majors in writing a senior thesis. Students will formulate their topics, develop research skills, and address issues of professional ethics. Participating in this seminar is required for students pursing honors in Public Health Studies. Permission Required.
Instructor(s): J. Schrack; K. Gebo
Area: Social and Behavioral Sciences
Writing Intensive.

AS.280.499. Honors in Public Health. 3 Credits.
A research methods seminar to prepare students doing honors in Public Health Studies. Permission Required.
Instructor(s): J. Schrack; K. Gebo
Area: Social and Behavioral Sciences.

AS.280.500. Applied Experience-PH. 2 Credits.
This is a supervised, hands-on experience working with public health professionals. Students will complete 80 hours of applied work and will submit a synthesizing assignment at the end of the term. Please contact your PHS Advisor for complete details. Permission Required. Public Health Majors Only.
Instructor(s): J. Goodyear; K. Gebo; L. Folda; M. Smart.

AS.280.501. Internship-Public Health. 1 Credit.
Permission Required. Public Health majors only
Instructor(s): J. Goodyear; K. Gebo; L. Folda; M. Smart.

AS.280.502. Internship-Public Health. 1 Credit.
Permission Required. S/U only.
Instructor(s): J. Goodyear; L. Folda; M. Smart.

AS.280.505. Research for Freshmen/Sophomores in Public Health. 3 Credits.
Instructor(s): J. Goodyear; K. Gebo; R. Horner; R. Pearlman.

AS.280.506. Research for Freshmen/Sophomores in Public Health. 3 Credits.
Instructor(s): J. Goodyear; R. Shingles.

AS.280.507. Independent Study-Public Health. 3 Credits.
Public Health majors only. Permission Required.
Instructor(s): J. Goodyear; R. Shingles.

AS.280.508. Independent Study-Public Health. 3 Credits.
Consult the public health studies adviser for procedure. Permission Required.
Instructor(s): J. Goodyear; K. Gebo.

AS.280.511. Research for Juniors/Seniors in Public Health. 3 Credits.
Instructor(s): Staff.

AS.280.512. Research for Juniors/Seniors in Public Health. 0 - 3 Credit.
Restricted to public health studies majors. Consult the public health studies adviser for procedure. Permission Required.
Instructor(s): J. Goodyear; K. Gebo; R. Cone; R. Pearlman; R. Shingles.

AS.280.519. Public Health Practice. 2 Credits.
Specialized training course/experience for students who have been selected to become members of the PEEPs (Preventative Education and Empowerment for Peers), a peer education group based out of the Center for Health Education and Wellness (CHEW). The experience will focus on knowledge, skill and application of college health issues including: health promotion theory, body image, sexual health, alcohol and other drugs, and stress management. Permission Required. S/U Only.
Instructor(s): B. Schubert.

AS.280.520. Public Health Practice. 0 - 2 Credit.
This course is a specialized training course/experience for students who have been selected to become members of PEEPs (Preventative Education and Empowerment for Peers), a peer education group based out of the Center for Health and Wellness (CHEW). The experience will focus on knowledge, skill and application of college health issues including: health promotion theory, body image, sexual health, alcohol and other drugs, and stress management. Permission Required. S/U only.
Instructor(s): B. Schubert.
AS.280.550. Special Studies: Urban Health Issues. 0 - 2 Credit.
Permission required. Student must register for this course in person only. They will need to have their add/drop slip signed by one of the PHS Academic Advisors or the Administrative Coordinator.
Area: Social and Behavioral Sciences.

AS.280.570. Internship-PH. 1 Credit.

AS.280.590. Internship-Summer. 1 Credit.
Instructor(s): J. Goodyear; K. Gebo; L. Folda; M. Smart.

AS.280.596. Independent Study-Summer. 3 Credits.
Instructor(s): J. Goodyear; M. Smart.

AS.280.597. Research for Freshmen/Sophomores in Public Health. 3 Credits.
Instructor(s): G. Ball; J. Goodyear; K. Gebo; R. Pearlman.

AS.280.598. Research for Juniors/Seniors in Public Health. 3 Credits.
Instructor(s): B. Morgan; J. Goodyear; K. Gebo; T. Schroer.

AS.280.599. Honors In Public Health. 3 Credits.
Instructor(s): J. Goodyear; K. Gebo.

Cross Listed Courses

Anthropology

AS.070.109. The Social Lives of Global Health Programs. 3 Credits.
The course critically examines the techniques, practices, and experiences of global health policies and programs, and explores how global health programs affect the lives of individuals and communities in diverse locations.

AS.070.302. The Social Lives of Global Health Programs. 3 Credits.
The course critically examines the techniques, practices, and experiences of global health policies and programs worldwide, and the effects they have on individuals, families, communities, and states. Dean’s Teaching Fellowship Course
Instructor(s): L. Reynolds
Area: Humanities, Social and Behavioral Sciences.

AS.070.306. Healing: Politics and Poetics. 3 Credits.
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.070.326. Bodies in Anthropology. 3 Credits.
Area: Humanities, Social and Behavioral Sciences.

AS.070.327. Poverty’s Life: Anthropology of Health & Economy. 3 Credits.
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.070.329. Care and Affliction in the Everyday. 3 Credits.
How are illness, suffering, and potentials for well-being shaped through our everyday relations? In this seminar, we will explore how relations of care make and unmake lives in contexts of inequality and precariousness. We examine how a multiplicity of social ties, from kinship to neighborhood networks, articulate with institutional margins, and mediate violence, scarcity, and material realities of disease and illness. Cross-listed with Public Health Studies
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.070.396. On the Question of Drugs. 3 Credits.
Area: Humanities, Social and Behavioral Sciences.

History

AS.100.333. Global Public Health Since World War II. 3 Credits.
Globalization has dramatically reshaped the world economy, providing great advantages to some but leaving poor nations to struggle with hunger, disease and death on a daily basis. This course explores the impact of globalization on public health in the developed and the developing nations since 1945. Cross-listed with Public Health Studies
Instructor(s): B. Morgan; L. Galambos
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.343. The Power of Place: Race and Community in East Baltimore. 3 Credits.
Instructor(s): M. Shell-Weiss
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

History of Science Technology

AS.140.105. History of Medicine. 3 Credits.
Course provides an overview of the medical traditions of six ancient cultures; the development of Greek and Islamic traditions in Europe; and the reform and displacement of the Classical traditions during the Scientific Revolution. Cross-listed with Public Health Studies
Instructor(s): M. Fissell
Area: Humanities, Social and Behavioral Sciences.

AS.140.106. History of Modern Medicine. 3 Credits.
The history of Western medicine from the Enlightenment to the present, with emphasis on ideas, science, practices, practitioners, and institutions, and the relationship of these to the broad social context.
Instructor(s): D. Todes
Area: Humanities, Social and Behavioral Sciences.

AS.140.127. History of Psychiatry: Medicine and Madness from Antiquity to the Present. 3 Credits.
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.304. Medicine for and by Women in Early Modern Europe. 3 Credits.
This course will examine women’s role in early modern European medicine through the reading of early modern medical texts written for or by women. The course is meant for students interested in women’s history, the history of medicine, European history.
Instructor(s): G. Pomata
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.385. A Patient’s History of Health and Healing (1600-1750) (DTF). 3 Credits.
This course explores themes in the history of medicine in early modern Europe from the patient’s point of view. Topics include patients’ conceptions of disease categories, articulations of suffering, use of popular medical texts, experiences of childbirth, negotiations with healers, and approaches to death. Dean’s Teaching Fellowship course Cross-listed with Public Health Studies
Instructor(s): O. Weisser
Area: Humanities, Social and Behavioral Sciences Writing Intensive.
AS.140.397. The Population Problem in Historical Perspective. 3 Credits.
This course will trace the major debates over the relationship of population growth to food supply, birth control, resources, and environmental change from the 18th century to present. Cross-listed with Public Health Studies
Instructor(s): T. Long
Area: Humanities, Social and Behavioral Sciences.

Philosophy
AS.150.219. Introduction to Bioethics. 3 Credits.
Introduction to a wide range of moral issues arising in the biomedical fields, e.g. physician-assisted suicide, human cloning, abortion, surrogacy, and human subjects research. Cross listed with Public Health Studies.
Instructor(s): H. Bok
Area: Humanities
Writing Intensive.

AS.150.302. Topics in Bioethics: Bioethics and the Human Genome. 3 Credits.
Instructor(s): M. Lewis
Area: Humanities.

Economics
AS.180.252. Economics of Discrimination. 3 Credits.
What does the empirical evidence show, and how can we explain it? How much of the difference in observed outcomes is driven by differences in productivity characteristics and how much is due to discrimination? How have economists theorized about discrimination and what methodologies can be employed to test those theories? What has been the impact of public policy in this area; how do large corporations and educational institutions respond; and what can we learn from landmark lawsuits? The course will reinforce skills relevant to all fields of applied economics, including critical evaluation of the theoretical and empirical literature, the reasoned application of statistical techniques, and analysis of current policy issues.
Prerequisites: AS.180.102
Instructor(s): B. Morgan
Area: Social and Behavioral Sciences
Writing Intensive.

AS.180.289. Economics of Health. 3 Credits.
Application of economic concepts and analysis to the health services system. Review of empirical studies of demand for health services, behavior of providers, and relationship of health services to population health levels. Discussion of current policy issues relating to financing and resource allocation.
Prerequisites: AS.180.102
Instructor(s): D. Bishai
Area: Social and Behavioral Sciences.

AS.180.390. Health Economics & Developing Countries. 3 Credits.
Prerequisites: AS.180.301
Instructor(s): M. Gersovitz
Area: Social and Behavioral Sciences
Writing Intensive.

Political Science
AS.190.354. Politics of Health Policy. 3 Credits.
Traces the evolution of the American Health care system, emphasis on the political forces that shape public and private provision of health care in the United States.Cross-listed with Public Health Studies.
Instructor(s): P. Longman
Area: Social and Behavioral Sciences.

AS.190.405. Food Politics. 3 Credits.
This course examines the politics of food at the local, national, and global level. Topics include the politics of agricultural subsidies, struggles over genetically modified foods, government efforts at improving food safety, and issues surrounding obesity and nutrition policy. Juniors, seniors, and graduate students only. Cross-listed with Public Health Studies.
Instructor(s): A. Sheingate
Area: Social and Behavioral Sciences
Writing Intensive.

Public Policy
AS.195.477. Intro To Urban Policy. 3 Credits.
Perm. Req’d. 195.477 & 195.478 must be taken together by undergraduates Cross-listed with Political Science, Sociology, Public Health Studies, and Geography and Environmental Engineering
Instructor(s): S. Newman
Area: Social and Behavioral Sciences
Writing Intensive.

AS.195.478. Urban Policy Internship. 3 Credits.
195.478 & 195.477 must be taken together by undergraduates Cross-listed with Political Science, Sociology, Public Health Studies, and Geography and Environmental Engineering
Instructor(s): S. Newman
Writing Intensive.

German Romance Languages Literatures
AS.211.416. Visual Languages in Medical Knowledge. 3 Credits.
This interdisciplinary course, co-taught by professor Veena Das (Anthropology) and Research professor and filmmaker Bernadette Wegenstein (German and Romance Languages and Literatures) will track the mediation of images in the making of medical knowledge and show how sensory knowledge is incorporated or transformed in the process.
Co-listed with 214.616 and 070.416
Instructor(s): B. Wegenstein; V. Das
Area: Humanities.

AS.214.616. Visual Languages in Medical Knowledge.
This interdisciplinary course, co-taught by professor Veena Das (Anthropology) and Research professor and filmmaker Bernadette Wegenstein (German and Romance Languages and Literatures) will track the mediation of images in the making of medical knowledge and show how sensory knowledge is incorporated or transformed in the process.
Co-listed with 211.416 and 070.416
Instructor(s): B. Wegenstein; V. Das
Area: Humanities.
Writing Seminars

AS.220.309. Writing Healthy Baltimore. 3 Credits.
Students will explore public health issues in Baltimore and then write about them first in short pieces, and then in longer, polished works. The framework will be the mayor's Healthy Baltimore 2015 initiative – launched in 2011 to address the city's top-10 public health problems, including obesity, smoking, drug and alcohol abuse, STDs, cancer, and environmental health hazards. Students will study the initiative and its historical context; examine data sets; explore where and how the initiative intersects with public health practitioners and advocacy groups at the neighborhood level; and write what they learn in different formats, including essays, breaking news, and substance analysis. Students will then "workshop" each other's papers.
Instructor(s): K. Masterson
Area: Humanities
Writing Intensive.

Sociology

AS.230.150. Issues in International Development. 3 Credits.
This course will explore the major theoretical frameworks used to explain underdevelopment. Students will also explore the practice of development since the 1950s by examining specific strategies employed in Latin America, South Asia, East Asia, and Africa. Using a variety of country-specific case studies, students will have the opportunity to apply the theoretical and practical frameworks learned in the class to assess the successes and failures of real-life cases. Fulfills Economics requirement for GSCD track students only. Cross listed with International Studies (IR). Freshmen and sophomores only.
Instructor(s): R. Agarwala
Area: Social and Behavioral Sciences.

AS.230.225. Population, Health and Development. 3 Credits.
This course will provide an undergraduate level introduction to the study and practice, as well as the successes and failures of international development. Students will be introduced to the various theoretical frameworks used to explain underdevelopment. Students will also explore the practice of development since the 1950s by examining specific strategies employed in Latin America, South Asia, East Asia, and Africa. Using a variety of country-specific case studies, students will have the opportunity to apply the theoretical and practical frameworks learned in the class to assess the successes and failures of real-life cases. Fulfills Economics requirement for GSCD track students only. Cross listed with International Studies (IR). Freshmen and sophomores only.
Instructor(s): K. Szlavecz
Prerequisites: AS.270.103 or permission of instructor
Area: Natural Sciences.

AS.230.308. Population/Community Ecology. 3 Credits.
This course explores the distribution and abundance of organisms and their interactions. Topics include dynamics and regulation of populations, population interactions (competition, predation, mutualism, parasitism, herbivory), biodiversity, organization of equilibrium and non-equilibrium communities, energy flow, and nutrient cycles in ecosystems. Field trip included.
Prerequisites: AS.270.103 or permission of instructor
Instructor(s): K. Szlavecz
Area: Natural Sciences.
AS.270.320. The Environment and Your Health. 3 Credits.
This course surveys the basic environmental health sciences (toxicology, risk assessment), current public health issues (hazardous waste, radon, water-borne diseases) and emerging global health threats (global warming, ozone depletion, sustainability).
Instructor(s): M. Trush
Area: Natural Sciences.

AS.270.360. Climate Change: Science & Policy. 3 Credits.
This course will investigate the policy and scientific debate over global warming. It will review the current state of scientific knowledge about climate change, examine the potential impacts and implications of climate change, explore our options for responding to climate change, and discuss the present political debate over global warming.
Prerequisites: AS.270.103 or permission
Instructor(s): B. Zaitchik
Area: Natural Sciences.

AS.271.107. Introduction to Sustainability. 3 Credits.
Will introduce interactions between global environment and humans, discuss meaning of sustainability, and introduce use of tools to attain sustainability such as policy, law, communication, marketing, research, advocacy, international treaties.
Instructor(s): C. Parker
Area: Natural Sciences.

AS.271.360. Climate Change: Science & Policy. 3 Credits.
Prereq: 270.103 or permission of instructor. This course will investigate the policy and scientific debate over global warming. It will review the current state of scientific knowledge about climate change, examine the potential impacts and implications of climate change, explore our options for responding to climate change, and discuss the present political debate over global warming.
Instructor(s): D. Waugh
Area: Natural Sciences.

Interdepartmental

Instructor(s): S. Lee

AS.360.121. Discover Hopkins Health Studies. 1 Credit.

AS.360.258. Topics in Health, Gender and Sexuality. 3 Credits.
Area: Social and Behavioral Sciences.

Program in Latin American Studies

AS.361.322. Health, Development and Inequalities, A View from Latin America. 3 Credits.
Social inequalities have evolved along with capitalism. The seminar explores how these historical patterns of inequalities relate to the production of health and disease, especially the situation in Latin America.
Instructor(s): C. Abadia
Area: Humanities, Social and Behavioral Sciences.

Center for Africana Studies

The Feminization of Poverty - This WGS course examines the intersection of gender and poverty in the US and internationally. Students will intern for a Baltimore-area organization that works to improve quality of life for those who make the neighborhood home today will be critical to our work. Interviews, photographs, and related material collected as part of this class will become part of the JHU Center for Africana Studies "East Baltimore Oral History Project.” As such, they will be archived and also become part of a growing resource that will assist scholars, teachers, and community members in recovering and uncovering this neighborhood’s rich past.
Cross-listed with Public Health Studies
Instructor(s): M. Hinderer
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

Study of Women, Gender, Sexuality

The Feminization of Poverty - This WGS course examines the intersection of gender and poverty in the US and internationally. Students will intern for a Baltimore-area organization that works to improve gender economic equality, and course discussions will situate student experiences in a broader framework of understanding.
Instructor(s): T. Gottbreht
Area: Humanities, Social and Behavioral Sciences.

Geography Environmental Engineering

EN.570.108. Introduction Environmental Engineering. 3 Credits.
Overview of environmental engineering including water/air quality issues, water supply/ wastewater treatment, hazardous/solid waste management, pollution prevention, global environmental issues, public health considerations/environmental laws, regulations and ethics.Cross listed with Public Health Studies.
Instructor(s): H. Alavi
Area: Engineering.

EN.570.109. Environment & Society: Towards Sustainability. 3 Credits.
An introduction to understanding sustainability, with a focus on identifying and implementing solutions for a world of increasing needs and limited resources.
Instructor(s): C. Norman
Area: Humanities, Social and Behavioral Sciences.

EN.570.465. Water Resource Dev. 3 Credits.
Perm. Req’d. An attempt to review utilization and development of water in diverse environments beginning with early irrigation systems revealed by archaeology including those in the Middle East, Asia, and Latin America.
Instructor(s): M. Wolman
Area: Humanities, Social and Behavioral Sciences.
Entrepreneurship and Management
EN.660.336. Community Engineering: Interdisciplinary Problem Solving-Community Based Learning. 3 Credits.
So many big and seemingly intractable problems inhibit progress and diminish quality of life especially in and around urban communities. Surely there are ways to begin to tackle some of these problems, if we approach them from a multi-disciplinary perspective. This course provides that opportunity as students, who work primarily in teams, apply theory and ingenuity to investigate problems, propose solutions or invent devices that address some of these problems. Class time is spent in lecture, discussion, and applied community projects to master content. Time will be spent participating on teams and working in community organizations in addition to class.
Area: Social and Behavioral Sciences Writing Intensive.

Social Policy Minor
Social policy is the study of policy solutions to the problems of education, inequality, poverty, crime, and other issues faced by society’s families and children. It is an interdisciplinary field to which the disciplines of economics, sociology, and political science contribute in equal measure. It is a basic-science field with a strong applied research focus that can prepare students for careers in government, non-profits, and the private sector. Because it motivates students to think about how fundamental knowledge translates into real-world problem solving, it is an appropriate specialization for young people who plan to attend law school, programs in public health, or graduate school in the constituent social science fields.

A social policy minor is offered jointly by the Departments of Economics, Political Science, and Sociology. To complete the minor, students must take an introductory course, Introduction to Social Policy and Inequality: Baltimore and Beyond; a 300-level social policy elective in one of the three departments; an intensive semester in either Baltimore or Washington; and a senior capstone course to be taken after the intensive semester is completed. The preferred sequence is for students to take the introductory course in their sophomore year, the elective in the fall of their junior year, the intensive semester in Washington or Baltimore in the spring of their junior year, and the capstone course in their senior year. However, modifications in the sequence will be considered. The intensive semester in Washington or Baltimore will involve course work focusing on urban and national social policy problems coupled with an internship in a governmental agency or non-governmental organization that is involved with some aspect of social policy, or as a research assistant to a faculty member conducting research on social policy. The capstone course will involve discussion and research among students who have completed the intensive semester and is intended to build up experiences in that semester.

Enrollment in the intensive semester will be limited to 30 students and requires application and admission. The social policy minor is grounded in the three disciplines and priority will be given to students who are majoring in economics, political science, or sociology, but other students who are not majors and who have taken a large number of social science courses will be considered.

The program was launched with the Introduction to Social Policy course (AS.360.247) in fall, 2013. Details of the rest of the program are still under development. The list of courses includes the introductory course and a partial list of electives in the three departments (including 200-level social policy courses) but does not include the intensive semester or the capstone course. Students interested in the minor should speak to an advisor in the Economics, Political Science, or Sociology departments.

Faculty
Professors
Andrew Cherlin
Benjamin H. Griswold III Professor (Sociology).

Robert Moffitt
Krieger-Eisenhower Professor (Economics).

Associate Professors
Stefanie DeLuca
Associate Professor (Sociology).

Adam Sheingate
Associate Professor (Political Science).

Steven Teles
Associate Professor (Political Science).

Assistant Professors
Nicholas Papageorge
Assistant Professor (Economics).

Daniel Schlozman
Assistant Professor (Political Science).

Senior Lecturer
Barbara Morgan
Senior Lecturer (Economics).

Sociology
The Department of Sociology concentrates on two broad areas at the graduate and undergraduate levels: Global social change, which focuses on cross-national, comparative research; and social inequality, which primarily focuses on family, education, work, race, gender, policy, and immigration.

These concentrations trace back to the department’s founding in 1959 by renowned American sociologist James Coleman. The department has since earned a reputation as one of most selective, personalized sociology departments in the U.S. Currently home to 12 faculty members, 41 graduate students, and roughly 30 undergraduates, the department offers a uniquely intimate scholarly atmosphere in which faculty and students interact and collaborate frequently.

Scholars in the department share a wide variety of interests and interdisciplinary partnerships. Students are given flexible parameters for their study, and several faculty members have been honored with joint appointments in other Johns Hopkins schools and divisions. The department shares a unique relationship with the Bloomberg School of Public Health, which offers faculty and students access to first-rate collaborations in fields such as population and demography, mental health and mental hygiene, and healthcare organization. The department is also proudly partnered with the Department of Applied Mathematics and Statistics and is committed to building and maintaining strong foundations in quantitative research methods.
Major in Sociology

A major in sociology offers undergraduates a variety of post-graduation opportunities. Graduates from the department have found positions in financial institutions, education, non-governmental organizations focusing on international development, research departments of major corporations, and local government social service agencies. Others continue to graduate school in sociology, public health, law, urban planning, and education. A major in sociology can also be combined with the pre-medical course sequence, resulting in a medical school candidate who is well versed in the hard science of the human body and the social science of the human experience. For more details, please visit http://soc.jhu.edu/undergraduate/.

Requirements for a B.A. Degree

The required courses for a major in sociology provide students with a fundamental understanding of sociological theory, methods, and social statistics. Beyond these core requirements, elective courses are offered on a range of important sociological themes, including gender and family, social structure and personality, education, race and ethnicity, immigration, political sociology, international development, and the evolution of a world social system. Requirements are listed below and on the Office of Academic Advising—Sociology Checklist.

Six elective courses in sociology, at least four of which must be numbered 300 or above. Credits from one or two credit courses may be combined to satisfy this requirement, but no more than one of the six electives can be completed this way.

Three elective non-sociology courses carrying a Social and Behavioral Sciences designation in at least two other departments or programs are required. These may be at any level.

Total Credits: 13

A grade of C or better is required in all courses. For students who declared their major before fall 2012, one grade of C- is allowed in the core curriculum classes (none are allowed in the electives).

Foreign language study is strongly encouraged for majors, especially those considering graduate or professional study.

Senior Honors Program

The senior year Honors Program affords highly motivated and qualified students the opportunity to pursue, with faculty guidance, a research project of their own design. The Honors Program culminates in an honors thesis; a substantial work of original scholarship. Prerequisites and requirements for the program are as follows:

- All the requirements of a traditional major in sociology.
- Minimum 3.5 GPA in all sociology core curriculum courses.
- Declaration of intention to enroll in Senior Honors Program to faculty advisor by the end of the junior year.
- At least two 300-level courses in sociology by the end of the junior year.
- Foreign language study through the intermediate level (equivalent to four semesters) by the end of senior year.
- Enrollment in the year-long AS.230.502 Senior Honors Program.
- Completion and faculty approval of honors thesis.

For more information on the Senior Honors Program, contact your academic advisor.

Alpha Kappa Delta (AKD) Honor Society

In spring 2006, the Sociology department was awarded a chapter of the AKD sociology honor society. The chapter welcomed eleven new initiates that year, two faculty members, two new graduate students, and seven undergraduates.

AKD is an open, democratic, international society of scholars dedicated to the ideal of Athropon Katamanthein Diakonesin or “to investigate humanity for the purpose of service.” AKD seeks to acknowledge and promote excellence in scholarship in the study of sociology, the research of social problems, and other social and intellectual activities that will lead to improvement of the human condition.

AKD was founded at the University of Southern California in 1920 and affiliated with the Association of College Honor Societies in 1967. There are more than 97,000 lifetime members and over 600 chapters of the Society. These are persons with academic records showing excellence in sociology.

Initiates receive a chapter pin, a certificate of membership, and a membership activation form. Members who submit completed activation forms receive a one-year subscription to Sociological Inquiry, the official journal of the Society, the Alpha Kappa Delta Newsletter, election materials, and other services. In addition, the Society sponsors student paper contests, provides honoraria for initiation speakers, provides funds for student travel to regional sociological meetings, funds research symposia, sponsors a distinguished lecture series at the Annual Meeting of the American Sociological Association, and contributes annually to the ASA Minority Scholarship Fund. AKD members wear AKD honor cords at graduation ceremonies.

AKD chapters are important in the academic, professional, and social lives of student and faculty members. They provide opportunities for initiating and sharing activities in keeping with the purposes of the Society. Our local chapter affords the opportunity for faculty, graduate students, and undergraduate students to interact informally and to plan together events to enrich the intellectual and social life of the Department.

To be eligible for membership, majors must have at least junior year standing, an overall GPA of at least 3.0, a sociology GPA of at least 3.5, and have taken at least four courses in sociology.

Election to Alpha Kappa Delta is without regard to race, creed, or national origin. For more information, interested students should contact the AKD Faculty Chapter Representatives: Karl Alexander (karl@jhu.edu), Katrina McDonald (kmcdon@jhu.edu), Stephen Plank (splank@jhu.edu).

James S. Coleman Award

This award was established by the Department of Sociology in 1994 in honor of Dr. James S. Coleman, first chair of the department. The
award is for outstanding academic achievement by a senior majoring in sociology and is presented at graduation.

The department’s primary educational goal is to train first-class sociology Ph.D.’s. The sociology graduate experience at Johns Hopkins is best characterized as a research apprenticeship – a careful blend of formal instruction, faculty-directed individual study, and supervised as well as self-initiated research. The department’s small size and specific concentrations yield a personalized course of study and close relationships with faculty members and fellow graduate students. The social climate is informal, and the mix of students and faculty, drawn from a wide variety of geographic and social backgrounds, constitutes a rewarding intellectual community.

The department also offers two certificate programs that allow students to concentrate their graduate course of study: Program on Global Social Change (PGSC) and Program on Social Inequality (PSI). Students may pursue certificates in either, both, or neither of the special programs, and credits earned while pursuing a certificate may also be used to fulfill Ph.D. requirements. For more details, please visit http://soc.jhu.edu/graduate/.

Admissions

Applicants must submit an application fee, personal statement, GRE scores, all college transcripts, at least two (preferably three) letters of recommendation, and a sample of written work. International applicants must also submit a TOEFL score and a financial statement (FS-1G Form: Graduate International Student Notification [F-1/J-1]). Applicants should have a broad background in social science, especially sociology, economics, and psychology. Training in mathematics is encouraged. The department gives greatest weight to an applicant’s demonstrated ability and past performance. For more details, please visit http://soc.jhu.edu/graduate/admissions/.

Total Credits: 4

* This fall semester course is taken during the first year. Faculty presentations introduce students to the substantive interests, research and professional background of the sociology faculty. It is graded pass/fail.

To count toward degree requirements, core curriculum courses other than AS.230.815 Trial Research Paper I must be passed with a grade of B- or higher. After the core course requirement is satisfied, additional methods courses from the list above may be used to fulfill the nine-elective course requirement.

Electives

In addition to the core curriculum, graduate students must enroll in nine additional graduate-level courses, up to four of which may be taken outside of the department. All must be passed with a grade of B- or higher. While students are free to select these courses, the department strongly recommends that they be taken from diverse fields of specializations so as to maximize the breadth of exposure to core areas of sociology and other disciplines.

Teaching Assistantships

As part of their preparation for future academic work, graduate students are required to register for AS.230.811 Teaching Assistantship and serve as a teaching assistant for at least one semester.

Foreign Language

One of the requirements for the Ph.D. degree in sociology at Johns Hopkins University is a reading knowledge of a language other than English, and no student is exempt from this requirement. For a language to be eligible the student must show that

1. a body of social scientific literature exists in the language, or
2. the student must use this language to carry out dissertation field work or archival research for the dissertation.

The language test will evaluate comprehension of a social science document. Students are encouraged to complete the language requirement as soon as possible, but no later than the end of their third year.

Residence

A minimum of two consecutive semesters of full-time residence is mandatory for all degrees. However, at least six semesters of full-time residence is recommended by the department for completion of the core curriculum, electives, and completion of a research apprenticeship and a trial research paper. By the end of the fourth year in the program, the student is expected to have written a dissertation proposal and have defended it successfully before the appropriate examining committees.

Research Apprenticeship

AS.230.801 and AS.230.804

Students are required to develop practical research expertise through professional-level participation (data analysis, literature searches/reviews, non-routine data processing or coding, preparation and refinement of research instruments, and data/file management). This requirement is fulfilled by satisfactorily completing a Research Apprenticeship, which is required during the student’s first year of full-time graduate study in the department. The standard for certification is substantial research accomplishment as judged by the faculty supervisor.

Trial Research Paper

(AS.230.815, AS.230.816, AS.230.817)

The Trial Research Paper (TRP) affords students the experience of planning and executing a research project that leads to a scholarly paper. The TRP is expected to be a serious, complete work of scholarship, suitable for conference presentation or journal submission. By the end
of the fall semester of their second year, students should invite a faculty sponsor to supervise the design and execution of the TRP project. A TRP proposal must be approved by the faculty sponsor by the end of the spring semester of the second year. By the end of the fall semester of the third year, the faculty sponsor must approve a draft of the paper which will then be reviewed by another department faculty member. The faculty sponsor, at her or his discretion, may extend this deadline to the end of the intersession period following the fall semester. The faculty reviewer will evaluate the paper and, if necessary, recommend revisions that should be made before the paper is certified. The faculty sponsor will determine required revisions and must certify a final TRP by the end of the spring semester of the third year.

Dissertation
The student must propose and conduct original research presented in a dissertation suitable for publication. The department administers an oral examination which must be passed before the student is allowed to defend before a university board. The dissertation must then be defended either at a Graduate Board preliminary oral examination, based on the dissertation proposal, or at a Graduate Board final oral examination, based on the completed dissertation.

Special Programs
The department offers two special programs that coordinate activities in its two areas of concentration. Doctoral students may affiliate with one or both of these programs at their discretion. These programs function as fields of doctoral specialization within the Department of Sociology.

Program on Global Social Change (PGSC)
This concentration of graduate study focuses on cross-national, comparative research and long-term, world-scale social change. The goal of the program is to give students knowledge of the various theoretical perspectives in these areas, experience in data collection and analysis, and expertise in one or more substantive fields.

The program does not focus on a particular geographic area, although faculty members have conducted extensive research on Latin America, Africa, Asia, the Middle East, and Eastern and Southeastern Europe. Instead of a geographical approach, the emphasis is on issues of development and social change that cut across different countries and world regions. Examples are globalization and regionalization, labor and development, city systems and urban primacy, social movements and revolutions, state violence, migration and labor force formation, family structure and change, social structure and personality, and national and international stratification. Students enroll in a sequence of courses and seminars and participate actively in ongoing faculty projects dealing with one or more of the above issues.

In addition, the interdisciplinary character of graduate education at Johns Hopkins offers students ample opportunity to enroll in courses or collaborate in research with faculty in other departments. Faculty associates of the program include distinguished scholars in anthropology, economics, geography, history, political science, and public health.

A graduate concentration is not required of Ph.D. students.

Program on Social Inequality (PSI)
This concentration of graduate study focuses on the causes and consequences of social inequality, the social processes that sustain it, and how social policies can reduce it. These questions are addressed in terms of class, gender, race, ethnicity, and immigration status/citizenship.

The program is designed to train students in the sociological analysis of social inequality among individuals and groups. This training includes course work in areas such as social stratification, the sociology of the family, the sociology of education, sociology of immigration, social structure and personality, social policy, and research design and methods. Students in the PSI program enroll in a sequence of courses and seminars and participate actively in ongoing faculty projects dealing with one or more of the above issues.

In addition, the interdisciplinary character of graduate education at Johns Hopkins offers students ample opportunity to enroll in courses or collaborate in research with faculty in other departments. Faculty associates of the program include distinguished scholars in anthropology, economics, geography, history, political science, and public health.

A graduate concentration is not required of Ph.D. students.

Joint Program: Doctorate in Sociology and Master’s in Applied Mathematics and Statistics
The Department of Sociology, Krieger School of Arts and Sciences, and the Department of Applied Mathematics and Statistics, Whiting School of Engineering, announce a joint program leading to a Ph.D. in Sociology and an M.A. or M.S.E. in Applied Mathematics and Statistics. The purpose of the joint program is to offer Sociology doctoral students an opportunity to acquire advanced statistical knowledge and applied research skills.

The joint program requirements include all the Ph.D. requirements in Sociology and the specially designed requirements for an M.A. or M.S.E. in Applied Mathematics and Statistics. For Sociology Ph.D. requirements, see the Sociology Ph.D. Students Handbook. Applied Mathematics and Statistics courses may substitute for AS.230.600 Introduction to Social Statistics and AS.230.604. Two options for fulfilling the requirements are available for an M.A. or M.S.E. in Applied Mathematics and Statistics. For both options, students are required to meet the Applied Mathematics and Statistics department’s computing requirement (fulfilled through EN.550.413 Applied Statistics and Data Analysis), the purpose of which is to ensure that students are able to effectively use computers to solve mathematical problems.

Note: All Joint Program students are required to complete Responsible Conduct of Research (RCR) training, which is in addition to the HIPPA training required for the sociology Ph.D.

For more information, please visit http://soc.jhu.edu/graduate/jointprogram/.

Facilities
Each resident graduate student is provided office or desk space to conduct his or her studies and research. In addition, the department has a computer lab with a network of computers and printers for graduate student use. Close working relationships exist with the Center for Social Organization of Schools and the Institute for Policy Studies, which provide excellent opportunities for research training.

Financial Aid
The department strives to provide five years of financial aid for all students who are in good academic standing. Eligibility for financial aid in
the fifth year ordinarily requires successful oral defense of the dissertation proposal by May 31, following their fourth year in the Ph.D. program.

The department has a number of assistantships that are awarded each year to graduate students in the Ph.D. program. Opportunities are also available for graduate students to work as salaried research assistants with members of the Sociology faculty and staff at associated research centers.

For current faculty and contact information go to http://soc.jhu.edu/directoryindex/faculty/

**Faculty**

**Chair**

Karl L. Alexander
John Dewey Professor of Sociology; sociology of education, social stratification.

**Professors**

Andrew J. Cherlin
Benjamin H. Griswold III Professor of Public Policy; sociology of the family, demography, social policy.

Lingxin Hao
Sociology of the family, public policy, immigration, social inequality, sociology of education, quantitative methodology.

Katherine Newman
James B. Knapp Dean of the Krieger School of Arts & Sciences, Professor; Sociology of poverty and the working poor.

Beverly J. Silver
Historical capitalism, comparative and world-historical research methods, global inequality and development, labor and social movements.

**Associate Professors**

Joel Andreas
Post 1949 Chinese society, transitions to and from socialism, industrial democracy, education and class reproduction.

Stefanie A. DeLuca
Sociology of education, sociology of neighborhoods, life course studies.

Ho-Fung Hung
Global political economy, contentious politics, nationalism, and social theory.

Katrina Bell McDonald
Sociology of the family, gender/ethnic identity, race and social class.

Stephen B. Plank
Sociology of education, statistical and research methods, stratification.

**Assistant Professors**

Rina Agarwala
International development, gender, labor, migration, globalization, India.

Michael Levien
Political and developmental sociology.

**Professor Emeritus**

Melvin L. Kohn
Academy Professor in The Academy at JHU/KSAS; social structure and personality, cross-national comparative analysis, social class and stratification, sociology and social psychology of work.

**Research Professor**

Emily Agree
Gerontology demography.

Doris R. Entwistle
Sociology of human development, socialization of cognitive behavior, methods in social science research.

**Adjunct/Lecturers**

Joyce Epstein
Research Professor (Center for Social Organization of Schools); sociology of education, evaluation research, social psychology.

Kelly Gebo
Adjunct Assistant Professor (School of Medicine); medical sociology and mental health.

Huei-ying Kuo
Senior Lecturer/Assistant Research Scientist; Chinese diasporic business networks, Japanese and British imperialism, as well as Chinese nationalism in East and Southeast Asia.

James McPartland
Research Professor (Center for Social Organization of Schools); sociology of education, race relations, formal organizations.

Timothy Nelson
Senior Lecturer/Assistant Research Scientist; low income non-custodial fathers, congregational studies, African-American religion.

Magda von der Heydt
Senior Lecturer (Latin American Studies Program); socio-economic history of Latin America, developmental processes.

**Joint Appointments**

David M. Altschuler
Adjunct Associate Professor (Institute for Policy Studies) Bloomberg School of Public Health; de-institutionalization and community-based services, delinquency and criminal justice, voluntary organizations and philanthropy, social policy.

Nan M. Astone
Associate Professor, Bloomberg School of Public Health; demography, urban poverty, adolescence.

Stanley Becker
Professor, Bloomberg School of Public Health; demography.

William W. Eaton
Professor, Bloomberg School of Public Health; epidemiology of schizophrenia, research methods, sociology of mental disorders and mental hygiene.

Margaret E. Ensminger
Professor, Bloomberg School of Public Health; poverty, family, adolescence, social structure and individual lives, substance use, criminal behavior, life course.

Thomas A. LaVeist
Professor, Bloomberg School of Public Health; medical sociology, mortality, health services, aging.

Lori Leonard
Associate Professor, Bloomberg School of Public Health; global health, anthropology, ethnography, reproductive health, adolescents, women’s health.

Vicente Navarro
Professor, Bloomberg School of Public Health; health and social policy, international health, health care policy.

Sandra J. Newman
Director, Adjunct Professor (Institute for Policy Studies) Bloomberg School of Public Health; policy analysis, housing policy for vulnerable populations, long-term care policy.

Marc Stein
Assistant Professor, School of Education; neighborhoods, school choice, academic achievement.

Visiting Faculty
Paul Attewell
Professor (CUNY, New York).

For current course information and registration go to https://isis.jhu.edu/classes/

Courses

AS.230.101. Introduction Sociology. 3 Credits.
Introduces students to basic sociological concepts and perspectives, and applies them to a variety of topics including family, work, and the dynamics of class, gender, and racial/ethnic inequalities in the United States and globally.
Instructor(s): T. Nelson
Area: Social and Behavioral Sciences.

AS.230.108. Freshman Seminar: Disability & Society. 3 Credits.
This seminar is designed to introduce students to, and examine the medical and human state of disability. It is structured to give students basic insight into how disability is defined, experienced, and understood in modern society, and to provide an introduction to the study of disability. We will look historically at the circumstances surrounding the oppression of individuals with disabilities. We will also explore how cultural depictions of disability in popular culture, films, television, music, literature, and the internet media form and reinforce disability stereotypes. Throughout this course, we will also analyze the benefits and detriments of government policies created to level opportunities for individuals with disabilities. Finally, we will also look at present bioethical issues related to disability including selective abortion, genetic testing, growth limitation, and cochlear implantation. Dean’s Prize Freshman Seminar
Instructor(s): C. Villenas
Area: Social and Behavioral Sciences.

AS.230.109. Hot Topics in Education. 3 Credits.
This course examines current school reform initiatives and the controversies surrounding them through a sociological lens. Freshmen only.
Instructor(s): K. Alexander
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.1109. Hot Topics in Education. 3 Credits.
The goal of this course is to explore issues of race and ethnicity in American education. We begin by studying the landmark Supreme Court case, Brown V. Board of Education, and related school segregation and resegregation issues. Through lectures, discussions, and films, students will become familiar with various sociological lenses through which the educational issues facing blacks, Asians, Latinos, and American Indians are analyzed. Cross-listed with the Center for Africana Studies.
Instructor(s): P. Bennett
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.114. Labor and Globalizations. 3 Credits.
Themes include the impact of global processes such as immigration and capital mobility on the nature of work and employment in different parts of the world, and how local protest has shaped global social change.
Area: Social and Behavioral Sciences.

AS.230.123. Trust and Altruism: Existence and Forms in Theory and Practice. 3 Credits.
Trust is often cited as necessary to the successful functioning of small groups, formal organizations, and democratic society. Altruism is a concept that is debated regarding its very existence – whether there is a sociological, biological, or other basis for saying it exists. Through interdisciplinary readings – primarily from sociology but also evolutionary biology, psychology, and philosophy – we will consider theories of trust and altruism, as well as claims about other mechanisms that can secure mutually beneficial cooperation. Case studies from families, education, neighborhood ecology, and on-line communities are featured. Freshmen only.
Instructor(s): S. Plank
Area: Social and Behavioral Sciences.

AS.230.127. Freshmen Seminar: Social Interaction. 3 Credits.
This course introduces students to ways of seeing social interaction, from mundane acts like conversation and riding the bus to extraordinary events like riots, escape panics and battlefield atrocities. The course will employ a “hands on” approach in which students will DO and not just read about sociology. Locations in and around campus will serve as laboratories to observe (and instigate) interactions for analysis. Freshman Only.
Instructor(s): T. Nelson
Area: Social and Behavioral Sciences.

AS.230.129. Social Science Research Methods Practicum. 3 Credits.
Taught by a sociologist and a political scientist, this interdisciplinary course gives students hands-on training with several social scientific research methods. Both quantitative and qualitative methods will be introduced, including survey, secondary data analysis, participant observation, path dependency, and event-structure analysis. Students will be expected to consider the strengths and weaknesses of each method, including the types of validity threats associated with each.
Area: Social and Behavioral Sciences.

AS.230.140. Introduction to Globalization. 3 Credits.
This course will offer a broad introduction to the social, economic and political dimensions of globalization. Themes include theories of globalization, the impact of global processes such as immigration and capital mobility on work and family, and how local protest has shaped global social change.
Instructor(s): N. Aschoff
Area: Social and Behavioral Sciences.
AS.230.145. Social Problems in Contemporary China. 3 Credits.
This course will introduce students to contemporary Chinese society in the era of reform through examination of major social problems. We will examine issues such as: urban-rural divisions and the hukou system; urbanization and the plight of millions of peasant workers migrating into China's cities; changing class structure and the lives of the new urban underclass such as laid-off state workers; the one-child policy and its impacts on women, children, and society in China; education and gender inequality; land disputes and rural protests; corruption and stalled political reforms; government media control and contesting cyber-space; pollution and emerging environmental movement; ethnic conflicts; and challenges faced with China's medical care and public health system. The course will also discuss the impact of the rise of China, and its past, current, and possible future development paths in the region and the world. Through lectures, discussions, group projects, and documentary films, students will get a bird's eye view of contemporary Chinese society, and gain some insights on the problems of balancing economic growth and social development. Cross-listed with East Asian Studies
Instructor(s): L. Zhang
Area: Social and Behavioral Sciences.

AS.230.150. Issues in International Development. 3 Credits.
This course will provide an undergraduate level introduction to the study and practice, as well as the successes and failures, of international development. Students will be introduced to the various theoretical frameworks used to explain underdevelopment. Students will also explore the practice of development since the 1950s by examining specific strategies employed in Latin America, South Asia, East Asia, and Africa. Using a variety of country-specific case studies, students will have the opportunity to apply the theoretical and practical frameworks learned in the class to assess the successes and failures of real-life cases. Fulfills Economics requirement for GSCD track students only. Cross listed with International Studies (IR). Freshmen and sophomores only.
Instructor(s): R. Agarwala
Area: Social and Behavioral Sciences.

AS.230.166. Chinese Migration in Modern World History 1500's-2000's. 3 Credits.
This interdisciplinary course applies theories of economic sociology to examine the effects of Chinese overseas migration on modern world economy from the sixteenth century to the contemporary era. It examines the contribution of overseas Chinese to the development of capitalism in the following junctures: the East-West economic integration in the pre-modern era, China's modern transformation after the Opium War (1839-1842), the making of US national economy in the early twentieth century, as well as the postwar economic miracles in the Pacific Rim, among others. Cross-listed with History and East Asian Studies.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences.

AS.230.175. Chinese Revolutions. 3 Credits.
This course introduces the origins, operation and impacts of five major revolutions in modern China between 1850 and 1950. These include the Taiping Rebellion, the republican revolutions, federalist and southern automatic movements, labor strikes as well as peasant rebellions. It draws on the existing historiography that examines China's transition from an empire to a republic, impacts of western and Japanese influences to China, as well as the continuity and change of Chinese social organizations. Cross list with International Studies and East Asian Studies. Fulfills IS History requirement.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.199. Criminal Justice & Correction. 3 Credits.
An overview of the criminal justice system including court watching and riding with a police officer (optional). Class includes guest visits, field trips, and term projects.
Instructor(s): S. Harris
Area: Social and Behavioral Sciences.

The purpose of this course is to provide a sound introduction to the overall process of research and the specific research methods most frequently used by sociologists and other social scientists. Required for IS GSCD track students.
Instructor(s): L. Hao
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.203. Intro Latin American Societies. 3 Credits.
This course is designed as an introduction to latin america's societies for beginners. The course is organized thematically, providing a survey of latin america through its historical, economic, social, political and cultural dimensions. We will analyze the pre-columbian civilizations and the legacy of colonialism to understand the origins of the multiethnic societies and then focus on the contemporary development. It will offer fundamental background information to build a solid base for further specialization in a region or a theme.
Area: Social and Behavioral Sciences.

AS.230.205. Introduction to Social Statistics. 4 Credits.
This course will introduce students to the application of statistical techniques commonly used in sociological analysis. Topics include measures of central tendency and dispersion, probability theory, confidence intervals, chi-square, anova, and regression analysis. Hands-on computer experience with statistical software and analysis of data from various fields of social research. Required for IS GSCD track students.
Prerequisites: Statistics Sequence Restriction: Students who have completed EN.550.111 OR EN.550.113 may not enroll.
Instructor(s): D. Pasciuti
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.230.206. Introduction to Race and Ethnicity. 3 Credits.
This course offers an historical overview of race and ethnicity in American society, and the processes that have led to ethnic and racial boundaries. We explore the social dynamics of racial/ethnic hostility and racial/ethnic protest movements. In addition, we examine how race and ethnicity have been used to justify segregation, domination and genocide, but also to create a sense of community, shared responsibility and belonging. Cross-listed with Africana Studies
Instructor(s): K. McDonald
Area: Social and Behavioral Sciences.

AS.230.213. Social Theory. 3 Credits.
This course provides an introduction to classical sociological theories (with an emphasis on Marx, Weber, and Durkheim). Contemporary theoretical perspectives on social inequality, conflict, and social change are also explored. Emphasis is placed on understanding the theoretical constructs as well as on applying them in the analysis of current social issues. Required for IS GSCD track students.
Instructor(s): J. Andreas
Area: Social and Behavioral Sciences
Writing Intensive.
AS.230.224. Migration and Social Change in China. 3 Credits.
This course, titled "Migration and Social Change in China: a Global Perspective," assists students to understand rapid social change in China and globalization of production through the window of the massive rural-urban migration. While focusing on migrant labor, the course will raise and discuss a wide range of issues, including rural development, rural-urban inequality, government policy, public health, environmental degradation, capital relocation and global commodity chain.
Area: Social and Behavioral Sciences.

AS.230.225. Population, Health and Development. 3 Credits.
This course will cover the major world population changes in the past century as well as the contemporary situation and projections for this century. Topics include rapid population growth, the historical and continuing decline of death and birth rates, contraceptive methods as well as family planning and child survival programs, population aging, urbanization, population and the environment and the demographic effects of HIV/AIDS.
Instructor(s): S. Becker
Area: Social and Behavioral Sciences.

AS.230.228. Colonialism in Asia and Its Contested Legacies. 3 Credits.
This seminar examines the theories and historiography of colonialism in Asia, with special focus on the development of British Straits Settlements and Hong Kong as well as Japanese Taiwan. We will review the competing discourses about the impact of colonial dominations in these areas from the 1800s to the present-day. In the beginning of the era, the British built up the economic linkage between Hong Kong and Penang, Malacca as well as Singapore to sustain its dominance throughout the "Far East." In the middle of the period, the expanding Japanese empire developed Taiwan as a foothold to compete with the British interests in South China and Southeast Asia. Hong Kong and the Straits Settlements, especially Singapore, came to the contested terrain where two colonial powers vied for their influence in the region. The competition was not only about trade, but about the construction of a new East Asian regional order after the end of the Chinese hegemony. In the end of the period, the intervention of the US power in postwar Asia facilitated the retreat of the colonial establishments. British and Japanese ones included. The course that compares the colonial establishments and discourses on colonial legacies among the three areas points out that colonialism constituted an inalienable part of Asian history. Cross listed International Studies (CP) and East Asian Studies. Fulfills History requirement for IS GSCD track students only.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.237. Sociology and Film. 3 Credits.
Do films merely mirror society, or do they in fact shape societal experience? This class will investigate these questions through a filmic analysis of sociological issues. We will consider both narrative and documentary films and use them to engage in sociological questions of class, race, and gender. We will discuss what the historical and current trends in film making and film subject say about society, and how these trends may in turn influence society.
Instructor(s): E. Talbert
Area: Humanities, Social and Behavioral Sciences.

AS.230.240. Introduction to Environmental Sociology. 3 Credits.
The first part of the course will critically examine the major theoretical perspectives on environmental sociology including nature as a social construction, ecological Marxism and ecological modernization. The second part of the course will examine key aspects of the relationship between society and the environment including risk perception, the environmental effects of economic globalization, the distribution of environmental goods and bads, population growth, environmental movements, and debates about state-led environmental protection.
Instructor(s): A. Bonini
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.244. Race and Ethnicity in American Society. 3 Credits.
Race and ethnicity have played a prominent role in American society and continue to do so, as demonstrated by interracial and interethnic gaps in economic and educational achievement, residence, political power, family structure, crime, and health. Using a sociological framework, we will explore the historical significance of race and its development as a social construction, assess the causes and consequences of intergroup inequalities and explore potential solutions.
Instructor(s): Staff
Area: Social and Behavioral Sciences.

AS.230.245. Inequality & Social Policy in U.S.A.. 3 Credits.
In the US and other industrialized countries, problems of income inequality and poverty have taken a sharp turn for the worst in recent years. The purpose of the course is to give students an opportunity to learn about the causes of this increasing inequality and poverty in US cities like Baltimore, and to explore the potential for public policies to rectify these problems. Students will read about the main theoretical and empirical perspectives on the issues; examine the relationship between inequality and class, gender and race; study the history and present shape of social policy in the US; and explore the consequences of particular initiatives for the status of the urban poor.
Instructor(s): A. Livingstone
Area: Social and Behavioral Sciences.

AS.230.255. Men and Women in Society. 3 Credits.
This course will explore what it means to be male or female through academic writings, fiction, and film. It will examine how genders are defined by individuals, cultures, and institutions, and how those meanings shape everyday life for men and women. Power, inequality, and intersections with race-ethnicity, class, and sexuality will be a primary focus. Theories of gender addressed will include those related to masculinity, social psychology, feminism, and intersectionality. Though the course will primarily consider the United States, gender in other countries and cultures will also be addressed. Cross-listed with WGS.
Instructor(s): K. McDonald
Area: Social and Behavioral Sciences.
AS.230.260. Political Sociology. 3 Credits.
This course explores the interaction between political power and social forces in macro-comparative and international perspectives, focusing on how political institutions (such as states, political parties, and international governing bodies) are shaped by actions of different social groups (such as classes, ethnic groups, social movements), and vice versa. The class will cover the historical emergence of sovereign nation-state as the most salient political organization across the world, as well as its evolution into the form as we know it today. The class will also discuss the array of challenges that modern nation-states are facing under globalization and restructuring of world order following the end of Cold War. Cross-listed with Political Science.
Instructor(s): H. Hung
Area: Social and Behavioral Sciences.

AS.230.265. Research Tools and Technologies for the Social Sciences. 3 Credits.
This course will introduce students to a range of digital technologies that are critical for conducting social scientific research in the 21st century. Students will develop competency in the use of computer programs for statistical analysis, database management, the creation of maps and timelines, and the presentation of research reports. The research tools and technologies will be taught using examples from ongoing social science faculty research projects at Johns Hopkins on global inequality and international development. Required for GSCD track students.
Instructor(s): S. Karatashli
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.230.285. Maritime East Asia. 3 Credits.
This course examines the transnational connections among merchants and migrants in the waters of East and Southeast Asia from a historical and comparative perspective. In this class, we will explore how diplomatic ties, trade and migration between the thirteenth and eighteenth centuries contribute to the making of cosmopolitan cities such as Quanzhou, Macau, Nagasaki, Fort Zeelandia (Formosa), Malacca, Singapore and Batavia. The course will also address the role that transnational trade and migration networks played in the incorporation of East and Southeast Asia into the Western-led capitalism in the nineteenth century. The course will close with an examination of how the legacies of the long-standing transnational maritime connections continue to shape contemporary inter-state competition and negotiation in the region. Key concepts to be introduced include tribute trade system, rice economy, pan-Asianism, and ASEAN free trade zone. Cross listed with East Asia Studies.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.302. Class Stratification & Personality. 3 Credits.
230.302 (S) CLASS, STRATIFICATION, AND PERSONALITY (3)
Kohn Limit 30 Juniors/Seniors only or instructor's consent An intensive examination of the research literature, much of it based on survey research carried out by the instructor and his international collaborators, on the relationships of social class and social stratification with personality. The course will examine the links between people's positions in the class structure and the stratification hierarchy of their society and their more proximate conditions of life, particularly their job conditions, and how these conditions, in turn, affect (and are affected by) such basic dimensions of personality as intellectual flexibility, self-directedness of orientation, and feelings of well-being or distress. The research has been conducted principally in the United States, Japan, Poland when it was socialist, Poland and Ukraine during their transitions from socialism to nascent capitalism, and (in the instructor's current research) China during its very different transformation. Cross-listed with Psychological & Brain Sciences
Instructor(s): M. Kohn
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.303. Sociology of Disability. 3 Credits.
This course introduces students to themes within the sociology of disability by critiquing traditional notions of disability, an exploring how societal institutions influence the classification, significance, and experiences of disability. Cross-listed with Public Health Studies.
Instructor(s): C. Villenas
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.304. Social Organization and Social Control in Schools. 3 Credits.
We will ask: "How do arrangements of tasks, rewards, roles, and opportunities in schools affect student learning, behavior, and sense of attachment?" and "In what ways are social control processes in schools related to the demands and dynamics of other institutions, particularly the family and the labor market?" Before addressing these questions, we will define social organization and social control, and describe the forms (both intended and unintended) they take in schools.
Instructor(s): S. Plank
Area: Social and Behavioral Sciences.

AS.230.307. Sociology of Latin America. 3 Credits.
Area: Social and Behavioral Sciences.

