Contrary to the image most Americans have of their country, the United States is a tough nation with respect to crime. The U.S. has constructed a considerably more harsh criminal justice regime than any of its advanced industrial counterparts. In recent years, America's prisons and jails have held more than one percent of the nation's adults—2.3 million people—with many more on parole, probation or temporarily free on bail awaiting trial. In Western Europe, by contrast, fewer than two-tenths of one percent of the adult populace is behind bars. This enormous discrepancy in incarceration rates is more a function of the relative severity of America's criminal laws than differences between Europe and the U.S. in the actual incidence of serious crime. And, of course, while Western European nations no longer execute convicted criminals, the U.S. remains committed to the use of capital punishment. We will explore these and related issues of crime and punishment in the U.S.
Instructor(s): B. Ginsberg
Area: Social and Behavioral Sciences

AS.190.396. Capitalism and Ecology. 3.00 Credits.
Capitalism and Ecology focuses on the relations between capitalism and climate during the era of the Anthropocene. How do capitalist processes of extraction, consumption, production and governance contribute to the pace of climate warming, glacier flows, the ocean conveyor system, species loss and other phenomena? What are the effects and the possible modes of political response? How do the nonhuman, self-organizing processes change on their own as they also amplify the effects of capitalist emissions? The course combines texts on capitalism and activism with those by geoscientists on how the nonhuman systems work. Books by Michael Benton, Hayek, Naomi Klein, Fred Hirsch, Fred Pearce, Maurizio Lazzarato and Connolly will be drawn upon to engage these issues. A previous course in political theory is recommended. The class is organized around student presentations on assigned readings. Two papers, 10-12 pages in length. Extensive class discussion.
Instructor(s): W. Connolly
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive.

AS.190.397. States and Markets. 3.00 Credits.
The course offers an introduction to the relation between politics and economics by focusing on the interaction between the two most important institutions of the modern world: states and markets. Under what conditions do states and markets combine to promote or damage human welfare? Essential concepts, theories and cases of economic development will be examined.
Instructor(s): S. Mazzuca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.398. Politics of Good & Evil. 3.00 Credits.
The politics of good and evil places a set of classic myths into conversation with recent philosophical and political work on good and evil. The myths include the Book of Job, Genesis (J version), two dramas by Sophocles, a reading from Augustine, and Voltaire's Candide. Texts by Nietzsche, William James and Connolly are then placed into conversation with each other and hostile mythic texts. Kohlberg's The Sixth Extinction closes the class, allowing us to look again at the relevance of myth to today. This class is organized around “elemental theory” in which diverse existential stories jostle and disturb both each other and us. Previous work in theory is highly recommended. Assignments: A class presentation, two 10-12 page papers, extensive class discussion.
Instructor(s): W. Connolly
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.401. International Relations Theory. 3.00 Credits.
This seminar covers the main theoretical perspectives employed in the analysis of international politics, covering a variety of realist, liberal, and constructivist work. The strengths and weaknesses of different approaches will be assessed and contrasted with one another, with the goal being to provide students with a broad foundation on which to develop their own understandings. The course is open to graduate students and advanced undergraduates.
Instructor(s): S. Schmidt
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.405. Food Politics. 3.00 Credits.
This course examines the politics of food at the local, national, and global level. Topics include the politics of agricultural subsidies, struggles over genetically modified foods, government efforts at improving food safety, and issues surrounding obesity and nutrition policy. Juniors, seniors, and graduate students only. Cross-listed with Public Health Studies.
Instructor(s): A. Sheingate
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.406. The Executive Branch. 3.00 Credits.
In the 19th Century America was noted for its courts, political parties and representative institutions. Today, America's political parties and representative institutions have declined in importance while the institutions of the executive branch have increased in importance. This seminar will examine the nation's key executive institutions and aspects of executive governance in the U.S. Students will alternate primary responsibility for week's readings. Every student will prepare a 10-15 page review and critique of the books for which they are responsible in class.
Instructor(s): B. Ginsberg
Area: Social and Behavioral Sciences

AS.190.408. Sovereignty: Historical Perspectives and Contemporary Issues. 3.00 Credits.
This seminar provides an in-depth exploration of the concept of sovereignty by examining its historical development and its use in international relations scholarship. Our discussion will also be informed by works in political theory and the international law literature. The course is open to advanced undergraduate students and graduate students.
Instructor(s): S. Schmidt
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.409. Comp/Politics/Social Mov. 3.00 Credits.
Course examines major approaches to social movement organizations, dynamics, and significance. Case materials come from U.S., Europe, and Third World examples.
Instructor(s): M. Keck
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.411. Environment and Development in the Third World. 3.00 Credits.
A research seminar examining the politics of environmental issues in developing countries, with special focus on Latin America.
Instructor(s): M. Keck
Area: Social and Behavioral Sciences
Writing Intensive.
AS.190.412. Political Violence. 3.00 Credits.
An examination of the ways in which violence has been used to secure political ends. Topics include terrorism, assassination, genocide, coups, rebellions and war itself. Students examine what makes types of political violence unique and what unites them. (Formerly AS.190.372)
Instructor(s): S. David
Area: Social and Behavioral Sciences.

AS.190.413. Global Security Politics. 3.00 Credits.
An intensive examination of the security politics of nuclear weapons, outer space, biological weapons, and emerging information technologies.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

AS.190.414. America and the World. 3.00 Credits.
Intensive examination of the United States from the founding to the present in comparative and international perspective. Senior or graduate students.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

AS.190.417. American Welfare State. 3.00 Credits.
This seminar analyzes the distinctive US welfare state in historical and comparative perspective. Special attention to policy development over time in health care, pensions, taxes, and work and poverty.
Instructor(s): D. Schlozman
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.419. Identity and Nations in Latin American Politics. 3.00 Credits.
This seminar class explores formation and political mobilization of identities - group, ethnic, gendered, national, cosmopolitan - in Latin America. Although some of the reading will be broadly comparative, the spring 2013 version of the class will focus especially on Brazil. Requirements will include short response papers and a term paper. Portuguese or Spanish desirable but not required. Enrolled students must be juniors or seniors and must have taken at least one prior course in comparative politics.
Instructor(s): M. Keck
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.420. Nuclear Power and World Order. 3.00 Credits.
This course provides an in-depth examination of evolving debates over world political order and nuclear deterrence, war-fighting, arms control, world government, proliferation, and terrorism.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.422. Republicanism. 3.00 Credits.
Readings in classical and contemporary texts (Polybius, Machiavelli, Montesquieu, Rousseau, Kant, the Federalist, Calhoun, World Federalism, and nuclear arms control). Focus on security, freedom, and geopolitics, both domestic and international.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences

AS.190.423. Planetary Geopolitics. 3.00 Credits.
With the tools of geopolitics, course explores political debates over globalization of machine civilization and changes in scope and pace, space and place, and role of nature in human affairs.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.424. Policy Disasters. 3.00 Credits.
Investigates the causes of large-scale policy disasters, examining the role of ideology, psychology, organization design and political incentives. Examples may be drawn from the Iraq War, Bay of Pigs, Hurricane Katrina, the U.S. Financial crisis, Shuttle Challenger disaster. economic development policy, privatization, and the Great Society. Limited to seniors or with permission of instructor. (CP / AP)
Instructor(s): S. Teles
Area: Social and Behavioral Sciences

AS.190.425. The New Deal and American Politics. 3.00 Credits.
This seminar explores how the New Deal, the fundamental moment in the post-Civil War United States, has structured politics and government across a variety of domains ever since. Topics include presidential leadership, executive power, political parties, labor, race, and the welfare state.
Instructor(s): D. Schlozman
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.426. Science and Expertise in Global Politics. 3.00 Credits.
An in-depth examination of complex global problems that demand the effective use of scientific and expert knowledge in global governance. We will begin with a theoretical overview covering different perspectives on the role of knowledge and technology in global politics before looking in more detail at case studies drawn from environmental politics, nuclear management, colonial history, international political economy, UN peacekeeping, and more.
Instructor(s): E. Chung
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.427. Political Economy of Japan and Korea. 3.00 Credits.
This upper-level seminar examines some of the major debates and issues of postwar Japanese and South Korean political economy. Topics include nationalism, gender politics, civil society, immigration, and US-Japan-South Korea trilateral relations.
Instructor(s): E. Chung
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.429. The Political Bases of the Market Economy. 3.00 Credits.
Although "the market" is conventionally understood as separate from "politics", the modern market economy did not arise in a political vacuum. In fact, the very separation between the economy and politics is itself the product of a politically potent set of ideas. This course is an upper-division reading seminar on the origins and evolution of the modern market economy. Readings will include Smith, Marx, Weber, Polanyi, Keynes, Hayek, Friedman, Becker, and Foucault. Recommended course background: Introduction to comparative politics OR any college-level course in social or political theory.
Instructor(s): N. Jabko
Area: Social and Behavioral Sciences.
AS.190.430. Time and Punishment. 3.00 Credits.
"If you can’t do the time, don’t do the crime." According to ask.com, this common expression was made popular in the 1970s by the theme song for the television show "Beretta." Aside from amusing us with the irony that the star of "Beretta" was Robert Blake who was later charged with the murder of Bony Lee Bakely, the expression raises a profound issue: What is the relationship between punishment and time? This course will explore that question. Topics to be discussed include different philosophical understandings and experiences of time, views of mortality and fate, theories of punishment, specific punishments in the U.S. (including sentences of juveniles, life, death, and LWOP), as well as punishments that are not specifically meted out but are known to be the consequences of political, social, and economic circumstance. Students will read texts in criminology, political theory, philosophy, and jurisprudence, as well as a selection of Supreme Court cases, novels, and short stories. This writing intensive course is limited to undergraduates who have taken at least one "Classics of Political Thought" course (190.280, 190.281, 190.282, or 190.283).
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences.

AS.190.431. Global Climate Governance. 3.00 Credits.
This course will offer an in-depth study of the history and politics of global climate governance. It will examine the central actors, agreements, and policy proposals that shape climate governance.
Instructor(s): B. Allan
Area: Social and Behavioral Sciences.

AS.190.432. Topics in Global Security Politics. 3.00 Credits.
Intensive examination of catastrophic and existential risks posed by natural and technogenic sources (including nanotechnology, synthetic biology, cyberwar, artificial intelligence, asteroidal collision, climate change and space colonization) and their political implications
Prerequisites: Pre-reqs: AS.190.413 or AS.190.220
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences

AS.190.433. Constructivism: How Ideas Shape International Relations. 3.00 Credits.
Can not have taken AS.190.304.
Instructor(s): B. Allan
Area: Social and Behavioral Sciences.

AS.190.434. Does Israel Have a Future?. 3.00 Credits.
Israel is one of the only countries whose existence is openly challenged. This class will examine the future of Israel focusing on international and domestic threats to its continued existence as a Jewish democracy. Outside threats to be considered include nuclear attack and the growing international movement to delegitimize Israel. Domestic challenges include demographic changes, the role of religion in governance, and doubts as to whether one can be a Jewish state and still be a democracy. Lessons from the destruction of the ancient Israelite kingdoms and from contemporary state deaths will be included. The course will conclude by considering efforts that Israel can undertake to meet the threats it faces.
Instructor(s): S. David
Area: Social and Behavioral Sciences.

AS.190.435. Law and Literature. 3.00 Credits.
This course will examine the relationship between law and literature. As many have observed, law and literature have much in common as well as much to teach each other. Topics this course will discuss include practices of interpretation, issues of authority, the role of law, and the power of narrative. In addition to reading essays by scholars in the field, students will read a selection of judicial opinions, short stories, novels, and plays.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences

AS.190.436. Republican Orders and Sustainability. 3.00 Credits.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

AS.190.437. Violence and Politics. 3.00 Credits.
This seminar will address the role of violence—both domestic and international—in political life. Though most claim to abhor violence, since the advent of recorded history, violence and politics have been intimately related. States practice violence against internal and external foes. Political dissidents engage in violence against states. Competing political forces inflict violence upon one another. Writing in 1924, Winston Churchill declared—and not without reason—that, The story of the human race is war. Indeed, violence and the threat of violence are the most potent forces in political life. It is, to be sure, often averred that problems can never truly be solved by the use of force. Violence, the saying goes, is not the answer. This adage certainly appeals to our moral sensibilities. But whether or not violence is the answer presumably depends upon the question being asked. For better or worse, it is violence that usually provides the most definitive answers to three of the major questions of political life—statehood, territoriality and power. Violent struggle, in the form of war, revolution, civil war, terrorism and the like, more than any other immediate factor, determines what states will exist and their relative power, what territories they will occupy, and which groups will and will not exercise power within them.
Instructor(s): B. Ginsberg
Area: Social and Behavioral Sciences

AS.190.438. Advanced Topics in Global Politics: Learning Through Research. 3.00 Credits.
Join a research team. In this course, students will explore topics in global politics and methods for the conduct of inquiry in the Johns Hopkins tradition of learning through research. Under the guidance of the professor, students will learn about a topic from existing primary and secondary sources, collect new empirical evidence, analyze the evidence, and contribute to research products. Recommended for students planning to write a thesis. Junior or Senior standing in Political Science or International Studies or permission of instructor.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences

AS.190.440. European Politics in Comparative Perspective. 3.00 Credits.
Europe has been in a sense the first testing ground for theories of
comparative politics, but many outsiders now see Europe as a pacified
and somewhat boring place. This course will question conventional
wisdom through an examination of European politics in historical and
cross-national perspective. We will apply the comparative method to the
study of European politics today, and conversely we will ask what Europe
tells us more generally about politics. We will see that Europe is still a
locus of intense conflict as well as remarkably diverse experimentation.
Topics will include: political, legal, and economic governance; the
evolution of democracy and fundamental rights, the welfare state,
class stratification, immigration and race, the role of religion; European
integration and globalization. Juniors and seniors only.
Instructor(s): N. Jabko
Area: Social and Behavioral Sciences.

AS.190.441. Comparative European Politics. 3.00 Credits.
In comparison with other regions of the world, Europe can easily appear
as a pacified and somewhat boring place. This course will question this
stereotype through an examination of European politics in historical and
cross-national perspective. From a historical perspective, Europe has
been the crucible of modern politics. And to this day, Europe remains a
locus of intense conflict as well as remarkably diverse experimentation.
We will read seminal scholarly works as well as recent comparative
politics literature on European politics. The goal is to understand and
discuss central concepts that comparative politics scholars mobilize
in the study of European politics across time and space. Topics will
include: political, legal, and economic governance; the evolution of
democracy, the welfare state, partisan politics, immigration, race, and
religion; European integration and globalization.
Instructor(s): N. Jabko
Area: Social and Behavioral Sciences.

AS.190.442. Civil Society. 3.00 Credits.
This course explores classic and contemporary debates on the concept
of civil society and critically examines its analytical value in light of
recent developments. Topics include the relationship between civil
society, the state, and markets, the role of civil society in development
democratization, social capital, and global civil society. This
course is open to graduate students from any discipline. Advanced
undergraduate students must obtain permission from the instructor and
are expected to keep up with graduate students during class discussions.
Instructor(s): E. Chung
Writing Intensive.

AS.190.443. Politics of Outer Space. 3.00 Credits.
Intensive examination of the political aspects of human activities in outer
space, past, present and future, with focus on militarization, earth-remote
sensing, surveillance, navigation, resource exploitation, the Outer Space
Treaty, and colonization.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.444. Causes of Peace. 3.00 Credits.
Since 1945, the great powers have enjoyed their longest period of peace
in history. Interstate conflict between lesser powers is also at an all time
low. What accounts for this “long peace?” This course will look at various
explanations including the spread of democracy, the proliferation of
nuclear weapons, globalization, American hegemony, and fundamental
changes in attitudes regarding the use of force. Students will present
draft versions of their research papers during the last weeks of the
course. Co-listed with AS.190.619
Instructor(s): S. David
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.445. Power and Wealth: Sources, Dynamics and Linkages. 3.00
Credits.
This seminar explores theoretical approaches to the multiple relations
between political power and economic power, including pluralism,
Marxism, and historical institutionalism. Major empirical transformations
will provide the motivation: the rise of modern states, capitalism and
social classes in Early Modern Europe, the creation of highly unequal
societies in post-colonial Latin America and Africa, the varieties of
Welfare State in the golden age of advanced capitalism (1950-75), and
the powerful rebirth of inequality in advanced economies for the last 25
years. Theories of sources and interactions of political and economic
power will be coupled with accounts of the effects of power and wealth
on macroscopic change, especially democratization and economic
development. Open to juniors, seniors, and graduate students.
Instructor(s): S. Mazzuca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.450. Power. 3.00 Credits.
Power is a – if not the – key concept of international relations, yet there is
no single definition of power that is accepted by all scholars in the field.
In this course we will critically examine definitions of power from classic
and contemporary works of international relations, political science, and
related areas of study.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences.

AS.190.471. The University and Society. 3.00 Credits.
In the 20th century, American universities became the envy of the world,
leading in most categories of scholarly productivity and attracting
students from every nation. In recent years, though, American higher
education has come to face a number of challenges including rapidly
rising costs, administrative bloat, corporatization and moocification. We
will examine the problems and promises of American higher education,
the political struggles within the university and the place of the university
in the larger society. Upper classes and Grad Students only.
Instructor(s): B. Ginsberg; R. Kargon
Area: Social and Behavioral Sciences.
AS.190.472. The Power of Speech. 3.00 Credits.
Drawing from literary theory, political philosophy, and jurisprudence, this course will explore the unique relationship between speech (broadly conceived) and politics. In addition to reviewing classic arguments about freedom of speech and the significance of this freedom in and for democratic government, the course will study debates about the need to limit this freedom, taking into consideration not only how we do things with words but how words affect us. In addition to court cases and critical legal studies, we will read texts by, among others, Aristotle, Arendt, Mill, Austin, Fish, Butler, and Fanon. Recommended Course Background: AS.190.200, AS.190.201, or AS.190.202 or permission of the professor.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences.

AS.190.491. Game Theory in the Social Sciences. 3.00 Credits.
Strategic thinking is a fundamental component of many political and economic phenomena, from international wars and national elections to wage bargains and monopoly power. Game Theory is a set of ideas and techniques for analyzing strategic interactions and making predictions about its outcomes. This course provides an introduction to Game Theory and its main applications to relevant political and social outcomes.
Juniors and Seniors Only.
Prerequisites: AS.110.106 or AS.110.108
Instructor(s): S. Mazzuca
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.190.499. Senior Thesis: International Relations/Political Science. 6.00 Credits.
Seniors also have the opportunity to write a senior research thesis. To be eligible to write this thesis, students must identify a faculty sponsor who will supervise the project. Once a faculty sponsor has approved a topic, students must enroll in a three credit independent study during the fall semester of their senior year. At the end of the fall semester, if the faculty sponsor determines that adequate progress has been made and the project warrants further work, the student may enroll in the senior thesis (AS.190.499) which will be worth 6 credits.
Instructor(s): Staff
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.475. Courts, Politics and Public Policy. 3.00 Credits.
Examines the causes of American legal change, with particular focus on the role of social movements, and whether and how legal change produces social change. Among the particular cases examined will be civil, prisoners' and women's rights.
Instructor(s): S. Teles
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.479. Imag(in)ing Cities. 3.00 Credits.
In The City and The City, China Melvielle uses a traditional crime procedural to tell the story of two distinct cities existing within the same space, with the residents of each city forced to literally unsee the residents, buildings, etc. of the other. In Imag(in)ing Cities I take this idea literally...arguing that the cities we live, play, and work in are in fact several cities layered on top of and through each other with the content of these cities shaped by a combination of (political, social, economic) theory of how cities work (and are supposed to work), a series of practical policies and actions that dictate how cities in fact work, and our popular imaginations. The class will place these theories, policies, and imaginations in dialogue with each other through readings, viewings, and "listennings".
Instructor(s): L. Spence
Area: Social and Behavioral Sciences

AS.190.480. Planetary Interdependence and World Governments. 3.00 Credits.
Intensive exploration of alternative global political architectures for high levels of security, ecological and internet interdependence
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.481. Conservatism and Crime. 3.00 Credits.
This course will examine the evolution of conservative thought on crime and criminal justice from the 1960s to the present. We will focus in particular on how the subject of crime illuminates different strains of conservatism, reveals tensions between its values of liberty, authority and anti-statism, and shows the changing approach that conservative intellectuals have had to race.
Instructor(s): S. Teles
Area: Social and Behavioral Sciences
Writing Intensive.
AS.190.550. Internship. 1.00 Credit.
Instructor(s): Staff.

AS.190.592. Summer Internship. 1.00 Credit.
Instructor(s): Staff.

AS.190.598. Independent Study. 3.00 Credits.
Instructor(s): Staff.

AS.190.599. Research-Summer. 3.00 Credits.
Instructor(s): E. Chung; L. Spence; M. Crenson; R. Hsieh.

AS.190.601. Qualitative Research.
An introduction to measurement and data analysis in contemporary American political science. Measurement topics include the formation of indices and cumulative scales. Analytic topics will topics include sampling variations, statistical association and causation, as manifested in contingency tables and correlation and regression. Emphasis will be on fundamental concepts and assumptions, and on comprehension and evaluation of the scholarly literature. Advanced undergraduates by permission only.
Instructor(s): M. Keck
Area: Social and Behavioral Sciences.

AS.190.602. Introduction to Quantitative Political Science.
An introduction to measurement and data analysis in contemporary American political science. Measurement topics include the formation of indices and cumulative scales. Analytic topics will topics include sampling variations, statistical association and causation, as manifested in contingency tables and correlation and regression. Emphasis will be on fundamental concepts and assumptions, and on comprehension and evaluation of the scholarly literature. Advanced undergraduates by permission only.
Instructor(s): R. Katz
Area: Social and Behavioral Sciences.

AS.190.603. Power.
Power is a -- if not /the/ -- key concept of international relations, yet there is no single definition of power that is accepted by all scholars in the field. In this course we will critically examine definitions of power from classic and contemporary works of international relations, political science, and related areas of study.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.604. Rethinking Freedom in a Neoliberal Age.
This seminar will start with forays into the traditions of negative, positive and Republican freedom, exploring the conceptions of agency, self, language, citizenship, state, economy and global politics associated with each. It then turns to conceptions of freedom tied more actively to the elements of creativity, self-organization, and planetary politics. How do you bring the former images of freedom into productive conversations with the latter? Texts by Machiavelli, Berlin, Skinner, Foucault, Ritzolatti, Butler, and Holland (Nomad Citizenship) will probably be consulted.
Graduate students only.
Instructor(s): W. Connolly
Area: Social and Behavioral Sciences.

AS.190.605. Women in Dark Times.
A survey of contemporary female voices—feminist and nonfeminist—in political theory. Questions raised and addressed: How is power defined and distributed? What constitutes political action? What is the relationship of bodies to politics? Among others we will read Cristina Beltrán, Judith Butler, Jodi Dean, Bonnie Honig, and Melissa Lane.
Instructor(s): J. Bennett; J. Culbert.

AS.190.606. Language, Order, Action.
Graduate students only.
Instructor(s): S. Chambers.

AS.190.607. Comparative Racial Politics.
This course surveys the major trends in the comparative study of race in political science and critically examines the link between race and politics. Topics include the racial state, neo-racism, and immigration politics.
Instructor(s): M. Hanchard
Area: Social and Behavioral Sciences.

AS.190.608. Critical Comparisons of Deleuze and Foucault.
A comparative exploration of the thought of Gilles Deleuze and Michel Foucault, focusing on the following topics: the nature of immanence and the virtual; sovereignty and biopolitics; neoliberal capitalism; time and the event; and political activism. Key texts will be The Order of Things, Discipline and Punish, A Thousand Plateaus, Society Must be Defended, and Cinema II, as well as biographical material on the activism of each intellectual. Graduate students only.
Instructor(s): W. Connolly
Area: Social and Behavioral Sciences.

AS.190.610. Advanced Topics in Contemporary Chinese Politics.
This seminar is structured around key concerns in China’s domestic politics, including the politics of economic reform, central-local-relations, corruption, increasing inequality, the role of intellectuals, the rise of quasi-governmental organizations, various channels for political participation and protest, and other contemporary issues. Undergraduates who wish to be enrolled in this class must have taken AS.190.348 and by permission only.
Instructor(s): K. Tsai
Area: Social and Behavioral Sciences.

AS.190.611. Feminist and Queer Theory.
Graduate students only.
Instructor(s): S. Chambers.

AS.190.612. Comparative Citizenship and Immigration Politics.
Graduate students only. Examines the contemporary political dynamics of migration, citizenship, and race concentrating on North America, Europe and East Asia. We will focus on how citizenship and immigration policies shape immigrant political identities, claims, and strategies as well as how immigrants impact public debates and policies in receiving societies.
Instructor(s): E. Chung
Area: Social and Behavioral Sciences.

AS.190.613. Elections.
Open to advanced undergraduates by permission only. This seminar surveys recent (and some classic) work in elections, principally in the US, but also in other democracies. Topics include nomination, polarization, voter turnout, ideology, media, the economy, and race. Graduate students only.
Instructor(s): D. Schlozman
Area: Social and Behavioral Sciences.

AS.190.614. Institutions, Ideas and Practice.
Graduate students only.
Instructor(s): N. Jabko
Writing Intensive.
AS.190.615. International Relations Theory.
This seminar covers the main theoretical perspectives employed in the analysis of international politics, covering a variety of realist, liberal, and constructivist work. The strengths and weaknesses of different approaches will be assessed and contrasted with one another, with the goal being to provide students with a broad foundation on which to develop their own understandings. Meets with AS.190.401
Instructor(s): S. Schmidt
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.616. American Political Development.
An examination of state-building and nation-building throughout American political history. (AP)
Instructor(s): A. Sheingate.

AS.190.617. Romanticism and Radicalism.
A study of a group of European and American writers, including Schiller, Shelley, Emma Goldman, Walt Whitman, Georges Sorel, Carl Schmitt, Guy Debord and other Situationists, Georges Perec, Herbert Marcuse, Theodor Adorno, and contemporary artists and theorists of the aesthetic, in order to explore connections between romantic themes and the aspiration for a significant transformation of political life. What are the complex relations between artistic and revolutionary practice? What are the standards by which to assess the viability of romantic, counter-cultural, or eccentric artworks/texts/events?
Instructor(s): J. Bennett; W. Connolly
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.618. What Was/Is Fascism?
An examination of texts on twentieth century fascist movements and societies in relation to twenty first century movements. What roles do capitalism, imperialism, racism, democracy, the media, global processes and planetary processes play in them? To what extent does the production and exploitation of resentment shape their intensities? What rhetorical strategies mobilize such movements? What rhetorics and social movements to resist or retune such movements show promise? Texts by Hitler, Arendt, Neumann, Adorno, Deleuze and Kenneth Burke may be among those included. Perhaps the films "Our Hitler" and "The Conformist", plus a couple of speeches by Donald Trump will be included. Conceptions to democracy first united to challenge fascist drive will also be explored.
Instructor(s): W. Connolly
Area: Social and Behavioral Sciences

Since 1945, the great powers have enjoyed their longest period of peace in history. Interstate conflict between lesser powers is also at an all time low. What accounts for this "long peace?" This course will look at various explanations including the spread of democracy, the proliferation of nuclear weapons, globalization, American hegemony, and fundamental changes in attitudes regarding the use of force. Students will present draft versions of their research papers during the last weeks of the course.
Instructor(s): S. David.

In Twilight of the Idols/The Anti-Christ, Nietzsche famously confessed, “I am afraid we are not rid of God because we still have faith in grammar.” Drawing from scholarship identified with the Law and Literature movement as well as philosophy, jurisprudence, literary theory, and political theory, this course will engage an on-going conversation about the capacity of language to invent and enforce the expectations, regulations, and ritual formulas we know as law. Readings will include texts by classical and contemporary scholars, including Arendt, Plato, Pierce, Nietzsche, and Nancy, as well as stories by Borges, Kafka, and Melville.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences.

AS.190.622. Contemporary International Relations Theory.
This course will focus on recent work (from approximately the past 10 years) in International Relations Theory. Emphasis will be placed on contending schools of thought and often divergent means of determining what counts as good theory. In Fall 2014, we will focus on critical approaches to the global and the political, with a special emphasis on theories of borders, bodies, and the global-ness of cyberspace.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.623. Capitalism, Discipline, Debt the Anthropocene.
How do we rethink Capitalism in an age of Discipline, Debt, and the Anthropocene? This seminar draws upon a series of Left Nietzscheans to pursue that agenda. It starts with Nietzsche's examination of debt, guilt and subjectivity in The Genealogy, turns to work by Foucault, Deleuze, Esposito, and Lazzarato on capitalism, debt and molecular control, adds Klein and Connolly on capitalism and the Anthropocene, and returns to all of the above to explore the potential of critical social movements today. Graduate students only.
Instructor(s): W. Connolly.

AS.190.625. Theories-Comp Politics.
This seminar is intended for graduate students planning to take the comprehensive exam in comparative politics, either as a major or as a minor. In addition to exploring central methodological debates and analytic approaches, the seminar reviews the literature on state-society relations, political and economic development, social movements, nationalism, revolutions, formal and informal political institutions, and regime durability vs. transition. Graduate students only.
Instructor(s): S. Mazzuca
Area: Social and Behavioral Sciences.

AS.190.627. Pragmatism in Politics.
After a long eclipse, the scholarly tradition of pragmatism has recently experienced a revival across the social sciences. The goal of this course is to take stock of this movement and to discuss the usefulness of pragmatism for the study of politics. The readings attempt to weave together classical and recent texts in philosophy, cultural theory, sociology, economics, science studies, as well as political science. We will begin with a survey of pragmatism’s core concepts and methods. Then we will discuss recent applications of the pragmatist approach in the social sciences. Finally, we will explore the links between pragmatism and three contemporary approaches.
Instructor(s): A. Sheingate; N. Jabko
Area: Social and Behavioral Sciences.
AS.190.628. Race and Segregated Time.
This graduate seminar examines how time is used as a vehicle of political power that perpetuates racial inequality. We will also explore how/whether thinking and acting in untimely ways can challenge white supremacy and further transracial democracy. Grad students only.
Instructor(s): P. Brendese.
Area: Social and Behavioral Sciences.

AS.190.629. American Racial Politics.
Race is not a biological fact but rather a social construction. However, it is a social construction with very real consequences. Definitions of citizenship, allocation of state resources, attitudes about government and government policy, the creation of government policy, all shape and are shaped by race and racial classifications. Serving as a critical corrective to American politics treatments that ignore race, this class will examine how race functions politically in the United States. While not required, some knowledge of statistics is helpful.
Instructor(s): L. Spence
Area: Social and Behavioral Sciences.

AS.190.630. Politics of Territory and Boundaries.
This seminar will explore territorial dimensions of politics and political action, including the political construction of territorial space and the territorial construction of political space, and borders as spatial markers of fixity and flows. As supra-, sub-, multi-, trans-, inter-, and pluri-national political arenas proliferate, how are they connected, institutionally and in practice? How are they structured by – and how do they structure – the actions of individuals and groups? How does location affect the nature of political authority? Graduate students only.
Instructor(s): M. Keck; R. Marlin-Bennett.
Area: Social and Behavioral Sciences.

Examines American social policy in comparative perspective. Special attention to issues of poverty and inequality, and their relation to the political system.
Instructor(s): D. Schlozman.

AS.190.632. The Development of American Political Institutions.
This course explores institutional development in American national politics, from the Founding until the present. It traces parties, Congress, the presidency, bureaucracy, and courts, and also examines how those institutions have interacted with one another across American history. Throughout the course, we will consider how ideas, interests, procedures, and sequence together shape institutions as they collide and abrade over time. Finally, although it hardly covers the entire corpus across the subfield, the course is also designed to prepare students to sit for comprehensive examinations in American politics.
Instructor(s): A. Sheingate; D. Schlozman.

The seminar will explore to what extent Hegel can be read as contributing to a feminist philosophy. We will focus on Hegelian openings onto the emotional in Phenomenology of Spirit. In addition, we will study feminist philosophers who have drawn on or offered critical readings of Hegel (Irigaray, Butler, Cavarero, Malabou, and others).
Instructor(s): J. Bennett; K. Pahl
Area: Social and Behavioral Sciences.

AS.190.634. Interest Groups.
Graduate students only.
Instructor(s): S. Teles
Area: Social and Behavioral Sciences.

AS.190.635. Theories of Constitutional Governance.
This class is focused on the nature of constitutions and the way that they should and do work within a political system, with particular emphasis on the U.S. context. We will examine both normative and empirical arguments about the relationship between politics and constitutional law. More specifically, we will think about how societies and individual actors should make meaning out of constitutional texts, how they do seem to make meaning out of those texts, and the conditions that give rise to constitutional drafting and change. Graduate students only.
Instructor(s): E. Zackin
Area: Social and Behavioral Sciences.

AS.190.636. The Many Machiavellis.
Often serving as the hinge between classical and modern thought, Machiavelli obviously stands as a central and prominent thinker in the historical canon. But Machiavelli is also the central figure for some of the most important works of political theory in the 20th century. In each of the past 8 decades a major text has been published on Machiavelli, the authors of which include the following leading thinkers: Gramsci, Strauss, Wolin, Althusser, Pocock, Pitkin, Skinner, and Honig. This graduate seminar will be devoted not necessarily to Machiavelli the historical writer, but to Machiavelli as a varied and contested figure, to the trope of Machiavelli that has emerged in 20th and 21st century political thought. Graduate students only.
Instructor(s): S. Chambers
Area: Social and Behavioral Sciences.

AS.190.637. Environment and Politics.
Grad students only.
Instructor(s): B. Allan; D. Deudney
Area: Social and Behavioral Sciences.

AS.190.638. Contentious Politics.
Social movements and revolution in comparative and global perspective. Exploration of the major theoretical approaches and of what difference globalization makes.
Instructor(s): M. Keck.

AS.190.639. Critical IR Theories.
Generally relegated to the last week or two on the standard IR theory syllabus, critical IR theories take center stage in this course. We explore the intellectual roots of clusters of critical theories, the foundational works for each cluster, and the current debate. The course will cover Feminist IR Theory, the Practice Turn, and New Materialist IR, among other perspectives.
Instructor(s): R. Marlin-Bennett; S. Schmidt
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.641. Political Theories of Violence.
The aim of this course is to explore a range of theories and images of violence, from bloody war, torture, and terrorism to the “everyday” violence of policing and disciplinary practices, to the violence of conceptual, linguistic, or figural representation. As we read contemporary and classic treatments of violence, we will ask: What constitutes violence? Does violence have specific modes of agency or is it an intensification of generally available modes of action? What is the relationship between violence and bodies, violence and representation, violence and social and psychic structures? Is there a relationship between violence and technology? Violence and the sacred? From whence the force of violence? Among others we will read Nietzsche, Freud, Foucault, Arendt, Schmitt, Agamben, Sorel, Benjamin, Derrida, Levinas, and Fanon. Grad students only
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences.
AS.190.645. Black Politics.
Grad Students Only.
Instructor(s): L. Spence
Area: Social and Behavioral Sciences.

Graduate students only.
Instructor(s): L. Spence; P. Brendese
Area: Social and Behavioral Sciences.

AS.190.647. Race and Memory in Politics, Theory and Literature.
This seminar will investigate various modes of theorizing experiences of race through a critical engagement of a range of literary and philosophical sources pertaining to African-American and Afro-diasporic populations. Specifically, we will explore the extent to which politically attuned approaches to literature and drama can disclose how memory and temporality function as vehicles of racial domination, resistance and identity formation. Graduate students only.
Instructor(s): P. Brendese
Area: Social and Behavioral Sciences.

This graduate seminar will examine a range of indigenous political theorists and critics of settler colonialism. In so doing, we will interrogate the role of liberal Anglo-centrism in contested theories and practices of sovereignty, property rights, freedom, equality, race, sexuality and nature. Likewise, we will investigate the contention that settler colonialism is acquisitive of territory in perpetuity, as opposed to being a moment in history, in order to assess the enduring political and theoretical impact of colonial legacies. Importantly, we shall explore how the relays between indigenous cosmologies and temporalities shape theories and practices of resistance, reason, identity and political imagination. Graduate students only.
Instructor(s): P. Brendese.

AS.190.650. The Theories and Politics of Rights.
Grad Students only.
Instructor(s): E. Zackin
Area: Social and Behavioral Sciences.

AS.190.651. Policy Dynamics.
Policy dynamics is the study of changes of the political system in its entirety, from the point of view of the system’s outputs—what government actually does, or fails to do. It is dynamic in that it seeks to explain changes in what matters governments feel can or must be addressed, the tools that are available to deal with problems, and the interactions of government and non-government actors that generate change. Particular emphasis will be placed on studying policy dynamics over long periods of time, including such post-enactment issues as implementation, policy feedback on political identities and group formation, and policy durability.
Instructor(s): S. Teles.

AS.190.652. Organizations.
Graduate students only. Organizations are the fundamental building blocks of economic, social and political life. This course will examine how different disciplines (sociology, economics, political science) approach the problem of explaining how organizations operate, as well as exploring the structure and development of a very wide range of organizations (firms, interest groups, charitable foundations, universities, military, bureaucracies, international organizations, and professions).
Instructor(s): S. Teles
Area: Social and Behavioral Sciences.

AS.190.653. The Political Economy of Neoliberalism.
Grad students only.
Instructor(s): N. Jabko.

AS.190.655. Figures of Time and Politics.
A comparative exploration of contending figures of time, including metamorphosis, linear progress, evolution, and process. Readings from Parcelsus, Darwin, Bergson, Dewey, Whitehead and Evan Thompson. We will explore the interrelations between practices of time, nature, aesthetics, and political agency within each problematic and experiment with how to move this or that element across problematics. Graduate students only.
Instructor(s): J. Bennett; W. Connolly
Area: Social and Behavioral Sciences.

AS.190.656. Sovereignty: Historical Perspectives and Contemporary Issues.
This seminar provides an in-depth exploration of the concept of sovereignty by examining its historical development and its use in international relations scholarship. Our discussion will also be informed by works in political theory and the international law literature. The course is open to advanced undergraduate students and graduate students. Co-listed with AS.190.408
Instructor(s): S. Schmidt
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.657. Hannah Arendt’s Phenomenology.
This graduate-level course will focus on Hannah Arendt’s phenomenological approach to political philosophy. In addition to reading some of Arendt’s major works, including The Human Condition and Life of the Mind, students will read texts by Martin Heidegger and Maurice Merleau-Ponty, as well as texts by feminist critics of phenomenology (and readers of Arendt) such as Judith Butler.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences.

AS.190.658. Paradigms of Political Economy.
A book reading seminar in past and present political economy. Each week, we read one book and discuss it in great detail. We start with canonical authors in political economy (Smith, Marx,…). We move on to leading figures of political economy since the 1980s (Hall, Katzenstein, Esping-Anderson, Ostrom,…). We finish with a few first books authored by a younger generation of scholars and published after 2000. Special attention will be paid to the evolution of research questions, theories, and methodologies. The relevance of existing literature to the crafting of doctoral dissertations will also be discussed.
Instructor(s): N. Jabko
Area: Social and Behavioral Sciences.
AS.190.659. Crisis and Change.
The topic of institutional change has drawn intense scholarly interest in the social sciences since the 1990s. Most of the theoretical debate has revolved around different notions of institutions that scholars bring to the table. Yet the meaning of “change”, and especially the role of crises, is often left implicit and under-theorized. The objective of this course will be to step back from the most recent debate and think about change from a broader perspective. First, we will go back to some classics of the comparative politics literature and read about different figures of change – revolutions, political and economic development, political and policy regime change, emerging and incremental change. Second, we will read about different sources and actors of change – material and ideational, collective and individual, and non-human. Themes for discussion throughout the course will include dictatorship and democratic consolidation, marketization and neoliberalism, mass politics and elite conflicts. Graduate students only.
Instructor(s): S. Chambers
Area: Social and Behavioral Sciences.

This graduate seminar will conduct close readings of a wide swath of the writings of Jacques Rancière and Arthur Bentley, considering how each eschews the style and mode of argumentation of today’s “normative” political theory. Grad students only.
Instructor(s): S. Chambers
Area: Social and Behavioral Sciences.

AS.190.661. Empire and Discipline.
The term ‘empire’ denotes a state of dominion of one political entity over key dimensions of the public and private lives of populations who are culturally and ethnically distinct from that of the ruling or imperial class. The structures, institutions, and values that give effect to empire are assembled under the rubric of ‘imperial’ while the ambition to or desire for it is ‘imperialism’. In any case, the advent of empire is a temporal, geo-strategic, ethical, and moral event predicated upon practices and traditions with deep roots in history, theology, philosophy, and economic and political theory among others. This course examines how modern empires produced the object and discipline of international relations and how disciplinary theories and associated systems of thought and their modes of inquiry may still foster a pervasive yet unacknowledged dedication to empire. Graduate students only.
Instructor(s): S. Grovogui
Area: Social and Behavioral Sciences.

AS.190.662. Technology and Politics.
Grad students only.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

Intensive examination of theories, old and new, which attempt to employ geographical, technological and ecological factors to explain political outcomes. Graduate students only.
Instructor(s): D. Deudney.

AS.190.664. Political Economy Of Development.
Graduate students only.
Instructor(s): E. Chung.

AS.190.665. modes of knowledge and theories of international relations.
We will explore the role of scientific, religious, ethical and other forms of knowledge in global politics by reading classic works in the sociology of knowledge alongside IR theory. Substantively, we will seek to explain and understand the effects of knowledge on, inter alia, historical change, economic policy, and global environmental politics. Graduate students only.
Instructor(s): B. Allan
Area: Social and Behavioral Sciences.

AS.190.666. Nuclear Weapons and World Order.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

Instructor(s): S. Grovogui
Area: Social and Behavioral Sciences Writing Intensive.

AS.190.668. Capitalism, Marx and the Value-Form.
This seminar will explore the capitalist value-form (Wertform) by way of a reading of Marx and a number of value-form theorists. Grad students only.
Instructor(s): S. Chambers
Area: Social and Behavioral Sciences Writing Intensive.

AS.190.669. States, Regimes and Governmentality.
This course will provide a broad overview of the modern state as concept, institution and effect. Students will be introduced to conceptual, philosophical and empirically based scholarship on the modern state and its European precursors—such as the absolutist state. Civil society, citizenship and nation, though clearly related themes and categories of analysis, are not the focus of this course. Students will be introduced to key normative perspectives on the state: Marxist, Liberal, Anarchist, and Republican, as well as scholarly accounts of state formation, development, administration and transformation in a variety of regional and temporal contexts.
Instructor(s): M. Hanchard
Area: Social and Behavioral Sciences.

AS.190.670. Rsch/Writing Workshop.
Instructor(s): M. Keck.

AS.190.671. Field Survey of International Relations.
This course provides a scaffold for the study of international relations theory, organized historically and by major approaches. The focus is on close reading and discussion of exemplars of important bodies of theory. Intended for doctoral students with IR as their major or minor field. Graduate students only.
Instructor(s): R. Katz; R. Marlin-Bennett
Area: Social and Behavioral Sciences.

AS.190.672. Civil Society in Comparative Perspective.
This course explores classic and contemporary debates on the concept of civil society and critically examines its analytical value in light of recent developments. Topics include the relationship between civil society, the state, and markets, the role of civil society in development and democratization, social capital, and transnational civil society.
Instructor(s): E. Chung.
AS.190.678. Law and Politics.
As a field, Law and Politics has evolved from the study of constitutional law and judicial politics to the political behavior of judges and their associates to the study of law and society, the operation of law and courts "on the ground" in the international arena as well as in the United States, historical institutionalism, and the carceral state. In this graduate course, we will review some of the classic texts in the field, with a focus on the tension between legal institutions and democratic politics. In particular, we will examine how that tension is manifest in the foundations of the American political system and in critical reflection on contemporary practices of American democracy. Students will turn in response papers every week on the reading. In addition, there will be two 10-20 page papers due during the semester. Graduate Students Only. Instructor(s): E. Zackin; J. Culbert
Area: Social and Behavioral Sciences.

AS.190.679. The Political Poetics of Walt Whitman and Henry Thoreau.
Examination of the works of Thoreau and Whitman with an eye toward how their texts engage in subjectivity-formation and the inducement of publics. What are the powers and limits of their practices of language, including myth-making, affirmations of nonhuman agencies, and nature-writing? Grad students only. Instructor(s): J. Bennett
Area: Social and Behavioral Sciences.

AS.190.681. Strategy in Politics.
Political scientists today increasingly recognize the importance of strategy in politics. Yet they often implicitly adopt a rationalist conception of strategy directly inspired by game theory. This course will discuss the usefulness of this conception, and explore the possibility that alternative conceptions of strategy might also (and perhaps better) illuminate what a strategy is in real-world politics. We will read texts from a variety of disciplines - political science/political economy, but also sociology, organization theory, psychology, and history. Graduate Students Only. Instructor(s): N. Jabko
Area: Social and Behavioral Sciences.

AS.190.682. A Short History of Eccentric Theory: Lucretius, Spinoza, Kafka, Serres.
An examination of the political insights yielded by the distinctive modes of inquiry pursued by these four thinkers/writers. Instructor(s): J. Bennett
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.683. Research Seminar/Political Parties.
Instructor(s): R. Katz
Area: Social and Behavioral Sciences.

AS.190.684. ReReading Marx.
This graduate seminar will be based on the following working hypothesis: that the received readings of Marx in contemporary political theory over the past two decades have all been filtered by layers of interpretation provided by late 19th and early 20th century Marxism, mid 20th century Critical Theory, and late 20th century Analytical Marxism. We will work through, and slough off, some of those layers in order to go back and reread Marx. Grad students only. Instructor(s): S. Chambers
Area: Social and Behavioral Sciences.

AS.190.686. The Institutions of Capitalist Democracy.
Instructor(s): N. Jabko
Area: Social and Behavioral Sciences.

AS.190.687. Philosophy and the Anthropocene.
How do philosophers such as Heidegger, Whitehead, Deleuze and Braidotti help us to think about the dynamics of the Anthropocene? What do anthropologists and geoscientists such as Anna Tsing, Bruno Latour, Jason Moore, Michael Benton, Jan Zalasiewics and Wally Brooker teach those philosophies and us about the contemporary condition? Class presentations on assigned readings, seminar paper, and class discussions. Instructor(s): B. Allan; W. Connolly
Area: Social and Behavioral Sciences.

AS.190.688. Micro- and Meso-Level Approaches to Political Violence.
How is violence organized, produced, and understood? This course will introduce graduate students to advanced scholarship on political violence and will encourage students to explore the relationship between violence, agency, and structure. Central themes include: mobilization and recruitment; the emergence and behavior of armed organizations (e.g. militant groups, pro-state militias); ethnic violence; civilian targeting; gender-based violence in war; election violence; and vigilantism. The class will challenge students to critically examine violence as an outcome, political process, and as an indicator of underlying relationships and social structures. Instructor(s): S. Parkinson
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.690. Statelessness.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences.

This course examines contemporary nuclear issues through the prism of international relations theory. Topics to be considered include the origins and effect of nuclear proliferation, nuclear terrorism, the challenge of “rogue” states, the robustness of deterrence, the viability of defense, and the prospects for disarmament. These issues will be looked at through the lens of Realism, Liberalism and Constructivism, as well as other approaches. Students will be required to engage in formal and informal debates in class, present a draft of their paper to their fellow students, and (in light of comments received) complete a major research paper on some topic related to nuclear weapons. Grad students only. Instructor(s): S. David
Area: Social and Behavioral Sciences.

AS.190.692. Race and the Neoliberal Turn.
Scholars conceive of neoliberalism as an ideology, as a set of public policies, as a governmentality, or as a combination of above. However while neoliberalism however it is conceptualized has been described as the contemporary doxa, the role of race both in the turn towards neoliberalism, and in the forms neoliberalism takes in a given space/moment has gone relatively underexamined. In this course I seek to rectify this problem, by examining neoliberalism and then charting the ways that race shapes it and is shaped by it. Instructor(s): L. Spence.

AS.190.693. Planetary Interdependence and World Governments.
Intensive exploration of alternative global political architectures for high levels of security, ecological and internet interdependence. Instructor(s): D. Deudney
Area: Social and Behavioral Sciences
Writing Intensive.
AS.190.694. Comparative State Formation.
The course examines causes, effects and paths of state formation in history and across societies. Weberian and Marxist analyses of the emergence of the modern state in Western Europe are a necessary point of departure. To develop a stronger comparative perspective, however, the course will analyze theoretical approaches and historical studies on state formation in the Ancient World (Mesopotamia, Egypt and China) and in modern Latin America and Africa. The course will also examine whether variations in state formation have a systematic effect on state capacities and political regimes. Graduate Students Only.
Instructor(s): S. Mazzuca.

AS.190.695. Politics, Time and the Tragic.
What can tragic visions teach us today? What cosmological and ontological issues are posed to late modern life by tragic traditions? What conceptions of time and political aspiration can inhabit a tragic vision? What opposing conceptions of politics grow out of them? This seminar will start with Hesiod’s Theogony, moves through the Sophocles Trilogy, examines attempts to rework the tragic by Friedrich Nietzsche, Bernard Williams, Judith Butler, Bonnie Honig, and James Baldwin, returns to these issues through King Lear, and explores again the issues that emerge through a close engagement with Deleuze’s philosophy and time in Cinema II.
Instructor(s): W. Connolly
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.697. Norm and Change in International and Comparative Perspective.
This seminar will explore the dynamics behind the origin and demise of foundational normative understandings that inform action in a variety of issue areas. Readings will be drawn from the international relations and comparative politics literatures, with attention focusing on the themes of power, discourse, and practice as well as on how these literatures relate to one another.
Instructor(s): N. Jabko; S. Schmidt
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.698. Qualitative Methods in the Social Sciences.
Some of the most important and enduring methodological innovations in the study of politics within political science have their origin in other disciplines. Quantitative and qualitative approaches alike share hold this basic fact in common. This course will trace the origin and development of several qualitative approaches to the study of politics, emphasizing methodologies culled or derived from the disciplines of anthropology, history, sociology and philosophy, utilized in some form in all sub-fields of the discipline of political science. Students will become familiar with debates concerning the relative merits and limitations of these approaches as methodological forms in their own right, and in relation to more quantitatively oriented methodologies often deployed in large N research design. Graduate students only.
Instructor(s): M. Hanchard.

AS.190.800. Independent Study.
Instructor(s): Staff.

AS.190.801. Independent Study II.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

Instructor(s): Staff.

AS.190.890. Independent Study.
Instructor(s): Staff.

AS.190.893. Political Science Practicum.
Instructor(s): R. Katz.

AS.191.105. The Bad Good Life: Cruel Optimisms, Bad Romances, and Other Political Depressions. 3.00 Credits.
What if the good life that we desire turns out to be bad? This course explores the intersections of personal and political life when our hopes turn out to be damaging to ourselves or to others. Potential issues include: positive thinking, the American Dream, love, queer survival, failure, ecological crises, and the end of the world. Dean’s Teaching Fellowship. Freshmen Only.
Instructor(s): C. Shomura
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.191.107. Global Politics in Theory and Film. 3.00 Credits.
This class offers an introduction to different approaches to the study of international politics by using film, literature, and political theory. The class explores realist, constructivist, feminist, and critical theories of global politics. It addresses two broad themes: the emergence of global political spaces and, second, the implications of ‘globalization’ for contemporary politics. The class both provides an introduction to the study of international politics and takes an in-depth look at the global.
Instructor(s): B. Meiches
Area: Social and Behavioral Sciences.

AS.191.108. Political/Science/Fiction. 3.00 Credits.
Science Fiction has long been recognized for its ability to speak to the concerns of the present. In Political/Science/Fiction we will explore one theme in particular: the cultural politics of alien encounter. “Alien encounter” in this case refers to encounters with the Other—those marked as outsiders, as less-than-human. In reading works of science fiction in conjunction with those of social science, our purpose will be to seek out new worlds than to strive for a nuanced understanding of our own.
Instructor(s): L. Wilcox
Area: Social and Behavioral Sciences.

AS.191.109. Freshman Seminar: American Democracy and its Discontents. 3.00 Credits.
Dean’s Prize Freshmen Seminar
Instructor(s): K. Anfinson
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.110. International Relations Theory and it’s Margins: the case of East Asia. 3.00 Credits.
The advent of European International Society to East Asia in late nineteenth century is often characterized as an ‘opening’ of the East to the West: Korea as the hermit kingdom, Commodore Perry’s opening of Japan, and Open Door policy for China. For the Americas and ‘Westerners’, it was ‘discovery.’ For Asia, it was ‘opening.’ However, the term ‘open’ is wanting in capturing the political turmoil this period witnessed, as this is a period in which the terms of global coexistence were contended and negotiated both between the East and the West, and among actors in East Asia. Seeing the period of late nineteenth century to mid-twentieth century as a period of political contestation of different visions of order in Asia, this course explores the role played by Sinocentrism, Westernization, the rise of Japan, and discourses of Asianism in reconfiguring the international relations of East Asia in modernity. Dean’s Prize Freshmen Seminar.
Instructor(s): H. Koyama
Area: Social and Behavioral Sciences
Writing Intensive.
AS.191.111. The Limits of Tolerance: Nation-States, Immigration, and Islam in Europe. 3.00 Credits.
An examination of the politics and policies affecting the experiences of Muslim immigrants in Europe, this course explores the connections between national identity, group and individual identities, and religious beliefs.
Instructor(s): M. Luhman
Area: Social and Behavioral Sciences.

AS.191.112. Freshman Seminar: War, The Garrison State & The American Security Tradition. 3.00 Credits.
Interstate war threatens constitutional government because of various power concentrations necessary for survival. For much of its existence, the United States avoided this dilemma given its separated geographic location vis-à-vis Europe, and continental hegemony. However, technological advances, specifically nuclear weapons and intercontinental means of delivery, reduced American effective distance from large despotic powers in the 20th century. In this nuclear age, how would it be possible to prepare for total war without becoming a garrison state? Dean's Prize Freshman Seminar
Instructor(s): R. Fried
Area: Social and Behavioral Sciences.

AS.191.113. Diet, Politics and Identity. 3.00 Credits.
Tracing the history of the idea that you are what you eat, this course explores the relationships between diets, bodies, selves, and politics. The class examines three historical periods: the classical and early modern humoral tradition emphasizing the incorporation of the properties of foods; the nineteenth and twentieth century nutritionist tradition emphasizing the incorporation of the ingredients or nutrients of a food; and the newly emerging eco-dietetic tradition emphasizing the environmental ramifications an item of food’s production.
Instructor(s): A. Rebovich
Area: Humanities, Social and Behavioral Sciences.

AS.191.114. Free Expression in the 21st Century. 3.00 Credits.
This course will explore the theoretical underpinnings of the freedom of expression protection and some of the key contemporary debates that surround free expression in an age of mobilization, globalization, and digitization. Dean's Prize Freshman Seminar
Instructor(s): G. Jones
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.116. Special Opportunities in Undergraduate Learning: Introduction to the Literature and Practice of Political Science: Democracy, War and the State. 1.00 Credit.
This class is designed to introduce students to basic concepts and debates in Political Science, while introducing them to the process and practice of research. Students will read texts on democracy, war, and the state, and will begin to develop a unique research project on one of these topics. Authors discussed will include Plato, Aristotle, Tilly, Lipset, Weber and Waltz. Freshmen and Sophomores only.
Instructor(s): M. Helsel.

AS.191.117. The Limits of Tolerance? Nation-States, Immigration, and Islam in Europe. 3.00 Credits.
This course investigates how Europe has responded to recent events, such as mass flows of refugees and asylum-seekers entering the E.U. and recent terror attacks committed by jihadists in European capitals. To understand the policy responses to these events, we will examine the historical context of immigration and Islam in Europe and the different policies which have affected Muslim immigrants, including policies governing integration, religious expression, and security. Do European states really have a “threshold of tolerance” for immigrants, particularly Muslim immigrants, as suggested by both social scientists and politicians? If so, why, and what are the implications for Muslims living in Europe?
Instructor(s): M. Luhman
Area: Social and Behavioral Sciences.

AS.191.118. Organized Interests in American Politics. 3.00 Credits.
This course provides an introductory overview of interest groups in American politics. It addresses questions of how political organizations form, who they represent, how they pursue influence, and their overall impact on the political system. In asking these questions it has two goals. First, to familiarize students with basic features of the interest group landscape and the ways organized interests engage various political institutions. Second, to sharpen their awareness of the challenges interest groups pose to democratic governance and to consider ways in which their influence can or should be limited.
Instructor(s): D. Fernandes
Area: Social and Behavioral Sciences.

AS.191.119. Thinking Critically through the Global South. 3.00 Credits.
This seminar exposes students to tools for thinking critically about life and politics by introducing them to key theoretical debates in International Relations that have been proposed by authors from the Global South, with a focus on postcolonial and postdevelopment studies.
Instructor(s): T. Zille
Area: Social and Behavioral Sciences.

AS.191.202. War and Justice. 3.00 Credits.
This course introduces dominant and critical perspectives on questions relating to the morality of war and the use of force. We'll discuss a variety of perspectives about what constitutes justice in war realism, to the just war tradition, and international law to feminist and post-colonial critiques of prevailing standards of conduct in war through a consideration of historical and contemporary controversies such as the dropping of the atomic bomb, what constitutes 'terrorism', what is the meaning of 'self-defense' in war, torture, the use of sanctions, civilian victimization in war, humanitarian intervention and the use of unmanned aerial vehicles ('drones'). We'll investigate both the content and historical formation of the norms of conduct in war and question whether these prevailing norms serve the interests of justice. Prior course work in International Relations is required. Writing Intensive course (around 20 pages of writing).
Instructor(s): L. Wilcox
Area: Social and Behavioral Sciences
Writing Intensive.
Instructor(s): P. Giamario

build on and depart from one another, and how their approaches inform thought of Marx, Nietzsche, and Foucault, we ask how these philosophers revolution and freedom. In addition to serving as an introduction to the relationship between history and social criticism, (2) the operation in particular, we examine how these three philosophers understand (1) a practice of “ruthless criticism” and what they seek to get out of it. In

part, of modern society, Friedrich Nietzsche and Michel Foucault, engage in a philosophical critique of social, economic, religious, and political conditions unafraid of its own conclusions or “the powers that be”. This course explores how Marx and two other major philosophical critics of modern society, Friedrich Nietzsche and Michel Foucault, engage in a practice of “ruthless criticism” and what they seek to get out of it. In particular, we examine how these three philosophers understand (1) the relationship between history and social criticism, (2) the operation of power in the modern capitalist social order, and (3) the possibility of revolution and freedom. In addition to serving as an introduction to the thought of Marx, Nietzsche, and Foucault, we ask how these philosophers build on and depart from one another, and how their approaches inform contemporary political issues, debates, and activism.

Instructor(s): A. Ignatov

historical periods.

be explored using multi-media and texts from various disciplines and disciplines. We will read works by Rousseau, Heidegger, Arendt, Rushdie and Bauman.

The purpose of this course is to understand the expression of feminist concerns in cinematic discourse. The course will explore the productive tensions between various genres of film, feminist film theory, and themes in feminist thought. The class will examine films through the lens of feminist texts that focus on topics such as the portrayal of sexuality, subjectivity, and the maternal, as well as the effects of the masculine gaze. This course is cross-listed with the Women, Gender, and Sexuality Program.