AS.230.309. Segregation & Social Inequality. 3 Credits.
This course presents an in-depth study of racial and ethnic residential segregation and its relationship to social inequality. Through various theoretical perspectives, students will explore the history and contemporary patterns of residential segregation in the United States. In doing so, students will learn about the persons, organizations, and social phenomena that contribute to neighborhood segregation, such as homeowner associations, federal and local governments, developers, as well as differences between groups in racial preferences and socioeconomic status. Through lectures, readings, discussions, and films, students will gain insight into the causes of segregation, as well as its social, economic, and demographic consequences. Cross listed with the Center for Africana Studies.
Instructor(s): P. Bennett
Area: Social and Behavioral Sciences.
AS.230.310. Becoming An Adult. 3 Credits.
While students may already be personally familiar with the subject matter, the course examines the sociological and psychological dimensions of this demographically dense period known as the transition to adulthood. Emphasizes life course theories of human development through readings of empirical work on adolescence, the transition to college, early employment and early family formation. Attention is paid to the ways class; gender; race and nationality influence the pathways, choices and outcomes of young people. A Statistics/ Sociology background is helpful, but not required.
Instructor(s): S. Deluca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.312. Education & Society. 3 Credits.
This course examines how educational institutions affect students’ skills, values, and social mobility across generations. Research reviewed that compares educational institutions according to their formal and interpersonal structures. This course examines how educational institutions affect students’ skills, values, and social mobility across generations. Research reviewed that compares educational institutions according to their formal and interpersonal structures. Restricted to juniors and seniors only.
Instructor(s): K. Alexander
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.313. Space, Place, Poverty & Race: Sociological Perspectives on Neighborhoods & Public Housing. 3 Credits.
Is a neighborhood just a grouping of individuals living in the same place, or do neighborhoods have collective meanings and impacts on children and families? We will capitalize on research methodologies used to define and describe neighborhoods and their effects on economic and educational outcomes. These include case studies, census data, surveys, quasi/experimental data. Focus is on how research measures neighborhood effects and incorporates community level processes into models of social causation (e.g., social capital/control, community efficacy, civic engagement). Also examined: patterns in residential mobility, segregation, and preferences within black and white populations; development of housing policy in the U.S.; programs to determine how neighborhoods affect issues of social importance. Statistics and public policy background is helpful but not required.
Instructor(s): S. Deluca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.314. International Development. 3 Credits.
“Recent and long-term trends in the distribution of wealth, status, welfare and power will be analyzed in light of theories of national and international development.”
Instructor(s): B. Silver
Area: Social and Behavioral Sciences.

AS.230.316. African American Family. 3 Credits.
This course is an examination of sociological theories and studies of African-American families and an overview of the major issues confronting African-American family life. The contemporary conditions of black families are explored, as well as the historical events that have influenced the family patterns we currently observe. Special attention will be given to social policies that have evolved as a result of the prominence of any one perspective at a given point in time.
Instructor(s): K. McDonald
Area: Social and Behavioral Sciences.

AS.230.317. Sociology of Immigration. 3 Credits.
This course surveys sociological theories and research on immigration to the U.S. Theoretical approaches include theories of international migration, economic sociology, immigration, and assimilation. Research topics include the impact of U.S. immigration laws and policies on immigrant inflows and stocks, self-selection of immigrants, the impact of immigration on the native-born population and the U.S. labor market and economy, and the adaptation of the first and second generations.
Instructor(s): L. Hao
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.318. State and Society in Modern India. 3 Credits.
This course examines the complex, at times conflicting, relationship that has emerged between Indian seats of power from above and Indian expressions of society from below. Attention will be placed on the period between 1947 to the present.
Instructor(s): R. Agarwala
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.320. Education & Inequality: Individual, Contextual, and Policy Perspectives. 3 Credits.
Instructor(s): S. Deluca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.321. Revolution, Reform and the Social Inequality of China. 3 Credits.
This course explores various aspects of social inequality in China during the Mao Zedong and the post-Mao reform eras. We will examine inequality within villages, the rural/urban divide, urban inequality, education and health policies, and gender and ethnic relations. Each of these issue areas will be tackled analytically, but the aim is also to understand what it was/is like to live in China during and after the Mao era. The course is designed for both undergraduate and graduate students. Cross-listed with East Asian Studies and International Studies (CP).
Instructor(s): J. Andreas
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.322. Quantitative Research Practicum. 3 Credits.
This course provides “hands on” research experience applying sociological research tools and a sociological perspective to problems of substance. Quantitative methods will be emphasized, as applied to census data, survey data and/or archival data. Students will design and carry out a research project and write a research report. Juniors and seniors only. Sophomores require instructor’s permission. Recommended Course Background: AS.230.205, AS.230.202
Instructor(s): S. Plank
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.230.323. Qualitative Research Practicum. 3 Credits.
This course provides “hands on” research experience applying sociological research tools and a sociological perspective to problems of substance. Qualitative observational and/or interviewing methods will be emphasized. Students will design and carry out a research project and write a research report. This course fulfills the “research practicum” requirement for the Sociology major.
Instructor(s): K. McDonald
Area: Social and Behavioral Sciences
Writing Intensive.
AS.230.324. Gender and International Development. 3 Credits.
This course employs a comparative perspective to examine the gendered impact of international development experiences and policies. Students will discuss the historical evolution of how the concept of gender has been constructed, conceptualized, and integrated into international development theory and practice. The course will also examine how greater international development. In particular, we will examine structural theories of poverty reduction, individual theories of power and processes of stratification at the household and family level. Specific issue areas will include the globalization, class and work political participation and social movements.
Instructor(s): R. Agarwala
Area: Social and Behavioral Sciences.

AS.230.325. Global Social Change and Development Practicum. 3 Credits.
This course provides “hands on” research experience in the field of global social change and development. Students will participate in a collaborative research project analyzing the causes and consequences of the recent upsurge of protest around the world in comparison with previous historical waves of social unrest. The course fulfills the “research practicum” requirement for Sociology majors and is required for the GSCD track.
Prerequisites: Prereq: AS.230.265 or permission of Instructor.
Instructor(s): B. Silver
Area: Social and Behavioral Sciences.

AS.230.333. Quality/Inequality in United States Educations. 3 Credits.
Instructor(s): K. Alexander
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.334. The City in Time and Space: Historical Sociology of the Urban World. 3 Credits.
Area: Social and Behavioral Sciences

AS.230.337. Global Crises: Past and Present. 3 Credits.
Instructor(s): B. Silver
Area: Social and Behavioral Sciences.

AS.230.338. Comparative Sociology of Religious Fundamentalism. 3 Credits.
The rising tide of global religious fundamentalism in the last three decades has challenged the basic tenets of all theories of progress, and attracted significant popular and scholarly attention. This course combines theoretical material with comparative analyses of selective case studies to investigate and question the basic dichotomies that underlie our understanding of religious fundamentalism: cultural versus political, Western versus non-Western, modern versus anti-modern, and reactionary versus revolutionary.
Instructor(s): L. Bushra
Area: Social and Behavioral Sciences.

AS.230.340. Sociology of Privilege. 3 Credits.
This course examines how privilege—as a system of advantage based on race, class, gender, and sexuality—operates in social institutions including family, education, occupation, wealth, housing, migration, and media.
Area: Social and Behavioral Sciences.

AS.230.341. Medical Sociology. 3 Credits.
This course introduces students to medical sociology, which is the application of the sociological perspective to health and health care. Major topics include stress, social epidemiology, and the social organization of health care. Cross-listed with Public Health Studies.
Instructor(s): E. Agree
Area: Social and Behavioral Sciences.

AS.230.343. Political Sociology of Latin America. 3 Credits.
This course provides an overview of Latin America through its historical, economic, social, and political dimensions. Emphasis will be given to the analysis of social structures: class, race and ethnicity, and the contemporary social movements. The course begins with an overview of the pre-Columbian civilizations and colonial legacies that gave rise to the multiethnic societies and the ethnic conflicts which characterize contemporary Latin America. Cross-listed with Program in Latin American Studies and International Studies (CP)
Instructor(s): M. von der Heydt-Coca
Area: Social and Behavioral Sciences.

AS.230.344. Health and Society in Contemporary China. 3 Credits.
This class examines the social and health consequences of systemic transformations in China, including collapse of the urban work-unit system, resurgence of infectious disease, and implementation of the One-Child Policy. Dean’s Teaching Fellowship; Cross listed with East Asian Studies, Public Health and International Studies.
Instructor(s): R. Core
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.346. Economic Sociology of Latin America. 3 Credits.
This course will offer an overview of Latin America’s economic reality as an intertwined process of economic and political domestic factors within the constraints of the world economy. Latin American development will be analyzed from a historical perspective. The first half of the semester the course will focus on the analysis of the economic developmental patterns starting in the middle of the 19th century to the populist era in the middle of the 20th century. In the second half of the semester, we will analyze in depth the contemporary neoliberal approach to development. Globalization is the force that drives economic, social and political processes in Latin America. The course will include case studies as well the social conflicts generated by the increasing polarization of the society. Students will be exposed to important sociological theories. Fulfills Comparative Politics and/or History requirement for International Studies. Fulfills Economics for GSCD students.
Instructor(s): M. von der Heydt-Coca
Area: Social and Behavioral Sciences.

AS.230.353. Global Social Change. 3 Credits.
This course will offer an overview of Latin America through its historical, economic, social, and political dimensions. Emphasis will be given to the analysis of social structures: class, race and ethnicity, and the contemporary social movements. The course begins with an overview of the pre-Columbian civilizations and colonial legacies that gave rise to the multiethnic societies and the ethnic conflicts which characterize contemporary Latin America. Cross-listed with Program in Latin American Studies and International Studies (CP). Fulfills Comparative Politics and/or History requirement for International Studies. Cross-listed with International Studies (IR). Fulfills Economics requirement for IS GSCD track students only.
Instructor(s): H. Hung
Area: Social and Behavioral Sciences
Writing Intensive.
AS.230.354. Trust & Collective Efficacy: Fragile Resouces. 3 Credits.
Trust is often cited as necessary to the successful functioning of small
groups, formal organizations, and democratic society. Collective efficacy
(social cohesion combined with shared expectations for control of public
space) is a related concept. This course will consider theories and
empirical evidence regarding trust and collective efficacy, as well as
claims about other mechanisms that can secure mutually beneficial
cooperation. Case studies from education and neighborhood ecology will be
considered.
Instructor(s): S. Plank
Area: Social and Behavioral Sciences.

AS.230.356. Contemporary African Social Movements. 3 Credits.
This course is a survey of contemporary social movements in sub-
Saharan Africa. The course will begin with an introduction to social
movement theory. Subsequent weeks will each focus on a different
type of movement (e.g. independence movements, labor movements,
women's movements, environmental movements, etc.) The limited
coverage of African issues in the US media tends to focus on either
catastrophes or on development projects that are driven by international
NGOs and the governments of northern countries. Through this course,
students will gain a clear understanding of the broad range of actions that
African civil society is using to address social problems throughout the
continent. Materials used will include academic analysis of movements,
 writings by movement participants themselves, and films. The course
will also introduce students to the most widely used social movement
theories. Because these theories have been largely developed by social
scientists in northern countries, the students will be asked to assess their
applicability to African movements. Through this critical application of
social theory, students will investigate the specific possibilities and
constraints facing social and political actors in contemporary Africa. Cross
listed with Dean's Teaching Fellowship, International Studies (CP) and
Africana Studies.
Instructor(s): B. Scully
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.357. The West in the East. 3 Credits.
Area: Social and Behavioral Sciences.

AS.230.359. Research Seminar on Global Social Protest. 3 Credits.
This course will be run as a collective research working group in which
we will design and carry-out a research project on the current upsurge
of social unrest around the world, from the Arab Spring to Occupy Wall
Street, from the anti-austerity movements rolling Europe to the wave of
workers' protests taking place in China (including the factories where
I pods, I pads and I phones are assembled). We are currently witnessing an
unalusual worldwide clustering of major protest movements that will have
important consequences for the shape of social and political institutions
in the twenty-first century. We will design and carry-out a research project
aimed at documenting the spread and characteristics of this global wave
as well as exploring its causes and consequences. The first part of the
class will be devoted to research design (determining our central research
questions, hypotheses, and data collection procedures); the remainder of
the class will be devoted to data collection and analysis. This course
is suitable for students who are interested in an empirical and theoretical
introduction to the dynamics of global social protest as well as in gaining
hands-on research experience on a topic of contemporary social and
political relevance.
Instructor(s): B. Silver; S. Karatatsi
Area: Social and Behavioral Sciences.

AS.230.360. Globalization, Labor and the State in East Asia. 3
Credits.
The course will examine the relationship between labor, state policies,
and globalization in China, South Korea and Japan in comparative
perspective. We will look at debates about the role of developmentalist
states on economic and social development, as well as transformation in
the nature of work and labor relations in the three countries.
Instructor(s): L. Zhang
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.361. Class and Culture. 3 Credits.
This course examines the intersection of social class and culture—
both the popular culture of movies, TV, music, etc, and “culture” in the
anthropological sense as the shared way of life of a people. The course
is divided into three main sections: 1) concepts of class, culture and
the ways in which they interact; 2) cultures of each major class within
American society, beginning with the “Old” and “New Money” classes,
the “New Class” of intelligentsia, the much-invoked Middle Classes, the
shrinking Working Class, and continuing through the poverty-stricken
Lower Classes; 3) issues of cultural consumption and production and their
role in reproducing the class structure.
Instructor(s): T. Nelson
Area: Social and Behavioral Sciences.

AS.230.362. Migration & Development. 3 Credits.
This course focuses on the relationship between international migration
and development. The course first introduces theories of international
migration, immigrant integration, and international development. Building
on this foundation, we then examine how immigrants interact with their
homeland and how sending country governments tap their diaspora to
improve development outcomes. Cross-listed with International Studies
(CP, IR). Fulfills Economics requirement for IS GSCD track students only.
Instructor(s): L. Hao; R. Agarwala
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.365. Labor and Globalization. 3 Credits.
The course will focus on the ways in which contemporary processes of
globalization (including the current crisis) are transforming the nature
of work and employment, using a wide range of local case studies from
Africa, Asia, Europe, Latin America and North America. Themes include
changes in business organization that impact labor (e.g., automation,
outsourcing, subcontracting) and the role of inter- and intra-national labor
migration. We will also look at present-day forms of workers’ protest (open
and hidden, local and transnational) and how these are shaped by and
are shaping global social change. Cross-listed with International Studies
Instructor(s): B. Silver; L. Zhang
Area: Social and Behavioral Sciences.

AS.230.366. From Habeas Corpus to Eminent Domain: Urban
Development and Urban Planning in Comparative-Historical
Perspective. 3 Credits.
This course offers a broad survey of urban development in the United
States by examining both the intended and unintended consequences of
urban planning. Using a comparative-historical framework, issues of
power, conflict, representation, participation, and planning within urban
development and the American city will be addressed and critiqued with
specific reference to Baltimore. Cross listed with International Studies
(AP). Fulfills History requirement for IS GSCD track students only.
Instructor(s): D. Pasciuti
Area: Social and Behavioral Sciences
Writing Intensive.
AS.230.372. Social Protest in Contemporary China. 3 Credits.
This class introduces popular resistance in post-1978 China, examining its socioeconomic, political, and cultural background, various types of protests by multiple social groups, and outcomes of protests. Cross listed with Dean’s Teaching Fellowship.
Instructor(s): Y. Li
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.376. Sociology of Religion. 3 Credits.
This course addresses two primary questions: What social elements influence the varieties of religious belief, organization and action? What are the consequences of these forms of religious expression for both individuals and for society? In addition to readings and exams, students will also attend two different religious services over the course of the semester.
Instructor(s): T. Nelson
Area: Social and Behavioral Sciences.

AS.230.380. Poverty and Social Welfare Policy. 3 Credits.
This course examines the causes and consequences of U.S. poverty and explores strategies for addressing it, with some comparisons to other rich nations. We cover the major theoretical explanations scholars have advanced to explain the persistence of poverty and inequality including labor markets, residential segregation, welfare policy, family structure, and the criminal justice system. Within each topic area, students are introduced to contemporary policy approaches aimed at alleviating poverty, and evaluations of these approaches.
Instructor(s): K. Edin
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.384. Global Urbanism: Planet of Slums or World Cities?. 3 Credits.
Cities are at the forefront of a range of global governance challenges. This course will address the relationship between development and the political and economic structure of the world economy in the built environment of the city. By drawing upon both classical texts about cities (do they still work for us, what can they account for) and on a diverse literature on cities and slums, we will focus our attention to the contemporary challenges faced in cities both in the more developed and in the developing world. Through a variety of disciplinary perspectives we will try to understand the underlying social and economic changes and the profound transformations under way throughout the global urban world. Fulfills IR or CP requirement for International Studies students and Political Sociology (IR or CP) for GSCD track. (Formerly AS.191.349)
Instructor(s): D. Pasciuti
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.388. Sociology Of The Family. 3 Credits.
Sociological perspectives on contemporary family life, including marriage and divorce, cohabitation, single parenthood, same sex partnerships, children’s well being, balancing work and family responsibilities, domestic violence, and government policy toward families.
Instructor(s): A. Cherlin
Area: Social and Behavioral Sciences.

AS.230.391. Theories of International Development. 3 Credits.
This course will cover major theoretical approaches to the study of development. We will begin with foundational political economic texts (including those of Adam Smith, Karl Marx, and Karl Polanyi). After setting the historical context of decolonization, we will then proceed to cover major theoretical approaches to the study of development in the past sixty years, including: modernization theory, dependency and world systems analysis, state-centered approaches, neo-institutionalism, the capabilities approach, political-ecology, post-development, feminism, the Washington consensus, social capital, experimental economics, and contemporary sociological reconstructions of Marx, Smith and Polanyi. Cross listed with International Studies (IR); fulfills IS Economics requirement for GSCD track students only.
Instructor(s): M. Levien
Area: Social and Behavioral Sciences.

AS.230.396. Politics and Society. 3 Credits.
This seminar surveys texts that treat key problems of political sociology including the rise of the modern state, the relationship between political and economic power, the origins and nature of liberal democracy, the nation-state and nationalism, states and war, states and welfare, sources of authority, ideology and political contention, social movements, and social revolutions. Fulfills Comparative Politics for International Studies.
Instructor(s): J. Andreas
Area: Social and Behavioral Sciences.

AS.230.399. Economic Development in Comparative Perspective. 3 Credits.
This course reviews the evolution of the literature on economic development over the past half-century and evaluates its strengths and weaknesses in light of developmental experiences in Africa, Asia and Latin America. Course lectures are by Dr. Brian Van Arkadie, an economist with decades of experience in the international development field including as a consultant for the World Bank, the United Nations Development Program and to numerous governments ranging from Tanzania and Uganda to Egypt and Vietnam.
Instructor(s): B. Silver; B. Van Arkadie
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.415. Social Problems in Contemporary China. 3 Credits.
In this course we will examine contemporary Chinese society, looking at economic development, rural transformation, urbanization and migration, labor relations, changes in class structure and family organization, health care, environmental problems, governance, and popular protest. The course is designed for both graduate and undergraduate students. Undergraduates must have already completed a course about China at Hopkins. Cross-listed with East Asian Studies.
Instructor(s): J. Andreas
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.500. Independent Study. 0 - 4 Credit.
Instructor(s): A. Cherlin; H. Hung; K. Alexander; L. Hao; M. Levien.

AS.230.501. Research Assistantship. 3 Credits.
Instructor(s): H. Hung; K. McDonald.

AS.230.502. Senior Honors Program. 0 - 3 Credit.
Instructor(s): Staff.

AS.230.506. Independent Research. NULL Credits.
Instructor(s): Staff.

AS.230.507. Internship. 1 Credit.
Instructor(s): J. Andreas; K. Alexander.
AS.230.508. Internship. 1 Credit.
Instructor(s): H. Hung; K. Alexander; Staff.

AS.230.597. Independent Research. 3 Credits.
Instructor(s): K. Alexander; L. Hao; P. Bennett; S. Deluca; S. Plank.

AS.230.598. Summer Internship. 1 Credit.
Instructor(s): Staff.

AS.230.599. Independent Study. 3 Credits.
Instructor(s): K. McDonald; P. Bennett; Y. Ma.

AS.230.600. Introduction to Social Statistics.
This course will introduce students to the application of statistical techniques commonly used in sociological analysis. Topics include measures of central tendency and dispersion, probability theory, confidence intervals, chi-square, anova, and regression analysis. Hands-on computer experience with statistical software and analysis of data from various fields of social research.
Instructor(s): D. Pasciuti.

This course is designed to support and foster the ability of students to think "critically, theoretically, and empirically" about issues of design in sociological research. There are four main areas we will focus on in the course: 1) Understanding causal inference and the objectives of social science; 2) Learning the types of validity in research designs; 3) Becoming familiar with the elements of research design, such as treatment, observation and assignment; 4) Comparing and contrasting experimental and quasi-experimental designs and their applications for the study of social processes and social problems. The course will give a general overview of sociological research designs, but we will critically examine research in a few specific areas, such as education and urban sociology, for the sake of consistent, coherent examples. Sociology/Statistics background is helpful, but not required.
Instructor(s): S. Deluca.

AS.230.602. Theories of Society.
Intensive readings from classical theorists (including Marx, Weber, and Durkheim) form the core of this course. Emphasis is placed on exploring the utility of social theory for formulating important sociological questions and conceptualizing social research.
Instructor(s): B. Silver.

AS.230.603. Contemporary Social Theory.
This course will explore several important traditions in contemporary social theory, including structural-functionalism, micro-interactionism, exchange and rational choice, post-structuralism, discourse and narrative analysis, and efforts by recent theorists to extend, synthesize, supplement, and revise Marx and Weber’s explanations of inequality, group conflict, and macro-level social change, including world systems analysis.
Instructor(s): J. Andreas.

A seminar in multiple regression (least squares and alternative estimation procedures) with a focus on sociological problems and software applications. Extensions to hierarchical linear models will be included. Graduate students should have completed AS.230.600 or the equivalent. Undergraduates only admitted with instructor’s permission, and AS.230.205 or equivalent. Recommended Course Background: AS.230.205, AS.230.600 or equivalent.
Instructor(s): Staff.

AS.230.605. Categorical Data Analysis.
This course provides the students with a set of statistical tools to understand and interpret social science research dealing with categorical dependent variables and to prepare students to apply these models in their own research. The models covered in the course include logit, probit, Poisson, and log-linear models, as well as multi-level models of categorical dependent variables.
Instructor(s): L. Hao.

This course introduces the main tools of categorical and panel data analysis. Categorical data analysis deals with categorical dependent variables. The first 7 weeks of the course introduce models for dichotomous, multiple-category, and count dependent variables, including logit, probit, ordered logit, multinomial logit, poisson, and negative binominal models. Week 7 covers procedures for constructing data and handling missing data. The last 6 weeks introduce discrete-time models for panel data analysis along three lines: continuous vs. Categorical dependent variables; random-vs. Fixed-effects models and static vs. Dynamic models. This course uses the statistical packages stata.
Instructor(s): L. Hao
Area: Social and Behavioral Sciences.

This is an intensive reading seminar on working class formation from a comparative, historical and global perspective, including theoretical and empirical (case study) readings on changes over time in labor process, labor markets, and labor movements. We will build on a range of local case studies to establish spatial and temporal patterns, and discuss the connections between these global patterns and the dynamics of historical capitalism.
Instructor(s): B. Silver; L. Zhang.

AS.230.608. Proseminar In Sociology.
Individual one-hour presentations by faculty members will introduce students to the faculty’s substantive interests and research styles.
Instructor(s): K. Alexander.

Instructor(s): M. Kohn.

A critical examination of the research literature in this domain, with special attention to the logic of cross-national comparative analysis and to the methods used for assuring comparability of concepts and indices in cross-national research.

AS.230.611. World-Historical Sociology.
In this seminar we will read key texts in comparative sociology. The topics covered are cross-national sociology, comparative national development, comparing world-systems, the modern world-system, globalization, and social movements.
Instructor(s): H. Hung.

AS.230.612. Seminar on Social Inequality.
This seminar attempts a broad survey of sociological theorizing and research on social stratification and the role of social institutions in generating and mitigating inequality.
Instructor(s): K. Alexander.

A discussion-oriented seminar focused on major recent writings on the family, in both the developed and developing nations.
Instructor(s): A. Cherlin.

Instructor(s): L. Hao.
AS.230.616. Researching Race, Class, & Gender.
This advanced graduate seminar is designed to help graduate students sort out whether they are headed for careers as race, gender, or class specialists. We will review major sociological work in these sub-fields and work to determine what common elements of these publications makes them a stand out in the discipline. Then students will be asked to craft projects of their own.
Instructor(s): K. McDonald.

In-depth reading and discussion of theories and research on immigration to the U.S. There are theoretical issues include international migration, immigration, and assimilation. Research topics include: the impact of U.S. immigration laws on immigrant inflows and stocks, self-selection of immigrants, the impact of immigration on the native-born population, and the adaptation of the first and second generations. The course focuses on immigration since 1965 and its related controversies and debates.
Instructor(s): S. Deluca.

This course covers hazard models (also called survival analysis), treatment effects models such as propensity score analysis, censored regression models, and statistical approaches to address endogeneity. It is offered in alternate years with AS.230.606, Categorical and Panel Data Analysis.
Instructor(s): A. Cherlin.

This course engages students in the study of educational inequality through in-depth readings on poverty, culture, the family, neighborhoods and public policy.
Instructor(s): S. Deluca.

This seminar offers a graduate level introduction to the theoretically guided study of national development. The first part of the course analyzes the development theories that dominated the first four decades of the development effort. The second half of the course examines more recent perspectives that have attempted to fill the intellectual void left by the demise of the development paradigm. Throughout the seminar, discussions and readings will focus on the intellectual history of the development theories: What are the relevant questions to ask and what are the appropriate units of analysis for the study of social and political change? What forces have propelled transformations across the world? What explanatory power do the theories hold for our future?
Instructor(s): R. Agarwala.

Instructor’s permission required. Selected topics in the study of long-term, world-scale social change.
Instructor(s): B. Silver; R. Korzeniewicz; W. Martín.

AS.230.630. Research in International Development.

Instructor(s): M. Kohn.

AS.230.632. Research on International Development II.
Instructor Permission Required. Research-oriented seminar on selected topics in international development. Course work will include various activities including the writing of review essays, critical analysis of key texts, symposium participation, and the collection and incorporation of new evidence realted to specific theses on global inequality and development.
AS.230.645. PSI Research Seminar.  
Seminar focusing on new research in the study of social inequality, with an emphasis on education, neighborhoods, race, family dynamics, health and social policy. Sociology graduate students or permission of instructor.  
Instructor(s): S. Deluca.

AS.230.647. Agrarian Change.  
This course will explore questions related to historical and contemporary trajectories of agrarian change. It begins with classical theoretical debates on the distinctiveness of peasantry and their prospects under capitalism. It will then turn to major themes of agrarian change in the twentieth century: modes of production, class polarization and differentiation, peasant wars, moral economies, everyday resistance, collectivization and decollectivization, food regimes, and depeasantization. It will conclude with new themes in agrarian change, with a particular emphasis on contemporary forms of land dispossession and repossessions. The course will be structured as a reading-intensive research seminar.  
Instructor(s): M. Levien.

This course provides in-depth familiarity with qualitative research methods, including ethnographic research, participant observation, and intensive interviewing. Alternative conventions in the elaboration of narratives are also explored. The course includes the application of relevant methods.  
Instructor(s): K. McDonald

AS.230.650. Macro-Comparative Research.  
The course examines methods of studying long-term, large-scale social change. Both qualitative and quantitative methods are covered.  
Instructor(s): B. Silver.

This seminar surveys key problems of political sociology including the rise of the modern state, the origins and nature of liberal democracy, the relationship between political and economic power, the nation-state model and nationalism, ideology and political contention, collective identity, and collective action.  
Instructor(s): J. Andreas.

AS.230.652. Macrocomparative Research Methods II.  
The course examines methods of studying long-term, large-scale social change. Time and space in social science research, narration and explanation, statistical and historical approaches.  
AS.230.655. Sociology Of Education.  
Topics are selected to enable students to understand and extend or revise current theories and measurements of school effects. Topics may include the social organization of schools and classrooms, estimation of cumulative school impact; techniques for examining the interaction of school, individual and family characteristics; definition and measurement of nonacademic outcomes of schooling, formulation of factors which condition the influence of school desegregation; elaboration of attainment models; and study of school, family, and peer group influence processes.  
Instructor(s): K. Alexander.

This course presents an in-depth study of racial and ethnic residential segregation and its relationship to social inequality. Through various theoretical perspectives, students will explore the history and contemporary patterns of residential segregation in the United States. In doing so, students will learn about the persons, organizations, and social phenomena that contribute to neighborhood segregation, such as homeowner associations, federal and local governments, developers, as well as differences between groups in racial preferences and socioeconomic status. Through both classics in urban sociology and contemporary works, students will gain insight into the causes of segregation, as well as its social, economic, and demographic consequences.  
Instructor(s): P. Bennett.

AS.230.660. Social Structure and Personality.  
An intensive examination of the research literature on the relationships of position in the social structure (particularly the class structure and the social stratification hierarchy) with personality, based primarily on research conducted by the instructor and his collaborators in the United States, Japan, Poland when it was socialist, Poland and Ukraine during their transitions from socialism to nascent capitalism, and (currently) China during its very different transformation.  
Instructor(s): M. Kohn.

AS.230.800. Independent Study.  
Instructor(s): Staff.

Instructor(s): Staff.

Instructor(s): Staff.

Instructor(s): Staff.

Instructor(s): Staff.

AS.230.811. Teaching Assistantship.  
Instructor(s): Staff.

AS.230.815. Trial Research Paper I.  
Instructor(s): Staff.

AS.230.816. Trial Research Paper II.  
Instructor(s): Staff.

AS.230.817. Trial Research Paper III.  
Instructor(s): Staff.
This course is for graduate students in the PhD program in Sociology to obtain graduate credit for work off campus that provides training and the development of skills in teaching and/or research. Before the practicum is begun, the graduate student must identify a sponsoring faculty member or seek permission from the student’s faculty advisor. The faculty member or adviser must sign a form that certifies that graduate credit will be granted, verifies the nature of the work to be performed by the student and explains how the practicum helps to fulfill the degree requirement. Once completed, the sponsoring faculty member or adviser submits a grade of pass or fail for the student. This course may be used for Curricular Practical Training (CPT).
Instructor(s): Staff.

AS.360.247. Introduction to Social Policy: Baltimore and Beyond. 3 Credits.
How can we address pressing social problems, such as inner city poverty, inequality in educational attainment among children from different backgrounds, and disparities in access to health care? Social policy refers to the programs, legislation and governmental activities that regulate access to important social, financial and institutional resources needed by members of a society to address these concerns. Social policy also aims to reduce inequality, especially in the areas of education, health, income, housing, neighborhoods, and employment. The study of social policy is interdisciplinary, and this course will introduce students to the basic concepts in economics, political science, and sociology relevant to the study of social problems and the programs designed to remedy them. We will cover issues of national policy importance, as well as issues specifically affecting Baltimore City and the metropolitan region. This course is open to all students, but will be required for the Social Policy Minor. The course is also recommended for students who are interested in law school, medical school, programs in public health, and graduate school in related social science fields. Cross list with Sociology, Economics and Political Science. Freshman, Sophomore and Juniors only.
Instructor(s): A. Sheingate; B. Morgan; S. Deluca
Area: Social and Behavioral Sciences
Writing Intensive.

Cross Listed Courses

History

AS.100.343. The Power of Place: Race and Community in East Baltimore. 3 Credits.
Instructor(s): M. Shell-Weiss
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

Political Science

AS.190.653. Organizations.
Graduate students only. “Organizations are the fundamental building blocks of economic, social and political life. This course will examine how different disciplines (sociology, economics, political science) approach the problem of explaining how organizations operate, as well as exploring the structure and development of a very wide range of organizations (firms, interest groups, charitable foundations, universities, militaries, bureaucracies, international organizations, and professions).
Instructor(s): S. Teles
Area: Social and Behavioral Sciences.

AS.191.206. Violence and World Orders. 3 Credits.
This class explores the relationship between two central concepts of International Relations: violence and world order. Some broad questions we will attempt to answer include: What is the role of violence in maintaining or producing certain world orders, both contemporary and historical? How do blatant and more hidden forms of violence work together to foreclose certain possibilities for social, political, and economic existence? How do different logics of violence produce hierarchies of gender, race, citizenship and class? What violence pasts and/or presents are concealed by contemporary ways of thinking about world order? We will explore diverse literatures from International Relations and political theory that addresses these questions. Readings will include contemporary work from International Relations theory as well as Franz Fanon, Michel Foucault, Judith Butler, Achille Mbembe and others.
Assignments will include several analytic essays.Cross-listed with Sociology.
Instructor(s): L. Wilcox
Area: Social and Behavioral Sciences.

AS.191.349. Global Urbanism: Planet of Slums or World Cities. 3 Credits.
This course will address the relationship between development and the political and economic structure of the world economy in the built environment of the city. By drawing upon both classical texts about cities (do they still work for us, what can they account for) and on a diverse literature on cities and slums, we will focus our attention to the contemporary challenges faced in cities both in the more developed and in the developing world. Through a variety of disciplinary perspectives we will try to understand the underlying social and economic changes and the profound transformations under way throughout the global urban world.
Instructor(s): D. Pasciuti
Writing Intensive.

AS.191.375. Thinking Organizationally about Politics. 3 Credits.
Aitchison Students Only.
Instructor(s): S. Teles
Area: Social and Behavioral Sciences.

Public Policy

AS.195.477. Intro To Urban Policy. 3 Credits.
Perm. Req'd. 195.477 & 195.478 must be taken together by undergraduates Cross-listed with Political Science, Sociology, Public Health Studies, and Geography and Environmental Engineering
Instructor(s): S. Newman
Area: Social and Behavioral Sciences
Writing Intensive.

AS.195.478. Urban Policy Internship. 3 Credits.
195.478 & 195.477 must be taken together by undergraduates Cross-listed with Political Science, Sociology, Public Health Studies, and Geography and Environmental Engineering
Instructor(s): S. Newman
Writing Intensive.
East Asian Studies

AS.310.204. Rural Development in Asia. 3 Credits.
We will examine the transformation of the Asian countryside from the beginning of the twentieth century up until the present by looking at agrarian structure, economic and social development, collectivization and decollectivization, rural industrialization, agribusiness, sustainable agriculture, and rural unrest. Course materials combine theoretical readings with empirical case studies. While theoretical readings examine global processes involving Asia and elsewhere, case studies cover several Asian countries, with an emphasis on China and India.
Instructor(s): B. Gurel
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

Program in Latin American Studies

AS.361.357. Development in Latin America Today: Theories and Practices. 3 Credits.
The course examines a new wave of development theories and projects that have emerged in Latin America in response to changes such as the empowerment of indigenous movements, the rise of China, the contestation of U.S. hegemony and the current global crisis. Theoretical questions are examined in light of real case studies and reports from the United Nations. Cross-listed with Sociology
Instructor(s): F. Filomeno
Area: Humanities, Social and Behavioral Sciences

Center for Africana Studies

AS.362.111. Introduction to African American Studies. 3 Credits.
This course is an introduction to the origins and emergence of African American Studies as an academic discipline in the American academy. The course is centered on the social realities of people of African descent living in the United States.
Instructor(s): K. McDonald
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.362.175. Freshman Seminar: Remembering the Black Power Movement. 3 Credits.
This course critically examines trends, developments, contradictions, and dilemmas related to the Black Power Movement for black identity and self-determination in the late 1960s and 1970s.
Instructor(s): F. Hayes
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

Study of Women, Gender, and Sexuality

Courses in the program are taught by prominent faculty members from many disciplines and are cross-listed through a variety of departments. New courses are added each year. Recent offerings have included Feminist and Queer Theory, The Poetics and Politics of Sex, and seminars that incorporate non-Western perspectives on religion and sexuality. WGS also offers community-based learning, where students combine volunteer work in a local social service agency with a seminar that explores the connections between social justice and academic inquiry. Each of these courses is offered on a regular basis. Together, they form the basis of a flexible minor. More generally, the minor—which is open to students from any department—aims to help integrate work undertaken across a broad range of offerings in the humanities, sciences, and social sciences.

A sample of cross-listed courses follows. Not all courses are offered every semester. Complete information regarding the Program for the Study of Women, Gender.

Minor

The requirements for the minor consist of six one-semester courses chosen from the core offerings and the offerings cross-listed with the Program for the Study of Women, Gender, and Sexuality. Two core courses are required. In the recent past, the core courses have been Introduction to the Study of Women, Gender, and Sexuality, Feminist and Queer Theory, Gender and Health, The Poetics and Politics of Sex, Religion and Gender or Sexuality, and the community-based learning course Working for Social Justice in Contemporary Urban Space.
Students must check with the most recent course catalog for a description of the courses constituting the core. Two introductory 100- or 200-level courses may be counted toward the minor. With approval, students may elect to apply two semesters of independent study to fulfill the minor requirements. Courses counted toward the minor can also be used to meet university distribution requirements. Students electing to minor in the Program for the Study of Women, Gender, and Sexuality may declare their intention to the program at any time, but they are encouraged to seek advice about course selection early in their academic careers.

For current course information and registration go to https://isis.jhu.edu/classes/

Please refer to departmental listings for more complete information. Some of these courses are offered on an irregular basis.

For current faculty and contact information go to http://anthropology.jhu.edu/wgs/directory.html

Todd Shepard
Director

Associate Professors
Sam Chambers
Ph.D., Associate Professor (Political Science).

Jennifer Culbert
Theatre Arts and Studies

The program offers a comprehensive approach to the arts of acting, directing, playwriting, and theatre history, along with the fundamentals of technical direction, play production, play analysis, and theatre management.

For those students who intend to prepare for a career in the theatre, the courses offered are taught exclusively by established professionals with experience on Broadway, in the best of regional theatres, and in many countries of the world.

For those students not focused on a career in theatre arts, the courses offer a broader perspective, an understanding of societal traditions and culture, and an appreciation for the arts, whether theatrical, literary, musical, or visual. Students pursuing careers in medicine, engineering, law, international relations, science, and others have been challenged and enriched by the school’s courses in theatre arts.

For those who seek careers in the arts, the acting and directing workshops, playwriting courses, and independent study opportunities provide rigorous training in acting and other theatre crafts, as well as an appreciation for and an understanding of the history of dramatic arts, its cultural significance, and the industries it has produced.

Located in the program’s home, the historic Merrick Barn, The Johns Hopkins University Theatre provides a vehicle for the fulfillment of student lab requirements. The University Theatre produces several plays each year in the John Astin Theatre and occasionally in the Meyerhoff Auditorium at the Baltimore Museum of Art, which adjoins the Homewood campus. Classes are also held in the Barn.

Requirements for a Minor in Theatre Arts

One semester of study in the Writing Seminars:
AS.220.105 Fiction Poetry Writing I 3

One semester of a drama course in the departments of English, Classics, Film and Media Studies, German and Romance Languages. (Course must be approved by the student’s minor advisor or by the director.)

The following courses are required for the Theatre minor:
AS.225.300 Contemporary Theatre & Film 3
AS.225.301 Acting & Directing Workshop I 3
AS.225.302 Acting & Directing Workshop II 3
Choose at least one from any of the following: 3
AS.225.303 Acting & Directing Workshop III
AS.225.304 Acting for Musical Theatre
AS.225.307 Directing Seminar
Any Writing Seminars playwriting course
AS.225.314 Theater: Technical Direction
AS.225.312 Acting Workshop: Chekhov and O’Neill
Any Theatre History course approved or not used above.

Total Credits 18

Courses

**AS.225.300. Contemporary Theatre & Film. 3 Credits.**
An introduction to the performing arts, including an overview of theatre history, acting styles and the interaction of art and society. A personal view from inside.
Instructor(s): J. Astin  
Area: Humanities.

**AS.225.301. Acting & Directing Workshop I. 3 Credits.**
An introduction to the fundamentals of acting through exercises, improvisation, and work on scenes from established plays and Shakespearean sonnets, based on the teachings of Stanislavsky, Greet, Boleslavsky, Michael Chekhov, Clurman, and Meisner. This course also includes a brief survey of major playwrights. Plays will be read, analyzed, and employed in scene work.
Instructor(s): J. Astin  
Area: Humanities.

**AS.225.302. Acting & Directing Workshop II. 3 Credits.**
The Sanford Meisner repetition exercises are explored in detail. They form the basis of Workshop II. The Uta Hagen exercises are also pursued. As in Workshop I, the principal classroom activities will consist of scene work, exercises, lectures, and discussion. Some rehearsal will also take place during school hours. It is expected that substantial out-of-class time be spent on rehearsals and exercises. Recommended Course Background: AS.225.301  
Instructor(s): J. Astin  
Area: Humanities.

**AS.225.303. Acting & Directing Workshop III. 3 Credits.**
Special attention is given to the development of spontaneity and emotional freedom using the principles of Workshops I and II. Hands on work with John Astin’s “The Process” and the second Silverberg workbook are employed, along with the Uta Hagen text. Boleslavsky and Michael Chekhov are introduced. The Clurman, Meisner, Stanislavsky and Strasberg approaches are included. Substantial out of class time is required. Recommended Course Background: Two acting courses.
Instructor(s): J. Astin  
Area: Humanities.

**AS.225.304. Acting for Musical Theatre. 3 Credits.**
Workshop IV is an advanced class for actors who have gained some control over their instruments and are ready for character work and full performances. Work will be co-ordinated with productions in which the actor performs and in which the directors direct. Play analysis, characterization, fullness of performance, diction, accents, and other elements of building a performance are covered. Permission only, signature required. Recommended Course Background: AS.225.302, AS.225.303  
Instructor(s): M. Denithorne  
Area: Humanities.

**AS.225.307. Directing Seminar. 3 Credits.**
Fundamentals of mounting, casting and staging the play; various theories of directing; students must commit to a practical lab. It is understood that students have a working familiarity with acting fundamentals.
Instructor(s): J. Astin; J. Glossman  
Area: Humanities.

**AS.225.308. Shakespeare in Performance. 3 Credits.**
The techniques and craft of following a Shakespearean text directly into character and action. Students will work with a selection of Shakespeare’s plays --- A Midsummer Night’s Dream, Hamlet, and Richard III --- in exploring specific ways in which the power of the lines can be translated dynamically and immediately into vocal and physical performance. This course can be repeated for credit, because it covers different topics. (Some background in the acting sequence is encouraged).
Instructor(s): J. Glossman  
Area: Humanities.

**AS.225.310. Stagecraft. 3 Credits.**
A hands-on approach to the technical and theoretical elements of production. Meets in the Merrick Barn Scene Shop. Permission Required.
Instructor(s): W. Roche  
Area: Humanities.

**AS.225.311. Scene Study. 3 Credits.**
Classes and scenes tailored to the needs of the actors. Some rehearsal will take place during school hours. It is expected that substantial out-of-class time be spent on rehearsals and exercises. - Prerequisite: Acting and Directing Workshop I [1A].  
Prerequisites: AS.225.301  
Area: Humanities.

**AS.225.312. Acting Workshop: Chekhov and O’Neill. 3 Credits.**
Using the plays of Anton Chekhov and Eugene O’Neill, the acting fundamentals from the Workshops are applied in both preparation and scene work as the student employs the basics in order to build a character for the stage. Play analysis is included. Recommended Course Background: At least one acting workshop.
Instructor(s): J. Astin  
Area: Humanities.

**AS.225.313. The Story of Theatre - an Introduction to Drama and Performance. 3 Credits.**
An exploration of World Theatre from the Greeks to modern times, including the major playwrights and their plays, performance styles throughout the ages, and the surrounding social and cultural contexts.
Instructor(s): J. Martin  
Area: Humanities.
AS.225.314. Theater:Technical Direction. 3 Credits.
An introduction to Technical Direction including pre-production and production with an overview of materials, tools, rigging and safety, together with design and its implementation.
Instructor(s): J. Astin; W. Roche
Area: Humanities.

AS.225.315. Scene Study 2. 3 Credits.
Instructor(s): J. Astin
Area: Humanities.

AS.225.316. American Women Playwrights of the 20th and 21st Centuries. 3 Credits.
This course is designed to help students deepen their appreciation and understanding of the accomplishments of American Women Playwrights of the 20th and 21st Centuries. Students will explore the growth, development and impact of women writers in the first half of the century, the second half of the century and the women playwrights of today.
Area: Humanities.

AS.225.317. Introduction to Theatre. 3 Credits.
Where theatre came from; how it emerged and what role it has played in human history; why the drama (or written text for a performance) came into being; and how changing social structures in different regions and epochs have shaped different kinds of theatre, plays and performance. Also: how theatre “works” for us and on us, and the major plays of world drama. [This course fulfills a key requirement in the Theatre minor.]
Instructor(s): J. Martin
Area: Humanities.

AS.225.319. Performance II. 4 Credits.
The student is given specific acting assignments, and develops them as special projects for public performance under the direct supervision of the instructor. A professional level of performance is the goal. Audition Req’d. Out of class rehearsal time required. Check at the Barn (6-0618). Auditions TBA.
Instructor(s): J. Astin
Area: Humanities.

AS.225.320. Performance. 3 Credits.
The student is given specific acting assignments, and develops them as special projects for public performance under the direct supervision of the instructor. A professional level performance is the goal. Audition Required. Out of class rehearsal time required. Permission only, signature required.
Instructor(s): M. Denithorne
Area: Humanities.

AS.225.321. The Lab - The Actor/Director/Playwright Lab. 3 Credits.
Student actors, directors, and playwrights will explore their respective crafts with emphasis on process and individual artistic growth. Participants in the class will also collaborate on the creation of new material for the stage. Recommended Course Background: one course in Acting, Directing, or Playwriting.
Instructor(s): M. Denithorne
Area: Humanities.

AS.225.323. Design for the Stage. 3 Credits.
The fundamentals of stage design, with an emphasis on process, including script analysis, research, conceptualization, and implementation, from the first reading of the play to opening night, along with an overview of theatre architecture from the Greeks to the current day and into our imagined future.
Instructor(s): W. Roche
Area: Humanities.

AS.225.324. Adaptation for the Stage. 3 Credits.
For aspiring playwrights, dramaturgs, and literary translators, this course is a workshop opportunity in learning to adapt both dramatic and non-dramatic works into fresh versions for the stage. Students with ability in foreign languages and literatures are encouraged to explore translation of drama as well as adaptation of foreign language fiction in English. Fiction, classical dramas, folk and fairy tales, independent interviews, or versions of plays from foreign languages are covered.
Instructor(s): J. Martin
Area: Humanities
Writing Intensive.

AS.225.325. The New American Theater. 3 Credits.
Examines powerful new trends within American Theatre, bringing together an important circle of playwrights, directors, and theorists: Shepard, Mamet, Bogart, August Wilson, Suzan-Lori Parks, José Rivera, Kushner, Shanley, Wallace, and Ruhl.
Instructor(s): J. Martin
Area: Humanities
Writing Intensive.

AS.225.326. Three Giants of Theatre: Ibsen/Strindberg/Brecht. 3 Credits.
This course explores the wide ranging works of three giants of the modern drama that shaped, and then reshaped, the twentieth century theatre. The roots of both the conventions of today’s theatre and contemporary innovative work lie with these writers. We will also explore putting scenes on their feet utilizing the acting approaches of Stanislavsky, Vakhtangov and Brecht. Plays include Peer Gynt, The Wild Duck, The Ghost Sonata, The Dream Play, Threepenny Opera, Mother Courage, and others, with theatre theory excerpts from Brecht and Antonin Artaud.
Instructor(s): J. Martin
Area: Humanities
Writing Intensive.

AS.225.327. The Bones of Theatre-Dramatic Structure (Part I). 3 Credits.
Structures of shamanistic theatre, classical comedy, and medieval theatre are discovered in works by Beckett, Fo, Brecht, Churchill, Mee and Wertenbaker. Sanskrit Drama and “rasa” methods are examined against modern artists; Chinese Yuan Drama and Noh Theatre against Brecht, Yeats and Mabou Mines.
Area: Humanities
Writing Intensive.

AS.225.328. The Existential Drama: Philosophy and Theatre of the Absurd. 3 Credits.
Existentialism, a powerful movement in modern drama and theatre, has had a profound influence on contemporary political thought, ethics, and psychology, and has transformed our very notion of how to stage a play. Selected readings and lectures on the philosophy of Kierkegaard, Nietzsche, Camus and Sartre -- and discussion of works for the stage by Sartre, Ionesco, Genet, Beckett, Albee, Pinter, Athol Fugard (with Nkani & Nshone), Heiner Müller and the late plays of Caryl Churchill. Opportunities for projects on Dürenmatt, Frisch, Havel, Wiktiewicz, and Mrozek.
Instructor(s): J. Martin
Area: Humanities
Writing Intensive.
AS.225.329. Acting and Directing Musical Theatre. 3 Credits.
Musical Theatre is a unique form of theatrical expression that requires special skills of its actors and directors. In this course, students will study the form and structure of musicals as they apply to acting and directing. Students will direct and perform musical numbers as well as book scenes from classic and contemporary American musicals.
Instructor(s): M. Denithorne
Area: Humanities

AS.225.330. Playwriting Strategies. 3 Credits.
In this small class, part tutorial and part workshop, student writers will learn how to open up to the creative process, brainstorm, generate material, refine their work and shape it until the script becomes a true act of artistic communication. Our "textbook" for this playwriting course is, for the most part, plays by important and effective dramatists.
Instructor(s): J. Martin
Writing Intensive

AS.225.331. Acting Styles and the “Viewpoints”. 3 Credits.
This course is designed for acting students who have already completed one or both of the first levels in acting or the first level in directing. Uses the cutting edge approach to enhanced physicality and presence in acting – The Viewpoints, originally developed by Anne Bogart and Tina Landau. The second half of the course involves work on scenes from Commedia dell’Arte to modern absurdist plays.
Instructor(s): J. Martin
Area: Humanities

AS.225.332. Acting and Directing Workshop IV. 3 Credits.
Workshop IV is an advanced class for actors who have gained some control over their instruments and are ready for character work and full performances. Work will be co-ordinated with productions in which the actor performs and in which the directors direct. Play analysis, characterization, fullness of performance, diction, accents, and other elements of building a performance are covered.
Prerequisites: AS.225.302 OR AS.225.303
Instructor(s): J. Astin
Area: Humanities

AS.225.333. Science and Theatre. 3 Credits.
Innovative modern playwrights and have gone beyond the boundaries of the living room, the kitchen and the front porch to explore the interaction of the human mind and human passions with the drama of the cosmos. Few elements of science remain unexplored by theatre, be it medicine, particle physics, astronomy, mathematics or chemistry. These unique plays often require experiments with new forms of theatre, and a new way of writing for theatre. We will examine prominent works for theatre which engage with science, including: The Life of Galileo (Brecht, astronomy), Copenhagen (Frayn, physics), Arcadia (Stoppard, mathematics), Semmelweis (Bjorneboe, medicine), The Man who Mistook His Wife for a Hat (Sachs/Brook, neuroscience); Einstein’s Dreams (Lightman et al).
The course will include lectures, informal readings (together) of scenes to inform discussions of the works; final small group presentations; one short paper and a choice of a final essay or research paper.
Instructor(s): J. Martin
Area: Humanities, Natural Sciences

AS.225.344. Theatre History and Dramatic Traditions II. 3 Credits.
Traces the evolution of the drama and performance from Shakespeare up to the 20th Century, with a special emphasis on comic and tragic traditions - and the new "hybrid" forms which emerged in the modern age. Shakespeare, Webster, Moliere, Racine, and Commedia del’Arte, alongside Bond Brecht and other moderns.
Area: Humanities
Writing Intensive

AS.225.345. History of Modern Theatre & Drama. 3 Credits.
Designed to impart a deepened appreciation and understanding of today’s theatre by surveying the major playwrights, historical movements, and theatre practices of the 20th century. The course also seeks to help students understand theatre’s relationship to the societal and political power structure of each era and to introduce students to great dynamic literature in its intended form, which is performance.
Instructor(s): J. Astin; M. Denithorne
Area: Humanities
Writing Intensive

AS.225.346. Creative Improvisation. 3 Credits.
An exploration of the imagination and the senses using basic techniques of improvisation. Exercises, conflict resolution, ensemble building, and theatre games. Texts: Spolin, Johnstone, LaBan and Feldencreis. Open to all students.
Instructor(s): M. Denithorne
Area: Humanities

AS.225.347. International Theatre and Peace. 3 Credits.
This course brings together the arts and the new and vital field of peace studies, and demonstrates how theatre has fulfilled this function through time, and across borders.
Area: Humanities
Writing Intensive

AS.225.375. Critical Moments in American Radical Theatre. 3 Credits.
Area: Humanities

AS.225.501. Independent Study. 1 - 3 Credit.
Permission only.
Instructor(s): J. Astin; J. Glossman.

AS.225.502. Independent Study. 3 Credits.
Instructor(s): J. Astin.

AS.225.520. Projects in Theater. 0 - 4 Credit.
Special projects created for and tailored to the individual theatre student. Enrollment limited. Permission Required.
Instructor(s): J. Astin.

AS.225.590. Summer Internship in Theatre. 1 Credit.
Instructor(s): J. Astin.

AS.225.599. Independent Study. 3 Credits.
Instructor(s): J. Astin.

Cross Listed Courses

Film and Media Studies

AS.061.223. Special Topics: Performance Art and Video. 3 Credits.
This course will explore the history and current state of video and performance art, two of the most important movements in contemporary art. How have they influenced each other and how have they affected mainstream media and cultural notions of art? Students will view significant works and their presentation in galleries, museums, and public spaces, and will create individual and collaborative performance pieces of their own.
Instructor(s): S. Barber
Area: Humanities
German Romance Languages Literatures

AS.211.312. Acting French: learning about French language and culture through theater. 3 Credits.
Performing a play in a foreign language not only improves language skills, but develops the ability to express oneself through the body and to communicate both efficiently and elegantly. Using excerpts from popular French stage plays by Camus, Sartre, Feydeau, Ionesco, Pagnol and Rostand among others, this course aims to help students to 1) improve French pronunciation, intonation, syntax, and vocabulary; 2) appreciate and understand linguistic nuance and socio-cultural practices; 3) learn fundamentals of acting that carry over into everyday communication, from body language and vocal projection to the expression of emotion and improvisation. Students will view filmed representations of select plays as well as present an end-of-semester staging. Recommended course background: AS.210.301.
Instructor(s): K. Cook-Gailloud
Area: Humanities.

AS.211.346. 20th Century French Theater and Performance. 3 Credits.
Taught in English. In this course, we will survey the themes and techniques that marked the theory and practice of theater in France in the 20th century. As we make our way from the early century avant-garde movements such as Futurism and Surrealism to Antonin Artaud’s Theater of Cruelty, from the Theater of the Absurd and mid-century existentialists to the post-1968 turn to collective authorship, our goal will be twofold: First, we will examine the prominent plays of the era as literary products, generated from within specific socio-political contexts. Second, we will attempt to re-construct their three-dimensional lives in performance, how they looked, sounded and felt to those watching. In addition, we will examine how French theater went from being a playwright-centered institution to a director-centered one, and how acting styles transitioned from psychological realism to a focus on the human body. Course materials will include plays, theoretical texts on the theater, as well as directors’ manifestos, rehearsal notes, set and costume designs and filmed recordings of theatrical events. Cross-listed with Theatre Arts and Studies. THIS COURSE CAN COUNT EITHER AS A 212 (LITERATURE--AS.212.346) OR AS A 211 (CULTURE) COURSE FOR THE FRENCH MAJOR AND MINORS.
Instructor(s): E. Fisek
Area: Humanities.

Writing Seminars

The Writing Seminars exists to help students combine imaginative writing with scholarship in the general context of the humanities.

AS.220.105 Fiction Poetry Writing I-AS.220.106 Fiction Poetry Writing II is a prerequisite for all majors and others who want to take advanced courses in writing.

Requirements for a B.A. Degree
(through the class of 2014)
(See also General Requirements for Departmental Majors (p. 33))

Students choose a genre concentration: fiction, poetry, generalist.

• Two Introductory courses (200-level); both may be taken in the selected genre.
• One Intermediate course (300-level) in the selected genre.
• One Advanced Workshop (400-level) in the genre.
• One Readings course (400-level) in the genre.
• One Writing Seminars course beyond IFP outside the selected genre.
• A total of 8 courses beyond AS.220.105 Fiction Poetry Writing I-AS.220.106 Fiction Poetry Writing II.

In addition, students must take:

• Two semesters of Introduction to -.
• Four semesters of literature.
• Two semesters of philosophy (The Writing Seminars strongly recommends that its majors select at least one course from the following: Philosophic Classics, Philosophic Problems, Introduction to Greek Philosophy, or Introduction to History of Modern Philosophy).
• Two semesters of history (may include one course in History of Art or History of Science and Technology. Majors are encouraged to take at least one semester of History of Occidental Civilization).
• Demonstrate competence in a foreign language through the intermediate college level.

Requirements for a B.A. degree
(Class of 2015 and later. Optional for class of 2012–14)

• Two semesters of Introduction to AS.220.105 Fiction Poetry Writing I–AS.220.106 Fiction Poetry Writing II.
• Four semesters of English literature or other literature with advisor’s approval.
• Two semesters in the Department of Philosophy. It is strongly recommended that at least one be selected from either Philosphic Classics or the department’s introductory courses. Philosophy courses from other departments may be used with advisor’s approval.
• Two Semesters in the Department of History. Majors are encouraged to take at least one semester in the History of Occidental Civilization. May include one course from History of Art or from History of Science and Technology.
• Demonstrated competence in a foreign language through the intermediate level. Any language requirement waived by exam must be documented on transcript or in the Advising Office before the checklist will be accepted.

Beyond IFP 1 and 2 (AS.220.105 Fiction Poetry Writing I–AS.220.106 Fiction Poetry Writing II) in the major:
• One semester of Introduction to Fiction.
• One semester of Introduction to Poetry.
• One semester of fiction at the 300-400 level.
• One semester of poetry at the 300-400 level.
• One advanced writing workshop.
• Three elective semesters beyond IFP within the department.

The Writing Seminars offers a Master of Fine Arts (M.F.A.) in fiction and poetry. Students admitted to the M.F.A. program enroll in two years of course work and produce a substantial manuscript in the form of a novel or collection of fiction or poetry. M.F.A. candidates are chosen on the basis of a manuscript, college transcripts, GRE scores, and appropriate letters of recommendation that testify to the student’s ability and willingness to undertake serious study in the literary arts. Since all students receive financial aid in the form of full tuition and a teaching assistantship, applicants must be able to demonstrate aptitude for college teaching.

The program requires two full years of residency in Baltimore. Students enroll each semester in two courses: a writing workshop in poetry or fiction and a second course in craft or literature taught within the department. At the end of the first year, students present a portfolio of revised work for faculty review. Successful completion of this work is a requirement for continuation in the second year.

The M.F.A. degree in The Writing Seminars is designed for students committed to the study and practice of literary writing at the highest level of accomplishment. Approximately five poets and five fiction writers will be admitted annually. Our pedagogy emphasizes genre-informed discussions, faculty conferences, independent readings, and interactions with visiting writers. Culminating in a book-length thesis, this immersion in literary study is designed to inculcate the habits and skills necessary for a productive writer’s life.

Students applying to the M.F.A. program should have a bachelor’s degree. All must demonstrate competence in a foreign language at the college level.

We begin with classical authors then jump to those reinterpreted ancient myths to explore modern themes of ennui, violence, This course examines how and why important 20th century writers

Literature. 3 Credits.

AS.220.112. The Problems with Myth: Mythology in 20th Century Literature. 3 Credits.
This course examines how and why important 20th century writers
reinterpreted ancient myths to explore modern themes of ennui, violence, and the absurd hero. We begin with classical authors then jump to those of the 20th century: for example, Louise Glück, James Joyce, Albert Camus, and Eugene O’Neill. In addition to reading literature and essays, students write original poems and sketches in order to understand how mythic narratives continue to satisfy the modern voice.

Instructor(s): R. Oh
Area: Humanities
Writing Intensive.

AS.220.115. Mitchell, Fitzgerald, and American Class Identity. 3 Credits.

English General Banastre Tarleton was reviled throughout the American South for his extreme brutality during the War of American Independence. Why, then, did Margaret Mitchell select Tarleton as the surname for the twin brothers who are courting the Southern belle Scarlett O’Hara in Gone with the Wind? Did Mitchell intend the name both as an historical reference, and as a literary reference? In four short stories, F. Scott Fitzgerald used the fictional town of Tarleton, Georgia as the backdrop for his disparagement of the notion that social integration was desirable—much less even possible. Did Mitchell conceive her novel as a counterweight to Fitzgerald’s depictions of the futility of attempts at class mobility—not only in those stories, but also in The Great Gatsby? What’s at stake in the commitment to resisting or promoting class fluidity? How does Mitchell’s debate with Fitzgerald illustrate the role social standing plays in modern America?

Area: Humanities
Writing Intensive.

AS.220.118. Plagues and Pandemics in Literature. 3 Credits.
All plagues seem to begin in mystery: What is happening? Why? Who can we blame? What needs to change? How we react to these questions in the midst of a mass disaster has fascinated writers for centuries. Looking to literature, this class will examine pandemics ranging from the Black Death to Influenza to HIV/AIDS. We will also discuss vampires, zombies, and laboratory experiments gone disastrously wrong. Students will write their own poems and short stories.

Instructor(s): P. Kirkpatrick
Writing Intensive.

AS.220.120. Musical Theater: History and Lyrics, from Guys & Dolls to Glee. 3 Credits.
This course examines the history of musical theater, from Gilbert and Sullivan to Hammerstein to Sondheim, in all its forms: stage, film, live actions, cartoons, and jukebox musicals. We will watch films in class, including CAROUSEL, GUYS & DOLLS, SOUND OF MUSIC, SWEENEY TODD, RENT, ACROSS THE UNIVERSE, GLEE episodes, and more. Students write lyrics and imitations, and a short paper on a favorite lyricist. Optional field trips to DC and Baltimore theaters to see musicals live.

Area: Humanities
Writing Intensive.

AS.220.125. Short Fiction of David Foster Wallace. 3 Credits.
In this course we will explore David Foster Wallace’s shorter fiction with an eye towards the philosophical questions raised therein: How can we be authentic when the self is a social construct? How do we escape solipsism while remaining aware of our helpless subjectivity? How do we feel empathy while acknowledging irony? Is it impossible to escape the self, or is that just me? Recommended Course Background: AS.220.105

Area: Humanities

AS.220.146. Introduction to Science Writing. 3 Credits.
Science writing is science written in plain English and told as a story. Students research, write, edit others, rewrite. They also analyze published stories for structure, substance, accessibility, and clarity.

Area: Humanities
Writing Intensive.
AS.220.175. Introduction to Creative Writing: Chaos and Order in Literature. 3 Credits.

In this literature and creative writing course, we’ll consider the ways in which the ideas of “chaos” and “order” implicitly or explicitly shape literature. From Greek tragedy to “fractal” poetry, from Shakespeare’s landscapes to the Deep South and Wild West, we will investigate humans’ essential and paradoxical relationship with the unknown. We will experiment with chaotic and structured forms in our own poems, stories and essays to explore these fundamental themes.

Instructor(s): A. Thompson
Area: Humanities
Writing Intensive.

AS.220.176. Poetry and the Visual Arts. 3 Credits.

This course will examine the interplay between poetry and the visual arts. We will look at poems inspired by great paintings and sculptures and vice versa: paintings and sculptures inspired by great poems. We will also explore ekphrasis in both poetry and painting. The course will include field trips to local museums and poetry writing workshops.

Instructor(s): P. Kirkpatrick
Area: Humanities.

AS.220.182. The American Political Novel. 3 Credits.

An examination of several major American authors who engaged some of the most controversial political issues of their day: race relations and the role of the federal government in enforcing civil rights. We’ll explore a chain of literary influence that stretches from the early 1850s to the late 1990s. How did Robert Penn Warren conceive All the King’s Men (a fictional account of Louisiana’s governor and senator Huey Long) as a response to Herman Melville’s Moby Dick, Mark Twain’s Huckleberry Finn, and William Faulkner’s Absalom, Absalom!? And how, in turn, did Joe Klein conceive Primary Colors (a fictional account of Arkansas’s governor Bill Clinton) as a response to All the King’s Men? We’ll also consider Billy Lee Brammer’s The Gay Place (a fictional account of Texas’s senator Lyndon Johnson).

Instructor(s): J. Rockefeller V
Area: Humanities
Writing Intensive.

AS.220.184. Writers Who Act / Actors Who Write: Introduction to Writing for Solo Performance. 3 Credits.

A first course in nonfiction writing, emphasizing how facts can be woven together into narrative forms. Students write, develop, and perform their own solo performance pieces. Monologue forms investigated: interview-based documentary, autobiography, fiction. Writing exercises and in-class critiques. Works analyzed: Anna Deveare Smith, Doug Wright, Dario Fo, Mel Brooks, Richard Pryor, Moises Kaufman, films where one actor plays many roles (Kind Hearts & Coronets, Dr. Strangelove, Monty Python’s Holy Grail, etc.) Field trips: one-man show at Everyman Theatre, slam poetry, stand-up comedy, cabaret. Culminating showcase of student work. No acting experience necessary.

Area: Humanities
Writing Intensive.

AS.220.185. Writing Intensive. 3 Credits.

An examination of F. Scott Fitzgerald’s major short stories in the 1920s and 1930s. We’ll analyze Fitzgerald’s commitment to exploring the tension between two opposing intellectual movements: literary naturalism (which championed the primacy of environmental determinism) and literary realism (which championed the primacy of free will). We’ll trace Fitzgerald’s mercurial loyalty to each movement: his abandonment of one school of thought for the other, from one year to the next. In “May Day” he even embraced both movements equally—testimony to his belief that “the test of a first-rate intelligence is the ability to hold two opposed ideas in mind at the same time and still retain the ability to function”. Did Fitzgerald ultimately advocate one school of thought over the other? Or, did he intend simply to stage the debate between them?

Area: Humanities
Writing Intensive.

AS.220.186. The American Poem. 3 Credits.

This course will examine the broad family tree of American poetry, from Whitman and Dickinson to the present day. We will focus on several poets of the 20th century as exemplars of major trends and/or instigators of change over the last hundred years, and we will seek to chart their influences. Through our own poems and essays, we will enter into a conversation with the myriad voices that have composed the poem in America.

Instructor(s): S. Lackaye
Area: Humanities
Writing Intensive.

AS.220.187. Songwriting: The Poetry of Music. 3 Credits.

We will investigate song as both inherent in poetry and as a possible vehicle for it, focusing on the lyricist’s particular challenges and possible techniques. We’ll look at what makes Goethe’s poetry attractive to a musician like Schubert, and what Bob Dylan’s lyrics share with those of Keats and Shakespeare. We’ll follow the tradition of forms like the ballad and the blues song, and compose a few of our own.

Area: Humanities
Writing Intensive.

AS.220.195. Fitzgerald’s Short Stories. 3 Credits.

An examination of F. Scott Fitzgerald’s major short stories in the 1920s and 1930s. We’ll analyze Fitzgerald’s commitment to exploring the tension between two opposing intellectual movements: literary naturalism (which championed the primacy of environmental determinism) and literary realism (which championed the primacy of free will). We’ll trace Fitzgerald’s mercurial loyalty to each movement: his abandonment of one school of thought for the other, from one year to the next. In “May Day” he even embraced both movements equally—testimony to his belief that “the test of a first-rate intelligence is the ability to hold two opposed ideas in mind at the same time and still retain the ability to function”. Did Fitzgerald ultimately advocate one school of thought over the other? Or, did he intend simply to stage the debate between them?

Area: Humanities
Writing Intensive.

AS.220.200. Introduction to Fiction. 3 Credits.

Study in the reading and writing of short narrative with focus on basic technique: subject, narrative voice, character, sense of an ending, etc. Students will write weekly sketches, present story analyses in class, and workshop one finished story. Selected parallel readings from such models of the form as Henry James, Anton Chekov, James Joyce, John Cheever, Alice Munro, and others. Permission Required. (Formerly AS.220.191.)

Prerequisites: AS.220.105 AND AS.220.106

Instructor(s): G. Blake; T. Davies
Area: Humanities
Writing Intensive.

AS.220.201. Introduction to Poetry Writing. 3 Credits.

A study of the fundamentals and strategies of poetry writing. This course combines analysis and discussion of traditional models of poetry with workshop critiques of student poems and student conferences with the instructor. Permission Required. (Formerly AS.220.141.)

Instructor(s): C. Siskel; G. Williamson; J. Arthur
Area: Humanities.

AS.220.202. Introduction to Non-Fiction: Matters of Fact. 3 Credits.

A first course in nonfiction writing, emphasizing how facts can be woven into narrative forms to portray verifiable, rather than imagined, people and events. Students read and discuss model works, then write frequent papers to refine their own style. (Formerly AS.220.145.)

Instructor(s): W. Biddle
Area: Humanities
Writing Intensive.

AS.220.203. Introduction to Science Writing. 3 Credits.

Instructor(s): A. Bohac; E. Gray
Area: Humanities
Writing Intensive.
AS.220.204. Introduction to Dramatic Writing: Film. 3 Credits.
An examination of the screenplay as a literary text and blueprint for production. Professional screenplays will be critically analyzed, with focus on character, dialogue, plot development, conflict, pacing, dramatic foreshadowing, the element of surprise, text and subtext, and visual storytelling. Students write one complete script. Formerly AS.220.342.
Instructor(s): R. Buso-garcia
Area: Humanities
Writing Intensive.

AS.220.205. Introduction to Dramatic Writing: Plays. 3 Credits.
Instructor(s): M. Lapadula
Area: Humanities
Writing Intensive.

AS.220.206. Becoming a Science Journalist. 3 Credits.
This course is designed to teach students the skills of daily science news reporting. The focus is on turning complex scientific information into lively prose for the general public. Lectures will cover such topics as how to compose news “ledes,” how to get great quotes, how to find stories, and how best to interact with researchers and outside experts. Scientists from Johns Hopkins, University of Maryland, and other local institutions will present their latest research to the class. Students will ask questions, as journalists would, at a news conference. Students will convert these talks into news stories, which will be critiqued in class. As a final project, students will be asked to write a daily news story of their own devising.
Instructor(s): D. Grimm
Area: Humanities
Writing Intensive.

AS.220.207. Intro to Creative Writing. 3 Credits.
Area: Humanities
Writing Intensive.

AS.220.209. Poetic Symbols: Past and Future. 3 Credits.
Poetic Symbols: Past and Future. In this course we will trace the lineages of familiar poetic symbols, or tropes, that have occurred centrally and with regularity in literary history. We will investigate how they evolve with time and reveal changing styles and sensibilities from author to author and age to age. That’s the past. The future is the next poem you will write as the assignment for each of the symbols we read. Recommended Course background: AS.220.105
Instructor(s): G. Williamson
Area: Humanities.

AS.220.303. Intermediate Dramatic Writing: Plays. 3 Credits.
Intensive workshop development of one play by each student. Repeatable for credit with permission of instructor. Permission Required.
Prerequisites: Prerequisite AS.220.205
Instructor(s): M. Lapadula
Area: Humanities
Writing Intensive.

AS.220.309. Writing Healthy Baltimore. 3 Credits.
Students will explore public health issues in Baltimore and then write about them first in short pieces, and then in longer, polished works. The framework will be the mayor’s Healthy Baltimore 2015 initiative – launched in 2011 to address the city’s top-10 public health problems, including obesity, smoking, drug and alcohol abuse, STDs, cancer, and environmental health hazards. Students will study the initiative and its historical context; examine data sets; explore where and how the initiative intersects with public health practitioners and advocacy groups at the neighborhood level; and write what they learn in different formats, including essays, breaking news, and substance analysis. Students will then “workshop” each other’s papers.
Instructor(s): K. Masterson
Area: Humanities
Writing Intensive.

AS.220.310. Intermediate Fiction: Nature Writing. 3 Credits.
Our central text will be Thoreau’s “Walden”. Most of our readings will be American, though we will read excerpts from Lucretius and Darwin. We will examine various ways in which the natural world has been depicted in nonfiction, fiction, and poetry. Students will write critical papers on nature writers as well as to do creative nature writing of their own. Our authors may include: Emerson, Rachel Carson, Loren Eiseley, John Updike, Robert Frost, Donald Culross Peattie.
Instructor(s): B. Leithauser
Area: Humanities
Writing Intensive.

AS.220.316. Seminar: Opinion Writing. 3 Credits.
The study of exposition and argument in literary prose, with exposure to journalistic practices. Instructor will assign topics on which students write essays and subsequently discuss in class and critique for style, grammar, coherence, and effectiveness. Permission required.
Instructor(s): G. Kane
Area: Humanities
Writing Intensive.

AS.220.319. Intermediate: Nonfiction/Nonfact. 3 Credits.
Instructor(s): W. Biddle
Area: Humanities
Writing Intensive.

AS.220.320. Intermediate Poetry: Poetics. 3 Credits.
A study of how to read poetry closely and how to write critical prose about it. Readings in the course may include T.S. Eliot, Robert Frost, John Crowe Ransome, W.H. Auden, Robert Lowell, Randall Jarrell, and others. Completion of Introduction to Poetry required.
Prerequisites: AS.220.201
Instructor(s): M. Salter
Area: Humanities.

AS.220.324. Intermediate Fiction: Landscape & Setting. 3 Credits.
An intermediate fiction workshop focusing on the question of place. We’ll read 19th, 20th, and 21st century short fiction (including some set in Baltimore) in which setting strongly affects plot. While we’ll talk about each story holistically, we’ll also spend time discussing how authors make the physical world feel three-dimensional, and how place can lean on--even change--what happens in a story. Students will write stories and exercises, including exercises that involve exploring Baltimore in order to observe and write about the city in which we live.
Instructor(s): K. Noel
Area: Humanities.
AS.220.325. Intermediate Fiction: Story and Plot. 3 Credits.
The study of plot, with questions, both practical and theoretical, inevitably raised by the short story form. Readings in Chekhov, James, O’Connor, Cheever, Joyce, and Hemingway.
Instructor(s): K. Noel
Area: Humanities.

AS.220.327. Intermediate Fiction: Characters. 3 Credits.
A study of fictional persons in works by Fitzgerald, Joyce, W.C. Williams, and Rilke. Students write sketches and compose at least one complete story.
Instructor(s): T. Davies
Area: Humanities.

AS.220.328. Intermediate Fiction: Narrative Voice. 3 Credits.
Instructor(s): J. McGarry
Area: Humanities

AS.220.329. Intermediate Fiction: Forming The Short Story. 3 Credits.
Readings in the first hundred years of the short story in the Western tradition. Authors include Hoffmann, Kleist, Pushkin, Gogoi, Turgenev, Maupassant, James, Chekhov, and Wharton. Numerous pastiches will be assigned.
Instructor(s): T. Davies
Area: Humanities

AS.220.330. Intermediate Fiction: Forms of Fiction. 3 Credits.
A look at some non-realistic methods, in stories and novels, for dealing with the “real world.” Students will write one page exercises and short stories. Permission Required.
Instructor(s): T. Davies
Area: Humanities

AS.220.331. Intermediate Fiction: Writing Central Baltimore. 3 Credits.
A workshop in writing about a single geographical area, in this case the amalgamated districts popularly known as Central Baltimore. Subjects will include the area history, demographics, and future. Research and a series of written projects will be required, including both individual and group work.
Prerequisites: AS.220.105 and AS.220.106 and AS.220.200
Instructor(s): T. Davies
Area: Humanities.

AS.220.332. Intermediate Fiction: The Anatomy. 3 Credits.
Registration Restrictions: Permission Required. A workshop with readings in encyclopedic fictional forms. Authors will include Petronius, Robert Burton, and Joyce. Numerous sketches to be assigned including the exploration of digital media.
Prerequisites: AS.220.200
Instructor(s): T. Davies
Area: Humanities.

AS.220.333. Intermediate Fiction: Indexed Fiction. 3 Credits.
A course in fiction writing that utilizes a wiki environment. Students will write and maintain multiple fictional data sets, read and edit other students’ work in the same, and coordinate and interlink their sets with the goal of creating a collaborative web-based fiction.
Prerequisites: AS.220.200
Area: Humanities.

AS.220.334. Intermediate Fiction: Fiction and Fact. 3 Credits.
Permit Req’d. A workshop in fictions that are “on” something, that is: fictions that take as their organizing principal the consideration of some material or intellectual subject. Readings will include famous examples of the anatomical form as well as writings in contemporary metaphysics.
Instructor(s): T. Davies
Area: Humanities

AS.220.335. Intermediate Drama Writing: Film. 3 Credits.
An intensive workshop focusing on methodology: enhancing original characterization, plot development, conflict, story, pacing, dramatic foreshadowing, the element of surprise, text and subtext, act structure, and visual storytelling. Each student is expected to present sections of his/her “screenplay-in-progress” to the class for discussion. The screenplay Chinatown will be used as a basic text.
Instructor(s): R. Buso-garcia
Area: Humanities

AS.220.337. Intermediate Fiction: Image & Text. 3 Credits.
A study of book composition and design. Emphasis on combinations of writing and digital photography, with attention to aesthetic principles and production. Requirements include, but are not limited to, creation of a prose-and-image semester project. Darkroom access is limited to students who have completed 371.146, Basic Black and White Photography.
Area: Humanities.

AS.220.339. Seminar: Science Stories. 3 Credits.
Science Stories is designed to teach students the skills of daily science news reporting and writing. Lectures will cover topics such as how to write news ledes, how to get great quotes, how to find stories, and how best to interact with researchers and outside experts. Every other week, scientists from local institutions will present their latest research to the class. Students ask questions and are given a week to write up a daily news story, which is workshopped during the following class. As a final project, students will be asked to find and write a daily news story on their own.
Prerequisites: AS.220.146 or 220.203 or permission of instructor
Instructor(s): D. Grimm
Area: Humanities

AS.220.344. Intermediate Fiction: Forming The Short Story. 3 Credits.
A consideration of the short-short story. Students will weekly present in the short-short story form. We will read the following anthologies: Short Shorts, Flash Fiction, Micro Fiction, and Sudden Fiction.
Prerequisites: AS.220.200
Instructor(s): G. Blake
Area: Humanities

AS.220.345. Intermediate Fiction: Alternative Fictions. 3 Credits.
Instructor(s): B. Leithauser
Area: Humanities
AS.220.351. Intermediate Fiction: Forms of International Fiction. 3 Credits.
A course which reads fiction written by leading innovators in form such as, but not limited to, Franz Kafka, Jorge Luis Borges, Angela Carter, Amos Oz, Italo Calvino, Gabriel Garcia Marquez, A.S. Byatt, Margarettt Atwood, Ian McEwan. Students will write variations of the forms of fiction. 
Prerequisites: AS.220.200
Area: Humanities.

AS.220.366. Intermediate Fiction: Contemporary American Fiction. 3 Credits.
This seminar will examine how three schools of American fiction address the fate of linear narrative in the late 20th century. Permission required. 
Area: Humanities.

AS.220.376. Intermediate Fiction: Outdoor Stories. 3 Credits.
Students will write sketches and stories, in a class organized around readings in classic texts of wilderness encounter. Hawthorne, Tolstoy, Hemingway, Faulkner, Styron, Cormac McCarthy, Kate Chopin, Melville, McGuane, Conrad. Permission Required. 
Instructor(s): R. Roper
Area: Humanities
Writing Intensive.

AS.220.377. Intermediate Poetry: Poetic Forms. 3 Credits.
A consideration of a variety of poetic forms and conventions, analysis and discussion of characteristic approaches, with a balance of workshop of student poems. Admission requires completion of Introduction to Poetry. 
Permission Required. 
Instructor(s): G. Williamson
Area: Humanities.

AS.220.378. Poetic Forms II. 3 Credits.
The course builds on the information and techniques encountered in Poetic Forms I, and uses them in reading and imitating a range of contemporary poets. Permission Required. 
Instructor(s): G. Williamson
Area: Humanities.

AS.220.380. Intermediate Fiction: The Scene. 3 Credits.
Emphasis in writing scenes—the building blocks of fiction—units of action, units of dialogue. Readings will include the stories of Chekhov, Cheever, Hemingway, and Carver. Recommended Course Background: AS.220.200
Instructor(s): G. Blake
Area: Humanities.

AS.220.382. Intermediate Poetry: Narrative Strategies in Poetry Writing. 3 Credits.
Before a poem is anything else, it is the hint, implication, outline, or raw matter of a story, that fundamental human-making shape of expression. Story-writing is learned behavior and its alternative approaches are the makers of form and vision, of communication that is worth re-experiencing, or not. In this course we consider how poets have written narratives and how today’s poets continue to do so. We will read one book of poems by each of eight contemporary poets who will visit the class, including Pulitzer Prize winners Claudia Emerson and Stephen Dunn, and discuss narrative strategies with these poets. Students will then write a poem “imitating” each visitor and we will workshop the poems on next class meeting after the visit. There will also be short response papers and a final essay (or examination—the student’s choice). 
Instructor(s): D. Smith
Area: Humanities.

AS.220.383. Intermediate Fiction: The 20th Century. 3 Credits.
We will look at modern American novellas. Authors will include: Henry James, Edith Wharton, Katherine Anne Porter, John Updike, Steven Milhauser, Truman Capote, Elizabeth Spencer. Frequent short writing assignments, to be discussed in workshop. 
Instructor(s): B. Leithauser
Area: Humanities.

The class will read and discuss classic autobiographical texts by Benjamin Franklin, Frederick Douglass, Henry Thoreau, Henry Adams, Gertrude Stein, Malcolm X, and others. Students will write and workshop their own life stories of substantial length. 
Instructor(s): W. Biddle
Area: Humanities
Writing Intensive.

AS.220.387. Intermediate Poetry: The Poet as Observer. 3 Credits.
A workshop course with readings and writing assignments that emphasize the artistic value of the outward gaze. Students will keep a daily journal of observations, and over the semester will develop those observations into at least 10 new poems. Course readings will include work by Rainer Maria Rilke, Elizabeth Bishop, and Theodore Roethke. Permission Required. 
Area: Humanities.

AS.220.389. Intermediate Poetry: The Dramatic Element. 3 Credits.
This course will explore the dramatic mode of poetry, from the plays of the Greeks and Shakespeare to the lyric poems of Hardy, Yeats, Frost, Brooks, Hecht, and others. Weekly writing assignments, suggested by the readings, will include character monologues, dialogue, conflict, and other aspects of the dramatic lyric. Student poems will be discussed in a workshop format. 
Instructor(s): D. Yezzi
Area: Humanities.

AS.220.391. Performing Poetry & Fiction: An Acting Workshop for Writers. 3 Credits.
This hands-on performance workshop, combining literary and theatrical practice, will look closely at what makes a performance or reading compelling, clear, and resonant. Through textual analysis, vocal technique, and group discussion, students will create a pliant and powerful reading style to best serve their work. The course includes regular writing assignments in poetry or fiction and weekly performance and group discussion. 
Instructor(s): D. Yezzi
Area: Humanities
Writing Intensive.

AS.220.392. Intermediate Poetry: Tall Tales and Short on Narrative Poetry. 3 Credits.
Tall Tales and Short: On Narrative Poetry. Many of the most resonant and influential stories in history have been told in verse—The Iliad, The Aeneid, Beowulf, The Divine Comedy, The Prelude. This course will examine narrative poems—from Homer to the present, both long and short—with an eye toward how they function formally and generically. Students will adapt an array age-old storytelling techniques for their own poems. There will be weekly writing assignments in poetry and group discussion of student writing. 
Instructor(s): D. Yezzi
Area: Humanities
Writing Intensive.
AS.220.397. Intermediate Poetry: The Lyric. 3 Credits.
What is a lyric poem in the 21st Century? What causes such a thing? What does it sound like? What is it good for? Who writes them? We will. By reading lyric poems written over the last 500 years in English, and by writing our own original work we will find some answers to these questions. This class will have a special emphasis on Free Verse and the particular challenges and joys of such a poem. This workshop aims to generate new work and to cultivate skills necessary for a writer. Permission Required.
Instructor(s): S. Scafidi
Area: Humanities.

AS.220.400. Advanced Poetry Workshop. 3 Credits.
The capstone course in poetry writing. Consideration of various poetic models in discussion, some assigned writing, primarily workshop of student poems. Students will usually complete a “collection” of up to 15 poems. Permission Required. (Formerly AS.220.396.)
Prerequisites: AS.220.201
Instructor(s): J. Irwin
Area: Humanities.

AS.220.401. Advanced Fiction Workshop. 3 Credits.
The capstone course in writing fiction, primarily devoted to workshop of student stories. Some assignments, some discussion of literary models, two or three completed student stories with revisions. Completion of Intermediate Fiction is required for admission. Permission Required. (Formerly AS.220.355)
Instructor(s): A. McDermott; T. Davies
Area: Humanities.

AS.220.403. Readings in Poetry: The Branch Will Not Break. 3 Credits.
Readings in Contemporary Poetry. Confession, place, myth and image are the four compass points of American poetry best embodied in the work of James Wright. With the work of Wright at the center of the compass, we will read the Selected Poems of four major living poets and discover how these directions and forces play out over the course of a career. Permission required.
Instructor(s): S. Scafidi
Area: Humanities.

AS.220.404. Readings in Fiction: Narrative Design. 3 Credits.
A readings course in the novel studying works by Jane Austen, Honore de Balzac, Ivan Turgenev, Henry James, Thomas Mann, Joseph Conrad and Elsa Morante. Students keep a notebook of critical responses to the novels and write a final paper.
Instructor(s): J. McGarry
Area: Humanities.

AS.220.406. Readings in Fiction: Hard-Boiled Fiction and Film Noir. 3 Credits.
Students read six novels by Hammett, Chandler, Cain, Burnett, and Woolrich and view seven films made from these novels by Huston, Hawks, Wilder, Dmytryk, Richards, Walsh, and Farrow. Cross-listed with Film and Media Studies.
Area: Humanities
Writing Intensive.

AS.220.409. Readings in Fiction: Faulkner, Fitzgerald, & Hemingway. 3 Credits.
An examination of the fiction of three American modernist masters in the context of the early 20th century movement in the verbal and visual arts. Not a workshop course.
Instructor(s): J. Irwin
Area: Humanities.

AS.220.410. Readings in Poetry: Four Women Poets. 3 Credits.
A study of technique and strategy in the poetry of Emily Dickinson, Marianne Moore, Elizabeth Bishop, and Amy Clampitt. Not a workshop course.
Instructor(s): M. Salter
Area: Humanities.

AS.220.411. Readings in Poetry: Sex & Death in Contemporary American Poetry. 3 Credits.
Between sex and death the body has a varied wild life in American poetry. In a survey of contemporary poetry this seminar will consider the life of the body, its relationship to the imagination and the kaleidoscopic world of the senses. Reading erotic poems, elegies, poems of sickness and health, and of age and youth, we will find an intimate politics of the body. Students will read and respond critically to American poems written over the last forty years.
Instructor(s): S. Scafidi
Area: Humanities.

AS.220.412. Readings in Poetry: Eliot, Crane & Stevens. 3 Credits.
An examination of the poetry of Eliot, Crane and Stevens in the context of the modernist movement in the verbal and visual arts. Not a workshop course. Juniors and seniors majors are given preference.
Instructor(s): J. Irwin
Area: Humanities.

AS.220.413. Readings in Fiction: Contemporary American Fiction. 3 Credits.
Area: Humanities.

AS.220.416. Readings in Fiction: Five from the Fifties. 3 Credits.
We will examine five American writers who were emerging or thriving in the middle of the 20th century: John Cheever, Flannery O’Connor, Peter Taylor, John Updike, and Vladimir Nabokov. We will read short stories by all five, as well as the following novels: O’Connor’s Wise Blood, Updike’s Of the Farm, Nabokov’s Lolita and Pale Fire.
Instructor(s): B. Leithauser
Area: Humanities
Writing Intensive.

AS.220.417. Advanced Nonfiction Workshop. 3 Credits.
Classes will be devoted to writing and collective editing of factual work of significant length and ambition, including essays, journalistic reports, histories, and biographies. Instructor permission required.
Instructor(s): W. Biddle
Area: Humanities
Writing Intensive.

AS.220.418. Readings in Fiction: The Novella. 3 Credits.
Registration Restrictions: Permission required. Twentieth-century novels, with a new author and book each week. The course asks: What can and has been accomplished by American fiction writers in fewer than 150 pages?
Instructor(s): B. Leithauser
Area: Humanities
Writing Intensive.

AS.220.419. Readings in Poetry: Auden & His Circle. 3 Credits.
Instructor(s): M. Salter
Area: Humanities
Writing Intensive.
AS.220.420. Readings in Contemporary Fiction: Coetzee, Delillo, Freudenberger, Johnson. 3 Credits.
The central concern of this course is to read, study, think about, and discuss several novels and short story collections, paying special attention to the voice and structural techniques these authors have invented to create compelling works.
Instructor(s): M. Klam
Area: Humanities.
AS.220.421. Readings in Poetry: Poetry of War. 3 Credits.
A study of modern war poetry, especially of the two World Wars, including work by W.B. Yeats, Rupert Brooke, Wilfred Owen, W.H. Auden, Louis MacNeice, Randall Jarrell, Henry Reed, Richard Wilbur, Anthony Hecht. Some poetry concerning other conflicts, from the Trojan War to the war in Iraq, will also be addressed. What is the role of poetry in responding to political events? Students will write critical papers as well as poems.
Instructor(s): M. Salter
Area: Humanities
Writing Intensive.
AS.220.422. Readings in Fiction: Women Behaving Badly!. 3 Credits.
This course will focus on fiction that centers around a profoundly flawed female protagonist, an antiheroine. Why is it that we love some of these women in spite of their wrongdoings? How do we connect to a character who is acting in ways that we would never hope to act? And how is it that bad behavior is often perceived as sexy? Are evil women any less or more evil than their male counterparts? Students will read 8 books with villains whose crimes range from poor parenting to serial killing. One final paper (10-20 pages) will be due at the end of the semester on a topic of the student's choosing, relating to one or more of the protagonists from the reading list.
Area: Humanities.
AS.220.423. Readings in Fiction: Castaways in Literature. 3 Credits.
Our primary text will be Defoe's 'Robinson Crusoe.' We will read spin-offs of Robinson Crusoe (Muriel Spark's 'Robinson, J. M. Coetzee's 'Foe, Elizabeth Bishop's "Crusoe in England") as well as Golding's 'Lord of the Flies' and Sylvia Townsend Warner's 'Fortune's Maggot.' Selections from Homer, Swift, and Byron. We will conclude with Shakespeare's 'The Tempest.' (Leithauser)
Instructor(s): B. Leithauser
Area: Humanities.
AS.220.424. Science as Narrative. 3 Credits.
Class reads the writings of scientists to explore what their words would have meant to them and their readers. Discussion will focus on the shifting scientific/cultural context throughout history. Authors include Aristotle, Copernicus, Galileo, Descartes, Newton, Darwin, Freud, Einstein, Heisenberg, Bohr, Crick and Watson.
Instructor(s): R. Panek
Area: Humanities
Writing Intensive.
AS.220.425. Readings in Fiction: The Story Cycle. 3 Credits.
A study of the short story cycle as a literary form. Authors may include Joyce, Schulz, Anderson, Welty, Calvino, Munro, Erdrich, Diaz and others.
Instructor(s): R. Puchner
Area: Humanities.
AS.220.426. Readings in Poetry: Early Auden and his Contemporaries. 3 Credits.
A close study of the writing that Auden, Isherwood, Spender, and MacNeice produced during the 1930s against the backdrop of the Great Depression, the Spanish Civil War, and the rise of Nazism. This is not a workshop course, but students will have the opportunity to respond artistically as well as analytically to the course readings.
Instructor(s): J. Arthur.
AS.220.427. Readings in Fiction: The Novella. 3 Credits.
A study of the novella as a literary form. Authors may include Melville, Turgenev, Tolstoy, Chekhov, Kafka, James, Wharton, Baldwin, Porter, Rulfo, Smiley, and others.
Instructor(s): R. Puchner
Area: Humanities
Writing Intensive.
AS.220.501. Independent Study. 3 Credits.
Ordinarily no more than one independent study course may be counted among the eight Writing Seminars courses presented for graduation.
Instructor(s): G. Williamson; Staff.
AS.220.502. Independent Study. NULL Credits.
Instructor(s): Staff.
AS.220.505. Writing Seminars Internship. 1 Credit.
Instructor(s): Staff.
AS.220.506. Writing Seminars Internship. 1 Credit.
Instructor(s): G. Williamson; T. Davies.
AS.220.507. Honors Thesis. 3 Credits.
Permission Required.
Instructor(s): Staff.
AS.220.508. Honors Thesis. 0 - 2 Credit.
Department Permission Required.
Instructor(s): J. McGarry.
AS.220.509. Practicing Journalism Internship. 1 Credit.
This internship is given in conjunction with local media and must be taken on a satisfactory/unsatisfactory basis. It covers many aspects of the operation of a metropolitan newspaper or magazine or TV station. Permission Required. Satisfactory/ Unsatisfactory only.
Instructor(s): Staff.
AS.220.510. Practicing Journalism. 1 Credit.
Permission Required.
Instructor(s): T. Davies
Area: Humanities.
AS.220.513. Teaching Writing. 3 Credits.
Permission Required.
Instructor(s): T. Davies
Area: Humanities.
AS.220.592. Internship-Summer. 1 Credit.
Instructor(s): Staff.
AS.220.594. Practicing Journalism Internship. 1 Credit.
Instructor(s): D. Basford; J. McGarry; Staff; T. Davies.
AS.220.596. Teach Writing-Internship. 1 Credit.
Instructor(s): S. Dixon.
AS.220.598. Independent Study. 3 Credits.
Instructor(s): G. Blake; G. Williamson; J. McGarry; Staff; T. Davies.
The central concern of this course is to read, study, think about, and discuss several novels and short story collections, paying special attention to the voice and structural techniques these authors have invented to create compelling works. Restricted to Graduate Students.
Instructor(s): M. Klam
Area: Humanities.

AS.220.610. Readings in Fiction: Alternatives to Realism.
Area: Humanities.

AS.220.613. Writing about Science.
A seminar in the writing of factual prose about scientific matters, whether for the general reader or for professional scientists as audience. Weekly writing, editing, and reading assignments. Permission required.
Instructor(s): A. Finkbeiner.

AS.220.614. Graduate - Science Workshop.
Intensive seminar, at a professional level, in writing factual prose about science for the general reader. Students find, research, and structure their own stories. Weekly writing, editing. Permission required.
AS.220.619. Graduate Poetic Forms I.
AS.220.623. Fiction Workshop.
Discussion and critique of fiction manuscripts by students enrolled in the M.F.A. program. Some assignments possible.
Instructor(s): A. McDermott.

AS.220.624. Graduate Fiction Workshop.
Discussion and critique of fiction manuscripts by students enrolled in the MFA program. Some assignments possible.
Instructor(s): J. Irwin.

AS.220.625. Poetry Workshop.
Discussion and critique of poetry manuscripts by students enrolled in the M.F.A. program. Some assignments possible.
Instructor(s): D. Yeazzi.

AS.220.626. Graduate Poetry Workshop.
Discussion and critique of poetry manuscripts by students enrolled in the MFA program. Some assignments possible.
Instructor(s): J. Irwin.

AS.220.628. Graduate Seminar: Landscape & Setting.
Instructor(s): M. Klam.

A study of American poetry written after 1945 with discussion of aesthetic movements, events, historical and contextual, and the character of evolution and practices in poetic structures. Readings vary.
Instructor(s): D. Smith
Area: Humanities.

Instructor(s): J. Irwin
Writing Intensive.

Area: Humanities.

AS.220.634. Forms of Poetry: Syllable and Stress.
Area: Humanities.

We will read all—or most—of Chekhov’s short stories, his “notebook,” as well as the letters that have been translated into English.

A study of three major poets (English, Irish, American) who each introduced signature tones, techniques, and themes in modern poetry. Some other figures, such as Louise Bogan and the World War I poets, may be discussed.

A course in the poetry of the 14th-century alliterative revival in which students will read and study Middle English works such as Patience, Cleanness, Pearl, Gawain and the Green Knight, and Piers Plowman.
Graduate students only.
Instructor(s): J. Irwin
Area: Humanities.

AS.220.645. Graduate Readings in Fiction: Castaways in Literature.
Our primary text will be Defoe’s Robinson Crusoe. We will read spin-offs of Robinson Crusoe (Muriel Spark’s Robinson, J. M. Coetzee’s Foe, Elizabeth Bishop’s “Crusoe in England”) as well as Golding’s Lord of the Flies and Sylvia Townsend Warner’s Mr. Fortune’s Maggot. Selections from Homer, Swift, and Byron. We will conclude with Shakespeare’s The Tempest.
Graduate students only.
Instructor(s): B. Leithauser
Area: Humanities.

AS.220.646. Graduate Readings in Fiction and Poetry.
A graduate course designed to develop both close reading and genre study, and to support the teaching of Introduction to Fiction and Poetry (IFP) I and II. Readings in selected works of American, English, and European poetry and short fiction. Course required by all graduate students in fiction and poetry.
Instructor(s): B. Leithauser; J. McGarry
Area: Humanities.

A practical study of prosody rooted in the formalist tradition and continuing into theories of free verse. Readings include essays by Ezra Pound, William Carlos Williams, T.S. Eliot, Charles Olson, and Denise Levertov. This is not a workshop course, but students will have the opportunity to respond artistically as well as analytically to the course readings.
Graduate students only.
Instructor(s): J. Arthur
Area: Humanities.

AS.220.648. Forms: The Longer Poem as Anthology.
A study of form through three poets especially concerned with formal variety as a complement to, and manifestation of, theme and voice. Readings will include book-length works by George Herbert (The Temple); Auden (The Sea and the Mirror); Schnackenberg (The Throne of Labdacus).
Instructor(s): M. Salter
Area: Humanities.

AS.220.800. Independent Study.
Instructor(s): Staff.
Instructor(s): Staff.
Cross Listed Courses

Film and Media Studies

AS.061.205. Introduction to Dramatic Writing: Film. 3 Credits.
We will explore the basic principles of visual storytelling in narrative film as they apply to the design and execution of a screenplay. During the course of the semester, each student will work on different writing exercises as they search for their specific story and the best way to approach it and execute it. We will study different narrative tools and methods of screenwriting by analyzing specific films to ascertain how they work or fail to do so at script level. Through in-class critiques, group discussions and one-on-one sessions, students will apply these techniques to their own work as they undergo the process of designing, breaking down, outlining and writing a screenplay for a short film. In-class analysis and debate on the strengths and challenges posed by the students' work will help shape the thematic emphasis of the second half of the course.
Instructor(s): R. Buso-garcia
Area: Humanities
Writing Intensive.

AS.061.315. Screenwriting By Genre. 3 Credits.
Story design for the screenplay with special attention to the genres of comedy, horror, melodrama, and adventure. Regular workshops, short written exercises, and a longer final project.
Prerequisites: AS.061.313 or AS.220.342 or instructor’s permission
Instructor(s): L. Bucknell
Area: Humanities
Writing Intensive.

AS.061.371. Unrealities: The Fantastic in Film & Fiction. 3 Credits.
The fantastic, the absurd, the blackly comic in films by Cocteau, Hitchcock, and others; and in the short fiction of Barthelme, Cortázar, Hrabal, and others. Several short creative exercises and a longer final project.
Prerequisites: AS.061.140 or AS.061.141 or AS.061.245 or AS.220.105 or AS.220.106 or instructor permission, lbucknell@jhu.edu
Area: Humanities
Writing Intensive.

AS.061.373. Intermediate Dramatic Writing: Film. 3 Credits.
We will explore different approaches towards understanding the fabric of story as it pertains to film. Students will be exposed to key challenges in conceiving, designing, structuring and executing a compelling, original, memorable and vibrant feature-length screenplay. By studying key examples we will discuss possible solutions to these issues. In every class, students will share their work in progress and will help each other find approaches or solutions to their specific challenges and issues. We will analyze films with screenplays that effectively play with the form to create lasting, thought-provoking and affecting stories. Through in-class critiques, group discussions and one-on-one sessions, students will apply new tools and approaches to their own work as they undergo the process of designing, breaking down, outlining and writing a full step outline, beat sheet and the first ten pages of a feature length screenplay. As the semester progresses, in-class analysis and debate on the strengths and challenges posed by the students' work will shape the thematic emphasis of each class.
Prerequisites: AS.220.204
Instructor(s): R. Buso-garcia
Area: Humanities
Writing Intensive.

Anthropology

AS.070.306. Healing: Politics and Poetics. 3 Credits.
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.322. Anthropology and Fiction. 3 Credits.
Looking at fiction, poetry, visual montage, and other forms of experimental writing in contemporary anthropology, we will explore ethnography as a creative practice of provoking altered states such as compassion, dream, wonder, and shame.
Instructor(s): A. Pandian
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.337. Digital Media, Democracy, and Control. 3 Credits.
This course examines how digital technologies enable new publics that circumvent state and social controls as well as how they are mobilized to confirm existing racial, gendered, and political hierarchies.
Instructor(s): L. Humphreys
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

German Romance Languages Literatures

AS.213.309. Walter Benjamin and His World. 3 Credits.
All readings and class discussions in English. This course will provide an introduction to the thought, writing, and world of Walter Benjamin—one of the most interesting and influential German writers of the early 20th century. Although he died in exile having published only a single book in his lifetime, in the past three decades his ideas and preoccupations have changed the way we think about Cultural Studies, Media Studies, Literary Studies, German thought, Jewish mysticism, and the philosophy of history. We will be examining some of his major writings in tandem with precursors such as Charles Baudelaire and Louis Aragon; contemporaries such as Theodor Adorno and Gershom Scholem; and the legacy of his work among contemporary theorists, critics, and artists.
Instructor(s): M. Caplan
Area: Humanities.
AS.213.336. Dancing About Architecture: Jewish Humor and the Construction of Cultural Discourse. 3 Credits.
Are all Jews funny, or only the ones from New York? This course will be an advanced-undergraduate examination of literary, theatrical, cinematic, and televised representations of Jewish culture focusing on the construction of cultural discourse through comedy. Taking as a point of departure Sigmund Freud’s Jokes and Their Relation to the Unconscious, we will consider the joke as a mode of narration and cultural coding with specific resonances for the Jewish encounter with modernity. Among the topics to be addressed in this course will be the origins of modern Jewish humor in traditional modes of storytelling and study; the problems of anxiety and otherness articulated and neutralized through humor; the significance of Jews in creating popular culture through the mass media (particularly though not exclusively in the United States) as well as the role of these mediums in transmitting and translating Jewish references to the general culture; the status of the Yiddish language as a vehicle for satire and a vehicle of resistance between tradition and modernity; the uses and abuses of Jewish stereotypes and the relationship of Jewish humor to anti-Semitism; the connections between Jewish humor and other modes of minority discourse; and the question of translation of Jewish humor both from Yiddish into other languages and from the Jewish “in-group” to a “post-ethnic” audience. Authors and performers to be examined will include Avrom Goldfaden, Sholem Aleichem, Franz Kafka, Dzigan and Szumacher, Lenny Bruce, the Marx Brothers, Mel Brooks, Phillip Roth, Woody Allen, Larry David, Sarah Silverman, and the Coen Brothers. All readings and discussions conducted in English.
Instructor(s): M. Caplan
Area: Humanities.

AS.214.612. The dichotomy ‘prodesse’-‘delectare’ from Horace to the Twentieth-Century.
Rooted in antiquity, a crucial notion in theory of literature is that a literary work must provide both entertainment and instruction to its readers. In the history of human reflection on artistic production this notion’s importance can be compared to that of imitation. This course will examine instances of this notion’s appearance across the centuries, from Horace to Boccaccio, and all the way to our times. Special attention will be given to the connection between aesthetics and ethics and to the pleasure of reading.
Area: Humanities
Writing Intensive.

AS.216.300. Contemporary Israeli Poetry. 3 Credits.
This course examines the works of major Israeli poets such as Yehuda Amichai, Nathan Zach, David Avidan, Dan Pagis, Dalia Rabikovitch, Yona Wollach, Yair Horwitz, Maya Bejerano, and Yitzhak Laor. Through close reading of the poems, the course traces the unique style and aesthetic of each poet, and aims at presenting a wide picture of contemporary Hebrew poetry.
Instructor(s): N. Stahl
Area: Humanities.

AS.216.398. Zionism, Post-Zionism and Modern Hebrew Literature. 3 Credits.
This course studies the development of modern Hebrew literature through its relation to Zionism and Post-Zionism. Based on a close reading of both literary and non-literary Zionist and Post-Zionist texts, we will explore the thematic, social, political, aesthetic and stylistic influences that these two movements have had on modern Hebrew literature. Writers to be discussed include: Herzl, Nordau, Achad ha-am, Jabotinsky, Kluasner, Brenner, Berdyczewski, Agnon, Greenberg, Kahana-Carmon, Oz, Yehoshua, Grossman, Castel-Bloom, and Laor.
Instructor(s): N. Stahl.

AS.216.412. The Divine in Literature and Cinema. 3 Credits.
This course studies various issues concerning literary and cinematic representations of the divine. We will investigate theoretical, theological, generic and aesthetic aspects of the topic and will familiarize ourselves with the general problem of the relation between religion, literature and cinema. Among the topics to be discussed are, negative theology in literature and film, theodicy and anti-theodicy, the question of religion and literary modernism, providence and narratology in the modern novel and in contemporary cinema.
Instructor(s): N. Stahl.

AS.216.612. The Divine in Literature and Cinema.
This course studies various issues concerning literary and cinematic representations of the divine. We will investigate theoretical, theological, generic and aesthetic aspects of the topic and will familiarize ourselves with the general problem of the relation between religion, literature and cinema. Among the topics to be discussed are, negative theology in literature and film, theodicy and anti-theodicy, the question of religion and literary modernism, providence and narratology in the modern novel and in contemporary cinema.
Instructor(s): N. Stahl.

Theatre Arts Studies
AS.225.324. Adaptation for the Stage. 3 Credits.
For aspiring playwrights, dramaturgs, and literary translators, this course is a workshop opportunity in learning to adapt both dramatic and non-dramatic works into fresh versions for the stage. Students with ability in foreign languages and literatures are encouraged to explore translation of drama as well as adaptation of foreign language fiction in English. Fiction, classical dramas, folk and fairy tales, independent interviews, or versions of plays from foreign languages are covered.
Instructor(s): J. Martin
Area: Humanities
Writing Intensive.

Humanities Center
AS.300.308. The Israeli Novel. 3 Credits.
This course studies the Israeli novel through close reading of the works of major Israeli writers such as, Ya’avik Shabtai, Amos Oz, A.B Yeshoshua, Amalia Kahana-Carmon, Yehoshua Knaaz, David Grossman, Orly Castel-Bloom, Yoel Hoffmann and Edgar Keret. We will focus on questions of style, genres and thematic choices. Among the topics to be discussed are Jewish history and tradition, social and political critiques and minority representations. Classes conducted in English, but students with knowledge of Hebrew are encouraged to read texts in the original.
Instructor(s): N. Stahl
Area: Humanities.

AS.300.323. Adventures in the First-Person Singular: The Fictions of Autobiography. 3 Credits.
Area: Humanities
Writing Intensive.

AS.300.351. Literature and Hasidism: The Tales of Nachman of Breslov. 3 Credits.
This course explores the tales of Nachman of Breslov as a literary, cultural and theological phenomenon. We will trace the Kabbalistic and messianic elements in these tales and evaluate their place and role within the wider context of Hassidic literature.
Area: Humanities
Writing Intensive.
AS.300.356. From Literature to Film - the case of Israeli Cinema. 3 Credits.
This course explores the differences and similarities between two artistic mediums: literature and cinema. Our case study will be the interesting transformation of Hebrew fiction into Israeli films—a dominant phenomenon in Israeli cinema since its very beginning. Our main framework will be narrative theories, but we will also consider the specific historical, ideological and geo-political aspects involved in this transformation. By comparing the two artistic modes and studying the transformation of 5 literary works into films, students will become familiar with the history of modern Hebrew literature, contemporary Israeli cinema, and the relationship between these two artistic mediums. Cross-listed with Jewish Studies, Film and Media Studies, and Writing Seminars
Instructor(s): N. Stahl
Area: Humanities
Writing Intensive

AS.300.375. The God of the Hebrew Writer. 3 Credits.
Who is the God of the Hebrew poet and what kind of being is he? This course will examine the ways in which Hebrew writers conceived God. Against the background of Medieval Hebrew poetry we will read modern Hebrew poetry, prose and drama and analyze the changes in the notion of God and its depictions from the Middle Ages through Jewish Enlightenment to modernity. We will study the role of the poet as a mediator between God and his people and his or her understanding of God in the aftermath of World War I and the Holocaust.
Area: Humanities

AS.300.404. The Israeli Novel. 3 Credits.
This course studies the Israeli novel through close reading of the works of major Israeli writers such as, Ya’akov Shabtai, Amos Oz, A.B Yeshoshua, Amalia Kahana-Carmon, Yehoshua Knaz, David Grossman, Orly Castel-Bloom, Yoel Hoffmann and Etgar Keret. We will focus on questions of style, genres and thematic choices. Among the topics to be discussed are Jewish history and tradition, social and political critiques and minority representations. Classes conducted in English, but students with knowledge of Hebrew are encouraged to read texts in the original. Cross-listed with Jewish Studies and Writing Seminars.
Area: Humanities

AS.300.413. Israeli poetry. 3 Credits.
This course examines the works of major Israeli poets such as Yehuda Amichai, Nathan Zach, David Avidan, Dalia Rabkowitch, Yona Woolich, Maya Bejerano, and Yitzhak Laor. These works will be read against the background of the poetry of previous literary generations of writers such as H.N Bialik, Avraham Shlonsky, Nathan Alterman and Lea Goldberg in an attempt to uncover changes in style, themes and aesthetic. Through close reading of the poems, the course traces the unique style and aesthetic of each poet, and aims at presenting a wide picture of contemporary Hebrew poetry. Class will be conducted in English and texts will be read in both English translation and the Hebrew original. Open for both Hebrew and non-Hebrew speakers.
Instructor(s): N. Stahl

AS.300.620. Tristram and His Kin.
Area: Humanities

East Asian Studies
AS.310.116. Romantic Love in Chinese Literature. 3 Credits.
This course aims to introduce students to a variety of literary texts featuring romantic love from the 9th to the mid-20th centuries in China. The target materials cover a wide range of literary products from Bo Juyi’s court poem to the modern Shanghai novella by the woman writer Zhang Ailing (Eileen Chang). As we read romance in a variety of narrative forms such as fiction, drama, and poetry, we will examine changing ideas about marriage, love, sexuality, family, emotion, and morality within the literary discourse as well as in society. Thus, students are expected to connect various literary texts about romance to their socio-historical, literary, and political surroundings. At the same time, we will discuss the shifting significance of romance for writers and reading public and consider how literary texts formed ideas about romance in society. The course is organized chronologically and thematically. Reading assignments are all in English.
Instructor(s): F. Joo
Area: Humanities.

Program in Latin American Studies
AS.361.316. Caribbean Writing in Shakespeare, V. S. Naipaul, and Alejo Carpentier. 3 Credits.
Readings and polemics concerned with Shakespeare’s play The Tempest (1610-1611) and its postcolonial afterlives; V. S. Naipaul’s novel A House for Mr. Biswas (1961); and Alejo Carpentier’s El siglo de las luces (1962). The socio historical and political contexts of each work and authorship will be considered in depth in terms of dominant notions of writing in current critical theory. Cross-listed with GRLL, English, and Writing Seminars.
Instructor(s): E. Gonzalez
Area: Humanities, Social and Behavioral Sciences.

Whiting School of Engineering
Engineering education at Johns Hopkins began with the establishment on an engineering school in 1913. Throughout its history, the Whiting School has maintained close ties with the Krieger School of Arts and Sciences, which has led pioneering education and research since the Faculty of Philosophy was assembled in 1876. The Whiting School of Engineering provides its students with an education and research environment that fosters a lifetime ability to create and apply new knowledge and to contribute to their professions.

The Whiting School offers 10 ABET-accredited programs in engineering leading to the Bachelor of Science degree: biomedical engineering, chemical and biomolecular engineering, civil engineering, computer engineering, computer science, electrical engineering, engineering mechanics, environmental engineering, materials science and engineering, and mechanical engineering. The school also offers B.S. and B.A. degrees in applied mathematics and statistics as well as B.A. degrees in computer science and general engineering.

Our commitment to advanced study and research yields outstanding programs that lead to masters and doctoral degrees. In the descriptions that follow, each department lists its faculty and their research, research facilities, graduate programs, and the elementary and advanced courses they offer. More details can be obtained from the departmental websites, through the Whiting School homepage at www.wse.jhu.edu.
Applied Mathematics and Statistics

The Department of Applied Mathematics and Statistics is devoted to the study and development of mathematical disciplines especially oriented to the complex problems of modern society. A broad undergraduate and graduate curriculum emphasizes several branches of applied mathematics: Probability, the mathematical representation and modeling of uncertainty; Statistics, the analysis and interpretation of data; Operations Research, the design, analysis, and improvement of actual operations and processes; Optimization, the determination of best or optimal decisions; Discrete Mathematics, the study of finite structures, arrangements, and relations; and Scientific Computation, which includes all aspects of numerical computing in support of the sciences.

Probability and Statistics is treated in the curriculum as a single general area, dealing in a unified way with theory and methodology for probabilistic representation of chance phenomena, applications of stochastic modeling to physical and social sciences, formulation of statistical models, fitting of statistical models to data, and interpretation of data. Operations Research and Optimization represents a second general area, dealing in unified fashion with the application of optimization theory, mathematical programming, computer modeling, stochastic modeling, and game theory to planning and policy problems such as scheduling, allocation of resources, and facility location. Discrete Mathematics includes the traditional themes of graph theory and combinatorics, as well as newer topics arising from modern technological and theoretical developments. The fourth general area, Computational and Applied Mathematics, covers topics pertaining to computing, numerical analysis, advanced matrix analysis, and mathematical modeling. Financial Mathematics addresses applications by making use of applied mathematics techniques and models from many of the above-mentioned areas.

In its fundamental role of representing applied mathematics at Johns Hopkins University, the Department of Applied Mathematics and Statistics is complemented by the Department of Mathematics, with its differing emphasis. Located in the School of Engineering, the Department of Applied Mathematics and Statistics fulfills a special integrative role, stemming in part from the affinity of engineers for applied mathematics and in part from the increasing need for interaction between science and engineering. The mathematical sciences, especially the mathematics of modeling, provide a common language and tools through which engineers can develop closer alliances and cooperation with other scientists.