Instructor(s): K. Glanz

Area: Social and Behavioral Sciences

Writing Intensive.

AS.191.244. Climate Change & the Politics of Belonging. 3.00 Credits.

This class will look beyond the ecological impacts of climate change to examine its potential consequences for citizenship, sovereignty and statehood, national identity, and belonging. We will explore these issues through both theoretical texts and reports from organizations working with populations and in places on the front lines of climate change.

Instructor(s): A. Blomme

Area: Social and Behavioral Sciences.

AS.191.226. Globalization and State-Society Relations in Contemporary East Asia. 3.00 Credits.

This course examines the extent to which globalization is reshaping state-society relations in contemporary East Asia, and how East Asian societies and political systems respond to, and influence, aspects of globalization in turn. Topics to be explored include the origins and trajectories of developmental states in East Asia, macroeconomic and industrial policy-making, social unrest and political organizing, export-led growth and political liberalization, the East Asian financial crisis and its aftermath, and today's East Asian political and economic landscapes in a globalizing world.

Instructor(s): P. Leon

Area: Social and Behavioral Sciences

Writing Intensive.

AS.191.241. The Stewart/Colbert Effect. 3.00 Credits.

This course examines the roles of Comedy Central's Jon Stewart and Stephen Colbert in the contemporary media and political landscape. Using recent work in media studies, political theory, and cultural studies, we will explore issues of satire, parody, and the distinctive roles Stewart and Colbert play vis a vis the major news networks. We will also look at political activism and what their popularity might mean for the future of media politics.

Instructor(s): C. Phillips

Area: Social and Behavioral Sciences.

AS.191.251. Globalization and Development: The Clash of Civilizations or a New World Order?. 3.00 Credits.

The course aims to introduce students to the major debates in globalization and development studies: Is globalization a new phenomenon? Does global interconnectedness lead to a clash of civilizations or to one-way diffusion from developed to developing countries, converting the globe into a giant mall? Are there processes of intermixing across time, space and identities? Is globalization an engine of progress or a vehicle of socio-economic polarization? Why has development been contested in some places and not in others? What would a completely developed world look like? These questions will be explored using multi-media and texts from various disciplines and historical periods.

Instructor(s): A. Ignatov

Area: Humanities, Social and Behavioral Sciences.

AS.191.208. American Politics and its Discontents. 3.00 Credits.

This class explores the gap between the promise and shortcomings of American democracy. Topics include the Puritans, political participation, slavery, wealth and political power, equality, and the national security state.

Instructor(s): K. Anfinson

Area: Social and Behavioral Sciences

Writing Intensive.

AS.191.209. The Politics of Home. 3.00 Credits.

In our globalized world the experience of being at home is changing. This course will examine what it means to be at home today and related notions of belonging, nostalgia, place and homelessness. We will read works by Rousseau, Heidegger, Arendt, Rushdie and Bauman.

Instructor(s): A. Blomme

Area: Humanities, Social and Behavioral Sciences

Writing Intensive.

AS.191.214. Ruthless Criticism: Marx, Nietzsche, Foucault. 3.00 Credits.

In 1844 Karl Marx called for a “ruthless criticism of everything existing” – a philosophical critique of social, economic, religious, and political terms. Following energy will therefore involve thinking about energy as not only a scientific unit, but also as a historical and political term, a shifting political apparatus that involves different fuels, supply chains, architectures and institutions over time. In order to ‘follow’ energy in this way, this course will also introduce students to literature that thinks about how things in the material world – whether geography, mapping, natural resources, climate, ships or technology – intersect with global politics.

Instructor(s): C. Daggett

Area: Social and Behavioral Sciences

Writing Intensive.

AS.191.218. Feminism and Film. 3.00 Credits.

The purpose of this course is to understand the expression of feminist concerns in cinematic discourse. The course will explore the productive tensions between various genres of film, feminist film theory, and themes in feminist thought. The class will examine films through the lens of feminist texts that focus on topics such as the portrayal of sexuality, subjectivity, and the maternal, as well as the effects of the masculine gaze. This course is cross-listed with the Women, Gender, and Sexuality Program.

Instructor(s): K. Glanz

Area: Social and Behavioral Sciences

Writing Intensive.

AS.191.204. Chinese Foreign Policy. 3.00 Credits.

The domestic sources of, and international constraints on, Chinese foreign policy-making will be examined. We will also study the development and evolution of Chinese foreign policy objectives and their implementation during and after the Cold War.

Instructor(s): P. Leon

Area: Social and Behavioral Sciences

Writing Intensive.
AS.191.283. Politics of Guilt and Sin. 3.00 Credits.
What role do guilt and sin play in politics? This course examines this problematic by addressing readings and case studies including religious texts such as the Bible, essays on economics of guilt, debt, and sacrifice, investigations into the concept of historical sin and repairation, and the contemporary psychology of lying in politics. The course includes extensive reading and weekly film viewings.
Instructor(s): B. Meiches; T. Hanafin
Area: Humanities, Social and Behavioral Sciences.

AS.191.300. Law, Politics, and Science Fiction. 3.00 Credits.
Science fiction (or speculative fiction) allows us to imagine new worlds and think creatively about social problems. In doing so, it raises numerous questions that have important resonance in politics and law. These include questions about the role and structure of government, equality, citizenship, criminal justice, and international relations. In this course we will explore these fundamental political and legal questions through a variety of sources including novels, short stories, films, and television shows.
Instructor(s): G. Jones
Area: Social and Behavioral Sciences.

AS.191.301. US Health Policy and Politics. 3.00 Credits.
This course examines the political origins and historical development of the US health care system. We will investigate the unique public-private structure of the US health care system and the policy and political challenges of lowering costs and increasing quality and access. Students will gain a broad understanding of the Medicare and Medicaid programs, as well as the system of employer-based insurance. The course will also explore the institutional hurdles and political forces that have shaped past and current efforts to reform the American health care system – with particular attention given to the Affordable Care Act. Students will debate competing policy ideas for future reform and use lessons gleaned from the history of American health care reform to understand the potential direction of policy and political change following the Affordable Care Act. Patrick Henry Post Doc.
Instructor(s): A. Kelly
Area: Social and Behavioral Sciences.

AS.191.302. Comparative Political Institutions. 2.00 Credits.
This course will provide a detailed overview of the main executive, legislative, and judicial institutions of liberal democracies around the world. Aim is to provide students with an insight into the consequences and mechanisms of various institutions, and to analyze challenges to established and fledgling liberal democracies. An additional objective is to make students familiar with the institutional setup of liberal democracies in: Latin America, Asia, and Europe (incl. EU).
Instructor(s): F. Bauwens
Area: Social and Behavioral Sciences.

AS.191.303. The Rise and Fall of the State. 3.00 Credits.
This course interrogates the state as a central institution of politics, its many meanings and its purposes. It will also analyze the politics of the rise of the state in domestic and international politics and assess whether it is currently being challenged by globalization and civil war.
Instructor(s): A. Naseemullah
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.304. US-Cuba Decision Making. 3.00 Credits.
This course is a history of U.S.-Cuban relations since the Castro regime took power in 1959 and an effort to understand why the U.S. has not been able to deal successfully or even rationally with the government there even with the end of the Cold War. At this point, the U.S. is the only nation in the Western Hemisphere not to have full diplomatic and trade relations with the island. Why is that?
Instructor(s): W. Smith
Area: Social and Behavioral Sciences.

AS.191.307. Ecologies of the Good Life: Politics for a More than Human World. 3.00 Credits.
This course explores the extent to which nonhuman actors influence politics. It aims to provide a new “green” lens through which to rethink power and political participation.
Instructor(s): A. Ignatov
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.308. Politics of the Ocean. 3.00 Credits.
This course critically analyzes the Law of the Sea Treaty, which has failed to achieve many of its basic objectives. Topics include: territorial disputes, piracy and trafficking, submarine telecommunications cables, pollution and over-fishing, naval strategy, sea level rise, ocean acidification, and renewable sources of energy. The final week considers proposals for reforming the Law of the Sea Treaty, including extended mandates, new enforcement powers, and a complete overhaul of the existing regime.
Instructor(s): E. Mendenhall
Area: Social and Behavioral Sciences.

AS.191.309. Non-Western Political Theory. 3.00 Credits.
This course is designed to introduce and critically examine some of the most influential non-western traditions, thinkers, texts, and ideas in the global history of political thought. We will focus on material from the Middle East, South Asia, and East Asia. Thinkers covered in the course include: Al-Mawardi, Confucius, Lao Tzu, Sayyid Qutb, and Tiruvalluvar.
We will also read key portions of the following texts: Qur’an, Law Code of Manu, and the Mahabharata.
Instructor(s): S. Gray
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.310. American Political Development. 3.00 Credits.
American political development (APD) is the study of how political institutions and the body politic in the U.S. have changed over time. In this advanced seminar, we will explore this subfield of political science. The course is concerned with attempting to identify historical patterns within American politics as well as the discontinuities that have reshaped the nation’s trajectory. Students will engage with the APD literature and in the process learn how scholars identify the evidence they use to support their analytical claims. The course is divided into four sections. First, we will survey the subfield’s rise and discuss how (or if) APD differs from other ways of studying American politics. Next, we turn to a discussion of political culture and the Constitution as a stabilizing influence within a changing political environment. From there we shift to the study of discontinuities through a careful examination of state-building as well as the impact of anti-statism. Finally, the course concludes with an analysis of associational life within the American state, focusing particularly on issues of race and gender.
Instructor(s): W. Adler
Area: Social and Behavioral Sciences
Writing Intensive.
AS.191.311. The Public Life of Personal Narrative. 3.00 Credits.
Michel Foucault once declared that “Western man has become a confessing animal.” In the era of Facebook and YouTube, we seem to be moving closer and closer to this definition, as we divulge increasingly private details about ourselves to increasingly broad publics. The hopes and anxieties that have attached themselves to these new media and technology, however, are not entirely novel. This course departs from a set of questions about contemporary uses of self-exposure, then turns to an examination of theoretical texts and autobiographical materials spanning several centuries, slowly winding our way back to the present. The aim of our journey will be to arrive at a fresh understanding of the political functions of personal narratives in our own time.
Instructor(s): N. Gies
Area: Social and Behavioral Sciences.

AS.191.312. Who Do We Think We Are?: The Politics of Being Human. 3.00 Credits.
Today the question of who - or what - is a human being animates many pressing political and cultural debates like human rights, abortion, climate change, the development of technology and artificial intelligence, and so on. This course will take up the question of what it means to “be human” and trace how answers to this question inform contemporary debates over the terms of political and ethical life.
Instructor(s): D. Walker
Area: Social and Behavioral Sciences.

AS.191.313. The Worlds of Globalization. 3.00 Credits.
The language of “globalization” is now widely used to describe the modern world—a world that is increasingly interconnected, economically homogenous, and culturally convergent. Even political and economic alternatives are commonly framed in terms of forging other “global” formations, be they justice globalism, grassroots globalization, or globalization from below. This class examines how the concept of globalization emerged as the definitive term for conceptualizing the modern world, debates the usefulness of this concept, and identifies alternative ways of conceptualizing the world as a social totality. In this class we look at four particular discourses of globalization—those of global cities, global activism, global capitalism, and global culture—while examining historical and contemporary alternatives to these discourses. The final project will use these theoretical tools to critically examine the city of Baltimore.
Instructor(s): I. Kamola
Area: Social and Behavioral Sciences.

AS.191.314. Business and Politics. 3.00 Credits.
This course will examine the multifaceted relationship between government, politics, and business. We will examine the role of business in American domestic policy and politics, including the historical development of the American political economy and the continued role of the government in American economic development. The course will also investigate the nexus of business and government in comparative perspective, looking at both developing and developed nations. The course will focus on the role of business as a political actor and the interaction between business and government in the policy process. The course will examine topics including the politics of regulation and theories of state capture, the role of the state in economic development, interest group formation, maintenance, and influence, and the delegation of governing responsibility and authority to private actors. The course will revolve around questions of how business participates in the political process and influences policymaking through lobbying and elections. The course will be designed around a combination of theoretical readings and discussions with case studies that explore policy areas such as healthcare, pharmaceuticals, tobacco, and finance.
Instructor(s): A. Kelly
Area: Social and Behavioral Sciences.

AS.191.317. Interest Groups, Social Movements and the Policy Process. 3.00 Credits.
Instructor(s): C. Thurston
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.320. Geopolitics, Geography, Technology, and Power. 3.00 Credits.
Geopolitics studies the natural world and the ways it constrains development, politics, conflict and sustainability. Societal resources and patterns of warfare are tied to humans’ physical environment and technological level.
Instructor(s): T. Williams
Area: Social and Behavioral Sciences.

AS.191.321. Anti-colonial and Post-colonial Revolutions. 3.00 Credits.
This course will explore various revolutions in the colonial world first looking to the Haitian and Spanish American revolutions of the 19th century. Then moving to the 20th century, we examine African and Indian independence through the writings of Franz Fanon on the Algerian revolution and through Gandhi’s treatise on Indian self-determination. We subsequently examine revolutionary movements in the context of the Cold War and the tension between the communist tradition and a budding non-aligned movement among former colonial states. We explore these issues through the works of leaders like Ho Chi Minh, Jawaharlal Nehru and Thomas Sankara. Lastly, we turn to Steven Biko and his writing on the South African anti-Apartheid revolution and to Eastern European independence from the Soviet Union through the writings of Vaclav Havel. In the final class we will wrap up by exploring some of the themes from the course and their relevance for our thinking about the Arab Spring. The course aims at an international understanding of the ideas that traversed these revolutions and of how the people involved understood the relationship of their movement to their imaginings and aspirations for broader global change. We explore how important leaders made innovations to the political vocabulary of their time in their pursuit of change. But in thinking through their ideas, we will pose critical questions on themes like race, class and gender.
Instructor(s): A. Stack
Area: Social and Behavioral Sciences.
AS.191.322. Globalization, Development, Conflict in the Developing World. 3.00 Credits.
This course will focus on socio-economic changes and challenges that the developing world faces in today’s globalized world. It will introduce students to the interaction between politics and economics in developing countries by examining political and economic development (and underdevelopment). It will evaluate the role of globalization and neoliberal reforms not just as the engine of economic change, but also as the source of social conflict. The first part of the course will introduce conventional theories and approaches to development, and evaluate how globalization and open markets have significantly changed the trajectory of economic growth and development through various substantive and country-specific readings. The second part of the course will examine the contemporary debates relating to globalization, particularly whether and how it has affected growth, human development, equality, and poverty in the developing world. A key theme explored will be on the relationship of the state to social welfare and the delivery of public goods. Finally, the course will also analyze the implications of globalization for crucial contemporary problems such as immigration, transnational flows, women’s rights, gender roles, state-building and democratization, civil society/NGOs and governance, and ethnic violence.
Instructor(s): S. Chidambaram
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.324. International Relations of Security and Development. 3.00 Credits.
This course examines how the politics of security and development shape relations between “global North” and “global South”, engaging both historical and contemporary debates around intervention, humanitarianism and development.
Instructor(s): C. McNeill
Area: Social and Behavioral Sciences.

AS.191.325. Introduction to International Relations through Comics. 3.00 Credits.
This course will present an overview of the different theories in the discipline of International Relations. The course will be organized around the question of the causes of conflict between and within states. A special emphasis will be given on reading primary literature. By the end of the course students should be well versed in the main approaches in the discipline.
Instructor(s): T. Tutunjii
Area: Social and Behavioral Sciences.

AS.191.326. Sex, Gender and War. 3.00 Credits.
In this course we will explore what different perspectives on sex and gender from feminist theory and the social sciences have to contribute to the understanding of key questions about the nature of war. Topics covered include nuclear politics, the concept of a just war, terrorism and the War on Terror, and humanitarian wars. This is a discussion seminar involving approximately 20 pages of writing. It also presupposes prior work in International Relations.
Instructor(s): L. Wilcox
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.327. Cities and Sovereignty. 3.00 Credits.
For the first time in history, the majority of the world population lives in cities. This course asks how this event and the ongoing process of global urbanization have transformed political life. From the Occupy movement’s reclamation of a right to the city to the practices of urban warfare in Iraq and Afghanistan, this course will examine how the city has become a medium of politics.
Instructor(s): D. Denman
Area: Social and Behavioral Sciences.

AS.191.330. The Political Subject of Economics. 3.00 Credits.
Instructor(s): T. Hanafin
Area: Social and Behavioral Sciences.

AS.191.331. Interest Group Politics and Advocacy. 3.00 Credits.
Interest groups play a central though at times controversial role in US politics. This course explores practical questions about how they emerge and seek to influence policy. It also considers their place in politics in light of theories of representation.
Instructor(s): D. Fernandes
Area: Social and Behavioral Sciences Writing Intensive.

AS.191.332. Civilians in the Path Of War. 3.00 Credits.
In this course, we will examine ideas about violence in international affairs by both states and non-state actors. More specifically, we will investigate some of the conditions that give rise to conflict in the international system, the range of actors engaged in violence, their diverse motives, and the strategies of governments and the international system to mitigate conflict.
Instructor(s): M. Abrahams
Area: Social and Behavioral Sciences.

AS.191.333. Philosophies of Capitalism from Rousseau to Hayek. 3.00 Credits.
Although we commonly speak of capitalism as if there were a consensus regarding the basic tendencies of this peculiar economic system, there is a vast amount of disagreement among philosophers and social scientists about the most fundamental issues. These arguments range from moral arguments over the (in)justice of capitalist economies to more profound ontological debates about what capitalism is and what it means for human experience. This course examines these issues by reading in conjunction a set of profound economic thinkers, including Rousseau, Adam Smith, Hayek, and Karl Polanyi.
Instructor(s): C. England
Area: Social and Behavioral Sciences.

AS.191.334. Competing American Exceptionalisms. 3.00 Credits.
This course explores diverse definitions and theoretical explanations of American exceptionalism in US intellectual history. Also, it investigates the political/academic debates surrounding the role of exceptionalism in American foreign policy.
Instructor(s): T. Cha
Area: Social and Behavioral Sciences.
AS.191.335. Arab-Israeli Conflict (IR). 3.00 Credits.
The course will focus on the origin and development of the Arab-Israeli conflict from its beginnings when Palestine was controlled by the Ottoman Empire, through World War I, The British Mandate over Palestine, and the first Arab-Israeli war (1947-1949). It will then examine the period of the Arab-Israeli wars of 1956, 1967, 1973, and 1982, the Palestinian Intifadas (1987-1993 and 2000-2005); and the development of the Arab-Israeli peace process from its beginnings with the Egyptian-Israeli treaty of 1979, the Oslo I and Oslo II agreements of 1993 and 1995, Israel's peace treaty with Jordan of 1994, the Road Map of 2003; and the periodic peace talks between Israel and Syria. The conflict will be analyzed against the background of great power intervention in the Middle East, the rise of political Islam and the dynamics of Intra-Arab politics, and will consider the impact of the Arab Spring.
Instructor(s): R. Freedman
Area: Social and Behavioral Sciences.
AS.191.336. On Diet: Are We What We Eat?. 3.00 Credits.
Tracing the history of the idea that you are what you eat, this course explores the relationships between diets, bodies, selves, and politics. Readings will be both historical and contemporary and cover a variety of fields including political theory, philosophy, anthropology, and the history of science and medicine.
Instructor(s): A. Rebrovick
Area: Social and Behavioral Sciences.
AS.191.337. Mass Incarceration and American Politics. 3.00 Credits.
This course examines why the United States quintupled its incarceration rate over the last 40 years to become the world's leading jailer and explores the consequences for American politics.
Instructor(s): D. Dagan de Picciotto
Area: Social and Behavioral Sciences.
AS.191.338. Diaspora in World Politics. 3.00 Credits.
This course examines the politics of diaspora communities in international perspective. Its main focus is on the impact of diaspora communities on national security and foreign policies of host-countries and homelands. In addition, the course tries to unpack the political meanings and uses of the term diaspora.
Instructor(s): Y. Abramson
Area: Social and Behavioral Sciences.
AS.191.340. Education Politics in Urban America. 3.00 Credits.
This seminar analyzes trends, developments, and future challenges related to the politics of urban public schooling with a concentration on community political dynamics and the struggle for equal educational opportunity and quality education. The course emphasizes the impact of socioeconomic class inequality, racial/ethnic conflict, and gender politics on the changing character of public school reform since the 1954 Supreme Court decision of Brown v. Board of Education. Cross-listed with Africana Studies.
Instructor(s): F. Hayes
Area: Social and Behavioral Sciences
Writing Intensive.
AS.191.341. Postcolonialism, Postdevelopment: Renewing Politics Through Critical Thinking. 3.00 Credits.
This seminar exposes students to tools for thinking critically about life and politics by introducing them first, to important texts in postcolonial studies, and second, to debates about development and its current criticisms.
Instructor(s): T. Zille
Area: Social and Behavioral Sciences
Writing Intensive.
AS.191.342. Law and Social Change. 3.00 Credits.
This course examines the role of American law in social change. Our readings and discussion will focus on social movements, targeted organizations, and courts in realizing legal impact.
Instructor(s): L. Foley
Area: Social and Behavioral Sciences.
AS.191.345. Russian Foreign Policy (IR). 3.00 Credits.
This course will explore the evolution of Russian Foreign Policy from Czarist times to the present. The main theme will be the question of continuity and change, as the course will seek to determine to what degree current Russian Foreign Policy is rooted in the Czarist(1613-1917) and Soviet(1917-1991) periods, and to what degree it has operated since 1991 on a new basis. The main emphasis of the course will be on Russia's relations with the United States and Europe, China, the Middle East and the countries of the former Soviet Union–especially Ukraine, the Baltic States, Transcaucasia and Central Asia. The course will conclude with an analysis of the Russian reaction to the Arab Spring and its impact both on Russian domestic politics and on Russian foreign policy.
Instructor(s): R. Freedman
Area: Social and Behavioral Sciences.
AS.191.346. American Political Parties. 3.00 Credits.
This course examines the major American political party organizations and the party system in relation to the electorate, interest groups and the institutions of American government since 1964.
Instructor(s): A. Hiramatsu
Area: Social and Behavioral Sciences.
AS.191.347. U.S.-Chinese Relations. 3.00 Credits.
This course examines key issues in U.S.-Chinese relations. We will take an in-depth look at the politics, policies, and topics surrounding strategic balancing, trade, energy, nuclear proliferation on the Korean Peninsula, relations across the Taiwan Strait, China's rise and the response of the United States and its allies. We will place the relationship between the United States and China in the context of its geopolitical implications not only for the two countries but also for the international system.
Instructor(s): P. Leon
Area: Social and Behavioral Sciences.
AS.191.348. Domestic Politics of Contemporary China. 3.00 Credits.
This course examines salient issues in the domestic politics of contemporary China. It begins with a brief historical overview of China's developments that led to the revolutions of 1911 and 1949, as well as the Cultural Revolution. The main part of the course will explore the era of economic reform and opening that began in the late 1970s and that still continues today. Topics include the relationship between business and politics, obstacles to economic and political reforms, the interplay between foreign relations and domestic politics, institutional and bureaucratic sources of policy-making, the social and political impact of economic growth, the relationship between central and provincial governments, and the questions of political opening and leadership transitions.
Instructor(s): P. Leon
Area: Social and Behavioral Sciences
Writing Intensive.
AS.191.351. Toxic Bodies, Natural Contracts, and wild law: Topics in Nature and Law. 3.00 Credits.
In recent years debates around climate change, human responsibility for earth, and doomsday narratives of mass extinctions and a dying planet have become salient features of both global and local politics. This course explores and expands upon some of these themes through a critical investigation of the relationship between law, nature, and their interdependencies. Often conceived as a distinctively human and social activity, law is widely contrasted with nature and the wider nonhuman world. Yet this supposed divide between law and nature, or human activity and responsibility and the wider nonhuman world, has long been contested by thinkers in the natural law tradition. Drawing on readings from the fields of environmental political theory, law and politics, literature, and theology, as well as in-class film-screenings and field trips, the course ultimately examines what a turn to the natural law tradition might contribute to understanding and engaging our increasingly ecologically-aware yet -destructive politics and practices.
Instructor(s): Z. Reyna
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.352. American Constitutionalism and War Making. 3.00 Credits.
This course explores the issue of security in the United States beginning with the 1787 constitutional founding and moving into the modern era. We will examine the role of the United States in world politics with a special emphasis on how the United States, as well as the international system changed in the 20th century, as well as the domestic constitutional challenges this presented.
Instructor(s): R. Fried
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.353. Africa and American Foreign Policy. 3.00 Credits.
This course examines the political, economic, and social relationships between the United States and various African countries. We start by critically examining various ways American foreign policy thinkers conceptualize Africa, before turning our attention to issues concerning conflict, intervention and peacekeeping, economic aid and development, and the Arab Spring. In particular, we will look at: the Rwandan genocide and the Congolese War, the Darfur conflict, Somali piracy, the Millennium Development goals, debates around foreign aid, NGO-based development, China’s presence in Africa, and the U.S.’s recent support of Libyan rebels.
Instructor(s): I. Kamola
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.354. History of US Latin American Relations. 3.00 Credits.
History of U.S. relations with Latin America, from founding of the U.S. until today.
Instructor(s): W. Smith
Area: Social and Behavioral Sciences.

AS.191.355. The Politics and Philosophy of Laughter. 3.00 Credits.
What is the political significance of laughter? How does laughter undermine, strengthen, or disrupt political life? We read philosophical, social scientific, and literary texts to explore these questions.
Instructor(s): P. Giamario
Writing Intensive.

AS.191.356. U.S Constitutional Law - Civil Liberties. 3.00 Credits.
The course is designed to introduce students to the study of civil liberties as protected by the Constitution of the United States. The emphasis will be upon those rights incorporated into the Bill of Rights and made applicable to the states through the Fourteenth Amendment. Specifically, the course will examine freedom of speech and freedom of the press – as well as freedom of freedom of thought, belief, and association. In addition, the course will address the right to privacy, the rights of those accused of crimes, and the rights and protections secured under the two clauses of the First Amendment relating to religious liberty – the Establishment Clause and the Free Exercise Clause.
Instructor(s): Staff
Area: Social and Behavioral Sciences
Writing Intensive.
AS.191.367. US Environmental Policy. 1.50 Credits.
This course provides an intensive introduction to the emergence, development, and functioning of key environmental policies in the United States.
Instructor(s): J. Greear
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.369. Democracy in Europe: A Political Philosophy of the European Union. 3.00 Credits.
The EU is living a "theoretical moment," in other words, a moment in which conceptual innovation is essential if we want to escape the deadlock in which we find ourselves, which is, first and foremost, a conceptual deficit. We are not facing a problem that can be resolved through leadership and procedures as much as a crisis that should be well diagnosed, in such a way that the basic concepts of democracy should be reconsidered in the context of the new complex reality that is the European Union. We are probably most in need of a theory of Europe that consists neither of institutional mechanics nor of cosmopolitan haze. And that is precisely the point at which philosophy still has a lot to say. The polarization between theory and practice, between normative and empirical points of view, between disciplines that focus mainly on values and those that happily inhabit functional realities has given way to very diverse controversies in the heart of the social and human sciences. This dissociation is as much a problem as a symptom, and we will not succeed at making European reality intelligible if we work without a determined horizon of valuation or if we maintain a level of exhortatory discourse that cares very little for the real game of interests, the weight of our historical past or the multiple determinants that limit political action in a space of dense interdependence. From this perspective, the proposed course will examine questions such as democracy, legitimacy, justice, demos and representation in order to offer an innovative comprehension about what is new in the European Union and what its main contribution to reconciling democracy and complexity, that is to say to global governance, could be.
Instructor(s): Staff
Area: Social and Behavioral Sciences.

AS.191.370. Theories of International Political Economy. 3.00 Credits.
This course is concerned with three general questions: What causes economic inequality among nations? Does free trade lead to economic growth? What causes financial crisis? How one answers these questions, however, depends upon one's fundamental conceptualization of what constitutes the economy. To answer these questions, therefore, we will read seminal texts in the study of political economy, including Adam Smith's Wealth of Nations, Karl Marx's Capital, Vol. 1. and various thinkers who have built upon this theoretical work (for example, Hayek, Friedman, Keynes, Polanyi, Harvey etc).
Instructor(s): I. Kamola
Area: Social and Behavioral Sciences.

AS.191.371. Pluralism, Debt, and Democracy. 3.00 Credits.
This undergraduate seminar in political theory asks students to examine the intersections between politics, morality, identity and economics from a pluralistic perspective. Pluralists generally analyze politics in terms of struggles for power between groups motivated by a range of differences including class interests, national, racial, gender, ethnic, or sexual identities, and religious beliefs. While many tend to think of the economy as a matter for technical management based on calculations of rational interests and impersonal market forces, recent scholarship in a number of fields seeks to politicize and pluralize economic questions, bringing up issues of gender, race and religion in the functioning of markets, for instance through a focus on the power dynamics of credit and debt. In this course we will explore the theoretical roots of pluralism, draw on this foundation to analyze power relationships of identity and difference at work in the political economy of capitalism both past and present, and consider the implications of this analysis for contemporary understandings of democracy and democratic activism. This course will be taught through extensive classroom discussion, student-led presentations of assigned readings, short papers, and will include at least one guest lecture by an invited speaker. Readings will include works by William James, Robert Dahl, Max Weber, Michel Foucault, William Connolly, Marieke De Goede, Saidiya Hartman, Eddie Glaude, Jr. and Miranda Joseph.
Instructor(s): C. Forster-Smith
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.372. Making Social Change. 1.50 Credits.
Aitchison Students Only.
Instructor(s): S. Strom
Area: Social and Behavioral Sciences.

AS.191.373. Greek and Christian Political Theory. 3.00 Credits.
This seminar will carefully examine some of the most important and influential texts and thinkers in the early Greek and Christian traditions. We will read works by Homer, Hesiod, Thucydides, Sophocles, Plato, Aristotle, Augustine, and Aquinas.
Instructor(s): S. Gray
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.374. Seminar in American Political Economy. 3.00 Credits.
This course examines the interplay of economic ideas, institutions and domestic politics in the United States, from the Founding through the financial crisis. Topics include industrialization, regulation, interest groups, voting behavior, and inequality.
Instructor(s): C. Thurston
Area: Social and Behavioral Sciences.

AS.191.375. Thinking Organizationally about Politics. 3.00 Credits.
Aitchison Students Only.
Instructor(s): S. Teles
Area: Social and Behavioral Sciences.

AS.191.376. Public Policy Writing. 3.00 Credits.
Aitchison Students Only.
Instructor(s): P. Longman
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.377. Thinking Strategically. 1.50 Credits.
Aitchison Students Only.
Instructor(s): K. Mueller
Area: Social and Behavioral Sciences.
AS.191.380. First Amendment Freedoms. 3.00 Credits.
The course will explore the historical, political and legal dimensions of the
First Amendment and the freedoms it protects: religion, speech, press, assembly, and petition. We will explore how First Amendment doctrine has developed over time, with attention to the social and political context of changes in the law. A major theme of the course will be to ask how do contemporary issues like combating terrorism, digital technologies, and social media might reshape existing First Amendment debates.
Instructor(s): G. Jones
Area: Social and Behavioral Sciences.

AS.191.382. Thinking Economically. 3.00 Credits.
Aitchison Students Only.
Instructor(s): D. Baker
Area: Social and Behavioral Sciences.

AS.191.384. Thinking Legally. 1.50 Credits.
Aitchison Students Only.
Instructor(s): M. Greve
Area: Social and Behavioral Sciences.

AS.191.385. i can has freedom? the political making of cyberspace. 3.00 Credits.
Political theories of the internet are typically framed in terms of its effects: how it impacts the conduct of warfare, demands new property regimes, restructures the organization of institutions, or enables efficient modes of democratic engagement. Yet, technological innovation is not apolitical but a process always already inscribed with political values. This course is designed to interrogate the political production of cyberspace. Over the course of the semester, we track the core political values that informed the making of the internet to assess how these values persist, transform, deteriorate, and intensify in the digital age.
Instructor(s): K. Abraham
Area: Social and Behavioral Sciences.

AS.191.387. Cognitive-Behavioral Political Theory. 1.00 Credit.
Students will read a mixture of scholarly work in cognitive-behavioral theory and political theory. We will explore affinities and differences between the way different traditions understand themselves as problem-solving. How are political problems constituted differently from the problems psychotherapy confronts? If there are similarities between the two approaches, what can they teach us about problem solving in each domain?
Instructor(s): J. Mohorcich
Area: Humanities, Social and Behavioral Sciences.

AS.191.388. Ethnic Politics. 3.00 Credits.
Ethnic conflict has become one of the major sources of inter-state and within-state strife in many regions of the world today. This course is designed to provide a broad overview of the relationship between ethnicity and politics. The purpose is to introduce key concepts, debates and contemporary research in the field of ethnic politics, and to develop an understanding of how political institutions can influence the course and consequences of ethnic conflict. There are no text book required for this course.
Instructor(s): S. Chidambaram.

AS.191.389. Comparative Political Philosophy. 3.00 Credits.
An introduction to the field of cross-cultural, comparative political philosophy. This course critically compares Western and non-Western political ideas and arguments on topics such as nature and the political order, philosophy and the political order, the relationship between religion and the state, individuality and community, and equality versus hierarchy. We will examine central political thinkers and texts from East Asia, South Asia, the Middle East, Greece, and Europe.
Instructor(s): S. Gray.

AS.191.390. Terrorism and Counterterrorism. 3.00 Credits.
The purpose of this course is to critically examine the most important empirical and theoretical debates on terrorism, with a view toward formulating maximally effective counterterrorism responses. This is the only book to purchase: http://www.cqpress.com/product/Debating-Terrorism-and-Counterterrorism.html. The other readings can be accessed online.
Instructor(s): M. Abrahams
Area: Social and Behavioral Sciences.

AS.191.391. Organizing War: Military Organizations, Culture and Bureaucracy in the Modern Age. 3.00 Credits.
How are modern militaries built and how does it impact their world – and ours? This course will discuss major themes in modern military studies, with a focus on military organization. We will explore how and why militaries change and adapt – or fail to – and ask what exactly they are meant to do in the first place. The course gives special focus to the interrelatedness of military organization and culture – and part of our challenge will be to try and understand the nature(s?) of the relationship between the two. On the way, students will gain literacy in major topics in military studies and major issues in current military policymaking.
Instructor(s): R. Stoi
Area: Social and Behavioral Sciences.

AS.191.392. Ancient and Medieval Political Philosophy. 3.00 Credits.
This discussion-intensive seminar carefully examines major texts and thinkers in the ancient and medieval periods. We will read works by Homer, Hesiod, Thucydides, Plato, Aristotle, Cicero, St. Augustine, as well as the Islamic political thought of the Qur’an and Alfarabi.
Instructor(s): S. Gray
Area: Social and Behavioral Sciences.

AS.191.393. The Arab Spring and the New Revolution. 3.00 Credits.
Instructor(s): R. Ford
Area: Social and Behavioral Sciences.

AS.191.394. Third World Environment and Development. 3.00 Credits.
The course examines how the interactions between ecological, political, economic and social processes shape world politics. It focuses on the connections between natural resource degradation, globalization, and development. Major themes include global environmental governance; consumption and sustainable development; environmental justice; changing patterns of food production and resource use.
Instructor(s): A. Ignatov
Area: Social and Behavioral Sciences
Writing Intensive.
AS.191.395. Law and Religion. 3.00 Credits.
The First Amendment to the U.S. Constitution contains the Establishment Clause, which prohibits the government from promoting religion, and the Free Exercise Clause, which guarantees religious liberty. Together, these are known as the Religion Clauses, and they have been at the center of some of the Supreme Court’s most controversial decisions, such as school prayer, state funding for religious schools, and the placement of religious displays on public property. Many scholars, judges, and politicians have proclaimed that the Court’s church-state decisions are incoherent and even contradictory. This course will examine these criticisms of the Court’s church-state jurisprudence and explore whether any consistent principles underlie this area of the law. Is there a basis on which separationists, who advocate for a strict separation of church and state, and accommodationists, who believe that government may promote some religious activities, can find common ground?
Instructor(s): J. Merriam
Area: Social and Behavioral Sciences.

AS.191.396. Politics of South Asia. 3.00 Credits.
This course is intended as an introductory seminar in comparative politics designed to acquaint participants with academic debates on a range of topics that are relevant to understanding the politics of contemporary South Asia. South Asia is a region that not only has a rich and complex history and culture, but also a region to study themes such as colonialism, nationalism, economic growth and development, democracy vs. authoritarianism, religious fundamentalism, and ethnic conflict. Whether it is the emerging radicalization of politics and consequent social strife in Pakistan, the paradox of democracy in India that is on the economic ascent yet still beset by poverty and a poor track record in human development, whether it is the brutality of the military regime in Myanmar or the democratization of Bangladesh, whether it is the violent sectarian conflicts that have wrecked the region or the grassroots social movements that have set an example, developments in the South Asian subcontinent continue to draw our attention to how developments within these countries shape global interactions as well as how international factors shape their political trajectories in turn. Drawing on multidisciplinary scholarship, this course will explore the history, culture, political economy, and contemporary debates in what has emerged as a strategically and economically vital region. Since the overwhelming majority of academic publications concerning the region use India as their case, the assigned readings may tend to have an India bias. However, we will use the theories developed in the Indian context to understand the politics of the other South Asian states, and ask how India-specific theories might be extended to capture the dynamics of its neighbors. The themes discussed during the course will be those that are crucial not only to understanding South Asia’s trajectory, but also to a general study of politics in a developing country.
Instructor(s): S. Chidambaram
Area: Social and Behavioral Sciences.

AS.191.397. Freedom. 3.00 Credits.
This course will explore the concept of freedom as it develops in modern and contemporary political thought. We will examine contending conceptions of public (civic republican) and private (liberal) freedom, robust subjectivism, constraints of disciplinary power, and anarchism. This course concludes by tracking elements of these conceptions into contemporary American life. We will read the works of: Rousseau, J. S. Mill, Nietzsche, Foucault, Goldman, and Franzen.
Instructor(s): S. Gray
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.398. The International Politics of Genocide. 3.00 Credits.
This course examines the creation of the concept of genocide and explores its controversial evolution in international law, humanitarian efforts, and global politics. Dean’s Teaching Fellowship course.
Instructor(s): B. Meiches
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.399. The Political Economy of Development. 3.00 Credits.
Ideas about the processes of economic development have undergone significant change since the end of World War II. The theory and practice of “development” has evolved over the intervening decades as both the structures of national economies and global markets have changed. Indeed, we might no longer agree what development is, who it is for and whether it is desirable. Today, development as a concept and a rallying cry is often expanded and reshaped to mean enforcing ‘market reform,’ monitoring multi;ateral aid programs, or even hastening globalization. How did this happen? What does it mean? How did we get to where we are today?
Instructor(s): A. Naseemullah
Area: Social and Behavioral Sciences.

AS.191.402. Numbers, Pictures, Politics. 3.00 Credits.
Aitchison students only.
Instructor(s): L. Drutman
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.191.403. Communicating Political and Policy Ideas In The Public Sphere. 3.00 Credits.
This workshop is designed to hone the communications skills of those engaged in public policy analysis and advocacy. Topics include how to develop effective op-ed pieces, position papers, essays, speeches, magazine articles, presentations, and the other forms of communications needed to advance policy ideas outside of the academy. Students receive intensive individual instruction, including close editing of their work and advice on how to publish or promote it the public sphere.
Instructor(s): P. Longman.

AS.191.416. International Human Rights. 3.00 Credits.
Develops an understanding of what human rights are and how they work at the international level. Also examines critical accounts of human rights as vehicles of power.
Instructor(s): A. Ross
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.417. Global Governance in A Diverse World. 3.00 Credits.
Studies how and why international organizations wield authority in a world of sovereign states. Also considers non-state actors and the globalized context of communication in which global governance is practiced.
Instructor(s): A. Ross
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.444. International Law. 3.00 Credits.
This course provides an introduction to international law, including its history and theoretical foundations; how it takes shape and is enforced, and the role it plays in modern foreign policy.
Instructor(s): P. Spector
Area: Social and Behavioral Sciences.
**AS.191.609. Historical Research Methods and the Study of Politics.**
This course is designed for graduate students across the Social Sciences and the Humanities interested in the study of transnational politics from a historical perspective. Taught by Visiting Hinckley Professor Robert A. Hill, students will be introduced to methods of historical interpretation in the examination of archival documents and other sources of scholarly evidence. Utilizing materials and examples from Prof. Hill's extensive archive of Garveyism, Rastafarianism, Black Hebraism, and other transnational, millenarian political and social movements, students will become familiar with the unique research challenges posed by various forms of political and historical articulation, ranging from formal records of state governments, intelligence records, personal archives, to publications and memoirs of non-governmental actors and organizations. Instructor(s): R. Hill.

**Cross Listed Courses**

**History of Art**

**AS.010.147. South Asian Art, Culture and Politics: Empire, Colony, Nation. 3.00 Credits.**
This course explores the visual culture and politics of South Asia from early archaeological settlements to contemporary installation art. Themes will include: the role of the patron, the relation of text and image, architecture and ritual/political space, colonialism, nationalism, modernity, and postcoloniality. Cross-listed with Political Science

Instructor(s): R. Brown

Area: Humanities

**AS.010.327. The Harem and the Veil: Space and Gender in the Islamic World. 3.00 Credits.**
This course explores the constructed imagery of the harem and the veil in relation to politics and visual culture in the Middle East, North Africa, India, and Euro-America. Topics will include: Ottoman palace architecture, Orientalist painting, mandating/banning the veil, Islamic feminisms. We will address visual culture broadly, including advertising, architecture, contemporary art, film, news media.

Instructor(s): R. Brown

Area: Humanities

**Writing Intensive.**

**AS.010.382. The Politics of Display in South Asia. 3.00 Credits.**
Through examining collecting, patronage, colonial exhibitions, and museums, this course examines how South Asia has been constructed in practices of display. Themes: politics of representation, spectacle, ethnography, and economies of desire related to colonialism and the rise of modernity. Cross-list with Anthropology, Museums and Society and Political Science.

Instructor(s): R. Brown

Area: Humanities

**Writing Intensive.**

**Anthropology**

**AS.070.294. Political Anthropology of Africa. 3.00 Credits.**
The course will explore classical and contemporary ethnographies of the political in Africa, examining how their authors address issues of power, hierarchy and symbol. We will study various articulations of state, ethnicity and community that are analyzed by observing relations between power and resistance or between law, economy and violence through war, custom and ritual. The seminar will also address the way in which Africa has been constituted as a key source of the sub-field of political anthropology through colonial trajectories, postcolonial detours and the political imagination of the past and the future.

Instructor(s): J. Obario

Area: Humanities, Social and Behavioral Sciences.

**AS.070.344. Muslim Societies and Modern States: Ethnographic Encounters. 3.00 Credits.**
Through a close reading of four recent ethnographies, this course explores the diverse ways Muslims encounter the power of modern states in the contemporary world. Topics include: state-led efforts to reform educational discipline and curricula in Yemen, the imaginary topos of dreams as a space of encounter in Egypt, and legal institutions in Egypt and Pakistan. Diverse ethnographic approaches to a common theme raise such questions as: how do legal reforms constrain, enable or express forms of moral striving in everyday life? what forms of knowledge are sanctioned by the state and what forms exceed its limits? what kinds of community become possible in the grip or the margins of modern governance?

Instructor(s): J. Bush

Area: Humanities, Social and Behavioral Sciences.

**AS.070.621. An Ontological Turn?.**
Recent years have seen a number of ambitious and controversial efforts to find, in ontology, a means of surpassing the inherited humanism, culturalism, and essentialism of anthropology. This course will critically examine this proposition of a fundamental "turn" in our thinking, juxtaposing recent work on matters of perspectivism, materialism, relationality, and divinity with earlier attempts in anthropology to grasp being and becoming otherwise.

Instructor(s): A. Pandian.

**History**

**AS.100.343. Diaspora, Nation, Race, and Politics. 3.00 Credits.**
For millions of people across the globe, political fate in the 20th century was defined at the intersection of diaspora, race, and nation — and this may be true in the 21st century as well. This course, a collaborative effort involving a historian and a political scientist, explores the parallels and divergences in the deployment of these terms in nationalist and transnational mobilization, literature and aesthetics, and group identity formation in Eastern Europe, Africa and the New World of the Americas. Set against the backdrop of the fall of significant empires in the late 19th and early 20th centuries, we will explore themes of migration, human rights, the nation-state system, and racism through history, political sociology, and political and social theory. We will pay particular attention to the theoretically exemplary Jewish and Black experiences of diaspora, race, and nation, engaging both with how those experiences were specially shaped by the imposition of national and racial logics and with Black and Jewish politics and thought in relation to those categories. Readings include Max Weber, W. E. B. Du Bois, Booker T. Washington, Theodor Herzl, Hannah Arendt, Benedict Anderson, Rogers Brubaker, Andrew Zimmerman, Michele Mitchell, David Scott.

Instructor(s): K. Moss; M. Hanchard

Area: Humanities, Social and Behavioral Sciences

**Writing Intensive.**

**AS.100.404. John Locke. 3.00 Credits.**
Seminar style course in which John Locke's major works will be read intensively, together with some of his contemporaries' works, and select scholarly interpretations.

Instructor(s): J. Marshall

Area: Humanities, Social and Behavioral Sciences

**Writing Intensive.**
German Romance Languages Literatures

**AS.211.174. Media of Propaganda. 3.00 Credits.**

Today, promoting a particular political or personal point of view is not viewed as propaganda, but rather as building a community of equally minded people. But where do we draw the line, and when does the use of a medium in service of a certain message become intrusive and misleading? What role do democracy and cultural values play in this use or abuse of media? In this class the term propaganda will be evaluated carefully and applied to such historical media case studies as the informational use of the radio in World War One, Leni Riefenstahl's Nazi propaganda films, the legendary success of advertisement campaigns in the 1950s and 1960s, the AIDS movement and other mobilization strategies from the 1980s to the 1990s, and the new values of friendship and propaganda in our current facebook nation.
Instructor(s): B. Wegenstein
Area: Humanities.

**AS.211.341. Power and Resistance: Approaches to French Political Thought.. 3.00 Credits.**

Even as a coherent, rational conception of state power emerged in France in as early as the Renaissance, French thinkers never stopped challenging the ways by which power justified itself in order to foster obedience and consensus. In so doing, they focused critically as much on the claims of sovereignty issuing from the top as on the willingness of the governed to submit to them. The course will examine the dialectic between the legitimation and delegitimation of power, from the Renaissance wars of religion to the Revolution and beyond: the haunting fear of the corruption and death of the political body; the notion of permanent crisis; the right to revoke the social contract; the reach of power in shaping minds and bodies. Readings may include works by La Boétie, Bodin, Bayle, Rousseau, Sade, Saint-Just, Constant, Maistre, Tocqueville, Foucault, Lefort and Rancière. Readings and discussion in English.
Instructor(s): E. Russo; W. Anderson
Area: Humanities.

**AS.212.470. Censorship in Language and Practice. From the Ancien Regime to Democracy. 3.00 Credits.**

An exploration of the boundaries of acceptability when speaking about religion, government, sexuality and gender. Students will learn about the political, theological and legal basis of blasphemy and punishable behavior, and how they have changed from the time of divine-right monarchy to contemporary laïcité. Selected readings ranging from the clandestine culture of free-thinkers and rakes in the 17th century, to the trials and causes célèbres of the Enlightenment, to modern-day democratic polemics.
Prerequisites: AS.210.302
Instructor(s): E. Russo
Area: Humanities.

**AS.213.368. German Political Thought. 3.00 Credits.**

This course will introduce students to major figures in German political thought from Martin Luther to Karl Marx and Immanuel Kant to Carl Schmitt. The class will explore such issues as the notion of sovereignty, the relationship between church and state, the theory of parliamentary democracy, and the political and economic ramifications of liberalism. Reading and discussion in English.
Instructor(s): R. Tobias
Area: Humanities.

**AS.213.633. Hegel and Feminist Philosophy.**

The seminar will explore to what extent Hegel can be read as contributing to a feminist philosophy. We will focus on Hegelian openings onto the emotional in Phenomenology of Spirit. In addition, we will study feminist philosophers who have drawn on or offered critical readings of Hegel (Irigaray, Butler, Cavarero, Malabou, and others). Co-listed with AS.190.633
Instructor(s): J. Bennett; K. Pahl
Area: Humanities
Writing Intensive.

**AS.213.705. Hegel's Phenomenology of Spirit.**

We will study key passages of The Phenomenology of Spirit from a queer-feminist perspective and engage with some of the feminist scholarship on Hegel
Instructor(s): K. Pahl
Area: Humanities.
AS.215.327. Modern Political Thought in Latin America. 3.00 Credits. Sophomores, Juniors and Seniors only. The course is an introduction to modern political thought in Latin America. It draws on essays and novels written by major and influential political thinkers such as D.F. Sarmiento, Gonzalez Prada, J.C. Mariategui, Leopoldo Zea, J. E. Rodo, Octavio Paz, Jose Revueltas, Jose Maria Arguedas, Mario Vargas Llosa, Darcy Ribeiro, Enrique Dussel and the authors of the Sumac Kawsay as well as Liberation Theology central writings. The course will be taught in English. Students wishing to do work in the original Spanish or Portuguese will be encouraged to do so.

Instructor(s): S. Castro-Klaren
Area: Humanities
Writing Intensive.

AS.215.745. Modern Political Thought in Latin America. Graduate students or advanced seniors. This seminar will explore the corpus of political thought in Latin America since independence (1810) to the present by focusing on the discourses that constructed and continue to construct key questions in the negotiation of power in the post-colonial res publica: territory, nationhood, national subjectivation, cultural imagination, justice and regimes of inclusion and exclusion. Readings will include the work of Sarmiento, Euclides da Cunha, Gonzalez Prada, Mariategui, Marti, Revueltas, Paz, Dussel, Ribeiro, Freire, Arguedas, Liberation Theology and Sumac Kawsay authors.

Instructor(s): S. Castro-Klaren
Area: Humanities
Writing Intensive.

AS.216.398. Zionism: Literature, Film, Thought. 3.00 Credits. Based on a close reading of both literary and non-literary Zionist texts, we will explore the thematic, social and political aspects of the Zionist movement. The course focuses on primary sources and its main goal is to familiarize students with the history of Zionism and its influence on Israeli culture. In the last part of the semester we will investigate the different meanings of Post-Zionism through contemporary literary and non-literary texts as well as recent Israeli films. Students wishing to do additional work in Hebrew should enroll in section 2 where students will meet for an additional hour at a time TBD and will earn 4 credits for the course.

Prerequisites: Students may receive credit for AS.216.398 or AS.300.398, but not both.
Instructor(s): N. Stahl; Z. Cohen
Area: Humanities.

Sociology
AS.230.275. Revolution, Reform and Social Inequality in China. 3.00 Credits. This course explores various aspects of social inequality in China during the Mao Zedong and the post-Mao reform eras. We will examine inequality within villages, the rural/urban divide, urban inequality, education and health policies, and gender and ethnic inequality. Each of these issue areas will be tackled analytically, but the aim is also to understand what it was/is like to live in China during and after the Mao era. Formerly offered as AS.230.321.

Instructor(s): J. Andreas
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.318. State and Society in Modern India. 3.00 Credits. This course examines the complex, at times conflicting, relationship that has emerged between Indian seats of power from above and Indian expressions of society from below. Attention will be placed on the period between 1947 to the present.

Instructor(s): R. Agarwala
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.357. Baltimore and Beyond. 3.00 Credits. This course uses the city of Baltimore as a lens through which to explore issues of urban inequality. We will focus on Baltimore's history of racial segregation and concentrated poverty, and its effect on the social and economic well-being of the city and its residents, with attention to education, employment, health and crime. Students will learn how to employ Census data, GIS approaches, and sociological research to inform questions about population change, inequality and the distribution of resources across the city and metropolitan region. Students will also work on one or more policy relevant studies based in Baltimore, including: a project on abandoned and vacant housing, a desegregation intervention, and a longitudinal study of inner city youth. Finally, students will become familiar with Baltimore City's programs and policy approaches to addressing the city's most pressing problems, and will design innovative and effective and innovative solutions as part of their course assignments. Enrollment restricted to Social Policy minors only.

Prerequisites: Students that took AS.360.357 may not take AS.230.357
Instructor(s): S. Deluca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.374. Poverty and Public Policy. 3.00 Credits. This course examines the causes and consequences of U.S. urban poverty, its implications for health and wellbeing, and explores strategies for addressing it. We cover the major theoretical explanations scholars have advanced to explain the persistence of urban poverty including labor markets, residential segregation, welfare policy, family structure, and the criminal justice system. Within each topic area, students are introduced to a range of interventions aimed at alleviating urban poverty. Students will conduct a formal policy analysis of 20 pages and participate in a mock congressional hearing. Enrollment restricted to Social Policy minors only.

Prerequisites: Students that took AS.360.372 may not take AS.230.374
Instructor(s): K. Edin
Area: Social and Behavioral Sciences
Writing Intensive.

East Asian Studies
AS.310.215. Enlightenment, Empire, and Democracy: Transnational Political Cultures in East Asia, 1880?1980. 3.00 Credits. This course explores the global circulation of political ideas and the formation of transnational social, intellectual, and aesthetic movements in Japan, China, and Korea from the 1880s to the 1980s.

Instructor(s): A. Bronson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.310.305. Southeast Asia and US Security. 3.00 Credits.
This survey course is designed to introduce students to Southeast Asia – the ten member countries of the Association of Southeast Asian Nations (ASEAN) plus Australia and New Zealand. Southeast Asia is an integral part of the broader region of East Asia and a geographic bridge to the Indian subcontinent (South Asia). Southeast Asia has been one of the great success stories in the saga of modernization and development of post-colonial Afro-Asia over the last six decades. Its resulting economic importance is matched by its strategic significance given the presence of imbedded jihadist networks and the emergence of China as a regional great power and aspirant superpower. Nevertheless, the region has been largely overlooked by senior foreign policy and defense officials in Washington. This course will equip students to fill that void by examining the region from the perspective of national security strategy – broadly understood in its multiple dimensions. Students will be challenged to formulate some element of a viable U.S. national security strategy for the region.
Instructor(s): M. Ott
Area: Social and Behavioral Sciences.

AS.310.306. Domestic Politics of Contemporary China. 3.00 Credits.
This course introduces students to China’s contemporary political history and current political system. It helps students develop a critical understanding of China’s governance institutions and processes, political economy, and state-society relations. The course focuses primarily on China’s domestic politics but also covers China’s changing role in Asia and the world.
Instructor(s): Y. Yang
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.310.307. Governance and Politics in China. 3.00 Credits.
A dramatic rise of popular protests in China today has spurred lively discussions about the causes, dynamics, and impact of these protests. This course will provide students with an opportunity to understand these issues by discussing the social, institutional and cultural background of protests, major forms of protest, social groups involved, government responses, and social implications of various kinds of protests. The first part of the course will explore significant socio-economic changes since 1978 and the effects of these changes on China’s social structure and stratification. This part will also examine changes in governance and political systems in the reform era and review important theories of contentious politics. The second part will examine protests by distinct social groups, including peasants, workers, homeowners, and ethnic minority groups, pro-democratic activists, among others. This part will identify similarities and differences in the demands and actions of different groups, introduce the major forms of popular resistance, and explore how the state deals with them accordingly. The course will conclude with discussion of the outcomes of social protests in China and make a cross-national comparison between protests in China and other authoritarian states. By taking China as an example, this course will enhance students’ knowledge about forms of popular contention and government responses in an authoritarian regime as well as help students develop analytical and critical thinking skills with regard to contentious politics.
Instructor(s): Y. Li
Area: Social and Behavioral Sciences
Writing Intensive.

AS.310.352. Current Issues in US-Asia Relations: A Practitioner’s View. 3.00 Credits.
We will examine how major political events, players, norms and institutions have shaped US-Asia relations in the modern era.
Instructor(s): W. Konishi
Area: Social and Behavioral Sciences
Writing Intensive.

AS.310.600. Advanced Topics in East Asian Studies.
This interdisciplinary seminar gives graduate students in East Asian Studies opportunities to present and receive comments on their dissertation chapters, prospectuses, conference papers, and/or potential publications.
Instructor(s): E. Chung
Area: Humanities, Social and Behavioral Sciences.

Interdepartmental

AS.360.247. Introduction to Social Policy: Baltimore and Beyond. 3.00 Credits.
This course will introduce students to basic concepts in economics, political science and sociology relevant to the study of social problems and the programs designed to remedy them. It will address the many inequalities in access to education and health care, unequal treatment in the criminal justice system, disparities in income and wealth, and differential access to political power. The focus will be on designing effective policies at the national and local level to address these pressing issues. This course is open to all students, but will be required for the new Social Policy Minor. The course is also recommended for students who are interested in law school, medical school, programs in public health, and graduate school in related social science fields. This course does not count as one of the required courses for the Economics major or minor, but it is required for the Social Policy Minor. Cross list with Sociology, Economics and Political Science. Freshman, Sophomore and Juniors only.
Instructor(s): B. Morgan; D. Schlozman; S. Deluca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.360.331. Methods for Policy Research. 3.00 Credits.
This course will introduce students to quantitative methods for studying social policy problems. Topics to be covered include descriptive statistics and sampling, correlation and causation, simple and multiple regression, and stratification. This course will emphasize the selection, interpretation and practical application of these methodologies in specific policy settings, rather than with formal proofs. Skills will be reinforced by hands-on exercises using statistical software. Over the course of the semester, students will critically analyze policy reports and empirical research in a range of policy areas and learn how to present this research to a non-specialist audience. Finally, we will discuss the pros and cons of quantitative vs. qualitative methodologies. The course will conclude with group presentations that draw on all these skills. Enrollment restricted to Social Policy minors only.
Instructor(s): B. Morgan
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.
AS.360.366. Public Policy Writing Workshop. 3.00 Credits.
This workshop is designed to hone the analytical and communications skills necessary for effective formulation and advocacy of public policy. Topics include how to develop op-ed pieces and other forms of advocacy journalism, memoranda, position papers, and grant proposals. The workshop puts special stress on how to make a clear and persuasive exposition of complex or counter-intuitive policy arguments in the market place of ideas, including the challenges of writing for popular journals and communicating to specific audiences both in and out of government. Students receive intensive individual instruction, including close editing of their work and advice on how to publish or promote it in the public sphere. Enrollment restricted to Social Policy minors only.
Instructor(s): P. Longman
Area: Social and Behavioral Sciences
Writing Intensive.

AS.360.372. Poverty and Public Policy. 3.00 Credits.
This course examines the causes and consequences of U.S. urban poverty, its implications for health and wellbeing, and explores strategies for addressing it. We cover the major theoretical explanations scholars have advanced to explain the persistence of urban poverty including labor markets, residential segregation, welfare policy, family structure, and the criminal justice system. Within each topic area, students are introduced to a range of interventions aimed at alleviating urban poverty. Students will conduct a formal policy analysis of 20 pages and participate in a mock congressional hearing. Permission of instructor required.
Instructor(s): K. Edin
Area: Social and Behavioral Sciences
Writing Intensive.

AS.360.380. Making America Social Policy. 3.00 Credits.
This course analyzes the distinctive US welfare state in historical and comparative perspective. We begin with a survey of the policy context, an historical overview from the poorhouses through the Great Society, and a tour of welfare states across the rich democracies. We then survey developments – and explain the actual workings of policy – across jobs, education, welfare, pensions, and health care. We explore the institutional and political factors behind their divergent trajectories through conservative revival and the age of Obama. Students will write a seminar paper exploring policy development over time in a program or area of their choosing. Enrollment restricted to Social Policy minors only.
Instructor(s): D. Schlozman
Area: Social and Behavioral Sciences
Writing Intensive.

Program in Latin American Studies
AS.361.330. Latin America Otherwise: Voicing Dissent. 3.00 Credits.
This course proposes to look at various Latin American texts through an unconventional lens: that of dissent. Partly inspired by French philosopher Jacques Rancière (2001), we will take as a premise the idea of dissent not simply as a moment of protest or resistance, nor of the collective plea for rights, but the moment when already given or accepted ways of living and institutional forms are unexpectedly modified by subjects not previously recognized as political. We will draw from diverse materials, ranging from political theory texts, Latin American literature, the literature on development, to the experiences of various social movements in the region. Recommended Course Background: an introductory level course in International Studies, Political Science, Anthropology, or Sociology
Instructor(s): T. Zille
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

Center for Africana Studies
AS.362.175. Freshman Seminar: Remembering the Black Power Movement. 3.00 Credits.
This course explores trends, developments, contradictions, and dilemmas related to the Black Power Movement. The objective of studying this historical movement is not to engage in nostalgia, but to think through and learn the lessons of this historic social movement. An active participant in the Black Power Movement as a university undergraduate and graduate student, I do not approach this subject merely as a set of interesting intellectual issues and dynamics that can be explored with complete dispassion and objectivity. Rather, I seek to examine critically some of the contradictions and dilemmas that I, too, was caught up in, seeking to come to grips with and clarify my own participation and activities. We study these historical events with the expectation of making a positive contribution to the future.
Instructor(s): F. Hayes
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.362.340. Power and Racism. 3.00 Credits.
This course investigates the impact of white supremacy and anti-black racism, as a global system of power, on the political development of the United States of America.
Instructor(s): F. Hayes
Area: Social and Behavioral Sciences
Writing Intensive.

AS.362.344. Education Politics in Urban America. 3.00 Credits.
This seminar analyzes trends, developments, and future challenges related to the politics of urban public schooling with a concentration on community political dynamics and the struggle for equal educational opportunity and quality education. The course emphasizes the impact of socioeconomic class inequality, racial/ethnic conflict, and gender politics on the changing character of public school reform since the 1954 Supreme Court decision of Brown v. Board of Education. Cross-listed with Africana Studies.
Instructor(s): F. Hayes
Area: Social and Behavioral Sciences
Writing Intensive.

AS.362.416. Black Nationalism and its Critics. 3.00 Credits.
This seminar will pursue an in-depth, critical analysis of the history and philosophy of black nationalism and its relationship to other trends in black political thought. Readings from Alexander Crummell, Martin Delany, Frederick Douglass, W. E. B. DuBois, Marcus Garvey, Malcolm X, James Baldwin, and others.
Instructor(s): A. Culver
Area: Humanities, Social and Behavioral Sciences.

Study of Women, Gender, Sexuality
AS.363.304. Love and Its Discontents. 3.00 Credits.
This course aims to familiarize students with a wide-range of feminist and queer conceptions of love as a political force. While reading theoretical texts and selections of poetry, students will be encouraged to interrogate the political implications of different conceptions of love, Eros, and desire.
Instructor(s): K. Glanz
Area: Humanities.
The courses in psychological and brain sciences have four purposes:

1. to acquaint all interested students with a sampling of topics through a variety of introductory and advanced courses;
2. to prepare majors for graduate work in psychology and related disciplines through a program that meets the admission requirements of the outstanding graduate departments in the United States;
3. to offer a distribution of courses for a minor concentration in psychology as well as several fields of concentration for area majors in the social and behavioral sciences; and
4. to provide an honors track designed for exceptional students who want training beyond that provided by the standard undergraduate curriculum.

Psychology Major Requirements

Also see Requirements for a Bachelor’s Degree. (p. 10)

General Requirement:

All classes taken for the major (including those for NQE credit) must be taken for a grade and be completed with a C- or better.

Specific Requirements:

- **Intro Level Course Requirement:** Three 100-level psychology courses. These are typically taken during Year 1 and Year 2.
- **Math/Science Requirement:** AS.110.106 Calculus I (Biology and Social Sciences) or AS.110.108 Calculus I, EN.550.111 Statistical Analysis I, EN.550.112 Statistical Analysis II, and AS.200.207 Research Methods in Experimental Psychology. Calculus is usually taken in Year 1, Stats 1 & 2 in Year 2, and Research Methods in fall of either Year 3 or Year 4.
- **Upper Level Course Requirement:** Five upper level psychology courses (200- or 300-level), three of which must be at the 300-level. These are typically dispersed through Years 2-4.
- **Small Group Experience:** 3 credits of either research, internship, independent study or an additional 300-level psychology course with an enrollment cap of 19 students or less. Students who are interested in graduate work in psychology are encouraged to get involved in research/internship activity starting in Year 2 and to continue throughout their time at Hopkins.
- **9 NQE Credits:** Students must complete 9 additional NQE credits using courses not taught within the psychology department (AS.200.XXX) and not counting otherwise toward the psychology major (e.g., AS.110.106 Calculus I (Biology and Social Sciences), AS.110.108 Calculus I, EN.550.111 Statistical Analysis I, EN.550.112 Statistical Analysis II, etc.).

Please note that not all courses offered by the Department of Psychological & Brain Sciences (AS.200.XXX) will fulfill the requirements of the Psychology major/minor (ex. AS.200.220 Discover Hopkins Health Studies: Application of Abnormal Psychology to Forensic Cases). Consult with Academic Advising and your psychology major advisor to ensure appropriate progress toward degree completion.

* AS.110.105 Introduction to Calculus may not be used for this requirement.
** These courses should be taken as early as possible as they are prerequisites for many psychology courses.

Facilities

The department’s offices and laboratories contain dozens of desktop computers (PCs and Macintoshes) and UNIX workstations used for experimental control and for computational studies, simulation, data analysis, and manuscript preparation.

The F. M. Kirby Research Center for Functional Brain Imaging houses 3.0T and 7.0T Philips research-directed MRI scanners for fMRI studies of human perception, memory, and cognition.

The psychological and cognitive neuroscience laboratories contain a wide range of computer equipment and special-purpose research equipment, including image-processing and large-format graphics systems, eye-movement monitors, speech recognition and analysis systems, stereoscopic graphic systems, video equipment, EEG, Transcranial Magnetic Stimulation, and other stimulus-presentation and response-collection devices.

The biopsychology laboratories have all the facilities necessary to conduct modern behavioral neuroscience research, including equipment for behavioral and operant testing, electrophysiology, histology, surgery, neurochemistry, and systems for the analysis and synthesis of audio signals.

The broad aim of the graduate program is to train students to become scientists rather than practitioners.

PSYCHOLOGICAL AND BRAIN SCIENCES

http://pbs.jhu.edu/

The psychological and brain sciences are concerned with understanding the biological and psychological processes underlying animal and human behavior at all stages of development.

The broad aim of the graduate program is to train students to become scientists rather than practitioners.

AS.363.395. Poetics and Politics of Sex: Intimacy and Its Discontents. 3.00 Credits.

Where might one turn for intimacy if its available forms are dissatisfying? What happens when politics authorizes certain forms of intimacy but not others? How might intimacies and their discontents lack a language to do them justice? This course explores problems with normative intimacies such as monogamy, family, and intimate publics. It covers issues such as optimism, ambivalence, trauma, queerness, war, and longing. It also explores how authors try to describe intimacy through different genres, such as poems, aphorisms, novellas, essays, and scholarly articles.

Instructor(s): C. Shomura
Area: Humanities
Writing Intensive.
II. Required Courses Within the Department

AS.200.207 Research Methods in Experimental Psychology (Fall Offering) 3

Select three of the following: 9
- AS.200.101 Introduction to Psychology
- AS.200.110 Introduction to Cognitive Psychology
- AS.200.132 Introduction to Developmental Psychology
- AS.200.133 Introduction to Social Psychology
- AS.200.141 Foundations of Brain, Behavior and Cognition
- Research, internship, independent study, or a designated seminar course 3

Five additional psychology courses distributed as follows: ** 15
- Two additional courses at the 200-400 level
- Three additional courses at the 300-400 level

* The seminar course must have a maximum enrollment of 19 students. Courses used to fulfill the five upper-level course requirements may not be used to satisfy this requirement. Students may take 1-3 credits in any given semester to fulfill this requirement. All students are required to discuss their plans with their faculty advisor before junior clearance.

** One upper level course in Cognitive Science may be used to satisfy these course credits with the approval of the director of undergraduate studies. Research, independent study, and internships may not be used to satisfy these course requirements.

*** Students who are planning advanced study in psychological and brain sciences are strongly encouraged to engage in psychological research and/or clinical internships.

Total Credits: 125
Restrictions
No courses taken during Intersession or through the School of Education and the Carey Business School may be counted toward the requirements for the B.A. degree in Psychological and Brain Sciences (although a limited number of such courses may be counted toward the 120 credits required for graduation).

Most courses offered by Psychological & Brain Sciences (AS.200.XXX) through the Summer at Hopkins program will not count toward the Psychology major or minor. However, exceptions may include summer courses that are also offered and counted toward the major/minor during the Fall and Spring semesters. You may make an appointment with Dr. Stephen Drigotas, Director of Undergraduate Advising for Psychological & Brain Sciences, to ensure that your enrollments will be considered toward your academic progress in the manner you intend.

Preparation for Graduate Work in Psychology
The Department of Psychological and Brain Sciences provides preparation for graduate training in all areas of psychology, including clinical and counseling. Virtually all psychology graduate programs, including those that provide training in clinical or counseling psychology, expect students to have a strong background in scientific psychology, including statistics. The department encourages students to obtain additional practical experiences outside the classroom, including research in a laboratory and/or an internship in a mental health care setting. These additional experiences are particularly salient to graduate school admission committees.

Honors Program in Psychology
The B.A. degree with honors provides recognition for outstanding achievement in formal course work and research. The requirements for a degree with honors include those for the regular B.A. degree, plus the following:

• A minimum grade point average of 3.5 in psychology courses (exclusive of independent study or research) through the fall semester of the student's junior year.

• A formal application to be submitted to the director of undergraduate studies by March 31 of the student's junior year. The application must include a copy of the student's transcript, a brief description of the proposed honors research project, and written endorsement of the application by the student's faculty sponsor. The sponsor must have a full-time faculty appointment at Johns Hopkins and either a primary or a joint appointment in the Department of Psychological and Brain Sciences. Admission into the Honors Program is not guaranteed.

• Completion of two 300- or 600-level psychology courses, in addition to those required for the regular B.A. degree. Neither of these can be research or reading courses. These additional courses are not in addition to the 120 credits required for graduation.

• Completion of an independent research project under the supervision of a member of the department's faculty, culminating in a written honors thesis. The student will enroll in AS.200.519 Seniors Honors Research and AS.200.520 Seniors Honors Research during both semesters of the senior year. The honors thesis must be submitted no later than March 31 of the senior year and must be read and approved in writing by two members of the faculty.

• Students considering application to the honors program should begin discussing possible thesis research topics with a faculty sponsor no later than the fall semester of their junior year.

Minor in Psychology
A minor in psychology is available to undergraduates majoring in any department. Students electing to minor in psychology should declare their intention directly to the director of undergraduate studies in the Department of Psychological and Brain Sciences by the end of junior year. All classes taken for the minor must be taken for a grade and be completed with a C- or better. The minor requires successful completion of the following:

Select three of the following:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>AS.200.101</td>
<td>Introduction to Psychology</td>
</tr>
<tr>
<td>AS.200.110</td>
<td>Introduction to Cognitive Psychology</td>
</tr>
<tr>
<td>AS.200.132</td>
<td>Introduction to Developmental Psychology</td>

<td>Introduction to Social Psychology</td>
</tr>
<tr>
<td>AS.200.141</td>
<td>Foundations of Brain, Behavior and Cognition</td>
</tr>
</tbody>
</table>

One psychology course at any level 3
Two psychology courses at the 300-600 level 6

Total Credits 18

• No course from the Carey Business School or School of Education may count toward the minor.

• No more than one research or readings course may count toward the minor.

Undergraduate Academic Awards
The Department of Psychological and Brain Sciences offers two undergraduate academic awards. The G. Stanley Hall Prize is awarded for outstanding achievement by an undergraduate in psychology. The Julian C. Stanley Award is given to the psychology major who most closely approximates Dr. Stanley’s personal and professional standards of excellence.

Master of Arts in Psychology
A student who has been admitted into the Ph.D. program can earn a Master of Arts degree in partial fulfillment of the requirements for the Ph.D. degree. Normally, candidates for the Ph.D. degree in psychology will qualify for the M.A. degree at the end of their second year, after having completed two area seminars and at least two courses in psychological research design and/or advanced statistics, provided that their performance is of the quality judged satisfactory for the M.A. level. There is no terminal master’s program.

Requirements for the Ph.D. Degree
The Department of Psychological and Brain Sciences emphasizes training and experience in the research methods essential to the development of new knowledge in the various sub-fields of psychology. Our core program for doctoral students emphasizes scientific methodology and provides rigorous research training. Each doctoral candidate is expected to become familiar with both a relatively narrowly defined area and a broad spectrum of knowledge related to the student’s topic of specialization.
In addition to general university requirements, the Department of Psychological and Brain Sciences has the following regulations:

**Statistics**
Most graduate students will complete take AS.200.314 Advanced Statistical Methods during the first semester and AS.200.318 Quantitative Methods for Brain Sciences during the second semester. Students with exceptional statistical training should take two more advanced courses by arrangement with the director of graduate studies.

**Fundamentals and Core Topics in PBS**
AS.200.613 Fundamentals of Psychological & Brain Sciences, AS.200.654 Psychological & Brain Sciences Core Topics A, and AS.200.655 Psychological & Brain Sciences Core Topics B offer an introduction to the fundamental principles and methods of the psychological & brain sciences. Students will read seminal and contemporary papers in topics that cover the breadth of the field. In addition, students become versed in the careful consideration of data and in formulating written and oral arguments.

**First-Year Research Report**
During the first year, the student, together with the faculty advisor, identifies a research project that will provide extended research experience. Normally, the student designs a study as part of a larger ongoing project. A project proposal must be submitted by April 15 of the first year; this proposal introduces the nature of the scientific problem, reviews the relevant literature, and describes the proposed study in detail, together with the anticipated data, means of analysis, and interpretations. A final written version of this report must be submitted by December 15 of the student’s second year; ideally, this "first year project" report includes all the information that would be appropriate for submission to a scientific journal.

**Advanced Examination**
Each student must pass an in depth examination in his/her chosen area. This examination, which includes both a written and oral part, is graded by a committee of at least two faculty members. The written and oral portions of the advanced examination offer the student an opportunity to demonstrate both in-depth, focused knowledge in their specialty area of study, and also a breadth of knowledge outside of their area of expertise. The student must pass the advanced examination by the beginning of the third year of study.

**Advanced Study**
Each student, in collaboration with a faculty advisor, plans a course of study consisting of intermediate and advanced topical and research seminars.

**Topical Seminars**
The Department of Psychological and Brain Sciences offers topical seminars in which one or more faculty members leads seminars on topics of special interest, such as memory, cognitive development, neurophysiological aspects of behavior, vision sciences, and decision making. Through participation in these seminars, students are exposed to findings in subfields of psychology. Topics vary from semester to semester and are determined by the interests of both faculty and graduate students.

**Research Seminars**
Students and faculty engaged or interested in research in particular areas organize these seminars. Participants discuss their own research and other current research in the area.

**Teaching Requirement**
Graduate students serve as teaching assistants (TAs) to members of the department’s faculty. All graduate students are expected to TA a total of four semesters. Although there is some flexibility in TA assignments, students typically TA during the second semester of their first year, both semesters of their second year, and one semester of their third year. The Director of Graduate Students, along with a committee of graduate student representatives, assigns these teaching duties.

Advanced students may apply for a Dean’s Teaching Fellowship. A course is proposed by the student and is sponsored by a faculty member. These are highly competitive and prestigious awards. For details please visit http://krieger.jhu.edu/teachingfellowship/.

**Literature Review**
Students complete a written literature review in preparation of the completion of their dissertation. The literature review is modeled on articles appearing in professional journals. Typically the review provides a background for the thesis plan, but for some students it may be prepared on a topic other than the one selected for the thesis. The literature review is evaluated by the same committee that will evaluate the thesis plan.

**Thesis Plan**
At least one calendar year before receiving the Ph.D. degree, each doctoral candidate must develop a plan for the dissertation research and present the plan before a departmental committee. With the committee’s approval, the student then prepares a dissertation.

**Dissertation**
The dissertation represents the student’s culminating piece of scholarly work. It establishes the start of a research career and the basis for postgraduate employment. The Graduate Board of the University administers the final oral examination, a defense of the thesis. The doctoral dissertation must be in a form suitable for and worthy of publication.

**Financial Aid**
Financial support packages are available to all doctoral students, with 9-month stipends that are competitive with those of other universities. Financial support includes tuition remission. Summer research assistantships are available in the department.

For further information on graduate study in psychology, contact the Academic Program Coordinator for the Department of Psychological and Brain Sciences.

For current faculty and contact information go to http://pbs.jhu.edu directory/

**Faculty Chair**
Susan Courtney
Professor: cognitive neuroscience, functional neuroimaging, working memory, attention
Professors
Howard Egeth
perception & cognition, attention & attentional selectivity, memory, eyewitness testimony, psychology & law
Lisa Feigenson
cognitive development, numerical cognition
Michela Gallagher
Krieger-Eisenhower Professor: learning & memory, neurobiology of aging
Justin Halberda
cognitive & developmental psychology, reasoning, language acquisition
Peter Holland
Krieger-Eisenhower Professor: mechanisms of behavior, learning, memory, motivation, behavioral ecology
Patricia Janak
Bloomberg Distinguished Professor: behavioral & neurobiological mechanisms of associative learning, addiction
Cynthia Moss
auditory information processing, spatial attention & perception, learning & memory, memory & sensorimotor integration

Assistant Professors
Marina Bedny
brain development & plasticity, cognitive neuroscience, concepts
Janice Chen
real-world memory, cognitive neuroscience, temporal structure in cognition
Chaz Firestone
perception, attention, visual cognition, foundations of cognitive science
Jason Fischer
visual scene understanding using fMRI, psychophysics, computational modeling
Jonathan Flombaum
visual perception, attention, cognition
Christopher Honey
cognitive neuroscience, computational neuroscience, memory in neural circuits
Shreesh Mysore
neural circuits for behavior (attention, decision-making, etc), computational neuroscience, comparative approach to the design of neural circuits

Associate Faculty
Richard Allen
Associate Professor; School of Medicine (Neurology): clinical & medical psychology
Kirsten (Kisi) Bohn
Assistant Research Professor: acoustic communication, vocal production, social behavior, neuroethology, evolution of vocal complexity
Stephen Drigotas

Teaching Professor & Undergraduate Advisor: social psychology, interpersonal relationships, friendship networks, intergroup behavior, social dilemmas
David H. Edwin
Associate Professor; School of Medicine (Psychiatry & Behavioral Sciences): clinical & medical psychology
Heather Roberts Fox
Senior Lecturer: industrial/organizational psychology
Linda Gorman
Teaching Professor: neuroscience
Paul J. Hofer
Adjunct Associate Professor; U.S. Sentencing Commission (Washington, D.C.): law & psychology
Chelsea Howe
Lecturer: forensics, abnormal psychology, dual diagnosis, therapy, assessment
Ann Jarema
Junior Lecturer: clinical psychology
Chris Kraft
Psychologist & Instructor; School of Medicine (Psychiatry & Behavioral Sciences, Center for Marital & Sexual Health); Senior Lecturer: human sexuality & behaviors
Meghan McGlaughlin
Junior Lecturer: clinical psychology
Alison Papadakis
Associate Teaching Professor: clinical & adolescent psychology, developmental psychopathology of depression in adolescence
Lawrence Raifman
Adjunct Assistant Professor; Private Practice & Director of Forensic Services (Springfield Hospital Center): forensic psychology, law & decision-making, clinical applications of psychology & the law, behavioral finance
Veit Stuphorn
Associate Professor; School of Medicine (Neuroscience): neurophysiological studies of decision-making

Joint Faculty
Marilyn Albert
Professor & Director (Division of Cognitive Neuroscience; School of Medicine): aging, cognition, memory
Arnold Bakker
Assistant Professor (Psychiatry, School of Medicine): psychiatric neuroimaging
Greg Ball
Research Professor: biopsychology, behavioral neuroendocrinology, neuroethology
Charles (Ed) Connor
Courses

AS.200.101. Introduction to Psychology. 3.00 Credits.
This course surveys all the major areas of scientific psychology, including the physiological bases of behavior; sensation and perception; learning, memory and cognition; developmental, social, and personality psychology; and psychopathology.
Instructor(s): S. Drigotas
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.110. Introduction to Cognitive Psychology. 3.00 Credits.
Introductory survey of current research and theory on topics in cognitive psychology. The course will cover a range of topics in perception, attention, learning, reasoning, and memory, emphasizing relationships among mind, brain, and behavior.
Instructor(s): J. Flombaum
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.132. Introduction to Developmental Psychology. 3.00 Credits.
An introductory survey of human development from the prenatal period through adolescence. The developing child is examined in terms of cognitive, social, emotional, motor, and language development.
Instructor(s): L. Feigenson
Area: Social and Behavioral Sciences.

AS.200.133. Introduction to Social Psychology. 3.00 Credits.
An introductory survey of social psychology. Topics include social perception, social cognition, attitudes, prejudice, attraction, social influence, altruism, aggression, and group behavior.
Instructor(s): S. Drigotas
Area: Social and Behavioral Sciences.

AS.200.141. Foundations of Brain, Behavior and Cognition. 3.00 Credits.
Formerly listed as Introduction to Physiopsychology. A survey of neuropsychology relating the organization of behavior to the integrative action of the nervous system. Cross-listed with Behavioral Biology and Neuroscience.
Instructor(s): L. Gorman
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.159. Freshmen Seminar: Evolutionary Psychology. 1.00 Credit.
In this course we discuss evolutionary psychology, which is the idea that the mind can be understood as an adaptation to our ancestral environment by means of natural selection. Freshmen only.
Instructor(s): H. Egeth
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.161. Illusions, delusions, and other confusions: Why what you think you know about human nature is (largely) wrong. 1.00 Credit.
This course is suitable for all, but would be especially useful for a student who does not expect to take many (or any) additional psychology or cognitive science courses. We will explore what modern psychology has uncovered about how our intuitions concerning human nature deceive us. Freshmen Only.
Instructor(s): H. Egeth
Area: Social and Behavioral Sciences.
AS.200.162. Childhood Disorders & Treatments: Online. 3.00 Credits.
This is an online course. The class will meet for ten weeks from May 23 through July 29 and will follow the deadlines for Term I for add/drop/withdraw and grade changes. This course examines the psychological disorders that are usually first diagnosed prior to adulthood. Some of the specific disorders that will be discussed are Attention-Deficit and Disruptive Behavior Disorders, Pervasive Developmental Disorders, Learning Disorders and Intellectual Disability. Students will become familiar with various diagnoses, etiologies, and methods of treatment.
Instructor(s): A. Jarema
Area: Social and Behavioral Sciences.

AS.200.163. Gamechangers: Conceptual Breakthroughs in Neuroscience. 3.00 Credits.
Freshman Seminar; This introductory class will highlight some of the key findings in neuroscience over the past century and a half that have revolutionized our understanding of how the brain works. The goal is to convey both the essence of, and the excitement surrounding, neuroscience breakthroughs that caused paradigm-shifts. We will also look at recent neuroscience-related headlines in popular media and unpack them from a scientific perspective. Topics covered will include "Is the brain just one big lump of tissue?", "Telephones in the brain?", "The frog with upside-down vision", "Brains vs. hard-drives", "Monkey see=monkey do neurons", Epigenetics, "Changing the brain's wiring diagram", "Do ants have GPS?, The science behind the movie "Memento", "Implanting false memories into brains", "My brain sees you, but I don't!", etc. For each big question, we will first examine the thinking that previously existed, and then explore the shift in thinking.
Instructor(s): S. Mysore
Area: Natural Sciences Writing Intensive.

AS.200.202. Forensic Psychology. 3.00 Credits.
The field of forensic psychology is focused on answering legal questions about the causes of human behavior. This survey course will explore the work that forensic psychologists do; their research, assessment, and clinical methods; and how their work influences lawyers, judges, and other legal practitioners. Specific topics will include mental capacity assessment, psychopathy, claims of mental distress, child custody evaluations, juvenile delinquency, forensic treatment, and forensic neuropsychological assessments.
Prerequisites: Students can only receive credit for AS.200.202 or AS.200.325, not both.
Instructor(s): L. Raifman
Area: Social and Behavioral Sciences.

AS.200.204. Human Sexuality. 3.00 Credits.
Course focuses on sexual development, sexuality across the lifespan, gender identity, sexual attraction and arousal, sexually transmitted disease, and the history of commercial sex workers and pornography. Please note that the use of electronic devices is not permitted during this class, in order to promote the full interactive potential of this engaging seminar-style offering. Open to Seniors within the following majors/ minors: Behavioral Biology; Biology; Cognitive Science; Medicine, Science & the Humanities; Molecular & Cellular Bio; Neuroscience; Psychology; Public Health; Sociology; Study of Women, Gender, & Sexuality.
Prerequisites: Students may enroll in both AS.200.204 and AS.290.420, but cannot do so in the same semester.
Instructor(s): C. Kraft
Area: Social and Behavioral Sciences Writing Intensive.

AS.200.205. Discover Hopkins: Psychological Profiling. 1.00 Credit.
"Psychological Profiling" focuses on strengths and limitations of psychological methods employed by forensic professionals who assist police in criminal investigations. Clinical cases of serial offenders, spree killers, disgruntled employees, police profiling, and terrorists will be studied. Legal and ethical issues will be explored, especially racial profiling controversies. We anticipate visits to the FBI Behavioral Sciences Unit at Quantico, Virginia; Baltimore County Forensic Crime Lab (with emphasis on crime scene analysis), and the Baltimore Police Profiling Program.
Instructor(s): L. Raifman
Area: Social and Behavioral Sciences.

AS.200.207. Research Methods in Experimental Psychology. 3.00 Credits.
Formerly known as Lab in the Analysis of Psychological Data (LAPD), this course is an overview of research methods used in psychology, experimental designs, interpreting results in psychology, and research ethics. Each student will complete an individual research project on a topic of his/her choosing as part of the course training. The class is taught interactively through lectures and labs.
Prerequisites: Pre-reqs: EN.550.111 (Statistical Analysis I) and EN.550.112 (Statistical Analysis II)
Instructor(s): H. Egeth
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences Writing Intensive.

AS.200.208. Animal Behavior. 3.00 Credits.
Examines basic principles of animal behavior (orientation, migration, communication, reproduction, parent-offspring relations, ontogeny of behavior and social organization). Evolution and adaptive significance of behavior will be emphasized.
Prerequisites: Prereqs: AS.020.151
Instructor(s): K. Bohn
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.209. Personality. 3.00 Credits.
This is a survey course focused on theory and research on human personality. Topics include personality traits, motivation, unconscious processes, self-regulation, cognitive and behavioral aspects of personality, biological and evolutionary influences on personality, and dysfunctional manifestations of personality.
Instructor(s): C. Howe
Area: Social and Behavioral Sciences.

AS.200.211. Sensation & Perception. 3.00 Credits.
This course surveys how stimuli from the environment are transformed into neural signals, and how the brain processes those signals to interpret the objects and events in the world. A primary focus will be on the visual system, with additional coverage of hearing, touch, taste, and smell.
Instructor(s): J. Fischer
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.212. Abnormal Psychology. 3.00 Credits.
A survey of the major syndromes of psychological disorders. Research and theory about the mechanisms, development, and diagnosis of psychopathology are emphasized.
Instructor(s): A. Papadakis
Area: Social and Behavioral Sciences.
AS.200.220. Discover Hopkins Health Studies: Application of Abnormal Psychology to Forensic Cases. 1.00 Credit.
This introductory course will examine the basic diagnostic psychology principles with special application to forensic psychology. The class will focus on investigating forensic psychology queries including: Does my client have a mental illness? Why did he or she act in such a self-defeating way? Does the law require special disposition? Should my client be punished or rehabilitated? We will explore the reasons behind why a movie star would shoplift or a famous athlete would engage in a series of extra marital relationships; why a policeman would commit a series of bank robberies in broad daylight; or why someone would shoot a Congresswoman and kill and wound many others in the process. As part of this course, students will visit with doctors and lawyers (including Judges), view and analyze video and movies about forensic cases, and participate in mock trial exercises.
Instructor(s): K. Hill; L. Raifman; L. Williams
Area: Social and Behavioral Sciences.

AS.200.221. Discover Hopkins: A Forensic Psychologist Confronts Criminality in the Internet Age. 1.00 Credit.
A Forensic Psychologist Confronts Criminality in the Internet Age: Profiling criminal behavior, assessing insanity, and counter-intuitive (self-defeating) motivations for criminal acts typically occupy forensic psychologists who work in the criminal justice system. This course initially looks into traditional forensic psychologist pursuits, and then expands the inquiry to new forms of criminality profiling for “relational aggression” crimes like cyber-bullying & sexual harassment, computer assisted crimes, hate crimes, child pornographers, as well as those high profile (media attention catching) crimes, e.g., spree killing, murder suicide, or terrorism due to political extremism and/or religious fundamentalism. Students will study with a practicing forensic psychologist and police detectives, forensic crime lab professionals, newspaper reporters, SWAT team members, mental health doctors, computer cyber crime investigators. Finally, valuable excerpts from “The Wire,” and “Serial, the podcast” will supplement class discussion and analysis. Come prepared to analyze actual forensic cases.
Instructor(s): L. Raifman.

AS.200.222. Positive Psychology. 3.00 Credits.
The course will review the growing field of positive psychology and will review the research on positive human attributes such as optimism, happiness, hope, resiliency, self-esteem, altruism, empathy, and forgiveness. This course will explore the research on how such positive attributes are developed and how they relate to psychological and physical well-being.
Instructor(s): J. Halberda
Area: Social and Behavioral Sciences.

AS.200.223. Psychotic at the White House. 1.00 Credit.
This introductory course focuses on the problem of delusional, morbidly depressed, and/or thought disordered persons who target federal officials or cites in Washington, DC. Contributing factors include: inadequate mental health commitment laws, an inability to successfully profile and prevent rarely occurring but potential dangerous behavior, pre-trial commitment challenges, the insanity defense, problems associated with easy access to Federal buildings and inter agency rivalries, as well as the inevitable frenzied media response that leads to problems of copy cat behavior. Forensic psychological case studies will be featured, including presidential attempted assassin John Hinckley, Secret Service “White House cases,” Miriam Carey’s death following a car chase ending at the US Capitol, the Beltway sniper case, and others. Finally, the need for increased sensitivity to the problem of stigmatization of mentally ill non-dangerous persons will be included.
Instructor(s): L. Raifman.

AS.200.228. The Illusion of Perception. 3.00 Credits.
In this course, students will gain a comprehensive understanding of the ways we perceive (or fail to perceive) things in the real world by studying examples in perception, memory and awareness. Students will read both empirical and theoretical writing on these topics and participate in class discussions exploring their potential ramifications. If the world isn’t what we perceive, what are the implications for our society, or for ourselves? Recommended Course Background: AS.050.101 OR AS.200.101 OR AS.200.110
Instructor(s): M. Schurgin
Area: Social and Behavioral Sciences.

AS.200.301. History Of Psychology. 3.00 Credits.
A survey of leading figures, schools, and systems in the history of psychology. The course will emphasize the development of experimental psychology in late 19th century Germany and its establishment in America at Johns Hopkins, Harvard, Chicago, and Columbia. Special topics will include the development of clinical and applied psychology and psychological testing. Juniors and seniors only. Recommended Course Background: two prior Psychology courses.
Instructor(s): P. Hofer
Area: Humanities, Social and Behavioral Sciences.

AS.200.302. Behavioral Assessment of Animal Models of Cognition and Neuropsychiatric Disorders. 3.00 Credits.
What does a rat exploring its environment tell us about memory? How can a mouse help us better understand schizophrenia? This course will focus on procedures that are routinely used to study behavior in animal models of cognition and neuropsychiatric disorders. The procedures discussed will include assessments that fall into 3 broad functional domains: motor function, affective or emotional states, and cognition. Throughout the course, we will read and discuss original research articles to illustrate and compare some of the measures and results from the various procedures. Postdoc Teaching Fellowship. This is designed to be an upper level course.
Prerequisites: Pre-reqs: AS.200.141 OR ( AS.080.305 AND AS.080.306 ) or permission of the instructor.
Instructor(s): D. Smith
Area: Social and Behavioral Sciences.
AS.200.303. Psychobiology of Drug Addiction. 3.00 Credits.
The goal of this course is to explore the psychobiological bases of drug addiction. The course will begin with a discussion of the evolving concepts and theories of addiction, as well as a review of the methods and animal models relevant for the study of drug addiction. Following this primary introduction, students will learn 1) how drugs of abuse affect neural function and how this relates to their addictive potential, 2) how biological and behavioral phenotypes predispose certain individuals to addiction, and 3) how environmental factors (stress, social context, learning history, drug contingencies, etc.) contribute to the development of addiction. Special focus will be given on the complex interactions between these different factors and levels of analysis. The course will integrate a variety of approaches (molecular biology, system neuroscience, and psychology). Based on this understanding of the psychobiological mechanisms of drug addiction, we will reflect and refine our views of addiction and examine potential ways to prevent and treat the disease.

Prerequisites: Pre-reqs: AS.200.141 OR (AS.080.305 AND AS.080.306) OR (AS.020.312 AND AS.020.306).
Instructor(s): R. Keiflin
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.304. Neuroscience of Decision Making. 3.00 Credits.
This course will survey the neural mechanisms of decision-making. Current experimental research and theory concerning selection, control, and evaluation of actions are examined in humans and animals. Topics will range from simple perceptual judgements to complex social behavior. The course involves a weekly lecture about a specific topic followed by a student presentation of a current research paper. Cross-listed with Neuroscience.

Prerequisites: AS.080.305 OR AS.080.205 OR AS.200.141
Instructor(s): V. Stuphorn
Area: Natural Sciences.

AS.200.305. Advanced Seminar in Forensic Psychology. 3.00 Credits.
Forensic psychologists determine clinical diagnoses and offer expert opinions to assist court decision makers who must employ legal tests to make case determinations. This course will explore how forensic psychologists communicate with the courts via consultation, report writing, and expert testimony. Students will write forensic analyses on a variety of controversial, cutting edge forensic topics (e.g., for competence to stand trial, child abuse, civil commitment, compensation for mental injuries, sex offender commitment, insanity, fitness for duty, child custody).

Prerequisites: AS.200.212 AND (AS.200.202 OR AS.200.325)
Instructor(s): L. Rafman
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive.

AS.200.306. Psychology in the Workplace. 3.00 Credits.
Industrial-organizational (I-O) psychology is the scientific study of the workplace. Rigor and methods of psychology are applied to issues of critical relevance to business, including talent management, coaching, assessment, selection, training, organizational development, performance, and work-life balance.

Instructor(s): H. Roberta Fox
Area: Social and Behavioral Sciences.
AS.200.314. Advanced Statistical Methods. 3.00 Credits.
Topics in applied probability and statistical inference; analysis of variance; experimental design. Intended for graduate students in psychology. Recommended Course Background: one statistics course.
Prerequisites: Statistics Sequence restriction: students who have completed any of these courses may not register: EN.550.211 OR EN.550.230 OR AS.280.345 OR EN.550.310 OR EN.550.311 OR EN.560.435 OR EN.550.420 OR EN.550.430 OR EN.560.348
Instructor(s): A. Papadakis; M. Uy
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.200.315. Advanced Research Design and Analysis. 3.00 Credits.
Second half of graduate statistics sequence, covering complex research design and analysis. Recommended Course Background: AS.200.314. Enrollment limited to seniors by instructor approval and graduate students.
Instructor(s): C. Honey
Area: Quantitative and Mathematical Sciences.

AS.200.316. Thought and Perception. 3.00 Credits.
This year's topic: Temporal Experience. Do we perceive time? If so, through what sense(s)? How long is the conscious now? Does the temporal order of our perceptions mirror the temporal order of what we perceive? Must the experience of a temporal duration itself be extended in time? What is the relation between the experience of time (for example, the experience of time's passage) and memory? Does our experience of time accurately represent temporal features of reality, or is it actually illusory? How does attending to time's passage affect its perceived rate of passage (and what is it to attend to time's passage)? We will explore these and other questions through an examination of both psychological and philosophical work. [This course meets jointly with Professor Gross’s AS.150.476]
Instructor(s): J. Flombaum; S. Gross
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.200.317. Interpersonal Relations. 3.00 Credits.
This course will investigate interpersonal processes ranging from attraction and courtship to relationship functioning and distress. Open to Psychology and Behavioral Biology majors only.
Prerequisites: AS.200.133
Instructor(s): S. Drigotas
Area: Social and Behavioral Sciences.

AS.200.318. Quantitative Methods for Brain Sciences. 3.00 Credits.
Focus on frequently-used quantitative methods used in the study of brain sciences, including gaining conceptual understanding of techniques, analysis and summarization of data, extracting the process underlying a data set, explaining data as a function of variables, data visualization, etc. Enrollment is limited to undergraduate seniors and graduate students with instructor approval. Recommended Course Background: Probability & Statistics.
Instructor(s): S. Mysore
Area: Quantitative and Mathematical Sciences.

AS.200.321. Child and Adolescent Psychopathology. 3.00 Credits.
This course focuses on mental disorders in children and adolescents. The course begins with an exploration of the general models and theories for why psychopathology occurs in childhood. The second portion of the course provides a systematic review of the symptoms, course, risk factors, theories, and treatments for specific disorders, including mood disorders, anxiety disorders, autism, ADHD, eating disorders, and behavioral disorders.
Prerequisites: AS.200.212
Instructor(s): L. Raifman
Area: Social and Behavioral Sciences.

AS.200.325. Law Psychology: Clinical Application. 3.00 Credits.
Introduction to legal standards governing criminal forensic psychology assessments, e.g., competence to stand trial, criminal responsibility, mitigation of death penalty, negation of mens rea, and other criminal law forensic applications. Cross-listed with Behavioral Biology.
Instructor(s): L. Raifman
Area: Social and Behavioral Sciences.

AS.200.326. Law, Psychology and Public Policy. 3.00 Credits.
An introduction to applications of psychological research in policy analysis. Special emphasis is given to the use and misuse of psychology in Supreme Court advocacy and decision making in the areas of children’s rights, adult sexuality, and educational and employment opportunity. Recommended Course Background: Statistics & Regression Analysis
Instructor(s): P. Hofer
Area: Social and Behavioral Sciences
Writing Intensive.

AS.200.328. Theory & Methods in Clinical Psychology. 3.00 Credits.
A critical examination of the methods of observation, description, reasoning, inference, measurement and intervention that underlie the clinical practice of psychology and psychiatry. Enrollment limited to Behavioral Biology, Cognitive Science, Neuroscience, Psychology, and Public Health majors or by instructor approval. Recommended: Junior & Senior
Prerequisites: AS.200.212
Instructor(s): D. Edwin
Area: Social and Behavioral Sciences
Writing Intensive.

The recent world financial crisis has arguably been the most important event of the new millennium. Understanding the financial crisis requires knowledge of: “What happened & how the crisis unfolded?” “Why did it happen?” “How was the crisis eventually managed?” “Further, who were hurt?” “Who succeeded well?” And finally, “what policy decisions intended to protect markets by government officials succeeded to forestall further damage. Taking a behavioral finance focus, the course offers an analysis of heuristic decision errors that lead to bubbles and crashes in markets, and the failure of market models to avoid them.
Instructor(s): L. Raifman
Area: Social and Behavioral Sciences.

AS.200.333. Advanced Social Psychology. 3.00 Credits.
The class is designed as a seminar including discussion of primary readings of social psychology articles ranging in topics from interpersonal relationship to behavior in large groups. Rising junior & senior Psychology majors only.
Prerequisites: AS.200.133
Instructor(s): S. Drigotas
Area: Social and Behavioral Sciences.
AS.200.336. Foundations of Mind. 4.00 Credits.
An interdisciplinary investigation into the innateness of concepts: perception, number, language, and morality, physics discussed. Evidence from animals, infants, patients, brains. Students collect data in sections investigating claims from the readings. Cross-listed with Cognitive Science and Philosophy.
Instructor(s): J. Halberda; L. Feigenson
Area: Social and Behavioral Sciences.

AS.200.339. Cognitive Development. 3.00 Credits.
How do children acquire knowledge about the world? In this course, we will explore how children understand the world, looking at concepts of objects, number, space, and other people. Students will read both empirical and theoretical writing on these topics, participate in class discussions, and complete short critical writing assignments and final literature review paper.
Instructor(s): M. Kibbe
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.343. Motivation. 3.00 Credits.
Current biological, behavioral, and cognitive research and theory concerning the motivation of behavior are examined. Both human and non-human animal research is reviewed. Topics include the role of genetics, arousal, biological regulatory systems, incentives, expectancies, attributions, social processes and self-actualization in the general behavior. Recommended Course Background: AS.200.101
Area: Social and Behavioral Sciences.

AS.200.344. Behavioral Endocrinology. 3.00 Credits.
An examination of the effects of hormones on behavior in non-human and human animals. Topics will include the effects of hormones on sexual differentiation, reproductive behavior, parental behavior, homeostasis and biological rhythms, regulation of body weight, learning and memory. Cross-listed with Behavioral Biology and Neuroscience.
Prerequisites: Prereqs: ( AS.200.141 OR AS.080.306 ) OR (AS.020.151 AND AS.020.152) OR ( AS.200.305 AND AS.020.306 ) or instructor's permission
Instructor(s): H. Petri
Area: Social and Behavioral Sciences.

AS.200.354. Winners, losers, & market protectors-decision-making in the financial crisis. 3.00 Credits.
The recent world financial crisis has arguably been the most important event of the new millennium. The course will initially answer: “What happened?” “Why did it happen?” “How was the crisis temporarily fixed?” “Who was hurt?” “Who succeeded?” Thereafter, the focus shifts to an analysis of the quality of decisions made by the market protectors who chose to intervene with policies to protect markets, and a comparison of investors who made winning compared with losing investment decisions. The final segment considers whether behavioral economic/cognitive psychological research best explains those decisions, and ways to lessen the risk inherent in current volatile recovering financial markets. In sum, the course will review the recent financial crisis by evaluating strategic investment decisions of the market protectors, winners, and losers.
Instructor(s): L. Raifman
Area: Social and Behavioral Sciences.

AS.200.355. Psych of Decision Making. 3.00 Credits.
This course will apply insights from cognitive psychology decision-making research to the stock market. The course investigates whether investors can beat the market benchmarks by exploiting marketplace investor sentiment. Juniors and seniors only. Recommended Course Background: six credits of Psychology course work.
Instructor(s): L. Raifman
Area: Social and Behavioral Sciences.

AS.200.359. The Psychology of Financial Crisis. 3.00 Credits.
The 2007-8 financial crisis, considered the most severe of its kind since the Great Depression, is our primary focus. The course will initially answer two critical questions: “What happened to bring about the financial crisis?” Who was hurt and who succeeded well? We will then study specific crisis decisions to determine if a behavioral finance analysis contributes to a better understanding of decision making under conditions of uncertainty.
Instructor(s): L. Raifman
Area: Social and Behavioral Sciences.

AS.200.360. Forensic Psychology Soup to Nuts. 2.00 Credits.
The course is based upon an integrative strategy that focuses upon: (1) scientific research underlying forensic psychology expertise, (2) the formulation of expert opinions, and (3) the presentation of expert witness testimony court cases. The course syllabus identifies examples from insanity defense that raises research questions answered by studies from psychology that focus on: battered spouse syndrome, sleep disorders/criminal behavior, pedophilia, settled psychosis, and the application of death penalty to juveniles or mentally ill persons.
Instructor(s): L. Raifman
Area: Social and Behavioral Sciences.

AS.200.361. Tests & Measurements. 3.00 Credits.
Psychological tests and measures are used in several settings including research, clinical, business, forensic, school and other applied settings. This course will consider the methodological and practical issues involved in test construction, the evaluation of instruments, and the uses of psychological tests across settings and for different purposes. Examples of assessments that may be discussed are aptitude and achievement tests; personality and behavioral inventories; neuropsychological tests, observations and interviews; and tests for employment and forensic use. Enrollment limited to Junior & Senior Cognitive Science & Psychology Majors, or instructor approval.
Instructor(s): H. Roberts Fox
Area: Social and Behavioral Sciences.
AS.200.363. Mind, Brain & Experience. 3.00 Credits.
How do nature and nurture shape the human mind? How does experience contribute to the development of visual perception, language and social reasoning? This course explores insights into these age-old questions from neuroscience and psychology. Studies of infant behavior reveal rich knowledge about objects and people in the first months of life. At the same time, experience has profound effects on behavior and neurobiology. For example, temporary absence of vision (i.e. blindness) during development permanently alters visual perception and the visual cortex. Key evidence also comes from studies of naturally occurring variation in human experience (e.g. blindness, deafness, socioeconomic and cultural differences). We will discuss what such studies of cognitive and neural function tell us about the origins of human cognition. This is a writing intensive course with weekly lectures and seminar style discussion of primary sources. Students will be required to write weekly responses to readings and a term paper.
Prerequisites: Pre-reqs: AS.200.141 OR AS.050.105 OR AS.080.105 OR AS.050.203 OR AS.020.312 OR AS.200.386 OR (AS.080.305 AND AS.080.306) OR AS.080.203
Instructor(s): M. Bedny
Area: Natural Sciences, Social and Behavioral Sciences Writing Intensive.

AS.200.364. Advanced Topics in Cognitive Development. 3.00 Credits.
How do children acquire knowledge about the world? In this seminar course, we will explore how children understand the world, looking at concepts of objects, number, space, and other people. Students will read both empirical and theoretical writing on these topics and complete writing assignments. Classes will primarily be discussion-based.
Instructor(s): M. Kibbe
Area: Social and Behavioral Sciences Writing Intensive.

AS.200.366. Neuroscience of Motivation: Sex, Drugs and the Brain. 3.00 Credits.
This course is designed to address the growing literature on the neurobiology of motivational behaviors, integrating studies from invertebrates to birds, rodents, primates and humans. The course will begin with a century old, yet ongoing, discussion on how researchers define ‘motivation’. Following this primary introduction, we will discuss the brain circuitry that underlies emotion, reward, and motivation, so that students attain the necessary foundations for understanding the neurobiology of motivated behavior. In particular, we will proceed with an in-depth exploration of an inherently motivated and naturally rewarding social interaction, sexual behavior, which will be discussed at multiple levels. Subsequent lectures will address literature on how humans activate the same brain reward systems artificially by using drugs of abuse. Drawing on these theoretical and empirical foundations, we will then explore the possible involvement of these motivational systems on distinctly human pleasures such as religious experience, visual arts, and music.
Prerequisites: AS.200.141 OR AS.080.105 OR (AS.080.305 AND AS.080.306) OR Permission required.
Instructor(s): O. Iyilikci
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.367. Episodic Memory in Human and Nonhuman Animals. 3.00 Credits.
Episodic memory, or autobiographical memory, has been said to be a capacity that is uniquely human. Consisting of the what, when, and where components of our experiences, episodic memory is what makes each of us who we are. This course will explore each of these components individually—the psychology and neural underpinnings of each component—before discussing them in combination as episodic memory. Finally, we will visit one of the greatest ongoing debates in the memory literature: whether or not this ability is truly uniquely human or if our nonhuman animal counterparts also have this capacity. Throughout the course, we will draw on evidence from empirical articles based on studies in a variety of species including rodents, primates, and birds.
Prerequisites: AS.200.101 OR AS.200.141 OR AS.080.105 OR (AS.080.305 AND AS.080.306) OR Permission required.
Instructor(s): J. Asem
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.368. Sleep, Dreams, and Altered States of Consciousness. 3.00 Credits.
Sleep, dreaming, resting and arousal to waking represent very different states of consciousness which differ dramatically both psychologically and physiologically. This course focuses on cognitive, psychological, physiological, biological and genetic aspects characterizing each of these states with some reference to other altered states. The course includes a focus on the major pathologies affecting sleep-wake states. Clinical cases will be considered. These inform about both psychological and biological aspects of these states. The relative biological functions of each state will be evaluated with particular attention to the mystery of why we have and apparently need REM and NREM sleep. Actual physiological recordings of sleep states will be reviewed and the student will learn how these are obtained and how to evaluate these. The circadian rhythms, ontogeny and evolution of these sleep-wake states will also be covered. This will include a review of information learned from non-human animal sleep. The change from sleep to full awakening reflects change toward increasing brain organization supporting consciousness. Understanding of the neurobiology of these states will be used to explore some of the modern and scientific concepts of human self-awareness or consciousness. Recommended Course Background: AS.200.101 OR AS.080.203 OR AS.050.203
Instructor(s): R. Allen
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.369. Neuroscience of Motivation & Reward. 3.00 Credits.
This course will explore the neurobiological bases of motivated behavior, including eating, drinking, and reproduction, tracing the history of our understanding from early neuroscientific studies to the modern day, with a focus on mammalian model systems. We will discuss innate motivated behaviors, and well as how learning can guide the expression of these behaviors. Neural mediation of processes such as reward and aversion will be considered in depth, as will applications of these findings to the understanding of addiction and other behavioral disorders. The course will be a mixed lecture/seminar format; we will read original research articles and scholarly reviews.
Prerequisites: AS.200.141 OR (AS.080.305 AND AS.080.306)
Instructor(s): P. Janak
Area: Natural Sciences.
AS.200.370. Functional Human Neuroanatomy. 3.00 Credits.
This course examines the general organizing principles of the anatomy of the human central nervous system and how this anatomical organization relates to function, from the level of neural circuits, to systems, to behavior. Students will learn to identify neuroanatomical structures and pathways in dissections and MRI images through computerized exercises. Readings and lectures will emphasize general structure-function relationships and an understanding of the functional roles of particular structures in sensory, motor, and cognitive systems.
Prerequisites: AS.080.250 OR AS.080.305
Instructor(s): S. Courtney-Faruqee
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.372. The Aging Brain. 3.00 Credits.
We will examine what current research can tell us about changes in mental abilities as we grow older, what biological changes in the brain during aging cause cognitive decline, and finally, how scientists are meeting the challenge of maintaining the functions of the mind into advanced old age.
Instructor(s): M. Gallagher
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive.

AS.200.376. Psychopharmacology. 3.00 Credits.
Designed to provide information about how drugs affect the brain and behavior. The course focuses on biological concepts underlying structures and functions of the brain that relate to mental disorders. An introduction to neurobiology and brain function is presented as it applies to the interaction of various classes of drugs with the individual neurotransmitter systems in the brain. A brief historic review is followed by a discussion of clinical relevance. Cross-listed with Behavioral Biology and Neuroscience. Enrollment limited to juniors and seniors.
Prerequisites: AS.200.141 OR (AS.020.312 AND AS.020.306) OR (AS.080.305 AND AS.080.306) or permission required.
Instructor(s): H. Adwanikar
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.377. Neuroethology. 3.00 Credits.
A comparative and evolutionary approach to understanding the neural underpinnings of biologically relevant behaviors in vertebrate and invertebrate animals. Enrollment limited to Sophomores, Juniors, Seniors or by instructor approval. Recommended Course Background: AS.200.141
Instructor(s): C. Moss
Area: Natural Sciences.

AS.200.379. Research Seminar in Clinical Psychology. 3.00 Credits.
A small group exploration of current issues in clinical psychology, aimed at developing students’ empirical research skills. Following critical analysis of the empirical literature, students develop research proposals for novel research and/or conduct research and author research reports. Topics vary by semester. In the current offering, the topic will be stress, coping, emotion-regulation, peer relationships, and psychopathology among adolescents and emerging adults. Recommended Course Background: AS.200.212 Abnormal Psychology AND EN.550.111 Statistical Analysis I AND EN.550.112 Statistical Analysis II AND AS.200.207 Research Methods in Experimental Psychology. Enrollment limited to Junior & Senior Psychology majors & minors by instructor approval.
Prerequisites: AS.200.212
Instructor(s): A. Papadakis
Area: Social and Behavioral Sciences
Writing Intensive.

AS.200.380. Neurobiology of Human Cognition. 3.00 Credits.
The complexity of human behavior surpasses even our closest primate relatives. Only humans communicate through language, build complex technology, devise legal system and wage war. What neurobiological capacities set humans apart from other animals? This course will explore the neurobiology of cognition, focusing on cognitive domains that are particularly developed in the human species: language, social cognition, number, executive function and concepts. The course format will consist of lectures and in class workshops.
Prerequisites: AS.200.141 OR AS.200.312 OR AS.080.105 OR AS.080.203 OR AS.050.203 OR AS.050.312
Instructor(s): M. Bedny
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.382. Models of Psychotherapy. 3.00 Credits.
This course reviews the major models of psychotherapy, including psychodynamic, cognitive, behavioral, interpersonal, and family therapy, with a focus on modern and empirically supported treatments. The application of the models through the analysis of clinical case studies is emphasized. Restricted to Junior & Senior Psychology Majors & Minors.
Prerequisites: AS.200.212
Instructor(s): A. Papadakis
Area: Social and Behavioral Sciences
Writing Intensive.

AS.200.384. Spatial Orientation and Navigation: Behavior and Neural Mechanisms. 3.00 Credits.
A cross-disciplinary investigation of space representation and navigation in a broad range of animal species. Topics will include sonar orientation, landmark use, the role of dead reckoning, spatial memory, long-distance migration, and map-making.
Prerequisites: AS.200.141 OR (AS.080.305 AND AS.080.306) or equivalent.
Instructor(s): C. Moss
Area: Natural Sciences.

AS.200.386. Animal Cognition. 3.00 Credits.
Examine relations between brain, mind, and behavior in nonhuman animals, focusing on topics such as learning, memory, attention, decision-making, navigation, communication, and awareness. We will take a variety of approaches, including behavioral, computational, evolutionary, neurobiological, and psychological perspectives.
Prerequisites: (AS.200.141 OR AS.200.208 OR AS.290.101) OR permission of instructor.
Instructor(s): P. Holland
Area: Social and Behavioral Sciences.

AS.200.387. The Social Brain/The Visual Brain. 3.00 Credits.
We tend to feel that we are thinking the hardest in social situations. In contrast, we barely feel the complicated processing that produces our vivid and salient visual experiences; in fact, we cannot even access most of this processing directly. This course will explore the relationship between visual perception and social cognition, especially the ways that the visual system supplies crucial raw materials for more elaborate social processing, and the ways that our social agendas may, in turn, influence vision. Topics will include what we find physically attractive in mates (and why); the quick formation of social impressions; the neural, cognitive, and evolutionary basis of aesthetic perception; and the extent to which perception might be socially constructed (i.e. whether vision can be influenced from the 'top-down'). All readings will come from primary scientific literature, and students should have some experience reading this kind of material. Limited to juniors, seniors, and graduate students.
Instructor(s): J. Flombaum.
AS.200.388. Occupational Health Psychology. 3.00 Credits.
Occupational Health Psychology (OHP) concerns the application of psychology to improving the quality of work life, and to protecting and promoting the safety, satisfaction, health, and well-being of workers. This course will consider a broad range of topics in OHP including the role of work on well-being, job stress and burnout, diversity and work, safety climate, work-family balance, conflict, and counterproductive work behaviors. The emphasis will be on drawing connections between OHP theory and OHP practice and at the relationship between individual and organizational health and well-being. This class should be of interest to students interested in industrial/organizational psychology, social psychology, health psychology, clinical psychology, human factors, public health, preventive medicine, and industrial engineering.
Instructor(s): J. Halberda
Area: Social and Behavioral Sciences.

AS.200.404. Careers in Psychology - Sophomore. 1.00 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.
Instructor(s): J. Halberda
Area: Social and Behavioral Sciences.

AS.200.403. Careers in Psychology - Juniors. 1.00 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.
Instructor(s): J. Halberda
Area: Social and Behavioral Sciences.

AS.200.402. Careers in Psychology - Sophomore. 1.00 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.
Instructor(s): J. Halberda
Area: Social and Behavioral Sciences.

AS.200.401. Careers in Psychology - Freshmen. 1.00 Credit.
An introduction to the varied career paths offered across the field of psychology, hosting a diverse representation of speakers from various Johns Hopkins institutions and the local Baltimore community.
Instructor(s): J. Halberda
Area: Social and Behavioral Sciences.

AS.200.509. Internship-Psychology. 1.00 Credit.
S/U grading only.
Instructor(s): Staff.

AS.200.510. Psychology Internship. 0.00 - 3.00 Credits.
Grading Satisfactory/ Unsatisfactory only.
Instructor(s): Staff.

AS.200.511. Psychological Research - Juniors. 3.00 Credits.
S/U grading only.
Instructor(s): Staff.

AS.200.512. Psychology Research-Juniors. 0.00 - 4.00 Credits.
Grading Satisfactory/ Unsatisfactory only.
Instructor(s): Staff.

AS.200.513. Psychological Research - Seniors. 3.00 Credits.
The student chooses some research problem with the advice and approval of a faculty member. S/U grading only.
Instructor(s): Staff.

AS.200.514. Psychology Research-Seniors. 0.00 - 4.00 Credits.
Instructor(s): Staff.

AS.200.519. Seniors Honors Research. 3.00 Credits.
Seniors working on the honors thesis enroll with the approval of the undergraduate coordinator.
Instructor(s): Staff.

AS.200.520. Seniors Honors Research. 0.00 - 3.00 Credits.
Instructor(s): Staff.

AS.200.540. Independent Study-Seniors. 3.00 Credits.
Instructor(s): Staff.

AS.200.541. Independent Study - Juniors. 3.00 Credits.
Instructor(s): Staff.

AS.200.542. Independent Study - Sophomores. 3.00 Credits.
Instructor(s): Staff.

AS.200.557. Psychology Research. 3.00 Credits.
Instructor(s): Staff.

AS.200.597. Psychology Research. 3.00 Credits.
Instructor(s): Staff.

AS.200.519. Seniors Honors Research. 3.00 Credits.
Seniors working on the honors thesis enroll with the approval of the undergraduate coordinator.
Instructor(s): Staff.

AS.200.606. The Semantics & Psychology.
Instructor(s): J. Halberda.

This graduate seminar will survey recent theory and research concerning the functional organization of prefrontal cortex for working memory, decision making, and cognitive control. Graduate students only.
Instructor(s): S. Courtney-Faruqee; S. Yantis; V. Stuphorn.

An introduction to the fundamental principles of cognitive and physiological psychology. Required course of first-year graduate students. Graduate students only.
Instructor(s): P. Janak; S. Mysore
Area: Natural Sciences, Social and Behavioral Sciences.
Graduate students only or permission required.
Instructor(s): B. Anderson; K. Blacker.

Graduate student only.
Instructor(s): K. Blacker.