The department’s degree programs include foundational and introductory course work drawing from all areas of the curriculum, along with specialized course work in areas such as probability, statistics, operations research, and optimization. Students, in consultation with their advisors, may develop challenging individual programs. The department emphasizes mathematical reasoning, mathematical modeling, abstraction from the particular, and innovative application all in a problem-oriented setting. The aim is to prepare graduates for professional careers in the mathematical sciences and related areas, in academic institutions as well as in governmental, industrial, and research organizations.

The undergraduate major in applied mathematics and statistics leads to the B.A. and B.S. degrees. The graduate program leads to the M.A., M.S.E., and Ph.D. degrees. In addition, under a combined bachelor’s/master’s program, exceptionally able undergraduates may be admitted early to simultaneous graduate work.

Facilities

The department is located in Whitehead Hall. Office space and liberal access to computing facilities are provided to resident graduate students. A Reading/Commons Room provides the opportunity for informal discussions among faculty and graduate students. The university’s Milton S. Eisenhower Library maintains an excellent collection of literature in the mathematical sciences, including all of the important current journals.

The undergraduate major in applied mathematics and statistics may serve as preparation for employment as an applied mathematician, for graduate study in applied mathematics or related areas, or as a general quantitative training for a career in business, medicine, or other fields. An undergraduate major in applied mathematics and statistics takes an individually tailored program of courses within the department and in the Department of Mathematics (calculus, and perhaps further courses such as differential equations, analysis, complex variables, topology, and modern algebra) and electives in science and engineering. By suitable choice of electives, heavy concentration in a specific field of engineering is possible.

In order to develop a sound program suited to individual needs and interests, the student should consult regularly with the faculty advisor. Additional advisory information, including information about the areas of focus described below, may be obtained from the department office.

With the advice and consent of the faculty advisor, each student constructs an individualized program meeting the requirements below. A written copy of the program should be on file with the faculty advisor, with whom it can be revised and updated from time to time.

Bachelor’s Degrees

Departmental majors can earn either the B.A. or the B.S. degree by meeting the general requirements of the School of Arts and Sciences or of the School of Engineering, respectively, the general university distribution requirements, and the departmental requirements. (See General Requirements for Departmental Majors (p. 33) and Writing Requirement in this catalog.)

All courses used to meet the following departmental requirements must be passed with grade of C- or higher:

1. Calculus I, II, and III

<table>
<thead>
<tr>
<th>Course Sequence</th>
<th>Course Code</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>AS.110.106 &amp; AS.110.107</td>
<td>Calculus I and II (For Biological and Social Science) (can be used to satisfy the Calculus I and II requirements.)</td>
<td>8</td>
</tr>
<tr>
<td>or AS.110.108 &amp; AS.110.109</td>
<td>Calculus I and II (For Physical Sciences and Engineering)</td>
<td>8</td>
</tr>
</tbody>
</table>

or AS.110.202 & AS.110.203 or AS.110.201 Honors Multivariable Calculus

2. Linear Algebra and Differential Equations

Two courses in linear algebra and differential equations. These two courses must, collectively, touch both areas. There are two ways to meet this two course requirement:

Option A

Choose one of the following for Linear Algebra:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>AS.110.201</td>
<td>Linear Algebra (for linear algebra)</td>
</tr>
</tbody>
</table>
Choose one of the following for Differential Equations:
- AS.110.302 Diff Equations/Applic
- AS.110.417 Partial Diff Equations
- EN.550.386 Scientific Computing: Differential Equations
- EN.550.391 Dynamical Systems
Option B
- EN.550.291 Lin Alg & Diff Equations (for introduction to both linear algebra and differential equations)

and an additional course in linear algebra or differential equations chosen from among the following:
- EN.550.385 Scientific Computing: Linear Algebra
- EN.550.386 Scientific Computing: Differential Equations
- EN.550.391 Dynamical Systems
- EN.550.692 Matrix Analysis and Linear Algebra
- AS.110.417 Partial Diff Equations

Choose one of the following (other courses may be substituted with advisor's approval):
- EN.500.200 Computing for Engineers and Scientists
- EN.550.200 Computing for Engineers and Scientists
- EN.550.281 Computing in Applied Mathematics
- EN.550.385 Scientific Computing: Linear Algebra
- EN.550.386 Scientific Computing: Differential Equations
- EN.550.400 Mathematical Modeling and Consulting
- EN.550.413 Applied Statistics and Data Analysis
- EN.550.450 Computational Molecular Medicine
- EN.570.210 Computation/Math Modeling
- EN.580.200 Introduction to Scientific Computing in BME using Python, Matlab, and R
- EN.580.223 Models and Simulations

4. Discrete Mathematics
Choose one of the following:
- EN.550.171 Discrete Mathematics
- EN.550.371 Cryptology and Coding
- EN.550.471 Combinatorial Analysis
- EN.550.472 Graph Theory

5. Probability and Statistics
- EN.550.420 Intro To Probability
- EN.550.430 Introduction to Statistics

6. Optimization
- EN.550.361 Introduction to Optimization

7. Completion of an area of Focus, chosen from the list below.
Two additional courses are to be taken in the area of focus, distinct from those used to satisfy requirements 5 and 6.

8. Courses coded Quantitative Studies totaling 40 credits of which at least 18 credits must be in courses numbered 300 or higher. (Courses used to meet the requirements above may be counted toward this total.)

9. For the B.S. degree, at least 12 credits coded Natural Sciences.
The requirements of the minor in applied mathematics and statistics are knowledge beyond the minimal requirements of his/her major. It is highly recommended that students develop a coherent program of study (see below) or at least take additional departmental courses, in order to establish a broad foundation for a career as an applied mathematician. Of particular importance are additional courses in optimization (EN.550.362 Introduction to Optimization II), stochastic processes (EN.550.426 Introduction to Stochastic Processes), statistics (EN.550.413 Applied Statistics and Data Analysis, EN.550.432 , dynamical systems EN.550.391 Dynamical Systems), mathematical modeling and consulting, scientific computing (EN.550.385 Scientific Computing: Linear Algebra, EN.550.386 Scientific Computing: Differential Equations), and investment science (EN.550.442 Investment Science). Students planning to continue to graduate school in an applied mathematics program are encouraged to consider taking one or more graduate-level courses in probability (EN.550.620 Probability Theory I, EN.550.621 Probability Theory II), statistics (EN.550.630 Statistical Theory, EN.550.631 Statistical Theory II), optimization (EN.550.651 Foundations of Optimization, EN.550.662 Optimization Algorithms), combinatorics (EN.550.671 Combinatorial Analysis), graph theory (EN.550.672 Graph Theory), numerical analysis (EN.550.681 Numerical Analysis), or matrix analysis ( ).

Capstone Experience
Students may elect to complete a capstone experience. This consists of taking EN.550.400 Mathematical Modeling and Consulting in the fall of their senior year followed by a senior thesis (EN.550.501 Senior Thesis) during the spring. An oral presentation based on the thesis is required.

Honors
The Department of Applied Mathematics and Statistics awards departmental honors based on a number of factors, including performance in coursework, research experiences, teaching, and service.

Minor in Applied Mathematics and Statistics
The minor in applied mathematics and statistics should be attractive to students majoring in a variety of disciplines, in both the School of Engineering and the School of Arts and Sciences. The minor provides formal recognition of the depth and strength of a student’s quantitative knowledge beyond the minimal requirements of his/her major.

The requirements of the minor in applied mathematics and statistics are the following:

- Completion of an approved program of study containing at least 18 credits in courses coded Quantitative Studies. The first two courses in calculus (AS.110.106 Calculus I/AS.110.107 Calculus II (For Biological and Social Science) or AS.110.108 Calculus I/AS.110.109 Calculus II (For Physical Sciences and Engineering) or their equivalents) may not be used to fulfill this requirement.
- Among the courses comprising the 18 credits, there must be (a) at least four courses in the Department of Applied Mathematics and Statistics (each of these must be a 3- or 4-credit course); (b) at least three 3- or 4-credit courses at the 300-level or above, of which at least two must be in the Department of Applied Mathematics and Statistics; and (c) an approved semester course based on a high-level computer language (EN.500.200 Computing for Engineers and Scientists or EN.550.200 Computing for Engineers and Scientists, EN.550.385 Scientific Computing: Linear Algebra, EN.550.386 Scientific Computing: Differential Equations, EN.550.400 Mathematical Modeling and Consulting, EN.550.413 Applied Statistics and Data Analysis, EN.550.450 Computational Molecular Medicine, EN.550.200 Introduction to Scientific Computing in BME using Python, Matlab, and R, EN.580.223 Models and Simulations or EN.600.107 Introductory Programming in Java), or one course which requires one of these courses as a prerequisite.
- The grade in each course counted in fulfillment of requirements for the minor must be at least a C-.
- Students may not count all 3 courses, EN.550.310 Probability & Statistics for the Physical and Information Sciences & Engineering/EN.550.311 Probability and Statistics for the Biological Sciences and Engineering, EN.550.420 Intro To Probability, and EN.550.430 Introduction to Statistics toward minor requirements.
- A student wishing to complete a minor in applied mathematics and statistics may obtain more information from the Applied Mathematics and Statistics Department office.

A wide variety of advanced courses, seminars, and research opportunities is available in the Department of Applied Mathematics and Statistics. In addition to graduate programs in probability, statistics, operations research, optimization, discrete mathematics, scientific computation, and financial mathematics, advanced study is possible in interdisciplinary topics in cooperation with other departments, particularly the departments of Biostatistics, Computer Science, Economics, Geography and Environmental Engineering, Health Services Administration, Mathematics, and Sociology. A graduate student in the Department of Applied Mathematics and Statistics may thus develop a program that suits his/her individual interests and objectives.

Various elements of the graduate program are summarized below. Further information is available from the department office.

Admission
To be admitted to an advanced degree program in the department, an applicant must show that he/she has the basic intellectual capacity and has acquired the skills necessary to complete the program successfully within a reasonable period of time. A faculty committee evaluates each applicant’s credentials; there are no rigid requirements.

Prospective applicants should submit transcripts of previous academic work, letters of recommendation from persons qualified to evaluate the applicant’s academic performance and potential for graduate study, a letter describing anticipated professional goals, and Graduate Record Examination (GRE) scores. Foreign students must submit scores from the Test of English as a Foreign Language (TOEFL). Foreign students applying for teaching assistantships are encouraged to submit scores from the Test of Spoken English (TSE).

Most applicants have undergraduate majors in quantitative fields such as mathematics, statistics, engineering, or a field in the physical sciences, but any major is permitted. Regardless of the major, completion of a program in undergraduate mathematics at least through advanced calculus and linear algebra is essential to begin the normal graduate program.
Requirements for the Master’s Degree in Applied Mathematics and Statistics

Students may work toward either the master of arts (M.A.) degree or the master of science in engineering (M.S.E.) degree in applied mathematics and statistics, or the master of science in engineering (M.S.E.) degree in financial mathematics (described in the next section). Both master’s degrees in applied mathematics and statistics ordinarily require a minimum of two consecutive semesters of registration as a full-time resident graduate student.

To obtain departmental certification for the master’s degree, the student must:

- Complete satisfactorily at least eight one-semester courses of graduate work in a coherent program approved by the faculty advisor. Some 400-level and all 600-level or higher courses in the Applied Mathematics and Statistics Department (with the exception of seminar and research courses) are “graduate level” for the purpose of meeting the Master’s degree requirements. For courses used toward the degree, all grades must be C or higher, at most two grades can be below a B-, and the overall average grade point average in these courses must be at least 3.0.
- Meet one of the following two options:
  - (a) submit an acceptable research report based on an approved project; or
  - (b) complete satisfactorily two additional one-semester graduate courses, as approved by the faculty advisor.
- Demonstrate a working knowledge of the utilization of computers in applied mathematics and statistics.

In consultation with the faculty advisor, a candidate for the master’s degree plans a complete program of proposed course work and submits it in writing for departmental approval. This should be done early in the first semester of residence.

Doctoral students in other departments may undertake concurrently a master’s program in Applied Mathematics and Statistics. Application forms and information are available in the department office.

Requirements for the Master’s Degree in Financial Mathematics

The department offers an M.S.E. degree in Financial Mathematics. The structure of this program is summarized below. More detailed information about this program may be found on the department’s website at www.ams.jhu.edu/financial-math/masters.html.

Full-time students in this program are expected to attend courses for three semesters beginning in the fall semester, a summer internship after the spring semester of their first year, and return for a second fall semester.

For departmental certification for this degree, the student must complete the following courses or approved substitute courses with program approval:

<table>
<thead>
<tr>
<th>Core financial mathematics requirements (4 courses)</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>EN.550.442 Investment Science</td>
<td>4</td>
</tr>
<tr>

Electives *

3 elective courses:

- One in Applied Mathematics and Statistics
- One course in Financial Mathematics
- One additional course with prior program approval

Financial Mathematics Masters Seminar
Computing requirement (includes the Financial Computing Workshop)
Communication skills requirement (includes the Communication Skills Practicum)
Summer Internship

Total Credits 47

For courses used toward the degree, all grades must be C or higher, at most two grades can be below a B, and the overall average grade point average in these courses must be at least 3.0.

* Please see department website for approved electives. http://ams.jhu.edu/fm-masters/electives.html

Requirements for the Bachelor’s/Master’s Program

Highly motivated and exceptionally well-qualified undergraduates may apply for admission to the combined bachelor’s/master’s program in applied mathematics and statistics. Interested students should apply no later than fall semester of their senior year.

The requirements for this program consist of those for the bachelor’s and master’s programs, as well as:

- At least two consecutive semesters of full-time residence after admission to the program.
- Satisfactory completion of at least 145 course credits.

As part of the application for admission to this program, a student submits a current transcript and a complete proposed program of course work which will meet the requirements. Application forms and information are available in the department office.

Requirements for the Ph.D. Degree

The objective of the department’s Ph.D. program is to produce graduates who are broadly educated in applied mathematics and statistics and who can work at the current frontiers of their chosen specialized disciplines. The introductory phase of graduate study acquaints the student with a spectrum of topics, provides an opportunity to fill gaps in his or her background, and affords a close view of the doctoral research process and of potential research areas and advisors. Continuation to advanced study and dissertation research is based upon favorable evaluation of preparedness and potential. The progress of students is evaluated at the
end of every semester. The culmination of the program is the doctoral dissertation, representing an original and significant contribution to knowledge in applied mathematics.

In addition to fulfilling the university requirement of a minimum of two consecutive semesters of registration as a full-time resident graduate student, the student must accomplish the following to obtain departmental certification for the Ph.D.:

• Pass the Introductory Examination, normally offered immediately before each semester.
• Pass the Ph.D. Candidacy Examination. This oral examination is normally taken in the third year of residency. The scope of the exam will be governed by a syllabus prepared by the student with the help of the student’s mentor or advisor.
• Pass the Graduate Board Oral Examination, normally taken in the third year of residence.
• Complete satisfactorily a one year elective course (or the equivalent) in some area of application of applied mathematics and statistics.
• Acquire teaching experience under the supervision of the faculty.
• Demonstrate a working knowledge of the utilization of computers in applied mathematics and statistics.
• Complete a program of original research and its clear exposition in a written dissertation. The dissertation must be approved by at least two faculty readers and be certified by them to be a significant contribution to knowledge and worthy of publication in scholarly journals. The candidate defends the dissertation in a public examination held under the auspices of the department.

Additional details on these items may be found at the department’s website.

Course Program

The most common way for students to gain the knowledge and skills to succeed in the Ph.D. program is through course work. In consultation with his or her advisor, each student will develop a program of proposed course work. The relevant courses for the Ph.D. are of three types: basic graduate-level courses, additional specialized courses appropriate to the student’s field of research, and an elective one year course selected to broaden the student in applied mathematics. To promote a well-rounded education and record, all full-time graduate students are expected to enroll in an appropriate number of courses for their stage in the program. Students are required to enroll in and attend EN.550.600 Department Seminar, the Applied Mathematics and Statistics Department Seminar, every semester. Grades of B- or better (or equivalent level of performance in pass/fail courses) are expected of all department Ph.D. graduate students in their course work.

Basic Courses

All students are encouraged to master basic material in:

• probability (EN.550.620), statistics (EN.550.630), and stochastic processes (EN.550.426);
• optimization (EN.550.661.);
• numerical and matrix analysis (EN.550.681, EN.550.692); and
• discrete mathematics (EN.550.671, EN.550.672).

Normally, a student will have completed at least eight basic courses by the end of the fourth semester of residence.

Specialized Courses

Each student takes advanced courses appropriate to the proposed area of dissertation research. Sample programs in the areas of probability/statistics, operations research/optimization, discrete mathematics, scientific computation, and numerical analysis are given online at the department’s website, but a student with different goals is free to propose an appropriate program meeting the approval of the research advisor.

Elective Courses

A one-year graduate course (or the equivalent) in a field distinct from the student’s specialized area is required. This is a minimal requirement. Students are encouraged to take more than two semesters of elective course work, either covering one area in depth or covering two areas. Typical areas in other departments are biology, econometrics, mathematical economics, mathematical ecology, computational geometry, systems theory, health systems, mathematics, facility location, psychometrics, and physics. These courses may complement or supplement the student’s previous experience, but if a student has no previous experience in an area some elementary course work may be necessary as a prerequisite to acceptable graduate level courses. Although students are strongly encouraged to take the elective courses outside the department, with the approval of the advisor they may be chosen within the department, provided they are 600- or 700-level courses in a field clearly distinct from the student’s specialized area.

Financial Assistance

A limited number of teaching and research assistantships providing full tuition and a competitive academic year stipend are available to qualified full-time Ph.D. candidates. Furthermore, the following special fellowships are awarded:

• The Rufus P. Isaacs Fellowship, named in honor of a late member of the faculty acclaimed for his contributions to operations research.
• The Charles and Catherine Counselman Fellowship, generously endowed by Hopkins alumnus Charles Counselman.

In addition, summer employment opportunities are often available within the university and in the Baltimore-Washington corridor.

For current faculty and contact information go to http://www.ams.jhu.edu/people/faculty.html

Faculty

Chair

Daniel Q. Naiman
Professor and Director, Financial Mathematics Master’s Program: statistics, computational probability, bioinformatics.

Vice Dean of Education

Edward R. Scheinerman
Professor: discrete mathematics, graph theory, social networks, random methods, partially ordered sets.

Director of Undergraduate Studies

James A. Fill
Professor: probability, stochastic processes, random structures, and algorithms.
Associate Director of Undergraduate Studies
Donniell E. Fishkind
Associate Research Professor: combinatorics, graph theory, matrix analysis.

Executive Director of Financial Mathematics Master's Program
David Audley
Senior Lecturer: financial mathematics, term structure models, fixed income derivatives, and quantitative portfolio strategies.

Professors
Gregory L. Eyink
Professor: mathematical physics, fluid mechanics, turbulence, dynamical systems, partial differential equations, nonequilibrium statistical physics, geophysics and climate.

Donald Geman
Professor: image analysis, statistical learning, bioinformatics.

Carey E. Priebe
Professor: statistics, image analysis, pattern recognition.

John C. Wierman
Professor: probability, statistics, discrete mathematics, percolation theory, stochastic processes.

Laurent Younes
Professor: mathematical imaging, shape theory and applied differential geometry, computational probability, statistics.

Assistant Professors
Amitabh Basu
Assistant Professor: optimization, discrete and combinatorial geometry, convex analysis, operations research.

Agostino Capponi
Assistant Professor: financial mathematics, credit risk, stochastic control.

Youngmi Hur
Assistant Professor: wavelets and other multiscale data representation methodologies, statistical applications of wavelet representations, applied harmonic analysis, approximation theory.

Daniel P. Robinson
Assistant Professor: optimization, numerical analysis, matrix analysis, complementarity problems.

Research Professor
Helyette Geman
Research Professor: financial mathematics, commodities.

James C. Spall

Associate Research Professor
Bruno Jedynak
Associate Research Professor: statistical modeling, computer vision, applications to road detection, face detection, skin detection, registration of brain MRI, language modeling and bioinformatics.

Assistant Research Professor
Avanti Athreya
Assistant Research Professor: probability, stochastic processes.

Nam Lee
Assistant Research Professor: probability theory, stochastic processes, and their applications.

Senior Lecturer
Beryl Castello
Senior Lecturer: operations research, optimization, facility location, inventory modeling.

Fred Torcaso
Senior Lecturer: stochastic processes, asymptotics, and partial differential equations.

Joint, Part-Time and Visiting Appointments
Gregory Chirikjian
Professor: Mechanical Engineering, computational structural biology, applied mathematics, robotics.

John Goutsias
Professor: Electrical and Computer Engineering.

Benjamin F. Hobbs
Professor: Geography and Environmental Engineering, energy and environmental systems and economics.

Pablo Iglesias
Professor: Electrical and Computer Engineering.

Takeru Igusa
Professor: Civil Engineering.

S. Rao Kosaraju
Edward J. Schaefer Professor: Computer Science, design of algorithms, parallel computation, pattern matching, robotics computational geometry.

Scott Levin
Assistant Professor: Emergency Medicine, School of Medicine.

David Marchette
Lecturer: Naval Surface Warfare Center.

Michael I. Miller
Professor: Biomedical Engineering.

Jerry L. Prince
Professor: Electrical and Computer Engineering, multi-dimensional signal processing, medical imaging, computational geometry.

For current course information and registration go to https://isis.jhu.edu/classes/
Courses

**EN.550.100. Introduction to Applied Mathematics and Statistics. 1 Credit.**
A seminar-style series of lectures and assignments to acquaint the student with a range of intellectual and professional activities performed by applied mathematicians and statisticians. Problems arising in applied mathematics and statistics are presented by department faculty and outside speakers. Recommended Course Background: one semester of Calculus.
Instructor(s): D. Naiman
Area: Engineering, Quantitative and Mathematical Sciences.

**EN.550.103. Mathematics & Politics. 4 Credits.**
Instructor(s): M. Sedlock
Area: Quantitative and Mathematical Sciences.

**EN.550.111. Statistical Analysis I. 4 Credits.**
First semester of a general survey of statistical methodology. Topics include descriptive statistics, introductory probability, conditional probability, random variables, expectation, sampling, the central limit theorem, classical and robust estimation, confidence intervals, and hypothesis testing. Case studies from psychology, epidemiology, economics and other fields serve to illustrate the underlying theory. Some use of Minitab, Excel or R, but no prior computing experience is necessary. Recommended Course Background: four years of high school mathematics. Students who may wish to undertake more than two semesters of probability and statistics should consider EN.550.420-EN.550.430.
Prerequisites: Statistics Sequence restriction: students who have completed AS.230.205 or EN.550.113 may not enroll.
Instructor(s): F. Torcaso
Area: Engineering, Quantitative and Mathematical Sciences.

**EN.550.112. Statistical Analysis II. 4 Credits.**
Second semester of a general survey of statistical methodology. Topics include two-sample hypothesis tests, analysis of variance, linear regression and correlation, analysis of categorical data, and nonparametrics. Students who may wish to undertake more than two semesters of probability and statistics should strongly consider the EN.550.420-430 sequence.
Prerequisites: Prereqs: EN.550.111 OR EN.550.113 OR AS.280.345 OR credit for AP Statistics
Instructor(s): D. Athreya
Area: Engineering, Quantitative and Mathematical Sciences.

**EN.550.113. Statistics Through Case Study. 4 Credits.**
A case-study based course treating basic statistical theory and methodology. All theoretical material will be presented in the context of timely real-world case studies. Topics covered will include basic probability, random variables and their distributions, the central limit theorem and normal approximation, sampling distributions, statistical inference, confidence intervals, and hypothesis testing. Recommended Course Background: Four years of highschool mathematics.
Prerequisites: Statistics Sequence restriction: AS.230.205 OR EN.550.211 OR EN.550.230 OR AS.280.345 OR AS.280.345 OR AS.200.315 OR EN.550.310 OR EN.550.311 OR EN.560.435 OR EN.550.112 OR EN.550.420 OR EN.550.430 OR EN.550.413
Instructor(s): D. Athreya
Area: Engineering, Quantitative and Mathematical Sciences.

**EN.550.115. Probability and Statistics for the Life Sciences. 4 Credits.**
This is an introduction to statistics aimed at students in the life sciences. The course will provide the necessary background in probability with treatment of independence, Bayes theorem, discrete and continuous random variables and their distributions. The statistical topics covered will include sampling and sampling distributions, confidence intervals and hypothesis testing for means, comparison of populations, analysis of variance, linear regression and correlation. Analysis of data will be done using Excel.
Prerequisites: AS.110.106 OR AS.110.108
Instructor(s): B. Jedynak
Area: Quantitative and Mathematical Sciences.

**EN.550.122. Chance And Risk. 3 Credits.**
The course will help students develop an appreciation of probability and randomness, and an understanding of its applications in real life situations involving chance and risk. Applications, controversies, and paradoxes involving risk in business and economics, health and medicine, law, politics, sports, and gambling will be used to illustrate probabilistic concepts such as independence, conditional probability, expectation, and variance. The course is intended primarily for humanities and social science majors. There is no prerequisite beyond high school mathematics. The course is not open to students who have taken AP Calculus BC, AP Statistics, 550.111, 550.112 or more than one semester of Calculus.
Prerequisites: Not open to students who have credit for AP Calculus BC, AP Statistics, 550.111, 550.112, 110.107 or 110.109
Instructor(s): L. Robinson
Area: Quantitative and Mathematical Sciences.

**EN.550.150. Introduction to Contemporary Applied Mathematics. 4 Credits.**
A survey course aimed at developing, in an accessible way for non-mathematicians, an appreciation for practical mathematical thinking, while exposing students to various ways in which mathematics is used to solve real-world problems. The course presents topics from a variety of application areas, including management science, statistics and data analysis, information coding and transmission, social choice and decision making, and the study of size and shape.
Area: Engineering, Quantitative and Mathematical Sciences.

**EN.550.171. Discrete Mathematics. 4 Credits.**
Introduction to the mathematics of finite systems. Logic; Boolean algebra; induction and recursion; sets, functions, relations, equivalence, and partially ordered sets; elementary combinatorics; modular arithmetic and the Euclidean algorithm; group theory; permutations and symmetry groups; graph theory. Selected applications. The concept of a proof and development of the ability to recognize and construct proofs are part of the course. Recommended Course Background: Four years of high school mathematics.
Instructor(s): B. Castello
Area: Quantitative and Mathematical Sciences.

**EN.550.200. Computing for Engineers and Scientists. 3 Credits.**
This course introduces a variety of techniques for solving problems in engineering and science on a computer using MATLAB. Topics include structure and operation of a computer, the programming language MATLAB, computational mathematics, and elementary numerical analysis. Co-listed with EN.550.200
Prerequisites: AS.110.107 OR AS.110.109 or credit for those courses through AP Calculus.
Instructor(s): K. Hedrick
Area: Engineering, Quantitative and Mathematical Sciences.

**EN.550.211. Probability and Statistics for the Life Sciences. 4 Credits.**
This is an introduction to statistics aimed at students in the life sciences. The course will provide the necessary background in probability with treatment of independence, Bayes theorem, discrete and continuous random variables and their distributions. The statistical topics covered will include sampling and sampling distributions, confidence intervals and hypothesis testing for means, comparison of populations, analysis of variance, linear regression and correlation. Analysis of data will be done using Excel.
Prerequisites: AS.110.106 OR AS.110.108
Instructor(s): B. Jedynak
Area: Quantitative and Mathematical Sciences.
EN.550.230. Introduction to Biostatistics. 4 Credits.
Prerequisites: Statistics Sequence restriction: Students who have completed any of these courses may not enroll: EN.550.211 OR AS.280.345 OR AS.200.314 OR AS.200.315 OR EN.550.310 OR EN.550.311 OR EN.560.435 OR EN.550.420 OR EN.550.430
Instructor(s): D. Athreya
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.251. Math Models/Decision Mgt. 4 Credits.
As society’s enterprises and technologies grow more and more complex, their operation and planning rely increasingly on mathematics-based analyses. This course is an introduction to management science and the quantitative approach to decision making. Emphasis on model development and case studies, using spreadsheets or other computer software, applied to a variety of problems in manufacturing, transportation, finance, and general management.
Prerequisites: AS.110.106 or AS.110.108
Instructor(s): B. Castello
Area: Engineering, Quantitative and Mathematical Sciences.

This course is an introduction to management science and the quantitative approach to decision making. Our focus will be on the formulation and analysis of stochastic models, where some problem data may be uncertain. The covered topics may include Project Scheduling, Decision Analysis, Time Series Forecasting, Inventory Models with Stationary or Nonstationary Demand, Queuing Models, Discrete-Event Simulation, and Quality Management. We emphasize model development and case studies, using spreadsheets and other computer software. The applications we study occur in variety of applications. Recommended Course Background: One semester of calculus
Prerequisites: AS.110.106 or AS.110.108
Instructor(s): B. Castello
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.281. Computing in Applied Mathematics. 3 Credits.
Prereq: Calculus I Overview of some of the more common computational platforms in which to do applied mathematics. The course will cover computing in at least three general areas: numerical linear algebra using Matlab, symbolic mathematics using Maple, and statistics using R. Students will be presented with applications, basic mathematics that underlies the problems to be solved, and computational approaches to their solution.
Instructor(s): D. Naiman
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.284. VBA For Finance. 1 Credit.
Excel VBA is a powerful programming environment that lurks behind the Excel program that many of us have some familiarity with. This course aims to get students up to speed with working with this tool.
Instructor(s): D. Naiman.

EN.550.291. Lin Alg & Diff Equations. 4 Credits.
An introduction to the basic concepts of linear algebra, matrix theory, and differential equations that are used widely in modern engineering and science. Intended for engineering and science majors whose program does not permit taking both AS.110.201 and AS.110.302.
Prerequisites: ( AS.110.106 OR AS.110.108 ) AND ( AS.110.107 OR AS.110.109 )
Instructor(s): B. Castello
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.310. Probability & Statistics for the Physical and Information Sciences & Engineering. 4 Credits.
An introduction to probability and statistics at the calculus level, intended for engineering and science students planning to take only one course on the topics. Combinatorial probability, independence, conditional probability, random variables, expectation and moments, limit theory, estimation, confidence intervals, hypothesis testing, tests of means and variances, goodness-of-fit. Recommended course background: Co-requisite, Multivariable Calculus.
Prerequisites: ( AS.110.106 OR AS.110.108 ) AND ( AS.110.107 OR AS.110.109 )
Instructor(s): F. Torcaso
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.311. Probability and Statistics for the Biological Sciences and Engineering. 4 Credits.
An introduction to probability and statistics at the calculus level, intended for students in the biological sciences planning to take only one course on the topics. This course will be at the same technical level as EN.550.310. Students are encouraged to consider EN.550.420-430 instead. Combinatorial probability, independence, conditional probability, random variables, expectation and moments, limit theory, estimation, confidence intervals, hypothesis testing, tests of means and variances, and goodness-of-fit will be covered. Students cannot receive credit for both EN.550.310 and EN.550.311. Students cannot receive credit for EN.550.311 after having received credit for EN.550.420 or EN.550.430.
Recommended Course Corequisite: AS.110.202
Prerequisites: ( AS.110.106 OR AS.110.108 ) AND ( AS.110.107 OR AS.110.109 )
Instructor(s): Staff
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.314. Actuarial Preparation. 1 Credit.
This is a weekly problem-solving course focused on preparing for Actuarial Exam P. Note: This course will not begin on Thursday, January 28. Enrolled students will be sent a notification email before the first class.
Prerequisites: Co-requisites: Students should be enrolled in or have taken one of 550.310, 550.311, or 550.420
Instructor(s): S. Meskin
Area: Quantitative and Mathematical Sciences.

EN.550.361. Introduction to Optimization. 4 Credits.
Appropriate for undergraduate and graduate students without the mathematical background required for EN.550.661. An introductory survey of optimization methods, supporting mathematical theory and concepts, and application to problems of planning, design, prediction, estimation, and control in engineering, management, and science. Study of varied optimization techniques including linear programming, network-problem methods, dynamic programming, integer programming, and nonlinear programming. Students should be familiar with computing and linear algebra. Recommended Course Background: one year of calculus
Prerequisites: ( AS.110.107 OR AS.110.109 OR AS.110.113 ) AND ( EN.550.291 OR AS.110.201 OR AS.110.212)
Instructor(s): D. Fishkind
Area: Engineering, Quantitative and Mathematical Sciences.
EN.550.362. Introduction to Optimization II. 4 Credits.
An introductory survey of optimization methods, supporting mathematical theory and concepts, and application to problems of planning, design, prediction, estimation, and control in engineering, management, and science. Study of varied optimization techniques including linear programming, network-problem methods, dynamic programming, integer programming, and nonlinear programming. Appropriate for undergraduate and graduate students without the mathematical background required for EN.550.661.
Prerequisites: ( EN.550.361 AND ( AS.110.202 OR AS.110.211 ) )
Instructor(s): D. Hedrick
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.371. Cryptology and Coding. 4 Credits.
Computing experience. A first course in the mathematical theory of secure and reliable electronic communication. Cryptology is the study of secure communication: How can we ensure the privacy of messages? Coding theory studies how to make communication reliable: How can messages be sent over noisy lines? Topics include finite field arithmetic, error-detecting and error-correcting codes, data compressions, ciphers, one-time pads, the Enigma machine, one-way functions, discrete logarithm, primality testing, secret key exchange, public key cryptosystems, digital signatures, and key escrow. Recommended Course Background: AS.110.204
Prerequisites: EN.550.171 AND ( EN.550.291 OR AS.110.201 )
Instructor(s): D. Fishkind
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.385. Scientific Computing: Linear Algebra. 4 Credits.
A first course on computational linear algebra and applications. Topics include floating-point arithmetic, algorithms and convergence, Gaussian elimination for linear systems, matrix decompositions (LU, Cholesky, QR), iterative methods for systems (Jacobi, Gauss–Seidel), and approximation of eigenvalues (power method, QR-algorithm). Theoretical topics such as vector spaces, inner products, norms, linear operators, matrix norms, eigenvalues, and canonical forms of matrices (Jordan, Schur) are reviewed as needed. Matlab is used to solve all numerical exercises; no previous experience with computer programming is required.
Prerequisites: ( EN.550.291 OR AS.110.201 ) AND ( AS.110.202 OR AS.110.211 )
Instructor(s): Y. Hur
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.386. Scientific Computing: Differential Equations. 4 Credits.
A first course on computational differential equations and applications. Topics include floating-point arithmetic, algorithms and convergence, root-finding (midpoint, Newton, and secant methods), numerical differentiation and integration, and numerical solution of initial value problems (Runge–Kutta, multistep, extrapolation methods, stability, implicit methods, and stiffness). Theoretical topics such as existence, uniqueness, and stability of solutions to initial-value problems, conversion of higher order/ non-autonomous equations to systems, etc., will be covered as needed. Matlab is used to solve all numerical exercises; no previous experience with computer programming is required.
Prerequisites: ( EN.550.291 OR AS.110.201 ) AND ( AS.110.202 OR AS.110.211 )
Instructor(s): K. Hedrick
Area: Engineering, Quantitative and Mathematical Sciences.

A first course on computational differential equations in vector spaces and applications, a continuation of EN.550.385. Topics include root-finding for nonlinear systems of equations (bisection, Newton, and secant methods), numerical differentiation and integration, and numerical solution of initial-value problems (Runge–Kutta, multistep, extrapolation methods, stability, implicit methods, and stiffness) and boundary-value problems (shooting method, relaxation) for ordinary differential equations in finite-dimensional vector spaces. Theoretical topics such as existence, uniqueness, and stability of solutions to initial-value problems, conversion of higher-order/ non-autonomous equations to systems, etc., will be covered as needed. Matlab is used to solve all numerical exercises.
Prerequisites: Prerequisites: ( AS.110.202 OR AS.110.211 ) AND ( EN.550.291 OR AS.110.201 AND AS.110.302 ) AND EN.550.385
Instructor(s): G. Eyink
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.391. Dynamical Systems. 4 Credits.
Mathematical concepts and methods for describing and analyzing linear and nonlinear systems that evolve over time. Topics include boundedness, stability of fixed points and attractors, feedback, optimality, Liapounov functions, bifurcation, chaos, and catastrophes. Examples drawn from population growth, economic behavior, physical and engineering systems. The main mathematical tools are linear algebra and basic differential equations.
Prerequisites: ( EN.550.291 OR AS.110.201 ) AND ( AS.110.202 OR AS.110.211 )
Instructor(s): G. Eyink
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.400. Mathematical Modeling and Consulting. 4 Credits.
Creating, analyzing and evaluating statistical and mathematical models using case studies and real world datasets. Project-oriented practice and guidance in modeling techniques, with emphasis on communication of methods and results. Examples drawn from finance, environmental science and medicine illustrate the data analysis process using exploratory data analysis and standard statistical modeling techniques. Topics include linear and generalized linear models, models for categorical data and time series models. Computation will be emphasized throughout using the R platform.
Prerequisites: ( EN.550.420 OR EN.550.310 OR EN.550.311 )
Instructor(s): N. Lee
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.413. Applied Statistics and Data Analysis. 4 Credits.
An introduction to basic concepts, techniques, and major computer software packages in applied statistics and data analysis. Topics include numerical descriptive statistics, observations and variables, sampling distributions, statistical inference, linear regression, multiple regression, design of experiments, nonparametric methods, and sample surveys. Real-life data sets are used in lectures and computer assignments. Intensive use of statistical packages such as S- to analyze data.
Prerequisites: EN.550.112 or EN.550.310 or EN.550.311 or EN.550.420
Instructor(s): D. Naiman; M. Tang
Area: Engineering, Quantitative and Mathematical Sciences.
EN.550.420. Intro To Probability. 4 Credits.
Probability and its applications, at the calculus level. Emphasis on techniques of application rather than on rigorous mathematical demonstration. Probability, combinatorial probability, random variables, distribution functions, important probability distributions, independence, conditional probability, moments, covariance and correlation, limit theorems. Students initiating graduate work in probability or statistics should enroll in EN.550.620. Auditors are not permitted. Students can use any of the 6th, 7th or 8th editions of the textbook. Recommended Course Background: one year of calculus; Corequisite: multivariable calculus.
Prerequisites: Prereqs: AS.110.106 OR AS.110.108 AND AS.110.107 OR AS.110.109 OR AS.110.113
Instructor(s): J. Wierman
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.426. Introduction to Stochastic Processes. 4 Credits.
Mathematical theory of stochastic processes. Emphasis on deriving the dependence relations, statistical properties, and sample path behavior including random walks, Markov chains (both discrete and continuous time), Poisson processes, martingales, and Brownian motion. Applications that illuminate the theory. Students may not earn credit for both EN.550.426 and EN.550.427.
Prerequisites: EN.550.420 AND ( EN.550.291 OR AS.110.201 OR AS.110.212)
Instructor(s): J. Wierman
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.427. Stochastic Processes and Applications to Finance. 4 Credits.
A development of stochastic processes with substantial emphasis on the processes, concepts, and methods useful in mathematical finance. Relevant concepts from probability theory, particularly conditional probability and conditional expectation, will be briefly reviewed. Important concepts in stochastic processes will be introduced in the simpler setting of discrete-time processes, including random walks, Markov chains, and discrete-time martingales, then used to motivate more advanced material. Most of the course will concentrate on continuous-time stochastic processes, particularly martingales, Brownian motion, diffusion, and basic tools of stochastic calculus. Examples will focus on applications in finance, economics, business, and actuarial science. Students may not receive credit for both EN.550.426 and EN.550.427.
Prerequisites: EN.550.420
Instructor(s): D. Athreya
Area: Quantitative and Mathematical Sciences.

EN.550.428. Stochastic Processes and Applications to Finance II. 4 Credits.
A basic knowledge of stochastic calculus and Brownian motion is assumed. Topics include stochastic differential equations, the Feynman-Kac formula and connections to partial differential equations, changes of measure, fundamental theorems of asset pricing, martingale representations, first passage times and pricing of path-dependent options, and jump processes.
Prerequisites: EN.550.427
Instructor(s): A. Capponi
Area: Quantitative and Mathematical Sciences.

EN.550.430. Introduction to Statistics. 4 Credits.
Introduction to the basic principles of statistical reasoning and data analysis. Emphasis on techniques of application. Classical parametric estimation, hypothesis testing, and multiple decision problems; linear models, analysis of variance, and regression; nonparametric and robust procedures; decision-theoretic setting, Bayesian methods.
Prerequisites: EN.550.420 OR APPROVED ALTERNATIVE AND ( EN.550.291 OR AS.110.201 OR AS.110.212 )
Instructor(s): D. Naiman
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.431. Statistical Methods in Imaging. 3 Credits.
Denoising, segmentation, texture modeling, tracking, object recognition are challenging problems in imaging. We will present a collection of statistical models and methods in order to address these, including the E.M. algorithm, Maximum Entropy Modeling, Particle filtering, Markov Random Fields and Belief Propagation. Co-listed with EN.580.466. Some practice of Matlab or R is highly recommended.
Prerequisites: (AS.110.202 OR AS.110.211) AND (EN.550.310 OR EN.550.311 OR EN.550.420)
Instructor(s): B. Jedynak
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.433. Monte Carlo Methods. 3 Credits.
The objective of the course is to survey essential simulation techniques for popular stochastic models. The stochastic models may include classical time-series models, Markov chains and diffusion models. The basic simulation techniques covered will be useful in sample-generation of random variables, vectors and stochastic processes, and as advanced techniques, importance sampling, particle filtering and Bayesian computation may be discussed.
Prerequisites: EN.550.430
Instructor(s): J. Spall
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.434. Nonparametric Statistics. 3 Credits.
Nonparametric, or distribution-free methods for statistical data analysis design statistical decision regions under minimal assumptions on the observed data, avoiding, in particular, making the assumption that their distribution in known, or that it belongs to a specific parametric class (like Gaussian). The course will study the following topics: order statistics, rank-based methods, tests of independence, symmetry, location differences, scale differences and goodness-of-fit, permutation tests with an introduction to the problem of multiple comparisons.
Prerequisites: Prereqs: EN.550.310 OR EN.550.311 OR EN.550.430
Instructor(s): E. Younes
Area: Engineering, Quantitative and Mathematical Sciences.
EN.550.436. Data Mining. 4 Credits.
Data mining is a relatively new term used in the academic and business world, often associated with the development and quantitative analysis of very large databases. Its definition covers a wide spectrum of analytic and information technology topics, such as machine learning, artificial intelligence, statistical modeling, and efficient database development. This course will review these broad topics, and cover specific analytic and modeling techniques such as advanced data visualization, decision trees, neural networks, nearest neighbor, clustering, logistic regression, and association rules. Although some of the mathematics underlying these techniques will be discussed, our focus will be on the application of the techniques to real data and the interpretation of results. Because use of the computer is extremely important when “mining” large amounts of data, we will make substantial use of data mining software tools to learn the techniques and analyze datasets. Recommended Course Background: EN.550.413
Prerequisites: EN.550.310 or EN.550.311 or EN.550.430
Instructor(s): B. Jedynak
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.437. Statistical Learning With Applications. 3 Credits.
Statistical modeling and inference, inductive learning and information theory together provide a cohesive framework for wide spectrum perception, which amounts to building a data-description machine converting physical measurements (images, molecular counts, etc.) to interpretations or descriptions. Recurring themes include quantifying uncertainty, estimating generalization error, Occam’s razor, the bias/variance dilemma and small-sample learning. Various problems in computational vision and learning molecular networks.
Instructor(s): D. Geman
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.439. Time Series Analysis. 4 Credits.
Time series analysis from the frequency and time domain approaches. Descriptive techniques; regression analysis; trends, smoothing, prediction; linear systems; serial correlation; stationary processes; spectral analysis.
Prerequisites: (EN.550.310 OR EN.550.311 OR EN.550.420) AND (AS.110.201 OR AS.110.212 OR EN.550.291)
Instructor(s): F. Torcaso
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.440. Stochastic Calculus. 3 Credits.
Introduction to stochastic integration, stochastic differential equations, and the Ito calculus. Emphasis will be on underlying ideas rather than rigorous development. Stochastic processes, Brownian motion, conditional expectation, martingales, Ito and Stratonovich integrals and their calculus, stochastic differential equations, some applications to finance, stochastic flow systems, or other areas should be provided. Recommended Course Background: AS.550.420; stochastic processes recommended, but not required.
Instructor(s): F. Torcaso
Area: Quantitative and Mathematical Sciences.

EN.550.442. Investment Science. 4 Credits.
Intended for upper-level undergraduate and graduate students, this course offers a rigorous treatment of the subject of investment as a scientific discipline. Mathematics is employed as the main tool to convey the principles of investment science and their use to make investment calculations for good decision-making. Topics covered in the course include the basic theory of interest and its application to fixed-income securities, cash flow analysis and capital budgeting, mean-variance portfolio theory, and the associated capital asset pricing model, utility function theory and risk analysis, derivative securities and basic option theory, portfolio evaluation. The student is expected to be comfortable with the use of mathematics as a method of deduction and problem solving. Some familiarity with optimization is desirable but not necessary.
Instructor(s): P. Liu; Staff
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.444. Introduction to Financial Derivatives. 4 Credits.
This course will develop the mathematical concepts and techniques for modeling cash instruments and their hybrids and derivatives.
Prerequisites: AS.110.302 AND EN.550.420
Instructor(s): D. Audley
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.445. Interest Rate and Credit Derivatives. 4 Credits.
Advances in corporate finance, investment practice and the capital markets have been driven by the development of a mathematically rigorous theory for financial instruments and the markets in which they trade. This course builds on the concepts, techniques, instruments and markets introduced in EN.550.444. In addition to new topics in credit enhancement and structured securities, the focus is expanded to include applications in portfolio theory and risk management, and covers some numerical and computational approaches.
Prerequisites: EN.550.444
Instructor(s): D. Audley
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.446. Risk Measurement/Management in Financial Markets. 4 Credits.
This course applies advanced mathematical techniques to the measurement, analysis, and management of risk. The focus is on financial risk. Sources of risk for financial instruments (e.g., market risk, interest rate risk, credit risk) are analyzed; models for these risk factors are studied and the limitation, shortcomings and compensatory techniques are addressed.
Prerequisites: EN.550.444
Instructor(s): D. Audley
Area: Engineering, Quantitative and Mathematical Sciences.
EN.550.447. Quantitative Portfolio Theory and Performance Analysis. 4 Credits.
This course focuses on modern quantitative portfolio theory, models, and analysis. Topics include intertemporal approaches to modeling and optimizing asset selection and asset allocation; benchmarks (indexes), performance assessment (including Sharpe, Treynor and Jensen ratios) and performance attribution; immunization theorems; alpha-beta separation in management, performance measurement and attribution; Replicating Benchmark Index (RBI) strategies using cash securities / derivatives; Liability-Driven Investment (LDI); and the taxonomy and techniques of strategies for traditional management: Passive, Quasi-Passive (Indexing) Semi-Active (Immunization & Dedicated) Active (Scenario, Relative Value, Total Return and Optimization). In addition, risk management and hedging techniques are also addressed.
Prerequisites: EN.550.442 OR EN.550.444
Instructor(s): D. Audley
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.448. Financial Engineering and Structured Products. 4 Credits.
This course focuses on structured securities and the structuring of aggregates of financial instruments into engineered solutions of problems in capital finance. Topics include the fundamentals of creating asset-backed and structured securities—including mortgage-backed securities (MBS), stripped securities, collateralized mortgage obligations (CMOs), and other asset-backed collateralized debt obligations (CDOs)—structured and allocating cash-flows as well as enhancing credit; equity hybrids and convertible instruments; asset swaps, credit derivatives and total return swaps; assessment of structure-risk interest rate-risk and credit-risk as well as strategies for hedging these exposures; managing portfolios of structured securities; and relative value analysis (including OAS and scenario analysis).
Instructor(s): D. Audley
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.450. Computational Molecular Medicine. 4 Credits.
Biomedical research has been transformed by the development of new technologies for sequencing genomes and measuring RNA and protein expression levels. Due to the massive number of interacting components, the traditional approach, which is experimental and component-by-component, is no longer adequate. In contrast, statistical learning, modeling and inference have emerged as core methodologies for analyzing these data and uncovering the relationships between molecules, networks and disease, where knowledge extraction is formulated as a problem in high-dimensional pattern recognition. We will cover selected aspects of this methodology (e.g., measuring associations, testing multiple hypotheses, learning predictors and network models, and stochastic simulation) and illustrate how it enhances our ability to discover molecular disease networks, detect disease, predict clinical outcomes, and characterize disease progression. Meets with EN.550.650.
Prerequisites: EN.550.420 and ( EN.550.310 or EN.550.311 or EN.550.430 )
Instructor(s): D. Geman
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.453. Mathematical Game Theory. 4 Credits.
Mathematical analysis of cooperative and noncooperative games. Theory and solution methods for matrix game (two players, zero-sum payoffs, finite strategy sets), games with a continuum of strategies, N-player games, games in rule-defined form. The roles of information and memory. Selected applications to economic, recreational, and military situations. Prereq: Multivariable Calculus, probability, linear algebra.
Prerequisites: ( AS.110.202 OR AS.110.211 ) AND EN.550.420 AND ( EN.550.291 OR AS.110.201 )
Instructor(s): B. Castello
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.457. Topics in Operations Research: Supply Chains: Models and Analyses. 3 Credits.
Sports provide interesting topics for a variety of mathematical analyses (optimization, statistical, etc.) The course will discuss a number of these applications.
Prerequisites: EN.550.361 and general mathematical maturity
Instructor(s): A. Goldman
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.461. Optimization in Finance. 4 Credits.
A survey of many of the more important optimization methods and tools that are found to be useful in financial applications.
Prerequisites: EN.550.442 OR EN.550.444
Instructor(s): F. Torcaso
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.463. Network Models in Operations Research. 4 Credits.
In-depth mathematical study of network flow models in operations research, with emphasis on combinatorial approaches for solving them. Introduction to techniques for constructing efficient algorithms, and to some related data structures, used in solving shortest-path, maximum-volume, flow, and minimum-cost flow problems. Emphasis on linear models and flows, with brief discussion of non-linear models and network design.
Prerequisites: EN.550.361 or EN.550.661
Instructor(s): B. Castello
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.471. Combinatorial Analysis. 4 Credits.
Counting techniques: generating functions, recurrence relations, Polya’s theorem. Combinatorial designs: Latin squares, finite geometries, balanced incomplete block designs. Emphasis on problem solving. Recommended Course Background: AS.550.291 or AS.110.201
Instructor(s): E. Scheinerman
Area: Quantitative and Mathematical Sciences.

EN.550.472. Graph Theory. 4 Credits.
Study of systems of “vertices” with some pairs joined by “edges.” Theory of adjacency, connectivity, traversability, feedback, and other concepts underlying properties important in engineering and the sciences. Topics include paths, cycles, and trees; routing problems associated with Euler and Hamilton; design of graphs realizing specified incidence conditions and other constraints. Attention directed toward problem solving, algorithms, and applications. One or more topics taken up in greater depth.
Prerequisites: EN.550.291 OR AS.110.201 OR AS.110.212
Instructor(s): A. Basu
Area: Quantitative and Mathematical Sciences.
EN.550.480. Shape and Differential Geometry. 3 Credits.
The purpose of this class is to provide an elementary knowledge of
the differential geometry of curves and surfaces, and to place this in
relation with the description and characterization of 2D and 3D shapes.
Intrinsic local and semi-local descriptors, like the curvature or the second
fundamental form will be introduced, with an emphasis on the invariance
of these features with respect to rotations, translations, etc. Extension of
this point of view to other class of linear transformations will be given, as
well as other types of shape descriptors, like moments or medial axes.
Recommended Course Background: Calculus III and linear algebra
Instructor(s): E. Younes
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.484. Introduction to Wavelet and Fourier Analysis. 3 Credits.
Prerequisites: ( AS.110.202 OR AS.110.211 ) AND ( EN.550.291 OR
AS.110.201 OR AS.110.212 )
Instructor(s): Y. Hur
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.487. Numerical Simulation of Stochastic Differential
Equations. 3 Credits.
The numerical integration of stochastic differential equations (SDEs)
requires a more complex mathematical construction than the integration
of ordinary differential equations (ODEs). The algorithms for approximating
SDE solutions are constructed on the basis of stochastic Taylor
expansions, which can become particularly elaborate for systems with
multiple noise sources. In this course we propose to follow in detail all the
steps from writing down an SDE to writing and running the computer code
that will generate a “solution” of that SDE with a well-defined error. Python
will be used for all applications, and more general programming concepts
will be discussed as needed.
Prerequisites: ( EN.550.420 OR EN.550.310 OR EN.550.311) AND
( AS.110.202 OR AS.110.211) and minimal familiarity with Matlab or
equivalent software
Instructor(s): C. Lalescu
Area: Quantitative and Mathematical Sciences.

EN.550.492. Mathematical Biology. 3 Credits.
This course will examine the mathematical methods relevant to modeling
biological phenomena, particularly dynamical systems and probability.
Topics include ordinary differential equations and their simulation; stability
and phase plane analysis; branching processes; Markov chains; and
stochastically perturbed systems. Biological applications will be drawn
from population growth, predator-prey dynamics, epidemiology, genetics,
intracellular transport, and neuroscience.
Prerequisites: EN.550.420 AND (AS.110.201 AND AS.110.302 OR
EN.550.291)
Instructor(s): D. Athreya
Area: Natural Sciences, Quantitative and Mathematical Sciences.

EN.550.493. Mathematical Image Analysis. 3 Credits.
Prerequisites: ( AS.110.202 or AS.110.211 ) AND ( AS.110.201 or
EN.550.291 )
Instructor(s): E. Younes
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.500. Undergraduate Research. 3 Credits.
Reading, research, or project work for undergraduate students. Pre-
arranged individually between students and faculty.
Instructor(s): E. Scheinerman.

EN.550.501. Senior Thesis. 3 Credits.
Instructor(s): Staff.

Reading, research, or project work for undergraduate students. Pre-
arranged individually between students and faculty. Recent topics
and activities: percolation models, data analysis, course development
assistance, and dynamical systems.
Instructor(s): Staff.

EN.550.503. Preparation for Research. 1 Credit.
Primarily an independent study course. Readings, assignments, and
discussion to prepare students for research in applied mathematics
and statistics. Topics include the research process, problem-solving,
mathematical writing, LaTeX, Beamer, reading mathematics, literature
search, oral presentations, REU programs, and the publication process.
Brief meetings to be arranged. Students are expected to spend 3 to
4 hours per week in addition to the meetings. Grading is Satisfactory/
Unsatisfactory only.
Instructor(s): J. Wierman.

EN.550.505. Applied Mathematics Pedagogy. 2 Credits.
Instructor Permission Required - Opportunity for students to particiate.

EN.550.506. Independent Study. 0 - 3 Credit.

EN.550.510. Readings: Actuarial Math. 0 - 3 Credit.
Instructor(s): D. Audley.

EN.550.511. Senior Thesis. 3 Credits.
Preparation of a substantial thesis based upon independent student
research, under the pre-arranged supervision of at least one faculty
member in Applied Mathematics and Statistics. Instructor permission
required.
Instructor(s): D. Geman.

EN.550.552. Undergraduate Internship. 1 Credit.
Instructor(s): Staff.

EN.550.590. Internship-Summer. 1 Credit.
Instructor(s): Staff.

EN.550.597. Research-Summer. 3 Credits.
Instructor(s): Staff.

EN.550.599. Independent Study. 3 Credits.
Instructor(s): D. Fishkind; E. Scheinerman; J. Fill; N. Lee.

EN.550.600. Department Seminar.
A variety of topics discussed by speakers from within and outside the
university. Required of all resident department graduate students.
Instructor(s): J. Wierman.

EN.550.620. Probability Theory I.
The course objectives are to develop probabilistic reasoning and
problem solving approaches, to provide a rigorous mathematical basis
for probability theory, and to examine several important results in the
theory of probability. Topics include axiomatic probability, independence,
random variables and their distributions, expectation, integration, variance
and moments, probability inequalities, and modes of convergence of
random variables. The course will include introductory measure theory as
needed. Students are expected to have previous study of both analysis
and probability. This course is the first half of a yearlong sequence.
The second semester’s course, EN.550.621 Probability Theory II, will
cover classical limit theorems, characteristic functions, and conditional
expectation.
Prerequisites: EN.550.420 and AS.110.405 or equivalent
Instructor(s): J. Fill.
EN.550.621. Probability Theory II.
Probability at the level of measure theory, focusing on limit theory. Modes of convergence, Poisson convergence, three-series theorem, strong law of large numbers, continuity theorem, central limit theory, Berry-Esseen theorem, infinitely divisible and stable laws.
Prerequisites: EN.550.620 OR AS.110.405
Instructor(s): J. Fill.