AS.200.616. Thought and Perception.
This year's topic: Temporal Experience. Do we perceive time? If so, through what sense(s)? How long is the conscious now? Does the temporal order of our perceptions mirror the temporal order of what we perceive? Must the experience of a temporal duration itself be extended in time? What is the relation between the experience of time (for example, the experience of time's passage) and memory? Does our experience of time accurately represent temporal features of reality, or is it actually illusory? How does attending to time's passage affect its perceived rate of passage (and what is it to attend to time's passage)? We will explore these and other questions through an examination of both psychological and philosophical work. [This course meets jointly with Professor Gross's AS.150.476]
Instructor(s): J. Flombaum; S. Gross
Writing Intensive.

This is a required course for all first year PhD students in the Department of Psychological and Brain Sciences. The course covers foundational concepts and methods in cognition.
Instructor(s): J. Flombaum.

Often, languages are described as sets of expressions. But in acquiring a language, a child acquires a procedure that generates expressions. If linguistic expressions pair pronunciations with mental representations, then one task shared by linguists and psychology is to specify the forms of these representations. This seminar explores this relationship in detail.
Instructor(s): J. Halberda.

AS.200.627. Graduate Seminar: Memory.
Instructor(s): S. Courtney-Faruqee.

Instructor(s): A. Shelton.

AS.200.632. Topics: Spatial Cognition.
Graduate students only.
Instructor(s): A. Shelton.

AS.200.640. Review of Recent Literature in Biopsychology.
Instructor's approval required.
Instructor(s): G. Ball.

Current biological, behavioral, and cognitive research and theory concerning the motivation of behavior are examined. Both human and non-human animal research is reviewed. Topics include the role of genetics, arousal, biological regulatory systems, incentives, expectancies, attributions, social processes and self-actualization in the general of behavior. Course will meet with AS.200.343.
Instructor(s): H. Petri.

This two-semester course will provide an overview of clinical, neuropsychological, imaging and neuropathological approaches to the study of cognitive systems altered in aging, AD and other neurodegenerative disorders. It will consider research using animal models as well as human subjects and clinical populations. The course is intended for graduate students and is open to advanced undergraduates only with permission of the professor.
Instructor(s): M. Albert; M. Gallagher.

AS.200.649. Aging, Cognition, and Neurodegenerative Disorders II.
Second part of a two-semester course. Course will provide an overview of clinical, neuropsychological, imaging and neuropathological approaches to the study of cognitive systems altered in aging, AD and other neurodegenerative disorders. It will consider research using animal models as well as human subjects and clinical populations. The course is intended for graduate students and is open to advanced undergraduates only with permission of the professor. Predoctoral and Postdoctoral students from A&S, SPH and SOM students participating in the NIA Training Program on Age-Related, Cognitive and Neuropsychiatric Disorders are required to take this course; meets concurrently with PH.330.802(01)
Instructor(s): M. Albert; M. Gallagher.

AS.200.654. Psychological & Brain Sciences Core Topics A.
This course is designed to introduce students to core topics in psychological and brain sciences. Students will read seminal and contemporary papers in topics that cover the breadth of the field.
Graduate students in Psychological and Brain Sciences.
Instructor(s): L. Feigenson.

AS.200.655. Psychological & Brain Sciences Core Topics B.
This course is designed to introduce students to core topics in psychological and brain sciences. Students will read seminal and contemporary papers in topics that cover the breadth of the field.
Graduate Students in Psychological & Brain Sciences.
Instructor(s): L. Feigenson.

AS.200.661. Topics in Psychological & Brain Sciences.
An introduction to postdoctoral activities (e.g., grant applications, journal article submission, meeting presentations, the politics of psychology and American science) for Ph.D. candidates in psychology.
Instructor(s): L. Feigenson.

AS.200.662. Psychological and Brain Sciences: Career Development.
Instructor(s): L. Feigenson.

How do children acquire knowledge about the world? In this seminar course, we will explore how children understand the world, looking at concepts of objects, number, space, and other people. Students will read both empirical and theoretical writing on these topics and complete writing assignments. Classes will primarily be discussion-based.
Instructor(s): M. Kibbe.

This seminar will cover advanced topics in vision from the perspectives of several disciplines. Topics include human visual psychophysics, perception and cognition, and computational vision. Graduate students only.
Instructor(s): H. Egeth; J. Flombaum; J. Halberda.

Instructor(s): L. Feigenson.
A cross-disciplinary investigation of space representation and navigation in a broad range of animal species. Topics will include sonar orientation, landmark use, the role of dead reckoning, spatial memory, long-distance migration, and map-making. Contact instructor for enrollment approval. Instructor(s): C. Moss.

AS.200.801. Research Seminar: Learning and Memory.
This laboratory meeting is for graduate students studying learning and memory mechanisms, alterations with age or neurologic disease, and advanced neuroimaging methods. Meetings will focus on experimental design, presentation of data, analytical techniques. Undergraduates allowed to add the course with permission as Satisfactory/Unsatisfactory only. Recommended Course Background: AS.200.370 or AS.200.141 or AS.080.305/AS.080.306 or AS.020.306. Instructor(s): M. Yassa.

AS.200.804. Topics in Neurocognitive Aging.
This seminar will cover advanced topics in neurocognitive aging. Topics will include animal models of memory loss in normal aging and in Alzheimer’s disease (AD), including both behavioral and neurobiological findings. Special attention will be given to the relation between such findings and the effects of aging and AD on memory and the brain in man. Similar comparative analysis in other cognitive domains (e.g. attentional processes) will also be considered. Instructor(s): M. Gallagher.

AS.200.805. Topics in Attention and Cognition.
Instructor(s): J. Flombaum.

Guided independent readings. The class is designed as a seminar including discussion of primary research articles of cognitive aging. Specific topics include human imaging and animal models of memory, aging, and neurodegenerative disease. Instructor(s): R. Haberman.

AS.200.810. Research in Psychology.
Students plan and execute original research under guidance of advisers. Results are usually prepared in a form suitable for publication. Graduate students only. Instructor(s): Staff.

Instructor(s): H. Egeth.

Instructor(s): L. Feigenson.

Instructor(s): J. Halberda.

Instructor(s): P. Holland.

Instructor(s): L. Feigenson.

Instructor(s): V. Stuphorn.

Instructor(s): J. Halberda.

Guided independent readings and research in special fields. Graduate Students only. Instructor(s): Staff.

Graduate students only. Instructor(s): F. Madison; G. Ball.

Graduate students only. Instructor(s): C. Moss; M. Gallagher; P. Janak.

Graduate Students Only. Instructor(s): M. Bedny.

Gradaute only. Instructor(s): S. Yantis.

Graduate Students Only. Instructor(s): S. Mysore.

AS.200.830. Readings In Psychology.
Graduate students only. Instructor(s): J. Flombaum; J. Halberda.

Graduate Students Only. Instructor(s): C. Moss.

Graduate Students Only. Instructor(s): P. Janak.

Research seminar covering topics on the behavioral and brain basis of perception in dynamic scenes. Instructor(s): J. Fischer.

Research seminar covering topics on cognitive and systems neuroscience. Instructor(s): C. Honey.

Research seminar covering topics on the behavioral neurophysiology of the hippocampal formation. Instructor(s): J. Knierim.

Graduate students only. Permission Required. Instructor(s): S. Courtney-Faruqee.

Instructor(s): S. Courtney-Faruqee.

AS.200.848. Current Advances in Psychological and Brain Sciences.
Introduces advanced research topics to graduate students (as well as faculty) through a series of speakers and discussions. Instructor(s): J. Flombaum.

AS.200.849. Teaching Practicum.
All candidates are required to obtain special experience in various aspects of undergraduate teaching. Graduate students only. Instructor(s): L. Feigenson.

AS.200.850. Advanced Teaching Practicum.
Instructor(s): J. Halberda; L. Feigenson.
AS.200.899. Psychology Internship/Practicum. The Ph.D. program in Psychological & Brain Sciences trains students in psychological science through general and advanced seminars in the various subdisciplines of psychology and by active engagement in research. Registration in this course will be accompanied by the student's participation in an internship/practicum experience. Instructor(s): L. Feigenson.

Cross Listed Courses

Cognitive Science

AS.050.102. Language and Mind. 3.00 Credits. This course is an advanced seminar and research practicum course. It will provide the opportunity to learn about fMRI methods used in the field of vision science and for students to have hands-on experience to develop, design and analyze a research study on topics in the cognitive neuroscience field of high-level vision. In the first part of the course students will read recent fMRI journal papers and learn about common fMRI designs and analysis methods; in the second part of the course students will conduct a research study as a group to address a research question developed from readings. Students are expected to write a paper in a journal article format at the end of the course and to present their results in front of the class. Research topics will vary but with special focus on topics in object, scene and space recognition. Cross-listed with Neuroscience and Psychology. Instructor(s): J. Yarmolinskaya Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.312. Cognitive Neuroimaging Methods in High-Level Vision. 3.00 Credits. This course gives an introduction to computational models of the mammalian visual cortex. It covers topics in low-, mid-, and high-level vision. It briefly discusses the relevant evidence from anatomy, electrophysiology, imaging (e.g., fMRI), and psychophysics. It concentrates on mathematical modeling of these phenomena taking into account recent progress in probabilistic models of computer vision and developments in machine learning, such as deep networks. Co-listed with Computer Science as EN.600.485.
Prerequisites: Pre-reqs: AS.110.106 OR AS.110.108 Instructor(s): A. Yuille Area: Quantitative and Mathematical Sciences.

AS.050.612. Cognitive Neuroimaging Methods in High-Level Vision. Instructor’s permission required. (Also offered as AS.050.312.) Instructor(s): S. Park Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.639. Cross-listed with Neuroscience. Instructor's approval required.

AS.050.339. Cognitive Development. 3.00 Credits. This is a survey course in developmental psychology, designed for individuals with some basic background in psychology or cognitive science, but little or none in development. The course is strongly theoretically oriented, with emphasis on issues of nature, nurture, and development. We will consider theoretical issues in developmental psychology as well as relevant empirical evidence. The principle focus will be early development, i.e., from conception through middle childhood. The course is organized topically, covering biological and prenatal development, perceptual and cognitive development, the nature and development of intelligence, and language learning. Also listed as AS.050.639. Cross-listed with Neuroscience. Instructor’s approval required.
Instructor(s): J. Yarmolinskaya Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.375. Probabilistic Models of the Visual Cortex. 3.00 Credits. The course gives an introduction to computational models of the mammalian visual cortex. It covers topics in low-, mid-, and high-level vision. It briefly discusses the relevant evidence from anatomy, electrophysiology, imaging (e.g., fMRI), and psychophysics. It concentrates on mathematical modeling of these phenomena taking into account recent progress in probabilistic models of computer vision and developments in machine learning, such as deep networks. Co-listed with Computer Science as EN.600.485.
Prerequisites: Pre-reqs: AS.110.106 OR AS.110.108 Instructor(s): A. Yuille Area: Quantitative and Mathematical Sciences.

AS.050.612. Cognitive Neuroimaging Methods in High-Level Vision. Instructor’s permission required. (Also offered as AS.050.312.) Instructor(s): S. Park Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.675. Probabilistic Models of the Visual Cortex. The course gives an introduction to computational models of the mammalian visual cortex. It covers topics in low-, mid-, and high-level vision. It briefly discusses the relevant evidence from anatomy, electrophysiology, imaging (e.g., fMRI), and psychophysics. It concentrates on mathematical modelling of these phenomena taking into account recent progress in probabilistic models of computer vision and developments in machine learning, such as deep networks. Also offered as AS.050.375. Co-listed with Computer Science as EN.600.485 Instructor(s): A. Yuille.

Instructor(s): J. Yarmolinskaya Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.375. Probabilistic Models of the Visual Cortex. 3.00 Credits. The course gives an introduction to computational models of the mammalian visual cortex. It covers topics in low-, mid-, and high-level vision. It briefly discusses the relevant evidence from anatomy, electrophysiology, imaging (e.g., fMRI), and psychophysics. It concentrates on mathematical modeling of these phenomena taking into account recent progress in probabilistic models of computer vision and developments in machine learning, such as deep networks. Co-listed with Computer Science as EN.600.485.
Prerequisites: Pre-reqs: AS.110.106 OR AS.110.108 Instructor(s): A. Yuille Area: Quantitative and Mathematical Sciences.

AS.050.612. Cognitive Neuroimaging Methods in High-Level Vision. Instructor’s permission required. (Also offered as AS.050.312.) Instructor(s): S. Park Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.675. Probabilistic Models of the Visual Cortex. The course gives an introduction to computational models of the mammalian visual cortex. It covers topics in low-, mid-, and high-level vision. It briefly discusses the relevant evidence from anatomy, electrophysiology, imaging (e.g., fMRI), and psychophysics. It concentrates on mathematical modelling of these phenomena taking into account recent progress in probabilistic models of computer vision and developments in machine learning, such as deep networks. Also offered as AS.050.375. Co-listed with Computer Science as EN.600.485 Instructor(s): A. Yuille.

AS.080.330. Brain Injury & Recovery. 3.00 Credits. This course investigates numerous types of brain injuries and explores the responses of the nervous system to these injuries. The course’s primary focus is the cellular and molecular mechanisms of brain injury and the recovery of function. Discussions of traumatic brain injury, stroke, spinal cord, and tumors, using historical and recent journal articles, will facilitate students’ understanding of the current state of the brain injury field. Cross-listed with Psychological and Brain Sciences and Behavioral Biology.
Prerequisites: ( AS.080.305 AND AS.080.306) OR (AS.020.312 OR AS.020.306) OR (200.141 and 020.306) OR Permission of Instructor Instructor(s): L. Gorman Area: Natural Sciences Writing Intensive.
AS.080.348. Neuroeducation. 3.00 Credits.
Can what we know about the brain guide how we teach in our schools? This seminar course is designed to address this question. Various universities throughout the country have “Science of Learning” or “Neuroeducation” initiatives. But, do we know enough about the way the brain works to make substantial changes in our educational system? That is the question that we will address by looking at these various initiatives and looking at the literature.
Prerequisites: Pre-reqs: AS.080.306 OR AS.200.141
Instructor(s): L. Gorman
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive.

Behavioral Biology
AS.290.420. Human Sexual Orientation. 3.00 Credits.
This course will examine the historical and current theories of sexual orientation and sexual variation development by examining the biological, psychological and social contributing factors that influence the development of sexual orientations and variations along with treatment and modification of problematic sexual behaviors. Open to Seniors in the Biology, Behavioral Biology, Cognitive Sciences, Neuroscience, Psychology, Public Health, Studies of Women, Gender & Sexuality, Medicine, Science & the Humanities, Sociology, and Molecular and Cellular Biology majors.
Prerequisites: Students may enroll in both AS.200.204 and AS.290.420, but cannot do so in the same semester.
Instructor(s): C. Kraft
Area: Social and Behavioral Sciences
Writing Intensive.

Public Health Studies
http://krieger.jhu.edu/publichealth/
Public Health combines a prevention orientation with a population perspective in pursuit of better health for all members of society. Public health professionals deal with critical large-scale issues such as access to health care, chronic disease control; mapping, predicting, and containing outbreaks of infectious disease; as well as researching factors that contribute to health outcomes such as gender, poverty, and education. Public Health has close ties with medicine through research, clinical practice, and formulating policy.

The Public Health Studies Program offers undergraduates a major that links them to the world of public health through core courses taken on the Homewood campus, as well as electives taken at the Johns Hopkins Bloomberg School of Public Health (JHSPH).

Core course work at Homewood includes Fundamentals of Epidemiology, Environment and Your Health, Fundamentals of Health Policy and Management, Biostatistics, Social and Behavioral Health, as well as a year of Biology and Calculus I. Students will select additional public health coursework from a range of options that include the natural sciences, health economics, medical anthropology, disparities in health and access to health care, the history of science and medicine, and demography. The major is flexible and easily adapted to further course work in the natural sciences and historically about two-thirds of Public Health Studies majors complete the premedical core curriculum.

Public Health Studies majors also complete the Public Health Applied Experience as part of their undergraduate degree requirements. This involves a supervised, hands-on experience working with public health professionals. The goal of the applied experience requirement is to ensure that students have practical public health exposure in a clinical, research, or community setting. Find more information at http://krieger.jhu.edu/publichealth/academics/AE-Main.

The Johns Hopkins Bloomberg School of Public Health is the oldest and largest school of public health in the United States. Although its primary function is as a graduate school, seniors majoring in public health studies take a semester’s worth of courses there in fulfilling their B.A. degree requirements. Many students get involved in ongoing research projects at JHSPH such as developing malaria vaccine, investigating hospital patient safety protocols or assessing the links between poverty and poor health.

Available course work at JHSPH includes the following areas: health education, environmental health sciences, epidemiology, health finance and management, health policy, human genetics, immunology and infectious diseases, international health, maternal and child health, mental health, nutrition, occupational medicine/health protection and practice, population studies, toxicology, and tropical medicine, among others.

An honors option is available to Public Health Studies seniors with a major GPA of 3.3. Public Health Honors students work in a research capacity under the supervision of a JHU faculty member and with the guidance of the Director of the Public Health Studies program. Students register for 280.495 Honors in Public Health Seminar in the fall and 280.499 in the spring. Interested students should discuss their plans with the Director of the Public Health Studies program in the spring of their junior year.

Many Public Health Studies students have pursued international public health internships and study abroad opportunities both during the academic year and over the summer. In addition to a wide array of general options available through the JHU Office of Study Abroad, the PHS program has established two public-health specific annual programs: Intersession (3 1/2 weeks) in Uganda and Summer (7 weeks) in South Africa. Each includes both academic and applied components and allows students to earn graded JHU credits which can be used toward the Public Health Studies major. The Uganda program compares health issues in urban and rural settings, while the South Africa program closely investigates the impact of the HIV epidemic on prevention measures and healthcare delivery in that country. For more information, go to krieger.jhu.edu/publichealth/academics/study-abroad/.

The Public Health Studies office is located in the 3505 North Charles Building second floor, adjacent to the Homewood campus. Public Health Studies advisors may be consulted about the various courses, careers, and graduate programs in public health on a walk-in basis or by appointment. Information can also be obtained by emailing phstudies@jhu.edu or at http://krieger.jhu.edu/publichealth.

Bachelor of Arts/Masters Program
The Bachelor of Arts/Master of Health Sciences (BA/MHS) and Bachelor of Arts/Master of Sciences in Public Health (BA/MSPH) programs are a coordinated academic collaboration between the Krieger School of Arts and Sciences and the Johns Hopkins Bloomberg School of Public Health. It enables talented and committed Public Health Studies Program majors to complete a BA and master’s degree from the School of Public Health in five to six years.

The Department of Environmental Health Sciences, Department of Epidemiology and Department of Mental Health will consider JHU undergraduates majoring in Public Health Studies for admission to the BA/MHS program. The Department of Environmental Health Sciences
also offers a BA/MSPH in Occupational and Environmental Hygiene. The Department of Health Policy and Management offers a BA/MSPH in Health Policy.

Public Health Studies students apply for early admission during their junior year. Admitted students must complete the BA degree before formally enrolling in the graduate school, but up to 16 of the public health credits earned inter-divisionally toward the BA may also apply toward the MHS or MSPH degree. In addition, students in this program will receive co-advising from both schools to optimize their academic experience. Find more information at http://krieger.jhu.edu/publichealth/academics/.

Public Health Studies Program Advisory Board
The Public Health Studies Program Advisory Board reviews the progress and status of the Public Health Studies Program. Members provide advice and guidance on issues that are vital to a successful program, such as faculty appointments, curriculum reviews, utilization of university resources, and new funding opportunities.

One designated Public Health Studies Alumni serves a 2-year term on the committee.

Board Members
Krieger School of Arts and Sciences
Joel Schildbach; Vice Dean for Undergraduate Education; Professor (Biology)
Richard Cone; Professor (Biophysics); Advisory Board Chair
Steven David; Professor (Political Science)
Andy Cherlin; Professor (Sociology); Benjamin H. Griswold III Professor of Public Policy
Adam Sheingate; Associate Professor (Political Science)

Johns Hopkins Bloomberg School of Public Health
Stephen Gange; Senior Associate Dean for Academic Affairs; Professor (Epidemiology)
Marie Diener-West; Abbey-Merrell Professor of Biostatistics; Chair, Master of Public Health Program
John Groopman; Anna M. Baetjer Professor in Environmental Health Sciences
Ellen MacKenzie; Fred and Julie Soper Professor in Health Policy and Management
James Yager; Edyth H. Schoenrich Professor in Preventive Medicine; Professor; Deputy Chair (Environmental Health Sciences)
Scott Zeger; Professor (Biostatistics); Professor (Epidemiology)

Requirements for the B.A. Degree
Also see Requirements for a Bachelor’s Degree (p. 10).

All major requirements must be taken for a letter grade. Course taken satisfactory/unsatisfactory do not apply towards the major with some exceptions for the applied experience requirement. Major requirements are as follows:

Courses at Homewood

<table>

**Requirements at JHSPH**
Fifteen (15) units of courses are taken at the Johns Hopkins Bloomberg School of Public Health in the student's fourth year. This is equivalent to 10 Homewood credits. Within the 15, students must create an 8 unit focus in one particular area, topic, or department. Other courses may be taken in any department. These courses may not be independent research/special study, taken S/U or online.

**Applied Experience**
Public health studies majors will complete one (1) approved applied clinical or community-based experience. A minimum of 80 hours of applied work is required along with a synthesizing assignment. Additional information about this requirement is available here (http://krieger.jhu.edu/publichealth/academics/AE-Main).

**Honors in Public Health Studies**
An honors option is available to Public Health Studies seniors with a major GPA of 3.3. Public Health Honors students work in a research capacity under the supervision of a JHU faculty member and with the guidance of the Director of the Public Health Studies program. Students register for AS.280.495 Honors in Public Health - Seminar in the fall and AS.280.499 Honors in Public Health in the spring. Interested students should discuss their plans with the Director of the Public Health Studies program in the spring of their junior year.

For current faculty and contact information go to http://krieger.jhu.edu/publichealth/directory/

**Faculty**

**Program Director**
Kelly Gebo
M.D., M.P.H.; Professor (Medicine, Epidemiology, Public Health Studies).

**Associate Director**
Mieka Smart
DrPH.; Lecturer (Public Health Studies); Academic Advisor.

**Assistant Director**
Lisa Folda
M.H.S.; Lecturer (Public Health Studies); Academic Advisor.

**Academic Advisor**
Joseph Balabis
M.P.H; Academic Advisor (Public Health Studies).

**Faculty**
Stanley Becker
Professor (Population, Family, and Reproductive Health).

Peter Beilenson
Associate (Public Health Studies).

David Bishai
Professor (Population, Family, and Reproductive Health).

Lee Bone
Associate Professor (Health, Behavior, and Society).

Joseph Bressler
Professor (Environmental Health Sciences)

Lawrence Cheskin
Associate Professor (Health, Behavior, and Society).

Darrell Gaskin
Professor (Health Policy and Management).

Leah Jager
Assistant Scientist (Biostatistics).

Philip Leaf
Professor (Mental Health).

Darcy Phelan-Emrick
Assistant Scientist (Epidemiology).

Jennifer Schrack
Assistant Professor (Epidemiology).

Margaret Taub
Assistant Scientist (Biostatistics).

Peter Winch
Professor (International Health).

James Yager
Professor (Environmental Health Sciences).

Scott Zeger
Professor (Biostatistics and Epidemiology).

Barry Zirkin
Professor (Biochemistry and Molecular Biology).

For current course information and registration go to https://sis.jhu.edu/classes/
Courses

AS.280.100. Public Health in Film and Media. 1.00 Credit.
This course uses film to explore and question the cultural landscape of public health in today's society. Public health is a richly diverse field that reaches not only into many areas of daily life, but into our cultural imagination as well. The purpose of this class is to examine how public health matters such as epidemic disease, access to health care, health and the law, bioethics, neglected tropical diseases and other topics are portrayed in feature films and documentaries. Each week students will view and discuss a film or documentary that addresses a public health issue. Freshmen Only. S/U Grading Only.
Instructor(s): L. Folda; L. Foster
Area: Social and Behavioral Sciences.

AS.280.101. Introduction to Public Health. 3.00 Credits.
An overview of the major concepts and themes in Public Health utilizing the social and natural science disciplines in populations world-wide.
Instructor(s): M. Alexander
Area: Social and Behavioral Sciences.

AS.280.103. Public Health, Policy and Politics: A Primer. 3.00 Credits.
Combining basic tenets of public health with real-life examples of public health practice in Baltimore, the course will provide an introduction to the field of public health. Throughout the course a major effort will be made to expose students to the wide array of opportunities that are available to those pursuing a career in public health.
Instructor(s): P. Beilenson
Area: Social and Behavioral Sciences.

AS.280.110. Evidence in Epidemiology and Popular Culture. 3.00 Credits.
In the past year, we have witnessed a broad range of controversial issues: from Ebola to anti-vaxers; protests in Ferguson and New York; the legalization of marijuana and Obamacare. Often the theories of health that experts develop and promote don’t resonate with the public they are intended to serve. Often times, different people interpret the same piece of evidence in very different ways. This course will teach students how to think critically about theories of health and disease and to develop communication skills to talk about public health in everyday conversation.
Instructor(s): A. Buttress
Area: Humanities, Social and Behavioral Sciences.

AS.280.115. Issues in Public Health Ethics. 3.00 Credits.
Freshmen Seminar: Should overweight individuals pay more for health insurance like many smokers do? When is it appropriate to quarantine people during an infectious disease outbreak? Do we owe citizens universal access to quality, affordable health care? We will explore these questions, among others, through the lens of public health ethics. Freshmen Only.
Instructor(s): J. Leider
Area: Social and Behavioral Sciences.

AS.280.120. Lectures on Public Health and Wellbeing in Baltimore. 1.00 Credit.
An introduction to Urban Health with Baltimore as a case study: wellbeing, nutrition, education, violence and city-wide geographic variation. Lectures by JH Faculty, local government/service providers and advocates.
Instructor(s): P. Leaf
Area: Social and Behavioral Sciences.

AS.280.121. Chemical Karma: From Pollution to Disease. 3.00 Credits.
This course follows several pollutants from their industrial sources to their human health outcomes, and teaches how to rigorously/ systematically search for and synthesize concepts in environmental health literature. Term paper. E²SHI Fellowships.
Instructor(s): M. Gribble
Area: Natural Sciences.

AS.280.203. Introduction to International Nutrition. 1.00 Credit.
The course presents a broad overview of international public health nutrition, including: main nutritional problems in developing countries, causes and consequences of malnutrition, and multi-level approaches for the prevention and treatment of malnutrition. Grades will be based on class attendance, participation, and a presentation that describes the key nutrition indicators for a low-income country of the student's choice, and proposes an intervention to address the country's nutrition challenges.
Instructor(s): J. Emerson

AS.280.215. Understanding Behavior Change: Theory and Application. 3.00 Credits.
This course will begin by exposing students to a variety of theories of behavior change - why and how we do it, and why we often don't. From there they will apply this knowledge to, part of a semester-long group project, develop a health communication campaign designed to encourage changing a behavior among their peers. They will practice the skills necessary to analyze a problem, develop a campaign strategy, create persuasive materials, and implement and monitor that campaign. Some elements of impact evaluation will also be covered in this course.
Sophomores Only. Recommended Course Background: AS.280.101
Instructor(s): L. Folda
Area: Social and Behavioral Sciences.

AS.280.217. Youth Bullying, Aggression, and Public Health. 3.00 Credits.
This course examines bullying and aggression among school-aged youth from a public health perspective. We will explore the prevalence of bullying, theories about its etiology, and recent prevention efforts.
Instructor(s): J. Duong
Area: Social and Behavioral Sciences.

AS.280.220. Baltimore and The Wire: A focus on major urban issues. 3.00 Credits.
Playing off the themes raised in the HBO series The Wire, this course will provide an introduction to major issues confronting Baltimore and other American urban centers through a series of lectures by policy makers in the region.
Instructor(s): P. Beilenson
Area: Social and Behavioral Sciences.

AS.280.221. The Sciences Behind HIV: Is eradication imminent?. 3.00 Credits.
Students will obtain a fundamental understanding of HIV biology, including a review of its origin, routes of infection, host defenses and viral evasion strategies, and HIV treatment. Special focus will be on the evaluation of HIV prevention strategies including vaccines and microbicides. Recommended Course Background: one year of general biology, AS.020.151, AP Biology, or equivalent. This is a Public Health Teaching Prize Course.
Instructor(s): J. Guedon
Area: Natural Sciences.
AS.280.223. Health and the Internet. 3.00 Credits.
This course will examine how the internet and web based applications influence individual and societal health. Health information is one of the most searched for subjects online, yet despite the proliferation of health related sites, there is still a need for quality, accurate and useable information. Blogs and online communities can bring patients together and aid in treatment and recovery. However, many Web 2.0 applications such as social networking sites, wikis and mobile technology that have the potential to increase interactivity and collaboration have yet to reach their full potential in healthcare delivery and promotion. Indeed, as the internet and new technologies hold great promise, there are also pitfalls such as spread of inaccurate or potentially dangerous information. This course will provide an overview of how the internet has changed health care and how new technologies will continue to influence our health.
Instructor(s): M. Massey
Area: Humanities, Social and Behavioral Sciences.

AS.280.224. Health, Homelessness & Social Justice. 3.00 Credits.
Homelessness is bad for one’s health, and its existence, persistence, and growth demonstrate deep policy failures and social ills. This course examines issues fundamental to the modern phenomena of homelessness in the U.S. – and the connection between disparate health and desperate inequality. There are ethical values and dimensions to the decisions we make about health policy – and public policy generally. Life, liberty, the pursuit of happiness, equality, justice, community, democracy, human rights, and human flourishing; there are many values that we might prioritize – both individually and collectively – as we develop and assess programs, policies, and systems. In this course, we will consider these and other values together with issues of health and homelessness. We will also examine tools of policy analysis and political action, and how those committed to changing the world can use those tools to engage that system critically.
Instructor(s): A. Schneider
Area: Social and Behavioral Sciences.

AS.280.225. Population, Health and Development. 3.00 Credits.
This course will cover the major world population changes in the past century as well as the contemporary situation and projections for this century. Topics include rapid population growth, the historical and continuing decline of death and birth rates, contraceptive methods as well as family planning and child survival programs, population aging, urbanization, population and the environment and the demographic effects of HIV/AIDS.
Prerequisites: Students who have taken AS.230.225 may not take AS.280.225.
Instructor(s): S. Becker
Area: Social and Behavioral Sciences.

AS.280.226. Mini-Term: Urban Environments and Public Health. 3.00 Credits.
Introduction to physical and social environmental systems issues affecting the health of several marginalized populations (eg. immigrants, impoverished and homeless). The course will primarily use Baltimore as the field for experiential learning, and will incorporate cross-cultural discussions, a variety of readings, and guest lecturers from Hopkins faculty and industry experts. Course will meet for two weeks: from July 7th through 18th.
Instructor(s): A. Rule
Area: Social and Behavioral Sciences.

AS.280.302. GIS as a Public Health Tool. 3.00 Credits.
This course provides an introduction to Geographic Information Systems (GIS) and presents its utility in the various fields of public health such as Epidemiology, Environmental Health and International Health. Provides exposure to GIS as a tool for describing the magnitude of health problems and for supporting health decision making. Course topics include a historical overview of the intersection between geography and public health; current epidemiological use of GIS; and, GIS applications in identifying public health problems such as the current Ebola outbreak. This course is ideal for students who desire exposure to the vast utility of GIS as it applies to public health.
Instructor(s): J. Ferguson
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.280.303. Responding to Disasters: From Earthquakes to Ebola. 3.00 Credits.
Responding to Disasters: from Earthquakes to Ebola introduces students to the fundamentals of humanitarian and disaster response. The course is divided into four topic areas: (1) fundamentals of humanitarian emergencies, (2) methods in humanitarian emergency settings, (3) refugee health, and (4) emerging issues in humanitarian response.
Instructor(s): J. Freeman
Area: Social and Behavioral Sciences.

AS.280.304. Transforming Disease: HIV/AIDS and the production of chronic illness. 3.00 Credits.
Drawing primarily on public health, anthropology, and sociology literature, the course critically examines debates surrounding the production of chronic illness, and resulting contestations as practices, laws, and policy are transformed.
Instructor(s): M. Philbin
Area: Social and Behavioral Sciences.

AS.280.310. Nutrition, Behavior, and Mental Health. 3.00 Credits.
What's the relation between food and mood? This course will journey through topics as diverse as micronutrients, caffeine, and eating behaviors to seek nutrition’s connection to behavior and mental health.
Recommended Course Background: AS.280.345 and/or AS.280.350
Instructor(s): L. Chen-Edinboro
Area: Natural Sciences, Social and Behavioral Sciences.

AS.280.311. Math, Money and the Mind: Controversies in Medical Decision Making. 3.00 Credits.
How do doctors decide what to prescribe? How do clinical studies, elected officials, drug companies, personal beliefs, and insurance companies influence those decisions? This will not be on your MCATs.
Recommended Course Background: course in Introductory Statistics or Biostatistics. Deans Teaching Fellowship Course.
Instructor(s): A. Turnbull
Area: Social and Behavioral Sciences.

AS.280.312. Media, Politics, and Evidence of Public Health. 3.00 Credits.
This writing intensive course will encourage students to consider what counts as evidence among public health professionals as well as popular audiences. Using case studies from the field of epidemiology, now emblematic of the field, students will learn about historical changes in theories of population health and disease. Through a series of writing assignments, students will interrogate the formal structure of scientific arguments and gain practice in synthesizing and communicating complex ideas to a lay audience. Juniors/Seniors Only
Prerequisites: Prerequisite/Corequisite: AS.280.350
Instructor(s): A. Buttress
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.280.313. The Germ Theory in Literature. 3.00 Credits.
The Germ Theory in Literature is a writing course for science and public health majors, and for writing majors interested in science and public health. We examine the use of germs in popular literature, from 1900 to the present (with works by Paul de Kruif, Sinclair Lewis, Milton Silverman, Berton Roueche, Richard Preston, Laurie Garrett and John Barry). Students examine what happens to science when it is popularized in mainstream literature, and learn to write essays and opinion pieces using crisp, clear and purposeful prose. This course includes a writing workshop.
Instructor(s): K. Masterson
Area: Humanities
Writing Intensive.

AS.280.315. Nutrition: Concepts and Controversies. 3.00 Credits.
Nutrition is a fundamental component of human health and a challenging science, with individual and societal factors that span the country and the world. The primary objective of this course is to provide a fundamental understanding of human nutrition and its role in public health by addressing multiple components including the core micro- and macro- nutrients, and food choices and their implications for personal health. The secondary objective is to examine many of today's nutrition controversies, both scientific and societal. Accordingly, this course will encourage students to think about nutrition and its critical contribution to public health on individual, societal, and global levels. A fundamental knowledge of biology and/or anatomy and physiology is recommended.
Instructor(s): B. Ha; J. Schrack; Z. Chowdhury
Area: Social and Behavioral Sciences.

AS.280.318. Food, Nutrition, and Public Health. 3.00 Credits.
This course explores an array of questions related to nutrition, food access, socioeconomic and demographic factors that affect individuals, communities, and public policy. Students will seek answers through field trips, guest lectures, and discussion seminars. Deans Teaching Fellowship Course.
Instructor(s): S. Lee
Area: Social and Behavioral Sciences.

AS.280.319. Water, Sanitation, and Hygiene in the 21st Century. 3.00 Credits.
The course provides an in-depth overview of current challenges related to water, sanitation, and hygiene (WASH) in the developing world with an emphasis on the links between WASH and epidemiology, climate change, population, gender, equity, and policy. Juniors and seniors Only.
Instructor(s): R. Dreibelbis
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive.

AS.280.320. Seminar on Public Health and Well-being in Baltimore. 3.00 Credits.
Seminar combines lectures from AS.280.120 with additional readings and discussion to more deeply address urban health issues. The course will revolve around student projects that can impact health and wellbeing in Baltimore. If you are accepted for this course do NOT register for AS.280.120. Course registration is by instructor permission only. You will be asked to provide a brief description of a project in order to determine your potential linkage with this course. This course is utilizing the online active approval process. Permission requests should be submitted via SIS Self-Service upon the opening of your registration period. The instructor will review requests and approve registrations using SIS Self-Service for Faculty. Please note, a request does not guarantee registration into the course. Status inquiries should be address to the instructor or departmental administrator.
Instructor(s): P. Leaf
Area: Social and Behavioral Sciences.

AS.280.325. Public Health in South Africa. 3.00 Credits.
This course provides an in-depth overview of Public Health in South Africa, including material on the political climate, health care services, and the impact of the HIV/AIDS epidemic. Course is taught in Cape Town, South Africa.
Instructor(s): M. Smart
Area: Social and Behavioral Sciences.

AS.280.326. Community-Based Learning in South Africa. 3.00 Credits.
3 Credit course taught in Cape Town, South Africa. This course may be used to satisfy the Public Health Applied Experience requirement. Students will participate in a community-based service learning program with a local NGO in Cape Town.
Instructor(s): M. Smart
Area: Social and Behavioral Sciences.

AS.280.329. The Good, the Bad, and the Ugly: Scientific Writing in Public Health. 3.00 Credits.
This course covers how to conduct a literature review, and interpret and evaluate scientific literature that focuses on public health. In addition, this course will provide students with fundamental skills of writing a scientific manuscript. Skills obtained in this course will prepare students for advanced-level senior year classes at Bloomberg and other graduate institutions.
Prerequisites: AS.280.350; AS.280.345
Instructor(s): R. Thorpe
Area: Social and Behavioral Sciences
Writing Intensive.

AS.280.335. The Environment and Your Health. 3.00 Credits.
This course surveys the basic concepts underlying environmental health sciences (toxicology, exposure assessment, risk assessment), current public health issues (hazardous waste, water- and food-borne diseases), and emerging global health threats (global warming, built environment, ozone depletion, sustainability). Public Health Studies, Global Environmental Change and Stability, and Earth and Planetary Science majors have 1st priority for enrollment. Your enrollment may be withdrawn at the discretion of the instructor if you are not a GECS, PHS, or EPS major.
Instructor(s): J. Bressler; J. Yager; M. Latshaw
Area: Natural Sciences.
AS.280.340. Fundamentals of Health Policy & Management. 3.00 Credits.
Through lectures and small group discussions, students will develop a
framework for analyzing health care policy problems and gain familiarity
with current issues including managed care, Medicare and the uninsured.
Instructor(s): D. Gaskin
Area: Social and Behavioral Sciences.

AS.280.345. Public Health Biostatistics. 4.00 Credits.
Using problem-based learning focusing on public health topics, students
learn to describe & summarize data, make inferences regarding
population parameters, & test hypotheses. Recommended Course
Background: Four years of high school math.
Prerequisites: Statistics Sequence restriction: students who have
completed any of these courses may not register: EN.550.211 OR
EN.550.230 OR AS.200.314 OR AS.200.315 OR EN.550.310 OR
EN.550.311 OR EN.560.435 OR EN.550.420 OR EN.550.430 OR
EN.560.348
Instructor(s): L. Jager; M. Taub
Area: Quantitative and Mathematical Sciences.

AS.280.346. Advanced Biostatistics Laboratory. 1.00 Credit.
As a complementary course to 280.345, Public Health Biostatistics,
this course teaches R programming skills necessary for conducting
independent data analyses, beyond those presented in the main course.
No programming experience is necessary, but a willingness to learn
independently and work with other students is indispensable.
Prerequisites: Corequisite: AS.280.345
Corequisites : AS.280.345
Instructor(s): L. Jager; M. Taub
Area: Quantitative and Mathematical Sciences.

AS.280.347. Health Data Analysis Practicum. 2.00 Credits.
Students will learn to formulate precise scientific and policy questions,
design exploratory and confirmatory statistical analyses to address the
questions, conduct appropriate analyses using the statistical package R,
and communicate their findings through graphical and tabular displays
that are presented in writing and in person. The course will be run
seminar style in which students conduct data analysis to present to
one another in one meeting per week. Evaluation will be through class
participation and a final project in which students will analyze their own
data set to address a question of their choice.
Instructor(s): S. Zeger
Area: Quantitative and Mathematical Sciences.

AS.280.350. Fundamentals of Epidemiology. 4.00 Credits.
A practical introduction to epidemiology focusing on the principles and
methods of examining the distribution and determinants of disease
morbidity and mortality in human populations. Juniors and seniors only.
Instructor(s): A. Arnold; D. Phelan-Emrick; I. Saldanha
Area: Quantitative and Mathematical Sciences.

AS.280.360. Clinical & Public Health Behavior Change. 3.00 Credits.
This course explores the theory and practice of changing the health
behaviors of individuals, and the public health and medical impact of
doing so. Theoretical concepts are integrated with practical clinical
applications, especially in the areas of diet and fitness. Skill building in
persuasive, health-related communication will be included in smaller
group discussions.
Instructor(s): L. Cheskin
Area: Social and Behavioral Sciences.

AS.280.375. Cultural Factor Of Public Health. 3.00 Credits.
This course covers the influence of culture on public health, health policy,
management and practice. It also provides background on disparities in
health in the US with a particular focus on race, place, and poverty. Guest
speakers include healthcare providers, managers, and policy-makers.
Instructor(s): C. Furr-Holden; T. Laveist
Area: Social and Behavioral Sciences.

AS.280.380. Global Health Principles and Practices. 3.00 Credits.
Global health addresses the staggering global disparities in health
status, drawing on epidemiology, demography, anthropology, economics,
international relations and other disciplines. We review patterns of
mortality, morbidity and disability in low and middle income countries,
starting with malnutrition, infectious diseases and reproductive health,
and continuing to an emerging agenda including mental health, injury
prevention, surgical care, chronic diseases, and health impacts of climate
change. Gender, health systems and health workforce challenges, and
career trajectories in global health are also discussed. Recommended
course background: Minimum of one prior course in Public Health.
Instructor(s): P. Winch
Area: Social and Behavioral Sciences.

AS.280.399. Community Based Learning - Practicum Community Health Care. 3.00 Credits.
This course is designed to expose students to urban health with focus
on Baltimore City through lectures, class discussions, and experiential
learning. Students will select a community-based organization (CBO)
according to their expressed interests and schedule in order to complete
45 hours of service based learning. Grades are based on participation,
completion of service learning project, presentation, and papers. Open
to Senior and Junior Public Health Studies majors only. Others by
permission of instructor.
Instructor(s): J. Goodyear; L. Bone; L. Folda
Area: Social and Behavioral Sciences.

AS.280.401. Alcohol, Media & Health. 3.00 Credits.
Students will critically examine the public health impact of alcohol
marketing and assess the consequences of the resulting change in patterns of alcohol use. Gordis Teaching Fellowship course. Public
Health Majors only or permission required.
Instructor(s): S. Cukier
Area: Social and Behavioral Sciences.

AS.280.402. HIV, Behavior and Society. 3.00 Credits.
This class will examine the behaviors associated with the HIV epidemic.
We will explore the importance of behavior and context that affect
the transmission, prevention, and treatment of HIV. Gordis Teaching Fellowship course. Public Health Majors only or permission required.
Instructor(s): C. Sun
Area: Social and Behavioral Sciences.

AS.280.403. Introduction to Intimate Partner Violence and Public Health. 3.00 Credits.
This course provides an introduction to the public health implications of intimate partner violence and the spectrum of activities used to
understand and combat it - from measurement to intervention. This
course will cover a variety of topics, focusing on both research and
programming, including: qualitative and quantitative research methods,
individual- and community-level interventions, ethical challenges, and
populations of interest. Gordis Teaching Fellowship course. Public Health Majors only or permission required.
Instructor(s): A. Robinson
Area: Social and Behavioral Sciences.
AS.280.404. Immunity and Infectious Diseases of Public Health Importance. 3.00 Credits.
Provides an overview of innate and adaptive immunity as they relate to the control of infection and the development of treatment and vaccination strategies for pathogens of public health significance. Gordis Teaching Fellowship course.
Prerequisites: AS.020.151 AND AS.020.152 or AP Biology
Instructor(s): J. Craig
Area: Natural Sciences.

AS.280.405. Public Health and Human Rights. 3.00 Credits.
This course explores the links between public health and human rights, applies human rights frameworks to public health policies, and explains why the human rights have been called The conscience of public health. Gordis Teaching Fellowship course. Public Health Majors only or permission required.
Instructor(s): W. Davis
Area: Social and Behavioral Sciences.

AS.280.406. U.S. Military Policy and Public Health. 3.00 Credits.
How does U.S. military policy impact global and national public health? Do U.S. military missions promoted as humanitarian assistance, such as those in Africa and Afghanistan, compromise global development and independent humanitarian action programs? Did the CIA's covert use of a vaccination program in Pakistan as cover for intelligence gathering threaten the success of global immunization campaigns? How have vaccines and drugs developed for U.S. military use benefited global public health? These topics and much more will be the focus in this seminar that explores consequences within conflict zones and the developing world, and among military personnel and veterans. Gordis Teaching Fellowship course. Juniors and Seniors Public Health Studies majors only.
Instructor(s): R. Nevin
Area: Social and Behavioral Sciences.

AS.280.407. Public Health and Disasters. 3.00 Credits.
This course will introduce students to the public health component of preparedness and response to common emergencies, including the public health implications of such situations and the role of public health agencies and practitioners. The course will employ an all-hazard perspective, including emerging infections, natural disasters, and terrorism. Students will understand the public health community’s role in preparing for and responding to disasters through case studies, discussion, debate, and material related to the national public health preparedness infrastructure. Juniors and seniors Public Health Studies majors only. Gordis Teaching Fellowship course. Recommended Course Background: AS.280.335
Instructor(s): N. Errett
Area: Social and Behavioral Sciences.

AS.280.408. Youth Violence Prevention: A Public Health Approach. 3.00 Credits.
Examines the causes, consequences, and prevention of violence committed by or against young people through a public health lens. Interrupts prevailing notions about crime and punishment and shifts the discourse to encompass an ecological and developmental understanding of the problem. Media representations and other case studies of youth violence, including mass shootings, child soldiers in armed conflict, interpersonal violence, bullying, suicide, and gang violence, provide the basis for in-class, interactive analysis applying current theories. Introduces effective prevention strategies, underscoring the important role of youth leadership and advocacy to prevent violence. Juniors and seniors Public Health Studies majors only. Gordis Teaching Fellowship course. Recommended Course Background: AS.280.350
Instructor(s): J. Bottiani
Area: Social and Behavioral Sciences.

AS.280.409. Health Systems Challenges from Chronic Diseases in Low and Middle Income Countries. 3.00 Credits.
This course provides a multidimensional health systems approach to chronic diseases, presently the largest population health burden in low and middle income countries. Learning tools include patient interviews, in-class debates, and country case studies. Recommended course background: AS.280.290: Fundamentals of Epidemiology. Gordis Teaching Fellowship course open to junior and seniors only.
Instructor(s): M. Socal
Area: Social and Behavioral Sciences.

AS.280.410. Disease Detectives and the History of Epidemiology. 3.00 Credits.
Through a series of historical case studies we will explore the changing ideas and assumptions that have shaped our struggles to understand and improve health in the United States. Juniors and Seniors Public Health Studies majors only. Gordis Teaching Fellowship course.
Recommended Course Background: AS.280.350
Instructor(s): A. Buttress
Area: Humanities, Social and Behavioral Sciences.

AS.280.411. Where You Live Matters: The Role of Place in Racial/Ethnic Health Disparities. 3.00 Credits.
This course will critically examine the impact of place of residence on health outcomes, and on racial/ethnic health disparities. This will be accomplished by examining different definitions and levels of place, and assessing the impact of each on various health outcomes and racial/ethnic health disparities. The role of place will be examined in the development of interventions targeting racial/ethnic health disparities. Juniors and seniors Public Health Studies majors only. Gordis Teaching Fellowship course.
Instructor(s): C. Bell
Area: Social and Behavioral Sciences.
AS.280.412. The HIV/AIDS Pandemic: An Enquiry Concerning Epidemiologic Understanding. 3.00 Credits.
Students will gain an understanding of the epidemiology of HIV/AIDS that will serve as basis for illustrating modern epidemiologic theory, methods, and practice. Topics will include a review of the natural history and pathogenesis of HIV/AIDS, the spread and current geography of the disease, contemporaneous prevention strategies, and the impact of antiretroviral therapies at the individual and population level. Throughout, a focus on the methods and mindset of epidemiologic enquiry will be emphasized. This will include how epidemiological approaches for characterizing populations, measurements, and inference can be used to build the evidence for public health action. Students will learn through critical analysis and discussion of the peer-reviewed literature coupled with evaluations using short quizzes and a final group presentation.
Gordis Teaching Fellowship course. Recommended Course Background: AS.280.345
Prerequisites: Prerequisite/Corequisite: AS.280.350
Instructor(s): P. Rebeiro
Area: Natural Sciences, Social and Behavioral Sciences.

AS.280.413. Information Communication Technology (e/mHealth) for Health Systems Strengthening. 3.00 Credits.
This course explores the emerging landscape of information and communication technology in public health, such as e/mHealth, through concepts and frameworks of health systems research with a focus on low and middle income countries (LMICs). It is designed to comprehensively address various aspects of e/mHealth including policy aspects of health systems governance, community aspects of health service delivery, economic aspects of the healthcare market, technological aspects of health information infrastructure, and individual aspects of self-monitoring/management. Multidisciplinary approaches will be encouraged to understand complex public health challenges and to suggest creative yet feasible solutions in low resource settings. Successful e/mHealth use cases across countries with various health system contexts will be introduced and discussed. The course is intended for undergraduate students interested in how information and communication technology is likely to affect health care in the future.
Gordis Teaching Fellowship course open to Junior and Senior Public Health Majors only.
Instructor(s): Y. Jo
Area: Social and Behavioral Sciences.

AS.280.414. Leading Health Care Organizations. 3.00 Credits.
This seminar course is designed for students who seek an understanding of how to manage health care organizations including management processes, organizational structures, types of governance models and management issues of health care delivery systems. This course is designed to provide participants with an understanding of leadership and organizational behavior within health care organizations (HCOs). In this course, students will become skilled at identifying the forces that challenge the effective management of HCOs at multiple levels – individual, group, and organization. Moreover, they will become skilled at developing and analyzing efforts to improve HCOs’ performance. Through case studies, readings, in-class exercises and class discussions, participants will learn analytic frameworks, concepts, tools and skills necessary for leading and management organizational learning, innovation and overall performance improvement in health care organizations.
Gordis Teaching Fellowship course open to junior and seniors only.
Instructor(s): K. Henderson
Area: Social and Behavioral Sciences.

AS.280.415. Comparative Health Systems and Health Reform. 3.00 Credits.
The course explores the structural components of modern health care systems through a comparative approach. Students will develop a toolkit for analyzing how the financing, payment, and organization of health service provision determine system performance. Student teams will analyze a health system component and develop health reform recommendations for advancing the often-competing goals of improved population health, financial protection, and public satisfaction. They will also learn how to enhance the political feasibility of technically rigorous reforms through rational design and political stakeholder analysis. Theoretical frameworks utilized by international aid organizations and think tanks will be supplemented by case studies, hands-on class activities, and team projects to encourage active student learning.
Gordis Teaching Fellowship course open to Junior and Senior Public Health Majors only.
Instructor(s): N. Done
Area: Social and Behavioral Sciences.

AS.280.416. Nutrition and Immunology in Chronic Disease. 3.00 Credits.
This course provides an overview of basic immunology and nutrition through the review of published chronic disease research. By careful reading and critique of published literature, students will learn to interpret scientific studies on nutrition and chronic disease. This course will cover a variety of globally important chronic diseases such as type II diabetes, heart disease and cancer. Course sessions will include lectures on the basics of nutrition and immunology, seminar sessions to critically evaluate published research findings and group presentations.
Recommended prerequisite: Introductory Biology. Gordis Teaching Fellowship course open to junior and seniors only.
Instructor(s): J. Fontes
Area: Social and Behavioral Sciences.

AS.280.417. Mental Health in Humanitarian Emergencies. 3.00 Credits.
This course will serve as an introduction to mental health in humanitarian emergencies. The course focuses both on mental health disorders (PTSD, anxiety, depression and substance abuse) and well-being (functionality, self-esteem, hope, and pro-social behavior). Assessment of mental health in humanitarian emergencies will include identification of risk factors and protective factors that impact mental health disorders and promote well-being. Coursework will include exploration of ways gender, age, political climate, environmental factors, and social and cultural norms impact mental health. Furthermore, the course will consider development of mental health interventions for specific cultural contexts and evaluation of the effectiveness of interventions in meeting mental health needs in the short and long-term. Class sessions will be built around case studies from various countries and include contexts of natural disasters, armed conflict and complex emergencies.
Gordis Teaching Fellowship course open to junior and seniors only.
Instructor(s): M. Cherewick
Area: Social and Behavioral Sciences.
AS.280.418. Introduction to Public Health Genomics. 3.00 Credits.
Advances in genomic medicine and technology have presented both opportunities and challenges for public health. Through lectures and case studies, the first half of the course will provide an historical overview and raise contemporary issues related to genomics at the individual, public and policy level. In the second half of the course, students will critically analyze psychosocial, behavioral, ethical and legal issues arising from increasingly widespread access to genetic technologies and information. Topics will cover the use of routine testing (prenatal testing, newborn screening and predictive testing for adult-onset conditions) and emerging technologies capable of whole genome sequencing, direct-to-consumer marketing of various kinds of genetic testing, pharmacogenomics and personalized medicine. Gordis Teaching Fellowship course open to junior and seniors only.
Instructor(s): Y. Guan
Area: Social and Behavioral Sciences.

AS.280.419. Introduction to Practical Data Analysis in Medicine and Public Health. 3.00 Credits.
The course is designed to introduce undergraduate public health majors to the methodology of data analysis, such as how to apply previously learned statistical methods in the performance of data analysis in medical and public health research. This course is unique in that it focuses on all parts of the data analysis process, from formulating a research question to synthesizing the results. While the emphasis is placed on developing and implementing various methods of data analysis, the course will also address interpreting and evaluating the strengths and limitations of existing data analyses. Students’ understanding will be solidified through small in-class activities that explore the data analysis process and evaluations of data analyses in the scientific literature, culminating in a final data analysis project relevant to their own areas of expertise for the purpose of incorporating knowledge gained from the course into their research. Gordis Teaching Fellowship course open to sophomore, junior, and seniors who have taken AS.280.345: Public Health Biostatistics.
Prerequisites: AS.280.345
Instructor(s): T. Usher
Area: Quantitative and Mathematical Sciences.

AS.280.420. Global Food and Nutrition Security. 3.00 Credits.
This course examines food insecurity in low and middle income countries from a public health nutrition perspective. Students will explore food insecurity as a complex phenomenon linked to important issues in global development and public health. Recommended prior course, either Issues in International Development or Global Health Principles & Practices. Gordis Teaching Fellowship course open to junior and seniors only.
Instructor(s): B. Caswell
Area: Social and Behavioral Sciences.

AS.280.421. Telling Public Health Stories through Maps. 3.00 Credits.
Maps play an increasingly central role in conceptualizing, investigating, and communicating many types of public health concerns. This semester-long course is intended for undergraduate students in their junior or senior year who are familiar with epidemiology and biostatistics. This course will develop the skills needed to create and manipulate spatial information for public health research and communication. The course also prepares students to critically evaluate spatial data and to identify the common pitfalls of map-making. Through a blend of lectures, student seminars, and lab exercises, students will examine and appreciate the history of map-making, its current uses in public health, and future directions of spatial analysis. This course involves active student participation during discussions, short responses to the readings, and culminates in an independent spatial analysis project involving Geographic Information Systems (GIS) software. Basic knowledge of biostatistics and epidemiology are recommended pre-requisites. Juniors/Seniors Only. Gordis Teaching Fellowship course
Instructor(s): B. Davis
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.280.422. Health Equity and Disparities: Addressing Complex Global Health Challenges. 3.00 Credits.
In this course, students will be supported and challenged to develop a personal understanding of and perspective on global health equity and disparities, and acquire a toolbox of frameworks and strategies to use in addressing them. Students will have the opportunity to be exposed to numerous examples and case studies to gain experience in assessing and addressing issues of equity in the complex, real-life problems such as those they will be facing as public health professionals. Students will review major historical and contemporary global and national initiatives to address equity issues in the health sector, including global declarations and reports as well as policies and programs that have been developed to achieve improvements in health equity in specific contexts. Application of this historical and practical knowledge and their own perspectives to new and complex situations will be fostered throughout the course. Basic knowledge of biostatistics and epidemiology and courses on global health or international public health issues recommended pre-requisites. Juniors/Seniors Only. Gordis Teaching Fellowship course
Instructor(s): M. Schleiff
Area: Social and Behavioral Sciences.

AS.280.423. Data Visualization for Individualized Health. 3.00 Credits.
This course will explore how biostatistics and data visualization can be used to improve patient care and health outcomes. Students will learn and apply key concepts of effective data visualization to applications in individualized medicine. Teams of students will work with clinician-partners of the Hopkins Individualized Health Initiative (http://hopkinsinhealth.jhu.edu) to produce interactive web applications (http://shiny.rstudio.com) that support clinical decision-making by communicating a patient’s health state, prognosis, or expected treatment outcomes. R programming experience (AS.280.419, AS.280.346, or R programming course in coursera (https://coursera.org/course/rprog)) is necessary before the start of this course.
Prerequisites: Prereq: AS.280.345
Instructor(s): R. Coley
Area: Quantitative and Mathematical Sciences.
AS.280.424. The Quest for Effective Universal Health Coverage in Low and Middle Income Countries. 3.00 Credits.
This course examines the movement to achieve effective universal health coverage with a particular focus on MICCs. It provides foundational grounding on health systems thinking to understand the key components of effective UHC and accordingly analyzes country cases to demonstrate lessons from health reforms in five LMICs.
Instructor(s): A. Bhadelia
Area: Social and Behavioral Sciences.

AS.280.425. Immunity and Cancer: How the Recent Paradigm Shift in Treatment Affects Public Health. 3.00 Credits.
An elective for upper-level public health studies students with a strong biology background that reviews the basics of immunology and cancer biology, and then delves into how treatments at the interface are sparking a paradigm shift in how we understand and treat cancer. Special interest will be taken in the public health repercussions of this change in thinking and treatment. Students apply this knowledge by analyzing topics of current and potential immunotherapies such as cancer vaccinations, adoptive cell transfer therapies, immune checkpoint inhibitors, and more. Course format will be a combination of lecture and active learning activities such as facilitated discussions, case study analysis, and role-plays of system actions. Juniors/Seniors only.
Prerequisites: AS.020.151 OR AS.020.152 OR AS.020.243 OR AS.020.123 OR AP Biology
Instructor(s): J. Gordy
Area: Natural Sciences.

AS.280.426. Ethics of Obesity Prevention. 3.00 Credits.
This course introduces undergraduate PHS students to ethical issue of obesity prevention in public health, and how these issues have influenced the success or failure of past and current intervention efforts. Students explore the multiple perspectives of each issue, and use an ethical framework to learn how to address the ethical challenges associated with the development of obesity intervention programs and policy. Juniors/Seniors only.
Instructor(s): L. Redmond
Area: Social and Behavioral Sciences.

AS.280.427. Communicating Science: Skills to Analyze and Communicate Science News. 3.00 Credits.
Science communication is challenging. Experts are seldom trained to translate jargon in everyday language. In this course students will expand their knowledge of the biology basics of several public health issues, develop the critical thinking needed to assess health science reporting, and practice science communication skills.
Prerequisites: Prereq: AS.020.151 OR AS.020.152 OR AS.020.243 OR AS.020.123 OR AP Biology.
Instructor(s): N. Martin
Area: Humanities, Natural Sciences.

AS.280.428. Environmental Health and Disasters. 3.00 Credits.
Environmental Health and Disasters examines the core principles and applications of environmental health science in disaster and humanitarian emergency response. Lecture topics range from emerging infectious diseases to toxicology to climate change. Students will have the opportunity to apply lessons learned through completion of weekly in-class case studies based on recent global events. Juniors/Seniors only
Instructor(s): J. Freeman
Area: Natural Sciences, Social and Behavioral Sciences.

AS.280.429. An Introduction to Public Health Evaluation Using Population-Based Survey. 3.00 Credits.
Students will be introduced to key concepts for public health program evaluation, including how to develop evaluation research questions, common evaluation study designs, and aspects of study implementation including sample size calculation and questionnaire development. Students will become familiar with how to analyze datasets to answer global health evaluation research questions, and effectively interpret and summarize evaluation study results for key audiences. Students will get hands-on experience working with a Demographic and Health Survey (DHS) dataset to apply skills learned in each module. The DHS program provides indicators in areas of population, health, and nutrition from more than 300 surveys in 90 countries (see www.dhsprogram.com). Juniors/ Seniors only
Instructor(s): E. Carter
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.280.430. Communicating Public Health Findings Through Research-Based Theatre. 3.00 Credits.
Results of public health research have the potential to catalyze positive social change, yet often need to be creatively communicated to target audiences in order to produce meaningful effects. Research-based theatre is gaining traction in the health and social sciences as a compelling and effective means of disseminating research findings to audiences beyond those that typically read scientific journal articles. Equipped with the results of a recent mixed-methods study of sexual violence on JHU campuses, students will collaboratively prepare a messaging strategy, a research-based script, print/digital materials, and an audience evaluation plan for a live campus dissemination event at the end of the semester.
Instructor(s): E. Hurley
Area: Humanities, Social and Behavioral Sciences.

AS.280.431. Beyond Borders: Migration, Ethics, and Public Health. 3.00 Credits.
This course explores the public health, ethical, and policy implications of international human migration both globally and within the United States. It is intended for upper-level undergraduate students interested in bioethics, migration, public health, and political philosophy. The first part of the course acquaints students with the various types of migrants and relevant political theory, including citizenship, freedom of movement, open/closed borders, and human rights. In the second part of the course, students discuss different ethical/philosophical concepts related to migration and apply them in analysis of a wide variety of public health and health policy cases. The course culminates with a final paper that students workshop collaboratively. This course challenges students to draw connections between ethical theory and real-world events and policies involving human migration. This is a Gordis Teaching Fellowship course.
Instructor(s): R. Fabi
Area: Social and Behavioral Sciences.

</tbody>
</table>

We live in a highly connected world where the amount of information we are exposed to on a daily basis is staggering. Primary news reports, articles from content aggregators, and social media postings are constantly feeding us information, and we must somehow synthesize all of this information in order to arrive at sensible conclusions. This course is designed to introduce students to the considerations that researchers and analysts face when performing the studies that make up the core content of news reports. In particular, students will take a detailed look at the complex process of going from scientific question to data analysis to journal publication to mainstream media reports. Using readings from news sources and primary research, students will engage in discussions about the considerations and complications that arise at each stage. Additionally, students will gain exposure to the computational aspect of statistics through data analysis and simulation exercises in the R programming environment. This is a Gordis Teaching Fellowship course. Juniors/Seniors Only

**Prerequisites:** AS.280.345

**Area:** Quantitative and Mathematical Sciences

**Instructor(s):** L. Myint

**Writing Intensive:**

AS.280.499. Honors in Public Health. 3.00 Credits.

A research methods seminar to prepare students doing honors in Public Health Studies. Permission Required.

**Instructor(s):** J. Schrack; M. Bulzacchelli

**Area:** Social and Behavioral Sciences

**Writing Intensive:**

AS.280.500. Applied Experience-PH. 1.00 - 2.00 Credits.

This is a supervised, hands-on experience working with public health professionals. Students will complete 80 hours of applied work and will submit a synthesizing assignment at the end of the term. Please contact your PHS Advisor for complete details. Permission Required. Public Health Majors Only.

**Instructor(s):** K. Henry; L. Folda; L. Foster; M. Bulzacchelli

AS.280.501. Internship-Public Health. 1.00 Credit.

Permission Required. Public Health majors only

**Instructor(s):** K. Henry; L. Folda; L. Foster; M. Bulzacchelli

AS.280.502. Internship-Public Health. 1.00 Credit.

Permission Required. S/U only.

**Instructor(s):** K. Henry; L. Folda; L. Foster; M. Bulzacchelli

AS.280.505. Research for Freshmen/Sophomores in Public Health. 3.00 Credits.

**Instructor(s):** K. Henry; L. Folda; L. Foster; M. Bulzacchelli

AS.280.506. Research for Freshmen/Sophomores in Public Health. 0.00 - 3.00 Credits.

Permission Required.

**Instructor(s):** K. Henry; L. Folda; L. Foster; M. Bulzacchelli; R. Pearlman

AS.280.507. Independent Study-Public Health. 3.00 Credits.

Public Health majors only. Permission Required.

**Instructor(s):** K. Henry; L. Folda; L. Foster; M. Bulzacchelli

AS.280.508. Independent Study-Public Health. 3.00 Credits.

Consult the public health studies adviser for procedure. Permission Required.

**Instructor(s):** K. Henry; L. Folda; L. Foster; M. Bulzacchelli

AS.280.511. Research for Juniors/Seniors in Public Health. 3.00 Credits.

**Instructor(s):** Staff.

AS.280.512. Research for Juniors/Seniors in Public Health. 0.00 - 3.00 Credits.

Restricted to public health studies majors. Consult the public health studies adviser for procedure. Permission Required.

**Instructor(s):** Staff.

AS.280.519. Public Health Practice. 2.00 Credits.

Specialized training course/experience for students who have been selected to become members of the PEEPs (Preventative Education and Empowerment for Peers), a peer education group based out of the Center for Health Education and Wellness (CHEW). The experience will focus on knowledge, skill and application of college health issues including: health promotion theory, body image, sexual health, alcohol and other drugs, and stress management. Permission Required. S/U Only.

**Instructor(s):** B. Schubert; J. Goodyear

AS.280.520. Public Health Practice. 0.00 - 2.00 Credits.

This course is a specialized training course/experience for students who have been selected to become members of PEEPs (Preventative Education and Empowerment for Peers), a peer education group based out of the Center for Health Education and Wellness (CHEW). The experience will focus on knowledge, skill and application of college health issues including: health promotion theory, body image, sexual health, alcohol and other drugs, and stress management. Permission Required. S/U only.

**Instructor(s):** B. Schubert

AS.280.530. Community Based Learning - Advanced Practicum in Community Health. 2.00 Credits.

This course is designed to enable students who have already been volunteering in a community health placement either through 280.399 or an Applied Experience to build on this experience in the spring semester. Students eligible to enroll in this course will have previously completed a semester-long volunteering experience and have already made arrangements with that site to continue to volunteer for a minimum of 60 hours in spring 2014 semester. All students meet as a group every other Monday from 5:00-6:30 pm, starting January 27, 2014. By that meeting all students will be expected to have confirmed with their placement sites that they will be continuing. Class time will be used for reflections, training exercises, oral presentations, and group projects. Attendance at the first session is mandatory and registration forms will be completed at this time. Instructor Permission Required.

**Instructor(s):** J. Goodyear; L. Bone

AS.280.590. Internship-Summer. 1.00 Credit.

**Instructor(s):** J. Balabis; K. Gebo; L. Folda; M. Smart

AS.280.596. Independent Study-Summer. 3.00 Credits.

**Instructor(s):** J. Balabis; L. Folda; M. Smart

AS.280.597. Research for Freshmen/Sophomores in Public Health. 3.00 Credits.

**Instructor(s):** G. Ball; J. Balabis; K. Gebo; L. Folda

AS.280.598. Research for Juniors/Seniors in Public Health. 3.00 Credits.

**Instructor(s):** J. Balabis; K. Gebo; L. Folda; T. Schroer
Cross Listed Courses

**English**

AS.060.155. Expository Writing: Introduction to the Research Paper - Controversies in Adolescence. 3.00 Credits.

"Introduction to the Research Paper" is designed to introduce more experienced student writers to the fundamental skills of the research process. These include asking research questions, evaluating the usefulness of sources to answer them, synthesizing sources, reading sources critically, and developing arguments that deliver an original thesis. Students will work with a research librarian at the Eisenhower Library, with whom they will learn to navigate traditional databases as well as new media sources. The Research Paper is topic-based and divided into three linked units of instruction. The course culminates with a paper of 10-12 pages that draws upon the cumulative skills of the semester. Each course is capped at ten students and available only to those who have taken "Expository Writing" (060.113/114)

Instructor(s): A. Watters
Area: Humanities
Writing Intensive.

**Anthropology**

AS.070.203. Healing: Politics and Poetics. 3.00 Credits.

Metaphors of health and illness; individual and social. The body in pain and the body politic. Ethnographies of historical memory vis-à-vis medicine, epidemics, sacredness, shamanism, terror, humanitarianism, truth and reconciliation.

Instructor(s): J. Obarrio
Area: Humanities, Social and Behavioral Sciences.

AS.070.302. The Social Lives of Global Health Programs. 3.00 Credits.

The course critically examines the techniques, practices, and experiences of global health policies and programs worldwide, and the effects they have on individuals, families, communities, and states. Dean's Teaching Fellowship Course

Instructor(s): L. Reynolds
Area: Humanities, Social and Behavioral Sciences.

AS.070.327. Poverty's Life: Anthropology of Health & Economy. 3.00 Credits.

Medicine, economics, and ethics have profoundly shaped debates on poverty. This course analyzes these debates and tracks the relationships between body, economy, and the everyday. How can anthropological reasoning and methods inform approaches to health and economic scarcity and insecurity?

Instructor(s): C. Han
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**History**

AS.100.333. Global Public Health Since World War II. 3.00 Credits.

Globalization has dramatically reshaped the world economy, providing great advantages to some but leaving poor nations to struggle with hunger, disease and death on a daily basis. This course explores the impact of globalization on public health in the developed and the developing nations since 1945. Cross-listed with Public Health Studies

Instructor(s): B. Morgan, L. Galambos
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.411. Readings in the History of Public Health in the 20th and 21st Centuries. 3.00 Credits.

The students will read major and some minor works in the history of global public health and will each develop their own concept of how and why the major institutions, professions, and practices associated with public health have evolved over the past long century. To help the students focus on their ideas, they will write three essays on particular aspects of the history.

Instructor(s): L. Galambos
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**History of Science Technology**

AS.140.105. History of Medicine. 3.00 Credits.

Course provides an overview of the medical traditions of six ancient cultures; the development of Greek and Islamic traditions in Europe; and the reform and displacement of the Classical traditions during the Scientific Revolution.

Instructor(s): S. LeJacq
Area: Humanities, Social and Behavioral Sciences.

AS.140.106. History of Modern Medicine. 3.00 Credits.

The history of Western medicine from the Enlightenment to the present, with emphasis on ideas, science, practices, practitioners, and institutions, and the relationship of these to the broad social context.

Instructor(s): N. Comfort
Area: Humanities, Social and Behavioral Sciences.

AS.140.146. History of Public Health in East Asia. 3.00 Credits.

This course examines the history of disease, epidemics, and public health responses in East Asia from the 17th-20th centuries. This public health history emphasizes the interactions, connections, and comparisons among China, Japan, Korea, and Taiwan.

Instructor(s): M. Hanson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.304. Medicine for and by Women in Early Modern Europe. 3.00 Credits.

This course will examine women's role in early modern European medicine through the reading of early modern medical texts written for or by women. The course is meant for students interested in women's history, the history of medicine, European history.

Instructor(s): G. Pomata
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.311. Ecology, Health, and the Environment. 3.00 Credits.

Explores historical and current problems relating to the environment and human health, with emphasis on the Chesapeake region and Baltimore. Students write research papers.

Instructor(s): S. Kingsland
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**Philosophy**

AS.150.219. Introduction to Bioethics. 3.00 Credits.

Introduction to a wide range of moral issues arising in the biomedical fields, e.g. physician-assisted suicide, human cloning, abortion, surrogacy, and human subjects research. Cross-listed with Public Health Studies

Instructor(s): H. Bok
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
Economics

**AS.180.252. Economics of Discrimination. 3.00 Credits.**

This course examines labor market discrimination by gender, race and ethnicity in the United States. What does the empirical evidence show, and how can we explain it? How much of the difference in observed outcomes is driven by differences in productivity characteristics and how much is due to discrimination? How have economists theorized about discrimination and what methodologies can be employed to test those theories? What has been the impact of public policy in this area; how do large corporations and educational institutions respond; and what can we learn from landmark lawsuits? The course will reinforce skills relevant to all fields of applied economics, including critical evaluation of the theoretical and empirical literature, the reasoned application of statistical techniques, and analysis of current policy issues.

**Prerequisites:** AS.180.102

Instructor(s): B. Morgan

Area: Social and Behavioral Sciences

**Writing Intensive.**

**AS.180.289. Economics of Health. 3.00 Credits.**

Application of economic concepts and analysis to the health services system. Review of empirical studies of demand for health services, behavior of providers, and relationship of health services to population health levels. Discussion of current policy issues relating to financing and and resource allocation.

**Prerequisites:** AS.180.102

Instructor(s): D. Bishai

Area: Social and Behavioral Sciences.

**AS.180.390. Health Economics & Developing Countries. 3.00 Credits.**

**Prerequisites:** AS.180.301

Instructor(s): M. Gersovitz

Area: Social and Behavioral Sciences

**Writing Intensive.**

Political Science

**AS.190.354. Politics of Health Policy. 3.00 Credits.**

Traces the evolution of the American Health care system, emphasis on the political forces that shape public and private provision of health care in the United States.

Instructor(s): P. Longman

Area: Social and Behavioral Sciences.

**AS.190.405. Food Politics. 3.00 Credits.**

This course examines the politics of food at the local, national, and global level. Topics include the politics of agricultural subsidies, struggles over genetically modified foods, government efforts at improving food safety, and issues surrounding obesity and nutrition policy. Juniors, seniors, and graduate students only. Cross-listed with Public Health Studies.

Instructor(s): A. Sheingate

Area: Social and Behavioral Sciences

**Writing Intensive.**

German Romance Languages Literatures

**AS.211.416. Visual Languages in Medical Knowledge. 3.00 Credits.**

This interdisciplinary course, co-taught by professor Veena Das (Anthropology) and Research professor and filmmaker Bernadette Wegenstein (German and Romance Languages and Literatures) will track the mediation of images in the making of medical knowledge and show how sensory knowledge is incorporated or transformed in the process. Co-listed with 211.416 and 070.416

Instructor(s): B. Wegenstein; V. Das

Area: Humanities.

**AS.214.616. Visual Languages in Medical Knowledge.**

This interdisciplinary course, co-taught by professor Veena Das (Anthropology) and Research professor and filmmaker Bernadette Wegenstein (German and Romance Languages and Literatures) will track the mediation of images in the making of medical knowledge and show how sensory knowledge is incorporated or transformed in the process. Co-listed with 211.416 and 070.416

Instructor(s): B. Wegenstein; V. Das

Area: Humanities.

Writing Seminars

**AS.220.309. Writing Healthy Baltimore. 3.00 Credits.**

Students will explore public health issues in Baltimore and then write about them first in short pieces, and then in longer, polished works. The framework will be the mayor’s Healthy Baltimore 2015 initiative – launched in 2011 to address the city’s top-10 public health problems, including obesity, smoking, drug and alcohol abuse, STDs, cancer, and environmental health hazards. Students will study the initiative and its historical context; examine data sets; explore where and how the initiative intersects with public health practitioners and advocacy groups at the neighborhood level; and write what they learn in different formats, including essays, breaking news, and substance analysis. Students will then “workshop” each other’s papers.

Instructor(s): K. Masterson

Area: Humanities

**Writing Intensive.**

Sociology

**AS.230.150. Issues in International Development. 3.00 Credits.**

This course will provide an undergraduate level introduction to the study and practice, as well as the successes and failures, of international development. Students will be introduced to the various theoretical frameworks used to explain underdevelopment. Students will also explore the practice of development since the 1950s by examining specific strategies employed in Latin America, South Asia, East Asia, and Africa. Using a variety of country-specific case studies, students will have the opportunity to apply the theoretical and practical frameworks learned in the class to assess the successes and failures of real-life cases.

Instructor(s): M. Levien; R. Agrawala

Area: Social and Behavioral Sciences.

**AS.230.225. Population, Health and Development. 3.00 Credits.**

This course will cover the major world population changes in the past century as well as the contemporary situation and projections for this century. Topics include rapid population growth, the historical and continuing decline of death and birth rates, contraceptive methods as well as family planning and child survival programs, population aging, urbanization, population and the environment and the demographic effects of HIV/AIDS

Instructor(s): S. Becker

Area: Social and Behavioral Sciences.

**AS.230.341. Sociology of Health and Illness. 3.00 Credits.**

This course introduces students to medical sociology, which is the application of the sociological perspective to health and health care. Major topics include stress, social epidemiology, and the social organization of health care.

Instructor(s): E. Agree

Area: Social and Behavioral Sciences.
Earth Planetary Sciences
AS.270.107. Introduction to Sustainability. 3.00 Credits.
Will introduce interactions between global environment and humans, discuss meaning of sustainability, and introduce use of tools to attain sustainability such as policy, law, communication, marketing, research, advocacy, international treaties.
Instructor(s): C. Parker
Area: Natural Sciences.

AS.270.308. Population/Community Ecology. 3.00 Credits.
This course explores the distribution and abundance of organisms and their interactions. Topics include dynamics and regulation of populations, population interactions (competition, predation, mutualism, parasitism, herbivory), biodiversity, organization of equilibrium and non-equilibrium communities, energy flow, and nutrient cycles in ecosystems. Field trip included. Permission of instructor.
Prerequisites: AS.270.103 or permission of instructor
Instructor(s): K. Szlavecz
Area: Natural Sciences.

AS.270.360. Climate Change: Science & Policy. 3.00 Credits.
This course will investigate the policy and scientific debate over global warming. It will review the current state of scientific knowledge about climate change, examine the potential impacts and implications of climate change, explore our options for responding to climate change, and discuss the present political debate over global warming.
Prerequisites: AS.270.103 or permission
Instructor(s): B. Zaitchik; D. Waugh
Area: Natural Sciences.

AS.271.103. Introduction to Sustainability. 3.00 Credits.
Will introduce interactions between global environment and humans, discuss meaning of sustainability, and introduce use of tools to attain sustainability such as policy, law, communication, marketing, research, advocacy, international treaties.
Instructor(s): R. Kelly.

AS.271.306. Climate Change: Science & Policy. 3.00 Credits.
This course will investigate the policy and scientific debate over global warming. It will review the current state of scientific knowledge about climate change, examine the potential impacts and implications of climate change, explore our options for responding to climate change, and discuss the present political debate over global warming.
Prerequisites: AS.270.103 or permission of instructor
Instructor(s): R. Kelly.

AS.271.360. Climate Change: Science & Policy. 3.00 Credits.
Prerequisite: 270.103 or permission of instructor. This course will investigate the policy and scientific debate over global warming. It will review the current state of scientific knowledge about climate change, examine the potential impacts and implications of climate change, explore our options for responding to climate change, and discuss the present political debate over global warming.
Instructor(s): B. Zaitchik; D. Waugh
Area: Natural Sciences.

Interdepartmental
AS.360.115. Discover Hopkins Health: Food, Nutrition & Public Health. 1.00 Credit.
With the creation of President Barack Obama's Task Force on Childhood Obesity, there is finally a national focus on the importance of childhood nutrition. First Lady Michelle Obama spearheads the "Let's Move!" initiative, dedicated to the goal of eradicating childhood obesity through an emphasis on diet and physical activity. This class will tackle the issue of food, nutrition and health from the ground up; looking at multiple behavioral, cultural, and environmental factors that influence what and why we eat. We will also look at how our food systems and eating habits impact the health of individuals, communities, our country, and the world.
In this two week session students will have a variety of experiences including trips to a Baltimore City urban farm, the Maryland Food Bank, farmer's markets, one of Baltimore's traditional public markets, and a sustainably-sourced restaurant. Students will hear guest speakers from the academic and government sectors.
Instructor(s): C. Burns; S. Lee; Y. Mui
Area: Social and Behavioral Sciences.

AS.360.121. Discover Hopkins Health Studies. 1.00 Credit.
Instructor(s): D. Pasciuti.

Center for Africana Studies
AS.362.325. The Role of Place in Racial Ethnic Health Disparities. 3.00 Credits.
This course will introduce students to racial/ethnic health disparities, the need to examine the role of "place", give different definitions of "place", how the characteristics of where people live affects individual's health, and how this leads to racial/ethnic health disparities. The course will first examine large-scale measures of place, then down to smaller scale measures. Students will discuss various theories generally associated with racial/ethnic health disparities, as well as, the extension of "place" theories to this topic. Students will apply this knowledge through various assignments and activities about racial/ethnic health disparities of interest. These activities include class discussions, group assignments and development of interventions and solution-focused policy recommendations. This course is being offered for sophomores, juniors and seniors who have completed a statistic course or who have received permission from the instructor.
Prerequisites: Students may receive credit for AS.280.411 or AS.362.325, but not both.
Instructor(s): C. Bell
Area: Humanities.

AS.362.371. Public Health Crisis in Africa. 3.00 Credits.
This course examines the historical and current public health crises in Africa. Topics covered include infectious diseases and viral outbreaks, water and food access, sanitation, education, behavioral health, gender equality, health care and health care access, as well as the link between culture, economics and health. Introduction to Epidemiology is recommended but not required.
Instructor(s): M. Smart
Area: Humanities, Social and Behavioral Sciences.

Geography Environmental Engineering
EN.570.108. Introduction Environmental Engineering. 3.00 Credits.
Overview of environmental engineering including water/air quality issues, water supply/ wastewater treatment, hazardous/solid waste management, pollution prevention, global environmental issues, public health considerations/environmental laws, regulations and ethics. Cross-listed with Public Health Studies.
Instructor(s): H. Alavi
Area: Engineering.
Entrepreneurship and Management
EN.660.336. Community Engineering: Interdisciplinary Problem Solving-Community Based Learning. 3.00 Credits.
So many big and seemingly intractable problems inhibit progress and diminish quality of life especially in and around urban communities. Surely there are ways to begin to tackle some of these problems, if we approach them from a multi-disciplinary perspective. This course provides that opportunity as students, who work primarily in teams, apply theory and ingenuity to investigate problems, propose solutions or invent devices that address some of these problems. Class time is spent in lecture, discussion, and applied community projects to master content. Time will be spent participating on teams and working in community organizations in addition to class. Instructor(s): E. Rice; P. Beilenson Area: Social and Behavioral Sciences Writing Intensive.

Social Policy
http://krieger.jhu.edu/fields/social-policy/
Social policy is the study of policy solutions to the problems of education, inequality, poverty, crime, and other issues faced by society’s families and children. It is an interdisciplinary field to which the disciplines of economics, sociology, and political science contribute in equal measure. It is a basic-science field with a strong applied-research focus that can prepare students for careers in government, nonprofits, and the private sector. Students who undertake the social policy minor will work with faculty who are experts in the study of poverty, the labor market, social demography, family structure, educational inequality, political participation, organizational dynamics, and health and welfare policy. They will be strongly grounded in social science training and will apply that training to real-world applications and policies. In the minor, students will be motivated to think about how knowledge translates into policy solutions, making this an appropriate specialization for young people who plan to attend law school, programs in public health, or graduate school in the constituent social science field

Requirements of the Minor
A Social Policy minor is offered jointly by the Departments of Economics, Political Science, and Sociology. To complete the minor, students must take an introductory course, Introduction to Social Policy and Inequality: Baltimore and Beyond; a 300-level social policy elective in one of the three departments; the Baltimore Policy Fellowship; and a capstone course to be taken after the semester is completed. The preferred sequence is for students to take the introductory course in their freshman or sophomore years, the elective in the fall of their junior year, the Baltimore Policy Fellowship semester in the spring of their junior year, and the capstone course in their senior year. However, modifications in the sequence will be considered. The Fellowship semester will involve course work focusing on urban and national social policy problems coupled with an internship in Baltimore or Washington in a governmental agency or non-governmental organization that is involved with some aspect of social policy, or as a research assistant to a faculty member conducting research on social policy. The capstone course will involve discussion and research among students who have completed the Fellowship semester and is intended to build up experiences in that semester.

Enrollment in the Fellowship semester will be limited to 15 and requires application and admission. The Social Policy Minor is grounded in the three disciplines and priority will be given to students who are majoring in Economics, Political Science, or Sociology, but students with other majors will be considered.

A list of electives to be used to fulfill the 300-level social policy elective is available on the Social Policy Program website (http://krieger.jhu.edu/socialpolicy).

Students interested in the minor should contact the Director of the Social Policy Program, by sending a message to socialpolicy@jhu.edu.

All courses must be taken for a letter grade and a grade of C- or better must be earned in all minor requirements.

Senior Lecturer (Economics).

Sociology
http://soc.jhu.edu/
The Department of Sociology concentrates on two broad areas at the graduate and undergraduate levels: Global social change, which focuses on cross-national, comparative research; and social inequality, which primarily focuses on family, education, work, race, gender, policy, and immigration.

These concentrations trace back to the department’s founding in 1959 by renowned American sociologist James Coleman. The department
has since earned a reputation as one of most selective, personalized sociology departments in the U.S. Currently home to 17 faculty members including 2 Bloomberg Distinguished Professors, 36 graduate students, and roughly 70 undergraduates, the department offers a uniquely intimate scholarly atmosphere in which faculty and students interact and collaborate frequently.

Scholars in the department share a wide variety of interests and interdisciplinary partnerships. Students are given flexible parameters for their study, and several faculty members have been honored with joint appointments in other Johns Hopkins schools and divisions. The department shares a unique relationship with the Bloomberg School of Public Health, which offers faculty and students access to first-rate collaborations in fields such as population and demography, mental health and mental hygiene, and healthcare organization. The department is also proudly partnered with the Department of Applied Mathematics and Statistics and is committed to building and maintaining strong foundations in quantitative research methods.

**Major in Sociology**

A major in sociology offers undergraduates a variety of post-graduation opportunities. Graduates from the department have found positions in financial institutions, education, non-governmental organizations focusing on international development, research departments of major corporations, and local government social service agencies. Others continue to graduate school in sociology, public health, law, urban planning, and education. A major in sociology can also be combined with the pre-medical course sequence, resulting in a medical school candidate who is well versed in the hard science of the human body and the social science of the human experience. For more details, please visit [http://soc.jhu.edu/undergraduate/](http://soc.jhu.edu/undergraduate/).

**Requirements for a B.A. Degree**

(Also see Requirements for a Bachelor’s Degree (p. 10.).)

The required courses for a major in sociology provide students with a fundamental understanding of sociological theory, methods, and social statistics. Beyond these core requirements, elective courses are offered on a range of important sociological themes, including gender and family, social structure and personality, education, race and ethnicity, immigration, political sociology, international development, and the evolution of a world social system.

**Core Courses**

<table>
<thead>
<tr>

<tr>
<td>Two sociology courses at any level</td>
<td>6</td>
</tr>
<tr>
<td>Four sociology electives at the 300-level or above</td>
<td>12</td>
</tr>
</tbody>
</table>

**Additional Social Science Electives**

Three non-sociology courses at any level carrying a social and behavioral sciences area designator in at least two other departments or programs | 9       |

* One elective course may be fulfilled by combining 1 or 2 credit courses for a total of at least 3 credits. All other elective courses must be at least 3 credit courses. Up to two of the six sociology electives and one of the three other social science electives may be independent study or independent research courses (at least 3 credits) supervised by Hopkins faculty. Only one course taken in the summer at JHU may apply towards the sociology electives.

All courses must be taken for a letter grade and a grade of C or better is required.

Foreign language study is not required, but it is strongly encouraged, especially for students considering graduate or professional study.

**Sample Program**

A typical program might include the following sequence of courses:

**Freshman**

<table>

**Total Credits: 45**

**Senior Honors Program**

The senior year Honors Program affords highly motivated and qualified students the opportunity to pursue, with faculty guidance, a research project of their own design. The Honors Program culminates in an honors thesis; a substantial work of original scholarship. Prerequisites and requirements for the program are as follows:

- All the requirements of a traditional major in sociology.
• Minimum 3.5 GPA in all sociology courses.
• Declaration of intention to enroll in Senior Honors Program to faculty advisor by the end of the junior year.
• At least two 300-level courses in sociology by the end of the junior year.
• Enrollment in the year-long AS.230.502 Senior Honors Program.
• Completion and faculty approval of honors thesis.

For more information on the Senior Honors Program, contact your faculty advisor.

Social Policy Minor
The Social Policy minor (p. 765) brings an interdisciplinary focus to the many social problems facing a city such as Baltimore and the nation as a whole, and encourages the search for policy solutions to those problems.

Global Social Change and Development Track
The Global Social Change and Development (GSCD) Track (http://krieger.jhu.edu/arighi/undergraduate/gscd) is geared towards students interested in understanding critical issues surrounding contemporary processes of globalization and international development. The track provides students with a sophisticated set of research and critical-thinking skills, prepares students for twenty-first century professions and helps them to become thoughtful global citizens. Ultimately, students pursuing the Global Social Change and Development track will receive a double major in both International Studies and Sociology.

Alpha Kappa Delta (AKD) Honor Society
In spring 2006, the Sociology department was awarded a chapter of the AKD sociology honor society. The chapter welcomed eleven new initiates that year, two faculty members, two new graduate students, and seven undergraduates. We now have over 70 members.

AKD is an open, democratic, international society of scholars dedicated to the ideal of Athropon Katamanthein Diakonesein or “to investigate humanity for the purpose of service.” AKD seeks to acknowledge and promote excellence in scholarship in the study of sociology, the research of social problems, and other social and intellectual activities that will lead to improvement of the human condition. AKD was founded at the University of Southern California in 1920 and affiliated with the Association of College Honor Societies in 1967. There are more than 97,000 lifetime members and over 600 chapters of the Society. These are persons with academic records showing excellence in sociology.

Initiates receive a chapter pin, a certificate of membership, and a membership activation form. Members who submit completed activation forms receive a one-year subscription to Sociological Inquiry, the official journal of the Society, the Alpha Kappa Delta Newsletter, election materials, and other services. In addition, the Society sponsors student paper contests, provides honoraria for initiation speakers, provides funds for student travel to regional sociological meetings, funds research symposia, sponsors a distinguished lecture series at the Annual Meeting of the American Sociological Association, and contributes annually to the ASA Minority Scholarship Fund. AKD members wear AKD honor cords at graduation ceremonies. AKD chapters are important in the academic, professional, and social lives of student and faculty members. They provide opportunities for initiating and sharing activities in keeping with the purposes of the Society.

To be eligible for membership, majors must have at least junior year standing, an overall GPA of at least 3.0, a sociology GPA of at least 3.5, and have taken at least four courses in sociology.

Election to Alpha Kappa Delta is without regard to race, creed, or national origin. For more information, interested students should contact the AKD Faculty Chapter Representatives: Meredith Greif (mgreif1@jhu.edu) & Katrina McDonald (kmcdon@jhu.edu).

James S. Coleman Award
This award was established by the Department of Sociology in 1994 in honor of Dr. James S. Coleman, first chair of the department. The award is for outstanding academic achievement by a senior majoring in sociology.

The department’s primary educational goal is to train first-class sociology Ph.D.’s. The sociology graduate experience at Johns Hopkins is best characterized as a research apprenticeship – a careful blend of formal instruction, faculty-directed individual study, and supervised as well as self-initiated research. The department’s small size and specific concentrations yield a personalized course of study and close relationships with faculty members and fellow graduate students. The social climate is informal, and the mix of students and faculty, drawn from a wide variety of geographic and social backgrounds, constitutes a rewarding intellectual community. For more details, please visit http://soc.jhu.edu/graduate/.

Admissions
Applicants must submit an application fee, personal statement, GRE scores, all college transcripts, at least two (preferably three) letters of recommendation, and a sample of written work. International applicants must also submit a TOEFL score and a financial statement (FS-1G Form: Graduate International Student Notification [F-1/J-1]). Applicants should have a broad background in social science, especially sociology, economics, and psychology. Training in mathematics is encouraged. The department gives greatest weight to an applicant’s demonstrated ability and past performance. For more details, please visit http://soc.jhu.edu/graduate/admissions/.

<td>Qualitative Research Methods: Domestic and International Fieldwork</td>
</tr>
<tr>
<td>AS.230.650</td>
<td>Macro-Comparative Research</td>
</tr>
</tbody>
</table>

* This fall semester course is taken during the first year. Faculty presentations introduce students to the substantive interests, research and professional background of the sociology faculty. It is graded pass/fail.
To count toward degree requirements, core curriculum courses other than the Trial Paper Research series of courses must be passed with a grade of B- or higher. After the core course requirement is satisfied, additional methods courses from the list above may be used to fulfill the nine-elective course requirement.

**Electives**

In addition to the core curriculum, graduate students must enroll in nine additional graduate-level courses, up to four of which may be taken outside of the department. All must be passed with a grade of B- or higher. While students are free to select these courses, the department strongly recommends that they be taken from diverse fields of specializations so as to maximize the breadth of exposure to core areas of sociology and other disciplines.

**Teaching Assistantships**

As part of their preparation for future academic work, graduate students are required to register for AS.230.811 Teaching Assistantship and serve as a teaching assistant for at least one semester.

**Foreign Language**

One of the requirements for the Ph.D. degree in sociology at Johns Hopkins University is a reading knowledge of a language other than English, and no student is exempt from this requirement. For a language to be eligible the student must show that

1. a body of social scientific literature exists in the language, or
2. the student must use this language to carry out dissertation field work or archival research for the dissertation.

The language test will evaluate comprehension of a social science document. Students are encouraged to complete the language requirement as soon as possible, but no later than the end of their third year.

**Residence**

A minimum of two consecutive semesters of full-time residence is mandatory for all degrees. However, at least six semesters of full-time residence is recommended by the department for completion of the core curriculum, electives, and completion of a research apprenticeship and a trial research paper. By the end of the fourth year in the program, the student is expected to have written a dissertation proposal and have defended it successfully before the appropriate examining committees.

**Research Apprenticeship**

AS.230.801 and AS.230.804

Students are required to develop practical research expertise through professional-level participation (data analysis, literature searches/reviews, non-routine data processing or coding, preparation and refinement of research instruments, and data/file management). This requirement is fulfilled by satisfactorily completing a Research Apprenticeship, which is required during the student’s first year of full-time graduate study in the department. The standard for certification is substantial research accomplishment as judged by the faculty supervisor.

**Trial Research Paper**

(AS.230.685, AS.230.690, AS.230.815, AS.230.816, AS.230.817)

The Trial Research Paper (TRP) affords students the experience of planning and executing a research project that leads to a scholarly paper.

The TRP is expected to be a serious, complete work of scholarship, suitable for conference presentation or journal submission. Work on the TRP generally will be done over three semesters with students registering for a total of five TRP courses. By the end of the fall semester of their second year, students should invite a faculty sponsor to supervise the design and execution of the TRP project. A TRP proposal must be approved by the faculty sponsor by the end of the spring semester of the second year. By the end of the fall semester of the third year, the faculty sponsor must approve a draft of the paper which will then be reviewed by another department faculty member. The faculty sponsor, at her or his discretion, may extend this deadline to the end of the intersession period following the fall semester. The faculty reviewer will evaluate the paper and, if necessary, recommend revisions that should be made before the paper is certified. The faculty sponsor will determine required revisions and must certify a final TRP by the end of the spring semester of the third year.

**Dissertation**

The student must propose and conduct original research presented in a dissertation suitable for publication. The department administers an oral examination which must be passed before the student is allowed to defend before a university board. The dissertation must then be defended either at a Graduate Board preliminary oral examination, based on the dissertation proposal, or at a Graduate Board final oral examination, based on the completed dissertation.

**Special Programs**

The department offers two special programs that coordinate activities in its two areas of concentration. Doctoral students may affiliate with one or both of these programs at their discretion. These programs function as fields of doctoral specialization within the Department of Sociology.

**Program on Global Social Change (PGSC)**

This concentration of graduate study focuses on cross-national, comparative research and long-term, world-scale social change. The goal of the program is to give students knowledge of the various theoretical perspectives in these areas, experience in data collection and analysis, and expertise in one or more substantive fields.

The program does not focus on a particular geographic area, although faculty members have conducted extensive research on Latin America, Africa, Asia, the Middle East, and Eastern and Southeastern Europe. Instead of a geographical approach, the emphasis is on issues of development and social change that cut across different countries and world regions. Examples are globalization and regionalization, labor and development, city systems and urban primacy, social movements and revolutions, state violence, migration and labor force formation, family structure and change, social structure and personality, and national and international stratification. Students enroll in a sequence of courses and seminars and participate actively in ongoing faculty projects dealing with one or more of the above issues.

In addition, the interdisciplinary character of graduate education at Johns Hopkins offers students ample opportunity to enroll in courses or collaborate in research of faculty in other departments. Faculty associates of the program include distinguished scholars in anthropology, economics, geography, history, political science, and public health.

A graduate concentration is not required of Ph.D. students.
Program on Social Inequality (PSI)

This concentration of graduate study focuses on the causes and consequences of social inequality, the social processes that sustain it, and how social policies can reduce it. These questions are addressed in terms of class, gender, race, ethnicity, and immigration status/citizenship.

The program is designed to train students in the sociological analysis of social inequality among individuals and groups. This training includes course work in areas such as social stratification, the sociology of the family, the sociology of education, sociology of immigration, social structure and personality, social policy, and research design and methods. Students in the PSI program enroll in a sequence of courses and seminars and participate actively in ongoing faculty projects dealing with one or more of the above issues.

In addition, the interdisciplinary character of graduate education at Johns Hopkins offers students ample opportunity to enroll in courses or collaborate in research with faculty in other departments. Faculty associates of the program include distinguished scholars in anthropology, economics, geography, history, political science, and public health.

A graduate concentration is not required of Ph.D. students.

Joint Program: Doctorate in Sociology and Master's in Applied Mathematics and Statistics

The Department of Sociology, Whiting School of Engineering, announce a joint program leading to a Ph.D. in Sociology and an M.A. or M.S.E. in Applied Mathematics and Statistics. The purpose of the joint program is to offer Sociology doctoral students an opportunity to acquire advanced statistical knowledge and applied research skills.

The joint program requirements include all the Ph.D. requirements in Sociology and the specially designed requirements for an M.A. or M.S.E. in Applied Mathematics and Statistics. For Sociology Ph.D. requirements, see the Sociology Ph.D. Students Handbook. Applied Mathematics and Statistics courses may substitute for AS.230.600 Introduction to Social Statistics and AS.230.604. Two options for fulfilling the requirements are available for an M.A. or M.S.E. in Applied Mathematics and Statistics. For both options, students are required to meet the Applied Mathematics and Statistics department’s computing requirement (fulfilled through EN.550.413 Applied Statistics and Data Analysis), the purpose of which is to ensure that students are able to effectively use computers to solve mathematical problems.

Note: All Joint Program students are required to complete Responsible Conduct of Research (RCR) training, which is in addition to the HIPPA training required for the sociology Ph.D.

For more information, please visit http://soc.jhu.edu/graduate/jointprogram/.

Facilities

Each resident graduate student is provided office or desk space to conduct his or her studies and research. In addition, the department has a computer lab with a network of computers and printers for graduate student use. Close working relationships exist with other JHU Centers & Programs which provide excellent opportunities for research training.

Financial Aid

The department strives to provide five years of financial aid for all students who are in good academic standing. Eligibility for financial aid in the fifth year ordinarily requires successful oral defense of the dissertation proposal by May 31, following their fourth year in the Ph.D. program.

The department has a number of assistantships that are awarded each year to graduate students in the Ph.D. program. Opportunities are also available for graduate students to work as salaried research assistants with members of the Sociology faculty and staff at associated research centers.

For current faculty and contact information go to http://soc.jhu.edu/ directoryindex/faculty/

Faculty

Chair
Beverly J. Silver
Historical capitalism, comparative and world-historical research methods, global inequality and development, labor and social movements.

Professors
Andrew J. Cherlin
Benjamin H Griswold III Professor of Public Policy; sociology of the family, demography, social policy.

Kathryn Edin
Bloomberg Distinguished Professor; poverty, inequality, social policy.

Lingxin Hao
Sociology of the family, public policy, immigration, social inequality, sociology of education, quantitative methodology.

Stephen L Morgan
Bloomberg Distinguished Professor; education, inequality, demography, and methodology.

Associate Professors
Rina Agarwala
International development, gender, labor, migration, globalization, India.

Joel Andreas
Post 1949 Chinese society, transitions to and from socialism, industrial democracy, education and class reproduction.

Stefanie A. DeLuca
Sociology of education, sociology of neighborhoods, life course studies.

Ho-Fung Hung
Global political economy, contentious politics, nationalism, and social theory.

Katrina Bell McDonald
Sociology of the family, gender/ethnic identity, race and social class.

Assistant Professors
Julia Burdick-Will
Urban sociology, education, stratification.

Ryan Calder
Economic sociology, political sociology, political economy, Middle East, Southeast Asia, Globalization, finance, Islamic banking, Islamic jurisprudence.
Meredith Greif  
Race, urban sociology, and health in developing countries.

Michael Levien  
Political and developmental sociology.

**Professors Emeriti**  
Karl L. Alexander  
Academy Professor in The Academy at JHU/KSAS, sociology of education, social stratification.

Melvin L. Kohn  
Academy Professor in The Academy at JHU/KSAS; social structure and personality, cross-national comparative analysis, social class and stratification, sociology and social psychology of work.

**Joint Appointments**  
David M. Altschuler  
Adjunct Associate Professor (Institute for Policy Studies) Bloomberg School of Public Health; de-institutionalization and community-based services, delinquency and criminal justice, voluntary organizations and philanthropy, social policy.

Stanley Becker  
Professor, Bloomberg School of Public Health; demography.

Joyce Epstein  
Research Professor, School of Education (Center for Social Organization of Schools); sociology of education, evaluation research, social psychology.

Kelly Gebo  
Adjunct Assistant Professor, School of Medicine; medical sociology and mental health.

Gail Geller  
Professor, School of Medicine; ethical, social and cultural implications of genetic advances in the adult, pediatric and family contexts.

Thomas A. LaVeist  
Professor, Bloomberg School of Public Health; medical sociology, mortality, health services, aging.

Vicente Navarro  
Professor, Bloomberg School of Public Health; health and social policy, international health, health care policy.

Katherine Smith  
Associate Professor, Bloomberg School of Public Health; social determinants of health behavior.

Marc Stein  
Assistant Professor, School of Education; neighborhoods, school choice, academic achievement.

**Research Professor/Lecturers**  
Emily Agree  
Research Professor; gerontology demography.

Magda von der Heydt  
Senior Lecturer (Latin American Studies Program); socio-economic history of Latin America, developmental processes.

Huei-ying Kuo  
Senior Lecturer/Assistant Research Scientist; Chinese diasporic business networks, Japanese and British imperialism, as well as Chinese nationalism in East and Southeast Asia.

Sydney van Morgan  
Director of International Studies/Senior Lecturer

Timothy Nelson  
Senior Lecturer/Associate Research Scientist; low income non-custodial fathers, congregational studies, African-American religion.

For current course information and registration go to [https://sis.jhu.edu/classes/](https://sis.jhu.edu/classes/)

**Courses**

**AS.230.101. Introduction Sociology. 3.00 Credits.**
Introduces students to basic sociological concepts and perspectives, and applies them to a variety of topics including family, work, and the dynamics of class, gender, and racial/ethnic inequalities in the United States and globally.

Instructor(s): A. Cherlin  
Area: Social and Behavioral Sciences.

**AS.230.109. Freshman Seminar: Hot Topics in Education. 3.00 Credits.**
This course examines current school reform initiatives and the controversies surrounding them through a sociological lens. Freshmen Only

Instructor(s): J. Burdick-Will  
Area: Social and Behavioral Sciences  
Writing Intensive.

**AS.230.123. Trust and Altruism: Existence and Forms in Theory and Practice. 3.00 Credits.**
Trust is often cited as necessary to the successful functioning of small groups, formal organizations, and democratic society. Altruism is a concept that is debated regarding its very existence – whether there is a sociological, biological, or other basis for saying it exists. Through interdisciplinary readings – primarily from sociology but also evolutionary biology, psychology, and philosophy – we will consider theories of trust and altruism, as well as claims about other mechanisms that can secure mutually beneficial cooperation. Case studies from families, education, neighborhood ecology, and on-line communities are featured. Freshmen only.

Instructor(s): S. Plank  
Area: Social and Behavioral Sciences.

**AS.230.127. Freshmen Seminar: Social Interaction. 3.00 Credits.**
This course introduces students to ways of seeing social interaction, from mundane acts like conversation and riding the bus to extraordinary events like riots, escape panics and battlefield atrocities. The course will employ a “hands on” approach in which students will DO and not just read about sociology. Locations in and around campus will serve as laboratories to observe (and instigate) interactions for analysis. Freshmen Only.

Instructor(s): T. Nelson  
Area: Social and Behavioral Sciences.
AS.230.137. Special Opportunities in Undergraduate Learning: Exploring Baltimore: An Introduction to Urban Studies. 1.00 Credit.
Through an exploration of urban topics, this course will introduce students to data collection and analysis methods used in the social sciences. Students will discuss relevant research published by Johns Hopkins faculty in urban studies. Students will also gain an introduction to their adopted home, Baltimore, by collecting data and conducting field observations in different neighborhoods.
Instructor(s): M. Reese.

AS.230.147. Introduction to Islam and Islamicate Societies since 1800. 3.00 Credits.
This course is an introduction to contemporary Islam and Muslim societies from approximately 1800 to the present. Key themes will include the colonial encounter, state formation and reform, revolution, Islamic revival, and globalization. Reflecting Islam's status as a world religion, the course will touch on developments around the Muslim-majority world and in the West.
Instructor(s): R. Calder
Area: Social and Behavioral Sciences.

AS.230.150. Issues in International Development. 3.00 Credits.
This course will provide an undergraduate level introduction to the study and practice, as well as the successes and failures, of international development. Students will be introduced to the various theoretical frameworks used to explain underdevelopment. Students will also explore the practice of development since the 1950s by examining specific strategies employed in Latin America, South Asia, East Asia, and Africa. Using a variety of country-specific case studies, students will have the opportunity to apply the theoretical and practical frameworks learned in the class to assess the successes and failures of real-life cases.
Instructor(s): M. Levien; R. Agarwala
Area: Social and Behavioral Sciences.

AS.230.152. Housing and Schools: The Social Contexts of Inequality. 3.00 Credits.
Where families live is still a major determinant of the quality of children’s schools, and this connection between residential location and educational opportunity plays a significant role in the perpetuation of social inequality. This course will examine recent research in housing and education to develop a critical understanding of the role of social inequality, public policy, and individual choices in shaping housing and school opportunities for families. The course will focus on the intersection of residential and educational choices, by examining housing and school interventions across a host of American cities, with a particular focus on how these issues operate in our own city of Baltimore at the end of the semester.
Instructor(s): A. Rhodes
Area: Social and Behavioral Sciences.

AS.230.166. Chinese Migration in Modern World History 1500’s-2000’s. 3.00 Credits.
This interdisciplinary course applies theories of economic sociology to examine the effects of Chinese overseas migration on modern world economy from the sixteenth century to the contemporary era. It examines the contribution of overseas Chinese to the development of capitalism in the following junctures: the East-West economic integration in the pre-modern era, China’s modern transformation after the Opium War (1839-1842), the making of US national economy in the early twentieth century, as well as the postwar economic miracles in the Pacific Rim, among others. Special Note: Fulfills History requirement for GSCD track students.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences.

AS.230.175. Chinese Revolutions. 3.00 Credits.
This course introduces the origins, operation and impacts of five major revolutions in modern China between 1850 and 1950. These include the Taiping Rebellion, the republican revolutions, federalist and southern automatic movements, labor strikes as well as peasant rebellions. It draws on the existing historiography that examines China’s transition from an empire to a republic, impacts of western and Japanese influences to China, as well as the continuity and change of Chinese social organizations. Cross list with International Studies and East Asian Studies. Fulfills IS History requirement.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences Writing Intensive.

AS.230.202. Research Methods for the Social Sciences. 3.00 Credits.
The purpose of this course is to provide a sound introduction to the overall process of research and the specific research methods most frequently used by sociologists and other social scientists. Required for Sociology majors and IS GSCD track students.
Instructor(s): L. Hao
Area: Social and Behavioral Sciences Writing Intensive.

AS.230.205. Introduction to Social Statistics. 4.00 Credits.
This course will introduce students to the application of statistical techniques commonly used in sociological analysis. Topics include measures of central tendency and dispersion, probability theory, confidence intervals, chi-square, anova, and regression analysis. Hands-on computer experience with statistical software and analysis of data from various fields of social research. Special Note: Required for IS GSCD track students.
Prerequisites: Statistics Sequence restriction: students who have completed any of these courses may not register: EN.550.211 OR EN.550.230 OR EN.550.310 OR EN.550.311 OR EN.550.413 OR EN.550.420 OR EN.550.420 OR EN.550.420 OR EN.550.435 OR AS.280.345 OR AS.200.314 OR AS.200.315 OR EN.560.348; Statistics Sequence Restriction: Students who have completed EN.550.111 OR EN.550.113 may not enroll.
Instructor(s): S. Karatasli
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.230.208. Introduction to Race and Ethnicity. 3.00 Credits.
This course offers an historical overview of race and ethnicity in American society, and the processes that have led to ethnic and racial boundaries. We explore the social dynamics of racial/ethnic hostility and racial/ethnic protest movements. In addition, we examine how race and ethnicity have been used to justify segregation, domination and genocide, but also to create a sense of community, shared responsibility and belonging. Cross-listed with Africana Studies
Instructor(s): K. McDonald
Area: Social and Behavioral Sciences.

AS.230.213. Social Theory. 3.00 Credits.
This course provides an introduction to classical sociological theories (with an emphasis on Marx, Weber, and Durkheim). Contemporary theoretical perspectives on social inequality, conflict, and social change are also explored. Emphasis is placed on understanding the theoretical constructs as well as on applying them in the analysis of current social issues. Special Note: Required for IS GSCD track students.
Instructor(s): J. Andreas
Area: Social and Behavioral Sciences Writing Intensive.
AS.230.217. Chinese Overseas in Global History. 3.00 Credits.
This course examines the topics of Chinese overseas migration after the long sixteenth century. It investigates the following themes: First, the making of Chinese maritime frontier in the longterm trade and migration across the South China Sea and beyond; Second, economic functions of Chinese overseas networks in the East-West integration from the early modern era to the ongoing wave of globalization; Third, politics of identity and heritage in Chinese overseas communities. Course may not be taken by students that previously took AS.230.166.
Prerequisites: Course may not be taken by students who previously took AS.230.166.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.221. Global Social Change. 3.00 Credits.
This course introduces students to issues of global social change, with a particular focus on the challenges of international development and the contemporary globalization process. Specific themes include world income inequality and global poverty, the rise of supranational organizations (e.g. WTO and EU) and their relations with sovereign states, anti-globalization activism, the rise of China and India in the global economy, and the origins as well as consequences of the current global economic crisis, among others. Lectures will be aided by documentary films and other multi-media materials. Special Note: Fulfills Economics requirement for IS GSCD track students only. Formerly offered as AS 230.353. Students who took AS.230.353 cannot take AS.230.221.
Prerequisites: Students who took AS.230.353 cannot take AS.230.221.
Instructor(s): H. Hung
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.223. Housing and Homelessness in the United States. 3.00 Credits.
This course will examine the role of housing, or the absence thereof, in shaping quality of life. It will explore the consequences of the places in which we live and how we are housed. Consideration will be given to overcrowding, affordability, accessibility, and past and existing housing policies and their influence on society. Special attention will be given to the problem of homelessness.
Instructor(s): M. Greif
Area: Social and Behavioral Sciences.

AS.230.225. Population, Health and Development. 3.00 Credits.
This course will cover the major world population changes in the past century as well as the contemporary situation and projections for this century. Topics include rapid population growth, the historical and continuing decline of death and birth rates, contraceptive methods as well as family planning and child survival programs, population aging, urbanization, population and the environment and the demographic effects of HIV/AIDS
Instructor(s): S. Becker
Area: Social and Behavioral Sciences.

AS.230.228. Colonialism in Asia and Its Contested Legacies. 3.00 Credits.
This seminar examines the theories and historiography of colonialism in Asia, with special focus on the development of British Straits Settlements and Hong Kong as well as Japanese Taiwan. We will review the competing discourses about the impact of colonial dominations in these areas from the 1800s to the present-day. In the beginning of the era, the British built up the economic linkage between Hong Kong and Penang, Malacca as well as Singapore to sustain its dominance throughout the “Far East.” In the middle of the period, the expanding Japanese empire developed Taiwan as a footstep to compete with the British interests in South China and Southeast Asia. Hong Kong and the Straits Settlements, especially Singapore, became the contested terrain where two colonial powers vied for their influences in the region. The competition was not only about trade, but about the construction of a new East Asian regional order after the end of the Chinese hegemony. In the end of the period, the intervention of the US power in postwar Asia facilitated the retreat of the colonial establishments, British and Japanese ones included. The course that compares the colonial establishments and discourses on colonial legacies among the three areas points out that colonialism constituted an inalienable part of Asian history. Cross listed International Studies (CP) and East Asian Studies. Fulfills History requirement for IS GSCD track students only.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.237. Sociology and Film. 3.00 Credits.
Do films merely mirror society, or do they in fact shape societal experience? This class will investigate these questions through a filmic analysis of sociological issues. We will consider both narrative and documentary films and use them to engage in sociological questions of class, race, and gender. We will discuss what the historical and current trends in film making and film subject say about society, and how these trends may in turn influence society.
Instructor(s): E. Talbert
Area: Humanities, Social and Behavioral Sciences.

AS.230.244. Race and Ethnicity in American Society. 3.00 Credits.
Race and ethnicity have played a prominent role in American society and continue to do so, as demonstrated by interracial and interethnic gaps in economic and educational achievement, residence, political power, family structure, crime, and health. Using a sociological framework, we will explore the historical significance of race and its development as a social construction, assess the causes and consequences of intergroup inequalities and explore potential solutions.
Instructor(s): M. Greif
Area: Social and Behavioral Sciences.

AS.230.245. Inequality & Social Policy in U.S.A.. 3.00 Credits.
In the US and other industrialized countries, problems of income inequality and poverty have taken a sharp turn for the worst in recent years. The purpose of the course is to give students an opportunity to learn about the causes of this increasing inequality and poverty in US cities like Baltimore, and to explore the potential for public policies to rectify these problems. Students will read about the main theoretical and empirical perspectives on the issues; examine the relationship between inequality and class, gender and race; study the history and present shape of social policy in the US; and explore the consequences of particular initiatives for the status of the urban poor.
Instructor(s): A. Livingstone
Area: Social and Behavioral Sciences.
AS.230.253. Social Interaction. 3.00 Credits.
Interaction in small groups or in face-to-face situations ("microsociology") is the sole focus of this course. Wherever possible, a "hands on" approach in which students do sociology and not just learn about others' efforts is utilized. This will include field observations of public and semi-public spaces, recording and analyzing small group interaction, and participating in SIMSOC, an intense interactive simulation of society. Major conceptual approaches include symbolic interactionism, ethnomethodology and interaction ritual. Students that previously took AS.230.127 may not take this course.
Prerequisites: Students that previously took 230.127 may not take this course.
Instructor(s): T. Nelson
Area: Social and Behavioral Sciences.

AS.230.255. Men and Women in Society. 3.00 Credits.
This course will explore what it means to be male or female through academic writings, fiction, and film. It will examine how genders are defined by individuals, cultures, and institutions, and how those meanings shape everyday life for men and women. Power, inequality, and intersections with race-ethnicity, class, and sexuality will be a primary focus. Theories of gender addressed will include those related to masculinity, social psychology, feminism, and intersectionality. Though the course will primarily consider the United States, gender in other countries and cultures will also be addressed. Cross-listed with WGS.
Instructor(s): K. McDonald
Area: Social and Behavioral Sciences.

AS.230.265. Research Tools and Technologies for the Social Sciences. 3.00 Credits.
This course will introduce students to a range of software programs that are critical for conducting social scientific research in the 21st century. Students will develop competency in the use of computer programs for statistical analysis, database management, the creation of maps and timelines, and the presentation of research reports. The course uses examples from ongoing social science faculty research projects at Johns Hopkins on global inequality and international development. Required for GSCD track students
Instructor(s): M. Kang
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.230.275. Revolution, Reform and Social Inequality in China. 3.00 Credits.
This course explores various aspects of social inequality in China during the Mao Zedong and the post-Mao reform eras. We will examine inequality within villages, the rural/urban divide, urban inequality, education and health policies, and gender and ethnic inequality. Each of these issue areas will be tackled analytically, but the aim is also to understand what it was/is like to live in China during and after the Mao era. Formerly offered as AS.230.321.
Instructor(s): J. Andreas
Area: Social and Behavioral Sciences Writing Intensive.

AS.230.285. Maritime East Asia. 3.00 Credits.
This course examines the transnational connections among merchants and migrants in the waters of East and Southeast Asia from a historical and comparative perspective. We will explore how diplomatic ties, long-distance trade and migration contributed to the making of cosmopolitan cities such as Quanzhou (Zayton), Malacca, Fort Zeelandia (Formosa), Batavia, Manila, Singapore and Hong Kong in the region from the tenth century onwards. The course will close with an examination of how the transnational connections are relevant to understand interstate competition in Asia's long twentieth century. Key subjects to be introduced include tribute trade system, trading diasporas, Euro-Chinese co-colonialism, pan-Asianism, as well as history and historiography of maritime silk road.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences Writing Intensive.

AS.230.293. Immigration in the United States. 3.00 Credits.
This course examines patterns and consequences of immigration at the national, state, and local level. Special attention will be given to changing racial and ethnic relations in American gateway cities, immigrants' economic and cultural assimilation, the plight of the second generation, the importance of immigration policy in shaping the experiences of migrant groups, and public opinion on immigration.
Instructor(s): M. Greif
Area: Social and Behavioral Sciences.

AS.230.304. Social Organization and Social Control in Schools. 3.00 Credits.
We will ask: How do arrangements of tasks, rewards, roles, and opportunities in schools affect student learning, behavior, and sense of attachment? and In what ways are social control processes in schools related to the demands and dynamics of other institutions, particularly the family and the labor market? Before addressing these questions, we will define social organization and social control, and describe the forms (both intended and unintended) they take in schools.
Instructor(s): S. Plank
Area: Social and Behavioral Sciences.