This course explores several topics and tools toward modern applications of probability and statistics in computational, cognitive, engineering, and neural sciences. The course will introduce the theoretical background for each topic, while the emphasis will be on the applications that are not often covered in the standard probability and statistics courses. The tentative topics include: Gibbs distribution and the maximum entropy with connections to large deviations and information theory; Nonparametric statistics ("learning theory") and classifications including consistency, bias/variance tradeoff, and regularization; Markov chains and their applications in MCMC computing and hidden Markov models; Graphical models and their applications; Parameter estimation, the EM algorithm and applications on image template learning. For each topic, there will be a related project assignment, which is composed of both paper work problems and computer experiments, designed to demonstrate the mathematics and the utility of the approach in the topic. Students are required to submit their own work individually.
Prerequisites: EN.550.310 OR EN.550.311 OR ( EN.550.420 AND EN.550.430)
Instructor(s): J. Fill.

EN.550.626. Stochastic Processes II.
Prerequisites: EN.550.426 AND EN.550.621
Instructor(s): J. Fill.

EN.550.630. Statistical Theory.
The fundamentals of mathematical statistics will be covered. Topics include: distribution theory for statistics of normal samples, exponential statistical models, the sufficiency principle, least squares estimation, maximum likelihood estimation, uniform minimum variance unbiased estimation, hypothesis testing, the Neyman-Pearson lemma, likelihood ratio procedures, the general linear model, the Gauss-Markov theorem, simultaneous inference, decision theory, Bayes and minimax procedures, chi-square methods, goodness-of-fit tests, and nonparametric and robust methods.
Prerequisites: EN.550.420 or EN.550.620.
Instructor(s): C. Pribe.

EN.550.631. Statistical Theory II.
Advanced concepts and tools fundamental to research in mathematical statistics and statistical inference: asymptotic theory; optimality; various mathematical foundations.
Instructor(s): B. Jedynak.

EN.550.635. Topics in Bioinformatics.
A "readings" course organized around research articles in the recent bioinformatics and computational biology literatures. In this term, the choice of papers will favor work on inferring phenotype from genotype, and modeling signaling networks, based on gene microarrays bearing the expression levels of thousands of transcripts, and on properties of proteins, such as predicting active sites and detecting harmful mutations. One major objective is to prepare students to comfortably read articles which involve extensive mathematical and statistical modeling as well as techniques from pattern recognition and machine learning. Most papers will be presented by the students. In addition, student expositions will be preceded by "tutorials" by the instructor on various aspects of statistical learning, modeling and prediction, such as properly estimating generalization error in cancer classification and avoiding over-fitting in learning networks of molecular interactions. Recommended Course Background: course in statistics; previous exposure to machine learning or pattern recognition
Instructor(s): D. Geman.

The focus of this roundtable-format course will be stochastic modeling as relates to system identification and maximum likelihood. The principles and algorithms being covered in this course have tremendous importance in the world at large. For example, maximum likelihood is arguably the most popular method for parameter estimation in most real-world applications. System identification is the term used in many fields to refer to the process of mathematical model building from experimental data, with a special focus on dynamical systems. The system identification process refers to several important aspects of model building, including selection of the model form (linear or nonlinear, static or dynamic, etc.), experimental design, parameter estimation, and model validation. This course will cover topics such as the maximum likelihood formulation and theory for dynamical systems, the EM (expectation-maximization) algorithm and its variants, Fisher information, common model structures, online versus offline estimation, the role of feedback in identification (i.e., open-loop versus closed-loop estimation), standard and extended Kalman filtering, and uncertainty characterization (e.g., confidence regions). Recommended Course Background: Undergraduate-level matrix theory and ordinary differential equations; graduate-level course in probability and statistics (e.g., 550.430 or equivalent; in particular, students should have prior exposure to maximum likelihood and Bayes’ rule). Prior experience in data analysis and algorithms will be helpful.
Instructor(s): J. Spall.

This course will focus on theoretical and practical aspects of statistical learning. We will review a collection of learning algorithms for classification and regression estimation, including linear methods, kernel methods, tree-based and boosting methods. We will also discuss unsupervised methods for linear and nonlinear data reduction and clustering. We will introduce fundamental concepts of the theory of model selection and validation: bias/variance dilemma, penalty methods, and some measures of complexity; the course will also include standard validation algorithms, like cross-validation and bootstrap. Recommended Course Background: EN.550.430.
This course will cover quantitative trading strategies, with a critical focus on statistical arbitrage. Students will learn how to apply mathematical and statistical techniques that are commonly employed within the quantitative industry. Upon successful completion of this course, students should have a firm understanding of the lurking problems, potential solutions, and distinct challenges in building and implementing a statistical arbitrage program. We will cover the spectrum of long-term, medium-term, and short-term alpha extraction methodologies, across liquid investment opportunities but primarily focusing on equities, FX, and future markets. This course is appropriate and recommended only for those students who have a serious interest in pursuing a career in statistical arbitrage. The course will run from August 31 - October 7. Note: This short course counts as half of an elective course in financial math as part of the elective requirement for the Financial Mathematics Masters program.
Instructor(s): E. Younes.

EN.550.642. Investment Science-Commodities as a Unique Asset Class.
The aims of the course are the following: 1. understand the properties of commodities and shipping as an asset class distinct from bonds and equity, 2. learn the fundamental economic results, e.g., theory of storage, established for commodities by leading figures like Keynes and Kaldor, 3. recognize the specific difficulties of the different groups, i.e., energy, metals, agricultural and shipping, 4. analyze the forward curve and its stochastic modeling, with or without seasonality, 5. discuss the pricing and hedging of options mostly traded in commodity markets, such as Asian and spread, as well as the valuation of physical assets through alternative approaches, 6. identify the different ways of investing in Commodities: Futures, ETFs, indexes, structured notes. Students should have rudimentary knowledge of financial markets.
Prerequisites: Rudimentary knowledge of financial markets; EN.550.420 and (AS.110.106 or AS.110.108)
Instructor(s): H. Geman.

This course describes how models based on networks encoding the conditional dependency structure between random variables, also called graphical models, can be used to design multivariate probability distributions. A special focus will be made on important particular cases, like Markov Chains, Bayesian networks or Markov Random Fields. We will also discuss parametric estimation and inference problems, and issues arising when some of the variables cannot be observed.
Prerequisites: EN.550.420 or equivalent AND EN.550.430 or equivalent
Instructor(s): E. Younes.

This course is only open to students enrolled in the MSE in Financial Mathematics program. Advanced topics chosen according to the interests of the instructor and graduate students. The course will focus on recent research articles in the financial mathematics literature.
Instructor(s): D. Audley.

Credit risk is a topic which has become of fundamental importance after the recent crisis, due to the larger number of credit quality deteriorations and default events. This course deals with mathematical modeling and valuation of credit risk. Students will be exposed to key theoretical principles (doubly stochastic intensity processes, enlargement of filtrations, risk measures), related to the construction of modern credit risk management systems. The course will analyze computational techniques for simulating default times, as well as methodologies for measuring credit losses based on probabilistic tools. We will discuss topics of currently high research interest, such as counterparty risk valuation, systemic risk, liquidity risk, and default contagion.
Prerequisites: (EN.550.426 OR EN.550.427) AND EN.550.620
Instructor(s): A. Capponi.

The first part of the course will review in depth the main instruments in the various asset classes, as well as the founding results on investment decision and project undertaking. The second part will analyze the theory of the firm: capital structure, dilution and share repurchase, dividend policy, Modigliani- Miller theorem and will lead to the contingent claim pricing of corporate debt and equity as in Merton (1974). The third part will extend the CAPM to the Arbitrage Pricing Theory of Ross (1976) and its theoretical and operational consequences. The fourth part will be dedicated to the fundamentals of interest rates and stochastic modelling of the yield curve to price caps, floors and swaptions. It will conclude with the Asset Liability Management of a bank, insurance company. This course will not begin until mid-October.
Instructor(s): H. Geman.

EN.550.650. Computational Molecular Medicine.
Biomedical research has been transformed by the development of new technologies for sequencing genomes and measuring RNA and protein expression levels. Due to the massive number of interacting components, the traditional approach, which is experimental and component-by-component, is no longer adequate. In contrast, statistical learning, modeling and inference have emerged as core methodologies for analyzing these data and uncovering the relationships between molecules, networks and disease, where knowledge extraction is formulated as a problem in high-dimensional pattern recognition. We will cover selected aspects of this methodology (e.g., measuring associations, testing multiple hypotheses, learning predictors and network models, and stochastic simulation) and illustrate how it enhances our ability to discover molecular disease networks, detect disease, predict clinical outcomes, and characterize disease progression. Meets with 550.450. Recommended Course Background: EN.550.420 and EN.550.310/ EN.550.311/EN.550.430
Instructor(s): D. Geman.

Advanced introduction to no-arbitrage derivatives pricing theory. Topics include fundamental theorems of asset pricing; equivalent martingale measures; stochastic volatility models; credit-linked derivatives; stochastic control & optimal stopping problems in finance. This course assumes a working familiarity with Brownian motion and Ito’s formula. Simulation and numerical methods for derivatives pricing will also be discussed.
Prerequisites: EN.550.426 OR EN.550.427 OR EN.550.440 OR EN.550.621.
EN.550.653. Commodities and Commodity Markets.
The first half of this course will be devoted to energy markets, both in terms of the market itself and how to model peculiar features of this business. First we will discuss fossil fuels, including physical and financial natural gas and LNG; crude and refined petroleum commodities; and possibly coal markets. Then the focus will turn to electricity markets, including market structures; energy, capacity and ancillary services markets; characteristics of demand; power plant commitment and dispatch; the “stack” or market supply curve; characteristics of different plants and fuels; regional differences in markets; and hedging techniques from trading vanilla products all the way to complex multi-commodity structures. We will discuss renewable energy sources, their characteristics, economics, and effects on the larger market, as well as emissions markets as a way of removing pollution externalities. The first half will conclude by elaborating on risk management techniques; credit; legislation and regulation; and derivative accounting as time permits. The second half of the course will turn to shipping, metals and agricultural markets. The metal physical markets will be described, the major Exchanges presented (LME, SHFE), as well as the warehousing issues in the case of base metals. The case of precious metals will be singled out, and gold in particular; and finally uranium and rare earths. Agricultural (grains and softs) markets will be presented, together with the crucial issues of biofuels, fertilizers, water, and arable land. In all cases, there will be a large focus on the trading activities – both to hedge and to gain exposure to commodities – in spot and derivative markets. Numerous examples of forward curves will be provided, as well as volatility skews. The valuation of swaps, spread options and Asian options will be (re)derived. Students should have rudimentary knowledge of financial markets. Recommended Course Background: EN.550.420 and AS.110.106 or AS.110.108
Instructor(s): G. Schultz; H. Geman.

Design and analysis of mainstream algorithms for solving optimal control, statistical/machine learning, financial engineering, compressed sensing, robust principal component analysis, sparse optimization, and structural engineering problems. Algorithms may include: sequential quadratic programming methods, interior-point methods, stochastic gradient descent algorithm, dual averaging algorithm, limited memory quasi-Newton methods, fast iterative shrinkage-thresholding algorithm, Pegasos, alternating linearization augmented Lagrangian methods, the support vector machine, Benders Algorithm, and the method of moving asymptotes. However, other algorithms may be covered depending on the interests of the students. The goals of the course include (i) understanding the algorithms, why they work, and when they should be used; (ii) recognizing the strengths and weaknesses of each algorithm; and (iii) motivating/discussing open research questions.
Instructor(s): D. Robinson.

EN.550.663. Stochastic Search & Optimization.
An introduction to stochastic search and optimization, including discrete and continuous optimization problems. Topics will include the “no free lunch” theorems, beneficial effects of injected Monte Carlo randomness, algorithms for global and local optimization problems, random search, recursive least squares, stochastic approximation, simulated annealing, evolutionary and genetic algorithms, machine (reinforcement) learning, and statistical multiple comparisons. Students should have knowledge of basic matrix algebra. Recommended Course Background: Graduate course in probability and statistics
Instructor(s): J. Spall.

Concepts and statistical techniques critical to constructing and analyzing effective simulations; emphasis on generic principles rather than specific applications. Topics include model building (bias-variance tradeoff, model selection,, Fisher information), benefits and drawbacks of simulation modeling, random number generation, simulation-based optimization, discrete multiple comparisons using simulations, Markov chain Monte Carlo (MCMC), and input selection using optimal experimental design.
Instructor(s): J. Spall.

EN.550.665. Tracking and Data Fusion Methods.
The uses are of tracking and data fusion are ubiquitous: GPS tracking; tracking people in crowds using facial recognition; robotic vision and control; cell-phone triangulation for emergency responders; location of military targets; navigation of unmanned vehicles, satellites and space probes; tracking debris in space, etc. This course will start with the basic theory of linear and non-linear Kalman filtering, the Cramer-Rao bound, Fisher information, and simple nearest-neighbor data association methods. After introducing the basic theory, the course will involve student-led discussions in a seminar-like manner on more advanced topics in non-linear filtering, probabilistic data association, and specific applications. The course content will depend somewhat upon student interest. Prereq: Basic Linear Algebra, Multivariate Calculus, 400-level or higher Probability.
Prerequisites: ( EN.550.291 or AS.110.201 ) and ( AS.110.202 or AS.110.211 ) and ( EN.550.420 or EN.550.620 ).
The main goal of this course is to introduce students to combinatorial optimization techniques. The first part of the course will focus on combinatorial algorithms for classical problems. The next part of the course will show how polyhedral theory can be used to deal with combinatorial optimization problems in a unifying manner. Familiarity with linear programming and algorithms desirable but not strictly required. Recommended Course Background: Linear Algebra.
Instructor(s): A. Basu.

EN.550.671. Combinatorial Analysis.
An introduction to combinatorial analysis at the graduate level. Meets concurrently with 550.471. See 550.472 for course description. Recommended Course Background: EN.550.291 or AS.110.201
Instructor(s): E. Scheinerman.

EN.550.672. Graph Theory.
An introduction to graph theory at the graduate level. See 550.472 for course description. Meets with EN.550.472
Prerequisites: EN.550.291 OR AS.110.201 OR AS.110.212
Instructor(s): A. Basu.

Brief review of topics in elementary numerical analysis such as floating-point arithmetic, Gaussian elimination for linear equations, interpolation and approximation. Core topics to be covered: numerical linear algebra including eigenvalue and linear least-squares problems, iterative algorithms for nonlinear equations and least squares problems, and convergence theory of numerical methods. Other possible topics: sparse matrix computations, numerical solution of partial differential equations, finite element methods, and parallel algorithms.
Instructor(s): S. Han.

This class will explore basic aspects of functional analysis, focusing mostly on normed vector spaces. This will include, in particular, the Hahn-Banach and open mapping theorems, a discussion of strong and weak topologies, the theory of compact operators, and spaces of integrable functions and Sobolev spaces, with applications to the study of some partial differential equations. Recommended Course Background: AS.110.415/AS.110.416/AS.110.605 or EN.550.620
Prerequisites: AS.110.405 or equivalent
Instructor(s): E. Younes.

The course will provide fundamental concepts and methods that pertain the analysis of the variation of anatomical shapes extracted from medical images. It will review basic properties of the most important shape representations (landmark, curves, surfaces, images...), describe distances and discrepancy measures that allow for their comparison, and introduce nonlinear optimal control methods that underlie the Large Deformation Diffeomorphic Metric Mapping (LDDMM) family of registration algorithms. The course will then discuss shape averaging methods and template-centered representations for the analysis of shape datasets. Recommended Course Background: Optimization (EN.550.361 or higher) and (AS.110.202 OR AS.110.211 or higher) AND AS.110.302 or higher.
Prerequisites: ( AS.110.202 OR AS.110.211 or higher) AND ( AS.110.302 or higher)
Instructor(s): E. Younes.

The main goal of this course is to introduce students to combinatorial optimization techniques. The first part of the course will focus on combinatorial algorithms for classical problems. The next part of the course will show how polyhedral theory can be used to deal with combinatorial optimization problems in a unifying manner. Familiarity with linear programming and algorithms desirable but not strictly required. Recommended Course Background: Linear Algebra.
Instructor(s): A. Basu.

EN.550.690. Neural Networks and Feedback Control Systems.
This roundtable course is an introduction to two related areas#neural networks (NNs) and control systems based on the use of feedback. Artificial NNs are effective conceptual and computational vehicles for many important applications; feedback control is relevant to virtually all natural and human-made systems. NNs are applied in areas such as system modeling and control, function approximation, time-series filtering/smoothing, speech/image/signal processing, and pattern recognition. Topics to be covered for NNs include network architecture, learning algorithms, and applications. Specific NNs discussed include perceptrons, feedforward networks with backpropagation, and recurrent networks. This course also provides an introduction to feedback control systems, including the role of feedback in regulating systems and in achieving stability in systems. We consider stochastic (noise) effects in feedback systems. We also consider the interface of NNs and control by discussing how NNs are used in building modern control systems in problems where standard methods are infeasible. Recommended Course Background: Matrix theory, differential equations, and a graduate course in probability and statistics.
Instructor(s): J. Spall.

EN.550.691. Financial Mathematics Master’s Summer Internship.
This course is open only to AMS department master's students.
Instructor(s): D. Audley; D. Naiman.

A second course in linear algebra with emphasis on topics useful in analysis, economics, statistics, control theory, and numerical analysis. Review of linear algebra, decomposition and factorization theorems, positive definite matrices, norms and convergence, eigenvalue location theorems, variational methods, positive and nonnegative matrices, generalized inverses.
Prerequisites: ( AS.110.202 OR AS.110.211 ) AND ( AS.110.201 OR EN.550.291 ) AND AS.110.405
Instructor(s): Y. Hur.

EN.550.693. Turbulence Theory.
An advanced introduction to turbulence theory for graduate students in the physical sciences, engineering and mathematics. Both intuitive understanding and exact analysis of the fluid equations will be stressed. Students should have previous familiarity with fluid mechanics. 
Instructor(s): G. Eyink.

EN.550.694. Turbulence Theory II.
This course will continue the theoretical investigation of fluid turbulence, directly following on from EN.550.693. Topics to be considered are turbulent vortex dynamics, Lagrangian dynamics, and special topics such as wall-bounded turbulence, free shear flows, two-dimensional and quasigeostrophic turbulence, MHD turbulence, etc. Cross-listed with Physics
Prerequisites: EN.550.693
Instructor(s): G. Eyink.
This course will present an overview of topics in science-based parameterization, including dynamics, probability and other applied mathematical methods. These concepts will be presented in a unified format, with some emphasis on scientific computing. Specific topics include: basic probability, statistical dynamics, (moment hierarchies, Liouville/forward equations, path-integral methods), asymptotic closure (homogenization, Chapman-Enskog), closure techniques without any separation of scales (non-linear Galerkin & Weighted residuals, algebraic closures, PDF-based closures, down-scaling), uncertainty quantification (variance & other measures of uncertainty, Bayesian estimation, ensemble methods), hybrid methods.
Instructor(s): G. Eyink
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.700. Master’s Research.
Reading, research, or project work for Master’s level students. Arranged individually between students and faculty.
Instructor(s): Staff.

EN.550.701. Master’s Independent Study.
Instructor(s): D. Naiman.

Development of methods for proving convergence to a Poisson limiting distribution. Stein-Chen and coupling methods. Applications to discrete mathematics, e.g. random graphs and random permutations.

Recent advances in computer science, physics, and statistics have been made possible by corresponding sharply quantitative developments in the mathematical theory of Markov chains. Possible topics: rates of convergence to stationarity, eigenvalue techniques, Markov chain Monte Carlo, perfect simulation, self-organizing data structures, approximate counting and other applications to computer science, reversible chains, interacting particle systems.
Instructor(s): J. Fill.

EN.550.730. Topics In Statistics.
Roundtable course covers system identification and maximum likelihood for models, including EM (expectation-maximization) and variants, online versus offline estimation, role of feedback in estimation (open-loop versus closed-loop), and uncertainty bounds. Students should have an understanding of matrix theory and ordinary differential equations. Prior experience in data analysis and algorithms will be helpful. Recommended Course Background: EN.550.430; in particular, students should have prior exposure to maximum likelihood and Bayes’ rule.
Instructor(s): M. Tang.

EN.550.735. Topics in Statistical Pattern Recognition.
The Dissimilarity Representation for Pattern Recognition. This course will investigate aspects of statistical inference and statistical pattern recognition associated with observing only dissimilarities between entities rather than observing feature vectors associated with the individual entities themselves.
Instructor(s): C. Priebe.

This course will cover various topics in financial mathematics and will be co-taught in two parts Part one (Chavez-Bedoya) will cover various aspects of portfolio optimization, and part two (Geman) will cover topics including stochastic time changes, subordination, pure jump Lévy Processes; the Lévy- Kintchine and its relationship to the Fast Fourier transform of option prices. The last part will be dedicated to general changes of probability measure in finance.
Instructor(s): H. Geman; L. Chavez-Bedoya.

One of the most powerful tools currently applied in combinatorics. This course covers the basic method, with applications to graph theory, combinatorics, and especially algorithm design.
Instructor(s): V. Lyzinski.

Analysis of Algorithms. This course in the probabilistic analysis of algorithms (AofA) will be accessible to any student who has had at least one course in probability and will be most beneficial to those who have had at least one probability course at the measure-theoretic level. The course will review basic topics from the theory of probability that have proved useful in AofA. It will provide introductions to more advanced AofA-relevant topics chosen from such topics as: Markov chains, branching processes, urn models, Poissonization (and de-Poissonization), various metrics on distributions, fixed-point characterizations of distributions, convergence of sequences of stochastic processes, perfect simulation using Markov chains (and otherwise), and large deviation principles. The course will interweave probability theory and applications to AofA, focusing on the fundamentally important and exceptionally rich example of limiting distributions for various ways of measuring the cost of executing the QuickSort and QuickSelect algorithms.
Instructor(s): J. Fill.

Instructor(s): Staff.

Open to students in the Financial Mathematics Master’s Program only.

EN.550.805. Communications Practicum.
Open to students in the Financial Mathematics Master’s Program only.

Instructor(s): Staff.

Instructor(s): Staff.

Continuation of EN.550.692.
Instructor(s): E. Scheinerman.

Biomedical Engineering

www.bme.jhu.edu

Faculty and students in the Department of Biomedical Engineering have been breaking new ground in biomedical research for over 50 years, and we strive to continue this history of innovation and discovery every day. Some examples of biomedical engineering include instrumentation and systems for use in medical environments, health care delivery systems, therapeutic and prosthetic devices such as artificial organs and orthopedic implants, and the application of quantitative methods and engineering-based modeling to basic research in the biological sciences.
The Department of Biomedical Engineering offers three programs of study to prepare students to work in this area: an undergraduate program leading to a bachelor’s degree with a choice of B.S. or B.A., a master’s degree program, and a doctoral degree program.

Research in the department focuses on several general areas: biomaterials, biomedical imaging systems, biomedical sensors and instrumentation, cardiovascular systems physiology, molecular and cellular engineering physiology, systems neuroscience, theoretical and computational biology, cell and tissue engineering, and nanobiotechnology.

Facilities

The center of gravity for the Department of Biomedical Engineering is the Traylor, Ross, Miller, and Smith research buildings on the campus of the School of Medicine. This location favors a close association with other basic medical science programs and provides access to the clinical environment of one of the nation’s top-ranked hospitals. The Homewood campus houses the Whitaker Biomedical Engineering Institute. The Whitaker Institute was established as a vital link between the School of Medicine and the Whiting School of Engineering. The vision of the institute is of an integrative research and education enterprise that provides leadership in moving biomedical engineering to the forefront of biomedical science and practice.

The general facilities of the Department of Biomedical Engineering include seminar rooms that allow broadcasting throughout the university, physiology teaching laboratories, a microfabrication laboratory, a cell and tissue teaching and research laboratory, a student instrumentation laboratory, and a fully-staffed mechanical shop.

Each faculty member maintains a well-equipped laboratory for research in his or her area of interest. A wide variety of equipment in these laboratories is available to students as their interests draw them into active participation in research.

The profoundly interdivisional nature of biomedical engineering education at Johns Hopkins provides students with a wide range of general university facilities. These include the Human Stem Cell Core facility, the Institute for Basic Biomedical Sciences Microscope Core facility, the Tissue Microarray Core facility, the Flow Cytometry Core Facility, the Genetics Resources Core Facility, the Transgenic Core Laboratory, the Welch Medical Library at the School of Medicine, the Eisenhower Library at the Homewood campus, and computing laboratories that are available on both campuses.

The mission of the undergraduate programs is to provide state-of-the-art biomedical engineering education to students in order that they may continue their education in graduate, medical, and professional schools or pursue careers in industry. To this end, our responsibility is as much to the future as it is to the present. Through a strong research and educational environment, we strive to empower our students to explore and define their own frontiers as well as instill the ethical principles that will foster rewarding professional endeavors. The B.S. in Biomedical Engineering degree program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

The biomedical engineering program normally leads to the bachelor of science degree and requires at least 129 credits. The B.S. program is recommended for students who plan careers in engineering or who plan to attend graduate school in engineering. If a student wishes to take a more flexible program with less emphasis on engineering, a B.A. program is also available. Either the B.S. or the B.A. program can meet the needs of a student who plans graduate study in a nonengineering area.

The undergraduate program provides a strong foundation in mathematics, engineering, and science. It emphasizes preparation for advanced study in an area related to biomedical engineering and is broad enough to accommodate students who plan graduate work in biology, medicine, engineering, biophysics, physiology, or biomedical engineering.

Thus, the objective of the undergraduate program is to educate students majoring in biomedical engineering who will attain one or both of the following upon or within a few years of graduation:

- entry into graduate (M.S. or Ph.D. degree programs) or professional schools (medical, dental, veterinarian, business, public health, law)
- employment in jobs that utilize biomedical engineering or a related field.

Each student plans a curriculum suited to his or her goals with the assistance of a faculty advisor. Upon completion of the B.S. in biomedical engineering, students will demonstrate the ability to:

- apply knowledge of advanced mathematics, life sciences, natural sciences, and principles of engineering to problems at the interface of engineering, biology, and medicine and mathematically model and simulate biological systems using computers.
- design and conduct experiments, as well as analyze and interpret data; formulate hypotheses for experiments, including those on living systems; devise procedures for experiments, including those on living systems; collect and validate data using appropriate equipment; display, describe, summarize, and interpret experimental results in a lab report; relate the experimental results to previous work, including the interaction between living and non-living materials and systems; and practice lab safety.
- design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability; identify a need and define the biomedical engineering problem to be solved, determine the constraints to the problem and assess the successful likelihood for different approaches, undergo the design process of creation, synthesis, and integration and evaluate success of the design to meet the desired need.
- function on multidisciplinary teams; understand team goals and complementary roles and expertise of each team member; share opinions and viewpoints with other team members; and assume and fulfill individual responsibilities within a team.
- identify, formulate, and solve engineering problems; conceptualize the engineering problem, formulate a solution to the problem, and solve problems using experimental, mathematical and/or computational tools.
- understand professional and ethical responsibility; understand the guidelines for ethical and responsible use of human subjects and data for research; understand the guidelines for ethical and responsible use of animals for research; understand professional and ethical standards in the workplace and properly reference the work of others.
- communicate effectively; synthesize, summarize, and explain technical content in a written report; and synthesize, summarize, and explain technical content in an oral presentation.
- understand the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context; understand the contributions biomedical engineers can play in academia, industry, and government; and understand how
biomedical engineering solutions are of benefit inside and outside the U.S.

- recognize the need for, and gain an ability to engage in, life-long learning; use library resources, professional journals, and Internet effectively; update technical literacy to understand contemporary issues; and recognize the need for self-assessment.

- comprehend contemporary issues; understand recent developments in biomedical engineering; understand differing viewpoints in academia, government, industry, and business; and gain the ability to search and critically evaluate scientific literature.

- use the techniques, skills, and modern engineering tools necessary for engineering practice; gain proficiency in computer simulations and mathematical analysis tools; create mathematical models; develop laboratory skills applied to living systems; and utilize data acquisition systems.

The program also encourages individual study and research and gives academic credit for them. Students are welcome to work in laboratories on the Homewood campus or at the Medical Institutions in East Baltimore.

**Bachelor of Science in Biomedical Engineering**

Students seeking the B.S. degree are encouraged to focus their studies on one of five subspecialties that incorporates traditional engineering disciplines and biomedical applications. See the Biomedical Engineering Undergraduate Advising Manual for specifics on focus areas, lists of recommended mathematics and engineering electives, limitations on credits for courses with overlapping material, and the design content of engineering courses.

### Requirements for the B.S. Degree

(See also General Requirements for Departmental Majors (p. 33).)

The B.S. degree in biomedical engineering requires 129 credits. The courses listed below must either be taken or passed by examination for advanced credit. Engineering, science, and mathematics courses may not be taken satisfactory/unsatisfactory. No more than 6 credits of engineering, science, or mathematics courses in which a grade of D was received may be counted.

#### Basic Sciences (22 credits)

At least one additional semester of advanced statistics/probability (300 level or above).

#### Humanities and Social Sciences (18 credits)

These courses should form a coherent program, relevant to the student’s goals, with at least one course at the 300-level or higher. They should include:

- One course in which ethical and social issues related to technology are discussed.

At least two semesters of writing intensive course.

#### Biomedical Core Knowledge (35 credits)

#### Focus Area (21 credits)

Each student is required to take one of four Biomedical Engineering focus areas

- **Design**

  Among the technical elective courses offered, at least 6 credits must come from an approved list of design options.

- **Computer Programming**

  Select 3 credits of computer programming

- **General Electives**

  Students may choose at least two courses from any area.

Total Credits: 129
** Bachelor of Arts in Biomedical Engineering**

(See also General Requirements for Departmental Majors (p. 33))

The B.A. in biomedical engineering requires 120 credits. The courses listed below must either be taken or passed by examination for advanced credit. See the Biomedical Engineering Undergraduate Advising Manual for lists of recommended courses, acceptable course substitutions, and limitations on credits for courses with overlapping material.

**Other Electives**

At least 19 additional credits (12 credits for premedical students counting Intermediate Organic Chemistry and lab) are needed to complete the 120 credit requirement for the BA degree. A course in which the use of computers in computer programming is strongly recommended.

Total Credits 155

---

**Master of Science in Engineering**

The master’s degree program is designed for students who wish to pursue careers in research and development, or as a step toward Ph.D. or M.D./Ph.D. education. The program, which is designed to be completed in two years, consists of core courses, elective courses, and a thesis project. The project may be basic research in a laboratory or practical engineering related to patient monitoring or other clinical problems.

---

**Admission and Financial Aid**

Students with undergraduate degrees in engineering are eligible to apply. Exceptional students with degrees in basic sciences may also apply, but would normally have to take a number of courses to overcome deficiencies in their curriculum.

All students have the potential to receive full tuition support by obtaining a position in a research laboratory. Research assistantships are usually advertised by various laboratories in the institution to carry out specific research and development projects. Students without a research assistantship are expected to pay full tuition independently. Fellowships are also awarded to the top students in the program.

Applications for admission are due by the appointed deadline (usually in mid-January).

For more information and to apply online, go to www.bme.jhu.edu/undergraduate/apply.
Requirements for the M.S.E. Degree

Each student will take a minimum of 24 credits of courses at the 400-level or higher and complete a thesis. Students fulfill the course requirement by taking two courses in the Systems Bioengineering sequence (EN.580.421, EN.580.422 or EN.580.429) and other advanced engineering, math, and science courses. (JHU undergraduates waive the SBE sequence and take 8 credits from advanced engineering, math, or science.) Students will also fulfill a minor teaching requirement by providing support to one of three lab-based undergraduate courses and six core lecture courses each semester. Additionally, all students must complete a thesis based on a research problem requiring application of quantitative or applied engineering principles to biomedical engineering.

B.S./M.S.E. Program

Students enrolled in the B.S. program in biomedical engineering may pursue a combined B.S./M.S.E. degree that can be completed in five years. Students should apply in their junior year and adhere to the published deadlines and application requirements. (The only exception is that biomedical engineering undergraduates do not need to take the GRE.) Course work should be carefully structured so as to fulfill all the requirements for the B.S. as well as the M.S.E. degree in a timely and coordinated manner. Students are advised to make an early start toward their master’s thesis. The M.S.E. program grants partial tuition fellowship awards on the basis of academic merit. Research assistantships are usually advertised by various laboratories in the institution to carry out specific research and development projects. Fellowships are also awarded to the top students in the program.

Master of Science in Engineering in Innovation and Design

The Center for Bioengineering Innovation and Design (CBID), housed in the Department of Biomedical Engineering, focuses on the design aspect of Biomedical Engineering. This exciting program gives students opportunities to design, develop, build, and test devices that solve some of the most pressing problems facing clinicians today.

The mission of CBID is to:

• Improve human health by developing medical devices that solve important clinical problems
• Educate a new generation of medical device engineers and fellows
• Facilitate technology transfer and industry collaboration

In the graduate program CBID students will learn to identify clinical needs and innovate a novel solution to solve that clinical problem. Working in teams, students work closely with engineering faculty and physicians throughout the medical institution to come up with device ideas, build prototypes, research intellectual property, learn about the regulatory process, write business plans, and present their designs to fellow students, faculty, and outside advisors.

Undergraduate students in BME can also become involved in medical device design by joining an undergraduate design team which works on solving clinical problems by designing innovative devices.

Incorporated in all the BME design curriculum is a focus on technology commercialization. All students, graduate and undergraduate, will interact with clinical and corporate sponsors and have experiences that promote the development of leadership, communications, and marketing skills, thus helping to ensure our graduates' professional success.

The CBID M.S.E. is a one-year program lasting from May through the following May. Please see our website for more information on our programs: http://cbid.bme.jhu.edu.

Ph.D. in Biomedical Engineering through the School of Medicine

Biomedical Engineering has emerged as one of the most exciting interdisciplinary research fields in modern science. Biomedical engineers apply modern approaches from the experimental life sciences in conjunction with theoretical and computational methods from the disciplines of engineering, mathematics, and computer science to the solution of biomedical problems of fundamental importance. The Biomedical Engineering Graduate Program of Johns Hopkins University is designed to train engineers to work at the cutting edge of this exciting discipline.

The cornerstone of the program is our belief in the importance of in-depth training of students in both life sciences and modern engineering. In-depth training in life sciences is achieved in one of two ways. Typically, incoming Ph.D. students enroll in the first year basic sciences curriculum of the Johns Hopkins University School of Medicine. That is, they learn human biology with the medical students. This is a unique and intensive curriculum covering a broad range of topics including molecules and cells, human anatomy, immunology, physiology, and neuroscience. Students choosing this option typically devote their entire first academic year to these courses. This curriculum is an excellent way to build a broad and solid foundation in the life sciences. Alternatively, students may elect alternative life sciences curricula. These curricula have been carefully designed to provide training in areas of the life sciences that are appropriate to each of the program’s research areas. This option is of particular value to students who enter the program having a strong background in the life sciences. In-depth training in engineering, mathematics, and computer science is achieved through elective courses that are taken in the second year.

All students are admitted with full fellowship. This covers tuition and provides a modest stipend for the duration of their Ph.D. Because the students are fully funded, they can choose to perform their dissertation research in essentially any laboratory in the University (subject to the approval of the Program directors). A special program with the National Heart, Lung, and Blood Institute of the National Institute of Health (NIH) allows students to also choose from research laboratories at the NIH.

Students typically do research rotations during the summer before start of the first academic semester, during the first year (typically as they are taking medical school courses), and during the following summer year. They are expected to choose a research laboratory before the start of the second academic year.

Emphasis is placed on original research leading to the doctoral dissertation. The research is usually experimental in nature, and students are expected to learn biological experimentation techniques. Nevertheless, experiment or theory can be emphasized in the research as desired by the student.

Requirements for Admission

The School of Medicine program accepts applications for the Ph.D. program until December 15 of each year. We typically recruit students in five areas: Computational Biology, Imaging, Tissue Engineering, Neural engineering, and Molecular, Neural, and Cardiac physiology (MNCP). The program is unique in that it offers the BME student the strengths of one of
the best medical schools in the world. If you wish to combine engineering with cutting edge research in medicine, this may be the program for you.

In their first year, our students have the option of taking many of the same courses as the medical students, including human anatomy, molecules and cells, and genes to society. In their second year, our students take advanced engineering courses. Therefore, students that apply to our program need to not only have a strong background in engineering and mathematics, but also sufficient background in chemistry (including organic chemistry) and biology (at least two introductory courses).

The admission process is by committee. The applicant should specify which area they are interested in and write about the kind of research they are considering. The faculty in each area vote and rank the applicants. The final pool of applicants is ranked and voted on by the entire faculty.

About one third of our incoming students are international students. A short list of these students is formed by committee and the top candidates are interviewed by phone. Like all admitted students, international students receive full financial aid as well as a monthly stipend. They too have the freedom to choose from any lab.

Applications should be complete when submitted. In order to be considered a complete application we must have:

- A completed online application form.
- **Official transcripts from each college or university attended**—Sealed, official transcripts or certified records of all university (undergraduate and graduate) study must be submitted. If you have attended more than one institution, transcripts from each must be included with your application.
- **Official Graduate Record Examination**—GRE/MCAT scores will be acceptable and can be arranged through the Office of Graduate Affairs (address provided below). The GRE code for applying to graduate programs at the Johns Hopkins School of Medicine is 5316.
  - The BME Ph.D. program does not rely heavily on the GRE exam in making admissions or financial aid decisions. Research experience, course grades, and recommendations carry more weight. However, because the GRE score is part of the application and does affect admissions decisions in some cases, foreign applicants who took the GRE in its electronic form, in a country where the electronic test is no longer offered, are advised to retake the exam in its paper form. Applications will be considered regardless of which form of the exam was taken.
- **Three letters of recommendation**—These letters should come from faculty members who are acquainted with you and your academic work. These letters should be sealed and comment on your aptitude and promise for independent research.
- **Personal Statement**—a typewritten statement (one page maximum) indicating the basis of your interest in graduate study and your career objectives. Included should be a discussion of any research experience you have had.

Applicants for admission must fulfill the following course prerequisites:

- one year of college level biology (may include quantitative biology or physiology)
- one semester of organic chemistry
- differential equations

If you are interested in applying and do not have the prerequisite courses, you may want to submit your application with an explanatory note indicating you have made or will make arrangements to take the prerequisites before you would matriculate, if your application is accepted. In the past, applicants have taken the prerequisites at their present schools, local community colleges, etc. Courses taken at any accredited college or university are acceptable.

Each applicant must have received a B.A. or B.S. degree or its equivalent prior to matriculation. A Masters degree is not required for admission to our program.

All written correspondence and supporting documents should be sent directly to:

**The Office of Graduate Affairs**
The Johns Hopkins School of Medicine
1830 E. Monument St., Suite 2-107
Baltimore, MD 21205-2196
410-614-3385 phone
410-614-3386 fax
grad_study@jhmi.edu

**Processing**
The Ph.D. Program admissions committee will not consider any application until it is complete. Once an application has been received the applicant will be notified if supporting materials are missing.

**Interview**
The admissions committee will review completed applications and invite applicants to come to Johns Hopkins for a personal interview with faculty. Applicants from North America must come for an interview to be considered for admission. In the case of overseas applicants, for whom such a trip is not possible, a small number of telephone interviews will be conducted. The final admissions decisions will be made from the pool of interviewed applicants. Interviews are generally conducted in March.

**Acceptance**
Applicants will be notified by end of March of the outcome of their application. An offer of admission from the program will include a yearly stipend, full tuition, and paid medical and dental insurance. This applies to every accepted applicant, regardless of citizenship or national origin. Those offered admission will be asked to let us know their decision as soon as possible. In any case, we must have the applicant’s decision by April 15. Applications can be found at [www.hopkinsmedicine.org/graduateprograms/application.cfm](http://www.hopkinsmedicine.org/graduateprograms/application.cfm).

**Financial Aid**
Fellowships for tuition and support stipends (regardless of citizenship or national origin) are available from the general funds of the university. U.S. citizens and Permanent Residents are eligible for support from training grants from the NIH. Students are encouraged to apply for individual fellowships from the National Science Foundation and for NRSA awards from the NIH. Only online applications for admission are accepted and must be received by December 15.

**Requirements for the Ph.D. Degree**
The first two years are ordinarily devoted to advanced courses in engineering science and in biomedical science. Engineering, mathematics, and other physical science courses to be taken are arranged between students and their advisors. Each student is assigned a panel of three advisors during the first two years. Eighteen credit hours of course work in engineering, mathematics, or physical sciences are required. In addition, students must complete eighteen credit hours of
course work in the life sciences. Of these 36 credit hours, at least six must be at the graduate level. At least three credit hours in a course with strong engineering or mathematical theory content at the 600-level must be taken.

Summers are spent working in a biomedical laboratory to gain experience and to seek out a suitable thesis research area. By the beginning of the third year, students should start original research leading to the dissertation. Students must fulfill a modest teaching requirement during one year of their program. The remaining time is spent in thesis research. The program typically takes five to six years to complete.

The student must pass a preliminary oral examination which will be a Graduate Board examination. This is taken in the first half of the third year. The student must then conduct original research, describe it in a dissertation, and pass a final oral examination that is a defense of the dissertation. There is a minimum residency requirement of two consecutive academic years.

### Integrated M.D./Ph.D. Program

Candidates for the Ph.D. in biomedical engineering who wish to apply jointly for the M.D. degree must apply directly through the School of Medicine. Although the combined programs would normally require at least seven years to execute sequentially, the combined program can ordinarily be completed in six years, with appropriate planning. Good preparation in biology and chemistry as well as mathematics, engineering, and the physical sciences is essential. Life science graduate requirements are met by the first-year program of the School of Medicine. This program is more arduous than the Ph.D. program alone, but it may have marked advantages for students interested in clinical research and applications in hospital systems and in the delivery of health care. The catalog for the School of Medicine should be consulted for admissions requirements and procedures.

Information about applying to the combined M.D.-Ph.D. program can be found at [www.hopkinsmedicine.org/mdphd/admissions/Howtoapply.html](http://www.hopkinsmedicine.org/mdphd/admissions/Howtoapply.html). Applications submitted for consideration of the combined degree will be reviewed by the Medical School admissions committee. If the Medical School admissions committee accepts the application, it is then passed along to the Biomedical Engineering Ph.D. Program admissions committee for review. A student applying to the combined program who wishes to be considered for the straight Ph.D. program must submit a written request to have his or her application forwarded to the Biomedical Engineering Ph.D. Program office for admission consideration if his or her application is not accepted by the Medical School admissions committee.

For current faculty and contact information go to [http://www.bme.jhu.edu/people/completefacultylist.php](http://www.bme.jhu.edu/people/completefacultylist.php)

### Faculty

**Chair**  
Eliot McVeigh  
Massey Professor and Director: imaging.

**Professors**  
Jennifer H. Elisseff  
Jules Stein Professor: tissue engineering, biomaterials, cartilage regeneration.  
Xingde Li

**Endomicroscopy technologies, nanobiophotonics and molecular imaging, early detection (cancer, cardiovascular diseases, wound healing).**

Michael I. Miller  
Herschel and Ruth Seder Chair in Biomedical Engineering: computational anatomy, medical imaging, image understanding.

Aleskander S. Popel  
Physiological flows and molecular transport, microcirculation, cell mechanics.

Lawrence P. Schramm  
Spinal cord injury and regeneration, neural regulation of the circulation.

Reza Shadmehr  
Co-director of the Biomedical Engineering PhD program: human motor control and learning in health and disease, functional imaging of the brain, human neurophysiology, computational and theoretical neuroscience.

Jeffrey H. Siewerdsen  
Medical imaging, image-guidance, flat-panel imagers, cone-beam CT, volume imaging, MRI, image science, imaging performance, radiation therapy.

Nitish V. Thakor  
Medical instrumentation, medical micro and nanotechnologies, neurological instrumentation, signal processing, and neural prosthesis.

Natalia Trayanova  
Murray B. Sachs Professor: computational cardiac electrophysiology and electro-mechanics, mechanisms of arrhythmogenesis and cardiac anti-arrhythmia therapies, cardiac dys synchrony and resynchronization, development of cardiac models from imaging modalities.

Leslie Tung  
Director of the Undergraduate program in Biomedical Engineering: Functional electro-physiology of cultured cardiac cell networks, cardiac arrhythmias, analysis of multicellular structure, stem cell-derived cardiac cells.

Xiaoqin Wang  
Neurophysiology of the auditory cortex, neural mechanisms of speech perception and learning, computational neuroscience.

Raimond L. Winslow  
Raj and Neera Singh Professor of Biomedical Engineering: computational cell biology, systems biology, cardiac electrophysiology.

Eric D. Young  
Auditory neurophysiology, neural modeling, sensory processes.

David T. Yue  
Co-director of the Biomedical Engineering PhD program: Ca2+ signaling experiments and modeling, as related to basic mechanisms and neuronal/cardiovascular disease; Ca2+ ion channels; calmodulin/Ca2+ channel decoding of channel nanodomain Ca2+ signaling; Ca2+ channel modulation; genetically encoded Ca2+ sensors; electrophysiology; fluorescence resonance energy transfer (FRET) imaging; confocal multiphoton, and total internal reflectance fluorescence (TIRF) imaging of Ca2+-related signaling; biophysics; molecular biology; biochemistry.

### Associate Professors

Joel S. Bader  
Bioinformatics, computational biology, systems biology, synthetic biology.
Rachel Karchin
Computational molecular biology, bioinformatics, genetic variation.

Scot C. Kuo
Cell motility and mechanics, nanoscale biophysics, laser-based
bioinstrumentation, advanced multiphoton and confocal microscopy.

Rene Vidal
Computer vision (camera sensor networks, recognition of human
activities, dynamic scene analysis, structure from motion), biomedical
imaging (processing of high angular resolution diffusion imaging,
registration and segmentation of diffusion MRI, segmentation and fiber
tracking of cardiac MRI, interactive medical image segmentation),
machine learning (generalized principal component analysis, manifold
learning and clustering, classification of dynamical systems), signal
processing (consensus on manifolds, distributed optimization,
compressive sensing).

Kevin J. Yarema
Director of the Master’s degree program in Biomedical Engineering:
metabolic glycoengineering, glycobiology, systems biology of
glycosylation, carbohydrate-based cancer drug design and delivery,
cellular responses to static magnetic fields.

Assistant Professors
Angelo Homayoun All
Spinal cord injury, stem cells, electrophysiology, imaging.

Michael A. Beer
Genomics and computational molecular biology.

Harry R. Goldberg
Assistant Dean of the School of Medicine: interactive simulations, virtual
classrooms.

Warren L. Grayson
Tissue engineering, stem cells, bioreactors, biomaterials and
orthopaedics.

Jordan J. Green
cellular engineering, nanobiotechnology, biomaterials, controlled drug
delivery and gene delivery.

Daniel Herzka
Cardiac magnetic resonance imaging, self-navigation, open-ended
imaging, fast imaging, high resolution imaging, applications of MRI in
cardiac electrophysiology, kinematic imaging, and fetal imaging.

Feilim Mac Gabhann
Computational modeling of growth factor-receptor networks, personalized
medicine, individualized medicine, experimental studies of interindividual
variation, therapeutic cardiovascular remodeling, novel methods for data
visualization and automated image analysis, computational models of
virus-host interactions.

Sridevi Sarma
Closed-loop deep brain stimulation, control theory, computational
neuroscience and large-scale optimization.

Winston Timp
Epigenetics, single cell analysis, single molecule biophysics,
nanotechnology, systems biology, computational biology/bioinformatics.

Youseph Yazdi
Medical instrumentation, medical device design, translation and
commercialization of medical devices, biophotonics, optical spectroscopy.

Kechen Zhang
Theoretical neuroscience, computational neuroscience, neural
computation.

Professors Emeriti
Richard J. Johns
University Distinguished Service Professor: Industrial liaison.

Murray B. Sachs
University Distinguished Service Professor: Auditory neurophysiology and
psychophysics

Artin A. Shoukas
Systems analysis of circulatory systems, systems physiology.

Adjunct Associate Professor
Yuan Gao
Methylation, transcriptomics and bioinformatics big data analytics and
visualization.

Research Professor
Alexander A. Spector
Biosolid mechanics, cell mechanics and biophysics, membrane
mechanics, mechanotransduction, molecular motors, mathematical and
computational modeling.

Associate Research Professor
Robert H. Allen
Design, education, biomechanics, birth mechanics.

Soumyadippta Acharya
Director of the Master’s degree program in Bioengineering Innovation
and Design: Biomedical instrumentation, medical device innovation,
neuroprosthetics, brain machine interfaces, computational neuroscience.

Joseph L. Greenstein
Assistant Research Scientist: cell biology, cardiac electrophysiology
and excitation-contraction coupling, ion channels, calcium signaling in
microdomains, biophysically detailed mathematical modeling.

J. Tilak Ratnamanther
Computational anatomy, biomedical imaging, numerical analysis,
mathematical biology of the cochlea.

Research Associate
Xiaofeng Jia
Clinical neuro-engineering—peripheral nerve, cardiac arrest and
hypothermia.

Niranjan Pandey
Angiogenesis, cancer, metastasis, peptide drugs, drug discovery.

David Sherman
Quantitative and clinical neurophysiology; EEG; seizure detection; signal
processing; instrumentation.

Web Stayman
Imaging physics, 3D image reconstruction, novel imaging systems, image-
guided interventions and diagnostic imaging.

Ramana Kumar Vinjamuri
Brain computer interfaces and neuroprostheses.

**Lecturers**

Lawrence B. Aronhime  
Senior Lecturer (Center for Leadership Education): innovation, business, technology commercialization, accounting, entrepreneurship, engineering management, business history.

Paul Fears  
Industrial design, medical device design.

Eileen Haase  
Freshmen Modeling and Design, System Bioengineering Laboratory I and II, Cell and Tissue Engineering Laboratory, Molecules and Cells, BME Teaching Practicum.

**Joint, Part-Time, and Visiting Appointments**

Mohamad E. Alaf  
Associate Professor (Urology): laparoscopic and robotic surgery.

Andreas G. Andreou  
Professor (Electrical and Computer Engineering): bioelectronics, integrated micro and nano devices for the life sciences, natural and synthetic sensory systems, neural computation.

Isaac N. Bankman  
Assistant Professor (Applied Physics Laboratory): biomedical signal and image processing.

Ronald D. Berger  
Professor (Department of Medicine, Division of Cardiology): mechanisms of sudden cardiac death, new modalities of ablation therapy, device development, signal processing.

Dan E. Berkowitz  
Professor (Anesthesiology and Critical Care Medicine): molecular mechanisms of cardiovascular deconditioning in rodent models of microgravity, vasoregulatory dysfunction associated with obesity, diabetes, the role of leptin in vasoregulatory changes.

Paul A. Bottomley  
Professor (Radiology): magnetic resonance imaging and spectroscopy, medical imaging.

Henry Brem  
Professor (Neurosurgery): clinical treatments for brain tumour, anti-angiogenesis therapies, computer navigation systems used during surgery, brain tumor vaccines.

Jeff W.M. Bulte  
Professor (Radiology): stem cells, cell therapy, imaging, nanotechnology, in vivo diagnostics.

Charles C. Della Santina  
Associate Professor (Otolaryngology–Head & Neck Surgery): electrical stimulation of the inner ear for restoring balance function, neurophysiology, vestibular function testing.

Andrew S. Douglas  
Vice Dean for Faculty for the Whiting School of Engineering, Professor (Mechanical Engineering): nonlinear solid mechanics, soft tissue mechanics, mechanics of active materials.

Paul A. Fuchs  
Professor (Otolaryngology): biophysics and sensory physiology of sensory hair cells and neurons on the inner ear.

Peter L. Gehlbach  
Associate Professor (Ophthalmology): microsurgical tools, angiogenesis, antiangiogenesis, viral vectors, oxidative injury as they apply to diseases of the retina and vitreous, microsurgical tools, angiogenesis, antiangiogenesis, viral vectors, oxidative injury.

Donald Geman  
Professor (Applied Mathematics and Statistics): statistical learning, visual recognition, computational genomics.

John Goutsias  
Professor (Electrical and Computer Engineering): complex interaction networks, biochemical reaction system modeling and analysis, computational systems biology.

Edith D. Gurewitsch  
Associate Professor (Gynecology and Obstetrics): birth simulation, birth mechanics, mechanical birth injury, shoulder dystocia, obstetric brachial plexus injury, human subjects testing.

Henry R. Halperin  
Professor (Medicine): cardiovascular medicine, MR compatible devices.

Justin Hanes  
Professor (Ophthalmology): drug and gene delivery, biomaterials synthesis, particle transport through biological barriers.

Kalina Hristova  
Associate Professor (Materials Science and Engineering): biomolecular materials, biomembranes, biosensor development, signal transduction across biological membranes.

Steven S. Hsiao  
Professor (Neuroscience): neurophysiology of the central nervous system.

Chao-Wei Hwang  
Assistant Professor (Cardiology): optimization of PCI and stent-based drug delivery using computational fluid dynamics, cell-based therapy for the heart and peripheral vasculature, active sensing drug delivery systems.

Pablo A. Iglesias  
Professor (Electrical and Computer Engineering): computational biology, models of cellular signal transduction, directed cell motility, cell division, control systems.

Bruno Jedynak  
Associate Research Professor (Applied Mathematics and Statistics): statistical models in image processing, language processing, genomics and neurosciences.

David A. Kass  
Professor (Cardiology): molecular pathophysiology of heart failure and hypertrophy, pathobiology of cardiac dyssynchrony and resynchronization, cardiac stress regulation by phosphodiesterase 5, nitric oxide synthase uncoupling, structure-function of sarcomeric proteins to cardiac mechanics, heart failure with preserved ejection fraction.

A. Jay Khanna  
Associate Professor (Orthopaedic Surgery): spine surgery, minimally invasive, musculoskeletal imaging, image guidance for surgery, MRI, biomechanics, clinical outcomes.

Konstantinos Konstantopoulos
Professor (Chemical and Biomolecular Engineering): cell adhesion and microfluidics, nanoscale mechanics, receptor biochemistry, quantitative modeling and functional genomics.

Albert C. Lardo
Associate Professor (Medicine): cardiovascular MRI, cardiovascular CT, image guided therapy.

Jonathan S. Lewin
Professor (Radiology): interventional MRI, intraoperative MRI, neuroradiology.

Hai-Quan Mao
Associate Professor (Materials Science and Engineering): nanomaterials, electrospinning, nanofibers, biomimetic matrix, stem cell expansion and differentiation, nerve regeneration, micellar nanoparticle, therapeutic delivery, biodegradable polymers.

Robert E. Miller
Associate Professor (Pathology Informatics): clinical laboratory instrumentation, laboratory information systems.

Wayne Mitzner
Professor (Environmental Health Sciences, Program in Respiratory Biology and Lung Disease): modeling lung function, lung structure-function interactions, mechanical aspects of lung disease.

Carey E. Priebe

Jerry L. Prince
Professor (Electrical and Computer Engineering): multi-dimensional signal processing, medical

Assistant Research Professor
Fijoy Vadakkumpadan
Patient-specific whole-heart modeling, ex vivo image-based cardiac modeling, image-based cardiac shape analysis, computational methods for brain surface mapping.

For current course information and registration go to https://isis.jhu.edu/classes/

Courses

**EN.580.106. Discover Hopkins: Nanoparticles for Drug Delivery Applications. 1 Credit.**
Humans have used medication to treat diseases for many centuries; however, with the ever growing pharmaceuticals industry and stronger, more effective agents being designed, it has become clear that getting these drugs to their target cells only is a significant issue. Possibly the most striking example is intravenously (IV) administered chemotherapy agents. Patients receiving IV chemotherapy experience severe side-effects throughout their entire body such as hair loss, fatigue, nausea and general pain. This clearly illustrates the need for delivering drugs locally or targeting them to reach only the desired tissues, and this is where the field of nanoparticle drug delivery comes into play. Drug delivery involves encapsulating drugs in a delivery vehicle that can help sustain the release at therapeutic levels over an increased period of time and deliver it to the desired site. This course will focus on current developments as well as the methods used in the field of nanoparticle.
Instructor(s): C. Bishop; K. Maisel
Area: Engineering, Natural Sciences.

**EN.580.111. BME Modeling and Design. 2 Credits.**
Working in teams with upperclassmen this course (1) introduces biomedical engineering freshmen to an orderly method for analyzing and modeling biological systems and (2) introduces engineering principles to solve design problems that are biological, physiological, and/or medical. Freshmen are expected to use the informational content being taught in calculus, physics and chemistry and apply this knowledge to the solution of practical problems encountered in biomedical engineering.
BME Freshmen only.
Instructor(s): E. Haase
Area: Engineering, Natural Sciences.