AS.230.310. Becoming An Adult. 3.00 Credits.
While students may already be personally familiar with the subject matter, the course examines the sociological and psychological dimensions of this demographically dense period known as the transition to adulthood. Emphasizes life course theories of human development through readings of empirical work on adolescence, the transition to college, early employment and early family formation. Attention is paid to the ways class; gender; race and nationality influence the pathways, choices and outcomes of young people. A Statistics/ Sociology background is helpful, but not required.
Instructor(s): S. Deluca
Area: Social and Behavioral Sciences Writing Intensive.

AS.230.312. Education & Society. 3.00 Credits.
This course analyzes educational systems as social institutions and organizations. It gives particular attention to the often taken-for-granted ways that we structure learning in schools and their consequences for social inequality. To these ends, the course will examine classical institutional and organizational theory in sociology and evaluate these theories in their application to historical process of educational formation and the contemporary organization of K-12 schooling in the US.
Instructor(s): J. Burdick-Will
Area: Social and Behavioral Sciences Writing Intensive.
AS.230.313. Space, Place, Poverty & Race: Sociological Perspectives on Neighborhoods & Public Housing. 3.00 Credits.
Is a neighborhood just a grouping of individuals living in the same place, or do neighborhoods have collective meanings and impacts on children and families? We will capitalize on research methodologies used to define and describe neighborhoods and their effects on economic and educational outcomes. These include case studies, census data, surveys, quasi/experimental data. Focus is on how research measures neighborhood effects and incorporates community level processes into models of social causation (e.g., social capital/control, community efficacy, civic engagement). Also examined: patterns in residential mobility, segregation, and preferences within black and white populations; development of housing policy in the U.S.; programs to determine how neighborhoods affect issues of social importance. Statistics and public policy background is helpful but not required.
Instructor(s): S. Deluca
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.316. African American Family. 3.00 Credits.
This course is an examination of sociological theories and studies of African-American families and an overview of the major issues confronting African-American family life. The contemporary conditions of black families are explored, as well as the historical events that have influenced the family patterns we currently observe. Special attention will be given to social policies that have evolved as a result of the prominence of any one perspective at a given point in time.
Instructor(s): K. McDonald
Area: Social and Behavioral Sciences

AS.230.318. State and Society in Modern India. 3.00 Credits.
This course examines the complex, at times conflicting, relationship that has emerged between Indian seats of power from above and Indian expressions of society from below. Attention will be placed on the period between 1947 to the present.
Instructor(s): R. Agarwala
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.322. Quantitative Research Practicum. 3.00 Credits.
This course provides "hands on" research experience applying sociological research tools and a sociological perspective to problems of substance. Quantitative methods will be emphasized, as applied to census data, survey data and/or archival data. Students will design and carry out a research project and write a research report. Juniors and seniors only. Sophomores require instructor's permission. Recommended Course Background: AS.230.205, AS.230.202
Instructor(s): J. Burdick-Will
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
Writing Intensive

AS.230.323. Qualitative Research Practicum. 3.00 Credits.
This course provides hands on research experience applying sociological research tools and a sociological perspective to problems of substance. Qualitative observational and/or interviewing methods will be emphasized. Students will design and carry out a research project and write a research report. This course fulfills the research practicum requirement for the Sociology major.
Instructor(s): K. McDonald
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.325. Global Social Change and Development Practicum. 3.00 Credits.
This course provides hands on research experience in the field of global social change and development. Students will participate in a collaborative research project analyzing the causes and consequences of the recent upsurge of protest around the world in comparison with previous historical waves of social unrest. The course fulfills the research practicum requirement for Sociology majors and is required for the GSCD track.
Prerequisites: AS.230.265 or permission of instructor.
Instructor(s): B. Silver; S. Karatasli
Area: Social and Behavioral Sciences

AS.230.332. Race, Racism & Racial Privilege. 3.00 Credits.
This course will examine the concepts of race, racism, racial privilege in contemporary America, and the West in general. Examples from other countries will be integrated as well. Historical contexts such as the colonialism, the Civil War and Reconstruction, the Civil Rights movement, and the post Civil Rights era will help to provide an understanding of the social, political, economic, and cultural forces processes that have constructed and shaped the concepts of race and the racialized subject over time.
Instructor(s): K. McDonald
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.336. Family, Gender and Sexuality in China. 3.00 Credits.
This course examines social changes in China since the beginning of the People’s Republic (1949) through the lenses of family, gender and sexuality. The first half of the course focuses on understanding family institutions, women’s status, gender relations and sexualities in connection with major historical transitions between 1949 and the present. The second half includes readings and discussions around several thematic topics regarding family, gender and sexuality in contemporary China in the broader context of politics, economy, and social norms.
Instructor(s): Y. Dong
Area: Social and Behavioral Sciences
Writing Intensive

AS.230.341. Sociology of Health and Illness. 3.00 Credits.
This course introduces students to medical sociology, which is the application of the sociological perspective to health and health care. Major topics include stress, social epidemiology, and the social organization of health care.
Instructor(s): E. Agree
Area: Social and Behavioral Sciences

AS.230.343. Political Sociology of Latin America. 3.00 Credits.
This course provides an overview of Latin America through its historical, economic, social, and political dimensions. Emphasis will be given to the analysis of social structures: class, race and ethnicity, and the contemporary social movements. The course begins with an overview of the pre-Columbian civilizations and colonial legacies that gave rise to the multiethnic societies and the ethnic conflicts which characterize contemporary Latin America.Cross-listed with Program in Latin American Studies and International Studies (CP)
Instructor(s): M. von der Heydt-Coca
Area: Social and Behavioral Sciences
AS.230.344. Health and Society in Contemporary China. 3.00 Credits.
This class examines the social and health consequences of systemic transformations in China, including collapse of the urban work-unit system, resurgence of infectious disease, and implementation of the One-Child Policy. Dean’s Teaching Fellowship; Cross listed with East Asian Studies, Public Health and International Studies.
Instructor(s): R. Core
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.345. Rising Inequality in Rich Countries. 3.00 Credits.
This course examines explanations for why inequality has increased in North America and Western Europe over the last 40 years. The course focuses on macro-level economic and political changes. Topics include deindustrialization, globalization, financial sector growth, welfare program cuts, and decreasing tax progressivity.
Instructor(s): D. Thompson
Area: Social and Behavioral Sciences.

AS.230.346. Economic Sociology of Latin America. 3.00 Credits.
This course will offer an overview of Latin America’s economic reality as an intertwined process of economic and political domestic factors within the constraints of the world economy. Latin American development will be analyzed from a historical perspective. The first half of the semester the course will focus on the analysis of the economic developmental patterns starting in the middle of the 19thcentury to the populist era in the middle of the 20thcentury. In the second half of the semester, we will analyze in depth the contemporary neoliberal approach to development. Globalization is the force that drives economic, social and political processes in Latin America. The course will include case studies as well the social conflicts generated by the increasing polarization of the society. Students will be exposed to important sociological theories.
Instructor(s): M. von der Heydt-Coca
Area: Social and Behavioral Sciences.

AS.230.355. Homelessness, Vacants and the Right to Housing. 3.00 Credits.
A Community Based Learning (CBL) course organized through the Center for Social Concern, we will collaborate with Housing Our Neighbors (HON) http://www.honbaltimore.org, a local organization comprised of people experiencing homelessness, allies and advocates promoting the human right to housing to examine and engage the vacant housing crisis in Baltimore. Students will be expected to participate in organizing and community sessions as well as ongoing research into the Baltimore vacant property market and ultimately seek to transform housing into a right for all people.
Instructor(s): D. Pasciuti
Area: Social and Behavioral Sciences.

AS.230.356. Contemporary African Social Movements. 3.00 Credits.
This course is a survey of contemporary social movements in sub-Saharan Africa. The course will begin with an introduction to social movement theory. Subsequent weeks will each focus on a different type of movement (e.g. independence movements, labor movements, women's movements, environmental movements, etc.) The limited coverage of African issues in the US media tends to focus on either catastrophes or on development projects that are driven by international NGOs and the governments of northern countries. Through this course, students will gain a clear understanding of the broad range of actions that African civil society is using to address social problems throughout the continent. Materials used will include academic analysis of movements, writings by movement participants themselves, and films. The course will also introduce students to the most widely used social movement theories. Because these theories have been largely developed by social scientists in northern countries, the students will be asked to assess their applicability to African movements. Through this critical application of social theory, students will investigate the specific possibilities and constraints facing social and political actors in contemporary Africa. Cross listed with Dean's Teaching Fellowship, International Studies (CP) and Africana Studies.
Instructor(s): B. Scully
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.357. Baltimore and Beyond. 3.00 Credits.
This course uses the city of Baltimore as a lens through which to explore issues of urban inequality. We will focus on Baltimore's history of racial segregation and concentrated poverty, and its effect on the social and economic well-being of the city and its residents, with attention to education, employment, health and crime. Students will learn how to employ Census data, GIS approaches, and sociological research to inform questions about population change, inequality and the distribution of resources across the city and metropolitan region. Students will also work on one or more policy relevant studies based in Baltimore, including: a project on abandoned and vacant housing, a desegregation intervention, and a longitudinal study of inner city youth. Finally, students will become familiar with Baltimore City's programs and policy approaches to addressing the city's most pressing problems, and will design innovative and effective and innovative solutions as part of their course assignments. Enrollment restricted to Social Policy minors only.
Prerequisites: Students that took AS.360.357 may not take AS.230.357
Instructor(s): S. Deluca
Area: Social and Behavioral Sciences
Writing Intensive.
AS.230.359. Research Seminar on Global Social Protest. 3.00 Credits.
This research seminar will be run as a collective research working group in which we will carry-out a research project on the waves of social unrest around the world from the 19th century to present. The research project seeks to shed light on the recent (post-2008) global upsurge of labor and social unrest – from the Arab Spring to Occupy Wall Street, from the anti-austerity movements roiling Europe to the wave of workers’ protests taking place in China (including the factories where Ipods, Ipads and iPhones are assembled) – by comparing it with analogous historical periods since the early nineteenth century. We will document the spread and characteristics of this global wave as well as exploring its causes and consequences. The course will be devoted to the (i) theoretical discussions about major historical waves of social protest and labor unrest in the world, (ii) methodological discussions regarding data collection procedures using digital archives of historical newspapers (including reliability studies), (iii) data-coding, and (iv) substantive analysis of major waves of social protest. This course is suitable for students who are interested in deepening their understanding of the dynamics of global social protest as well as in deepening their experience with hands-on research on a topic of contemporary social and political relevance.
Prerequisites: AS.230.265 OR AS.230.325 OR permission of the instructor.
Instructor(s): S. Kumral
Area: Social and Behavioral Sciences.

AS.230.360. Class and Culture. 3.00 Credits.
This course examines the intersection of social class and culture—both the popular culture of movies, TV, music, etc., and “culture” in the anthropological sense as the shared way of life of a people. The course is divided into three main sections: 1) concepts of class, culture and the ways in which they interact; 2) cultures of each major class within American society, beginning with the “Old” and “New Money” classes, the “New Class” of intelligentsia, the much-invoked Middle Classes, the shrinking Working Class, and continuing through the poverty-striken Lower Classes; 3) issues of cultural consumption and production and their role in reproducing the class structure.
Instructor(s): T. Nelson
Area: Social and Behavioral Sciences.

AS.230.361. Migration & Development. 3.00 Credits.
This course focuses on the relationship between international migration and development. The course first introduces theories of international migration, immigrant integration, and international development. Building on this foundation, we then examine how immigrants interact with their homeland and how sending country governments tap their diaspora to improve development outcomes. Cross-listed with International Studies (CP, IR). Fulfills Economics requirement for IS GSCD track students only.
Instructor(s): L. Hao; R. Agarwala
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.362. From Habeas Corpus to Eminent Domain: Urban Development and Urban Planning in Comparative-Historical Perspective. 3.00 Credits.
This course offers a broad survey of urban development in the United States by examining both the intended and unintended consequences of urban planning. Using a comparative-historical framework, issues of power, conflict, representation, participation, and planning within urban development and the American city will be addressed and critiqued with specific reference to Baltimore. Cross listed with International Studies (AP). Fulfills History requirement for IS GSCD track students only.
Instructor(s): D. Pasciuti
Area: Social and Behavioral Sciences
Writing Intensive.
AS.230.367. Islamic Finance. 3.00 Credits.

Today, Islamic finance is a global industry comprising nearly $2 trillion in assets, with hubs from Kuala Lumpur to Dubai to London. But half a century ago, nothing called "Islamic finance" existed. So where did Islamic finance come from? Why is it growing so fast? And what does it mean for finance to be Islamic? We discuss the ban on riba in the Quran and hadith, finance in early and medieval Islamic societies, petrodollars and the birth of Islamic banking in the 1970s, the rise of Islamic capital markets since 2000, contemporary shariah-compliant financial structures, and the constitution of piety through financial practice.

Instructor(s): R. Calder
Area: Social and Behavioral Sciences.

AS.230.369. Sociology in Economic Life. 3.00 Credits.

This course discusses how geopolitics, technology as well as social differentiation (such as race, class and gender) shape the structure of economic actions. Special attention will be paid to patterns of state-business relationship, labor processes, migrant economy, globalization and international division of labor.

Instructor(s): H. Kuo
Area: Social and Behavioral Sciences.

AS.230.370. Sociology of Rock. 3.00 Credits.

This course examines the history and dynamics of rock music using key concepts and perspectives from sociology. The course is divided into four sections, each of which examines the phenomenon of rock music from a different analytical perspective. The first section on the origins of rock looks at the confluence of developments in post-war America, especially in terms of race, class and generational change, which produced this new musical form. The second section, "Rock as Cultural Production," looks at all aspects of the rock "field," not just artists and audiences but record labels, stores, DJ's and radio stations, the music press and journalists, performance venues. The third section examines rock as a force for social change and protest from the 1960s until present, and the final section examines the performative aspects of rock as a kind of "interaction ritual" with its own microsociological dynamics.

Instructor(s): T. Nelson
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.372. Social Protest in Contemporary China. 3.00 Credits.

This class introduces popular resistance in post-1978 China, examining its socioeconomic, political, and cultural background, various types of protests by multiple social groups, and outcomes of protests. Cross listed with Dean's Teaching Fellowship.

Instructor(s): Y. Li
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.373. Urban Sociology. 3.00 Credits.

This course will explore the growth and development of urban areas, and how cities create, influence, and perpetuate social and economic inequalities. It will explore how the community environment shapes social interactions, identities, and attitudes. Specific topics will include urban poverty, residential segregation, housing, crime, and health.

Instructor(s): M. Greif
Area: Social and Behavioral Sciences.

AS.230.374. Poverty and Public Policy. 3.00 Credits.

This course examines the causes and consequences of U.S. urban poverty, its implications for health and wellbeing, and explores strategies for addressing it. We cover the major theoretical explanations scholars have advanced to explain the persistence of urban poverty including labor markets, residential segregation, welfare policy, family structure, and the criminal justice system. Within each topic area, students are introduced to a range of interventions aimed at alleviating urban poverty. Students will conduct a formal policy analysis of 20 pages and participate in a mock congressional hearing. Enrollment restricted to Social Policy minors only.

Prerequisites: Students that took AS.360.372 may not take AS.230.374.
Instructor(s): K. Edin
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.375. Nations, States, and Boundaries. 3.00 Credits.

This course explores the historical origins and development of the modern global political order based on sovereign nation-states, the crisis of this order through the twentieth century, as well as the unraveling of this order at the turn of the twenty-first century. We will focus on how dominant political organizations in the changing world order (such as states, political parties, and transnational governing bodies) have been shaped by different social forces (such as classes and ethnic groups) and vice versa. Topics covered include rise and fall of modern nationalism, formation of regional and global governing structures, "civilizational" turn of global politics, waves of separatism and redrawing of nation’s boundaries after the Cold War, politics of immigration and citizenship, among others.

Instructor(s): H. Hung
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.376. Sociology of Religion. 3.00 Credits.

This course addresses two primary questions: What social elements influence the varieties of religious belief, organization and action? What are the consequences of these forms of religious expression for both individuals and for society? In addition to readings and exams, students will also attend two different religious services over the course of the semester.

Instructor(s): T. Nelson
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.377. Colonialism and Anti-Colonialism. 3.00 Credits.

This seminar examines the theories and historiography of colonialism and anti-colonial movements. It focuses on the establishment of the colonial division of labor, comparative colonialism, identity formation, and nationalism as well as anti-colonial movement.

Instructor(s): H. Kuo
Area: Social and Behavioral Sciences.

AS.230.379. Undergraduate Research Seminar. 3.00 Credits.

Seminar for Sociology students writing senior honor theses and conducting pre-approved independent research projects. Juniors and Seniors Sociology majors only. Permission of instructor.

Instructor(s): M. Levien
Area: Social and Behavioral Sciences.
AS.230.380. Poverty and Social Welfare Policy. 3.00 Credits.
This course examines the causes and consequences of U.S. poverty and explores strategies for addressing it, with some comparisons to other rich nations. We cover the major theoretical explanations scholars have advanced to explain the persistence of poverty and inequality including labor markets, residential segregation, welfare policy, family structure, and the criminal justice system. Within each topic area, students are introduced to contemporary policy approaches aimed at alleviating poverty, and evaluations of these approaches.
Instructor(s): K. Edin
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.381. Sociology of the Middle East and North Africa. 3.00 Credits.
This course takes a sociological approach to the contemporary Middle East and North Africa. Topics include urbanization and demographic change; rentier welfare states and the global political economy of oil; women in higher education and the labor force; the 2011 Arab Spring; conflict in Syria, Libya, and Yemen; Amazigh (Berber) identity in northwest Africa; Israel-Palestine; “Dubai, Inc.” and the sociology of migrant labor; neoliberal Islamic politics in Turkey; cinema and everyday life in Iran; conservative monarchy in Morocco and Saudi Arabia; and the role of the United States in the MENA region. Students will give presentations, write memos, and submit two papers. One aim of the course is to turn students into clear, polished academic writers and thinkers.
Instructor(s): R. Calder
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.383. Courts, Housing, and the City: A Research Seminar on Social Justice in Baltimore. 3.00 Credits.
This course will join an existing survey of the Housing Court in Baltimore City by the Public Justice Center (PJC) of Maryland to examine the role and process of evictions in the Baltimore civil litigation system. The course will examine the history of housing in Baltimore and the changing role of the courts in housing rights and the mid-20th century to the present. Working with the PJC’s Human Right to Housing Project, students will be expected to participate in the survey collection process by attending Rent Court and participating in the data collection process, followed by cleaning and analysis of the data. Counts as American Politics/Sociology of the United States for GSCD Track.
Prerequisites: AS.230.205 AND AS.230.265 or permission of instructor
Instructor(s): D. Pasciuti
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.230.384. Global Urbanism: Planet of Slums or World Cities?. 3.00 Credits.
Cities are at the forefront of a range of global governance challenges. This course will address the relationship between development and the political and economic structure of the world economy in the built environment of the city. By drawing upon both classical texts about cities (do they still work for us, what can they account for) and on a diverse literature on cities and slums, we will focus our attention to the contemporary challenges faced in cities both in the more developed and in the developing world. Through a variety of disciplinary perspectives we will try to understand the underlying social and economic changes and the profound transformations under way throughout the global urban world. Fulfills IR or CP requirement for International Studies students and Political Sociology (IR or CP) for GSCD track. (Formerly AS.191.349)
Instructor(s): D. Pasciuti
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.385. Schooling, Racial Inequality and Public Policy in America. 3.00 Credits.
After examining alternative explanations for why individuals obtain different amounts and types of educational training, the course focuses on how an individual’s family background and race affect his or her trajectory through the educational system. The course covers the specific challenges that have confronted urban schooling in America since the 1960s, including the classic literature on the effects of school and community resources on student achievement as well as the development and later evaluation of school desegregation policies. The course also considers case studies of current policy debates in the US, such as housing segregation and school resegregation, voucher programs for school choice, and the motivation for and consequences of the establishment of state-mandated testing requirements. Throughout the course, emphasis is placed upon the alternative modes of inquiry and writing which opposing scholars, policymakers, and journalists use to address these contentious topics.
Instructor(s): S. Morgan
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.388. Sociology of the Family. 3.00 Credits.
Sociological perspectives on contemporary family life, including marriage and divorce, cohabitation, single parenthood, same sex partnerships, children’s wellbeing, balancing work and family responsibilities, domestic violence, and government policy toward families.
Instructor(s): A. Cherlin
Area: Social and Behavioral Sciences.

AS.230.391. Theories of International Development. 3.00 Credits.
This course will cover major theoretical approaches to the study of development. We will begin with foundational political economic texts (including those of Adam Smith, Karl Marx, and Karl Polanyi). After setting the historical context of decolonization, we will then proceed to cover major theoretical approaches to the study of development in the past sixty years, including: modernization theory, dependency and world systems analysis, state-centered approaches, neo-institutionalism, the capabilities approach, political-ecology, post-development, feminism, the Washington consensus, social capital, experimental economics, and contemporary sociological reconstructions of Marx, Smith and Polanyi. Cross listed with International Studies (IR); fulfills IS Economics requirement for GSCD track students only.
Instructor(s): M. Levien
Area: Social and Behavioral Sciences.
AS.230.395. Contemporary Social Theory. 3.00 Credits.
This course will examine how major social theorists of the 20th
century advanced upon the “classical” social theories of Marx,
Weber, and Durkheim. As they grappled with the historical events and
social concerns of the 20th century—the Russian revolution and its
degeneration into Stalinism, the failure of communist movements in
the West, the rise and fall of fascism and Nazism, the consolidation of
capitalist democracies and welfare states, the emergence of anti-colonial
movements in the “Third World,” and the persistence of race, gender
and sexuality as forms of domination—social theorists provided novel
answers to classical questions of social theory: 1) what is the structure
of modern society, how does it change, and how is it reproduced?; 2)
what is the relation between social structures and ideas, knowledge, and
subjectivity?; and 3) what are the conditions of possibility for human
freedom? Theorists to be covered include Antonio Gramsci, Franz Fanon,
W.E.B. Dubois, Georg Lukacs, Talcott Parsons, Herbert Marcuse, Jurgen
Habermas, Louis Althusser, Pierre Bourdieu, Michel Foucault, Nancy
Fraser, Patricia Hill Collins, Judith Butler, and Henri Lefebvre. In addition
to understanding and comparing the theories, we will try to use them to
understand contemporary societies.
Instructor(s): M. Levien
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.396. Politics and Society. 3.00 Credits.
This seminar surveys texts that treat key problems of political sociology
including the rise of the modern state, the relationship between political
and economic power, the origins and nature of liberal democracy, the
nation-state and nationalism, states and war, states and welfare, sources
of authority, ideology and political contention, social movements, and
social revolutions. Fulfills Comparative Politics for International Studies.
Prerequisites: AS.230.213 or permission of instructor.
Instructor(s): J. Andreas
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.399. Economic Development in Comparative Perspective. 3.00
Credits.
This course reviews the evolution of the literature on economic development over the past half-century and evaluates its strengths and weaknesses in light of developmental experiences in Africa, Asia and Latin America. Course lectures are by Dr. Brian Van Arkadie, an economist with decades of experience in the international development field including as a consultant for the World Bank, the United Nations Development Program and to numerous governments ranging from Tanzania and Uganda to Egypt and Vietnam.
Instructor(s): B. Silver; B. Van Arkadie
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.400. Social Policy Seminar. 3.00 Credits.
This course is designed for students who have completed either the
Baltimore or Washington intensive semesters of the Social Policy Minor.
The students will make presentations and pursue joint projects based on
what they have learned during the intensive semesters concerning key
social policy issues.
Instructor(s): A. Cherlin
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.405. Neoliberalism. 3.00 Credits.
Neoliberalism, a political project that seeks to subject all aspects of
social life to free market force, has ascended to orthodoxy in developed
developing countries alike over the last four decades. This course is a reading seminar focused on some of the key classic and cutting-edge original texts that critically examine and debate the origins, socio-political impacts, and crisis of the neoliberal project. It will cover such topics as the genealogy of the neoliberal idea, neoliberal state, informalization of works, neoliberal cities, rise of the one percent, and global governance. Class will be a mix of lecture and seminar-style discussions. Requirements include reading memo, class presentation, and a term paper.
Instructor(s): H. Hung
Area: Social and Behavioral Sciences.

AS.230.407. Comparative Labor Movements Research Seminar. 3.00
Credits.
Research-oriented course on the dynamics of labor and social movements from global and comparative-historical perspective.
Prerequisites: AS.230.265 AND AS.330.325
Instructor(s): S. Karatasli
Area: Social and Behavioral Sciences

AS.230.415. Social Problems in Contemporary China. 3.00 Credits.
In this course we will examine contemporary Chinese society, looking at
economic development, rural transformation, urbanization and migration,
labor relations, changes in class structure and family organization,
health care, environmental problems, governance, and popular protest.
The course is designed for both graduate and undergraduate students.
Undergraduates must have already completed a course about China at
Hopkins. Cross-listed with East Asian Studies.
Instructor(s): J. Andreas
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.435. The China Boom. 3.00 Credits.
This course addresses the origins, global impacts, and demise of China’s
economic ascendance as a world economic and political powerhouse at the turn of the twenty-first century. The course will cover the historical origins of the China boom and impacts of the boom on global political economic order. It will also address the social-political imbalances within China that contribute to the global financial crisis and recent slowdown of the Chinese economy. Particular topics include late imperial and Maoist legacies’ relation to contemporary economic growth, stages of China’s capitalist development, China’s outward investment in the developing world, formation and limits of US-China economic symbiosis, and China’s participation in global governance, among others.
Instructor(s): H. Hung
Area: Social and Behavioral Sciences
Writing Intensive.
AS.230.440. Port Cities and Historical Capitalism in Maritime Asia. 3.00 Credits.
The goal of the seminar is to examine the prospects and limits of understanding the incorporation of Asia in the capitalist world-system from the prism of oceanic connections. The theoretical thrust of this course is to develop but also to adapt Janet Abu-Lughod emphasis on the connections across port cities and littoral in the Afro-Eurasian continents before the long sixteenth century in her Before European Hegemony. But instead of looking at a port city as its adjacent hinterland polity’s gateway to global trade in the premodern era, the course examines the multifarious coast-hinterland relationships. The readings are organized by a chronological order, which begins with the historical maritime silk road between the third and thirteenth centuries, and will be followed by Asian port cities in the European age of empire and postwar American-led Cold War Structure, as well as the present-day Chinese New Silk Road Diplomacy. Students are expected to select an issue of regional tensions and to analyze its historical root.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences.

AS.230.460. Research Seminar on Stratification in the Modern World Economy: 1600-2014. 3.00 Credits.
This course examines stratification in the modern world economy from the 16th century to today, covering classical and contemporary theoretical perspectives and empirical studies on the hierarchical structure of the capitalist world economy (including Baran and Sweezy, Thomas Pikkety, Andre Gunder Frank, Giovanni Arrighi, Christopher Chase-Dunn, P. Korzeniewicz and T. Moran, W. W. Rostow). Students will be expected to recreate and extend these empirical studies and engage in a quantitative discussion of theories of global inequality and development. In doing so, we will discuss how methodological choices, research designs, choice of indicators and inequality measures affect the outcomes and conclusions of this research. Using this theoretical and empirical background, the course will engage key questions on the contemporary and historical conditions of world inequality such as, has world income inequality been increasing or decreasing over time? Do we see stability or change in the hierarchical structure of the capitalist world economy? What are the consequences for contemporary rise of China and recent global financial meltdown for world income inequality? What will stratification in the world economy look like in the 21st century? Counts as IR/Global Sociology or Economics/Economic Sociology for GSCD Track.
Prerequisites: AS.230.150 AND AS.230.265 or permission of instructor
Instructor(s): D. Pasciuti; S. Karatasli
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.230.500. Independent Study. 3.00 Credits.
Instructor(s): Staff.

AS.230.501. Research Assistantship. 3.00 Credits.
Instructor(s): H. Hung; K. McDonald; L. Hao; S. Morgan.

AS.230.502. Senior Honors Program. 3.00 Credits.
Instructor(s): Staff.

AS.230.506. Independent Research. 3.00 Credits.
Instructor(s): Staff.

AS.230.507. Internship. 1.00 Credit.
Instructor(s): Staff.

AS.230.508. Internship. 1.00 Credit.
Instructor(s): A. Cherlin; H. Hung; L. Hao; M. Levien; S. Morgan.

AS.230.597. Independent Research. 3.00 Credits.
Instructor(s): Staff.

AS.230.598. Summer Internship. 1.00 Credit.
Instructor(s): Staff.

AS.230.599. Independent Study. 3.00 Credits.
Instructor(s): J. Andreas; K. McDonald; M. Levien; T. Nelson.

AS.230.600. Introduction to Social Statistics.
This course will introduce students to the application of statistical techniques commonly used in sociological analysis. Topics include measures of central tendency and dispersion, probability theory, correlation, confidence intervals, chi-square, and regression analysis. Hands-on computer experience with statistical software and analysis of data from various fields of social research.
Instructor(s): S. Karatasli
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.230.602. Theories of Society.
Intensive readings from classical theorists (including Marx, Weber, and Durkheim) form the core of this course. Emphasis is placed on exploring the utility of social theory for formulating important sociological questions and conceptualizing social research.
Instructor(s): J. Andreas.

AS.230.603. Contemporary Social Theory.
This course will explore several important traditions in contemporary social theory, including structural-functionalism, micro-interactionism, exchange and rational choice, post-structuralism, discourse and narrative analysis, and efforts by recent theorists to extend, synthesize, supplement, and revise Marx and Weber’s explanations of inequality, group conflict, and macro-level social change, including world systems analysis.
Instructor(s): M. Levien.

A seminar in multiple regression (least squares and alternative estimation procedures) with a focus on sociological problems and software applications. Extensions to hierarchical linear models will be included. Graduate students should have completed AS.230.600 or the equivalent. Undergraduates only admitted with instructor’s permission, and AS.230.205 or equivalent. Recommended Course Background: AS.230.205, AS.230.600 or equivalent.
Instructor(s): S. Morgan.

AS.230.605. Categorical Data Analysis.
This course provides the students with a set of statistical tools to understand and interpret social science research dealing with categorical dependent variables and to prepare students to apply these models in their own research. The models covered in the course include logit, probit, Poisson, and log-linear models, as well as multi-level models of categorical dependent variables.
Instructor(s): L. Hao
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.
This is an intensive reading seminar on working class formation from a comparative, historical and global perspective, including theoretical and empirical (case study) readings on changes over time in labor process, labor markets, and labor movements. We will build on a range of local case studies to establish spatial and temporal patterns, and discuss the connections between these global patterns and the dynamics of historical capitalism.
Instructor(s): B. Silver.

AS.230.608. Proseminar In Sociology.
Individual one-hour presentations by faculty members will introduce students to the faculty's substantive interests and research styles.
Instructor(s): B. Silver.

Advanced seminar for PhD students who are preparing their dissertation proposals or writing their dissertations. Sociology graduate students only.
Instructor(s): L. Hao.

AS.230.611. World-Historical Sociology.
In this seminar we will read key texts in comparative sociology. The topics covered are cross-national sociology, comparative national development, comparing world-systems, the modern world-system, globalization, and social movements.
Instructor(s): H. Hung.

AS.230.612. Seminar on Social Inequality.
This seminar attempts a broad survey of sociological theorizing and research on social stratification and the role of social institutions in generating and mitigating inequality.
Instructor(s): S. Deluca.

A discussion-oriented seminar focused on major recent writings on the family, in both the developed and developing nations.
Instructor(s): A. Cherlin.

Instructor(s): L. Hao.

AS.230.616. Researching Race, Class, & Gender.
This advanced graduate seminar is designed to help graduate students sort out whether they are headed for careers as race, gender, or class specialists. We will review major sociological work in these sub-fields and work to determine what common elements of these publications makes them a stand out in the discipline. Then students will be asked to craft projects of their own.
Instructor(s): K. McDonald.

In-depth reading and discussion of theories and research on immigration to the U.S. theoretical issues include international migration, immigration, and assimilation. Research topics include: the impact of U.S. immigration laws on immigrant inflows and stocks, self-selection of immigrants, the impact of immigration on the native-born population, and the adaptation of the first and second generations. The course focuses on immigration since 1965 and its related controversies and debates.
Instructor(s): L. Hao.

This course introduces strategies for estimating causal effects from a counterfactual perspective, uniting the potential outcome model with causal graph methodology. After an examination of the primary features of the counterfactual perspective and criteria for causal effect identification, the course will consider data analysis techniques such as matching, regression from a potential outcome perspective, inverse probability of treatment weighting, instrumental variable estimators of local average treatment effects, and estimation via exhaustive mechanisms.
Instructor(s): S. Morgan.

This course engages students in the study of educational inequality through in depth readings on poverty, culture, the family, neighborhoods and public policy.
Instructor(s): S. Deluca.

This seminar offers a graduate level introduction to the theoretically guided study of national development. The first part of the course analyzes the development theories that dominated the first four decades of the development effort. The second half of the course examines more recent perspectives that have attempted to fill the intellectual void left by the demise of the development paradigm. Throughout the seminar, discussions and readings will focus on the intellectual history of the development theories: What are the relevant questions to ask and what are the appropriate units of analysis for the study of social and political change? What forces have propelled transformations across the world? What explanatory power do the theories hold for our future?
Instructor(s): R. Agarwala.

TBD
Instructor(s): B. Silver; C. Nealon.

AS.230.634. 21st Century Capitalism II.
Permission of instructor required.
Instructor(s): B. Silver; C. Nealon.

AS.230.635. PGSC Research Seminar.
Working seminar focusing on new research in the field of comparative and world-historical sociology. Sociology graduate students or permission of instructor.
Instructor(s): B. Silver.

This course is designed to help students think critically, theoretically, and empirically about issues in design of sociological research that aims to answer causal questions and incorporate mixed methods approaches. Specifically, we will focus on: 1) Understanding causal inference and the objectives of social science; 2) Learning the types of validity in research designs; 3) Becoming familiar with the elements of experimental research design, such as treatment, observation and assignment; 4) Comparing and contrasting experimental and quasi-experimental designs and their applications for the study of social processes and social problems; 5) Understanding designs that employ mixed methods to answer questions of social and policy importance. The course will give a general overview of the challenges of causal inference, but we will focus on research in a few specific areas, such as education and urban sociology, for the sake of consistent, coherent examples. Sociology/Statistics background is helpful, but not required.
Instructor(s): S. Deluca.

AS.230.638. 21st Century Capitalism IV.
Instructor(s): B. Silver; C. Nealon.
AS.230.641. Urban Youth and Inequality.
Popular television shows and news media cast stark images of urban youth that range widely from notorious corner boys and controversial teen moms, to the celebrated examples of those writers, athletes and artists who beat the impossible odds of their backgrounds. This course takes a more systematic look at this population, with a sociological focus on the demography and social processes that characterize the transition to adulthood for disadvantaged youth growing up in America's cities. We will also examine the role of family, neighborhood, schools and peers in affecting the transition from high school to work and college, early family formation, and participation in risky behavior. Previous and contemporary policy approaches to addressing inequality among these young adults will also be explored.
Instructor(s): S. Deluca.

AS.230.642. Advanced Topics in Education Research.
Instructor(s): S. Plank.

An intensive analysis of a wide range of sociological studies, designed to acquaint the student with how sociologists deal with important theoretical issues, using a variety of methods and sources of data. Particular attention will be paid to the logical coherence of the studies and to the fit between data and interpretation.
Instructor(s): H. Hung
Area: Social and Behavioral Sciences.

AS.230.644. Reading Capital @150.
Instructor(s): B. Silver; S. Karatasli
Area: Social and Behavioral Sciences.

AS.230.645. PSI Research Seminar.
Seminar focusing on new research in the study of social inequality, with an emphasis on education, neighborhoods, race, family dynamics, health and social policy. Sociology graduate students or permission of instructor.
Instructor(s): S. Deluca.

AS.230.647. Agrarian Change.
This course will explore questions related to historical and contemporary trajectories of agrarian change. It begins with classical theoretical debates on the distinctiveness of peasantry and their prospects under capitalism. It will then turn to major themes of agrarian change in the twentieth century: modes of production, class polarization and differentiation, peasant wars, moral economies, everyday resistance, collectivization and decollectivization, food regimes, and depeasantization. It will conclude with new themes in agrarian change, with a particular emphasis on contemporary forms of land dispossession and repossessing. The course will be structured as a reading-intensive research seminar.
Instructor(s): M. Levien.

AS.230.649. Qualitative Research Methods: Domestic and International Fieldwork.
This course discusses the conceptualization of qualitative research involving fieldwork, and the collecting, analyzing, and reporting of sociological field data in both domestic and international settings. Data collection techniques such as intensive interviewing, participant-observation, document analysis, and ethnography are included. The course also covers the logic of qualitative inquiry, choosing research sites and cases, engaging archival sources, judging the validity and reliability of data, and software-based data analysis.
Instructor(s): K. McDonald; R. Calder
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.650. Macro-Comparative Research.
The course examines methods of studying long-term, large-scale social change. Both qualitative and quantitative methods are covered.
Instructor(s): B. Silver.

AS.230.651. Political Sociology.
This seminar surveys key problems of political sociology including the rise of the modern state, the origins and nature of liberal democracy, the relationship between political and economic power, the nation-state model and nationalism, ideology and political contention, collective identity, and collective action.
Instructor(s): J. Andreas
Area: Social and Behavioral Sciences.

AS.230.674. Political Economy of India.
This course is designed to critically engage political economy questions in contemporary India. The course will focus on the post-colonial era. A basic understanding of India's contemporary political economy is required.
Instructor(s): R. Agarwala
Area: Social and Behavioral Sciences.

Instructor(s): B. Silver; C. Nealon; C. Westcott.

AS.230.685. TRP PROPOSAL SEMINAR.
This seminar includes all members of the second year cohort of sociology graduate students. Class meetings will provide feedback and guidance as students develop proposals for their Trial Research Papers. The course will also include a series of professional developments seminars. For Sociology PhD students only.
Instructor(s): J. Andreas.

AS.230.690. TRP PRESENTATION SEMINAR.
This seminar includes all members of the third year cohort of sociology graduate students. Class meetings will provide feedback and guidance as students revise the final drafts of their Trial Research Papers. For Sociology PhD students only.
Instructor(s): J. Andreas.

This course is for graduate students in the PhD program in Sociology to obtain graduate credit for work off campus that provides training and the development of skills in teaching and/or research. Before the practicum is begun, the graduate student must identify a sponsoring faculty member or seek permission from the student’s faculty advisor. The faculty member or adviser must sign a form that certifies that graduate credit will be granted, verifies the nature of the work to be performed by the student and explains how the practicum helps to fulfill the degree requirement. Once completed, the sponsoring faculty member or adviser submits a grade of pass or fail for the student. This course may be used for Curricular Practical Training (CPT).
Instructor(s): Staff.

Cross Listed Courses
East Asian Studies
AS.310.204. Rural Development in Asia. 3.00 Credits.
We will examine the transformation of the Asian countryside from the beginning of the twentieth century up until the present by looking at agrarian structure, economic and social development, collectivization and decollectivization, rural industrialization, agribusiness, sustainable agriculture, and rural unrest. Course materials combine theoretical readings with empirical case studies. While theoretical readings examine global processes involving Asia and elsewhere, case studies cover several Asian countries, with an emphasis on China and India.
Instructor(s): B. Gurel
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.310.307. Governance and Politics in China. 3.00 Credits.
A dramatic rise of popular protests in China today has spurred lively discussions about the causes, dynamics, and impact of these protests. This course will provide students with an opportunity to understand these issues by discussing the social, institutional and cultural background of protests, major forms of protest, social groups involved, government responses, and social implications of various kinds of protests. The first part of the course will explore significant socio-economic changes since 1978 and the effects of these changes on China’s social structure and stratification. This part will also examine changes in governance and political systems in the reform era and review important theories of contentious politics. The second part will examine protests by distinct social groups, including peasants, workers, homeowners, and ethnic minority groups, pro-democratic activists, among others. This part will identify similarities and differences in the demands and actions of different groups, introduce the major forms of popular resistance, and explore how the state deals with them accordingly. The course will conclude with discussion of the outcomes of social protests in China and make a cross-national comparison between protests in China and other authoritarian states. By taking China as an example, this course will enhance students’ knowledge about forms of popular contention and government responses in an authoritarian regime as well as help students develop analytical and critical thinking skills with regard to contentious politics.
Instructor(s): Y. Li
Area: Social and Behavioral Sciences
Writing Intensive.

Interdepartmental
AS.360.247. Introduction to Social Policy: Baltimore and Beyond. 3.00 Credits.
This course will introduce students to basic concepts in economics, political science and sociology relevant to the study of social problems and the programs designed to remedy them. It will address the many inequalities in access to education and health care, unequal treatment in the criminal justice system, disparities in income and wealth, and differential access to political power. The focus will be on designing effective policies at the national and local level to address these pressing issues. This course is open to all students, but will be required for the new Social Policy Minor. The course is also recommended for students who are interested in law school, medical school, programs in public health, and graduate school in related social science fields. This course does not count as one of the required courses for the Economics major or minor, but it is required for the Social Policy Minor. Cross list with Sociology, Economics and Political Science. Freshman, Sophomore and Juniors only.
Instructor(s): B. Morgan; D. Schlozman; S. Deluca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.360.372. Poverty and Public Policy. 3.00 Credits.
This course examines the causes and consequences of U.S. urban poverty, its implications for health and wellbeing, and explores strategies for addressing it. We cover the major theoretical explanations scholars have advanced to explain the persistence of urban poverty including labor markets, residential segregation, welfare policy, family structure, and the criminal justice system. Within each topic area, students are introduced to a range of interventions aimed at alleviating urban poverty. Students will conduct a formal policy analysis of 20 pages and participate in a mock congressional hearing. Permission of instructor required.
Instructor(s): K. Edin
Area: Social and Behavioral Sciences
Writing Intensive.
AS.360.380. Making America Social Policy. 3.00 Credits.
This course analyzes the distinctive US welfare state in historical and comparative perspective. We begin with a survey of the policy context, an historical overview from the poorhouses through the Great Society, and a tour of welfare states across the rich democracies. We then survey developments — and explain the actual workings of policy — across jobs, education, welfare, pensions, and health care. We explore the institutional and political factors behind their divergent trajectories through conservative revival and the age of Obama. Students will write a seminar paper exploring policy development over time in a program or area of their choosing. Enrollment restricted to Social Policy minors only.
Instructor(s): D. Schlozman
Area: Social and Behavioral Sciences
Writing Intensive.

AS.360.387. Cities, Crime, and the Constitution. 3.00 Credits.
This course is meant to introduce students to the profound challenge of crime in American cities and to the opportunities and obstacles to address it. From gangs, gun violence, and the narcotics trade to crimes targeting vulnerable populations like children and the elderly, the course will survey the breadth and character of criminal enterprises in cities like Baltimore. Students will confront vexing questions raised by contemporary criminal justice practices relating to race, poverty, privacy, and policing. Students will also examine whether institutional reform in the areas of juvenile justice, conviction integrity, fairness in sentencing, and reentry reflect the Constitution's promise of equal justice for all.
Instructor(s): Staff
Area: Social and Behavioral Sciences.

Program in Latin American Studies
AS.361.130. Introduction to Latin American Studies. 3.00 Credits.
The goal of this course is to provide an overview of Latin America, analyzing political and cultural aspects, chronologically organized. We will begin studying the origins of the multi–ethnic societies, starting with the ancient civilizations and their transformation under colonization. It is important to understand the survival of cultural traits among indigenous peasants today in the countries that were the cradle of ancient civilizations: Mexico, Guatemala and the Andean countries. In the republican era the course will focus on the classical Caribbean dictatorships in the first half of the 20th century and their reflection in the literature, comparing the historical reality with the magic representation in the work of Garcia Marquez. The course will scrutinize the most important revolutions in the continent: the Mexican, Cuban and Bolivian revolutions and the geopolitics of USA in the Americas. Weekly lectures related to the assigned reading will focus on specific periods, topics and regions. After each lecture, we will review the material, connecting specific details from the readings with the more theoretical aspects provided in my lecture. The course has a website where the PowerPoint presentations will be posted. Students are encouraged to post their questions, comments and suggestions on the web after their readings. Students will be given a study guide for each lecture, which will be the basis for the exams. Our perspective on Latin America will be enhanced by a selection of few films related to the topics.
Instructor(s): M. von der Heydt-Coca
Area: Humanities, Social and Behavioral Sciences.

Center for Africana Studies
AS.362.111. Introduction to African American Studies. 3.00 Credits.
Introduction to Africana Studies is designed to introduce you to the core concepts, theories, and thinkers of the black diaspora by means of a “keyword” approach. Each week we will focus on one keyword and the way it both shapes and is shaped by the African diaspora from the Trans-Atlantic Slave Trade to the middle of the twentieth century. I argue that much of the modern project, the assembly of institutions, ideas, interests, and identities, is a product of the brutal encounter between Europe, the Americas, and Africa. It is my hope that by the end of this course we will know more about how this encounter helped to construct modernity, and we will also know a bit more about how this encounter helped shape responses to it.
Instructor(s): K. McDonald
Area: Humanities, Social and Behavioral Sciences.

Study of Women, Gender, and Sexuality
http://anthropology.jhu.edu/wgs/index.html
The Program for the Study of Women, Gender, and Sexuality works to catalyze intellectual discussions—at Johns Hopkins, in Baltimore, and beyond—in which gender and sexuality concerns play important roles.

We are a forum that brings together undergraduates, graduate students, and faculty from different departments who share an interest and a need to address and interrogate their research fields from a queer, feminist, or otherwise gender- and sexuality-inflected perspective.

The activities of the program integrate teaching and research on all levels. Most importantly, the program encourages and supports initiatives for research projects, events, and curriculum developments emerging from all parts of the JHU campus—undergraduate students, graduate students, and faculty alike.

WGS brings new scholarship into conversation on campus in three main ways. First, the program sponsors a seminar series that brings speakers from academia and the broader community to Johns Hopkins University. Second, we organize workshops each semester around multiyear themes, such as “Affect and Emotion” and “Medical Humanities.” Finally, we bring renowned scholars and public figures to the Homewood campus through our annual Visiting Distinguished Professorship. Recent visiting professors have included Karen Barad (University of California-Santa Cruz), Joan Wallach Scott (Institute for Advanced Studies), Trinh-Minh Ha (University of California-Berkeley), and Michael Warner (Yale University).

WGS offers an undergraduate minor that enables students to devote a portion of their education to the study of women, gender, sexuality, and related issues. WGS also offers research fellowships for undergraduate and graduate students. Graduate students also have the opportunity to design and teach a course.

Through both interdisciplinary and specialized courses, students are encouraged to develop critical and comparative approaches to the study of gender and sexuality—often in interaction with related issues such as race, class, global health, and violence. Courses in the program are taught by prominent faculty members from across the disciplines and are cross-listed through a variety of departments. New courses are added frequently.

WGS also offers an undergraduate Seminar/Practicum, where students combine volunteer work in a local social service agency with a seminar
that explores the connections between social justice and academic inquiry.

Minor Requirements

Students can receive a minor in women, gender, and sexuality by completing six one-semester courses. The following courses constitute the WGS core curriculum (363 prefix); they are offered every year:

- Introduction to the Study of Women, Gender, and Sexuality
- Feminist and Queer Theory
- Gender and Sexuality Beyond the Global West
- Poetics and Politics of Sex
- Health, Medicine, Gender, and Sexuality
- Internship/Practicum (offered in collaboration with the JHU Center for Social Concern, the internship-practicum combines academic work with volunteer experience)

Students are asked to complete at least two courses from the core WGS curriculum and may choose among the courses cross-listed with other departments for the remaining four. No more than two courses can be lower level (100 or 200). Students must earn a C- or better in all minor requirements and courses may not be taken satisfactory/unsatisfactory.

Please direct inquiries about the undergraduate minor to Katrin Pahl (kpahl@jhu.edu).

Minor Requirements

Two core courses (selected from the following): 6

- AS.363.201 Introduction to the Study of Women, Gender, and Sexuality
- AS.363.230 Life, Vitality, Affect: History of Science and Sexuality
- AS.363.233 Introduction to Feminism and Queer Theory
- AS.363.251 Religion and Sexuality
- AS.363.260 Gender, Citizenship, and Politics
- AS.363.300 Thirty Years of AIDS: Fatigue, Failure and Fantasies
- AS.363.301 Feminist and Queer Theory: Politics and Performance
- AS.363.325 Black Women, Feminism and Activism
- AS.363.333 The Poetics and Politics of Sex
- AS.363.350 Gender, Sexuality, and Religion: Muslim (In)Visibilities
- AS.363.410 Worshipped Goddesses, Worshipping Women: Femininity, Religion, and Mythology in Ancient Greece
- AS.363.417 Internship/Practicum: Critical Theory and the Possibility of Social Justice

Four additional Women, Gender and Sexuality courses 12

Total Credits 18

* At least four 300- or 400-level courses are required for the minor.

Courses

AS.363.201. Introduction to the Study of Women, Gender, and Sexuality. 3.00 Credits.

This course offers an introduction into the fields of Women's Studies, Gender Studies, and Sexuality Studies. It explores why we need these fields of inquiry, how they have emerged historically, what some of the major and most interesting contributions are and where we might go from here. The course is meant as a preparation for the other WGS core courses.

Instructor(s): E. Ender
Area: Humanities, Social and Behavioral Sciences.

AS.363.230. Life, Vitality, Affect: History of Science and Sexuality. 3.00 Credits.

What is the relationship between biology and sexual identity? Feminists have until recently shunned answering this question, insisting instead on the cultural and linguistic construction of sexuality. In this course, we will investigate the history of the turn to affect, which has overthrown barriers between science and identity, biology and culture.

Instructor(s): L. McGrath
Area: Humanities, Social and Behavioral Sciences.
AS.363.233. Introduction to Feminism and Queer Theory. 3.00 Credits.
This course will encourage encounters with a number of concepts from a critical gendered perspective, including: sameness/difference, identity politics, race/gender, loyalty, security, queer ethics, and queerness in media.
Instructor(s): C. Phillips
Area: Humanities, Social and Behavioral Sciences.

AS.363.251. Religion and Sexuality. 3.00 Credits.
The Mystical Body. Incarnation, Experience and the Feminine from Hadewijch to Irigaray. In this course we will examine the writings of female mystics from Hadewijch and Angela of Foligno to Teresa of Ávila and analyze the interrelations of religion, sexuality and gender in the constitution of ecstatic mystical experience — an experience of the divine, or so the mystics allege, as bodily as it is spiritual. This idea of bodily experience — and particularly, of feminine bodily experience — as the potential site of transcendence we will subsequently trace in the writings of twentieth century French thought — particularly De Beauvoir, Bataille, Lacan and Irigaray. Is there such a thing as mystical experience beyond God?
Instructor(s): M. Buijs
Area: Humanities, Social and Behavioral Sciences.

AS.363.260. Gender, Citizenship, and Politics. 3.00 Credits.
This course examines the role of gender in theories of citizenship. It asks how the concept of gender frames thinking on equality, sovereignty, militarism, and imperialism. Readings will include Machiavelli, Pateman, Foucault, and Butler.
Instructor(s): D. Denman
Area: Humanities, Social and Behavioral Sciences.

AS.363.300. Thirty Years of AIDS: Fatigue, Failure and Fantasies. 3.00 Credits.
This course is designed to study the emergence of the concept of AIDS Fatigue that is being used to describe the current moment of this epidemic. Cross-listed with Anthropology
Instructor(s): V. Saria
Writing Intensive.

AS.363.301. Feminist and Queer Theory: Politics and Performance. 3.00 Credits.
This course will encourage encounters with a number of concepts from a critical gendered perspective, including: sameness/difference, identity politics, race/gender, loyalty, security, queer ethics, and queerness in media.
Instructor(s): K. Goktepe
Writing Intensive.

AS.363.302. Queer Identity?. 3.00 Credits.
What does queer mean? And who gets to say? This course examines tensions, ambiguities, and contradictions that have emerged in popular, political, and theoretical discourses over the past 25 years.
Instructor(s): J. Chilton
Area: Humanities, Social and Behavioral Sciences.

AS.363.303. Feminism and Queer Theory: The Master's Tools Will Never Dismantle the Master's House. 3.00 Credits.
As a Black lesbian woman, Lorde denounced white feminism for being complicit with patriarchy by not acknowledging marginal women’s experiences as a source of strength and creativity. Inspired by the title and impetus of Lorde’s essay, this course seeks to ask what happens when we start seeing the world through unfamiliar, alternative, tools or sensibilities? What different pictures of critique—ones that don’t merely focus on replacing the master’s house with other strong edifices—are allowed to emerge? With these questions in mind, the main objective of this course is to expose us to alternative sensibilities and ways of thinking offered by voices that experience gender and sexuality beyond conventional Western norms and counter-norms.
Instructor(s): T. Zille
Area: Humanities
Writing Intensive.

AS.363.304. Love and Its Discontents. 3.00 Credits.
This course aims to familiarize students with a wide-range of feminist and queer conceptions of love as a political force. While reading theoretical texts and selections of poetry, students will be encouraged to interrogate the political implications of different conceptions of love, Eros, and desire.
Instructor(s): K. Glanz
Area: Humanities.

AS.363.315. Genes, Gender and Reproduction in 20th Century America. 3.00 Credits.
Using the tools of historiography, anthropology and cultural studies, this course will discuss 20th and 21th century debates about gender, genetics and reproduction, family, bioethics and biomedical technology.
Instructor(s): M. Schmidt
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.363.316. Health, Medicine, Gender, and Sexuality: Gender, Sexuality, and AIDS in Africa. 3.00 Credits.
This course uses historical sources to connect constructions of gender and sexuality in Africa from the pre-colonial, colonial, and post-colonial periods to the epidemiology, politics, and culture of the AIDS epidemic.
Instructor(s): J. Cummiskey
Area: Humanities, Natural Sciences
Writing Intensive.

AS.363.325. Black Women, Feminism and Activism. 3.00 Credits.
This course will explore the intersection of race, gender/sexuality and class in regards to activism and social justice by considering black feminist thought and the experiences of black women activists in the 20th century.
Instructor(s): A. Davis
Area: Humanities.

AS.363.326. Capitalism and Gender. 3.00 Credits.
This course explores a range of critical work relating capitalism to gender, sex, and sexuality: from theoretical accounts of witchcraft, marriage, and prostitution at the birth of capitalist social relations, to classic feminist debates around housework and reproduction, to contemporary thought on affect, finance, and the global dimensions of women’s labor. As a centerpiece to the course we will read sections from Capital, interrogating the place of gender in Marx’s text while developing a grasp of its arguments and influence.
Instructor(s): C. Westcott
Area: Humanities
Writing Intensive.
AS.363.327. Gender and Sexuality beyond the Global West: Feminism and Homosexuality in the Islamic World. 3.00 Credits.
This course explores the emerging discourses on gender and sexuality in Islam. As minorities, women and homosexuals developed a shared interest in exegetic tools challenging the dominant narratives that shaped a so-called Muslim tradition. We will investigate disruptive narratives that take place within theological debates but we will also grapple with discourses that have been produced on women and homosexuals in the Islamic world. We will deal with the question of imposing on Muslims a specific conception - that a good amount of scholars have identified as being western - of homosexuality and feminism. A set of questions will guide us through our readings: does sexuality constitute an identity or refer to a practice? Should equality be reduced to identity or can it be understood differently? Are agency and freedom best manifested through subversion and opposition?
Instructor(s): M. Banahi
Area: Humanities

AS.363.333. The Poetics and Politics of Sex. 3.00 Credits.
A History of Pornography. This course traces several problematics in the history of Anglophone pornography from the nineteenth century to the present: contested sexual knowledge; pornography's reinforcement of or challenges to existing power relations; and cultural and legal determinations over and regulations of pornographic material. Treating pornography as a dynamic cultural construct, it considers historically contingent meanings of pornographic representation across a variety of media.
Instructor(s): L. Pepitone
Area: Humanities, Social and Behavioral Sciences.

AS.363.334. The Poetics and Politics of Sex: Gender and Sexuality in Twentieth Century European Empires. 3.00 Credits.
This course explores themes around sexuality and empire in nineteenth and twentieth century European empires, including (but not limited to) the gendered policies of colonial regimes, how colonialism encouraged ideal forms of femininity and masculinity, and nationalist feminisms in the era of independence.
Instructor(s): S. Rahnama; S. Stewart
Area: Humanities
Writing Intensive.

AS.363.340. Costumes and Masquerades of the Self. 3.00 Credits.
Instructor(s): E. Ender
Area: Humanities.

AS.363.350. Gender, Sexuality, and Religion: Muslim (In)Visibilities. 3.00 Credits.
"Muslim (In)Visibilities" focuses on gender and sexuality through Orientalism. It considers representations of Muslim bodies within popular Western discourses and what such (in)visibilities are productive of.
Instructor(s): M. Banahi
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.363.355. Poetics and Politics of Sex: Intimacy and Its Discontents. 3.00 Credits.
Where might one turn for intimacy if its available forms are dissatisfying? What happens when politics authorizes certain forms of intimacy but not others? How might intimacies and their discontents lack a language to do them justice? This course explores problems with normative intimacies such as monogamy, family, and intimate publics. It covers issues such as optimism, ambivalence, trauma, queerness, war, and longing. It also explores how authors try to describe intimacy through different genres, such as poems, aphorisms, novellas, essays, and scholarly articles.
Instructor(s): C. Shomura
Area: Humanities
Writing Intensive.

AS.363.410. Worshipped Goddesses, Worshipping Women: Femininity, Religion, and Mythology in Ancient Greece. 3.00 Credits.
This course examines the Greek goddesses and heroines and the ways in which women worshipped them in antiquity, using an interdisciplinary approach, incorporating literary, iconographical, and archaeological evidence.
Instructor(s): S. Stern.

AS.363.417. Internship Practicum: Critical Theory and the Possibility of Social Justice. 4.00 Credits.
This course combines a weekly seminar with 4 hours per week in a Baltimore social justice organization, coordinated by the JHU Center for Social Concern. Class discussions draw on readings in ethnography and feminist, queer and critical race studies to address topics such as; race, class and gender inequality, neoliberal development, health, institutional violence and politically engaged research.
Instructor(s): A. Krauss
Area: Humanities, Social and Behavioral Sciences.

AS.363.418. Internship Practicum: Feminist Ethnographic Methods and Social Justice Organizations. 3.00 Credits.
This course is for students who are working with social justice organizations. It will introduce students to ethnographic research that is informed by feminist methodologies of listening, care, ethics, and structural analysis. Methods will be oriented to the "inside" and "outside" of organizations. "Inside" the organization might refer to listening to marginalized voices, examining the place of bureaucracy and paperwork, and engaging with activist research and records. Reaching beyond the organization proper, we will learn to analyse localities, and less tangible zones such as social media, political networks, and the state.
Instructor(s): M. Sehdev
Area: Humanities.
AS.363.420. Stories of Hysteria. 3.00 Credits.
Hysteria, an elusive and polymorphous disease associated with the female body, was first diagnosed in Greek Antiquity. When, in the late nineteenth-century, Sigmund Freud decided to study it, he made discoveries that shaped in a decisive way the new science of psychoanalysis and offered new foundations for discussions of what we might now call “psychosomatic illness.” Though rarely diagnosed nowadays, hysteria provides a fascinating introduction to medical, clinical, social, and ethical questions connected to gender that have lost none of their relevance. We will study fictional narratives from the 18th century to the present as if they were case-studies— as a way of appraising hysteria’s changing and provocatively volatile definitions across time and in different cultural frameworks. Among our topics: trauma and PTSD, the concept of repression, masculinities, women and madness, and, above all, transformations in gender roles and identities in the modern era. In addition to selected readings of medical and historical materials available on Blackboard, texts for study are: The Nun (Diderot), Trilby (du Maurier), Fragment of a Case of Hysteria (Freud), Regeneration (Barker), The Icarus Girl (Oyeyemi), Redeployment (Klay).
Instructor(s): E. Ender
Area: Humanities.