**EN.580.112. BME Design Group. 3 Credits.**
A two-semester course sequence where freshmen work with groups of BME upperclassmen mentors, and learn to use engineering principles to solve design problems that are biological, physiological, and/or medical. Freshmen are expected to use the informational content being taught in calculus, physics, and chemistry and apply this knowledge to the solution of practical problems encountered in biomedical engineering.
Instructor(s): R. Allen
Area: Engineering, Natural Sciences.

**EN.580.200. Introduction to Scientific Computing in BME using Python, Matlab, and R. 3 Credits.**
This course is an introduction to scientific programming and computing designed for first-year students. The aim is to develop core computer skills required to succeed in research. Programming projects are drawn from current biomedical applications within BME. Emphasis is on algorithm development, large scale data analysis, and effective visualization of results, using MATLAB, Python, and R. Prior programming experience is not required.
Instructor(s): M. Beer
Area: Engineering.
EN.580.202. BME in the Real World. 1 Credit.
Open only to engineering students; A series of weekly lectures to inform students about careers in biomedical engineering and to discuss technological, social, ethical, legal, and economic issues relevant to the profession. Topics include academic careers in biomedical engineering; biomedical engineering in industry (large corporations to sole entrepreneurship); health care delivery; ethical issues; legal issues (patenting, licensing, product liability); standards and government regulations; and economic issues in biomedical engineering industry (start-up companies, global businesses).
Instructor(s): A. Popel.

EN.580.211. BME Design Group. 3 Credits.
Sophomore-level version of EN.580.311-312 or Perm. Req’d
Instructor(s): R. Allen
Area: Engineering, Natural Sciences.

EN.580.212. BME Design Group. 3 Credits.
Sophomore-level version of EN.580.111-112. Permission of course directors required.
Instructor(s): R. Allen
Area: Engineering, Natural Sciences.

EN.580.221. Molecules and Cells. 4 Credits.
An introduction to modern molecular and cellular biology in the context of potential biomedical engineering applications. Topics covered: reactions between molecules, including receptor-ligand and antigen-antibody specificity, protein structure, enzyme catalysis, genetic information, protein processing and secretion, cell physiology and cell functions. Advanced quantitative treatment including multi-state kinetics, Monte Carlo simulations of biochemical reactions, and transport phenomena. Recommended Course Background: AS.030.101 and AS.030.104
Instructor(s): E. Haase
Area: Natural Sciences.

EN.580.222. Systems and Controls. 4 Credits.
An introduction to linear systems: analysis, stability and control. Topics include first and second order systems, linear time invariant discrete and continuous systems, convolution, Fourier series, Fourier transforms, Laplace transforms, stability of linear systems, input output and state space representation of linear systems, stability, observability, controllability, and PID controller design. Recommended Course Background: AS.171.102 and AS.110.201, AS.110.302 or EN.550.291
Instructor(s): M. Miller; S. Sarma
Area: Engineering.

EN.580.223. Models and Simulations. 4 Credits.
This course introduces students to modeling and analysis of biological systems. The first portion of the course focuses on linear systems. Topics include harmonic oscillators, pharmacokinetics, reaction-diffusion equation, heat transfer, and fluid flow. The second half of the course focuses on non-linear systems. Topics include iterated maps, bifurcations, chaos, stability of autonomous systems, the Hodgkin-Huxley model, bistability, limit cycles, and the Poincare-Bendixson theorem. The course also introduces students to the Matlab programming language, which allows them to implement the models discussed in class. Recommended Course Background: AS.110.201, AS.110.302, or EN.550.291
Instructor(s): A. Popel; M. Beer
Area: Engineering.

EN.580.302. Careers in Biomedical Engineering. 1 Credit.
See description for EN.580.202. This course is designed for upperclassmen that wish to meet with weekly speakers to discuss careers issues. Junior/Senior Engineers only.
Instructor(s): A. Popel.

EN.580.311. BME Design Group. 3 Credits.
A two-semester course sequence where juniors and seniors work with a team leader and a group of BME freshmen and sophomores, to solve open-ended problems in biomedical engineering. Upperclassmen are expected to apply their general knowledge and experience, and their knowledge in their concentration area, to teach lower classmen and to generate the solution to practical problems encountered in biomedical engineering. Perm. Req’d.
Instructor(s): R. Allen
Area: Engineering, Natural Sciences.

EN.580.312. BME Design Group. 3 Credits.
A two-semester course sequence where juniors and seniors work with a team leader and a group of BME freshmen and sophomores, to solve open-ended problems in biomedical engineering. Upperclassmen are expected to apply their general knowledge and experience, and their knowledge in their concentration area, to teach lower classmen and to generate the solution to practical problems encountered in biomedical engineering.
Instructor(s): R. Allen
Area: Engineering, Natural Sciences.

EN.580.315. Introduction to Information Processing of Sensory Signals. 3 Credits.
An introductory course to basic concepts of information processing of human communication signals (sounds, images) in living organisms and by machine. Role of sensory signals, introduction (or review) of basic concepts of signals and systems and of information theory, basic psychophysical concepts of auditory and visual perception, physiology of hearing and vision, engineering applications with emphasis on auditory models for speech coding and recognition.
Prerequisites: EN.520.214 OR EN.580.222 or instructor permission
Instructor(s): H. Hermansky

EN.580.320. How do Cells Compute?. 3 Credits.
Living cells have to make decisions to survive, and they excel at it. In this course, we will study in detail how cells use the static information in their DNA and dynamic information arriving from their environment to compute appropriate responses, how this computation can go terribly wrong in disease and how one can intervene to rectify the decision making. As a part of the course we will review the important concepts related to transcriptional regulation, signal transduction and paracrine cell-cell communication. Recommended Course Background: Introductory college level biology
Area: Engineering.

EN.580.321. Statistical Mechanics and Thermodynamics. 4 Credits.
Basic principles of statistical physics and thermodynamics with application to biological systems. Topics include fundamental principles of thermodynamics, chemical equilibrium and thermodynamics of reactions in solutions, and elementary statistical mechanics. Recommended Course Background: AS.110.108-AS.110.109, AS.030.101-AS.030.102, AS.171.101-AS.171.102; Freshman/Sophomore Chemistry and Physics
Instructor(s): M. Beer
Area: Engineering, Natural Sciences.
EN.580.404. The Bionic Ear: an odyssey from profound deafness to possible hearing. 1 Credit.
This course aims to examine the growth and success of cochlear implants as a biotechnology tool in aural rehabilitation. A unique perspective will come from Dr. Ratnanather who has been profoundly hearing impaired since birth via his impending CI surgery in mid-semester and subsequent activation. The course will consist of 10-12 seminars. Students will learn among other things the auditory system and clinical aspects of cochlear implantation. Each seminar will involve a discussion of one or two key papers and may include a talk by an otologist. The course will conclude with attendance at a day-long session on rehabilitation and music at CI2012 in downtown Baltimore which reflects Johns Hopkins’ pre-eminent position in pediatric aural rehabilitation. Pass/Fail Only.
Instructor(s): J. Ratnanather
Area: Engineering.

EN.580.410. BME Teaching Practicum. 2 Credits.
Senior biomedical engineering students will assist the core course instructors and PhD students in managing the sections and recitations and or lab component of a course. Permission required.
Instructor(s): M. Beer.

EN.580.411. BME Design Group. 3 Credits.
Senior-level version of EN.580.311-312. Permission of course directors required
Instructor(s): R. Allen
Area: Engineering.

EN.580.412. BME Design Group. 3 Credits.
Senior-level version of EN.580.311-312. Permission of course directors required
Instructor(s): R. Allen
Area: Engineering.

EN.580.413. Design-Team, Team Leader. 4 Credits.
A two-semester sequence where leaders direct a team of undergraduate biomedical engineering students in a series of design problems. Prior design team experience and permission of course director required. Perm. Req’d.
Instructor(s): R. Allen
Area: Engineering.

EN.580.414. Design Team/Team Leader. 4 Credits.
A two-semester sequence where leaders direct a team of undergraduate biomedical engineering students in a series of design problems. Prior design team experience and permission of course directors required.
Instructor(s): R. Allen
Area: Engineering.

EN.580.415. Ethics of Biomedical Engineering Innovation. 3 Credits.
Engineers confront problems and make decisions that hold long term social consequences for individuals, organizations, communities and the profession. For biomedical engineers, these decisions may relate to: inventions such as medical devices and pharmaceuticals; neural prosthetics and synthetic biological organisms; responsible and sustainable design; availability of biotechnology in the developing world. Using a combination of cases, fieldwork and readings, we examine the ethical issues, standards, theory and consequences of recent and emerging engineering interventions as a way to understand the profession and to form a basis for future decisions. In addition students will learn and practice multiple forms of communication, including oral, visual and written rhetoric. A particular focus will be communication targeted to different stakeholders including other professionals and the public. Students will apply good communication principle to the discussion of biomedical engineering ethics, develop their own ethical case studies and participate in group projects to aid ethical decision-making, and to improve communication of complex biomedical ethical issues to others. Co-listed with 661.425
Instructor(s): F. Macgabhann
Area: Social and Behavioral Sciences
Writing Intensive.

EN.580.420. Build-a-Genome. 4 Credits.
Must understand fundamentals of DNA structure, DNA electrophoresis and analysis, Polymerase Chain Reaction (PCR) and must be either a) Experienced with molecular biology lab work or b) Adept at programming with a biological twist. In this combination lecture/laboratory “Synthetic Biology” course students will learn how to make DNA building blocks used in an int’l. project to build the world’s first synthetic eukaryotic genome, Saccharomyces cerevisiae v. 2.0. Please study the wiki www.syntheticyeast.org for more details about the project. Following a biotechnology boot-camp, students will have 24/7 access to computational and wet-lab resources and will be expected to spend 15-20 hours per week on this course. Advanced students will be expected to contribute to the computational and biotech infrastructure. Successful completion of this course provides 3 credit hours toward the supervised research requirement for Molecular and Cellular Biology majors, or 2 credit hours toward the upper level elective requirement for Biology or Molecular and Cellular Biology majors.
Instructor(s): J. Bader; J. Boeke; K. Zeller
Area: Engineering, Natural Sciences.

EN.580.421. Systems Bioengineering I. 4 Credits.
A quantitative, model-oriented investigation of the cardiovascular system. Topics are organized in three segments. (1) Molecular/cellular physiology, including electrical signaling and muscle contraction. (2) Systems cardiovascular physiology, emphasizing circuit-diagram analysis of hemodynamics. (3) Cardio-vascular horizons and challenges for biomedical engineers, including heart failure and its investigation/treatment by computer simulation, by gene-array analysis, by stem-cell technology, and by mechanical devices (left-ventricular assist and total-heart replacement). Recommended Course Background: EN.580.221 and EN.580.222
Instructor(s): N. Trayanova
Area: Engineering, Natural Sciences.
EN.580.422. Systems Bioengineering II. 4 Credits.
A quantitative, model-oriented approach to the study of the nervous system. Topics include functional anatomy of the central and autonomic nervous systems, neurons and networks, learning and memory, structure and function of the auditory and visual systems, motor systems, and neuro-engineering. Recommended Course Background: EN.580.221, EN.580.222, AS.110.302, EN.580.421; Corequisite: EN.580.424
Instructor(s): E. Haase; X. Wang
Area: Engineering, Natural Sciences.

EN.580.423. Systems Bioengineering Lab I. 2 Credits.
A two-semester laboratory course in which various physiological preparations are used as examples of problems of applying technology in biological systems. The emphasis in this course is on the design of experimental measurements and on physical models of biological systems. Priority to Junior BME majors. Recommended Corequisite: EN.580.421.
Instructor(s): E. Haase
Area: Natural Sciences.

EN.580.424. Systems Bioengineering Lab. 2 Credits.
A laboratory course in which various physiological preparations are used as examples of problems of applying technology in biological systems. The emphasis in this course is on the design of experimental measurements and on physical models of biological systems. Recommended Corequisite: EN.580.422
Instructor(s): E. Haase.

EN.580.425. Ion Channels in Excitable Membranes. 3 Credits.
Ion channels are key signaling molecules that support electrical communication throughout the body. As such, these channels are a central focus of biomedical engineering as it relates to neuroscience, computational biology, biophysics, and drug discovery. The course introduces the engineering and molecular strategies used to understand the function of ionic channels. The course also surveys key papers that paint the current picture of how ion channels open and conduct ions. Biological implications of these properties are emphasized throughout. Finally, the course introduces how optical and electrophysiological methods now promise to revolutionize understanding of ionic channels. This course can be seen as a valuable partner of Models of the Neuron (EN.580.439). Recommended Course Background: EN.580.421 and EN.580.422 or equivalent, AS.110.201, AS.110.302
Instructor(s): D. Yue.
Area: Engineering, Natural Sciences.

EN.580.426. Biofluid Mechanics. 3 Credits.
Course will cover selected topics from physiological fluid dynamics, including respiratory flow patterns, blood flow and pulse propagation, aerodynamics of phonation and speech, rheology of blood flow in the microcirculation, aquatic animal propulsion, and animal flight. Co-listed with EN.530.426
Area: Engineering.

EN.580.427. Systems Bioengineering III. 4 Credits.
Computational and theoretical systems biology at the cellular and molecular level. Topics include organizational patterns of biological networks; analysis of metabolic networks, gene regulatory networks, and signal transduction networks; inference of pathway structure; and behavior of cellular and molecular circuits. Recommended Course Background: EN.580.221 and EN.580.222 or Permission Required.
Instructor(s): J. Bader
Area: Engineering, Natural Sciences.

EN.580.428. Bioelectricity. 3 Credits.
This course has been revised to include numerous examples of bioelectrically active tissues and organs, complemented by relevant engineering principles. Topics include bioelectric currents and potentials, measurements of biological electric fields, wound repair in skin and epithelia, early history of bioelectricity, volume conductor theory, cardiac electrophysiology, and lead theory, electromanipulation of cells, galvanotaxis, stem cell development, bone repair, and neuronal growth. Recommended Prereqs: EN.580.421 and EN.580.422.
Instructor(s): L. Tung
Area: Engineering.

EN.580.439. Models of the Neuron. 4 Credits.
Single-neuron modeling, emphasizing the use of computational models as links between the properties of neurons at several levels of detail. Topics include thermodynamics of ion flow in aqueous environments, biology and biophysics of ion channels, gating, nonlinear dynamics as a way of studying the collective properties of channels in a membrane, synaptic transmission, integration of electrical activity in multi-compartment dendritic tree models, and properties of neural networks. Students will study the properties of computational models of neurons; graduate students will develop a neuron model using data from the literature. Recommended Course Background: AS.110.301, EN.580.421-EN.580.422 or equivalent. Meets with EN.580.639
Instructor(s): E. Young
Area: Engineering, Natural Sciences.

EN.580.440. Cell & Tissue Engineer. 3 Credits.
Lectures provide an overview of molecular biology fundamentals, an extensive review on extracellular matrix and basics of receptors, followed by topics on cell-cell and cell-matrix interactions at both the theoretical and experimental levels. Subsequent lectures will cover the effects of physical (shear, stress, strain), chemical (cytokines, growth factors), and electrical stimuli on cell function, emphasizing topics on gene regulation and signal transduction processes. Material on cell-cycle, apoptosis, metabolic engineering and gene therapy will also be incorporated into the course. Junior, Senior, Graduate students only. Recommended Course Background: EN.580.421-EN.580.422
Instructor(s): J. Elisseeff; K. Yarema
Area: Engineering, Natural Sciences.

EN.580.441. Cellular Engineering. 3 Credits.
This course focuses on principles and applications in cell engineering. Class lectures include an overview of molecular biology fundamentals, protein/ligand binding, receptor/ligand trafficking, cell-cell interactions, cell-matrix interactions, and cell adhesion and migration at both theoretical and experimental levels. Lectures will cover the effects of physical (e.g. shear stress, strain), chemical (e.g. cytokines, growth factors), and electrical stimuli on cell function, emphasizing topics on gene regulation and signal transduction processes. Furthermore, topics in metabolic engineering, enzyme evolution, polymeric biomaterials, and drug and gene delivery will be discussed. This course is intended as Part 1 of a two-semester sequence recommended for students in the Cell and Tissue Engineering focus area. Recommended Course Background: EN.580.221 or AS.020.305 and AS.020.306 or equivalent and AS.030.205 Meets with EN.580.641
Instructor(s): J. Green; K. Yarema
Area: Engineering.
EN.580.442. Tissue Engineering. 3 Credits.
This course focuses on the application of engineering fundamentals to designing biological tissue substitutes. Concepts of tissue development, structure and function will be introduced. Students will learn to recognize the majority of histological tissue structures in the body and understand the basic building blocks of the tissue and clinical need for replacement. The engineering components required to develop tissue-engineered grafts will be explored including biomechanics and transport phenomena along with the use of biomaterials and bioreactors to regulate the cellular microenvironment. Emphasis will be placed on different sources of stem cells and their applications to tissue engineering. Clinical and regulatory perspectives will be discussed. Recommended Course Background: EN.580.221 or AS.020.305 and AS.020.306, AS.030.205 Recommended EN.580.441/EN.580.641 Co-listed with EN.580.642
Instructor(s): E. Haase
Area: Engineering, Natural Sciences.

EN.580.445. Introduction to Speech and Audio Processing. 3 Credits.
Area: Engineering.

EN.580.446. Survey of Synthetic Biology. 1 Credit.
This course surveys basic fundamentals and current topics in synthetic biology including genome synthesis strategies, synthetic genetic systems, the engineering of proteins and genetic circuits, modeling of signaling and genetic circuits, and intellectual property issues. Meets with AS.020.451/EN.540.446.

EN.580.448. Biomechanics of the Cell. 3 Credits.
Mechanical aspects of the cell are introduced using the concepts in continuum mechanics. We will discuss the role of proteins, membranes and cytoskeleton in cellular function and how to describe them using simple mathematical models. Recommended course background: AS.171.101-102, AS.110.108-109 and AS.110.202
Instructor(s): J. Elisseef; W. Grayson
Area: Engineering.

Cell and tissue engineering is a field that relies heavily on experimental techniques. This laboratory course will consist of three six experiments that will provide students with valuable hands-on experience in cell and tissue engineering. Students will learn basic cell culture procedures and specialized techniques related to faculty expertise in cell engineering, microfluidics, gene therapy, microfabrication and cell encapsulation. Experiments include the basics of cell culture techniques, gene transfection and metabolic engineering, basics of cell-substrate interactions I, cell-substrate interactions II, and cell encapsulation and gel contraction. Co-listed with EN.530.451. Senior and Graduate students only; others, instructor permission required. Fall semester only. Lab Fee: $100
Instructor(s): E. Haase
Area: Engineering, Natural Sciences.

EN.580.452. Cell and Tissue Engineering Lab. 2 Credits.
This laboratory course will consist of three experiments that will provide students with valuable hands-on experience in cell and tissue engineering. Experiments include the basics of cell culture techniques, gene transfection and metabolic engineering, basics of cell-substrate interactions I, cell-substrate interactions II, and cell encapsulation and gel contraction. Spring semester only.
Instructor(s): E. Haase
Area: Engineering, Natural Sciences.

EN.580.455. Introduction to Orthopaedic Biomechanics. 3 Credits.
This course will cover static and dynamic force in the musculoskeletal systems, joint reactions, soft and hard tissue response to force loads, muscle mechanics, material properties, biomechanical lumped parameter systems, modeling and injury mechanisms. Co-listed with EN.580.655.
Instructor(s): R. Allen
Recommended Course Background: AS.110.302
Area: Engineering.

EN.580.456. Introduction to Rehabilitation Engineering. 3 Credits.
The primary objective of this course is to introduce biomedical engineering students to the challenges of engineering solutions for persons functioning with disabilities. In order to achieve this goal, other objectives include: gaining a basic appreciation of the modalities used to treat impairments, the opportunities for application of engineering to improve treatment delivery, understanding the science and engineering applied to helping persons with disabilities function in the everyday world and an basic knowledge of the legal, ethical issues and employment opportunities in rehabilitation engineering. By the conclusion of the course, students should be able to: understand the breadth and scope of physical impairment and disability and its associated pathophysiology characterize the material and design properties of current modalities of treatment of impairments and adaptations for disability • Apply engineering analysis and design principles to critique current and design new solutions for persons with disabilities
Instructor(s): S. Paul
Area: Engineering.

EN.580.466. Statistical Methods in Imaging. 3 Credits.
Denosing, segmentation, texture modeling, tracking, object recognition are challenging problems in imaging. We will present a collection of statistical models and methods in order to adress these, including the E.M algorithm, Maximum Entropy Modeling, Markov Random Fields, Markov Chain Monte Carlo, Boltzmann Machines and Multilayer Perceptrons. Recommended Course Background: AS.110.202 and EN.550.310 or equivalent.
Instructor(s): B. Jedynak
Area: Engineering, Quantitative and Mathematical Sciences.
EN.580.469. Design of Economic Health Care Technologies. 2 Credits.
Permission of instructor. This spring semester course is offered to juniors and seniors in engineering with an interest in developing economic health care technologies for global health care needs. Health care technologies for global use need to be cost effective and serve the needs of the disadvantaged population. In the US as well health care costs are spiraling and economic health care technologies and solutions will be necessary. This laboratory course will focus on identifying the health care needs, coming up with innovative technical solutions, designing and building such instrument prototypes and exploring how such technologies can be disseminated globally. A new laboratory, EcoHealth, will be set up to do rapid prototyping and the students will do independent designs in this lab after doing proper needs identification and will be responsible for finding appropriate target needs. Students will be required to write the problem statement and the need analysis, submit a patent on the design, and a short proposal to seek funding from philanthropic or Government/ non Government agencies. The course will focus on hands on design and projects, doing research and writing reports (or patents) pertaining to novel and useful technologies, and will receive 2 design credits and writing credits. This course, along with the 4 credit 580.471 (Principles of Design of Medical Instrumentation) offered in fall, and the 2 credit 580.571 (Honors Instrumentation) offered during the Intersession comprises an 8 credit design sequence that can serve the requirements for a full Capstone Design experience. The enrollment is restricted and subject to approval by the instructor, Prof. Nitish Thakor (nitish@jhu.edu). Selection of the students will depend on commitment and experience with hands on design and instrumentation development and an interest in global health care needs.
Area: Engineering
Writing Intensive.

EN.580.470. Biomedical Instrumentation I: Molecular and Cellular. 3 Credits.
This core design course will explore the fundamentals of molecular and cellular measurements, related technologies and their applications in scientific research. Course will include a guided lab. Seniors/ Graduate students only. Juniors with permission. Recommended Course Background: EN.520.345
Area: Engineering, Natural Sciences
Writing Intensive.

EN.580.471. Principles of Design of BME Instrumentation. 4 Credits.
This core design course will cover lectures and hands-on labs. The material covered will include fundamentals of biomedical sensors and instrumentation, FDA regulations, designing with electronics, biopotentials and ECG amplifier design, recording from heart, muscle, brain, etc., diagnostic and therapeutic devices (including pacemakers and defibrillators), applications in prosthetics and rehabilitation, and safety. The course includes extensive laboratory work involving circuits, electronics, sensor design and interface, and building complete biomedical instrumentation. The students will also carry out design challenge projects, individually or in teams (examples include “smart cane for blind,” “computer interface for quadriplegic”). Students satisfying the design requirement must also register for EN.580.571. Lab Fee: $150. Recommended Course Background: EN.520.345
Instructor(s): N. Thakor
Area: Engineering, Natural Sciences.

EN.580.472. Topics in Medical Imaging Systems. 3 Credits.
An introduction to the physics, instrumentation, and signal processing methods used in general radiography, X-ray computed tomography, ultrasound imaging, magnetic resonance imaging, and nuclear medicine. The primary focus is on the methods required to reconstruct images within each modality, with emphasis on the resolution, contrast, and signal-to-noise ratio of the resulting images. Cross-listed with Neuroscience and Electrical and Computer Engineering (EN.520.432).
Instructor(s): J. Prince
Area: Engineering.

EN.580.473. Modern Biomedical Imaging Instrumentation and Techniques. 3 Credits.
An intermediate biomedical imaging course covering modern biomedical imaging instrumentation and techniques as applied to diagnostic radiology and other biomedical applications. It includes recent advances in various biomedical imaging modalities, multi-modality imaging and molecular imaging. The course is team taught by experts in the respective fields and provides a broad based knowledge of modern biomedical imaging to prepare students for graduate studies and research in biomedical imaging. Also, the course will offer tours and practical experience with modern biomedical imaging equipment in clinical and research settings. Co-listed with EN.520.434 Recommended course background: EN.520.432 or EN.580.472
Prerequisites: EN.520.432 OR EN.580.472
Instructor(s): B. Tsui
Area: Engineering, Natural Sciences.

EN.580.474. Molecular and Cellular Imaging. 3 Credits.
Introduction to non-invasive imaging techniques as applied to an early diagnosis of disease, altered gene expression, cellular therapeutics, and fundamental molecular or metabolic changes. Includes magnetic resonance imaging, radionuclide imaging, and optical imaging techniques. Covered will be: principles of specific targeting and non-specific uptake of diagnostic contrast agents; NMR spectroscopy of metabolic changes in cancer; use of cell tracking using exogenous tags; imaging of stem cells; imaging using reporter genes, theranostics (combined therapeutics and diagnostics), imaging cancer, imaging of neurodegenerative disease, and imaging of cardiovascular disease. The emphasis of the overall course is to learn how molecular/ cellular imaging will change the way future diagnostic radiology and drug development will be practiced.
Prerequisites: EN.580.221 or equivalent. Senior Standing or Permission of instructor required.
Area: Engineering.

EN.580.476. Magnetic Resonance in Medicine. 3 Credits.
This course provides the student with a complete introduction to the physical principles, hardware design, and signal processing used in magnetic resonance imaging and magnetic resonance spectroscopy. The course is designed for students who wish to pursue research in magnetic resonance. Recommended course background: EN.580.222 or EN.520.214. Co-listed with EN.580.673.
Instructor(s): P. Bottomley; W. Edelstein
Area: Engineering.
EN.580.477. Advanced Topics in Magnetic Resonance Imaging. 3 Credits.
An advanced imaging course with in-depth quantitative coverage of topics central to magnetic resonance imaging, ranging from techniques currently used in the radiology practice to new developments at the cutting edge of MRI research. Topics include: steady-state imaging and contrast mechanisms, MRI simulations, RF pulse and coil design, flow imaging and angiography, cardiac imaging, diffusion imaging, functional MRI, parallel imaging, and high-field imaging. As part of the course, students will be expected to read and understand classic and current literature. The course is taught by a team of experts in the respective fields and will provide an excellent foundation for students interested in deep understanding of magnetic resonance imaging.
Instructor(s): D. Herzka
Area: Engineering.

EN.580.484. Ultrasound Imaging: Theory and Applications. 3 Credits.
This course is designed to teach students the theory behind ultrasound imaging and provide an opportunity to apply this theory in a final project. The projects will be centered around advanced beamformers, photoacoustic imaging and thermal imaging. Recommended course background: EN.520.432 or EN.580.472 or equivalent.
Instructor(s): E. Boctor; M. Bell
Area: Engineering.

EN.580.488. Foundations of Computational Biology & Bioinformatics II. 3 Credits.
This course will introduce probabilistic modeling and information theory applied to biological sequence analysis, focusing on statistical models of protein families, alignment algorithms, and models of evolution. Topics will include probability theory, score matrices, hidden Markov models, maximum likelihood, expectation maximization and dynamic programming algorithms. Homework assignments will require programming in Python. Foundations of Computational Biology I is not a prerequisite. Recommended Course Background: Math through linear algebra and differential equations, EN.580.221 or equivalent, EN.600.226 or equivalent.
Instructor(s): R. Karchin
Area: Engineering, Natural Sciences.

EN.580.491. Learning Theory. 3 Credits.
The course introduces the probabilistic foundations of learning theory. We will discuss topics in regression, estimation, optimal control, system identification, Bayesian learning, and classification. Our aim is to first derive some of the important mathematical results in learning theory, and then apply the framework to problems in biology, particularly animal learning and control of action. Recommended Course Background: Math through linear algebra and differential equations, EN.580.221 or equivalent, EN.600.226 or equivalent.
Instructor(s): R. Karchin
Area: Engineering, Natural Sciences.

EN.580.492. Build-a-Genome Mentor. 4 Credits.
In addition to producing and sequencing DNA segments like regular B-a-G students, mentors will help prepare and distribute reagents, and maintain a Moddle site to track student reagent use and productivity. Mentors will also be expected to mentor specific students who are learning new techniques for the first time, contribute to the computational and biotech infrastructure associated with Build-a-Genome, and pursue at least one independent research project. Successful completion of this course provides 3 credit hours toward the supervised research requirement for Molecular and Cellular Biology majors. Co-listed AS.020.451 Permission Required.
Instructor(s): J. Bader; J. Boeke; K. Zeller
Area: Engineering, Natural Sciences.

EN.580.495. Microfabrication Lab. 4 Credits.
This laboratory course introduces the principles used in the construction of microelectronic devices, sensors, and micromechanical structures. Students will work in the laboratory on the fabrication and testing of a device. Accompanying lecture material covers basic processing steps, design and analysis CAD tools, and national foundry services. Co-listed with EN.530.495 and EN.520.495 Seniors only. Permission Required.
Instructor(s): A. Andreou; J. Wang
Area: Engineering, Natural Sciences.

EN.580.501. Fall BME Research - Freshman/Sophomore. 3 Credits.
Instructor(s): Staff.

EN.580.502. Spring BME Research - Freshman/Sophomore. 0 - 3 Credit.
Pacticum in Biomedical Engineering Research projects or engineering design projects under the supervision of any member of the BME faculty.
Instructor(s): Staff.

EN.580.511. Fall BME Independent Study - Freshman/Sophomore. 3 Credits.
Instructor(s): K. Yarema; M. Beer; R. Allen.

EN.580.512. Spring BME Independent Study - Freshman/Sophomore. 0 - 3 Credit.
Directed readings or other literature research under the direction of any member of the BME faculty.
Instructor(s): Staff.

EN.580.531. Fall BME Research - Junior/Senior. 3 Credits.
Instructor(s): Staff.

EN.580.532. Spring BME Research - Junior/Senior. 3 Credits.
Research projects or engineering design projects under the supervision of any member of the BME faculty.
Instructor(s): Staff
Area: Engineering.

EN.580.541. Fall BME Independent Study - Junior/Senior. 3 Credits.
Directed readings or other literature research under the direction of any BME faculty member. Junior or Senior standing.
Instructor(s): Staff.

EN.580.542. Spring BME Independent Study - Junior/Senior. 0 - 3 Credit.
Directed readings or other literature research under the direction of any BME faculty member.
Instructor(s): Staff.

EN.580.571. Honors Instrumentation. 2 Credits.
Student must have taken 580.471/771. Students will develop a term paper and patent application and carry out a hands-on individual or team project throughout the semester. Previous projects include design of EEG amplifier, voltage clamp and patch clamp, vision aid of blind, pacemaker/defibrillator, sleep detection and alert device, glucose sensor and regulation, temperature controller, eye movement detection and device control, ultrasound ranging and tissue properties, impedance plethysmography, lie detector, blood alcohol detector, pulse oximeter, etc.
Prerequisites: EN.580.471 OR EN.580.771
Instructor(s): N. Thakor
Area: Engineering.

EN.580.580. Senior Design Project. 3 Credits.
Per Independent or team design project to design and evaluate a system. The design should demonstrate creative thinking and experimental skills, and must draw upon advanced topics of biomedical and traditional engineering. Permission Required.
Instructor(s): R. Allen.
EN.580.581. Senior Design Project. 3 Credits.
Independent or team design project to design and evaluate a system. The design should demonstrate creative thinking and experimental skills, and must draw upon advanced topics of biomedical and traditional engineering. Permission Required.
Instructor(s): R. Allen.

EN.580.590. Biomedical Internship. 1 Credit.
Instructor(s): A. Shoukas; J. Bader; L. Tung; S. Sarma; X. Wang.

EN.580.595. BME Senior Design-Summer. 3 Credits.
Instructor(s): J. Green; L. Schramm; R. Allen.

EN.580.597. BME Research - Summer. 3 Credits.
Instructor(s): Staff.

EN.580.598. Design Project. 3 Credits.
Instructor(s): R. Allen.

EN.580.599. Independent Study. 3 Credits.
Instructor(s): A. Shoukas; H. Goldberg; K. Yarem; N. Thakor; S. Kuo.

EN.580.601. Special Topics in Bioengineering Innovation and Design.
This year long seminar series features experts from the medical device industry, venture capital firms, FDA, patent attorneys, entrepreneurs, and many more. They will share their real-world insights into the medical device innovation and commercialization process. Some of the topics covered will include bioethics, regulatory and reimbursement planning, medical device recalls, good design practices, and entrepreneurial success stories. The overarching philosophy of this seminar series is to complement the theoretical and practical aspects of the program curriculum, by learning from the experiences and insights of professionals in the field. These seminars are taken in a sequence of summer, fall, and spring. They are required for CBID masters students and are open to those students only.
Instructor(s): S. Acharya.

EN.580.602. Special Topics in Bioengineering Innovation and Design.
This year long seminar series features experts from the medical device industry, venture capital firms, FDA, patent attorneys, entrepreneurs, and many more. They will share their real-world insights into the medical device innovation and commercialization process. Some of the topics covered will include bioethics, regulatory and reimbursement planning, medical device recalls, good design practices, and entrepreneurial success stories. The overarching philosophy of this seminar series is to complement the theoretical and practical aspects of the program curriculum, by learning from the experiences and insights of professionals in the field. For CBID MSE students only. Registration with instructor’s permission only.
Instructor(s): S. Acharya.

EN.580.603. Special Topics in Bioengineering Innovation & Design.
This year long seminar series features experts from the medical device industry, venture capital firms, FDA, patent attorneys, entrepreneurs, and many more. They will share their real-world insights into the medical device innovation and commercialization process. Some of the topics covered will include bioethics, regulatory and reimbursement planning, medical device recalls, good design practices, and entrepreneurial success stories. EN.580.604. The Business of Bioengineering Innovation and Design.
This course comprises two distinct, but related, components. The first is a broad introduction to the terms, concepts, and values of business and management. Particular emphasis will be placed on the economic, financial, and corporate contexts of our business culture, and how they impact the organization, strategy, and decision-making of business firms. The second component is an introduction to the sociological and economic forces that shape the development and diffusion of new technologies. This part is primarily designed to provide a framework for determining the commercial viability of new medical devices and the best path for realizing their value, including how to develop a compelling value proposition, analyze markets and competitors, and protect intellectual property. Throughout, the course utilizes individual exercises, case analyses, and team projects.
Instructor(s): L. Aronhime.

EN.580.605. Business of Bioengineering Innovation and Design.
This course comprises two distinct, but related, components. The first is a broad introduction to the terms, concepts, and values of business and management. Particular emphasis will be placed on the economic, financial, and corporate contexts of our business culture, and how they impact the organization, strategy, and decision-making of business firms. The second component is an introduction to the sociological and economic forces that shape the development and diffusion of new technologies. This part is primarily designed to provide a framework for determining the commercial viability of new medical devices and the best path for realizing their value, including how to develop a compelling value proposition, analyze markets and competitors, and protect intellectual property. Throughout, the course utilizes individual exercises, case analyses, and team projects. CBID MSE students only.
Instructor(s): L. Aronhime.

Throughout, the course utilizes individual exercises, case analyses, and team projects. CBID MSE students only.
Instructor(s): L. Aronhime.

EN.580.607. Regulation of Medical Devices.
This course introduces graduate students in Bioengineering Innovation and Design to the medical device regulatory framework, as it pertains to bringing a medical device from concept to market. Topics covered include: FDA Design Controls; Regulatory Approval mechanisms, including the 510k and PMA process; Investigational Device exemption (IDE); planning clinical trials needed for bringing a medical device to market; and postmarket surveillance. Students learn from a series of invited lecturers from the FDA as well as professionals from the medical device industry. This summer course is required for CBID masters students and is not open to any other students.
Instructor(s): S. Acharya.
EN.580.608. Identification and Validation of Medical Device Needs. This course teaches the art and skill of identifying medical device opportunities by experiencing real world scenarios in an immersive clinical environment. Students rotate through multiple clinical disciplines and become part of the team of senior clinicians, surgeons, residents, fellows, nurses and medical technologists. They learn to identify unmet medical device needs through direct observations in a variety of clinical settings including the hospital ward and operating room, interviews (with patients, doctors, nurses, hospital administration), literature survey, and more. Concurrently, they learn the process of filtering all observations to a few valid medical device opportunities by assessing the market size, intellectual property landscape, regulatory framework, and competitor dynamics in addition to the clinical impact that such a device could have. The ability to identify a relevant medical device need is an important first step in the medical device innovation cycle; this course aims to provide students with practical hands-on training in that process. Instructor(s): C. Weiss; H. Nguyen; S. Acharya.

EN.580.609. Bme Teaching Practicum. Instructor(s): E. Haase.

EN.580.611. Medical Device Design and Innovation. For CBID MSE students only. Registration with instructor’s permission only. Instructor(s): S. Acharya.

EN.580.612. Medical Device Design and Innovation. For CBID MSE students only. Instructor(s): S. Acharya.

EN.580.616. Introduction to Linear Dynamical Systems. This course examines linear, discrete- and continuous-time, and multi-input-output systems in control and related areas. Least squares and matrix perturbation problems are considered. Topics covered include state-space models, stability, controllability, observability, transfer function matrices, realization theory, feedback compensators, state feedback, optimal regulation, observers, observer-based compensators, measures of control performance, and robustness issues using singular values of transfer functions. BME EN.580.616 can be used to fulfill the requirement of ME EN.530.616 or ECE EN.520.601. Instructor(s): S. Sarma.

EN.580.618. Needs and Validation of Global Health Innovation. Limited to CBID students only Instructor(s): S. Acharya.

EN.580.619. Bioengineering Innovation and Design - Global Health. For CBID MSE students only. Registration with instructor’s permission only. Instructor(s): S. Acharya.

EN.580.620. Principles and Practice of Global Health Innovation and Design. For CBID MSE students only. Instructor’s Permission Required. Instructor(s): S. Acharya.

EN.580.621. Insight Informed Innovation. For CBID MSE students only. Registration with instructor’s permission only. Instructor(s): B. Craft; P. Fearis.

EN.580.625. Structure and Function of the Auditory and Vestibulary Systems. This course will cover basic mechanisms and functions of the inner ear and brainstem. This is a companion course and alternates with EN.580.626, although these can be taken in either order. The focus is on transmission and transduction of sound and head movements by the auditory and vestibular periphery. Topics include: cellular and molecular mechanisms of mechanotransduction, synaptic signaling and development, primary afferents and the first-order brainstem nuclei, as well as clinical consequences of peripheral damage. Undergraduates with knowledge in Neuroscience welcome. Recommended Course Background: an introduction to neuroscience. Instructor(s): E. Glowatzki; P. Fuchs.

EN.580.626. Structure & Function of the Auditory and Vestibular Brain. Brain mechanisms and perception of sound and balance. This course is an accompaniment for EN.580.625, although the courses can be taken in either order. Topics include representation of sound and balance in neural discharge patterns, anatomy of the central auditory and vestibular systems, synaptic transmission and signal processing in central neurons, and complex sound perception and movement control. Aspects such as speech perception, sound localization, vestibular reflexes and vestibular compensation are discussed with an integrated perspective covering perceptual, physiological, and mechanistic data. Recommended Course Background: EN.580.422 or equivalent, EN.580.222 Taught at the School of Medicine.

EN.580.628. Topics in Systems Neuroscience. This course consists of weekly discussions of current literature in systems neuroscience. The selected readings will focus on neural mechanisms for perception, attention, motor behavior, learning, and memory, as studied using physiological, psychophysical, computational, and imaging techniques. Students are expected to give presentations and participate in discussions. Recommended Course Background: AS.110.302, EN.520.214, EN.580.421 or equivalent. Instructor(s): K. Zhang; X. Wang.

EN.580.630. Theoretical Neuroscience. Theoretical methods for analyzing information encoding and functional representations in neural systems. Models of single and multiple neural spike trains based on stochastic processes and information theory; detection and estimation of behaviorally relevant parameters from spike trans; system theoretic methods for analyzing sensory receptive fields; network models of neural systems. Both theoretical methods and the properties of specific well-studied neural systems will be discussed. Recommended Course Background: EN.580.422 or equivalent, EN.550.420 or equivalent, EN.580.222 or equivalent. Instructor(s): K. Zhang.
EN.580.632. Ionic Channels in Excitable Membranes.
Ion channels are key signaling molecules that support electrical communication throughout the body. As such, these channels are a central focus of biomedical engineering as it relates to neuroscience, computational biology, biophysics, and drug discovery. The course introduces the engineering and molecular strategies used to understand the function of ion channels. The course also surveys key papers that paint the current picture of how ion channels open and conduct ions. Biological implications of these properties are emphasized throughout. Finally, the course introduces how optical and electrophysiologic methods now promise to revolutionize understanding of ion channels. This course can be seen as a valuable partner of Models of the Neuron (EN.580.439). Recommended Course Background: EN.580.421 and EN.580.422 or equivalent, AS.110.201, AS.110.302
Instructor(s): D. Yue
Area: Engineering, Natural Sciences.

EN.580.633. Horizons in Biological Calcium and Voltage Signaling.
Introductory survey of current and classic discoveries relating to calcium and voltage signaling in biology. Fluctuations of free calcium concentration within cells, and electrical potential differences across cell membranes, turn out to be the currency by which information is communicated in relation to a vast array of vital biological processes. Understanding how these signals are generated, encoded, and decoded is therefore the key to unraveling complex biological signaling networks, and a Rosetta stone for next-generation disease treatments at the molecular and cellular level. Students and faculty will present a mixture of papers and didactic lectures that will give a flavor of this burgeoning area of biophysics, engineering, and systems biology. Appropriate for seniors and graduate students of all levels.
Instructor(s): D. Yue.

EN.580.634. Bioelectricity.
Instructor(s): L. Tung.

EN.580.635. Topics In Bioelectromagnetic Phenomena.
This course reviews theoretical concepts and experimental approaches used to characterize electric, magnetic, and electromagnetic phenomena that arise in biological tissues. Topics include volume conductor models of cells and tissues, complex conductive properties of tissue and cell suspensions, bioelectric and biomagnetic measurements, electric and magnetic stimulation, and impedance plethysmography. Selected topics will be chosen for oral presentations by class participants. Course taught at the School of Medicine.

EN.580.637. Contemporary Topics in the Engineering of Cardiac Tissue.
Cardiac ionic currents, molecular correlates and blockers, calcium clock repolarization reserve, alternans, electrical remodeling, cardiac memory, defective calcium cycling, ion channel mutations, human embryonic stem cells, paracrine signaling, extracellular matrix and cytoskeleton, synthetic tissue scaffolds, in vitro experimental models.
Instructor(s): L. Tung
Area: Engineering, Natural Sciences.

EN.580.639. Models of the Neuron.
See description for EN.580.439. Differs in that an advanced modeling project using data from the literature is required. Graduate version of EN.580.439. Recommended Course Background: AS.110.301-AS.110.302, EN.580.421-EN.580.422 or equivalent.
Instructor(s): E. Young.

See 580.440 for full description.
Instructor(s): K. Yarema.

This course focuses on principles and applications in cell engineering. Class lectures include an overview of molecular biology fundamentals, protein/ligand binding, receptor/ligand trafficking, cell-cell interactions, cell-matrix interactions, and cell adhesion and migration at both theoretical and experimental levels. Lectures will cover the effects of physical (e.g. shear stress, strain), chemical (e.g. cytokines, growth factors) and electrical stimuli on cell function, emphasizing topics on gene regulation and signal transduction processes. Furthermore, topics in metabolic engineering, enzyme evolution, polymeric biomaterials, and drug and gene delivery will be discussed. This course is intended as Part 1 of a two-semester sequence recommended for students in the Cell and Tissue Engineering focus area. Meets with EN.580.441. Recommended Course Background: EN.580.221 or AS20.305 and AS.020.306 (or equivalent) and AS.030.205
Instructor(s): J. Green; K. Yarema.

EN.580.642. Tissue Engineering.
This course focuses on the application of engineering fundamentals to designing biological tissue substitutes. Concepts of tissue development, structure and function will be introduced. Students will learn to recognize the majority of histological tissue structures in the body and understand the basic building blocks of the tissue and clinical need for replacement. The engineering components required to develop tissue-engineered grafts will be explored including biomechanics and transport phenomena along with the use of biomaterials and bioreactors to regulate the cellular microenvironment. Emphasis will be placed on different sources of stem cells and their applications to tissue engineering. Clinical and regulatory perspectives will be discussed. Co-listed with EN.580.442. Recommended Course Background: EN.580.221 or AS.020.305 and AS.020.306, AS.030.205, EN.580.441/EN.580.641
Instructor(s): J. Elisseeff; W. Grayson
Area: Engineering.

EN.580.655. Introduction to Orthopedic Biomechanics.
This course will cover static and dynamic force in the musculoskeletal systems, joint reactions, soft and hard tissue response to force loads, muscle mechanics, material properties, biomechanical lumped parameter systems, modeling and injury mechanisms. Co-listed with EN.580.455. Recommended Course Background: AS.110.302
Instructor(s): R. Allen
Area: Engineering.

EN.580.670. Biomedical Instrumentation I: Molecular and Cellular.
This course provides the student with a complete introduction to the physical principles, hardware design, and signal processing used in magnetic resonance imaging and magnetic resonance spectroscopy. The course is designed for students who wish to pursue research in magnetic resonance. Recommended course background: EN.580.222 or EN.520.214. Co-listed with EN.580.476.
Instructor(s): P. Bottomley; W. Edelstein.
EN.580.677. Advanced Topics in Magnetic Resonance Imaging.
An advanced imaging course with in-depth quantitative coverage of topics central to magnetic resonance imaging, ranging from techniques currently used in the radiology practice to new developments at the cutting edge of MRI research. Topics include: steady-state imaging and contrast mechanisms, MRI simulations, RF pulse and coil design, flow imaging and angiography, cardiac imaging, diffusion imaging, functional MRI, parallel imaging, and high-field imaging. As part of the course, students will be expected to read and understand classic and current literature. The course is taught by a team of experts in the respective fields and will provide an excellent foundation for students interested in deep understanding of magnetic resonance imaging.
Instructor(s): D. Herzka.

EN.580.681. Advanced Topics in Computer Vision.
(Formerly 580.464) State-of-the-art methods in dynamic vision, with an emphasis on segmentation, reconstruction, and recognition of static and dynamic scenes. Topics include reconstruction of static scenes (tracking and correspondence, multiple view geometry, self-calibration), reconstruction of dynamic scenes (2-D and 3-D motion segmentation, nonrigid motion analysis), recognition of visual dynamics (dynamic textures, face and hand gestures, human gait, crowd motion analysis), as well as geometric and statistical methods for clustering and unsupervised learning, such as K-means, Expectation Maximization, and Generalized Principal Component Analysis. Applications in robotics and biomedical imaging are also included.
Prerequisites: Prereq: AS.110.202, EN.600.461 or instructor permission.

EN.580.682. Computational Models of the Cardiac Myocyte.
The cardiac myocyte is one of the most extensively studied cells in biology. As such, it serves as an important example of how to develop quantitative, dynamic, computational models of cell function. "Computational Models of the Cardiac Myocyte" will present a comprehensive review of all aspects of modeling of the cardiac myocyte as an introduction to the discipline of computational cell biology. In this course, students will read and present key papers from the literature, implement and study computer models of the cardiac myocyte, and complete a project. Requirements are knowledge of a programming language (Matlab, C, C++, Java are satisfactory), a course in ordinary differential equations, and an introductory course in molecular and/or systems biology. BME courses Systems Bioengineering I and II meet the biology requirement. This course is taught at the graduate level, and is open to undergraduates (seniors) with permission of the instructors. Students will need a laptop. Recommended Course Background: EN.580.421 and EN.580.422 or equivalent, AS.110.302 or equivalent, and programming language (EN.500.200, EN.600.107, EN.600.120).
Instructor(s): J. Greenstein; R. Winslow.

See description for EN.580.484
Instructor(s): E. Doctor; M. Bell.

EN.580.688. Foundations of Computational Biology & Bioinformatics II.
This course will introduce probabilistic modeling and information theory applied to biological sequence analysis, focusing on statistical models of protein families, alignment algorithms, and models of evolution. Topics will include probability theory, score matrices, hidden Markov models, maximum likelihood, expectation maximization and dynamic programming algorithms. Homework assignments will require programming in Python. Recommended Course Background: Math through linear algebra and differential equations, EN.580.221 or equivalent, EN.600.226 or equivalent.
Instructor(s): R. Karchin.

EN.580.689. Computational Models of the Cardiac Myocyte.
This course will use cutting-edge techniques in computational cell biology to introduce students to the modeling of complex biological systems. The course will cover a wide range of topics, including signal transduction, cell-cell communication, and intracellular processes. Students will be expected to read and understand classic and current literature. The course is taught by a team of experts in the respective fields and will provide an excellent foundation for students interested in deep understanding of cardiac myocyte modeling.
Instructor(s): D. Herzka.

This course introduces the probabilistic foundations of learning theory. We will discuss topics in regression, estimation, Kalman filters, Bayesian learning, classification, reinforcement learning, and active learning. Our focus is on iterative rather than batch methods for parameter estimation. Our aim is to use the mathematical results to model learning processes in the biological system. Recommended Course Background: Probability and Linear Algebra.
Instructor(s): R. Shadmehr.

This class will cover machine learning techniques for modeling and segmentation of multivariate mixed data. Topics will include subspace learning (PCA, Probabilistic PCA, Robust PCA, Sparse representation, Rank minimization), manifold learning (Kernel PCA, LLE, Isomap), subspace clustering (K-subspaces, Mixtures of PPCAs, Generalized PCA, Sparse subspace clustering), and manifold clustering (LLMC). These methods will be applied to several problems in computer vision, biomedical imaging, neuroscience, and computational biology.
Instructor(s): R. Vidal.

EN.580.701. Sensorimotor Systems.
Instructor(s): R. Shadmehr.

EN.580.718. Advanced Seminars in Integrative and Systems Biology.
The course is designed to introduce the current concepts, methods and modes of analysis being developed in the context of experimental and computational systems biology, with the particular emphasis on the study of signal transduction and cell-cell communication networks. Topics include development and analysis of computational and experimental models of cell interactions with other cells, with extracellular matrix and with micro- and nano-fabricated analysis platforms. The areas of application range from the bacterial signaling to stem cell development and tissue regeneration. Students will be required to read current journal articles, online presentations and actively participate in the in-class discussions. Every student will also be required to be engaged in individual projects and report on their progress. Graduate Level. Seniors by permission. Fall semester only.
Instructor(s): A. Levchenko.
EN.580.719. Advanced Seminars in Integrative and Systems Biology.
The course is designed to introduce the current concepts, methods and modes of analysis being developed in the context of experimental and computational systems biology, with the particular emphasis on the study of signal transduction and cell-cell communication networks. Topics include development and analysis of computational and experimental models of cell interactions with other cells, with extracellular matrix and with micro- and nano-fabricated analysis platforms. The areas of application range from the bacterial signaling to stem cell development and tissue regeneration. Students will be required to read current journal articles, online presentations and actively participate in the in-class discussions. Every student will also be required to be engaged in individual projects and report on their progress. Spring semester only.
Instructor(s): A. Levchenko.

This course uses the current literature to teach advanced topics in carbohydrate engineering. Students will be required to read current papers, selected textbook chapters and online content to prepare for interactive teaching sessions with faculty and other students.
Potential topics will include: sugars as information storage entities and signaling molecules; methods to manipulate and characterize complex carbohydrates in vivo, through chemoenzymatic methods, and emerging high-throughput methodology; carbohydrate-based drug development; and the role of sugars in stem cell biology and tissue engineering.
Evaluation will be both by faculty and fellow students. Graduate Level.
Instructor(s): K. Yarema. Fall semester only.

Instructor(s): K. Yarema.

We live in a new era in the understanding, diagnosis and treatment of human disease. Over the past ten years, extraordinary advances in modeling and computing technologies have opened the door to an array of possibilities that were previously beyond the reach of biomedical researchers. Today’s powerful computational platforms are allowing us to begin to identify, analyze, and compare the fundamental biological components and processes that regulate human diseases and their impact on the body. The next step, then, is to harness the potential of these theoretical and computational tools and theory in a meaningful way -that is, to apply this "new medicine" to the exploration and treatment of many of our current diseases. This lecture series will feature world experts in computational medicine as well as laboratories at JHU’s institute for Computational Medicine (ICM). Fall semester only.
Instructor(s): F. Macgabhann; S. Sarma.

Over the past ten years, extraordinary advances in modeling and computing technologies have opened the door to an array of possibilities that were previously beyond the reach of biomedical researchers. Today’s powerful computational platforms are allowing us to begin to identify, analyze, and compare the fundamental biological components and processes that regulate human diseases and their impact on the body. The next step, then, is to harness the potential of these theoretical and computational tools and theory in a meaningful way -that is, to apply this "new medicine" to the exploration and treatment of many of our current diseases. This lecture series will feature world experts in computational medicine as well as laboratories at JHU’s institute for Computational Medicine (ICM). Spring semester only. **This course will meet on Feb 4, March 4, April 1 and 29.
Instructor(s): S. Sarma.

EN.580.738. Advanced Seminars in Cardiac Electrophysiology and Mechanics.
This course uses the current literature to teach advanced topics in cardiac electrophysiology and mechanics. Students will be required to read current articles and then conduct interactive teaching sessions with faculty and other students.
Potential topics will include: ion channels, cardiac excitation-contraction coupling, myofilament regulation, cardiac arrhythmias, heart failure, therapies for arrhythmias and pump dysfunction. Evaluation will be both by faculty and fellow students.
Graduate Level. Seniors by permission. Fall semester only.
Instructor(s): N. Trayanova.

EN.580.739. Advanced Seminars in Cardiac Electrophysiology and Mechanics.
This course uses the current literature to teach advanced topics in cardiac electrophysiology and mechanics. Students will be required to read current articles and then conduct interactive teaching sessions with faculty and other students.
Potential topics will include: ion channels, cardiac excitation-contraction coupling, myofilament regulation, cardiac arrhythmias, heart failure, therapies for arrhythmias and pump dysfunction. Evaluation will be both by faculty and fellow students.
Graduate Level. Seniors by permission only (signed add/drop form). Spring semester only.
Instructor(s): N. Trayanova.

EN.580.746. Imaging Science Seminar.
Fall semester only.
Instructor(s): M. Miller; R. Vidal.

Spring semester only.
Instructor(s): M. Miller; R. Vidal.

EN.580.748. Advanced Seminars in Magnetic Resonance Imaging.
This course uses the current literature to teach advanced topics in magnetic resonance imaging. Students will be required to read current papers, selected textbook chapters and online content to prepare for interactive teaching sessions with faculty and other students.
Potential topics will include: image artifacts, effect of motion, resolution and SNR, realtime imaging, clinical applications. Evaluation will be both by faculty and fellow students.
Graduate Level. Seniors by permission. Fall semester only.
Instructor(s): E. McVeigh.
This course uses the current literature to teach advanced topics in magnetic resonance imaging. Spring semester only.
Instructor(s): E. McVeigh.

This course is designed for graduate students interested in learning basic biomedical instrumentation design concepts and translating these into advanced projects based on their research on current state-of-the-art. They will first gain the basic knowledge of instrumentation design, explore various applications, and critically gain hands-on experience through laboratory and projects. At the end of the course, students would get an excellent awareness of biological or clinical measurement techniques, design of sensors and electronics (or electromechanical/ chemical, microprocessor system and their use). They will systematically learn to design instrumentation with a focus on the use of sensors, electronics to design a core instrumentation system such as an ECG amplifier. Armed with that knowledge and lab skills, students will be encouraged to discuss various advanced instrumentation applications, such as brain monitor, pacemaker/defibrillator, or prosthetics. Further, they will be “challenged” to come up with some novel design ideas and implement them in a semester-long design project. Students will take part in reading the literature, learning about the state-of-the-art through journal papers and patents, and discussing, critiquing, and improving on these ideas. Finally, they will be implementing a selected idea into a semester-long advanced group project. Meets with 580.471 Graduate students only Instructor(s): N. Thakor.

EN.580.774. Molecular and Cellular Imaging.
Introduction to non-invasive imaging techniques as applied to an early diagnosis of disease, altered gene expression, cellular therapeutics, and fundamental molecular or metabolic changes. Includes magnetic resonance imaging, radionuclide imaging, and optical imaging techniques. Covered will be: principles of specific targeting and non-specific uptake of diagnostic contrast agents; NMR spectroscopy of metabolic changes in cancer; use of cell tracking using exogenous tags; imaging of stem cells, imaging using reporter genes, theranostics (combined therapeutics and diagnostics), imaging cancer, imaging of neurodegenerative disease, and imaging of cardiovascular disease. The emphasis of the overall course is to learn how molecular cellular imaging will change the way future diagnostic radiology and drug development will be practiced. Same course as 580.474.

EN.580.781. Biomedical Engineering Seminar.
Instructor(s): J. Bader.
EN.580.801. Research in Biomedical Engineering.
Graduate Students only
Instructor(s): K. Yarema.
EN.580.802. Research in Biomedical Engineering.
Directed research for MSE and PhD students
Instructor(s): K. Yarema.

Cross Listed Courses
General Engineering
EN.500.745. Seminar in Computational Sensing and Robotics.
S
Seminar series in robotics. Topics include: Medical robotics, including computer-integrated surgical systems and image-guided intervention. Sensor based robotics, including computer vision and biomedical image analysis. Algorithmic robotics, robot control and machine learning. Autonomous robotics for monitoring, exploration and manipulation with applications in home, environmental (land, sea, space), and defense areas. Birobotics and neuromechanics, including devices, algorithms and approaches to robotics inspired by principles in biomechanics and neuroscience. Human-machine systems, including haptic and visual feedback, human perception, cognition and decision making, and human-machine collaborative systems. Cross-listed Mechanical Engineering, Computer Science, Electrical and Computer Engineering, and Biomedical Engineering.
Instructor(s): Staff.

Electrical Computer Engineering
EN.520.445. Audio Signal Processing. 3 Credits.
An introductory course to basic concepts of information processing of human communication signals (sounds, images) in living organisms and by machine. Recommended Course Background: EN.520.214 (or EN.580.222) or consent of the instructor.
Instructor(s): H. Hermansky
Area: Engineering.

EN.520.434. Modern Biomedical Imaging Instrumentation and Techniques. 3 Credits.
An intermediate biomedical imaging course covering modern biomedical imaging instrumentation and techniques as applied to diagnostic radiology and other biomedical applications. It includes recent advances in various biomedical imaging modalities, multi-modality imaging and molecular imaging. The course is team taught by experts in the respective fields and provides a broad based knowledge of modern biomedical imaging to prepare students for graduate studies and research in biomedical imaging. Also, the course will offer tours and practical experience with modern biomedical imaging equipments in clinical and research settings. Co-listed with EN.580.472
Prerequisites: EN.520.432 OR EN.580.472
Instructor(s): B. Tsui.

EN.520.445. Audio Signal Processing. 3 Credits.
This course gives a foundation in current audio and speech technologies, and covers techniques for sound processing by processing and pattern recognition, acoustics, auditory perception, speech production and synthesis, speech estimation. The course will explore applications of speech and audio processing in human computer interfaces such as speech recognition, speaker identification, coding schemes (e.g. MP3), music analysis, noise reduction. Students should have knowledge of Fourier analysis and signal processing.
Instructor(s): M. Elhilali
Area: Engineering.
EN.520.601. Introduction to Linear Systems Theory.
A beginning graduate course in multi-input multi-output, linear, time-invariant systems. Topics include state-space and input-output representations; solutions and their properties; multivariable poles and zeros; reachability, observability and minimal realizations; stability; system norms and their computation; linearization techniques. Recommended Course Background: Undergraduate courses in control systems and linear algebra.
Instructor(s): D. Tarraf.

By employing fundamental concepts from diverse areas of research, such as statistics, signal processing, biophysics, biochemistry, cell biology, and epidemiology, this course introduces a multidisciplinary and rigorous approach to the modeling and computational analysis of complex interaction networks. Topics to be covered include: overview of complex nonlinear interaction networks and their applications, graph-theoretic representations of network topology and stoichiometry, stochastic modeling of dynamic processes on complex networks and master equations, Langevin, Poisson, Fokker-Plank, and moment closure approximations, exact and approximate Monte Carlo simulation techniques, time-scale separation approaches, deterministic and stochastic sensitivity analysis techniques, network thermodynamics, and reverse engineering approaches for inferring network models from data.
Instructor(s): J. Goutsias.

Mechanical Engineering
EN.530.426. Biofluid Mechanics. 3 Credits.
Course will cover selected topics from physiological fluid dynamics, including respiratory flow patterns, blood flow and pulse propagation, aerodynamics of phonation and speech, rheology of blood flow in the microcirculation, aquatic animal propulsion, and animal flight.
Instructor(s): R. Mittal
Area: Engineering.
EN.530.448. Biosolid Mechanics. 3 Credits.
This class will introduce fundamental concepts of statics and solid mechanics and apply them to study the mechanical behavior bones, blood vessels, and connective tissues such as tendon and skin.
Topics to be covered include concepts of small and large deformation, stress, constitutive relationships that relate the two, including elasticity, anisotropy, and viscoelasticity, and experimental methods. Recommended Course Background: AS.110.201 and AS.110.302, as well as a class in statics and mechanics
Area: Engineering.

EN.530.616. Introduction to Linear Systems.
This course examines linear, discrete- and continuous-time, and multi-input-output systems in control and related areas. Least squares and matrix perturbation problems are considered. Topics covered include state-space models, stability, controllability, observability, transfer function matrices, realization theory, feedback compensators, state feedback, optimal regulation, observers, observer-based compensators, measures of control performance, and robustness issues using singular values of transfer functions. ME EN.580.616 or BME EN.580.616 or ECE EN.520.601.
Instructor(s): N. Cowan.

Applied Mathematics Statistics
EN.550.450. Computational Molecular Medicine. 4 Credits.
Biomedical research has been transformed by the development of new technologies for sequencing genomes and measuring RNA and protein expression levels. Due to the massive number of interacting components, the traditional approach, which is experimental and component-by-component, is no longer adequate. In contrast, statistical learning, modeling and inference have emerged as core methodologies for analyzing these data and uncovering the relationships between molecules, networks and disease, where knowledge extraction is formulated as a problem in high-dimensional pattern recognition. We will cover selected aspects of this methodology (e.g., measuring associations, testing multiple hypotheses, learning predictors and network models, and stochastic simulation) and illustrate how it enhances our ability to discover molecular disease networks, detect disease, predict clinical outcomes, and characterize disease progression.
Meets with EN.550.650.
Prerequisites: EN.550.420 and ( EN.550.310 or EN.550.311 or EN.550.430 )
Instructor(s): D. Geman
Area: Engineering, Quantitative and Mathematical Sciences.
EN.550.635. Topics in Bioinformatics.
A "readings" course organized around research articles in the recent bioinformatics and computational biology literatures. In this term, the choice of papers will favor work on inferring phenotype from genotype, and modeling signaling networks, based on gene microarrays bearing the expression levels of thousands of transcripts, and on properties of proteins, such as predicting active sites and detecting harmful mutations. One major objective is to prepare students to comfortably read articles which involve extensive mathematical and statistical modeling as well as techniques from pattern recognition and machine learning. Most papers will be presented by the students. In addition, student expositions will be preceded by "tutorials" by the instructor on various aspects of historical learning, modeling and prediction, such as properly estimating generalization error in cancer classification and avoiding over-fitting in learning networks of molecular interactions. Recommended Course Background: course in statistics; previous exposure to machine learning or pattern recognition
Instructor(s): D. Geman.

Computer Science
EN.600.361. Computer Vision. 3 Credits.
This course gives an overview of fundamental methods in computer vision from a computational perspective. Methods studied include: camera systems and their modeling; computation of 3-D geometry from binocular stereo, motion, and photometric stereo; and object recognition. Edge detection and color perception are covered as well. Elements of machine vision and biological vision are also included. [Applications] [https://cir.icsr.jhu.edu/Vision_Syllabus]
Prerequisites: EN.600.226
Instructor(s): R. Vidal
Area: Engineering, Quantitative and Mathematical Sciences.
EN.600.461. Computer Vision. 3 Credits.
Graduate version of EN.600.361. Students may receive credit for EN.600.361 or EN.600.461, but not both. Recommended Course Background: EN.600.226 & linear algebra
Instructor(s): R. Vidal
Area: Engineering, Quantitative and Mathematical Sciences.
EN.600.476. Machine Learning in Complex Domains. 3 Credits.
How can robots locate themselves in an indoor environment when navigating? How do you infer which patients need attention first in the ICU? How can one identify the start of an epidemic using tweets? How does one predict the way a traffic jam will spread through the local streets during an Orioles game? How can you communicate with your TV using only hand gestures? This class will cover the fundamental concepts of Probabilistic Graphical Models as a framework for addressing questions like the ones above. We will study algorithms for model estimation, exact and approximate inference. The class will have 4 interactive sessions during which students will learn through an open discussion format how to think about open-ended real-world problems with the tools learnt in class. Students are also required to tackle a project of their choice within which they will experiment with the ideas learnt in class. Students in the class will be asked to do assignments in Matlab. Matlab is typically easy to pick up if one is already familiar with a different programming language. Students are expected to be mathematically mature. Though not required, exposure to optimization or machine learning is recommended. Proficiency in at least one programming language is expected. When in doubt, send the instructor a copy of your transcript to see if the class is appropriate for you. Also, sit through the first few sessions and first homework to get a sense of fit. Recommended Course Background: EN.550.310, EN.550.311, EN.550.420, or EN.550.430 and EN.550.291 or AS.110.201
Instructor(s): S. Saria
Area: Engineering, Quantitative and Mathematical Sciences.

Students in the class will be asked to do assignments in Matlab. Matlab is typically easy to pick up if one is already familiar with a different programming language. Students are expected to be mathematically mature. One should have taken at least an introductory course in probability theory and linear algebra. Though not required, exposure to optimization or machine learning is recommended. Proficiency in at least one programming language is expected. When in doubt, send the instructor a copy of your transcript to see if the class is appropriate for you. Also, sit through the first few sessions and first homework to get a sense of fit. Instructor(s): S. Saria.

Chemical and Biomolecular Engineering

Chemical and Biomolecular Engineering (ChemBE) is dedicated to the study and exploitation of chemical, biological, and physical processes and phenomena for chemical and biological applications. As a result of the scope and breadth of this rigorous undergraduate program, our students commonly secure employment in industries such as Chemical and Pharmaceutical Production, Biomedicine, Biotechnology, Material Design, and Green Energy. Graduates may embark on a career to produce

<table>

<td>Food, Beverage, and Health Care Products</td>
</tr>
</tbody>
</table>

The demands on the modern engineer are high, and graduates must possess a wide range of skills in order to be competitive in a global market. The ChemBE program successfully satisfies these demands. Students take advanced courses in chemistry, physics, mathematics, and biology. Additionally, students are trained in transport, kinetics, and thermodynamics, which are essential to solving real-world engineering problems. Students also hone their professional and communication skills (report writing, oral presentations, and teamwork) in courses involving experimental projects, process design and product design.

Depending on their interests and future career goals, students can choose electives from exciting areas including green engineering, nanotechnology, and bioengineering. These courses, along with undergraduate research opportunities offered by our faculty, are designed to prepare graduates for careers in the chemical industry, biotechnology, pharmaceuticals or microelectronics. The curriculum also offers an outstanding foundation for advanced graduate studies in Chemical and Biomolecular Engineering, Biomedical Engineering, Materials Engineering, or for medical, law, or business school.

Students also have the opportunity to develop more in-depth specialty in one or two areas within chemical and biomolecular engineering. Our two focus areas are Interfaces and Nanotechnology (IN) and Molecular and Cellular Bioengineering (MCB).

Interfaces and Nanotechnology (IN) Focus Area

Interesting and new physics exist at nanometer length scales, as the surface area of an object begins to approach and exceed its volume. In this focus area, students are trained in the fundamental sciences used to solve problems in nanotechnology and interfacial science. Students take a chemistry course in Materials and Surface Characterization and two electives such as Colloids and Nanoparticles, Supramolecular Materials and Nanomedicine and Micro/Nanotechnology: the Science and Engineering of Small Structures.

Molecular and Cellular Bioengineering (MCB) Focus Area

Fields in Biotechnology and Biomedicine often involve processes at biological, cellular and molecular levels. Common areas utilizing skills in the MCB focus area include the genetic manipulation of cells for protein and vaccine production, and the study and treatment of diseases such as arteriosclerosis and cancer. Students in this focus area must take a laboratory course in Biochemistry, and two electives such as Cellular and Molecular Biotechnology, Bioengineering in Regenerative Medicine, and Computational Protein Structure Prediction. In addition, students will take the Biomolecular Engineering Laboratory to learn the hands-on skills required for future careers in biological systems at the molecular and cellular level.

Our mission is to define and educate a new archetype of innovative and fundamentally-grounded engineer at the undergraduate and graduate levels through the fusion of fundamental chemical engineering principles and emerging disciplines. We will nurture our passion for technological innovation, scientific discovery, and leadership in existing and newly created fields that transcend traditional boundaries. We will be known for developing leaders in our increasingly technological society who are unafraid to explore uncharted engineering, scientific, and medical frontiers that will benefit humanity. Recent graduates of the Chemical and Biomolecular Engineering program will attain within a few years of graduation:
• careers in industrial, academic, or government organizations related to chemical, physical, and life sciences and engineering, and/or pursue graduate or professional education.
• positions in which they apply their chemical and biomolecular engineering skills to solve diverse traditional and emerging problems in the workplace.

The department also offers graduate programs leading to the Master of Science and Ph.D. degrees. These programs emphasize research leading to a written thesis.

Undergraduate students strongly involved in research may be interested in our B.S./M.S.E. program in Chemical and Biomolecular Engineering that allows students to obtain a master’s of science in engineering immediately after completion of their bachelors.

Facilities
The offices and state-of-the-art laboratories of Chemical and Biomolecular Engineering are located in Croft Hall and Maryland Hall on the Homewood campus. The research laboratories are well-equipped for studies in the areas of biochemical engineering, cell and tissue engineering, phase equilibria, membrane science, polymer science, interfacial phenomena, separation processes, fluid mechanics, and nucleation phenomena. The Milton S. Eisenhower Library on the Homewood campus contains over two million volumes and access to more than 325 electronic journals. The university’s other libraries located at the School of Medicine and at the Applied Physics Laboratory are also available to students. Through close collaborations with scientists at the National Institutes of Health, and the National Institute of Standards and Technology, The Institute for Genomic Research, Human Genome Sciences, Inc., and the Food and Drug Administration, students and faculty also have access to a variety of world-class facilities and other resources for research.

Financial Aid
Undergraduate scholarships and financial assistance are described in the catalog (see page 25). Part-time work is available in the Chemical and Biomolecular Engineering research laboratories on research projects supported by grants and contracts. There also is a federally sponsored work-study program for qualified students.

Financial assistance to graduate students is available in the forms of research assistantships, teaching assistantships, fellowships, and partial or full tuition remission. The financial aid package is specified following acceptance into the graduate program.

Graduates receive a Bachelor of Science degree in Chemical and Biomolecular Engineering accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org. As permitted under the ABET guidelines, we are continually updating our undergraduate programs to include the latest advances in chemical and biomolecular engineering. Such modifications will enable us to offer the best possible education experience to our undergraduates. For the latest chemical engineering educational programs, potential applicants are referred to our website at http://www.jhu.edu/chembe/

Requirements for the B.S. Degree
(See also General Requirements for Departmental Majors (p. 33))

The Bachelor of Science degree requires a minimum of 128 credits. Additional details are given in the Chemical and Biomolecular Engineering Undergraduate Advising Manual available from the department or online.

The 128 credits must include:

Total Credits 93

- **Humanities and Social Sciences Courses.** Eighteen credits designated as Humanities or Social and Behavioral Sciences are required. Students are required to take these courses in at least two subject areas other than writing. At least one of these courses must be an advanced course at the 300-level or higher. See the Chemical and Biomolecular Engineering Undergraduate Advising Manual for more details.
- **Writing Courses.** Two writing intensive courses are required. One of the courses must be EN.661.315 The Culture of the Engineering
Departments, Program Requirements, and Courses

The courses that are taken to satisfy the university writing requirement must be passed with a grade of C- or better.

- **Undesignated Electives.** A minimum of 128 credits is required for the degree. Therefore, in addition to all the credits taken to fulfill the requirements mentioned in the various sections above (e.g., chemical engineering core courses, engineering electives, basic science, advanced chemistry electives, mathematics requirement, and Humanities and Social and Behavioral Sciences courses) additional credits (called undesignated credits) are required.

- Students also must have a grade point average of at least 2.00 in the chemical and biomolecular engineering core courses to graduate. The core courses for GPA calculation comprise all of the above courses except for EN.540.101 Chemical Engineering Today and EN.540.490 Chemical Laboratory Safety.

- Students are required to take one additional course beyond these required courses. Students who are concentrating in Molecular and Cellular Bioengineering or Interfaces and Nanotechnology have additional and/or alternate requirements.

- Calculus is so essential to Chemical Engineering that a grade of C- or better in both Calculus I and Calculus II is required.

- Students are required to take these courses in at least two subject areas other than writing. At least one of these courses must be an advanced course at the 300-level or higher. See the Chemical and Biomolecular Engineering Undergraduate Advising Manual for more details.

### Credits

- **Credits**
  - Engr Thermodynamics
  - Transport Phenomena I
  - Diff Equations/ Applic
  - Cell Biology
  - Undesignated Elective
  - Kinetic Processes
  - Chemical & Biomolecular Separation
  - The Culture of the Engineering Profession
  - Humanities/ Social and Behavioral Sciences Elective
  - Advanced Chem/Bio Elective
  - Humanities/ Social and Behavioral Sciences Elective
  - Humanities/ Social and Behavioral Sciences Elective
  - Humanities/ Social and Behavioral Sciences Elective
Focus Areas

Students pursuing a degree in Chemical and Biomolecular Engineering have the option of concentrating on specific fields including Interfaces and Nanotechnology and Molecular and Cellular Bioengineering. Students completing a focus area will have this fact designated on their official university checklist. These focus areas have additional and/or alternate requirements, as described.

Molecular and Cellular Bioengineering (MCB) Focus Area

Students must fulfill the following requirements:

- The Advanced Chemistry and Biology laboratory requirement is fulfilled with a AS.020.315 Biochemistry Laboratory.
- Six credits of bioengineering electives are required. See department for a list of approved electives.
- Students take EN.540.313 Chemical and Biomolecular Engineering Lab instead of EN.540.311 Chemical Engineering Lab I.

Interfaces and Nanotechnology (IN) Focus Area

Students must fulfill the following requirements:

- AS.030.452 Materials & Surface is required and satisfies three credits of the advanced chemistry electives.
- Six credits of interfaces and nanotechnology electives are required. See department for a list of approved electives.

Sample Program: Molecular and Cellular Bioengineering Focus Area

Total Credits: 129-130
B.S./M.S.E. Program in Chemical and Biomolecular Engineering

The B.S./M.S.E. program in Chemical and Biomolecular Engineering allows students to obtain a master of science in engineering immediately after the bachelor of science degree by adding at least a year of study. For students who qualify academically, the Whiting School of Engineering allows students to obtain a master of science in engineering immediately after the bachelor of science degree by adding at least a year of study.

Students have two options in pursuing an M.S.E. in Chemical and Biomolecular Engineering.

1. Master of Science in Engineering (requiring an essay)
   • The student must complete six graduate (600-799) level courses approved by the student’s research advisor. The student and advisor select these courses to design a curriculum appropriate for the student’s research interest and educational goals.
   • These six courses cannot include seminars, independent study, graduate research, or special studies.
   • At least four of the six courses must be in the Department of Chemical and Biomolecular Engineering.
   • Students are allowed to count 400-level courses toward their M.S.E. degree if
     i. the course is not offered at the 600-level and
     ii. if the department offering the course considers it to be a graduate-level course in the program. Courses offered at both the 400- and 600-level must be taken at the 600-level to fulfill M.S.E. course requirements.
   • The student must also enroll in at least two semesters of graduate seminars (EN.540.600 Chemical and Biomolecular Engineering Seminar/EN.540.601 Chemical and Biomolecular Engineering Seminar) throughout his or her tenure in the Department of Chemical and Biomolecular Engineering at Johns Hopkins University.

2. Master of Science in Engineering (course work only)
   • The student must complete ten graduate (600-799) level courses approved by the Director of Graduate Studies. The student and Director of Graduate Studies select these courses to design a curriculum appropriate for the student’s interest and educational goals.
   • These ten courses cannot include seminars, independent study, graduate research or special studies.
   • At least six of the ten courses must be in the Department of Chemical and Biomolecular Engineering.
   • Students are allowed to count 400-level courses toward their M.S.E. degree if
     i. the course is not offered at the 600-level and
     ii. if the department offering the course considers it to be a graduate-level course in their program. Courses offered at both the 400- and 600-level must be taken at the 600-level to fulfill M.S.E. course requirements.

Recommended courses for all M.S.E. students

Completion of two of the four core courses of the Ph.D. program is recommended (but not required) for M.S.E. students. The four core Ph.D. courses are:

- EN.540.630 Thermodynamics, Statistical Mechanics, and Kinetics
- EN.540.652 Advanced Transport Phenomena
- EN.540.602 Metabolic Systems Biotechnology
- EN.540.615 Interfacial Science with Applications to Nanoscale Systems

Additional information and requirements can be found in the department Graduate Handbook.

Doctor of Philosophy

The Ph.D. degree is awarded for original research performed under the guidance of a thesis advisor. The formal requirements for this degree are:

1. Successful completion of six graduate-level courses including the four required core courses.
2. Successful completion of the Preliminary Research Exam during the student’s first year.
3. Successfully serve as a teaching assistant for at least two required undergraduate courses.
4. Completion of an original research project, documented in a dissertation that is defended by the candidate in a public presentation.
5. Successful completion of the Graduate Board Oral Exam.

Course Work

Student must successfully complete six graduate-level courses including the four required core courses listed below:

- EN.540.630 Thermodynamics, Statistical Mechanics, and Kinetics
- EN.540.652 Advanced Transport Phenomena
EN.540.602 Metabolic Systems Biotechnology
EN.540.615 Interfacial Science with Applications to Nanoscale Systems

Students are strongly encouraged to take the four required courses in the first fall semester. However, students who do not have an undergraduate degree in Chemical Engineering or a closely related field may need additional courses and should discuss an appropriate course plan with the director of the graduate program.

The remaining two engineering or science courses are chosen with the help of the student’s advisor to design a curriculum appropriate for the student’s research interest. These two courses cannot include seminars, independent study, graduate research or special studies.

Each of the six courses must be passed with a letter grade of B- or higher. In addition, the student must maintain an overall grade point average (GPA) of 3.0 or better. If the student’s GPA falls below 3.0, the student must re-take one or more of the courses and earn a higher grade, upon which the prior grade in those courses are not counted toward the GPA. If a student receives a grade of C+ or lower in a required core course, the student will be allowed to re-take the course once to achieve a grade of B- or higher. Failure to receive a B- or better the second time will be cause for dismissal from the program. Receipt of grades of C+ or lower in two or more required courses will ordinarily be cause for dismissal from the program without the opportunity to re-take those courses.

In addition:
• all first year students must enroll in EN.500.401 Research Laboratory Safety during their first semester.
• students must enroll in graduate seminars (EN.540.600 Chemical and Biomolecular Engineering Seminar/EN.540.601 Chemical and Biomolecular Engineering Seminar) every semester. Students are expected to attend department seminars throughout their tenure in the department.

Ph.D. Thesis Criteria and Graduate Board Oral Exam
Candidates must write a dissertation conforming to university requirements that describes the students work and results in detail. A public defense of the dissertation is required, and will be followed by a closed examination session. Because the closed examination session fulfills the university Graduate Board Oral (GBO) examination requirement, all procedures pertaining to GBOs as established by the University Graduate Board must be followed.

Additional information can be found in the department Graduate Handbook.

For current faculty and contact information go to http://www.jhu.edu/chembe/faculty-staff/

Faculty
Chair
Konstantinos Konstantopoulos
Professor: cell and molecular engineering; cell signaling, adhesion and migration; microfluidics; nanobioengineering; cancer metastasis.

Professors
Michael J. Betenbaugh

Professor: genomics, recombinant DNA biotechnology, biopharmaceuticals, metabolic engineering, insect and mammalian cell culture, glycosylation engineering, and cell death processes.

Marc D. Donohue
Professor: phase equilibria, statistical thermodynamics, kinetics of diffusion and phase transitions, adsorption.

David Gracias
Professor: micro and nanotechnology, surface science, metamaterials, complex systems, nanoelectronics, nanomedicine, regenerative medicine, drug delivery and microfluidics.

Justin Hanes
Joint, Part-Time, and Visiting Appointments: Professor (INBT, Oncology).

Marc A. Ostermeier
Professor: biomolecular engineering, molecular evolution, protein engineering, combinatorial methods, biosensors, protein therapeutics.

Peter C. Searson
Joint, Part-Time, and Visiting Appointments: Professor (Material Science).

Denis Wirtz
Professor: cell adhesion and migration, cell mechanics, cytoskeleton, receptor-ligand interactions, cancer, particle tracking, new proteomics tools.

Associate Professors
Michael A. Bevan
Associate Professor (Director of Graduate Program): measuring and manipulating nanoparticle and biomolecular interactions, dynamics, and structures in interfacial and confined systems.

Sharon Gerecht
Associate Professor: embryonic and adult stem cells, vascular regeneration, micro/nano fabrication, biomaterials, tissue engineering.

Jeffrey Gray
Associate Professor: biomolecular modeling, protein-protein docking, therapeutic antibodies, allostery, protein-surface interactions and design.

Honggang Cui
Assistant Professor: nanoscience and nanotechnology, biomolecular engineering, peptide synthesis and assembly, drug delivery, supramolecular polymers, nanoparticle imaging, diagnosis, and cancer therapeutics.

Joelle Frechette
Assistant Professor: properties of surfaces, thin films; fluid interfaces and confined fluids; measurements of surface forces and adhesion; micro and nanotechnology; microfluidics; nanoparticles.

Zachary Gagnon
Assistant Professor: electrophoretic phenomena in micro/nanofluidic environments, cell signaling, cell migration, micro/nano fabrication, dielectrophoresis, biological separation, manipulation and characterization in microfluidics.

Rebecca Schulman
Assistant Professor: nanotechnology, self-assembly, theory and experiment, nucleation, bioanalytical engineering, DNA, nanoelectronics, biomolecular engineering, single-molecular analysis.

Chao Wang
Assistant Professor: heterogenous catalysis, renewable energy technologies e.g., photoelectrochemical solar cells and lithium batteries, and green chemical engineering.

Professor Emeritus
Joseph L. Katz
Professor Emeritus: nucleation processes (e.g., condensation of supersaturated vapors, boiling of superheated liquids and its applications, e.g., the Ouzo effect, parts per quad-rillion detection) formation of nanosized ceramic oxide powders in flames, new proteomics tools.

Research Professor
Gregory Aranovich
Research Professor: molecular thermodynamics, phase equilibria, adsorption phenomena, separation processes, and diffusion.

Assistant Research Professor
Eva Lai
Assistant Research Professor: biomedical sciences, biomonitoring technologies, regenerative medicine, tissue engineering.

Adjunct Assistant Professor
Jerry S. H. Lee
Joint, Part-Time, and Visiting Appointments: Adjunct Assistant Professor (Program Director, NCI).

Senior Lecturer
Lise Dahuron
Sr. Lecturer (Director of Undergraduate Studies): separations, distillation, membrane technology, new product development, process design.

Lecturer
An Goffin
Lecturer: fluid and bioactive interfaces, kinetic processes, principles in chemical engineering, product design.

For current course information and registration go to https://isis.jhu.edu/classes/

Courses

EN.540.101. Chemical Engineering Today. 1 Credit.
A series of weekly lectures to introduce students to chemical and biomolecular engineering and its role as a profession in addressing contemporary technological, social, ethical, and economic issues in today’s world. The lectures will include examples of how chemical and biomolecular engineers apply the principles of physics and chemistry to develop new products, improve process efficiencies, and alleviate the strain on the ecosystem through the design of novel environmentally conscious processes. In addition, the lectures will highlight exciting new areas now being advanced by chemical and biomolecular engineers, such as biochemical engineering, tissue engineering, nanoparticle fabrication, and processing smart polymers for applications in computer technology and as sensors. Freshmen Only.
Instructor(s): L. Dahuron
Area: Engineering.

EN.540.202. Introduction to Chemical & Biological Process Analysis. 4 Credits.
Introduction to chemical and biomolecular engineering and the fundamental principles of chemical process analysis. Formulation and solution of material and energy balances on chemical processes. Reductionist approaches to the solution of complex, multi-unit processes will be emphasized. Introduction to the basic concepts of thermodynamics as well as chemical and biochemical reactions.
Prerequisites: AS.171.101
Instructor(s): J. Gray; L. Dahuron
Area: Engineering.

EN.540.203. Engr Thermodynamics. 3 Credits.
Formulation and solution of material, energy, and entropy balances with an emphasis on open systems. A systematic problem-solving approach is developed for chemical and biomolecular process-related systems. Extensive use is made of classical thermodynamic relationships and constitutive equations for one and two component systems. Applications include the analysis and design of engines, refrigerators, heat pumps, compressors, and turbines.
Prerequisites: EN.540.202
Instructor(s): C. Wang
Area: Engineering.

EN.540.204. Applied Physical Chemistry. 3 Credits.
The topics in this course include thermodynamic models for multicomponent phase equilibrium including vapor liquid equilibrium, phase diagrams, activity models and colligative properties in both non-electrolyte and electrolyte solutions. A link between average thermodynamic properties and microstates and molecular interactions is made via a discussion of intermolecular forces and the partition function. Also covered are thermodynamic relationships to describe chemical equilibria, and basic concepts in quantum mechanics and statistical mechanics.
Prerequisites: EN.540.203.
Instructor(s): D. Gracias
Area: Engineering.

EN.540.301. Kinetic Processes. 4 Credits.
Review of numerical methods applied to kinetic phenomena and reactor design in chemical and biological processes. Homogeneous kinetics and interpretation of reaction rate data. Batch, plug flow, and stirred tank reactor analyses, including reactors in parallel and in series. Selectivity and optimization considerations in multiple reaction systems. Non isothermal reactors. Elements of heterogeneous kinetics, including adsorption isotherms and heterogeneous catalysis. Coupled transport and chemical/biological reaction rates.
Prerequisites: EN.540.203 AND EN.540.303
Instructor(s): A. Goffin; H. Cui
Area: Engineering.

EN.540.303. Transport Phenomena I. 3 Credits.
Molecular mechanisms of momentum transport (viscous flow), energy transport (heat conduction), and mass transport (diffusion). Isothermal equations of change (continuity, motion, and energy). The development of the Navier Stokes equation. The development of non isothermal and multi component equations of change for heat and mass transfer. Exact solutions to steady state, isothermal unidirectional flow problems, to steady state heat and mass transfer problems. The analogies between heat, mass, and momentum transfer are emphasized throughout the course. Recommended Corequisite: AS.110.302, Introduction to the field of transport phenomena.
Instructor(s): K. Konstantopoulo
Area: Engineering, Natural Sciences.
EN.540.304. Transport Phenomena II. 4 Credits.
Prerequisites: EN.540.303.
Instructor(s): Z. Gagnon
Area: Engineering, Natural Sciences.

EN.540.305. Modeling and Statistical Analysis of Data for Chemical and Biomolecular Engineers. 3 Credits.
This course seeks to build the student’s strength in Chemical Engineering computing and data analysis. To this end, in the first part of the course, we will become familiar with the Matlab/Octave computing environment and solve problems in Chemical Engineering that involve concepts from Process Analysis, Thermodynamics, Chemical and Biotechnology. The subsequent part, we will build on the skills learnt earlier and tackle problems in Data Analysis and Hypothesis testing. Recommended Corequisites: EN.540.203 and EN.540.304.
Prerequisites: Corequisite: EN.540.303
Instructor(s): R. Schulman
Area: Engineering.

EN.540.306. Chemical & Biomolecular Separation. 3 Credits.
This course covers staged and continuous-contacting separations processes critical to the chemical and biochemical industries. Separations technologies studied include distillation, liquid-liquid extraction, gas absorption, membrane ultrafiltration, reverse osmosis, dialysis, adsorption, and chromatography. Particular emphasis is placed on the biochemical uses of these processes and consequently on how the treatment of these processes differs from the more traditional approach.
Prerequisites: EN.540.303 AND EN.540.202
Instructor(s): M. Betenbaugh
Area: Engineering.

EN.540.309. Chemical and Biomolecular Engineering Design Part 1. 3 Credits.
This course guides the student through the contrasting aspects of product design and of process design. Product design concerns the recognition of customer needs, the creation of suitable specifications, and the selection of best products to fulfill the needs. Process design concerns the quantitative description of processes which serve to produce many commodity chemicals, the estimation of process profitability, and the potential for profitability improvement through incremental changes in the process. Students work in small teams to complete a major project demonstrating their understanding of and proficiency in the primary objectives of the course. Students report several times both orally and in writing on their accomplishments. The material covered is the same as in EN.540.314, but more time is allowed so that laboratory tests can be performed and/or prototypes can be made. Note that both courses, 540.309 and 540.310 must be taken to satisfy the Undergraduate degree requirement for EN.540.314 as part of the Chemical and Biomolecular Engineering program. The two courses can be started in any term. Recommended Course Background: EN.540.301, EN.540.304, EN.540.311 or EN.540.313 or permission of instructor.
Instructor(s): L. Dahuron; M. Donohue
Area: Engineering, Natural Sciences.

EN.540.310. Chemical and Biomolecular Engineering Design: Spring. 3 Credits.
This course is one part of a two semester sequence that optionally can be taken instead of for EN.540.314 Chemical and Biomolecular Engineering Product and Process Design. This course guides the student through the contrasting aspects of product design and of process design. Product design concerns the recognition of customer needs, the creation of suitable specifications, and the selection of best products to fulfill the needs. Process design concerns the quantitative description of processes which serve to produce many commodity chemicals, the estimation of process profitability, and the potential for profitability improvement through incremental changes in the process. Students work in small teams to complete a major project demonstrating their understanding of and proficiency in the primary objectives of the course. Students report several times both orally and in writing on their accomplishments. The material covered is the same as in EN.540.314, but more time is allowed so that laboratory tests can be performed and/or prototypes can be made. Note that both courses, 540.309 and 540.310 must be taken to satisfy the Undergraduate degree requirement for EN.540.314 as part of the Chemical and Biomolecular Engineering program. The two courses can be started in any term. Recommended Course Background: EN.540.301, EN.540.304, EN.540.311 or EN.540.313 or permission of instructor.
Instructor(s): L. Dahuron; M. Donohue
Area: Engineering, Natural Sciences.

EN.540.311. Chemical Engineering Lab I. 6 Credits.
Students will have additional meeting times outside of class. Students are challenged with laboratory projects that are not well-defined and learn to develop an effective framework for approaching experimental work by identifying the important operating variables, deciding how best to obtain them, and using measured or calculated values of these operating variables to predict, carryout, analyze and improve upon experiments. Each student analyzes three of the following four projects: distillation, gas absorption, liquid-liquid extraction and chemical kinetics in a tubular flow reactor and also one of the projects in EN.540.313. In addition to technical objectives, this course stresses oral and written communication skills and the ability to work effectively in groups.
Prerequisites: EN.540.301, EN.540.304, EN.540.306, EN.540.490 and EN.661.315
Instructor(s): A. Goffin; L. Dahuron
Area: Engineering Writing Intensive.

EN.540.312. Chemical and Biomolecular Engineering Lab: Part 2. 3 Credits.
Students who, as a part of an exchange program, participated in a laboratory course at the Technical University of Denmark at Copenhagen during the summer of 2010 are required to register for this course to complete their equivalency requirement for the Chemical and Biomolecular Engineering Laboratory course offered in Fall 2010 at JHU. This course comprises of four parts: (i) a research-oriented study of one of the seven experiments done at Copenhagen to be submitted as a report, (ii) performance of one experimental project and submission of report along with the current Senior Lab students, (iii) a 15-min presentation of experimental work done at Copenhagen, and (iv) a 5-min presentation to the current junior class describing the overall experience. Recommended Course Background: EN.540.301, EN.540.304, EN.540.306, EN.540.490, EN.661.315
Instructor(s): L. Dahuron
Area: Engineering Writing Intensive.
Instructor(s): M. Donohue

EN.540.313. Chemical and Biomolecular Engineering Lab. 6 Credits.
Students are challenged with laboratory projects that are not well-defined and learn to develop an effective framework for approaching experimental work by identifying the important operating variables, deciding how best to obtain them, and using measured or calculated values of these operating variables to predict, carryout, analyze and improve upon experiments. Each student analyzes three biomolecular engineering projects and one of the projects in EN.540.311. In addition to technical objectives, this course stresses oral and written communication skills and the ability to work effectively in groups. Students will have additional meeting times outside of class. Recommended Course Background: EN.540.301, EN.540.304, EN.540.490, EN.661.315
Instructor(s): A. Goffin; L. Dahuron; M. Ostermeier
Area: Engineering Writing Intensive.

EN.540.314. Chemical Engineering Poduct & Process Design. 4 Credits.
This course guides the student through the contrasting aspects of product design and of process design. Product design concerns the recognition of customer needs, the creation of suitable specifications, and the selection of best products to fulfill the needs. Process design concerns the quantitative description of processes, which serve to produce many commodity chemicals, the estimation of process profitability, and the potential for profitability improvement through incremental changes in the process. Students work in small teams to complete a major project demonstrating their understanding of and proficiency in the primary objectives of the course. Students report several times both orally and in writing on their accomplishments.
Prerequisites: ( EN.540.311 OR EN.540.313 ) AND EN.540.301 AND EN.540.306
Instructor(s): A. Goffin; L. Dahuron; M. Donohue
Area: Engineering.

EN.540.400. Project in Design: Pharmacokinetics. 3 Credits.
This design project will be to develop a chemical process model of the human body that can be used to understand the temporal distribution, spatial distribution and bioavailability of pharmaceutical drugs. The course (and software to be developed) will cover the spectrum of factors affecting pharmaceutical bioavailability including drug formulation, mode of dosing and dosing rate, metabolism and metabolic cascades, storage in fatty tissues, and diffusional limitations (such as in crossing the blood-brain barrier or diffusional differences between normal and cancerous cells). The goal is to develop a process model of the human body that will predict pharmaceutical bioavailability as a function of time and organ (or cell) type that will work for a wide variety of pharmaceuticals including small molecules, biologics, and chemotherapy agents.
Instructor(s): M. Donohue
Area: Engineering.

EN.540.401. Projects in Design: Alternative Energy. 3 Credits.
This course is a group design project (i.e. not a lecture course) to use chemical processing simulation tools (Aspen) to model a real-world process of interest to Chemical and Biomolecular Engineers. The goal of the project will be to develop a process model that is sufficiently complete and robust that it can be used to understand the important factors in the process design and/or operation. This design project is focused on the role alternative energy will play in our country’s future. About a third of the course will be devoted to understanding the role of energy and alternative energy in the US and world economies. The remainder of the course will be devoted to a technical and economic analysis of the feasibility of making biofuel from algae.
Instructor(s): M. Donohue
Area: Engineering.

EN.540.402. Metabolic Systems Biotechnology. 3 Credits.
The aim of this course is to provide a fundamental understanding of the quantitative principles and methodologies of systems biology and biochemical engineering of metabolism. This includes concepts of cellular growth, cellular stoichiometric models, metabolic networks, metabolite fluxes, and genome-scale metabolic models. Quantitative methods and systems biology approaches for metabolic flux analysis and metabolic control theory will be included as well as an analysis of biochemical systems and bioreactors including a consideration of mass transport processes.
Prerequisites: AS.020.306 OR ( EN.580.440 or EN.580.441 )
Instructor(s): M. Betenbaugh
Area: Engineering.

EN.540.403. Colloids and Nanoparticles. 3 Credits.
Fundamental principles related to interactions, dynamics, and structure in colloidal, nanoparticle, and interfacial systems. Concepts covered include hydrodynamics, Brownian motion, diffusion, sedimentation, electrophoresis, colloidal and surface forces, polymeric forces, aggregation, deposition, and experimental methods. Modern topics related to colloids in nano-science and technology will be discussed throughout the course with frequent references to recent literature. Meets with EN.540.603
Instructor(s): M. Bevan
Area: Engineering.

EN.540.405. The Design of Biomolecular Systems. 3 Credits.
This course covers new topics in the design of systems of biomolecules, both in vitro and in vivo, for decision making and control. The course will begin with an overview of how logical decision making and control with biomolecules as is achieved in biology and then proceed to consider various strategies of engineering similar systems. The focus of the course will be on systems level principles rather than the biochemistry of molecule design. Topics will include engineering of transcriptional networks and genetic control for logically programming of cells, the design of in vitro mimics of genetic controls, molecular computing and systems aspects of metabolic engineering. The course will also cover quantitative and computational techniques for the simulation and analysis of biomolecular systems. Co-listed with EN.540.605
Instructor(s): R. Schulman.
EN.540.407. Current Topics in Functional Molecular Assembly. 3 Credits.
This course describes the most recent progress in molecular self-assembly, with a focus on the application aspects of self-assembling materials in medical and energy-related areas. Specifically, the course consists of about twelve lectures covering a broad range of topics, including: principles of static and dynamic molecular assembly, nanomaterials and phase/morphology diagrams of small molecular and macromolecular amphiphiles, self-assembly in biological systems, supramolecular polymers for energy and medicine, key challenges in the fabrication of organic solar cells, and self-healing materials. The class will be taught in a seminar format, with discussions led by graduate students or postdocs. Instructor permission required. Juniors and Seniors only. Instructor(s): H. Cui.

EN.540.409. Modeling Dynamic/Control. 4 Credits.
Introduction to modeling, dynamics, and control. Unsteady state analysis of biomolecular and chemical process control systems. State space and Laplace transform techniques, block diagram algebra, and transfer functions. Feedback and feedforward control. Frequency response and stability analysis. Model construction for biomolecular and cellular systems including pharmacokinetic modeling, biomolecular modeling using the central dogma of biology/control of gene expression, large scale biosimulation. Introduction to nonlinear dynamics. Recommended Corequisites: AS.110.302, EN.540.203, EN.540.301, EN.540.303, AS.020.305 and AS.020.306 or equivalent. Instructor(s): A. Goffin
Area: Engineering, Quantitative and Mathematical Sciences.

EN.540.414. Computational Protein Structure Prediction. 3 Credits.
This class will introduce the fundamental concepts in protein structure, biophysics, optimization and informatics that have enabled the breakthroughs in computational structure prediction and design. Problems covered will include protein folding and docking, design of ligand-binding sites, design of turns and folds, design of protein interfaces. Class will consist of lectures and hands-on computer workshops. Students will learn to use molecular visualization tools and write programs with the PyRosetta protein structure software suite, including a computational project. Programming experience is recommended. Instructor(s): J. Gray
Area: Engineering.

EN.540.415. Interfacial Science with Applications to Nanoscale Systems. 3 Credits.
Nanostructured materials intrinsically possess large surface area (interface area) to volume ratios. It is this large interfacial area that gives rise to many of the amazing properties and technologies associated with nanotechnology. In this class we will examine how the properties of surfaces, interfaces, and nanoscale features differ from their macroscopic behavior. We will compare and contrast fluid-fluid interfaces with solid-fluid and solid-solid interfaces, discussing fundamental interfacial physics and chemistry, as well as touching on state-of-the-art technologies. Instructor(s): J. Frechette.

EN.540.416. Current Topics in Protein Structure Prediction. 3 Credits.
This course will consist of student-led discussions of current literature in protein structure prediction, protein-protein docking, and computational protein design. Related advanced computational approaches of the Rosetta3 protein structural modeling platform will be discussed and object-oriented software design concepts dissected. Students will present and critique C++ and Python code and scripts corresponding to related research projects. Permission of Instructor Required Instructor(s): J. Gray.

EN.540.418. Projects in the Design of a Chemical Car. 2 Credits.
Ready to put those concepts from class into practice? Members work over the course of the semester to design and build a chemically powered vehicle that will compete with other college teams at the American Institute of Chemical Engineers (AIChE) Regional Conference. In this course, the students work in small groups to design and construct the chassis along with chemically powered propulsion and break mechanisms within the constraints of the competition. In addition, students will give oral presentation, write reports, and do thorough safety analysis of their prototypes. Both semesters must be completed with passing grades to receive credit. Instructor(s): L. Dahuron
Area: Engineering.

EN.540.419. Projects in the Design of a Chemical Car. 2 Credits.
Ready to put those concepts from class into practice? Members work over the course of the semester to design and build a chemically powered vehicle that will compete with other college teams at the American Institute of Chemical Engineers (AIChE) Regional Conference. In this course, the students work in small groups to design and construct the chassis along with chemically powered propulsion and break mechanisms within the constraints of the competition. In addition, students will give oral presentation, write reports, and do thorough safety analysis of their prototypes. Instructor(s): J. Frechette; L. Dahuron.

EN.540.420. Build-a-Genome. 4 Credits.
In this combination lecture/laboratory “Synthetic Biology” course students will learn how to make DNA building blocks used in an international project to build the world’s first synthetic eukaryotic genome, Saccharomyces cerevisiae v. 2.0. Please study the wiki www.syntheticyeast.org for more details about the project. Following a biotechnology boot-camp, students will have 24/7 access to computational and wet-lab resources and will be expected to spend 15-20 hours per week on this course. Advanced students will be expected to contribute to the computational and biotech infrastructure. Co-listed with 020.420 and 580.420. Students must understand fundamentals of DNA structure, DNA electrophoresis and analysis, Polymerase Chain Reaction (PCR) and must be either a) Experienced with molecular biology lab work or b) Adept at programming with a biological twist. Instructor(s): J. Boeke
Area: Engineering, Natural Sciences.

EN.540.421. Project in Design: Pharmacodynamics. 3 Credits.
This course covers pharmacodynamics, i.e. how pharmaceuticals affect biological processes. The course will use MatLab to aid in the design of new drug formulations. Instructor(s): M. Donohue
Area: Engineering.

EN.540.426. Biomacromolecules at the Nanoscale. 3 Credits.
This course introduces modern concepts of polymer physics at the nanoscale to describe the conformation and dynamics of biological macromolecules such as filamentous actin, microtubule, and nucleic acids. We will introduce scattering techniques, nano-manipulation techniques, as well as nano-rheology applied to the study of polymers for tissue engineering, nanoparticles, and drug delivery applications. Instructor(s): D. Wirtz
Area: Engineering.
EN.540.428. Supramolecular Materials and Nanomedicine. 3 Credits.
Nanomedicine is a quickly growing area that exploits the novel chemical, physical, and biological properties of nanostructures and nanostructured materials for medical treatments. This course presents basic design principles of constructing nanomaterials for use in drug delivery, disease diagnosis and imaging, and tissue engineering. Three major topics will be discussed, including 1) nanocarriers for drug delivery that are formed through soft matter assembly (e.g., surfactants, lipids, block copolymers, DNA, polyelectrolytes, peptides), 2) inorganic nanostructures for disease diagnosis and imaging (e.g., nanoparticles of gold and silver, quantum dots and carbon nanotubes), and 3) supramolecular scaffolds for tissue engineering and regenerative medicine. Students are expected to learn the physical, chemical and biological properties of each nanomaterial, the underlying physics and chemistry of fabricating such material, as well as their advantages and potential issues when used for biomedical applications. This course will also provide students opportunities for case studies on commercialized nanomedicine products. After this class, students should gain a deeper understanding of current challenges in translating nanoscience and nanotechnology.
Prerequisites: EN.540.204 AND AS.020.305 or instructor’s permission.
Instructor(s): H. Cui
Area: Engineering, Natural Sciences.

EN.540.437. Application of Molecular Evolution to Biotechnology. 3 Credits.
One of the most promising strategies for successfully designing complex biomolecular functions is to exploit nature’s principles of evolution. This course provides an overview of the basics of molecular evolution as well as its experimental implementation. Current research problems in evolution-based biomolecular engineering will be used to illustrate principles in the design of biomolecules (i.e. protein engineering, RNA/DNA engineering), genetic circuits and complex biological systems including cells. Meets with EN.540.637
Prerequisites: AS.020.305 OR EN.580.221
Instructor(s): M. Ostermeier
Area: Engineering, Natural Sciences.

EN.540.440. Micro/Nanotechnology: The Science and Engineering of Small Structures. 3 Credits.
The field of micro / nanotechnology has been gaining tremendous momentum as evidenced by an explosive rise in the number of publications, patents and commercial activities. This is an introductory course intended to expose students to the field as well as real world applications. Lectures will include an overview of scaling of material properties at the nanoscale, micro and nanofabrication methods and essential analytical tools of relevance to the field. All through the course, we will go over electronic, optical and biological applications of emerging micro and nanoscale devices and materials. Co-listed with EN.540.640.
Instructor(s): D. Gracias; L. Dahuron
Area: Engineering.

EN.540.441. Cellular Engineering. 3 Credits.
Area: Engineering.

EN.540.443. Topics in Vascular Engineering. 3 Credits.
In-depth discussion and hands-on course focused on engineering approaches for vascular regeneration. The course will focus on engineering principles of the vasculature including induction of differentiation and administration of cell therapies. Seminal papers and approaches to analyze vascular tissues and cultures will be examined and discussed. Students will perform hands on experiments focused on vascular differentiation and regeneration. In addition, the course will be integrated with students’ presentations throughout the semester on selected topics in vascular engineering.
Instructor(s): S. Gerecht
Area: Engineering.

EN.540.444. Current Topics in Stem Cell Engineering. 3 Credits.
A selection of problems in fluid mechanics at low and moderate Reynolds numbers. This is a highly interactive class in which students are expected to choose topics and prepare a presentation at least twice a semester. Therefore, the list of problems will vary depending on student selection. Typically, on Tuesdays will be an introductory class and Thursdays will be seminars on a specific topic or paper.
Area: Engineering, Natural Sciences.

EN.540.446. Survey of Synthetic Biology. 1 Credit.
Area: Engineering.

EN.540.447. Advanced Problems in Fluid Mechanics. 3 Credits.
A selection of problems in fluid mechanics at low and moderate Reynolds numbers. This is a highly interactive class in which students are expected to choose topics and prepare a presentation at least twice a semester. Therefore, the list of problems will vary depending on student selection. Typically Tuesdays will be an introductory class and Thursdays will be seminars on a specific topic or paper. Meets with 540.647
Instructor(s): G. Drazer
Area: Engineering, Natural Sciences.

EN.540.448. Current Topics in Colloid Science. 3 Credits.
Instructor(s): M. Bevan
Area: Engineering.

EN.540.449. Logic and Decision-making in Biomolecular Systems. 3 Credits.
From the smallest change in gene expression to life and death and reproduction, biomolecular decision-making processes govern cellular fate. In this course we explore the design principles by which biomolecules make decisions and orchestrate complex processes such as signal transduction, homeostasis or apoptosis. We will also explore how we can in turn design complex biomolecular networks that can control biological systems and biomolecular materials. Topics will include the design and analysis of molecular logic circuits, transcriptional and translational control, signal transduction cascades, biomolecular oscillators and cycles, DNA nanotechnology and nanobiotechnology, and molecular computing. The course will introduce principles from electrical circuit theory, computing and control theory and show how these tools can be applied to these systems. Students should be familiar with programming and chemical engineering principles.
Instructor(s): R. Schulman
Area: Engineering, Natural Sciences.

EN.540.450. Current Topics in Transport and Interfacial Phenomena. 3 Credits.
Instructor(s): G. Drazer; J. Frechette
Area: Engineering.
EN.540.459. Bioengineering in Regenerative Medicine. 3 Credits.
Introduction and in-depth discussion course focused on tissue and stem cell engineering. The course will focus on principles in tissue engineering, mechanisms of regeneration, and stem cell therapies. Topics will include introduction to regenerative medicine, bioreactors and scaffolds in tissue engineering, adult and pluripotent stem cells, engineering the niche, and two sessions will focus on legal and ethical issues. Selected approaches to analyze tissues and stem cell culture will also be discussed. In addition, the course will be integrated with graduate students' presentations on selected topics in stem cell engineering. Recommended Course Background: AS.020.306 or EN.580.221. Co-listed with EN.540.659
Prerequisites: AS.020.306 OR EN.580.221
Instructor(s): S. Gerecht
Area: Engineering.

EN.540.460. Computational and Experimental Design of Biomolecules. 3 Credits.
This course reviews current research problems in biomolecular design both from computational and experimental approaches. Current methods in structure prediction (folding, docking and design) will illustrate fundamental concepts in protein structure, biophysics, and optimization. Current research problems in evolution-based biomolecular engineering will illustrate principles in the design of biomolecules (i.e. protein engineering, RNA/DNA engineering), metabolic pathways, signaling pathways, genetic circuits and complex biological systems including cells. Recommended Course Background: AS.020.305
Area: Engineering.

EN.540.463. Current Topics: Biochemistry and Biophysics of Cancer. 3 Credits.
*Attendance to this course is limited to ChemBE students who are working in the instructors lab. This course focuses on the application of engineering fundamentals to cancer metastasis. Class lectures will include an overview of molecular biology fundamentals, an extensive review on extracellular matrix and basics of receptors, followed by topics on tumor cell-host cell and tumor cell-matrix interactions at both theoretical and experimental levels. Lectures will also cover the effects of physical (e.g. shear stress, strain) and chemical (e.g. cytokines, growth factors) stimuli on tumor cell function.
Instructor(s): K. Konstantopoulos
Area: Engineering.

EN.540.464. Current Topics: The Statistical Mechanics of Malignant Neoplasm. 3 Credits.
This course will introduce students involved in cancer engineering research the fundamental elements of statistical mechanics relevant to tumor growth and progression to metastatic disease. Topics include: Fokker-Planck equation for collective cancer migration, tumor growth as a phase transition, and cancer cell motility in nth-dimension space.
Instructor(s): D. Wirtz.

EN.540.472. Topics in Vascular Engineering. 3 Credits.
In-depth discussion and hands-on course focused on engineering approaches for vascular regeneration. The course will focus on engineering principles of the vasculature including induction of differentiation and administration of cell therapies. Seminal papers and approaches to analyze vascular tissues and cultures will be examined and discussed. Students will perform hands on experiments focused on vascular differentiation and regeneration. In addition, the course will be integrated with students' presentations throughout the semester on selected topics in vascular engineering.
Area: Engineering.

EN.540.475. Macromolecules at Interface. 3 Credits.
By instructor's permission. This course involves integrated lecture/discussion and laboratory components to review and participate in current and emerging topics involving macromolecules at interfaces. Lectures and discussions review how fundamentals of macromolecular and interfacial science are connected to emerging problems in nanoscale and bio-technologies. Authentic inquiry activities in the laboratory are connected to diverse scientific and technological fundamental topics. Research and journal article presentations provide a context for laboratory activities with respect to current topics in a number of emerging research applications involving colloidal particles. Research design and strategy is discussed as a process distinct from existing elective course activities and guided inquiry activities in standard undergraduate laboratory courses. Applications include (but are not limited to) photonic crystals, reconfigurable antennas, drug delivery, biomolecular interactions, nanoparticles in the environment, and tissue engineering.
Instructor(s): M. Bevan
Area: Engineering.

EN.540.477. Current Topics in Transport and Interfacial Phenomena: Electrokinetics. 3 Credits.
This course involves integrated lecture/discussion and laboratory components to review and participate in current and emerging topics involving fluid mechanics and interfacial science. The lectures and discussions review how fundamentals of transport and interfacial science are connected to emerging problems in micro- and nanotechnologies. The focus area of the class is Electrokinetic Phenomena. The mandatory laboratory component is aimed at connecting the topics covered in the class to scientific problems. Student participation will involve presentation of laboratory results and research papers.
Instructor(s): G. Drazer; J. Frechette; Z. Gagnon.

EN.540.478. Current Aspects of Transport and Interfacial Phenomena: Part 2. 3 Credits.
By instructor's permission. This course involves integrated lecture/discussion and laboratory components to review and participate in current and emerging topics involving fluid mechanics and interfacial science. The lectures and discussions review how fundamentals of transport and interfacial science are connected to emerging problems in micro- and nanotechnologies. The mandatory laboratory component is aimed at connecting the topics covered in the class to scientific problems. Student participation will involve presentation of laboratory results and research papers.
Instructor(s): G. Drazer; J. Frechette
Area: Engineering.
EN.540.479. Current Topics in Eukaryotic Cell Biotechnology. 3 Credits.
This course involves integrated lecture/discussion and laboratory components to review and participate in current and emerging topics involving eukaryotic biotechnology. Lectures and discussions review how fundamentals of biochemical kinetics and biomolecular engineering are connected to emerging problems in mammalian, algal, and stem cell biotechnology. Laboratory activities are connected to diverse scientific and technological fundamental topics on these same themes. Journal article and research presentations provide a context for laboratory activities with respect to emerging industrial applications for eukaryotic cell types. Research design and strategy is discussed in terms of its ultimate implementation in laboratory, pilot plant, and eventually manufacturing facilities. Methodologies implemented include cell and metabolic engineering for improving yields and production rates of proteins, cells, and tissues. Example topics include expansion of mammalian, stem cells, and algae for the production of membrane proteins, biologics, biofuels, and complex metabolites.
Instructor(s): M. Betenbaugh
Area: Engineering.