AS.363.502. Independent Study. 3.00 Credits.
Instructor(s): K. Pahl.

AS.363.601. WGS Graduate Colloquium.
Presenting new scholarship and art, the WGS Graduate Colloquium will catalyze intellectual discussions in which gender and sexuality concerns play important roles. The seminar includes lectures by invited speakers and a film series. Graduate students are encouraged to develop critical and comparative approaches to the study of gender and sexuality—often in interaction with related issues such as race, class, violence, law, medicine, art, and emotionality. This seminar can be taken for credit or audit.
Instructor(s): K. Pahl; T. Shepard
Area: Humanities.

Cross Listed Courses

History of Art
AS.010.327. The Harem and the Veil: Space and Gender in the Islamic World. 3.00 Credits.
This course explores the constructed imagery of the harem and the veil in relation to politics and visual culture in the Middle East, North Africa, India, and Euro-America. Topics will include: Ottoman palace architecture, Orientalist painting, mandating/banning the veil, Islamic feminisms. We will address visual culture broadly, including advertising, architecture, contemporary art, film, news media.
Instructor(s): R. Brown
Area: Humanities
Writing Intensive.

Classics
AS.040.140. Gender and Sexuality in Early Greece and the Eastern Mediterranean. 3.00 Credits.
In this course we will explore evidence and interpretations of gender and sexuality in the region of the Aegean and eastern Mediterranean during the third and second millennia BCE. Material investigated will include the “snake goddess” figures from Minoan Crete, anthropomorphic figurines from the Cyclades and Cyprus, wall paintings, etc. In each case we will consider the history of interpretation as well as investigate the objects’ archaeological and sociocultural contexts. Discussion topics will include representational ambiguity, the specific materialities of objects, and possible roles in activities construing gender. The course will incorporate material from the JHU Archaeological Museum.
Instructor(s): E. Anderson
Area: Humanities.

AS.040.142. Spartacus, Caesar, and Cleopatra: Notorious Characters from Roman History and Hollywood Cinema. 3.00 Credits.
Since the invention of cinema, the ancient world has been an important vehicle for both lavish visual spectacles and the exploration of contemporary social issues. This course analyzes the depiction of the infamous figures of the late republic in both ancient sources and modern media, to examine how ancient Rome and contemporary America have used these characters to contemplate race, class, gender, and imperialism.
Instructor(s): G. Gessert
Area: Humanities.

AS.040.218. Celebration and Performance in Early Greece. 3.00 Credits.
Surviving imagery suggests that persons in Minoan and Mycenaean societies engaged in various celebratory performances, including processions, feasts, and ecstatic dance. This course explores archaeological evidence of such celebrations, focusing on sociocultural roles, bodily experience, and interpretive challenges.
Instructor(s): E. Anderson
Area: Humanities.

English
AS.060.201. The Nineteenth Century British Novel. 3.00 Credits.
Reading major novelists from the nineteenth century including Austen, C. Brontë, Dickens, Eliot, Hardy, and Conrad. We will pay attention to formal conventions, and relation to social and historical context.
Instructor(s): J. Rosenthal
Area: Humanities.

AS.060.319. Values and Gender in Nineteenth-Century British Literature. 3.00 Credits.
The course considers how nineteenth-century British authors—including Ruskin, Gaskell, Eliot, and Wilde—engage and oppose various sets of values in their representations of gender.
Instructor(s): M. Flaherty
Area: Humanities
Writing Intensive.
AS.060.320. Icons of Feminism. 3.00 Credits.
This course looks at four crucial figures who have haunted feminist thought and responses to feminism over the centuries. Sappho, known as the first female poet, remains an enigmatic icon of feminine desire and creativity; Antigone, the daughter of Oedipus and the heroine of Sophocles’s play Antigone, still inspires feminist analyses of women’s relationship to law, the state and civil society; and Joan of Arc, the militant maid of Orleans, troubles thinking about women and violence as well as women, religion and spirituality. The last figure is Mary Wollstonecraft, often cited as the first modern feminist. The course will examine literary works written about these iconic figures, as well as contemporary feminist writing about their influence and viability as models for the future of feminism.
Instructor(s): M. Favret
Area: Humanities
Writing Intensive.

AS.060.348. Virginia Woolf and Bloomsbury. 3.00 Credits.
An exploration of the achievements and investments of one of the most influential coteries in the history of Britain. In addition to delving into key fictions by Virginia Woolf, we will examine novels by Leonard Woolf and E. M. Forster, art criticism by Roger Fry and Clive Bell, biographical essays by Lytton Strachey, economic writings by John Maynard Keynes, and poetry by T. S. Eliot.
Instructor(s): D. Mao
Area: Humanities
Writing Intensive.

AS.060.388. Old World/New World Women. 3.00 Credits.
The course considers the transatlantic writing of three women in the early modern period, Anne Bradstreet, Aphra Behn, and Phillis Wheatley. We will consider issues of identity, spatiality, religion, commerce, enforced labor, sexuality, race, and gender, along with literary tradition, formal analysis and poetics. We will read a good deal of these early women writers. Foremost in our mind will be the question of how perceptions of space and time are mediated through the global experiences of early modernity.
Instructor(s): S. Achinstein
Area: Humanities
Writing Intensive.

AS.060.398. Obscenity and the Law in 20th-Century Literature. 3.00 Credits.
In order to log on to JHU’s GuestNet you must “agree that your activities on the Guest Network shall not...[among other things] be obscene.” But what is obscene? What does the law determine as obscene today, and how has that determination changed over the past century? These questions will lead us to considerations of publicity and privacy, morality and standards of decency. This course will examine artworks and performances in a variety of media that have been publicly accused of indecency or obscenity. We will read legal judgments of obscenity and discuss their implications for figures such as Wilde, Joyce, Miller, Ginsberg, Bruce, Carlin, Prince, 2 Live Crew, and others.
Instructor(s): J. Chilton
Area: Humanities
Writing Intensive.

Film and Media Studies
AS.061.323. Masculinities. 3.00 Credits.
Prereq: One Core Course Or Permission From tap dancer to gangster, assassin to anguished teen, versions of the male in film from the silent era to the present. Cross-listed with Studies of Women, Gender, and Sexuality
Instructor(s): L. Bucknell
Area: Humanities.

AS.061.389. Women Making Movies (Europe). 3.00 Credits.
This course introduces students to some of the most exciting female directors of the 20th century, asking how gender shaped the production and reception of their films. Do particular directors attribute any significance to the fact of being a woman? Does a director’s gender shape her choice of subject or how she represents it? Does wider knowledge of works directed by women change our sense of the canon and authorship? Covers non-U.S. films, strongly encouraged for FMS majors and minors. Cross-listed with WGS. No pre-requisite.
Instructor(s): L. Mason
Area: Humanities.

AS.061.391. Love and Film. 3.00 Credits.
In this course, we explore different understandings of love and the way that film has dealt with the concept as a medium. We explore a variety of approaches to the question of love - from the agapic to the familial to the romantic - through a series of interdisciplinary readings ranging from philosophy to anthropology. We will also equally explore the question of how film has engaged with the question of love as a concept, and what depictions of human affection - from the general to the personal - it has offered us. Screenings are required for this course. $40 Lab fee. Cross-listed with Study of Women, Gender and Sexuality
Instructor(s): M. Ward
Area: Humanities.

AS.061.397. French Masculinities. 3.00 Credits.
Examines changing ideals of masculinity in France after 1960 as they found expression on film, rooting the work of iconic stars and directors in their cultural, political and historical contexts.
Instructor(s): L. Mason
Area: Humanities
Writing Intensive.

Anthropology
AS.070.179. Child Adoption and Family Making. 3.00 Credits.
The course takes child adoption as a starting point to critically explore how kinship and family are connected to legal practices, technological innovations, and broader historical, political, and socio-economic processes. Dean’s Prize Freshman Seminar
Instructor(s): A. Reyes Kipp
Area: Humanities, Social and Behavioral Sciences.

AS.070.304. Child Adoption and Family Making. 3.00 Credits.
The course takes child adoption as a starting point to critically explore how kinship and family are connected to legal practices, technological innovations, and broader historical, political, and socio-economic processes. Cross List: WGS, PLAS. Dean’s Teaching Fellowship Course.
Instructor(s): A. Reyes Kipp
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.070.327. Poverty's Life: Anthropology of Health & Economy. 3.00 Credits.
Medicine, economics, and ethics have profoundly shaped debates on poverty. This course analyzes these debates and tracks the relationships between body, economy, and the everyday. How can anthropological reasoning and methods inform approaches to health and economic scarcity and insecurity?
Instructor(s): C. Han
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.385. From Sexual Nature to Sexual Politics. 3.00 Credits.
This course traces anthropological concern with questions of sexuality. Students will explore anthropological notions of primitive promiscuity, cultural configurations of the correspondence between sex, procreation, and birth, and ideas about sexual rites of passage. The course will end with a discussion of sexual politics in Euro-America and public concern over HIV/AIDS. The course draws on the work of Freud, Malinowski, Meade, Herdt, Povinelli, Rubin, Bersani and Halperin. Cross-listed with Women Gender Studies
Instructor(s): A. Goodfellow
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

History

AS.100.311. National Pastimes: Sports, Culture, and American History. 3.00 Credits.
National Pastimes examines the development of sports in the United States over the course of the 20th century with a particular interest in the relationship between sports and politics as well as issues of race, gender, sexuality and class.
Instructor(s): A. Davis
Area: Humanities, Social and Behavioral Sciences.

AS.100.327. Gender and Sexuality in Reformation and Counter-Reformation Europe. 3.00 Credits.
This course will discuss the centrality of gender, sexuality, and gendered rhetoric to the genesis and development of the Protestant Reformation and Catholic Counter-Reformation in Europe.
Instructor(s): J. Keene
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.333. Global Public Health Since World War II. 3.00 Credits.
Globalization has dramatically reshaped the world economy, providing great advantages to some but leaving poor nations to struggle with hunger, disease and death on a daily basis. This course explores the impact of globalization on public health in the developed and the developing nations since 1945. Cross-listed with Public Health Studies
Instructor(s): B. Morgan; L. Galambos
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.334. Gender and the Economy in America, 1600-1870. 3.00 Credits.
Examines white, African, and Native American women’s economic activities in early America, including as laborers, entrepreneurs, and consumers. Also considers women’s economic and political roles during the Revolution and Civil War.
Instructor(s): S. Damiano
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.357. Panic and Liberation: The Politics of Sex in 20th Century Europe. 3.00 Credits.
This course examines the 20th century history of sexual attitudes, desires, behaviors, identities, communities, and movements in Western Europe (most notably, Germany, France, and the United Kingdom).
Instructor(s): T. Shepard
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.372. The Victorians. 3.00 Credits.
This course focuses on the politics of everyday life, consumption, intimate relations, and concepts of the self in Britain and its empire in the long nineteenth century. We devote particular attention to visual culture, entertainment, and the built environment. Course themes include popular nationalism; class differences; gender and body politics; and imperial expansion and racial thought.
Instructor(s): L. Pepitone
Area: Humanities, Social and Behavioral Sciences.

AS.100.397. U.S. Histories Male and Female. 3.00 Credits.
This seminar will be devoted to exploring gender differences as they have been expressed in a sequence of autobiographies and autobiographical fiction set in a shifting social and historical context.
Instructor(s): M. Ryan
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.424. Women & Modern Chinese History. 3.00 Credits.
This course examines the experience of Chinese women, and also how writers, scholars, and politicians (often male, sometimes foreign) have represented women’s experiences for their own political and social agendas. Cross listed with East Asian Studies.
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.426. Popular Culture in Early Modern Europe. 3.00 Credits.
Witchcraft, magic, carnivals, riots, folk tales, gender roles; fertility cults and violence especially in Britain, Germany, France, and Italy.
Instructor(s): J. Marshall
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.498. History of the Family & Gender in the United States. 3.00 Credits.
Topics include: history of emotions; politics of sexuality and marriage; impact of race, ethnicity, and class on family life; women and gender inequality. Primarily colonial era through the early twentieth century, with some attention to contemporary politics of family, gender, and sexuality.
Instructor(s): T. Ditz
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.635. Topics in European Imperial History.
This graduate reading course covers key topics in European Imperial History, c. 1600-1900.
Instructor(s): G. Paquette
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
Near Eastern Studies
AS.130.105. Freshman Seminar: Sex, Drugs, and Rock & Roll in Ancient Egypt. 3.00 Credits.
This seminar explores the social roles of sexuality, alcohol, other drugs, music, fragrance, and sensuality in secular and religious areas of Egyptian life, largely but not exclusively during the New Kingdom, ca. 1500 to 1000 B.C. The ancient attitudes towards these elements will be explored through the ancient textual sources in translation and the artistic representations.
Instructor(s): B. Bryan
Area: Humanities Writing Intensive.

AS.130.330. The Garden of Eden. 3.00 Credits.
References to the story of the Garden of Eden can be found in every significant issue of our time, from sex to politics, from race to the environment. The course will examine the story itself as well as how it's been interpreted, leading up to today. Enthusiastic participation required.
Instructor(s): E. Robbins
Area: Humanities.

History of Science Technology
AS.140.304. Medicine for and by Women in Early Modern Europe. 3.00 Credits.
This course will examine women's role in early modern European medicine through the reading of early modern medical texts written for or by women. The course is meant for students interested in women's history, the history of medicine, European history.
Instructor(s): G. Pomata
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.350. Disability in 20th century America: Rights, Restrictions, Reproduction. 3.00 Credits.
Is disability a biological fact or determined by culture? This class discusses different ideas of difference in the context of disability rights, professional power, reproductive technology and bioethics. Cross-listed with Studies of Women, Gender, and Sexuality
Instructor(s): M. Schmidt
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.353. Women, Health, and Medicine in Modern America. 3.00 Credits.
This course explores women's interactions with science, medicine, and health in the late-19th and 20th century United States. It is framed by an interest in medicalization, sex/gender, and feminism. Cross-listed with Studies of Women, Gender, and Sexuality.
Instructor(s): D. Stillwell
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.150.495. Sex, Drugs, and Bioethics: Medicine and Morality in Modern America. 3.00 Credits.
Alongside rock n' roll, sex and drugs have classically been seen as sites of moral or ethical transgression, particularly in post-war America. Unlike rock n' roll, however, sex and drugs have always been bound up with the practice of medicine. This course explores the interaction of medical science with the moral and ethical issues which surround i) reproduction, sexual pleasure, and gender roles and ii) the use of drugs, both therapeutic, enhancing and recreational. Bridging these two sides of the course is the question of medicalisation, and how medical science is used to construct socially normative ideals about sexuality, behavior, emotion and physical capacity, and how in turn those moral norms are used to justify or argue for the development of particular medical practices. The aim of the course is to illuminate the mutually constitutive interplay of medicine and morality in modern America. Topics covered include: abortion, contraception, IVF, sex-selection, gene selection, adolescent sexualities, prostitution, STD surveillance, medicalisation of sexual dysfunction, medicalisation of emotion and behavior, 'moral enhancement', ADHD, Performance Enhancing Drugs, cosmetic surgery, neuroenhancement, recreational drugs, the war on drugs, the purpose of medicine.
Instructor(s): D. O'Connor
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

Economics
AS.180.252. Economics of Discrimination. 3.00 Credits.
This course examines labor market discrimination by gender, race and ethnicity in the United States. What does the empirical evidence show, and how can we explain it? How much of the difference in observed outcomes is driven by differences in productivity characteristics and how much is due to discrimination? How have economists theorized about discrimination and what methodologies can be employed to test those theories? What has been the impact of public policy in this area; how do large corporations and educational institutions respond; and what can we learn from landmark lawsuits? The course will reinforce skills relevant to all fields of applied economics, including critical evaluation of the theoretical and empirical literature, the reasoned application of statistical techniques, and analysis of current policy issues.
Prerequisites: AS.180.102
Instructor(s): B. Morgan
Area: Social and Behavioral Sciences Writing Intensive.

Political Science
AS.190.331. Comparative Racial Politics. 3.00 Credits.
Students will learn to utilize qualitative, interpretive methods of comparative politics to examine dynamics of racial and/or ethnic politics in the nation-states of Cuba, Brazil, Britain and France, Germany, and the United States. Readings will emphasize the role of the state, political economy, national culture, racist ideologies and anti-racist politics in the formation, maintenance and transformation of conditions of race-based inequalities. Students will also become familiar with theories and concepts of race and ethnicity, and the histories of social movements in the aforementioned societies founded, in part, on racial and/or ethnic identification as a response to inequality. Formerly titled: Race and Racism in Comparative Perspective.
Instructor(s): M. Hanchard
Area: Social and Behavioral Sciences.
AS.190.605. Women in Dark Times.
A survey of contemporary female voices—feminist and nonfeminist—in political theory. Questions raised and addressed: How is power defined and distributed? What constitutes political action? What is the relationship of bodies to politics? Among others we will read Cristina Beltrán, Judith Butler, Jodi Dean, Bonnie Honig, and Melissa Lane.
Instructor(s): J. Bennett; J. Culbert.

AS.191.105. The Bad Good Life: Cruel Optimisms, Bad Romances, and Other Political Depressions. 3.00 Credits.
What if the good life that we desire turns out to be bad? This course explores the intersections of personal and political life when our hopes turn out to be damaging to ourselves or to others. Potential issues include: positive thinking, the American Dream, love, queer survival, failure, ecological crises, and the end of the world. Dean's Teaching Fellowship. Freshmen Only.
Instructor(s): C. Shomura
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.311. The Public Life of Personal Narrative. 3.00 Credits.
Michel Foucault once declared that “Western man has become a confessing animal.” In the era of Facebook and YouTube, we seem to be moving closer and closer to this definition, as we divulge increasingly private details about ourselves to increasingly broad publics. The hopes and anxieties that have attached themselves to these new media and technology, however, are not entirely novel. This course departs from a set of questions about contemporary uses of self-exposure, then turns to an examination of theoretical texts and autobiographical materials spanning several centuries, slowly winding our way back to the present. The aim of our journey will be to arrive at a fresh understanding of the political functions of personal narratives in our own time.
Instructor(s): N. Gies
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.326. Sex, Gender and War. 3.00 Credits.
In this course we will explore what different perspectives on sex and gender from feminist theory and the social sciences have to contribute to the understanding of key questions about the nature of war. Topics covered include nuclear politics, the concept of a just war, terrorism and the War on Terror, and humanitarian wars. This is a discussion seminar involving approximately 20 pages of writing. It also presupposes prior work in International Relations.
Instructor(s): L. Wilcox
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.363. Impasse Matters: The Politics of Unmaking Lives. 3.00 Credits.
What happens when our images of the good life seem to be harming us? When letting go of hopes, relationships, and attachments is so hard or painful that we cling to them and risk being destroyed? What might we do so that unmaking our lives becomes preferable to keeping a damaging one? This course explores such impasse matters, where political and personal life meet in struggles to endure, change, and thrive. Specific impasses that might arise in our discussions include the American Dream, intimacy, and climate change. We will engage readings and films of diverse genres to grapple with the threat and promise of the unmaking of our lives. Dean’s Teaching Fellowship course.
Instructor(s): C. Shomura
Area: Social and Behavioral Sciences
Writing Intensive.

Psychological Brain Sciences
AS.200.204. Human Sexuality. 3.00 Credits.
Course focuses on sexual development, sexuality across the lifespan, gender identity, sexual attraction and arousal, sexually transmitted disease, and the history of commercial sex workers and pornography. Please note that the use of electronic devices is not permitted during this class, in order to promote the full interactive potential of this engaging seminar-style offering. Open to Seniors within the following majors/ minors: Behavioral Biology; Biology; Cognitive Science; Medicine, Science & the Humanities; Molecular & Cellular Bio; Neuroscience; Psychology; Public Health; Sociology; Study of Women, Gender, & Sexuality.
Prerequisites: Students may enroll in both AS.200.204 and AS.290.420, but cannot do so in the same semester.
Instructor(s): C. Kraft
Area: Social and Behavioral Sciences
Writing Intensive.

German Romance Languages Literatures
AS.211.237. Literature and Medicine. 3.00 Credits.
Taught in English. The course will analyze literary representations of illness as well as explore interfaces between literary and medical knowledge in more general ways. Both literature and medicine can be considered semiotics as they deal with the study of signs; further, both are invested in interpretation. We will analyze the relation between literature and madness, explore “illness as metaphor” (Susan Sontag) and discuss case studies in relation to literary genres (for example, Freud is surprised to notice that his studies on hysteria read like novellas). As prominently depicted in Thomas Bernhard’s In the Cold and theoretically analyzed by Michel Foucault, the course will further address the nexus between medical institutions and power. Readings will include: Antonin Artaud, Thomas Bernhard, Georg Büchner, Michel Foucault, Sigmund Freud, Henry James, Franz Kafka, Thomas Mann, Daniel Paul Schreber, Susan Sontag, etc. Films: Philadelphia (Jonathan Demme, 1993), Melancholia (Lars von Trier, 2011).
Instructor(s): E. Strowick
Area: Humanities.

AS.211.318. Women in Pre-Modern French Literature. 3.00 Credits.
This course will examine the changes in the relationship of women to literature in France up to the French Revolution from several points of view: (1) What were the social and intellectual contexts of gender distinctions? (2) How did men writing about women differ from women writing about women? (3) How were these questions affected by the changing norms of literary production? Texts by Marguerite de Valois, Mme. de Sévigné, Molière, Mme. de Lafayette, Prévost, Diderot, Rousseau, Mme d’Épinay and Revolutionary memorialists.
Instructor(s): W. Anderson
Area: Humanities
Writing Intensive.
AS.211.364. Drama Queens: Opera, Gender, and the Poetics of Excess. 3.00 Credits.

What is a drama queen? According to the Oxford English Dictionary, a drama queen is “a person who is prone to exaggeratedly dramatic behaviour” and “a person who thrives on being the centre of attention.” While drama queens exist among us, the world of opera is certainly one of their ideal environments. Echoing back to their tragic fates, the powerful voices of Dido, Medea, Violetta, and Tosca never ceased to affect their empathetic public. In fact, excess and overreactions are two main features of the operatic experience both on stage and in the audience. By focusing on the ways in which operatic characters are brought to life, the course explores the social, political, and gender dynamics that inform the melodramatic imagination. Students will have the opportunity to attend live HD broadcasts of Verdi’s La Traviata and Tchaikovsky’s Eugene Onegin from the Metropolitan Opera. No musical skills required.

Instructor(s): E. Refini
Area: Humanities
Writing Intensive.

AS.211.427. Libertoins, Athées, Imposteurs. 3.00 Credits.

An exploration of the clandestine culture of free-thinkers, hedonists and rakes in France in the 17th and the 18th centuries and their strategies for undermining the theological grounding of morality, politics, sexuality and gender. Readings from Descartes, Cyrano de Bergerac, Molière, Diderot, Sade, Laclos and others. Meets with AS.212.427

Instructor(s): E. Russo
Area: Humanities
Writing Intensive.

AS.212.362. Ecrire l’héroïsme au féminin [Writing Heroism in the Feminine]. 3.00 Credits.

How can we define a heroine? What distinguishes heroines from mere female protagonists? Who are the main heroines to have marked the French literary tradition? This course examines how writers have transformed the notion of heroism inherited from Ancient Greece and Rome to lend it different and distinctly gendered shapes in the figure of the female hero: bravery, scandal, crime, sacrifice, nationalism. Focus will be placed on the evolution of the concept from the 17th century to the end of the 20th century in novels and plays by Racine, Madame de Lafayette, Prevost, Balzac, Maupassant, Anouilh, Wittig, and Condé. Recommended Course Background: AS.212.333 or AS.212.334.

Instructor(s): L. Cariou
Area: Humanities.

AS.212.644. Libertinage: entre révolte et fantasme.

The prerevolutionary libertine novel, starring at its center the character of the libertine, is one of the most iconically associated with the French novel and with notions of transgressive "Frenchness," intended both for national use and for export. In the wake of the pioneering work of René Pintard (Le Libertinage érudit dans la première moitié du 17e siècle, 1943) libertinage was emancipated from the fictional realm and promoted to a category of intellectual and cultural history. Yet recent critics have contested the use of this label, arguing that the historical individuals who were so called were a heterogeneous collection who had nothing in common apart from their marginality, which was in turn stigmatized or valorized. The purpose of this course is to examine critically the relationship between fictional and historical libertines, many of which overlap between the "transgressive" and the "erudite" communities, the roles they played in the emergence of the "radical" Enlightenment and scientific materialism, their subversive use of language, the fluctuation between protective strategies of equivocation and the audacity of parrésia.

Readings from trial documents, pamphlets, correspondence, novels and essays, by G. C. Vanini, François Garasse, Antonio Rocco, Théophile de Viau, Descartes, Cyrano de Bergerac, Dassoucy, Bayle, Boyer d'Argens, Voltaire, Sade, Diderot, Laclos.

Instructor(s): E. Russo.

AS.212.783. Diderot, Power and Representation.

A reading of some of Diderot's major works in light of his struggle to break out of imposed and self-imposed hierarchies of style and manner, and to reframe or reform radically the relationship between ethics, politics, sexuality, gender and the arts. Special emphasis on Diderot's self-representation as arbiter of taste, mediator and mentor.

Instructor(s): E. Russo.
Area: Humanities
Writing Intensive.

AS.213.237. Literature and Medicine. 3.00 Credits.

Taught in English. The course will analyze literary representations of illness as well as explore interfaces between literary and medical knowledge in more general ways. Both literature and medicine can be considered semiotics as they deal with the study of signs; further, both are invested in interpretation. We will analyze the relation between literature and madness, explore "illness as metaphor" (Susan Sontag) and discuss case studies in relation to literary genres (for example, Freud is surprised to notice that his studies on hysteria read like novellas). As prominently depicted in Thomas Bernhard’s In the Cold and theoretically analyzed by Michel Foucault, the course will further address the nexus between medical institutions and power. Readings will include: Antonín Artaud, Thomas Bernhard, Georg Büchner, Michel Foucault, Sigmund Freud, Henry James, Franz Kafka, Thomas Mann, Daniel Paul Schreber, Susan Sontag, etc. Films: Philadelphia (Jonathan Demme, 1993), Melancholia (Lars von Trier, 2011).

Instructor(s): E. Strowick
Area: Humanities.

AS.213.310. Classic German Theater. 3.00 Credits.

Taught in German. In this seminar we will read some of the most important plays of German literature, by Lessing, Goethe, Schiller, Kleist, and Büchner. We will explore questions about the role of the theater toward the education of mankind in the spirit of the enlightenment. We will examine how tragedy is reconfigured around the context of the bourgeois family. We will study historical practices of stage production as well as modern filmic and theatrical productions. Finally, we will prepare an informal staging of a play.

Prerequisites: AS.210.361
Instructor(s): K. Pahl.
AS.213.318. The Making of Modern Gender. 3.00 Credits.
Taught in English. Gender as we know it is not timeless. Today, gender roles and the assumption that there are only two genders are diligently contested and debated. With the binary gender system thus perhaps nearing its end, we might wonder if it had a beginning. In fact, the idea that there are two sexes and that they not only assume different roles in society but also exhibit different character traits, has emerged historically around 1800. Early German Romanticism played a seminal role in the making of modern gender and sexuality. For the first time, woman was considered not a lesser version of man, but a different being with a value of her own. The idea of gender complementation emerged, and this idea, in turn, put more pressure than ever on heterosexuality. In this course, we will explore the role of literature and the other arts in the making and unmaking of gender.
Instructor(s): K. Pahl
Area: Humanities.

AS.213.321. Bodies and Pleasures. 3.00 Credits.
Taught in English. This course traces a literary history of sexuality from the Middle Ages to contemporary women’s writing. We will analyze how sexual pleasure changed over time. In particular, we will discuss what role literature plays in the reproduction and transformation of bodily pleasures. The course explores how the pleasures of bodies are imagined in and through literature, but also whether words are bodies that give pleasure and perhaps even have their own pleasures. Authors discussed will include Boccaccio, Céline, Rousseau, Schlegel, Kleist, Hoffmann, Novalis, Arnim, Büchner, Freud, Rilke, Kafka, Rich, Foucault, Kristeva, Cixous, Giddens, and Winterson.
Instructor(s): K. Pahl
Area: Humanities.

AS.213.359. Kleist. 3.00 Credits.
Heinrich von Kleist was one of the most intriguing literary figures of the early nineteenth century in Germany. Neither Classicist nor Romanticist, he developed a unique style that combines such different elements as complex rhythmicality, drastic imagery, and philosophical speculation. His novellas, plays, and nonfiction prose explore questions of gender, colonialism, the tragic, and of innocence and double dealing. Among the texts we will read together are The Betrothal in St. Domingo (Kleist’s literary response to the Haitian revolution), Penthesilea (the play about lovers who can find each other only in war ends in a splatter scene), and Marquise of O (the story of a woman whose father rejects her because she finds herself pregnant, and yet she has no memory of the sexual intercourse that must have led to her current situation). Language of Instruction: German
Prerequisites: Pre-req: AS.210.362
Instructor(s): K. Pahl
Area: Humanities.

We will read texts by Freud, Klein, Lacan, and Laplanche that are of particular interest for literary and social theory. We will discuss recent literary theory and criticism (especially queer literary theory and criticism) that draws on psychoanalysis. In addition, we will consider psychoanalytically inflected thought on sexuality and conformism by members of the Frankfurt School.
Instructor(s): K. Pahl
Area: Humanities.

AS.213.668. Kleist.
This seminar will explore the narrative, dramatic, theoretical and quasi-journalistic work of Heinrich von Kleist along two lines of inquiry. We will read his literary experiments as reactions to the major shift in the sex-gender system and the new deployment of sexuality in the eighteenth century. We will discuss his unique role in the production, communication and interpretation of feeling across narrative and theater.
Instructor(s): K. Pahl.

AS.214.171. Freshman Seminar: Witchcraft and Demonology in Renaissance Europe. 3.00 Credits.
Who were the witches? Why were they persecuted for hundreds of years? Why were women identified as the witches par excellence? How many witches were put to death? (Answer: 30-40,000, between about 1400 and 1800.) What traits did European witchcraft share with witch-mythologies in other societies? After the witch-hunts ended, how did “The Witch” go from being “monstrous” to being “admirable” and even “sexy”? Answers are found in history and anthropology, but also in literature, folklore, music, and the visual arts. After an introduction to ancient and medieval witchcraft, we will study European witch-persecution between 1400 and 1800. The second half of the course will concentrate on artistic representations of witches in media ranging from manuscripts to movies, concentrating on Italy, France, Spain, and Germany.
Instructor(s): W. Stephens
Area: Humanities
Writing Intensive.

AS.214.376. Warrior Women from Ancient Times to Game of Thrones. 3.00 Credits.
This course will trace the origins of the warrior woman from ancient times through today’s pop culture and reflect on the multiplicity of its social, cultural, and political ramifications.
Instructor(s): J. Gomez
Area: Humanities.

AS.215.353. Women Writing in Latin America: Prose and Poetry by Sor Juana, Mistral, Lisóba, Pizarnik, Castellanos, and other poets. 3.00 Credits.
The first objective of the course is to train students in close reading and analysis of literary texts. The second objective is to read prose and poetry by some of the canonical texts in the Latin American tradition written by women. Taught in English.
Instructor(s): S. Castro-Klaren
Area: Humanities
Writing Intensive.

AS.215.422. Amor y romanticismo en una Novela y tres películulas. 3.00 Credits.
Prerequisites: AS.210.311 AND AS.210.312
Instructor(s): E. Gonzalez
Area: Humanities.
Sociology

AS.230.223. Housing and Homelessness in the United States. 3.00 Credits.
This course will examine the role of housing, or the absence thereof, in shaping quality of life. It will explore the consequences of the places in which we live and how we are housed. Consideration will be given to overcrowding, affordability, accessibility, and past and existing housing policies and their influence on society. Special attention will be given to the problem of homelessness.
Instructor(s): M. Greif
Area: Social and Behavioral Sciences.

AS.230.225. Population, Health and Development. 3.00 Credits.
This course will cover the major world population changes in the past century as well as the contemporary situation and projections for this century. Topics include rapid population growth, the historical and continuing decline of death and birth rates, contraceptive methods as well as family planning and child survival programs, population aging, urbanization, population and the environment and the demographic effects of HIV/AIDS.
Instructor(s): S. Becker
Area: Social and Behavioral Sciences.

AS.230.255. Men and Women in Society. 3.00 Credits.
This course will explore what it means to be male or female through academic writings, fiction, and film. It will examine how genders are defined by individuals, cultures, and institutions, and how those meanings shape everyday life for men and women. Power, inequality, and intersections with race-ethnicity, class, and sexuality will be a primary focus. Theories of gender addressed will include those related to masculinity, social psychology, feminism, and intersectionality. Though the course will primarily consider the United States, gender in other countries and cultures will also be addressed. Cross-listed with WGS.
Instructor(s): K. McDonald
Area: Social and Behavioral Sciences.

AS.230.310. Becoming An Adult. 3.00 Credits.
While students may already be personally familiar with the subject matter, the course examines the sociological and psychological dimensions of this demographically dense period known as the transition to adulthood. Emphasizes life course theories of human development through readings of empirical work on adolescence, the transition to college, early employment and early family formation. Attention is paid to the ways class, gender, race and nationality influence the pathways, choices and outcomes of young people. A Statistics/Sociology background is helpful, but not required.
Instructor(s): S. Deluca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.316. African American Family. 3.00 Credits.
This course is an examination of sociological theories and studies of African-American families and an overview of the major issues confronting African-American family life. The contemporary conditions of black families are explored, as well as the historical events that have influenced the family patterns we currently observe. Special attention will be given to social policies that have evolved as a result of the prominence of any one perspective at a given point in time.
Instructor(s): K. McDonald
Area: Social and Behavioral Sciences.

AS.230.336. Family, Gender and Sexuality in China. 3.00 Credits.
This course examines social changes in China since the beginning of the People’s Republic (1949) through the lenses of family, gender and sexuality. The first half of the course focuses on understanding family institutions, women’s status, gender relations and sexualities in connection with major historical transitions between 1949 and the present. The second half includes readings and discussions around several thematic topics regarding family, gender and sexuality in contemporary China in the broader context of politics, economy, and social norms.
Instructor(s): Y. Dong
Area: Social and Behavioral Sciences
Writing Intensive.

AS.280.225. Population, Health and Development. 3.00 Credits.
This course will cover the major world population changes in the past century as well as the contemporary situation and projections for this century. Topics include rapid population growth, the historical and continuing decline of death and birth rates, contraceptive methods as well as family planning and child survival programs, population aging, urbanization, population and the environment and the demographic effects of HIV/AIDS.
Instructor(s): B. Zirkin
Area: Natural Sciences.

Biophysics

AS.250.351. Reproductive Physiology. 2.00 Credits.
Focuses on reproductive physiology and biochemical and molecular regulation of the female and male reproductive tracts. Topics include the hypothalamus and pituitary, peptide and steroid hormone action, epididymis and male accessory sex organs, female reproductive tract, menstrual cycle, ovulation and gamete transport, fertilization and fertility enhancement, sexually transmitted diseases, and male and female contraceptive methods. Introductory lectures on each topic followed by research-oriented lectures and readings from current literature.
Instructor(s): B. Zirkin
Area: Natural Sciences.

Public Health Studies

AS.280.225. Population, Health and Development. 3.00 Credits.
This course will cover the major world population changes in the past century as well as the contemporary situation and projections for this century. Topics include rapid population growth, the historical and continuing decline of death and birth rates, contraceptive methods as well as family planning and child survival programs, population aging, urbanization, population and the environment and the demographic effects of HIV/AIDS.
Prerequisites: Students who have taken AS.230.225 may not take AS.280.225.
Instructor(s): S. Becker
Area: Social and Behavioral Sciences.

AS.280.304. Transforming Disease: HIV/AIDS and the production of chronic illness. 3.00 Credits.
Drawing primarily on public health, anthropology, and sociology literature, the course critically examines debates surrounding the production of chronic illness, and resulting contestations as practices, laws, and policy are transformed.
Instructor(s): M. Philbin
Area: Social and Behavioral Sciences.
AS.280.402. HIV, Behavior and Society. 3.00 Credits.
This class will examine the behaviors associated with the HIV epidemic. We will explore the importance of behavior and context that affect the transmission, prevention, and treatment of HIV. Gordis Teaching Fellowship course. Public Health Majors only or permission required.
Instructor(s): C. Kraft
Area: Social and Behavioral Sciences.

AS.280.403. Introduction to Intimate Partner Violence and Public Health. 3.00 Credits.
This course provides an introduction to the public health implications of intimate partner violence and the spectrum of activities used to understand and combat it - from measurement to intervention. This course will cover a variety of topics, focusing on both research and programming, including: qualitative and quantitative research methods, individual- and community-level interventions, ethical challenges, and populations of interest. Gordis Teaching Fellowship course. Public Health Majors only or permission required.
Instructor(s): C. Sun
Area: Social and Behavioral Sciences.

AS.280.402. HIV, Behavior and Society. 3.00 Credits.
This class will examine the behaviors associated with the HIV epidemic. We will explore the importance of behavior and context that affect the transmission, prevention, and treatment of HIV. Gordis Teaching Fellowship course. Public Health Majors only or permission required.
Instructor(s): C. Kraft
Area: Social and Behavioral Sciences.

Behavioral Biology
AS.290.420. Human Sexual Orientation. 3.00 Credits.
This course will examine the historical and current theories of sexual orientation and sexual variation development by examining the biological, psychological and social contributing factors that influence the development of sexual orientations and variations along with treatment and modification of problematic sexual behaviors. Open to Seniors in the Biology, Behavioral Biology, Cognitive Sciences, Neuroscience, Psychology, Public Health, Studies of Women, Gender & Sexuality, Medicine, Science & the Humanities, Sociology, and Molecular and Cellular Biology majors.
Prerequisites: Students may enroll in both AS.290.204 and AS.290.420, but cannot do so in the same semester.
Instructor(s): C. Kraft
Area: Social and Behavioral Sciences
Writing Intensive.

Humanities Center
AS.300.133. Freshmen Seminar: Women of Epic Fame in Literature and Drama, 800 BCE-1650 CE. 3.00 Credits.
From Homer’s Odyssey to Shakespeare’s Antony and Cleopatra, powerful women who achieve their ends by working from within the system are often overlooked or not fully explored. Our readings and discussions will foreground these women of fiction, while we also consider the social conditions of their living contemporaries. Readings will include: Homer’s Odyssey (Penelope); Virgil’s Aenead (Dido); Dante’s Inferno (Beatrice); Milton’s Paradise Lost (Eve), and several accounts of Cleopatra in plays by Shakespeare and his contemporary women writers. Cross listed with Theater Arts, Writing Seminars, and WGS.
Instructor(s): T. Tower
Area: Humanities
Writing Intensive.

AS.300.317. Russian Novel. 3.00 Credits.
Russian authors began writing novels in the shadow of counterparts in Western Europe, and thus had the chance to experiment with the form and scope of genres and themes they found in European literature: Alexander Pushkin’s novel in verse Eugene Onegin pays homage to Byron’s Don Juan and satirizes Richardson’s Pamela; Mikhail Lermontov’s nested stories A Hero of Our Time owes a debt to Romantic and gothic fiction, and Nikolai Gogol’s Dead Souls brings Dante’s Inferno to the Russian provinces. From these literary forefathers emerged the likes of Feodor Dostoevsky and Leo Tolstoy, who made a lasting impact on world literature with their psychological and philosophical novels. This course examines the Russian novel in its historical and cultural context alongside contributions of Russian literary criticism in defining novel form and genre.
Area: Humanities
Writing Intensive.

AS.300.324. Cinema of the 1930s: Communist and Capitalist Fantasies. 3.00 Credits.
Comedy and musical comedy film flourished in the USA during the Great Depression as well as in the USSR during the Stalinist Great Terror. This course will compare films of the era in a variety of genres (musical, epic, Western, drama), examining the intersections between politics and aesthetics as well as the lasting implications of the films themselves in light of theoretical works on film as a medium, ethics and gender.
Instructor(s): A. Eakin Moss
Area: Humanities

AS.300.363. Reading Judith Shakespeare: poetry and drama by women writers in Elizabethan England (ca 1558-1650). 3.00 Credits.
Virginia Woolf’s account of the thwarted career of Shakespeare’s hypothetical sister, Judith (in A Room of One’s Own) frames our reading of plays and poetry by Shakespeare and contemporary women writers, including Isabella Whitney, Elizabeth Cary, Mary Sidney, Aemelia Lanyer, Mary Wroth, and others. Students will create fictional biographies of “Judith Shakespeare” and her literary accomplishments. Cross listed with English, Theater Arts, Writing Seminars, and WGS.
Instructor(s): E. Patton
Area: Humanities
Writing Intensive.
AS.300.365. Desire in the Fin de siècle. 3.00 Credits.
This course examines the obsession with desire at the turn of the 20th century in literature, drama, philosophy and social thought and its implications for notions of self and community in modernity. We will read comparatively across European, Russian and American cultures, including Stoker’s Dracula, Hamsun’s Hunger, plays by Chekhov, Strindberg, Ibsen, Wilde, and stories by Tolstoy, Gorky, Chopin and Larsen. Instructor(s): A. Eakin Moss
Area: Humanities
Writing Intensive.

AS.300.367. Seeing Like a Woman. 3.00 Credits.
This seminar examines the problems of female desire, subjectivity, spectatorship and performance in fiction, poetry, memoir and film from a variety of cultures and theoretical perspectives. Readings include: de Beauvoir, Riley, Butler, Cixous, Tolstoy’s Family Happiness, Woolf’s Orlando, Larsen’s Passing; Poetry by Moore, Bishop, Plath, Akhamatova, Tsvetaeva and Szymborska. Films by Deren, Ophuls, Hitchcock, Potter, Campion, Akerman, Varda, Denis.
Instructor(s): A. Eakin Moss
Area: Humanities
Writing Intensive.

AS.300.371. The Modernist Novel: James, Woolf, and Joyce. 3.00 Credits.
The purpose of this course is to survey works by three of the greatest, most relentless innovators of the twentieth century – Henry James, Virginia Woolf, and James Joyce – who explored and exploded narrative techniques for depicting what Woolf called the “luminous halo” of life. Selected works include: The Beast in the Jungle, The Portrait of a Lady, Jacob’s Room, Mrs. Dalloway, To the Lighthouse, A Portrait of the Artist as a Young Man, and Ulysses.
Instructor(s): Y. Ong
Area: Humanities.

AS.300.397. How Freud Changed the Way We Think. 3.00 Credits.
An examination of aspects of the history and theory of psychoanalysis, focusing on the question of origins in Freud’s work. Texts by Freud, Laplanche, Lacan, Derrida, and others.
Instructor(s): M. Fried
Area: Humanities.

East Asian Studies
AS.310.115. Ghost Tales from China and Japan, 14th-19th Centuries. 3.00 Credits.
We cannot express our own experience of death – only imagine life after death. How did people in the past conceptualize the world of the dead? Ghost tales will teach us what we imagine as the experience of dead and life after death. This course aims to introduce students to a variety of ghost stories in Late Imperial China and Tokugawa Japan and connect their literary imagination of the dead to the cultural, socio-historical, and religious context of each society as well as to the broad East Asian tradition of supernatural narratives. While we also touch upon earlier traditions on narrating the dead, most of the stories in class readings are from the Ming (1368-1644) and Qing (1644-1911) dynasties of China, and the Tokugawa period (1600-1868) of Japan. Key issues include family, gender, sexuality, body, medicine and many more. Although we will also take a look at visual and theatrical representations of the dead, we will primarily focus on literary texts about ghostly phenomena. Film screenings required. All readings are in English.
Instructor(s): F. Joo
Area: Humanities.

AS.310.116. Romantic Love in Chinese Literature. 3.00 Credits.
This course aims to introduce students to a variety of literary texts featuring romantic love from the 9th to the mid-20th centuries in China. The target materials cover a wide range of literary products from Bo Juyi’s court poem to the modern Shanghai novella by the woman writer Zhang Ailing (Eileen Chang). As we read romance in a variety of narrative forms such as fiction, drama, and poetry, we will examine changing ideas about marriage, love, sexuality, family, emotion, and morality within the literary discourse as well as in society. Thus, students are expected to connect various literary texts about romance to their socio-historical, literary, and political surroundings. At the same time, we will discuss the shifting significance of romance for writers and reading public and consider how literary texts formed ideas about romance in society.
The course is organized chronologically and thematically. Reading assignments are all in English.
Instructor(s): F. Joo
Area: Humanities.

AS.310.203. Women Writers from East Asia, 11th to 19th Centuries. 3.00 Credits.
Introduction to women-authored texts in East Asia, 11th to 19th centuries. Historical and literary significance of their output in Chinese, Japanese, and Korean societies.
Instructor(s): F. Joo
Area: Humanities.

AS.310.310. Women and Gender in East Asian Religions. 3.00 Credits.
This course examines the complexities of gender and the role that women have played in the religions of China, Korea, and Japan. It explores two main types of content: 1) religious discourse on women and gender through doctrines, scriptures, narratives, myths, and legends; and 2) the practices, beliefs, and lives of real women through historical cases, including those of nuns, laity, sovereigns and family members. Organized in chronological order, the course begins with early sources across East Asia and finishes in contemporary times. Readings and assignments emphasize the analysis of primary sources, complemented by secondary works for historical and cultural context. Students will end the course with a research paper focused on a topic of their choice.
Instructor(s): C. Carter
Writing Intensive.

Interdepartmental
AS.360.243. The Poetics of Politics and Sex. 3.00 Credits.
Topic: Reading Women Reading. This course will consider gender at the site of reading. How has feminist scholarship read women, and how do these interpretations articulate with studies of women’s reading practices?
Instructor(s): C. Block
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
The program offers a comprehensive approach to the arts of acting, directing, playwriting, and theatre history, along with the fundamentals of technical direction, play production, play analysis, and theatre management.

For those students who intend to prepare for a career in the theatre, the courses offered are taught exclusively by established professionals with experience on Broadway, in the best of regional theatres, and in many countries of the world.

For those students not focused on a career in theatre arts, the courses offer a broader perspective, an understanding of societal traditions and culture, and an appreciation for the arts, whether theatrical, literary, musical, or visual. Students pursuing careers in medicine, engineering, law, international relations, science, and others have been challenged and enriched by the school's courses in theatre arts.

For those who seek careers in the arts, the acting and directing workshops, playwriting courses, and independent study opportunities provide rigorous training in acting and other theatre crafts, as well as an appreciation for and an understanding of the history of dramatic arts, its cultural significance, and the industries it has produced.

Located in the program's home, the historic Merrick Barn, The Johns Hopkins University Theatre provides a vehicle for the fulfillment of student lab requirements. The University Theatre produces several plays each year in the John Astin Theatre and occasionally in the Meyerhoff Auditorium at the Baltimore Museum of Art, which adjoins the Homewood campus. Classes are also held in the Barn.

Theatre Arts and Studies Minor

All courses for the minor here must be taken for letter grades and receive a grade of C- or higher. Courses taken at another institution may not apply towards the minor without permission of the Director of Undergraduate Studies.

AS.225.100 Introduction to Theatre
or AS.225.300 Contemporary Theatre & Film
AS.225.301 Acting & Directing Workshop I
AS.225.302 Acting & Directing Workshop II
AS.220.105 Fiction/Poetry Writing I

One theatre history course: 3
One drama course in other program * 3
One additional theatre course ** 3

Total Credits 21

* Courses are identified by the POS-Tag THEA-DRAMA. Alternatively, another theatre history course from within the program (not counted towards another requirement) may apply towards this requirement with permission of the director of undergraduate studies.

** This course may be an acting, theatre production, playwriting, or theatre history course.

For current faculty and contact information go to http://krieger.jhu.edu/theatre-arts/directory

Faculty
Director
John Astin
Visiting Professor (Dramatic Arts), Writing Seminars: acting, directing, theatre history, production and management.

Decker Professor in the Humanities, Writing Seminars
John T. Irwin
Decker Professor in the Humanities, Writing Seminars: criticism and poetry in the theatre.

Professors
Richard A. Macksey
Professor, The Humanities Center, History of Science and Technology: theatre history and criticism.

Ronald Walters
Professor, History: American cultural and social history.

Visiting Instructors
Margaret (Peg) Denithorne
Instructor: acting, directing, theatre history.

James Glossman
Instructor: directing, acting, theatre management, theatre history.
Joseph Martin
Instructor: theatre history, dramaturgy.
William Roche
Instructor: technical direction, theatre crafts, theatre management.

**Courses**

**AS.225.100. Introduction to Theatre. 3.00 Credits.**
An introduction to the drama: how and why the theatre came into being; its role in human history; and how changing social structures in different regions and epochs have shaped different kinds of theatre, plays and performance. Also: how theatre "works" for us and on us, and the major plays of world drama.
Instructor(s): J. Martin
Area: Humanities.

**AS.225.215. Performing Musical Theatre. 3.00 Credits.**
Effective performance in musical theatre demands a committed analysis of the musical and dramatic values of the song and the libretto from which it springs, in order to develop a fresh, organic interpretation. This course will provide you with the training to both analyze and interpret musical theatre scenes and songs and to make the most of them in performance. Instructor Permission Only.
Instructor(s): M. Denithorne
Area: Humanities.

**AS.225.300. Contemporary Theatre & Film. 3.00 Credits.**
An introduction to the performing arts, including an overview of theatre history, acting styles and the interaction of art and society. A personal view from inside.
Instructor(s): J. Astin
Area: Humanities.

**AS.225.301. Acting & Directing Workshop I. 3.00 Credits.**
An introduction to the fundamentals of acting through exercises, improvisation, and work on scenes from established plays and Shakespearean sonnets, based on the teachings of Stanislavsky, Greet, Boleslavsky, Michael Chekhov, Clurman, and Meisner. This course also includes a brief survey of major playwrights. Plays will be read, analyzed, and employed in scene work.
Instructor(s): J. Astin
Area: Humanities.

**AS.225.302. Acting & Directing Workshop II. 3.00 Credits.**
As in Workshop I, the principal classroom activities will consist of scene work, exercises, lectures, and discussion. Some rehearsal will also take place during school hours. It is expected that substantial out-of-class time be spent on rehearsals and exercises. Recommended Course Background: AS.225.301
Instructor(s): J. Astin
Area: Humanities.

**AS.225.303. Acting & Directing Workshop III. 3.00 Credits.**
Special attention is given to the development of spontaneity and emotional freedom using the principles of Workshops I and II. Hands on work with John Astin’s “The Process” and the second Silverberg workbook are employed, along with the Uta Hagen text. Boleslavsky and Michael Chekhov are introduced. The Clurman, Meisner, Stanislavsky and Strasberg approaches are included. Substantial out of class time is required. Recommended Course Background: Two acting courses.
Instructor(s): J. Astin
Area: Humanities.

**AS.225.304. Acting for Musical Theatre. 3.00 Credits.**
Workshop IV is an advanced class for actors who have gained some control over their instruments and are ready for character work and full performances. Work will be co-ordinated with productions in which the actor performs and in which the directors direct. Play analysis, characterization, fullness of performance, diction, accents, and other elements of building a performance are covered. Permission only, signature required. Recommended Course Background: AS.225.302, AS.225.303
Instructor(s): M. Denithorne
Area: Humanities.

**AS.225.307. Directing Seminar. 3.00 Credits.**
Fundamentals of mounting, casting and staging the play; various theories of directing; students must commit to a practical lab. It is understood that students have a working familiarity with acting fundamentals.
Instructor(s): J. Glossman
Area: Humanities.

**AS.225.308. Shakespeare in Performance. 3.00 Credits.**
The techniques and craft of following a Shakespearean text directly into character and action. Students will work with a selection of Shakespeare’s plays --- AS YOU LIKE IT; HAMLET; and RICHARD III --- in exploring specific ways in which the power of the lines can be translated dynamically and immediately into vocal and physical performance. This course can be repeated for credit, because it covers different topics. (Some background in the acting sequence is encouraged).
Instructor(s): J. Glossman
Area: Humanities.

**AS.225.310. Stagecraft. 3.00 Credits.**
A hands-on approach to the technical and theoretical elements of production. Meets in the Merrick Barn Scene Shop. Permission Required.
Instructor(s): W. Roche
Area: Humanities.

**AS.225.311. Scene Study. 3.00 Credits.**
Classes and scenes tailored to the needs of the actors. Some rehearsal will take place during school hours. It is expected that substantial out-of-class time be spent on rehearsals and exercises.
Prerequisites: AS.225.301
Instructor(s): J. Astin
Area: Humanities.

**AS.225.312. Acting Workshop: Chekhov and O'Neill. 3.00 Credits.**
Using the plays of Anton Chekhov and Eugene O'Neill, the acting fundamentals from the Workshops are applied in both preparation and scene work as the student employs the basics in order to build a character for the stage. Play analysis is included. Recommended Course Background: At least one acting workshop.
Instructor(s): J. Astin
Area: Humanities.
AS.225.314. Theater: Technical Direction. 3.00 Credits.
An introduction to Technical Direction including pre-production and production with an overview of materials, tools, rigging and safety, together with design and its implementation.
Instructor(s): W. Roche
Area: Humanities.

AS.225.315. Scene Study 2. 3.00 Credits.
Classes and scenes tailored to the needs of the actors. Some rehearsal will take place during school hours. It is expected that substantial out-of-class time be spent on rehearsals and exercises.
Instructor(s): J. Martin
Area: Humanities.

AS.225.316. Adaptation for the Stage. 3.00 Credits.
An introduction to dramaturgy and the adaptation of work for the stage. This course is a workshop opportunity in learning to adapt both dramatic and non-dramatic works into fresh versions for the stage. Students with ability in foreign languages and literatures are encouraged to explore translation of drama as well as adaptation of foreign language fiction in English. Fiction, classical dramas, folk and fairy tales, independent interviews, or versions of plays from foreign languages are covered.
Instructor(s): J. Martin
Area: Humanities
Writing Intensive.

AS.225.319. Performance II. 4.00 Credits.
The student is given specific acting assignments, and develops them as special projects for public performance under the direct supervision of the instructor. A professional level of performance is the goal. Audition Req’d. Out of class rehearsal time required. Check at the Barn (6-0618).
Auditions TBA.
Instructor(s): J. Astin
Area: Humanities.

AS.225.320. Performance. 3.00 Credits.
The student is given specific acting assignments, and develops them as special projects for public performance under the direct supervision of the instructor. A professional level of performance is the goal. Audition Required. Out of class rehearsal time required. Permission only, signature required.
Instructor(s): J. Astin
Area: Humanities.

AS.225.321. The Lab - The Actor/Director/Playwright Lab. 3.00 Credits.
Student actors, directors, and playwrights will explore their respective crafts with emphasis on process and individual artistic growth. Participants in the class will also collaborate on the creation of new material for the stage. Recommended Course Background: one course in Acting, Directing, or Playwriting.
Instructor(s): M. Denithorne
Area: Humanities.

AS.225.322. Design for the Stage. 3.00 Credits.
The fundamentals of stage design, with an emphasis on process, including script analysis, research, conceptualization, and implementation, from the first reading of the play to opening night, along with an overview of theatre architecture from the Greeks to the current day and into our imagined future.
Instructor(s): W. Roche
Area: Humanities.

AS.225.323. Adaptation for the Stage. 3.00 Credits.
For aspiring playwrights, dramaturgs, and literary translators, this course is a workshop opportunity in learning to adapt both dramatic and non-dramatic works into fresh versions for the stage. Students with ability in foreign languages and literatures are encouraged to explore translation of drama as well as adaptation of foreign language fiction in English. Fiction, classical dramas, folk and fairy tales, independent interviews, or versions of plays from foreign languages are covered.
Instructor(s): J. Martin
Area: Humanities
Writing Intensive.

AS.225.325. The Existential Drama: Philosophy and Theatre of the Absurd. 3.00 Credits.
Existentialism, a powerful movement in modern drama and theatre, has had a profound influence on contemporary political thought, ethics, and psychology, and has transformed our very notion of how to stage a play. Selected readings and lectures on the philosophy of Kierkegaard, Nietzsche, Camus and Sartre -- and discussion of works for the stage by Sartre, Ionesco, Genet, Beckett, Albee, Athol Fugard (with Nkani & Nshone), Heiner Müller and the late plays of Caryl Churchill. Opportunities for projects on Dürrenmatt, Frisch, Havel, Witkiewicz, and Mrozek.
Instructor(s): J. Martin
Area: Humanities
Writing Intensive.

AS.225.329. Acting and Directing Musical Theatre. 3.00 Credits.
Musical Theatre is a unique form of theatrical expression that requires special skills of its actors and directors. In this course, students will study the form and structure of musicals as they apply to acting and directing. Students will direct and perform musical numbers as well as book scenes from classic and contemporary American musicals.
Instructor(s): M. Denithorne
Area: Humanities.

AS.225.330. Playwriting Strategies. 3.00 Credits.
A seminar and workshop in playwriting with Dr. Joe Martin, playwright and dramaturge. Student writers, developing their plays, will learn how to open up to the creative process, “brainstorm,” refine their work, and shape it toward an act of artistic communication. Writer’s techniques, such as attending to plot or “story,” delineation of character, creating effective “dialog,” even overcoming “writer’s block,” will be addressed. This course is designed to be complementary to — not a replacement for — playwriting classes in the Writing Seminars.
Instructor(s): J. Martin
Area: Humanities
Writing Intensive.

AS.225.331. Acting Styles and the "Viewpoints". 3.00 Credits.
This course is designed for acting students who have already completed one or both of the first levels in acting or the first level in directing. Uses the cutting edge approach to enhanced physicality and presence in acting — The Viewpoints, originally developed by Anne Bogart and Tina Landau. The second half of the course involves work on scenes from Commedia delle’Arte to modern absurdist plays.
Instructor(s): J. Martin
Area: Humanities.

AS.225.332. Acting and Directing Workshop IV. 3.00 Credits.
Workshop IV is an advanced class for actors who have gained some control over their instruments and are ready for character work and full performances. Work will be co-ordinated with productions in which the actor performs and in which the directors direct. Play analysis, characterization, fullness of performance, diction, accents, and other elements of building a performance are covered.
Prerequisites: AS.225.302 OR AS.225.303
Instructor(s): J. Astin
Area: Humanities.