EN.540.480. Current Topics in Eukaryotic Cell Biotechnology Part II. 3 Credits.
This course involves integrated lecture/discussion and laboratory components to review and participate in current and emerging topics involving eukaryotic biotechnology. Lectures and discussions review how fundamentals of biochemical kinetics and biomolecular engineering are connected to emerging problems in mammalian, algal, and stem cell biotechnology. Laboratory activities are connected to diverse scientific and technological fundamental topics on these same themes. Journal article and research presentations provide a context for laboratory activities with respect to emerging industrial applications for eukaryotic cell types. Research design and strategy is discussed in terms of its ultimate implementation in laboratory, pilot plant, and eventually manufacturing facilities. Methodologies implemented include genomics, metabolic flux analysis, and cell and metabolic engineering for improving yields and production rates of proteins, cells, and tissues. Example topics include expansion of mammalian cells and algae for the production of membrane proteins, biologics, biofuels, and complex metabolites.
Instructor(s): M. Betenbaugh

EN.540.490. Chemical Laboratory Safety. 1 Credit.
This course is meant to provide the student with a basic knowledge of laboratory safety; hazards, regulations, personal protective equipment, good laboratory practice, elementary toxicology, and engineering controls. It has been developed by the Department of Chemical and Biomolecular Engineering to assist with regulatory compliance, minimize hazards, and reduce the severity of any incidents that may occur in the department's laboratories. The course is a prerequisite of EN.540.311/EN.540.313. It is required of all Chemical and Biomolecular Engineering undergraduates. In addition once per year a three-hour refresher seminar must be taken by all students involved in laboratory research.
Instructor(s): D. Kuespert; L. Dahuron.

EN.540.501. Independent Study. 3 Credits.
Instructor(s): J. Hanes.

EN.540.502. Independent Study. NULL Credits.
Instructor(s): J. Frechette; K. Konstantopoulos; M. Donohue; S. Gerecht.

EN.540.509. Undergraduate Internship. 1 Credit.
Internship unpaid and approved be ChemBE faculty.
Area: Engineering, Natural Sciences.

EN.540.521. Independent Research. 3 Credits.
Instructor(s): Staff.

EN.540.522. Independent Research. 0 - 3 Credit.
Instructor(s): Staff.

EN.540.597. Research. 3 Credits.
Instructor(s): Staff.

EN.540.598. Summer Internship. 1 Credit.
Summer internship unpaid and approved by ChemBE faculty.
Instructor(s): G. Drazer; H. Cui; Staff
Area: Engineering, Natural Sciences.

EN.540.599. Independent Study - Summer. 3 Credits.
Instructor(s): J. Frechette; J. Hanes; M. Betenbaugh.

EN.540.600. Chemical and Biomolecular Engineering Seminar.
Lectures are presented on current subjects relevant to chemical engineering.
Instructor(s): R. Schulman.

EN.540.601. Chemical and Biomolecular Engineering Seminar.
Instructor(s): R. Schulman.

The aim of this course is to provide a fundamental understanding of the quantitative principles and methodologies of systems biology and biochemical engineering of metabolism. This includes concepts of cellular growth, cellular stoichiometric models, metabolic networks, metabolite fluxes, and genome-scale metabolic models. Quantitative methods and systems biology approaches for metabolic flux analysis and metabolic control theory will be included as well as an analysis of biochemical systems and bioreactors including a consideration of mass transport processes.
Instructor(s): M. Betenbaugh.

EN.540.603. Colloids and Nanoparticles.
Fundamental principles related to interactions, dynamics, and structure in colloidal, nanoparticle, and interfacial systems. Concepts covered include hydrodynamics, Brownian motion, diffusion, sedimentation, electrophoresis, colloidal and surface forces, polymeric forces, aggregation, deposition, and experimental methods. Modern topics related to colloids in nano- science and technology will be discussed throughout the course with frequent references to recent literature. Meets with EN.540.403
Instructor(s): M. Bevan
Area: Engineering.

EN.540.605. The Design of Biomolecular Systems.
This course covers new topics in the design of systems of biomolecules, both in vitro and in vivo, for decision making and control. The course will begin with an overview of how logical decision making and control with biomolecules as is achieved in biology and then proceed to consider various strategies of engineering similar systems. The focus of the course will be on systems level principles rather than the biochemistry of molecule design. Topics will include engineering of transcriptional networks and genetic control for logically programming of cells, the design of in vitro mimics of genetic controls, molecular computing and systems aspects of metabolic engineering. The course will also cover quantitative and computational techniques for the simulation and analysis of biomolecular systems. Co-listed with EN.540.405
Instructor(s): R. Schulman.
Supervised Graduate Study
Instructor(s): M. Donohue
Area: Engineering, Natural Sciences.

This course focuses on the principles underlying the formation of micro-
to-nanostructured membranes applied in a range of modern filtration
technologies such as microfiltration, ultrafiltration, nanofiltration, reverse
osmosis, pervaporation, gas separation, electrodialysis, hemodialysis,
fuel cells, drug delivery, tissue engineering and sensors. Polymeric
membranes prepared by phase separation will be examined in detail,
while interfacial polymerization and sol-gel processing to prepare thin
films, composites and ceramic membranes, respectively, will also be
studied. The first part of the course will discuss how concepts from
thermodynamics, multicomponent diffusion and fluid/solid mechanics
are applied to membrane formation theory. The second part will present
membrane transport theory, and demonstrate how engineering principles
are applied to the various filtration applications and the design of modules.

EN.540.614. Computational Protein Structure Prediction.
This class will introduce the fundamental concepts in protein structure,
biophysics, optimization and informatics that have enabled the
breakthroughs in computational structure prediction and design. Problems
covered will include protein folding and docking, design of ligand-binding
sites, design of turns and folds, design of protein interfaces. Class will
consist of lectures and hands-on computer workshops. Students will
learn to use molecular visualization tools and write programs with the
PyRosetta protein structure software suite, including a computational
project. Programming experience is recommended.
Instructor(s): J. Gray
Area: Engineering.

EN.540.615. Interfacial Science with Applications to Nanoscale Systems.
Nanostructured materials intrinsically possess large surface area
(interface area) to volume ratios. It is this large interfacial area that gives
rise to many of the amazing properties and technologies associated
with nanotechnology. In this class we will examine how the properties of
surfaces, interfaces, and nanoscale features differ from their macroscopic
behavior. We will compare and contrast fluid-fluid interfaces with solid-
fluid and solid-solid interfaces, discussing fundamental interfacial physics
and chemistry, as well as touching on state-of-the-art technologies.
Instructor(s): J. Frechette

EN.540.616. Current Topics in Protein Structure Prediction.
Permission of instructor required.
Instructor(s): J. Gray

This design project is focused on the role alternative energy will play
in our country’s future. About a third of the course will be devoted to
understanding the role of energy and alternative energy in the US and
world economies. The remainder of the course will be devoted to a
technical and economic analysis of the feasibility of making biofuel from
algae. Graduate level. Meets with EN.540.401
Instructor(s): M. Donohue.

EN.540.626. Biomacromolecules at the Nanoscale.
This course introduces modern concepts of polymer physics at the
nanoscale to describe the conformation and dynamics of biological
macromolecules such as filamentous actin, microtubule, and nucleic
acids. We will introduce scattering techniques, nano-maneuvering
methods, as well as nano-rheology applied to the study of polymers for
tissue engineering, nanoparticles, and drug delivery applications.
Instructor(s): D. Wirtz.

EN.540.628. Supramolecular Materials and Nanomedicine.
Nanomedicine is a quickly growing area that exploits the novel chemical,
physical, and biological properties of nanostructures and nanostructured
materials for medical treatments. This course presents basic design
principles of constructing nanomaterials for use in drug delivery, disease
diagnosis and imaging, and tissue engineering. Three major topics will
be discussed, including 1) nanocarriers for drug delivery that are formed
through soft matter assembly (e.g., surfactants, lipids, block copolymers,
DNA, polyelectrolytes, peptides), 2) inorganic nanostructures for disease
diagnosis and imaging (e.g., nanoparticles of gold and silver, quantum
dots and carbon nanotubes), and 3) supramolecular scaffolds for tissue
engineering and regenerative medicine. Students are expected to learn
the physical, chemical and biological properties of each nanomaterial,
the underlying physics and chemistry of fabricating such material, as
well as their advantages and potential issues when used for biomedical
applications. This course will also provide students opportunities for
case studies on commercialized nanomedicine products. After this class,
students should gain a deeper understanding of current challenges in
translating nanoscience and nanotechnology into medical therapies.
Instructor(s): H. Cui
Area: Engineering, Natural Sciences.

In this course we will aim for understanding the thermodynamics of
chemical and bio-molecular systems. We will first review classical,
macroscopic thermodynamics covering concepts such as equilibrium,
stability and the role of thermodynamic potentials. Our goal will be to
gain a feel for the generality of thermodynamics. Statistical mechanics
provides a link between the mechanics of atoms and macroscopic
thermodynamics. We will introduce this branch in two distinct ways: 1)
following standard methods of developing concepts such as ensembles
and partition functions, and 2) where we will treat the basis of statistical
mechanics as a problem in inference. With this foundation, we will
consider concepts relevant to understanding the liquid state. Chemical
transformations in a liquid are of importance in much of chemistry and
biology; quasi-chemical generalizations of the potential distribution
theorem will be introduced to present these ideas. We hope to give an
overview of modern developments relating equilibrium work to non-
equilibrium work, as these are of increasing importance in studies on
single molecule systems. Perm Req’d for undergrads.
Instructor(s): C. Wang.

EN.540.632. Project in Design: Pharmacokinetics.
This course covers pharmacodynamics, i.e. how pharmaceuticals affect
biological processes. The course will use MatLab to aid in the design of
new drug formulations.
Instructor(s): M. Donohue
Area: Engineering, Natural Sciences.
EN.540.637. Application of Molecular Evolution to Biotechnology.
One of the most promising strategies for successfully designing complex biomolecular functions is to exploit nature’s principles of evolution. This course provides an overview of the basics of molecular evolution as well as its experimental implementation. Current research problems in evolution-based biomolecular engineering will be used to illustrate principles in the design of biomolecules (i.e. protein engineering, RNA/DNA engineering), genetic circuits and complex biological systems including cells. Will meet with EN.540.437. Recommended Course Background: AS.020.305
Instructor(s): M. Ostermeier
Area: Engineering, Natural Sciences.

The field of micro/nanotechnology has been gaining tremendous momentum as evidenced by an explosive rise in the number of publications, patents and commercial activities. This is an introductory course intended to expose students to the field as well as real world applications. Lectures will include an overview of scaling of material properties at the nanoscale, micro and nanofabrication methods and essential analytical tools of relevance to the field. All through the course, we will go over electronic, optical and biological applications of emerging micro and nanoscale devices and materials. Co-listed with EN.540.440.
Instructor(s): D. Gracias.

This course will (1) focus on transport processes that are different or more prominent in microfabricated systems, (2) present practical aspects of experimental and theoretical work in microscale and nanoscale transport processes and (3) develop a working knowledge of the relevant literature. Some topics include Maxwell and Navier-Stokes equations, Couette/ Poiseuille flow, Stokes flow, fluid circuits, microfluidic mixing, mass and charge transport, electrodynamics, electrophoresis, electro-osmosis, dielectrophoresis, induced-charge electrokinetics, DNA transport, and zeta potential.
Prerequisites: Prereq: EN.540.304 Transport II OR the equivalent. Instructor permission required.
Instructor(s): Z. Gagnon
Area: Engineering, Natural Sciences.

Area: Engineering, Natural Sciences.

EN.540.645. Intro to Research in Micro and Nanotechnology.
A class room based learning of all aspects of conducting research in Micro and Nanotechnology including review of state-of-the-art in the field and original research descriptions. In the course, you will learn the state of the art in Micro and Nanotechnology, critical analysis of research including Design of Experiments, research ethics and strategies to deliver effective research presentations. Instructor Approval.
Instructor(s): D. Gracias.

A selection of problems in fluid mechanics at low and moderate Reynolds numbers. This is a highly interactive class in which students are expected to choose topics and prepare a presentation at least twice a semester. Therefore, the list of problems will vary depending on student selection. Typically Tuesdays will be an introductory class and Thursdays will be seminars on a specific topic or paper. Meets with 540.447
Instructor(s): G. Drazer
Area: Engineering, Natural Sciences.

EN.540.649. Logic and Decision-making in Biomolecular Systems.
From the smallest change in gene expression to life and death and reproduction, biomolecular decision-making processes govern cellular fate. In this course we explore the design principles by which biomolecules make decisions and orchestrate complex processes such as signal transduction, homeostasis or apoptosis. We will also explore how we can in turn design complex biomolecular networks that can control biological systems and biomolecular materials. Topics will include the design and analysis of molecular logic circuits, transcriptional and translational control, signal transduction cascades, biomolecular oscillators and cycles, DNA nanotechnology and nanobiotechnology, and molecular computing. The course will introduce principles from electrical circuit theory, computing and control theory and show how these tools can be applied to these systems. Students should be familiar with programming and chemical engineering principles.
Instructor(s): R. Schulman.

It is the goal of this course to move the graduate student (and advanced undergraduate student) from the introductory level of transport phenomena (undergraduate) to a level that will allow them to be effective in researching transport-related topics in a variety of biomedical, chemical and biochemical engineering areas. The basic equations that govern mass, momentum, and energy transport will be derived and used to solve problems that demonstrate the physical insight necessary to apply these equations to original situations. Some topics include solution techniques utilizing expansions of harmonic functions, singularity solutions, lubrication theory for flow in confined geometries, boundary layer theory, Stokes flow, forced convection, buoyancy-driven flow, Taylor-Aris dispersion, and reaction-diffusion.
Instructor(s): Z. Gagnon
Area: Engineering, Natural Sciences.

EN.540.659. Bioengineering in Regenerative Medicine.
Introduction and in-depth discussion course focused on tissue and stem cell engineering. The course will focus on principles in tissue engineering, mechanisms of regeneration, and stem cell therapies. Topics will include introduction to regenerative medicine, bioreactors and scaffolds in tissue engineering, adult and pluripotent stem cells, engineering the niche, and two sessions will focus on legal and ethical issues. Selected approaches to analyze tissues and stem cell culture will also be discussed. In addition, the course will be integrated with graduate students’ presentations on selected topics in stem cell engineering. Meets with EN.540.459.
Recommended Course Background: AS.020.306 or EN.580.221 or EN.580.440
Instructor(s): S. Gerecht
Area: Engineering.

EN.540.801. Graduate Research.
Instructor(s): Staff.

EN.540.811. Graduate Independent Study.
Instructor(s): M. Donohue.
Cross Listed Courses
Institute for NanoBio Technology

This course will cover the physics and chemistry relevant to the
design, synthesis, and characterization of nanoparticles. Topics
include nanoparticle synthesis, functionalization, surface engineering,
and applications in diagnostics and therapeutics. The properties of
semiconductor quantum dots and magnetic nanoparticles will be reviewed
along with techniques for nanoparticle manipulation, particle tracking,
and bio-microrheology. Patterning tools including soft lithography,
optical lithography, e-beam lithography, and template lithography will be
discussed. Electron and scanning probe microscopy will be reviewed.
Cross-listed with Materials Science & Engineering and Chemical &
Biomolecular Engineering.
Instructor(s): Staff.

Civil Engineering

Civil engineers apply sophisticated analysis and design techniques
to advance the needs of society for shelter, infrastructure, and a safe
environment. Graduates are employed in the fields of structural analysis
and design, soil mechanics and foundation design, environmental
engineering and policy, materials engineering, and coastal and ocean
engineering, and increasingly are taking on far-reaching management
roles in infrastructure, hazard mitigation, sustainability, and technical
roles in the planning, design, and construction of large-scale engineered
systems. In addition, a civil engineering degree provides exposure to
broad societal challenges and the logical thinking necessary for pursuing
careers in other professional fields, such as law, business, and medicine.

The Department of Civil Engineering offers programs at the
undergraduate, graduate, and postdoctoral levels. Civil Engineering at
Hopkins offers a unique balance centered in mechanics fundamentals,
and enriched by state-of-the-art tools in modeling, simulation, and
physical experimentation. The small size of the CE Department fosters
a collegial, close-knit relationship between the students, staff, and
faculty, while our partnerships with other Johns Hopkins departments
provide a wide range of collaborative opportunities that span the larger
disciplines of fluids, systems, structures, and materials. A wide range
of research opportunities distinguishes the program. Students have
participated in projects on structural reliability, earthquake resistance of
structures, testing and analysis of historic bridges, computational design
of materials, failure of brittle materials, cold-formed steel members and
their connections, and coastal and ocean engineering to name a few. A
five-year bachelor’s/master’s degree program is also offered. Graduates
of Johns Hopkins University have traditionally risen to leadership roles in
education, research, industry, and government.

Facilities

The Department’s teaching and research labs are located in Latrobe Hall
and the Stieff Building. Teaching laboratories, all located in Latrobe Hall,
include a modern multi-use facility for exploring experiments in statics,
mechanics of materials, dynamics and other courses, a dedicated soil
mechanics laboratory, and a dedicated computing facility. Research
laboratories include the Smart Structures and Hybrid Testing Laboratory,
the Thin-walled Structures Laboratory, and the Sensor Technology and
Infrastructure Risk Mitigation (STIRM) Laboratory in Latrobe Hall, and the
Coastal Engineering Laboratory in the Stieff Building. The department
also provides space for undergraduate research, the student chapter of
the American Society of Civil Engineers, a graduate student lounge, and
office space for doctoral students.

The department sponsors an undergraduate and graduate seminar series,
as well as the Richard J. Carroll endowed lectureship; all of which are
designed to bring prominent civil engineers to campus to speak with
students and faculty.

Financial Aid

Scholarships and other forms of financial assistance for undergraduates
are described under Admissions and Finances (p. 22). In addition, some
undergraduate students are employed by departmental faculty to provide
assistance on research projects.

Financial assistance to graduate students is available on a competitive
basis in the form of partial or complete tuition fellowships, fellowships with
stipends, teaching assistantships, and research assistantships. In addition
to university-wide fellowships, graduate students in civil engineering are
also eligible for fellowships from the Joseph Meyerhoff Scholarship Fund,
the Richard D. Hickman Endowment, and the Hoomes Rich Graduate
Fellowship.

The mission of the undergraduate program is to educate intellectual
leaders of the profession by instilling in them a fundamental
understanding of the mathematical principles of physics and nature that
underlie engineering science, a practical appreciation of the challenges of
creative engineering design, and a sense of responsibility for professional
service. The undergraduate program has been designed to provide a firm
foundation in a wide breadth of modern civil engineering so that within a
few years our graduates attain:

1. a. an advanced degree in engineering or
   b. required experience toward professional licensure as an
      engineer, or
   c. an advanced degree in a field other than engineering, or
   d. a position within an organization that broadly supports the
      goals of civil engineering; and
2. a position or degree that values adaptability and innovation in their
   work. Building on the strengths of the faculty and supporting our vision
   for the field of civil engineering, the department emphasizes
four technical areas: environmental engineering, geotechnical
engineering, structural engineering, and systems engineering. Some
flexibility is built into the curriculum so that students may pursue
advanced topics in one or more of these areas. Upon completion of
the B.S. in civil engineering, students will demonstrate:

• an ability to apply knowledge of mathematics, science, and engineering
• an ability to design and conduct experiments, as well as to analyze and
  interpret data
• an ability to design a system, component, or process to meet desired
  needs within realistic constraints such as economic, environmental,
  social, political, ethical, health and safety, manufacturability, and
  sustainability
• an ability to function on multidisciplinary teams
• an ability to identify, formulate, and solve engineering problems
• an understanding of professional and ethical responsibility
• an ability to communicate effectively
• the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
• a recognition of the need for, and an ability to engage in lifelong learning
• a knowledge of contemporary issues
• an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice

The program has been accredited by ABET, the Accreditation Board for Engineering and Technology, since 1936.

Requirements for the B.S. Degree

The B.S. degree in civil engineering requires 128 credits. A brief summary of the requirements, given below, is intended only as a guide; these requirements were in effect for students matriculating during the 2012–2013 Academic Year. Students matriculating afterwards or looking for more detailed information should look at the department website at http://eng.jhu.edu/wse/civil/page/current_undergraduate_advising. Each student is assigned an advisor who will provide guidance to ensure all requirements are met.

No course listed as a requirement may be taken satisfactory/unsatisfactory. Any other course used to fulfill a requirement under humanities and social sciences or under unspecified electives can be taken S/U. Technical electives may be taken satisfactory/unsatisfactory only with the approval of the advisor. No more than two grades of D in the required engineering and technical electives may be counted.

Total Credits 129

Classes in the Humanities and Social and Behavioral Sciences provide students with an appreciation for societal concerns and humanistic issues, tools that are essential for a professional who serves the public good. Requirements are as follows: Students must take a minimum of 6 credits in Humanities electives and 6 credits in Social and Behavioral Studies electives. An additional 6 credits can be taken in either area. A minimum of one Humanities and one Social and Behavioral Sciences elective must be at or above the 300-level. One writing intensive requirement must be fulfilled by the Humanities/Social and Behavioral Sciences electives. This can either be done through AS.060.113 Expository Writing/ or a 300-level, writing intensive, Humanities, or Social and Behavioral Sciences elective. Given the increasingly global nature of the civil engineering field, students are required to take one Humanities or Social and Behavioral Sciences course from the KSAS International Studies major (see http://www.krieger.jhu.edu/internationalstudies/courses).

All technical electives must be at or above the 300-level, at least 6 credits must be designated as (E) and at least 3 credits must be directly aligned with one of the civil technical areas. For a list of preapproved technical electives, see http://eng.jhu.edu/wse/civil/page/current_undergraduate_advising.

Sample B.S. Program

A sample civil engineering program may be viewed at http://eng.jhu.edu/wse/civil/page/current_undergraduate_advising. This sample illustrates...
the general sequence of courses; individual programs may vary as a result of AP credits, study abroad, or pursuit of a minor in another department.

**Minor in Principles of Civil Engineering**

This program is available to nondepartmental majors only who would like an overview of the principles of civil engineering. In addition to the prerequisite courses of AS.171.101 General Physics/Physical Science Major I for Physical Science Majors, AS.110.108 Calculus I, and AS.110.109 Calculus II (For Physical Sciences and Engineering), 18 credits are required for the minor, including 12 credits from fundamental civil engineering courses and 6 credits from a two-course sequence in one of three civil technical areas (geotechnical engineering, structural engineering, or systems engineering). No D grades can be counted toward the minor.

**Combined Bachelor’s/Master’s Concurrent Programs**

The Department of Civil Engineering offers combined bachelor’s/master’s degrees. One program combines a B.S. in Civil Engineering with a Master of Science in Engineering (M.S.E.) in Civil Engineering. The other option combines a B.S. in Civil Engineering with a Master of Science in Engineering Management (M.S.E.M.). Formal application through the Department is required. Students may be admitted as early as the junior year. For students who are admitted to this program, the two degrees typically require five years total to complete. For these students, there is an automatic tuition waiver of 50 percent after the first eight semesters of undergraduate work. More information about these programs can be found at www.ce.jhu.edu/current-undergraduate-concurrent/.

**Requirements for the M.S.E. Degree**

After admission to the M.S.E. program, students must satisfactorily complete one of two requirements: 10 Courses (course-only option), or 8 Courses and a final M.S.E. Essay and Defense to obtain the M.S.E. degree. All courses must be 300-level or above, with a maximum of two (2) courses at the 300-level. With approval from the academic advisor, one of the courses counting toward the M.S.E. degree requirement may be a course at the 300-level or above from the Center for Leadership Education. Academic advisors, in consultation with the faculty in the Civil Engineering Department, will determine whether the 8 or 10 courses leading to this degree are appropriate and if they have been completed satisfactorily. No more than one course with a grade lower than a B– may be counted toward the course requirement. Typically the M.S.E. degree requires one to two years to complete if the student is making steady progress. In some cases, the degree may take longer.

The M.S.E. Essay must be approved by the student’s faculty advisor and one reader, who will typically be a full-time Johns Hopkins Civil Engineering faculty member. Any external reader must be approved by the Chair of the Civil Engineering Department.

**Requirements for the Ph.D. Degree**

The Ph.D. in Civil Engineering degree requires a minimum approved program of 10 technical courses beyond the bachelor’s degree, eight of which must be at the 600- or 700-level. All doctoral candidates are expected to demonstrate a high level of oral and written proficiency in English. International students are encouraged to participate in ESL testing recommended courses through the Language Teaching Center. Candidates must pass a department qualifying examination of their general scientific preparation, submit for approval a detailed preliminary proposal for the dissertation, and pass a Graduate Board oral examination. The Ph.D. degree is awarded following a successful defense of the doctoral dissertation. Appropriate graduate courses taken at another institution may be used toward the Ph.D. degree; exact credits are worked out on a case-by-case basis. A master’s degree in civil engineering is generally considered sufficient evidence for a maximum of four courses. Students transferring courses from a prior master’s degree are required to fulfill the remainder of the course requirement (typically six courses) with only courses at the 600- or 700-level.

For current faculty and contact information go to http://eng.jhu.edu/wse/civil/page/ce_faculty

**Faculty**

**Chair**

Benjamin Schafer
Professor, Swirnow Family Faculty Scholar: structural stability, computational mechanics, experimental methods, thin-walled structures.

**Professors**

Annalingam Anandarajah
Professor (Retired): geomechanics, constitutive modeling, finite element modeling, geotechnical engineering.

William P. Ball
Joint, Part-Time, and Visiting Appointments: Professor (DOGEE): environmental engineering.

Edward J. Bouwer
Joint, Part-Time, and Visiting Appointments: Joint, Part-Time, and Visiting Appointments

Robert A. Dalrymple
Professor and Willard and Lillian Hackerman Chair in Civil Engineering: coastal engineering, water wave mechanics, fluid mechanics.

J. Hugh Ellis
Joint, Part-Time, and Visiting Appointments: Professor (DOGEE): structural health engineering, environmental systems.

Somnath Ghosh
Professor and Michael G. Callas Chair in Civil Engineering: multiscale mechanics, finite elements, material fatigue modeling.

Lori Graham-Brady
Professor: probabilistic mechanics, finite elements, stochastic modeling of materials.

Takeru Igusa
Professor: structural dynamics, earthquake engineering, analysis of uncertainties.

Nicholas P. Jones
Professor in Civil Engineering and Dean of the Whiting School of Engineering: structural dynamics, flow-induced vibration, wind engineering.

Benjamin Schafer
Professor, Swirnow Family Faculty Scholar and Department Chair: structural stability, computational mechanics, experimental methods, thin-walled structures.

Alan T. Stone
Joint, Part-Time, and Visiting Appointments: Professor (DOGEE): environmental and aquatic chemistry.

Peter R. Wilcock

Associate Professors

James K. Guest
Associate Professor: topology optimization, structural and material design optimization, computational mechanics.

Seth Guikema
Joint, Part-Time, and Visiting Appointments: Assistant Professor (DOGEE): probabilistic risk analysis, environmental life-cycle assessment.

Judith Mitrani-Reiser
Assistant Professor: performance-based engineering, structural dynamics, earthquake engineering, multi-hazard loss estimation.

Narutoshi Nakata
Assistant Professor: structural dynamics, experimental methods, smart structures technology, earthquake engineering.

Sauleh Siddiqui
Assistant Professor: optimization, equilibrium problems, systems in energy and environmental markets, transportation, and public health.

Assistant Research Professor

Lian Shen
Assistant Research Professor: fluid mechanics, ocean-wind interaction, numerical modeling.

Adjunct Professors

Xin Chen
Adjunct Professor: geotechnical engineering, infrastructure asset management.

 Lucas de Melo
Adjunct Professor: geotechnical engineering.

Lecturers

John A. Matteo
Joint, Part-Time, and Visiting Appointments: Lecturer, Director of Design: structural engineering and architecture, historic structures.

Rachel H. Sangree
Lecturer: structural engineering, historic structures.

For current course information and registration go to https://isis.jhu.edu/classes/

Courses

EN.560.101. Freshman Experiences in Civil Engineering. 1 Credit.
An introduction to civil engineering for first-year students. This course welcomes freshmen to the major by exploring civil engineering design and the range of design projects in which professional civil engineers engage. Students will have the opportunity to practice the design process using hands-on team-based projects, with emphasis on creative design, graphical communication, and teamwork.
Instructor(s): R. Sangree
Area: Engineering.

EN.560.141. Perspectives on the Evolution of Structures. 3 Credits.
Why do buildings and bridges look the way they do today? Students will be provided the tools to answer this question for themselves through a study of the history of the design of buildings and bridges throughout the world from both engineering and architectural/aesthetic perspectives. Only simple mathematics is required (no calculus). Students will participate in individual and group critique of structures from engineering, architectural, and social points of view.
Instructor(s): B. Schafer
Area: Engineering, Quantitative and Mathematical Sciences Writing Intensive.

EN.560.201. Statics & Mechanics of Materials. 4 Credits.
Basic principles of classical mechanics applied to the equilibrium of particles and rigid bodies at rest, under the influence of various force systems. In addition, the following topics are studied: free body concept, analysis of simple structures, friction, centroids and centers of gravity, and moments of inertia. Includes laboratory experience. Co-listed with EN.530.201. Recommended Course Background: AS.171.101, or EN.530.103/EN.530.104 or instructor permission.
Instructor(s): T. Igusa
Area: Engineering.
EN.560.202. Dynamics. 4 Credits.
Basic principles of classical mechanics applied to the motion of particles, system of particles and rigid bodies. Kinematics: analytical description of motion; rectilinear and curvilinear motions of particles; rigid body motion. Kinetics: force, mass, and acceleration; energy and momentum principles. Introduction to vibration. Includes laboratory experience.
Prerequisites: (EN.560.201 OR EN.530.201) AND AS.110.109 AND (AS.171.101 or (EN.530.103 AND EN.530.104))
Instructor(s): N. Nakata
Area: Engineering.

EN.560.206. Solid Mechanics & Theory of Structures. 4 Credits.
Application of the principles of structural analysis for statically determinant and indeterminant structures (trusses, cables, beams, arches, and frames). Calculation of internal forces and stresses in members and structures. Determination of deflections by equilibrium and energy methods. Analysis of indeterminate structures by flexibility and stiffness methods.
Prerequisites: EN.560.201 OR EN.530.201
Instructor(s): L. Graham-Brady
Area: Engineering.

EN.560.220. Civil Engineering Analysis. 3 Credits.
Civil engineering problems are formulated and then solved by numerical methods. Matrix inversion, data fitting and interpolation, root-finding, and solutions of ordinary and partial differential equations are presented. Matlab programming will be introduced to facilitate the solutions.
Recommended Course Background: AS.110.106, AS.110.107/AS.110.109
Instructor(s): J. Mitrani-Reiser
Area: Engineering.

EN.560.305. Soil Mechanics. 4 Credits.
Prerequisites: EN.560.351 OR EN.570.351
Corequisites: EN.570.351 or EN.560.351
Instructor(s): L. De Melo
Area: Engineering.

EN.560.320. Structural Design I. 3 Credits.
Introduction to structural design using common building materials (structural steel, reinforced concrete, and wood). Emphasis will be placed on the application of solid mechanics principles to the design of structural components (beams, columns, and tension members).
Instructor(s): R. Sangree
Area: Engineering.

EN.560.325. Structural Design II. 3 Credits.
A continuation of Structural Design I, this course explores the behavior and conceptual design of structures. Emphasis is placed on identifying load paths through typical gravity and lateral load systems, modeling loads on real structures, and designing structural systems. Designing connections capable of transferring loads through a structural system will also be covered. Recommended Course Background: EN.560.320
Prerequisites: EN.560.206
Instructor(s): R. Sangree
Area: Engineering.

EN.560.330. Foundation Design. 3 Credits.
Application of soil mechanics theory and soil test results to the analysis and design of foundations for structures; retaining walls; embankments; design of pile and shallow footing foundations; slope stability.
Instructor(s): L. De Melo
Area: Engineering.

EN.560.348. Probability & Statistics in Civil Engineering. 3 Credits.
Development and applications of the analysis of uncertainty, including basic probability, statistics and decision theory, in civil engineering systems. Recommended Course Background: AS.110.109
Instructor(s): S. Siddiqui
Area: Engineering.

EN.560.351. Introduction to Fluid Mechanics. 3 Credits.
Introduction to the use of the principles of continuity, momentum, and energy to fluid motion. Topics include hydrostatics, ideal-fluid flow, laminar flow, turbulent flow, form and surface resistance with application to fluid measurement, flow in conduits, and channels, pumps, or turbines.
Co-listed with EN.570.351.
Area: Engineering.

EN.560.380. Introduction to Ocean Wind Engineering. 3 Credits.
Fundamentals of hydrodynamics, aerodynamics and flow-structure interactions with applications in coastal/ocean engineering and wind engineering. Topics include wind and current past blunt bodies, flow-induced structure vibrations, ocean waves and wave/flood loads, wind field and wind loads, sustainable energy from wind and wave and model testing.
Instructor(s): W. Marr
Area: Engineering.

EN.560.429. Preservation Engineering: Theory and Practice. 3 Credits.
The renovation of existing buildings often holds many advantages over new construction, including greater economy, improved sustainability, and the maintenance of engineering heritage and architectural character in our built environment. Yet, the renovation of existing structures presents many challenges to structural engineers. These challenges include structural materials that are no longer in widespread use (e.g., unreinforced masonry arches and vaults, cast iron, and wrought iron) as well as structural materials for which analysis and design practices have changed significantly over the last half-century (e.g., wood, steel, and reinforced concrete). This course will examine structures made of a wide variety of materials and instruct the student how to evaluate their condition, determine their existing capacity, and design repairs and/or reinforcement. The investigation and analysis procedures learned from this course may then be applied to create economical and durable structural alterations that allow for the reuse of older buildings. Site visits near Homewood campus will supplement lectures.
Prerequisites: (EN.560.201 OR EN.530.201) AND EN.560.206 AND EN.560.320 or equivalent for graduate students
Instructor(s): J. Matteo; R. Sangree
Area: Engineering.

EN.560.440. Applied Finite Element Methods. 3 Credits.
Finite Element Methods (FEM) are one of the most powerful engineering tools that are widely used in various disciplines. This course introduces concepts, capabilities, and limitations of FEM and is intended to facilitate applications of FEM in student’s research. The course covers fundamental theories with a focus on stiffness formulation techniques, element types, and computational procedures. The course also offers finite element programming with MATLAB.
Instructor(s): N. Nakata
Area: Engineering.
EN.560.442. Equilibrium Models in Systems Engineering. 3 Credits.
Provide an introduction to equilibrium problems involving systems. The course will start with an introduction to optimization theory followed by various equilibrium problems including market, spatial, and network models. Solution techniques to these types of problems will be discussed, along with applications to systems engineering. Recommended Course Background: AS.110.201 and AS.110.109 or equivalent.
Area: Engineering.

EN.560.445. Advanced Structural Analysis. 3 Credits.
Matrix methods for the analysis of statically indeterminate structures such as beams, plane and space trusses, and plane and space frames. Stiffness and flexibility methods. Linear elastic analysis and introduction to nonlinear analysis. Prerequisites: EN.560.206
Instructor(s): J. Guest
Area: Engineering.

EN.560.451. Civil Engineering Design I. 2 Credits.
A study of the engineering design process from problem definition to the final design. There are team projects which include written and oral presentations. Senior only or Permission Required
Instructor(s): J. Matteo
Area: Engineering.

EN.560.452. Civil Engineering Design II. 3 Credits.
A study of the engineering design process from problem definition to the final design. There are team projects which include written and oral presentations. Requirements: Student must be a senior in Civil Engineering.
Instructor(s): J. Matteo
Area: Engineering.

EN.560.460. Applied Structural Optimization. 3 Credits.
Basic principles of optimization applied to the design of structures. Algorithms and tools for structural component design, member selection, and structural layout (topology) optimization. Course will entail MATLAB programming and use of commercial structural engineering software. Prerequisites: EN.560.730 or 560.445 or permission of instructor
Area: Engineering, Natural Sciences.

EN.560.481. Engineering Design of Underwater Life Support. 3 Credits.
The physiological and psychological aspects of man in the sea are presented with the related engineering requirements. Topics include hyperbaric physiology, decompression theory, carbon dioxide absorption, thermal protection, psychrometrics, saturation diving, life support equipment, deep dive systems, diving operations and hazards.
Instructor(s): W. Marr
Area: Engineering.

EN.560.491. Civil Engr Seminar I.
Seminar series of speakers on various aspects of civil engineering. Juniors and Seniors in Civil Engineering are expected to enroll in this sequence; juniors and seniors receive one-half credit. Different speakers are invited each semester. Satisfactory/ Unsatisfactory only
Instructor(s): R. Sangree
Area: Engineering.

EN.560.492. Civil Engineering Seminar II.
Seminar series of speakers on various aspects of civil engineering. Juniors and Seniors in Civil Engineering are expected to enroll in this sequence; juniors and seniors receive one-half credit. Different speakers are invited each semester. Satisfactory/ Unsatisfactory only Prerequisites: EN.560.491
Instructor(s): R. Sangree
Area: Engineering.

EN.560.493. Civil Engr Seminar III.
Seminar series of speakers on various aspects of civil engineering. Juniors and Seniors in Civil Engineering are expected to enroll in this sequence; juniors and seniors receive one-half credit. Different speakers are invited each semester. Satisfactory/ Unsatisfactory only Prerequisites: EN.560.492.
Instructor(s): R. Sangree
Area: Engineering.

EN.560.494. Civil Engineering Seminar IV.
Seminar series of speakers on various aspects of civil engineering. Juniors and Seniors in Civil Engineering are expected to enroll in this sequence; juniors and seniors receive one-half credit. Different speakers are invited each semester. Satisfactory/ Unsatisfactory only Prerequisites: EN.560.493
Instructor(s): R. Sangree
Area: Engineering.

EN.560.498. Survey of Systems Engineering Tools. 3 Credits.
Introduction to analytical tools in the three major functional areas of systems engineering: design, analysis and control. Recommended Corequisite: EN.560.348 or equivalent course in probability theory. Restricted to Civil Engineering majors or by permission of instructor.
Instructor(s): T. Igusa
Area: Engineering.

EN.560.525. Independent Study. 3 Credits.
Instructor(s): R. Dalrymple.

EN.560.526. Independent Study Civil Engineering. 0 - 3 Credit.
Instructor(s): B. Schafer; J. Mitrani-Reiser; R. Dalrymple; R. Sangree; T. Igusa.

EN.560.535. Research in Civil Engineering. 3 Credits.
Perm. Req’d.
Instructor(s): Staff.

EN.560.536. Research in Civil Engineering. 0 - 3 Credit.
Instructor(s): Staff.

EN.560.590. Civil Engineering Internship. 1 Credit.
Instructor(s): B. Schafer; J. Guest.

EN.560.597. Summer Research - Civil Engineering. 3 Credits.
Instructor(s): Staff.

EN.560.599. Indep Study - Summer. 3 Credits.

EN.560.602. GPU Programming for Engineers.
Video graphics cards can be repurposed to perform massively parallel computations rapidly. This course will provide students the ability to program these graphics cards to speed up numerical computations. The course will begin with an introduction to C++ programming followed by concepts in parallel computing. Finally, the CUDA extensions to C++ that is used on Nvidia graphics cards. Students will be programming GPUs during the course. Recommended course background: Some programming experience.
Instructor(s): R. Dalrymple
Area: Engineering.
Basic solid mechanics for structural engineers. Stress, strain and constitutive laws. Linear elasticity and viscoelasticity. Introduction to nonlinear mechanics. Static, dynamic and thermal stresses. Specialization of theory to one- and two-dimensional cases: plane stress and plane strain, rods, and beams. Work and energy principles; variational formulations.
Instructor(s): J. Guest; L. Graham-Brady.

EN.560.620. Advanced Steel Design.
Steel Structures or comparable introductory steel design course. This course examines advanced design of structural steel buildings using the load and resistance factor design approach. Topics include plastic analysis of indeterminate structures, design of plate girders, and design of composite beams. Co-listed with EN.565.620. Recommended Course Background: EN.560.320.

EN.560.630. Structural Dynamics.
Functional and computational examination of elastic and inelastic single degree of freedom systems with classical and non-classical damping subject to various input excitations including earthquakes with emphasis on the study of system response. Extension to multi-degree of freedom systems with emphasis on modal analysis and numerical methods. Use of the principles of structural dynamics in earthquake response.
Instructor(s): M. Shields.

This is a course in the concept, design, development and integration of systems from individual systems to system-of-systems. Lessons are reinforced by case studies and assignments, taking a holistic systems view and integrating aspects of product development and system architecture within systems engineering. This course will teach UML and SysML as model based system engineering languages for systems design, analysis, and documentation in a concurrent engineering, team-oriented design setting. The system language IDEFx will be covered to the degree that students can read and interpret legacy systems documented using IDEFx. In addition to lectures, a case study approach will be employed to develop analytical, technical, management, and teamwork skills through exercises in planning, documentation, presentation, and the creative process of systems engineering design.
Instructor(s): T. Speller
Area: Engineering.

The theories governing water wave motion, from linear to nonlinear waves, is presented. Wave propagation and transformation, including shoaling, refraction, and diffraction, is shown. Wave breaking and the basic interaction of waves with structures and the ocean bottom are covered.
Instructor(s): R. Dalrymple.

EN.560.691. Graduate Seminar.
Graduate students are expected to register for this course each semester. Both internal and outside speakers are included.
Instructor(s): B. Schafer.

EN.560.692. Civil Engineering Graduate Seminar.
Seminar series of speakers on various aspects of civil engineering. Different speakers are invited each semester. Full time civil engineering graduate students must enroll in the seminar course every semester unless excused by the Department.
Instructor(s): B. Schafer.

EN.560.700. Applications of Science-Based Coupling of Models.
Area: Engineering, Social and Behavioral Sciences.

This 1.5 hour course will address various themes related to modeling complex systems through critical evaluation of technical articles, open discussion, faculty presentations, and computational workshops. Teams of 3-5 faculty will develop monthly units based on different themes, examples of which may include: optimization and uncertainty modeling in science and engineering, particle-based modeling, experimental and field measurements in multi-scale models, linking atomistic- to continuum-scale models, challenges in climate and ocean modeling, homogenization and upscaling of small-scale data. This course is a requirement for MCS IGERT trainees, but it is open to all graduate students.

Variational methods and mathematical foundations, Direct and Iterative solvers, 1-D Problems formulation and boundary conditions, Trusses, 2-D/3D Problems, Triangular elements, QUAD4 elements, Higher Order Elements, Element Pathology, Improving Element Convergence, Dynamic Problems.
Instructor(s): S. Ghosh.

Instructor(s): B. Schafer.

EN.560.738. Applied Knowledge Discovery.
The knowledge discovery process involves a close interaction between domain experts and machine learning techniques to explore and learn from complex data sets. Most research on this subject is centered on machine learning. The emphasis in this course is on effective use of domain expertise. Applications will be chosen based on student interests.
Instructor(s): T. Igusa.

EN.560.741. Theoretical and Computational Plasticity.

EN.560.756. Earthquake Engineering.

EN.560.764. Infrastructure Asset Management.
Introduction to concept of infrastructure asset management. Topics include performance & condition data collection and modeling, geographical information system (GIS), life-cycle economic analysis, maintenance, rehabilitation, and renovation (MR&R) strategies, innovative contracting using PPP and performance based design, construction, maintenance, and operation. Undergraduates must be seniors or obtain permission of instructor.
Instructor(s): X. Chen.
This course will discuss state of the art theoretical developments and modeling techniques in nonlinear computational mechanics, for problems with geometric and material nonlinearities. Large deformation of elastic-plastic and visco-plastic materials, contact-friction and other heterogeneous materials like composites and porous materials will be considered. A wide variety of applications in different disciplines, e.g. metal forming, composite materials, polycrystalline materials will be considered. Co-listed with EN.530.772
Instructor(s): S. Ghosh.

EN.560.782. Hydrodynamics.
Fundamentals of fluid mechanics in the context of ocean science and engineering, naval architecture, and coastal processes, at engineering scales.
Area: Engineering.

Hydrodynamics with applications in ocean vehicles and structures. Waves, winds and currents in sea environment. Interactions between waves and floating bodies. Sea loads on offshore structures.
Prerequisites: EN.560.781
Instructor(s): L. Shen.

EN.560.785. Coastal & Ocean Modeling.
Course discusses the numerical and physical modeling techniques used in coastal and ocean engineering, including finite difference, finite and boundary element methods, and particle methods. Some aspects of parallel computing will be included.
Area: Engineering, Natural Sciences.

Course introduces contemporary ocean science and engineering research, and discusses select topics in the areas of air-sea exchange, nonlinear waves, hydrodynamics, wave-turbulence interaction, and flow-structure interaction.
Prerequisites: EN.560.782 AND EN.560.783 OR INSTRUCTOR PERMISSION
Instructor(s): L. Shen.

EN.560.835. Graduate Research.
Instructor(s): Staff.

EN.560.836. Graduate Research.
Instructor(s): Staff.

EN.560.890. Independent Study.

Cross Listed Courses
Earth Planetary Sciences

AS.270.205. Introduction to Geographic Information Systems and Geospatial Analysis. 3 Credits.
The course provides a broad introduction to the principles and practice of Geographic Information Systems (GIS) and related tools of Geospatial Analysis. Topics will include history of GIS, GIS data structures, data acquisition and merging, database management, spatial analysis, and GIS applications. In addition, students will get hands-on experience working with GIS software.
Instructor(s): X. Chen
Area: Engineering, Natural Sciences.

Geography Environmental Engineering

EN.570.351. Introduction to Fluid Mechanics. 3 Credits.
Introduction to the use of the principles of continuity, momentum, and energy to fluid motion. Topics include hydrostatics, ideal-fluid flow, laminar flow, turbulent flow. Recommended Course Background: Statics, Dynamics, and AS.110.302
Instructor(s): P. Wilcock
Area: Engineering.

Computer Science

Computing has grown to be a pervasive element of society, business, science, and entertainment. The availability of relatively inexpensive high performance computing capabilities, ubiquitous high speed and wireless networking, and mobile computing have powered a technology-driven restructuring of the way society and most professions now operate. Information, and its associated processing and transport, is the commodity upon which corporations are built and lives are improved. At the center of this revolution, making it happen, are those who study computer science.

There are two dimensions to the field of computer science that establish it as a unique area. CS can be viewed as a stand-alone discipline worthy of study unto itself, and/or as an empowering discipline to be studied in conjunction with other areas. Core CS careers include (but are not limited to) software design and development, computer systems engineering or administration, and information security. Application areas span a wide range of fields and disciplines such as robotics, medical or health informatics, gaming/entertainment, business computing, and scientific research to name a few.

Because computer science is a highly diverse and broadly applied field, studies can proceed in many different directions. Accordingly, the undergraduate and graduate programs in the Department of Computer Science at Johns Hopkins are flexible curricula designed to accommodate a wide range of goals. Whether the ultimate goal is a mainstream career in computer science or a desire to combine expertise in computer science with another area, a student at Johns Hopkins can pursue appropriately customized versions of the following computer science programs: minor, bachelor of science, bachelor of arts, masters of science in engineering, and doctor of philosophy. Most of this catalog section is devoted to details regarding these programs.

Computer science research laboratories are currently active in the following areas at Hopkins: algorithm design and analysis, human-computer interaction, machine learning, health informatics, computational medicine, computer vision and image processing, computer graphics, geometric modeling, programming languages, natural language and speech processing, information retrieval, cryptography and information security, secure and robust systems, storage systems, high-performance and scientific computing, computational genomics, networks and distributed systems, stream processing, parallel and distributed databases, robotics, computer-integrated surgical systems, and wireless and sensor systems.

Additionally, interdisciplinary research centers in the university have heavy involvement by Computer Science faculty: the Information Security Institute (ISI), the Center for Computer-Integrated Surgical Systems and Technology (CISST), the Laboratory for Computational Sensing and Robotics (LCISR), the Center for Language and Speech Processing (CLSP), and the Institute for Data Intensive Engineering and Science (IDIES). An important component of the educational process...
in the department is the opportunity for student participation in the research programs of the faculty, and all faculty members have research laboratories in which individual projects are available for undergraduate and graduate students. Original research in close association with individual faculty members is emphasized at the graduate level.

There are several closely related programs at the undergraduate and graduate levels which involve significant coursework and faculty involvement from the Department of Computer Science. The Laboratory for Computational Sensing and Robotics (LCSR) offers a minor in robotics and also a minor in computer integrated surgery through the Engineering Research Center for Computer Integrated Surgical Systems and Technology. Details of these programs may be found elsewhere in this catalog in the section pertaining to the Laboratory for Computational Sensing and Robotics. Undergraduates with a strong interest in system design and performance may elect to pursue a bachelor degree in computer engineering. This field of study includes course work in computer science, as well as electrical and computer engineering. Although jointly administered by both departments, specific goals and requirements of the computer engineering degree may be found in the catalog section pertaining to the Department of Electrical and Computer Engineering only.

At the graduate level, the LCSR offers a Master of Science in Engineering (M.S.E.) in Robotics, designed for students from a wide variety of engineering, scientific, and mathematical backgrounds to advance their interdisciplinary knowledge in robotics. Details of this program may be found in the LCSR section of this catalog, or on the web at www.lcsr.jhu.edu/MSE. Lastly, the Master of Science in Security Informatics (M.S.S.I.) is a specialized graduate program offered through the Information Security Institute (ISI) in the WSE. The field of security informatics is fundamentally based on information security and assurance technologies (hardware, software, and networks) as related to issues such as policy, management, privacy/trust, health care, and law, from both national and international perspectives. Interested students can obtain detailed information regarding the M.S.S.I. online at www.jhuisi.jhu.edu or in the ISI section of this catalog.

For additional information regarding the academic programs available in Computer Science, and the facilities provided, please consult the sections which follow, or the departmental website www.cs.jhu.edu.

Facilities

The general department computing facilities include over 60 workstations and servers; a large undergraduate laboratory comprised of 24 Linux workstations, 7 Windows stations, and a separate collaboration room allowing students to work in a team-based environment; a Masters’ Students Office consisting of 16 Linux workstations and a collaboration area; assigned locations and computers for Ph.D. students; multiple high-speed networked laser printers, as well as a networked color copier; remotely accessible Linux and Unix compute servers available to both graduate and undergraduate students.

Focused research laboratories have significant resources that provide greater specialization, including isolated networks of PCs for security studies, sensor and wireless computing testbeds, robots and computer vision systems, a mock operating room equipped with medical robots and imaging equipment, and more.

The general department computing facilities are tied together by our own LAN, and access to specialized hardware in other departments, labs, and institutions is available via the university intranet and the Internet. In addition, the university provides wireless access to the JHU intranet and the Internet, as well as server systems that provide e-mail accounts for all students.

(See also General Requirements for Departmental Majors (p. 33))

The objectives of our bachelor degree programs are to train computer scientists who will be able to:

- Successfully engage in professional practice in the computing sciences or apply computer science tools and techniques to another field of interest.
- Pursue advanced study in the computing sciences.
- Behave in a professional and ethical manner.
- Work successfully in both independent and team environments.

A successful major program of study leads to either the Bachelor of Science in Computer Science (B.S.) or the Bachelor of Arts in Computer Science (B.A.). Students should decide which degree program to complete by about their junior year. Both degree programs require specific courses and/or credits in several key areas: computer science, math, basic science, humanities and social sciences. However, there is much flexibility in how these requirements are fulfilled. Undergraduate majors may choose to pursue a broad selection of computer science and distributional courses, or to pursue a specific concentration within the field. Current concentrations reflect departmental and school strengths: information security, natural language processing, robotics, software engineering, and video game design. Further information on these concentrations may be found in the computer science undergraduate advising manual.

All undergraduate students majoring or minoring in computer science must have a faculty advisor in the department. They will be assigned an advisor as entering freshmen or upon deciding on the major/minor. Every major must follow a program approved by his/her faculty advisor.

The department also offers a minor in computer science, and tangentially, a minor in computer integrated surgery and a minor in robotics. Some students majoring in computer science may be eligible for a concurrent bachelor’s/master’s degree program. Requirements for these programs are included here as well. Additional details regarding undergraduate programs can be found in the department’s undergraduate advising manual or on the website at www.cs.jhu.edu.

Requirements for the B.S. Degree

The Bachelor of Science in Computer Science degree program is accredited by the Computing Accreditation Commission of ABET, www.abet.org (http://www.abet.org). It provides for the acquisition of the following knowledge base and skill set:

- An ability to apply knowledge of computing and mathematics appropriate to the discipline.
- An ability to analyze a problem, and identify and define the computing requirements appropriate to its solution.
- An ability to design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs.
- An ability to function effectively on teams to accomplish a common goal.
- An understanding of professional, ethical, legal, security, and social issues and responsibilities.
• An ability to communicate effectively with a range of audiences.
• An ability to analyze the local and global impact of computing on individuals, organizations, and society.
• Recognition of the need for and an ability to engage in continuing professional development.
• An ability to use current techniques, skills, and tools necessary for computing practice.
• An ability to apply mathematical foundations, algorithmic principles, and computer science theory in the modeling and design of computer-based systems in a way that demonstrates comprehension of the trade-offs involved in design choices.
• An ability to apply design and development principles in the construction of software systems of varying complexity.

To meet the course credit requirements for the B.S. in computer science, the student must complete a minimum of 126 credits. The basic requirements for the B.S. degree are as follows:

**Computer Science (42 credits)**

The following foundational courses in computer science must be included in a student’s program:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN.600.104</td>
<td>Computer Ethics</td>
<td>1</td>
</tr>
<tr>
<td>EN.600.107</td>
<td>Introductory Programming in Java (or AP credit)</td>
<td>3</td>
</tr>
<tr>
<td>EN.600.120</td>
<td>Intermediate Programming</td>
<td>4</td>
</tr>
<tr>
<td>EN.600.226</td>
<td>Data Structures</td>
<td>4</td>
</tr>
<tr>
<td>EN.600.233</td>
<td>Computer System Fundamentals</td>
<td>3</td>
</tr>
<tr>
<td>EN.600.271</td>
<td>Automata &amp; Computation Theory</td>
<td>3</td>
</tr>
<tr>
<td>EN.600.363</td>
<td>Introduction To Algorithms</td>
<td>3</td>
</tr>
<tr>
<td>EN.600.463</td>
<td>Algorithms I</td>
<td>3</td>
</tr>
</tbody>
</table>

At least 16 credit hours must be at the 300-level or above, including EN.600.363/463. At least one course in each classification area of Analysis, Applications and Systems must be chosen. An exhaustive list of the area classifications for each of our courses may be found on the department’s website.

Students must take at least one of the following courses which contain oral communication components. The course satisfying this requirement may overlap other requirements:

EN.600.255 Introduction to Video Game Design
EN.600.321/421 Object Oriented Software Engineering
EN.600.355 Video Game Design Project
EN.600.392 CS Design Project
EN.600.446 Computer Integrated Surgery II
EN.600.520 Senior Honors Thesis

Eight additional credits of Computer Science are required.

**Mathematics (22 credits)**

The following courses must be included:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>AS.110.108</td>
<td>Calculus I</td>
<td>4</td>
</tr>
<tr>
<td>AS.110.109</td>
<td>Calculus II (For Physical Sciences and Engineering)</td>
<td>4</td>
</tr>
<tr>
<td>EN.550.171</td>
<td>Discrete Mathematics</td>
<td>4</td>
</tr>
</tbody>
</table>

The remaining courses must be 200-level or above. Chosen from Mathematics (110.xxx) or Applied Math and Statistics (550.xxx), and must include coverage of both probability and statistics. Some highly recommended math electives are Probability & Statistics, Calculus III, Linear Algebra, and Differential Equations. Note that students will need at least six courses to fulfill the credit requirement.

**Basic Sciences (16 credits)**

At least two semesters of physics or two semesters of chemistry, with the associated laboratories, must be included. The remaining courses must be chosen in accordance with the list posted on the department’s website, which includes most courses in Physics, Chemistry, Biology, Biophysics, Earth & Planetary Sciences, Natural Sciences designated engineering courses, and some Natural Sciences designated courses in Neuroscience & Cognitive Science, but not all. At most 2 credits from satisfactory/unsatisfactory intersession courses may be used to fulfill this requirement.

**Humanities/Social Sciences (18 credits)**

Six courses in the Humanities and Social and Behavioral Sciences must be taken, with each course at least 3 credits. These courses must have either an Humanities or Social and Behavioral Sciences area designator on them; however, foreign language courses (without an Humanities or Social and Behavioral Sciences) may also be used to satisfy this requirement.