AS.225.333. Scene Study 3. 3.00 Credits.
Classes and scenes tailored to the needs of the actors. Some rehearsal will take place during school hours. It is expected that substantial out-of-class time be spent on rehearsals and exercises.
Instructor(s): J. Astin
Area: Humanities.
AS.225.336. Science and Theatre. 3.00 Credits.
Innovative modern playwrights and have gone beyond the boundaries of the living room, the kitchen and the front porch to explore the interaction of the human mind and human passions with the drama of the cosmos. Few elements of science remain unexplored by theatre, be it medicine, particle physics, astronomy, mathematics or chemistry. These unique plays often require experiments with new forms of theatre, and a new way of writing for theatre. We will examine prominent works for theatre which engage with science, including: The Life of Galileo (Brecht, astronomy), Copenhagen (Frayn, physics), Arcadia (Stoppard, mathematics), Semmelweis (Bjorneboe, medicine), The Man who Mistook His Wife for a Hat (Sachs/Brook, neuroscience); Einstein's Dreams (Lightman et al).
The course will include lectures, informal readings (together) of scenes to inform discussions of the works; final small group presentations; one short paper and a choice of a final essay or research paper.
Instructor(s): J. Martin
Area: Humanities, Natural Sciences.

AS.225.339. Exploring The Major Plays of Anton Chekhov. 3.00 Credits.
This is an advanced class for actors who are interested in delving into the world of the play. Students will work on scenes from the four major plays of Anton Chekhov. We will also explore some modern adaptations including VANYA, SONIA, MASHA, and SPIKE.
Prerequisites: AS.225.301 AND AS.225.302 or permission of the instructor
Instructor(s): M. Denithorne
Area: Humanities.

AS.225.345. History of Modern Theatre & Drama. 3.00 Credits.
Designed to impart a deepened appreciation and understanding of today's theatre by surveying the major playwrights, historical movements, and theatre practices of the 20th century. The course also seeks to help students understand theatre's relationship to the societal and political power structure of each era and to introduce students to great dynamic literature in its intended form, which is performance.
Instructor(s): M. Denithorne
Area: Humanities
Writing Intensive.

AS.225.346. Creative Improvisation: For Theatre and for Life. 3.00 Credits.
An exploration of the imagination and the senses using basic techniques of improvisation: exercises, conflict resolution, ensemble building, and theatre games. Texts: Spolin, Johnstone, LaBan and Feldencreis. Open to all students.
Instructor(s): M. Denithorne
Area: Humanities

AS.225.501. Independent Study. 1.00 - 3.00 Credits.
Permission only.
Instructor(s): J. Astin; J. Glossman; J. Martin; M. Denithorne.

AS.225.502. Independent Study. 1.00 - 3.00 Credits.
Instructor(s): J. Astin; J. Glossman; J. Martin; M. Denithorne.

AS.225.520. Projects in Theater. 3.00 Credits.
Special projects created for and tailored to the individual theatre student. Enrollment limited. Permission Required.
Instructor(s): J. Astin.

AS.225.590. Summer Internship in Theatre. 1.00 Credit.
Instructor(s): J. Astin.

AS.225.599. Independent Study. 3.00 Credits.
Instructor(s): J. Astin.

Cross Listed Courses

German Romance Languages Literatures
AS.211.312. Acting French: learning about French language and culture through theater. 3.00 Credits.
Performing a play in a foreign language not only improves language skills, but develops the ability to express oneself through the body and to communicate both efficiently and elegantly. Using excerpts from popular French stage plays by Camus, Sartre, Feydeau, Ionesco, Pagnol and Rostand among others, this course aims to help students to 1) improve French pronunciation, intonation, syntax, and vocabulary; 2) appreciate and understand linguistic nuance and socio-cultural practices; 3) learn fundamentals of acting that carry over into everyday communication, from body language and vocal projection to the expression of emotion and improvisation. Students will view filmed representations of select plays as well as present an end-of-semester staging. Recommended course background: AS.210.301.
Instructor(s): K. Cook-Gailloud; M. Alhinho
Area: Humanities.

Humanities Center
AS.300.113. Freshmen Seminar: Drama and Gender in Shakespeare's England. 3.00 Credits.
In this seminar we will read male and female authored plays and discuss how they reflect contemporary social expectations in Tudor and Stuart England. Authors include William Shakespeare; Mary Sidney, Countess of Pembroke; Christopher Marlowe; Elizabeth Cary; Ben Jonson; and Mary Sidney, Lady Wroth.
Instructor(s): E. Patton
Area: Humanities

AS.300.133. Freshmen Seminar: Women of Epic Fame in Literature and Drama, 800 BCE-1650 CE. 3.00 Credits.
From Homer's Odyssey to Shakespeare's Antony and Cleopatra, powerful women who achieve their ends by working from within the system are often overlooked or not fully explored. Our readings and discussions will foreground these women of fiction, while we also consider the social conditions of their living contemporaries. Readings will include: Homer’s Odyssey (Penelope); Virgil’s Aenead (Dido); Dante’s Inferno (Beatrice); Milton’s Paradise Lost (Eve), and several accounts of Cleopatra in plays by Shakespeare and his contemporary women writers. Cross listed with Theater Arts, Writing Seminars, and WGS.
Instructor(s): T. Tower
Area: Humanities
Writing Intensive.

AS.300.353. Present Mirth: Stages of Comedy. 3.00 Credits.
A comparative survey of presentational comedies from Aristophanes to Beckett on stage and screen, with some attention to to to the vexed question of theories of comedy [no laughing matter].
Instructor(s): O. Mehrgan; R. Macksey
Area: Humanities
Writing Intensive.
AS.300.363. Reading Judith Shakespeare: poetry and drama by women writers in Elizabethan England (ca 1558-1650). 3.00 Credits.
Virginia Woolf's account of the thwarted career of Shakespeare's hypothetical sister, Judith (in A Room of One's Own) frames our reading of plays and poetry by Shakespeare and contemporary women writers, including Isabella Whitney, Elizabeth Cary, Mary Sidney, Aemelia Lanyer, Mary Wroth, and others. Students will create fictional biographies of "Judith Shakespeare" and her literary accomplishments. Cross listed with English, Theater Arts, Writing Seminars, and WGS.
Instructor(s): E. Patton
Area: Humanities
Writing Intensive.

Visual Arts
http://www.jhu.edu/artwork
http://krieger.jhu.edu/visualarts/

Center for Visual Arts

The Center for Visual Arts provides a studio environment in which undergraduates can pursue their creative interests and earn academic credit in a visual arts program. Art classes allow students to enrich their lives, while diversifying and broadening their educational experience. The Center for Visual Arts (formerly Homewood Art Workshops) provides a studio environment in which undergraduates can pursue their creative interests. They teach people to look at reality from different angles. They teach creativity, which is applicable and valuable in every avenue of human endeavor. They teach skills, including perceptual skills, which actually improve the process of thinking and reasoning. In fact, the ability to be flexible in the interpretation of data is a key component of success in research, and making art helps students develop exactly this sort of cognitive flexibility.

Courses in drawing, painting, printmaking and sculpture develop observational skills and techniques in the beginning student. Courses in photography, cartooning, and digital media balance studio work with research and critical analysis. Although there is currently no major, students can earn a minor in visual arts. For the minor in visual arts, students may focus on either traditional studio courses or a digital curriculum, or they can combine the two tracks for a more diverse experience. Students wishing to take more advanced fine arts courses are encouraged to take advantage of Hopkins' cooperative programs with other colleges in the Baltimore area.

Visual Arts-Minor

Students may focus on one of two tracks: (1) traditional studio courses or (2) a digital curriculum. They have the option to combine the two tracks for a more diverse, if more general, experience.

A minimum range of 15 to 18 credits, including:

Core Course

Additional details:

- Students may count as many as two visual arts courses taken at MICA, but not offered at Hopkins, toward the minor. These courses must be approved in advance by the advisor.
- All courses must be taken for a letter grade and students must receive a grade of C- or better to apply the course towards the minor.
- One independent study course in the visual arts may be counted toward the minor.
- One visual arts course, not offered at Hopkins, taken in a JHU-affiliated study abroad program may be counted toward the minor.
- Each student's complete program of study must be approved by the advisor.
- Advising will be done by the Director (Studio) and the Photography Coordinator (Digital).

Faculty

Director
Craig Hankin
Instructor: painting, portraiture, life drawing.

Instructor
D. S. Bakker
Aesthetics, visual philosophy, Surrealism.
Phyllis Berger
Photography Supervisor: photography, artists' books, documentary photography.
Cathy Goucher
Art therapy, non-traditional materials and techniques
Thomas Chalkley
Sequential imagery, political and social satire, popular culture.
Howard Ehrenfeld
Digital photography and imaging, location photography.
Barbara Gruber
Figure painting, plein air landscape.
Cara Ober
Watercolor, mixed media, color theory.
Larcia Premo
Sculpture, printmaking.

Courses

AS.371.131. Studio Drawing I. 2.00 Credits.
This course focuses on developing fundamental drawing skills for the student with little or no previous studio experience. Basic concepts of form and composition will be taught through exercises based on the book, Drawing On The Right Side Of The Brain, and with the aid of still life setups and live models. Attendance at 1st class is mandatory. Approval for this course will be considered after enrollment in ISIS; no need to email.
Instructor(s): C. Hankin.
AS.371.133. Painting Workshop I. 2.00 Credits.
This course offers the fundamentals of oil painting techniques for the serious student with minimal prior studio experience. Observational skills are taught through the extensive use of still-life setups, with particular attention paid to issues of light, color, and composition. Slide lectures and a museum trip give students an art historical context in which to place their own discoveries as beginning painters. Approval for this course will be considered after enrollment in SIS; no need to email.
Prerequisites: Prerequisite AS.371.131 or permission of instructor.
Instructor(s): B. Gruber; C. Hankin.

AS.371.134. Painting Workshop II. 2.00 Credits.
Students who have mastered basic painting skills undertake sustained projects, including portrait and plein air landscape work. Slide lectures and handouts deepen students' appreciation of representational traditions. Advanced techniques, materials, and compositional issues are also investigated. Recommended Course Background: AS.371.133 or equivalent. Approval for this course will be considered after enrollment in SIS; no need to email.
Prerequisites: Prereq: AS.371.133 or permission of the instructor.
Instructor(s): B. Gruber.

AS.371.135. Studio Drawing II. 2.00 Credits.
Building on basic drawing skills, this course explores various media, techniques, and compositional elements with special emphasis on still life, portrait, and life drawing. A visit to the Baltimore Museum of Art's Print & Drawing Library supplements lectures and enriches the student’s understanding of the history of artists’ drawings. Recommended Course Background: AS.371.131 or instructor's permission.
Instructor(s): C. Hankin.

AS.371.136. Drawing: The Portrait. 2.00 Credits.
An intensive look at the traditions and techniques of portrait drawing. Students work from live models in a variety of media and study master portraits by Holbein, Rembrandt, Ingres, Degas, etc. Trips to the Baltimore Museum of Art Print & Drawing Room and JHU Archaeological Museum will enhance knowledge and appreciation of the history and traditions of portraiture. Recommended Course Background: AS.371.131 or permission required.
Instructor(s): C. Hankin.

AS.371.139. Still Life/Interior/Landscape. 2.00 Credits.
This intermediate drawing class will examine three grand traditions in representational art. We will explore problems in still life that have occupied artists from Chardin to Morandi; in interiors from Vermeer to Giacometti; in landscape from Corot to Diebenkorn. We will also look at where the boundaries between these genres blur and how they overlap.
Prerequisites: AS.371.131 or permission required.
Instructor(s): C. Hankin.

AS.371.140. Cartooning. 3.00 Credits.
Not open to Freshmen. A history-and-practice overview for students of the liberal arts. The conceptual basis and historical development of cartooning is examined in both artistic and social contexts. Class sessions consist of lecture (slides/handouts), exercises, and ongoing assignments. Topics include visual/narrative analysis, symbol & satire, editorial/political cartoons, character development, animation. Basic drawing skills are preferred but not required.
Instructor(s): T. Chalkley
Area: Humanities.

AS.371.147. Design Studies: Art of Architecture. 3.00 Credits.
In this course, students will learn to design, draw, and see like an architect. A series of progressive design exercises will teach the practical capacities and habits of mind that lead not merely to competence but success and advancement in the field. We will look at what architecture has been, discuss what it is becoming, and explore both formal and narrative methodologies for design. The class will use the built environment of the city - and the Homewood campus - as a classroom and a site for interpretive drawing and creative design work. Essential in the architect's education is the sketchbook, which functions not merely as a place to 'store' what has been witnessed, but a place to interpret and explore implications of design in the world, whether close to home or traveling in exotic locales.
Instructor(s): C. Phinney
Area: Humanities.

AS.371.149. Visual Reality. 3.00 Credits.
In art, Realism is a simulation of visual reality. But art can also simulate alternative realities, those realities or truths which exist only in daydreams or nightmares. In this class, we will learn to explore and create representations of these additional moments of existence. This will require thinking creatively or outside the box, a useful skill in any field. Using a variety of media, students are asked to solve problems to which there is no one correct answer.
Instructor(s): D. Bakker
Area: Humanities.

AS.371.150. Life Drawing. 2.00 Credits.
An intermediate drawing course focusing on all aspects of the human form. Beginning with infrastructure (skeletal and muscular systems), we will work directly from the model using a variety of media and techniques to address problems in figurative art from the Renaissance to the present.
Prerequisites: Prereq: AS.371.131 or instructors permission.
Instructor(s): C. Hankin.

AS.371.151. Photoshop/Digital Darkroom. 3.00 Credits.
Photoshop is not only the digital darkroom for processing images created with digital cameras; it is also a creative application for making original artwork. In this course, students use Photoshop software as a tool to produce images from a fine art perspective, working on projects that demand creative thinking while gaining technical expertise. Students will make archival prints, have regular critiques, and attend lectures on the history of the manipulated image and its place in culture. We will look at art movements which inspire digital artists, including 19th-century collage, dada, surrealism, and the zeitgeist of Hollywood films. Students must have a digital SLR camera. Prior knowledge of Photoshop is not required. Attendance at first class is mandatory. Approval for this course will be considered after enrollment on SIS; no need to email.
Instructor(s): H. Ehrenfeld
Area: Humanities.

AS.371.152. Introduction to Digital Photography. 3.00 Credits.
Students learn to use their digital cameras through a variety of documentary, landscape and portrait projects, which will help them develop technical and creative skills. Critiques and slide lectures of historic photographs, which range from postmortem daguerreotypes to postmodern digital imagery, help students develop a personal vision. Students are provided digital SLR cameras and gain proficiency with one-on-one instruction in the field. Basics for print adjustment and output will be covered. Attendance at first class is mandatory. Approval for this course will be considered after enrollment on SIS; no need to email.
Instructor(s): H. Ehrenfeld
Area: Humanities.
AS.371.154. Introduction to Watercolor. 2.00 Credits.
Watercolor is simultaneously the most accessible of all painting media and the most misunderstood. This course provides experience and instruction in observational and expressive watercolor techniques, materials, concepts, and vocabulary. Topics to be reviewed include line, perspective, value, texture, composition, color, and pictorial space. There will be an introduction to contemporary practices in watercolor, as well as experimental and abstract exercises, collage, and conceptual work.
Instructor(s): S. Kopf.

AS.371.155. Introduction to Sculpture. 2.00 Credits.
A studio course introducing students to sculptural concepts and methods. Emphasis is on the process of creating. Even the simplest materials can effectively activate space, convey meaning, and elicit emotion when used thoughtfully and imaginatively. Students will learn different methods including additive and reductive techniques, construction, modeling, and mold-making. No prerequisites except a willingness to experiment, make mistakes... and clean up when you are done. Seniors only or permission required.
Instructor(s): L. Premo.
Area: Humanities.

AS.371.156. Black & White: Digital Darkroom. 3.00 Credits.
In this digital course, students explore the black-and-white aesthetic. They develop camera skills on numerous field trips including Ladew Topiary Gardens, the Maryland Zoo & Botanical Gardens, and an optional weekend trip to Cape Henlopen State Park in Delaware. Students meet frequently for critiques and discussions based on historic and contemporary imagery. They will learn to use Photoshop for image adjustment. Techniques such as high dynamic range, duotone, panorama and infrared will be covered. Students work on a project of their choice and produce a portfolio of ten prints. Digital SLRs are provided. Attendance at 1st class is mandatory. No need to email for approval.
Instructor(s): P. Berger
Area: Humanities.

AS.371.157. Lens to Page: The Photographer's Book. 3.00 Credits.
In this unique course, a photographer, a museum curator, and a book artist mentor students as they create photography books on subjects of their choosing. The class will concentrate on elements of composition, narration, design, and aesthetics. Field trips to view both public and private book collections and libraries will provide historical context for the evolution of book production, while actual shared volumes may serve as inspiration or models for emulation. As final project, each student will create a hardbound book using Blurb software. Fundamentals of Photoshop will be covered. A culminating exhibition affords students the opportunity to showcase their respective volumes at JHU's elegant Evergreen Museum & Library. Attendance at first class is mandatory.
Instructor(s): P. Berger
Area: Humanities.

AS.371.158. The Art of Architecture. 3.00 Credits.
In this course, students will learn to design, draw, and see like an architect. A series of progressive design exercises will teach the practical capacities and habits of mind that lead not merely to competence but success and advancement in the field. We will look at what architecture has been, discuss what it is becoming, and explore both formal and narrative methodologies for design. The class will use the built environment of the city and the Homewood campus as a classroom and a site for interpretive drawing and creative design work. Essential in the architect's education is the sketchbook, which functions not merely as a place to 'store' what has been witnessed, but a place to interpret and explore implications of design in the world, whether close to home or traveling in exotic locales.
Instructor(s): C. Hankin, C. Phinney
Area: Humanities.

AS.371.159. Works on Paper. 2.00 Credits.
As the title suggests, experienced students in this course will focus on the creation of artwork on paper. We’ll use a wide variety of paper supports and mediums will include pastel, ink, watercolor, charcoal, acrylic and oil paint. Subject matter will range from figure to landscape, from color theory to differentiation. Working visits to the Baltimore Museum of Art and Johns Hopkins Archaeological Museum are planned.
Instructor(s): B. Gruber
Area: Humanities.

AS.371.160. Color Explorations & Theory. 3.00 Credits.
Course begins Tuesday, June 28th. We will explore the physical characteristics, psychological effects and basic physics of color through exercises in various applications. Primary mediums include: Paint, Color-Aid Paper & Photoshop. Emphasis is placed on the investigation of color effects used in applied and fine arts.
Instructor(s): C. Gregory
Area: Humanities.
AS.371.172. DIY Art: You Are the Medium. 3.00 Credits.
Art is not confined to the makers labors with traditional art materials. Art is transactional and can be made of anything. It brings forth personal narrative ones internal experience in a concrete form sand seeks resonance with the viewer. Art-making is a shared place of possibility and self-revelation, available to anyone with a desire to make visible their thoughts and feelings. Students will engage with novel creative processes and materials and will be challenged to broaden their perspectives on the essential nature of art. Personal narratives will be deepened through a class visit to the American Visionary Art Museum, as well as a short-term group residency with the artists of Make Studio in Hampden. Approval for this course will be considered after enrollment on ISIS, no need to email.
Instructor(s): C. Goucher
Area: Humanities.

AS.371.174. Introduction to Digital Art Production. 2.00 Credits.
An introduction to digital media tools with a focus on creating art and communicating ideas. Develop your skills in audio/visual communication including graphics, web design, sound and video production. Class meets at the Digital Media Center and includes an introduction to DMC's facilities and broad range of digital production gear, plus studio visits with digital artists working in a variety of media.
Instructor(s): K. Anchor.

AS.371.190. Painting & Drawing the Local Landscape. 2.00 Credits.
Clear fall weather in Baltimore and the wide variety of landscape and architecture in and around the Homewood campus provide an ideal opportunity to paint and draw outside. Working from life, masterworks and slides, we will investigate the history and practice of landscape painting, beginning with tonal wash drawings and progressing to full-color paintings. Media will include charcoal, ink, watercolor and oil paint. Slide lectures, demonstrations and museum and library visits will be featured. Portable easels provided.
Prerequisites: AS.371.131 OR AS.371.133 OR Instructor’s Permission Required
Instructor(s): B. Gruber.

AS.371.191. Introduction to Video Art. 2.00 Credits.
Throughout the semester, students will screen video art and respond by shooting and editing their own video works. They will think critically about the personal and societal function that video artwork serves. We'll look at the work of artists ranging from Martha Rosler and Hennessy Youngman, to Spike Jonze and music videos. We will discuss and explore the intersections between video, poetry, painting, and music. Students will be required to learn video editing software, write short video responses, and read and discuss relevant essays. Students can expect to shoot and edit four video production assignments.
Instructor(s): J. Roche.

AS.371.200. Visualizing Music. 3.00 Credits.
In this course, JHU photography students will pair up with Peabody Conservatory of Music student composers to develop an interdisciplinary work that grows out of their conversations and passions. Working under the guidance of Phyllis Berger, CVA Photography Supervisor, and David Smooke, Peabody Conservatory Music Theory Chair, students will design a program of music and photography that brings together the experience of looking and listening. Their work will be exhibited and performed at Evergreen Museum and Library. Attendance at first class is mandatory.
Instructor(s): D. Smooke, P. Berger
Area: Humanities.

AS.371.201. Drawing Outside the Box. 3.00 Credits.
Class begins Monday, May 27th. We will explore essential principles, tools, terminology & media, while pushing the boundaries of traditional drawing by adopting alternatives such as drawing with wire, inking with grass, and animating gesture in Photoshop. Not only will we draw from observation, which builds the perceptual platform and skills for spatial understanding and rendering, we will draw from intuition, movement, and outdoor stimuli. Subject matter may include: still life, interiors, landscape, architecture, the human figure and personal narrative.
Instructor(s): C. Gregory
Area: Humanities.

AS.371.202. Street Photography: Ten Photos, Ten Stories. 3.00 Credits.
Street photography is about seeing and reacting, in order to capture small, revelatory moments in a single image. We'll cover camera operation basics, study inspiring examples by historical and contemporary photographers such as Robert Frank and Helen Levitt, and develop a more acute sense of sight on field trips to public parks and neighborhoods and through assignments and critiques. In the second half of the semester, students work on their own projects to develop 10 images that each tell a story, however slight, about the human condition.
Instructor(s): J. Bishop
Area: Humanities.

AS.371.301. Landscapes: Photographing the Burren. 3.00 Credits.
The Burren College of Art, located in a medieval castle on Ireland’s Atlantic coast, serves as the base for this digital photography course. Fundamentals of the Digital SLR are reviewed as well as image correction and manipulation in Photoshop. Focusing on the varied landscapes of Ireland, students will assemble a portfolio of digital photographs and exhibit their work in a group show at the end of the Program. Students of all majors and levels are welcome. Course must be taken for a grade.
Instructor(s): P. Berger
Area: Humanities.

AS.371.302. Photographic Portfolio. 3.00 Credits.
In this upper level course, experienced students will work on a semester-long project that reflects their artistic sensibility, interests and passion for photography. They will develop their ideas within a seminar style format that allows for conversation and debate and provides a forum for the evolution of content within their work. Through a combination of critique, lecture and lab, students will complete a portfolio of ten printed images that work together in a series. Recommended Course Background: Previous CVA photography course or instructor’s permission.
Instructor(s): P. Berger
Area: Humanities.

AS.371.303. Documentary Photography. 3.00 Credits.
In this hands-on course, we will explore different genres of documentary photography, including the fine art document, photojournalism, social documentary photography, the photo essay and photography of propaganda. Students will work on a semester-long photo-documentary project on a subject of their choice. Digital SLRs will be provided. The makeup of this class will include five JHU undergraduate students and five Baltimore Youth Film Arts Program fellows. There will be two one-day field trips on weekends to city and countryside locations. Attendance at first class is mandatory. No need to email for approval.
Instructor(s): P. Berger
Area: Humanities.
AS.371.304. Photo Seminar: Wet Darkroom. 3.00 Credits.
In this film based course, students develop a project of their choice over the semester working independently in the darkroom and meeting for weekly critiques and discussions. Using the zone system (a method of pre-visualization developed by Ansel Adams) students will experiment with different film, paper and developer combinations specific to their projects. Writing in the form of a journal as well as critical analysis of images are integral parts of the seminar experience.
Prerequisites: AS.371.146 or Permission Required
Area: Humanities.

AS.371.305. Photographs and Text: The Art of the Narrative. 3.00 Credits.
In the tradition of the illuminated manuscript, students will use photographs and text creatively to tell a story. Their journey will begin with visits to Johns Hopkins University museums, where they will choose an object as inspiration for their narrative. This could be an illustration from the George Peabody Library, a statue from the Archaeological Museum, an instrument from the Civil War at the Johns Hopkins Medical Museum, or a silver spoon at the Homewood Museum. Field trips to the JHU museums will be an integral part of this course. The resulting portfolios of five large prints will be curated by Evergreen Museum & Library director James Abbott for an exhibition at Evergreen Museum. Course will be co-taught by CVA instructor Phyllis Berger and book artist Betty Sweren.
Instructor(s): P. Berger
Area: Humanities.

AS.371.306. Digital Photography: Photographing the Burren. 3.00 Credits.
The Burren College of Art, located in a medieval castle on Ireland's Atlantic coast, serves as the base for this digital photography course. Fundamentals of the Digital SLR are covered as well as image correction and manipulation in Photoshop. Students will work one-on-one with their instructor and will exhibit their work in a group show at the end of the program. Students of all majors and levels are welcome. Course must be taken for a grade.
Instructor(s): H. Ehrenfeld; P. Berger
Area: Humanities.

AS.371.501. Independent Study. 2.00 Credits.
Instructor(s): B. Gruber; C. Hankin; P. Berger.

AS.371.502. Independent Study. 0.00 - 2.00 Credits.
Instructor(s): B. Gruber; C. Hankin; P. Berger.

AS.371.590. Independent Study. 3.00 Credits.
Instructor(s): C. Hankin.

Cross Listed Courses
Film and Media Studies
AS.061.376. Arts and Culture Journalism: Interactive Media, Online Publishing. 3.00 Credits.
Students will participate in the ongoing creation of BmoreArt.com, an online arts and culture publication that serves the Baltimore community. In conjunction with visiting professionals, students will investigate the Baltimore cultural community and create different types of editorial content using interactive media including film, video, sound, and writing. Students will produce creative content utilizing their individual areas of expertise - such as visual art, art history, music, literary arts, film, and theater - while working together as a professional organization. A strong emphasis will be placed on the student's collaborative participation and creative experimentation. Students with differing backgrounds in media will approach this project from unique perspectives, which will be valued and cultivated. Students with previous experience in journalism are welcome. An introductory writing or film course is suggested as a prerequisite.
Instructor(s): C. Ober
Area: Humanities
Writing Intensive.

German Romance Languages Literature
AS.213.348. Picturing Jews: Representing Jewish Identity in Modern Art, Film & Literature. 3.00 Credits.
This course will consider the different ways Jewish identity has been represented in the 19th and 20th centuries, focusing primarily on Central and Eastern Europe. Race, nationalism, religion, language, geography, politics—all helped shape different ways of understanding just what it meant to be a Jew, and all found expression in art and literature by both Jews and non-Jews. Looking at texts originally written in German, Yiddish, and Hebrew, including prose, poetry, journalism and drama, as well as painting, photography, graphic design, architecture, and film we will gain an understanding of the range of ways that Jewish identity could be understood and expressed as well as the ideological stakes and historical contexts of such representations. Writers and artists examined will include Chagall, Kafka, Sholem Aleichem, and Bialik. All readings will be in translation.
Instructor(s): S. Spinner
Area: Humanities
Writing Intensive.

Program in Museums and Society
AS.389.335. Recreating Ancient Greek Ceramics. 4.00 Credits.
This hands-on course in experimental archaeology brings together undergraduate and graduate students across disciplines to study the making of Athenian vases. Students work closely with expert ceramic artists, and in consultation with art historians, archaeologists, art conservators, and materials scientists to recreate Greek manufacturing processes.
Instructor(s): S. Balachandran
Area: Humanities.

AS.389.371. The Artist in the Museum: Making Books. 3.00 Credits.
Hopkins curatorial staff and photography instructor introduce the concept of books as art. Students create artist's books inspired by campus collections for inclusion in an Evergreen exhibition. FIRST CLASS IS MANDATORY. M&S practicum course. Cross-listed with Homewood Art Workshops.
Instructor(s): J. Abbott; P. Berger
Area: Humanities.
**Writing Seminars**

http://writingseminars.jhu.edu/

The Writing Seminars exists to help students combine imaginative writing with scholarship in the general context of the humanities.

**Requirements for a B.A. degree**

(Also see Requirements for a Bachelor’s Degree (p. 10))

AS.220.105 Fiction/Poetry Writing I and AS.220.106 Fiction/Poetry Writing II are prerequisite courses required for all majors and others who want to take advanced courses in writing. Majors must receive a grade of C- or better in all courses required for the major and no major requirements may be taken satisfactory/unsatisfactory.

AS.220.105 Fiction/Poetry Writing I
AS.220.106 Fiction/Poetry Writing II
Four courses of English literature. *
Two courses in philosophy. It is recommended that one course be a Philosophy Department introductory course.
Two courses in history. Majors are encouraged to take one history survey course in the History Department. May include one course from History of Art or from History of Science and Technology.
AS.220.200 Introduction to Fiction
AS.220.201 Introduction to Poetry
One fiction course at the 300-400 level.
One poetry course at the 300-400 level.
One advanced writing workshop.
Three elective courses at the 200-400 level within the department.
Foreign language proficiency through the second semester of the intermediate level is required.

* Expository Writing may not apply towards the English literature requirement.

**Honors**

A GPA of 3.5 or better in all major requirements is required to earn honors in the major.

**Sample Program Plan:**

The Writing Seminars offers a Master of Fine Arts (M.F.A.) in fiction and poetry. Students admitted to the M.F.A. program enroll in two years of course work and produce a substantial manuscript in the form of a novel or collection of fiction or poetry. M.F.A. candidates are chosen on the basis of a manuscript, college transcripts, GRE scores, and appropriate letters of recommendation that testify to the student’s ability and willingness to undertake serious study in the literary arts. Since all students receive financial aid in the form of full tuition and a teaching assistantship, applicants must be able to demonstrate aptitude for college teaching.

The program requires two full years of residency in Baltimore. Students enroll each semester in two courses: a writing workshop in poetry or fiction and a second course in craft or literature taught within the department. At the end of the first year, students present a portfolio of revised work for faculty review. Successful completion of this work is a requirement for continuation in the second year.

The M.F.A. degree in The Writing Seminars is designed for students committed to the study and practice of literary writing at the highest level of accomplishment. Approximately four poets and four fiction writers will be admitted annually. Our pedagogy emphasizes genre-informed discussions, faculty conferences, independent readings, and interactions with visiting writers. Culminating in a book-length thesis, this immersion in literary study is designed to inculcate the habits and skills necessary for a productive writer’s life.

Students applying to the M.F.A. program should have a bachelor’s degree. All must demonstrate competence in a foreign language at the college level.

Courses
AS.220.101. Mini-Term: Narrative Medicine. 1.00 Credit.
The course will introduce students to the role of storytelling in medicine through a variety of essays, short stories and documentaries, from Susan Sontag’s Illness as Metaphor to Atul Gawande’s Complications to Terry Wrong’s Hopkins. In addition to studying these narratives, students will produce their own written works and meet guest writers from the local medical community. Throughout, the course will provide students with valuable practice in critical analysis and reasoning, skills that are tested on entrance exams such as the MCAT.
Instructor(s): E. Parker
Area: Humanities.

AS.220.104. Dealing with the Unconscious. 1.00 Credit.
A course in the psychology of literature. Students will read works of literature, from Homer to Nabokov, that focus on the unconscious as a source of inspiration and conflict. The seminar will explore the relationship between literature and psychology, and the ways in which writers have used their own inner conflicts and experiences to create powerful works of art.
Instructor(s): Staff
Area: Humanities

AS.220.105. Fiction/Poetry Writing I. 3.00 Credits.
A course in realist fiction and traditional verse, with readings in Eudora Welty, Vladimir Nabokov, Henry James, Robert Frost, Paul Fusseil, John Gardner, Seamus Heane, and Gwendolyn Brooks. This first course for writers is a study of forms of short fiction and metered verse. Students compose short stories and poems; includes practice of critical attention to literary models and workshop of student writing. This course is a prerequisite for most upper level courses. This course is part one of the year-long Introduction to Fiction and Poetry, and must be taken before AS.220.106.
Instructor(s): Staff
Area: Humanities
Writing Intensive.

AS.220.106. Fiction/Poetry Writing II. 3.00 Credits.
The second half of IFP, a course in counter-traditional antirealist fiction and free verse (Emily Dickinson, Virginia Woolf, Elizabeth Bishop, Franz Kafka, Italo Calvino, and William Carlos Williams). This course is a prerequisite for most upper level courses.
Prerequisites: AS.220.105
Instructor(s): Staff
Area: Humanities
Writing Intensive.

AS.220.108. Introduction to Fiction & Nonfiction. 3.00 Credits.
A course in realist fiction and nonfiction, with readings by Eudora Welty, Vladimir Nabokov, Henry James; George Orwell, Beryl Markham and Truman Capote. Students compose short stories and essays with attention to literary models. AS.220.105 can be substituted for AS.220.108.
Instructor(s): J. Cavanaugh-Simpson
Area: Humanities
Writing Intensive.

AS.220.138. Make ‘Em Laugh. 3.00 Credits.
The quickest way to kill a joke is to explain it. So how do we learn to be funny? In this class, we’ll explore techniques in humor writing. Whether poking holes in accepted absurdities or helping us laugh at death, humor makes us smile and think. Each week, we’ll focus on a different type of humor—dark comedy, satire, etc.—through stories, nonfiction, criticism, and author interviews. Students will write imitations and original work.
Instructor(s): G. Kirby
Area: Humanities
Writing Intensive.

AS.220.142. Seriously Funny: Writing Humor Poetry. 3.00 Credits.
This course will examine both light verse and how humor can enrich serious subjects in poetry. We will explore techniques in humor writing. Whether poking holes in accepted absurdities or helping us laugh at death, humor makes us smile and think. Each week, we’ll focus on a different type of humor—dark comedy, satire, etc.—through stories, nonfiction, criticism, and author interviews. Students will be required to write several seriously funny poems of their own. Fun is mandatory.
Instructor(s): S. Greer
Area: Humanities

AS.220.146. Introduction to Science Writing. 3.00 Credits.
Science writing is science written in plain English and told as a story. Students research, write, edit others, rewrite. They also analyze published stories for structure, substance, accessibility, and clarity.
Instructor(s): S. Greer
Area: Humanities
Writing Intensive.
AS.220.148. Portraits of the Artists: Writing Self in Fiction. 3.00 Credits.
Flannery O'Connor once said “Anybody who has survived his childhood has enough information about life to last him the rest of his days.” Fiction is a carefully hewn combination of memory and imagination, and while it is impossible to know how much of the literary canon is sourced in autobiography, the truism holds firm: people write what they know. In this course, we will focus on modern and contemporary autobiographical fiction, looking closely at source, creative process, craft, and style, in order to answer the essential question, How does a writer successfully roll fact into fiction? Students will complete writing activities and participate in discussions and workshops. They will produce either an autobiographical story, or the first chapter of a longer work. Novels: Portrait of the Artist as a Young Man, Joyce; The Bell Jar, Plath; The Lover, Duras. Stories by Hemingway, Updike, Munro, O’Brien, Casey.
Instructor(s): J. Slovak
Area: Humanities.

AS.220.150. Steal This Book. 3.00 Credits.
From Spike Lee to The Clash, art can wield immense influence on our worldview. This class will explore the intersection of social critique and American literature. Class texts will also include a range of pertinent films, documentaries, and popular music. We'll examine the social utility of art and how artists use their craft to make a statement. Classwork includes Blackboard posts on current events, weekly creative writing assignments, and a final portfolio of creative work.
Instructor(s): J. Takacs
Area: Humanities
Writing Intensive.

AS.220.152. Words of Light: Poetry and Photography. 3.00 Credits.
This course examines the role of lyric poetry in a media culture that has become obsessed with photographs. In a world where everyone with a cell phone is a photographer — and every literate person a writer — how do we create valuable work? We will pair genres of photography and lyric poetry in discussion — landscape photos and poems of place, for example — and view each through the other. Students will read a body of poetry and criticism (prose by Walter Benjamin, Susan Sontag, Penelope Pelizzon, Roland Barthes, et al.). In addition to bringing worthwhile comments on the readings to each class, students will submit one original poem and one original photo each week for credit. * Prerequisites: Each student is required to have a device capable of taking digital photos. Cell phones are fine.
Instructor(s): S. Greer
Area: Humanities.

AS.220.162. Writing for Children: The Tales We Can’t Seem to Forget. 1.00 Credit.
In this summer mini-course, students will use canonical works of children's literature to inspire their own stories and verses, which they will read aloud and discuss in a workshop setting. We will focus on the uses and reuses of fairy and folk tales — from early works compiled by the Brothers Grimm and Charles Perrault to fantasies from the Victorian era by Mary de Morgan and Oscar Wilde. We will end with contemporary reimaginings by Roald Dahl, Neil Gaiman, Angela Carter and Lauren Child. Class will include discussion of illustration, recent trends in children's literature, and the publishing process. Course instructor Sarah Smith is the former Children's Book editor at the New York Times Book Review.
Instructor(s): S. Smith
Area: Humanities.

AS.220.165. Writing Unreality: Fantastical Fiction. 3.00 Credits.
While fiction is by definition not “real,” some modes of fiction present deliberate departures from the world as we know it. This class will examine fantastical and non-realist writing, including surrealist and magic realist stories, as well as works with fairy-tale and folklore influences, and stories with elements of the uncanny or supernatural. Students will read and discuss representative fiction, complete weekly creative assignments, and participate in workshop of a final, full-length piece.
Instructor(s): S. Robinson
Area: Humanities.

AS.220.167. Serious Nonsense: Light & Comic Poetry. 1.00 Credit.
This course will provide a guided tour of some of the funniest poems ever written in English. Genres covered will include light verse, satire, parody, absurdism (“nonsense”), and others. We'll explore the serious side of comic poetry and vice versa. Students will have the opportunity to write their own comic verse in the genres discussed.
Instructor(s): A. Allen
Area: Humanities.

AS.220.180. Special Opportunities in Undergraduate Learning: Metaphor and Poetry. 1.00 Credit.
We all use figurative language, such as metaphor, simile, and irony. But what does it mean for language to be figurative, and how does this affect its meaning? This course will approach these questions from the angle of poetry. We'll ask further questions like: how do some poets use metaphor differently from others? What does Shakespeare mean when he says “my love is as a fever”? We'll read passages from different critics on metaphor, including several from Lakoff and Turner's More Than Cool Reason: A Field Guide to Poetic Metaphor and Denis Donoghue’s Metaphor. Students will write poems with specific metaphorical requirements; they’ll learn to use conceits (metaphors that govern an entire poem); they’ll learn to use conventional metaphors; most importantly, they’ll learn to think critically about why certain metaphors work and certain ones don’t.
Instructor(s): J. Frantz.

AS.220.195. Fitzgerald's Short Stories. 3.00 Credits.
An examination of F. Scott Fitzgerald's major short stories in the 1920s and 1930s. We'll analyze Fitzgerald's commitment to exploring the tension between two opposing intellectual movements: literary naturalism (which championed the primacy of environmental determinism) and literary realism (which championed the primacy of free will). We'll trace Fitzgerald's mercurial loyalty to each movement: his abandonment of one school of thought for the other, from one year to the next. In May Day he even embraced both movements equally—testimony to his belief that the test of a first-rate intelligence is the ability to hold two opposed ideas in mind at the same time and still retain the ability to function. Did Fitzgerald ultimately advocate one school of thought over the other? Or, did he intend simply to stage the debate between them? 
Instructor(s): J. Rockefeller V
Area: Humanities
Writing Intensive.
**AS.220.200. Introduction to Fiction. 3.00 Credits.**
Study in the reading and writing of short narrative with focus on basic technique: subject, narrative voice, character, sense of an ending, etc. Students will write weekly sketches, present story analyses in class, and workshop one finished story. Selected parallel readings from such models of the form as Henry James, Anton Chekov, James Joyce, John Cheever, Alice Munro, and others. Permission Required. (Formerly AS.220.191.)

**Prerequisites:** AS.220.105 AND AS.220.106
Instructor(s): K. Noel; M. Klam; T. Davies
Area: Humanities.

**AS.220.201. Introduction to Poetry. 3.00 Credits.**
A study of the fundamentals and strategies of poetry writing. This course combines analysis and discussion of traditional models of poetry with workshop critiques of student poems and student conferences with the instructor. (Formerly AS.220.141)

**Prerequisites:** AS.220.105 AND AS.220.106
Instructor(s): A. Allen; G. Williamson
Area: Humanities.

**AS.220.202. Introduction to Non-Fiction: Matters of Fact. 3.00 Credits.**
A first course in nonfiction writing, emphasizing how facts can be woven into narrative forms to portray verifiable, rather than imagined, people and events. Students read and discuss model works, then write frequent papers to refine their own style. (Formerly AS.220.145.)

**Instructor(s):** W. Biddle
Area: Humanities
Writing Intensive.

**AS.220.204. Introduction to Dramatic Writing: Film. 3.00 Credits.**
Screenwriting workshop. This course will look at the screenplay as both a literary text and blueprint for production. Several classic screenplays will be analyzed. Students will then embark on their own scripts. We will intensively focus on character development, creating believable cinematic dialogue, plot development, conflict, pacing, dramatic foreshadowing, the element of surprise, text and subplot, and visual storytelling. Several classic films will be analyzed and discussed (PSYCHO, CHINATOWN, BLADE RUNNER). Students will learn professional screenplay format and write an 8-12 page screenplay that will be read in class and critiqued.

**Instructor(s):** M. Lapadula
Area: Humanities
Writing Intensive.

**AS.220.206. Writing about Science I: Daily News Journalism. 3.00 Credits.**
This course is designed to teach students the skills of daily news reporting, with a focus on covering science news. Students will learn how to turn scientific discoveries into lively and engaging prose for the general public, interview sources, and pitch stories to news organizations. The skills taught are applicable to all areas of journalism, not just science journalism. Please note that a brief writing test is required for this course (this may be waived for Writing Seminars students). To schedule this test, please contact the instructor at dgrimm5@jhu.edu.

**Instructor(s):** D. Grimm
Area: Humanities
Writing Intensive.

**AS.220.209. Poetic Symbols: Past and Future. 3.00 Credits.**
Poetic Symbols: Past and Future. In this course we will trace the lineages of familiar poetic symbols, or tropes, that have occurred centrally and with regularity in literary history. We will investigate how they evolve with time and reveal changing styles and sensibilities from author to author and age to age. That’s the past. The future is the next poem you will write as the assignment for each of the symbols we read. Recommended Course background: AS.220.105
Instructor(s): G. Williamson
Area: Humanities.

**AS.220.210. Introduction to Non-Fiction: Science as a Social Activity. 3.00 Credits.**
Using the political and economic milieu of science and technology as a context for our writing, we will study how social factors such as government, money, secrecy, and ethics affect the conduct and public presentation of scientific and medical research. Controversies from 20th century history as well as current events will be discussed. Writing assignments to satisfy the W requirement will consist of short papers derived from classroom topics.

**Instructor(s):** W. Biddle
Area: Humanities
Writing Intensive.

**AS.220.211. Journalism for Writers. 3.00 Credits.**
Learn reporting through analysis of famous and infamous work by contemporary journalists such as Janet Malcolm, Michael Finkel, Sarah Corbett and Seymour Hersch. Students will use readings to understand concepts central to news and feature writing, including libel, fair use, balanced reporting, and appropriate sourcing. They will then head out to find and write their own stories about local issues using best practices learned in class. Sarah Harrison Smith is a former managing editor of the New York Times Magazine and the author of The Fact Checker’s Bible.

**Instructor(s):** S. Smith
Area: Humanities
Writing Intensive.

**AS.220.212. Line and Lineage: A Survey of Poetry Writing. 3.00 Credits.**
In this lecture-based course, students will build their knowledge of the history of poetry writing in English through a chronological exploration of the poetic line. This course will serve as a foundation for future studies in the writing and reading of poetry. It is highly recommended that students take this course in their sophomore year, followed by Jean McGarry’s Survey of Fiction Writing course in Spring 2017. Writing Seminars Majors Only

**Prerequisites:** AS.220.105 AND AS.220.106
Area: Humanities.

**AS.220.213. Fiction Survey: Once Upon a Time. 3.00 Credits.**
A review of the origins and development of the Realist short story from fable, fairy tale, saint’s life, Bible story, through versions created in the Renaissance and classic (19th and 20th century) periods, to modern narratives. Writing Seminars majors only.

**Prerequisites:** AS.220.105 AND AS.220.106
Area: Humanities.
AS.220.309. Writing Healthy Baltimore. 3.00 Credits.
Students will explore public health issues in Baltimore and then write about them first in short pieces, and then in longer, polished works. The framework will be the mayor’s Healthy Baltimore 2015 initiative – launched in 2011 to address the city’s top-10 public health problems, including obesity, smoking, drug and alcohol abuse, STDs, cancer, and environmental health hazards. Students will study the initiative and its historical context; examine data sets; explore where and how the initiative intersects with public health practitioners and advocacy groups at the neighborhood level; and write what they learn in different formats, including essays, breaking news, and substance analysis. Students will then “workshop” each other’s papers.
Instructor(s): K. Masterson
Area: Humanities
Writing Intensive.

AS.220.310. Intermediate Fiction: Nature Writing. 3.00 Credits.
Our central text will be Thoreau’s Walden. Most of our readings will be American, though we will read excerpts from Lucretius and Darwin. We will examine various ways in which the natural world has been depicted in nonfiction, fiction, and poetry. Students will write critical papers on nature writers as well as to do creative nature writing of their own. Our authors may include: Emerson, Rachel Carson, Loren Eiseley, John Updike, Robert Frost, Donald Culross Peattie.
Instructor(s): B. Leithauser
Area: Humanities
Writing Intensive.

AS.220.311. Intermediate Fiction: Point of View. 3.00 Credits.
A consideration of not just the obvious point-of-view choices writers face - first person or third? one perspective or many? - but also questions of reliability and distance. Reading may include Chekhov, Faulkner, Nabokov, Munro, Diaz, and others. Students will write and workshop their own short stories.
Instructor(s): R. Puchner
Area: Humanities
Writing Intensive.

AS.220.312. Intermediate Fiction: Detail and Description. 3.00 Credits.
An intermediate workshop focusing on the question of how to make fictional worlds feel real. We’ll read 19th, 20th, and 21st century short fiction by authors such as Anton Chekhov, Jhumpa Lahiri, Junot Diaz, and Alice Munro, focusing particularly on how authors make the lives on the page feel three-dimensional. Students will write stories and exercises, including exercises that involve exploring Baltimore in order to observe and write about the city in which we live. Recommend Course Background: Students need to have completed a 200-level Writing Seminars course.
Prerequisites: AS.220.105 AND AS.220.106
Instructor(s): K. Noel
Area: Humanities.

AS.220.313. Writing about the Arts. 3.00 Credits.
Learn the practice of arts journalism, from reviewing to conducting interviews and writing profiles. In class, students will study the work of some of the best writers in this field, pitch story ideas, report and write, and then discuss their pieces in a workshop setting. Instruction will include journalistic ethics, plagiarism, libel law, and use of social media. Students can expect class visits from established journalists. Writing Seminars Majors only
Instructor(s): S. Smith
Area: Humanities.

AS.220.315. Intermediate Poetry: Sound Effects. 3.00 Credits.
This course explores the crucial role sound plays in the power of poetry, from early roots in oral traditions to contemporary contexts. Through readings, discussion, academic reflection, and creative exercises, participants will explore a range of sound techniques in their own poems and in the poems of others.
Instructor(s): D. Malech
Area: Humanities.

AS.220.316. Seminar: Opinion Writing. 3.00 Credits.
The study of exposition and argument in literary prose, with exposure to journalistic practices. Instructor will assign topics on which students write essays and subsequently discuss in class and critique for style, grammar, coherence, and effectiveness. Permission required.
Instructor(s): G. Kane; J. Cavanaugh-Simpson
Area: Humanities
Writing Intensive.

AS.220.317. Writing about Science II. 3.00 Credits.
Skills taught will include how to construct a long-form narrative, how to create profiles, and how to maintain reader interest throughout. Class speakers will include award-winning science journalists from New York to DC, who will share the secrets of their craft. The primary writing assignment will be a 3,000-word feature piece that is pitched, reported, and workshoped throughout the course of the class. Writing About Science I(formerly Becoming a Science Journalist) is recommended as a prerequisite for this course. Students who have not taken this course will need to complete a short writing test and obtain the permission of the instructor to enroll.
Instructor(s): D. Grimm
Area: Humanities
Writing Intensive.

AS.220.318. Intermediate Fiction: Voice. 3.00 Credits.
This workshop will focus intensely on student writing, and on reading stories with a strong narrative voice, the kinds of stories in which the reader can hear the narrator speaking, where the voice gets stuck in the reader’s mind, where the story feels like an invasion of the narrator’s private thoughts, or is a retelling of the tale for some invisible public, or is the quiet, clear prose of a diarist, journaling into the void.
Instructor(s): M. Klam
Area: Humanities

AS.220.324. Intermediate Fiction: Landscape & Setting. 3.00 Credits.
An intermediate fiction workshop focusing on the question of place. We’ll read 19th, 20th, and 21st century short fiction (including some set in Baltimore) in which setting strongly affects plot. While we’ll talk about each story holistically, we’ll also spend time discussing how authors make the physical world feel three-dimensional, and how place can lean on—even change—what happens in a story. Students will write stories and exercises, including exercises that involve exploring Baltimore in order to observe and write about the city in which we live.
Instructor(s): K. Noel
Area: Humanities.

AS.220.325. Intermediate Fiction: Story and Plot. 3.00 Credits.
The study of plot, with questions, both practical and theoretical, inevitably raised by the short story form. Readings in Chekhov, James, O’Connor, Cheever, Joyce, and Hemingway.
Instructor(s): T. Davies
Area: Humanities.
AS.220.327. Intermediate Fiction: Characters. 3.00 Credits.
A study of fictional persons in works by Fitzgerald, Joyce, W.C. Williams, and Rilke. Students write sketches and compose at least one complete story.
Instructor(s): A. McDermott
Area: Humanities.

AS.220.329. Forming The Short Story. 3.00 Credits.
In the early 1800s popular writers began to compress novel-like narrations into much shorter forms. By the 1880s what we recognize today as the short story had emerged. In this course we will trace the development of the form from its earliest stirrings in the tales of ETA Hoffmann through the Russians Pushkin, Gogol, and Turgenev, to its apotheosis in the stories of Chekhov and Wharton. Critical responses will be creative, using short sketches to experiment with the techniques, some adopted others rejected, and constraints experienced by writers along the way.
Instructor(s): T. Davies
Area: Humanities Writing Intensive.

AS.220.331. Intermediate Fiction: Forms of Fiction. 3.00 Credits.
A look at some non-realistic methods, in stories and novels, for dealing with the real world. Students will write one page exercises and short stories. Recommended Course Background: Students need to have completed a 200-level Writing Seminars class.
Prerequisites: Prereqs: AS.220.105 AND AS.220.106
Instructor(s): T. Davies
Area: Humanities.

AS.220.334. Intermediate Fiction: Indexed Fiction. 3.00 Credits.
A course in fiction writing that utilizes a wiki environment. Students will write and maintain multiple fictional data sets, read and edit other students' work in the same, and coordinate and interlink their sets with the goal of creating a collaborative web-based fiction.
Prerequisites: AS.220.200
Instructor(s): T. Davies
Area: Humanities.

AS.220.337. Intermediate Dramatic Writing: Film. 3.00 Credits.
An intensive workshop focusing on methodology: enhancing original characterization, plot development, conflict, story, pacing, dramatic foreshadowing, the element of surprise, text and subtext, act structure, and visual storytelling. Each student is expected to present sections of his/her screenplay-in-progress to the class for discussion. The screenplay Chinatown will be used as a basic text.
Instructor(s): R. Buso-garcia
Area: Humanities Writing Intensive.

AS.220.339. Seminar: Science Stories. 3.00 Credits.
Science Stories is designed to teach students the skills of daily science news reporting and writing. Lectures will cover topics such as how to write news ledes, how to get great quotes, how to find stories, and how best to interact with researchers and outside experts. Every other week, scientists from local institutions will present their latest research to the class. Students ask questions and are given a week to write up a daily news story, which is workshopped during the following class. As a final project, students will be asked to find and write a daily news story on their own.
Prerequisites: AS.220.146 or 220.203 or permission of instructor
Instructor(s): D. Grimm
Area: Humanities Writing Intensive.

AS.220.344. Intermediate Fiction: The Short-Short Story. 3.00 Credits.
A consideration of the short-short story. Students will weekly present in the short-short story form. We will read the following anthologies: Short Shorts, Flash Fiction, Micro Fiction, and Sudden Fiction.
Prerequisites: AS.220.200
Instructor(s): G. Blake
Area: Humanities Writing Intensive.

AS.220.351. Intermediate Fiction: Forms of International Fiction. 3.00 Credits.
A course which reads fiction written by leading innovators in form such as, but not limited to, Franz Kafka, Jorge Luis Borges, Angela Carter, Amos Oz, Italo Calvino, Gabriel Garcia Marquez, A.S. Byatt, Margaret Atwood, Ian McEwan. Students will write variations of the forms of fiction.
Prerequisites: AS.220.200
Instructor(s): L. van den Berg
Area: Humanities.

AS.220.368. Intermediate Fiction: Contemporary American Fiction. 3.00 Credits.
This seminar will examine how three schools of American fiction address the fate of linear narrative in the late 20th century. Permission required.
Instructor(s): G. Blake
Area: Humanities.

AS.220.370. Intermediate Fiction: Dialogue and Exposition. 3.00 Credits.
We will look at a variety of ways in which dialogue furthers artistic ends. We will ask questions like: When is dialogue best expressed directly? When is it best summarized? How does dialogue-heavy short fiction differ from a play? When can dialogue stand on its own, and when does it require an author's explanation or interpretation? Students will write both creative and expository papers. Recommend Course Background: Students need to have completed a 200-level Writing Seminars class.
Prerequisites: Prereqs: AS.220.105 AND AS.220.106
Instructor(s): B. Leithauser
Area: Humanities Writing Intensive.

AS.220.371. Nonfiction in the Post-Factual Era. 3.00 Credits.
When facts are widely ignored or mistrusted in public discourse, what happens to nonfiction as a genre? We will consider the current state of various political and scientific debates, examine historical precedents, and search for practical solutions in nonfiction writing.
Instructor(s): W. Biddle
Area: Humanities Writing Intensive.

AS.220.376. Intermediate Fiction: Outdoor Stories. 3.00 Credits.
Students will write sketches and stories, in a class organized around readings in classic texts of wilderness encounter. Hawthorne, Tolstoy, Hemingway, Faulkner, Styron, Cormac McCarthy, Kate Chopin, Melville, McGuane, Conrad. Permission Required.
Instructor(s): R. Roper
Area: Humanities Writing Intensive.
AS.220.377. Intermediate Poetry: Poetic Forms. 3.00 Credits.
Poetic Forms I fulfills one of the Intermediate requirements for The
Writing Seminars Major. It deals with rhyme, meter, traditional forms, and
ad hoc forms of students’ own making. Whether you are a poet, novelist,
song writer, science writer, or dramatist, this course will help you master
lines and sentences even better. Departmental permission required.
Instructor(s): G. Williamson
Area: Humanities.

AS.220.378. Intermediate Poetry: Poetic Forms II. 3.00 Credits.
The course builds on the information and techniques encountered
in Poetic Forms I, and uses them in reading and imitating a range of
temporary poets
Instructor(s): G. Williamson
Area: Humanities.

AS.220.379. Intermediate Poetry: Performing Shakespeare. 3.00 Credits.
This course, which begins with careful textual study, offers students
the opportunity to experience Shakespeare’s language as a spoken
expression, marked by rhythm, sound, and emotion. By working
with (and ultimately committing to memory) sonnets, speeches, and
scenes, students will develop their understanding of Shakespeare’s art,
through performance and brief critical writings. Recommended Course
Background: Need to have completed a 200-level Writing Seminars’
class.
Instructor(s): D. Yezzi
Area: Humanities.

AS.220.380. Intermediate Fiction: The Scene. 3.00 Credits.
Emphasis in writing scenes—the building blocks of fiction—units of action,
units of dialogue. Readings will include the stories of Chekhov, Cheever,
Hemingway, and Carver. Recommended Course Background: AS.220.200
Instructor(s): T. Davies
Area: Humanities.

AS.220.382. Intermediate Poetry: Narrative Strategies in Poetry Writing. 3.00 Credits.
Before a poem is anything else, it is the hint, implication, outline, or raw
matter of a story, that fundamental human-making shape of expression.
Story-writing is learned behavior and its alternative approaches are
the makers of form and vision, of communication that is worth re-
experiencing, or not. In this course we consider how poets have written
narratives and how today’s poets continue to do so. We will read one
book of poems by each of eight contemporary poets who will visit the
class, including Pulitzer Prize winners Claudia Emerson and Stephen
Dunn, and discuss narrative strategies with these poets. Students will
then write a poem imitating each visitor and we will workshop the poems
on next class meeting after the visit. There will also be short response
papers and a final essay (or examination—the student’s choice).
Instructor(s): D. Smith
Area: Humanities.

AS.220.383. Intermediate Fiction: The 20th Century. 3.00 Credits.
We will look at modern American novellas. Authors will include: Henry
James, Edith Wharton, Katherine Anne Porter, John Updike, Steven
Milhauser, Truman Capote, Elizabeth Spencer. Frequent short writing
assignments, to be discussed in workshop.
Instructor(s): B. Leithauser
Area: Humanities.

AS.220.384. Intermediate Nonfiction: I, Me, Mine: American Autobiography. 3.00 Credits.
The class will read and discuss classic autobiographical texts by
Benjamin Franklin, Frederick Douglass, Henry Thoreau, Henry Adams,
Gertrude Stein, Malcolm X, and others. Students will write and workshop
their own life stories of substantial length.
Instructor(s): W. Biddle
Area: Humanities
Writing Intensive.

AS.220.385. Intermediate Nonfiction: Communicating Risk. 3.00 Credits.
Scientists, engineers and physicians create and define risks. The public
perceives these risks and decides what is acceptable. We will study the
psychology and politics of risk communication between experts and
laymen.
Instructor(s): W. Biddle
Area: Humanities
Writing Intensive.

AS.220.387. Intermediate Poetry: The Poet as Observer. 3.00 Credits.
A workshop course with readings and writing assignments that
emphasize the artistic value of the outward gaze. Students will keep a
daily journal of observations, and over the semester will develop those
observations into at least 10 new poems. Course readings will include
work by Rainer Maria Rilke, Elizabeth Bishop, and Theodore Roethke.
Permission Required.
Instructor(s): J. Arthur
Area: Humanities.

AS.220.389. Intermediate Poetry: The Dramatic Element. 3.00 Credits.
This course will explore the dramatic mode of poetry, from the plays of
the Greeks and Shakespeare to the lyric poems of Hardy, Yeats, Frost,
Brooks, Hecht, and others. Weekly writing assignments, suggested by
the readings, will include character monologues, dialogue, conflict, and
other aspects of the dramatic lyric. Student poems will be discussed in a
workshop format.
Instructor(s): D. Yezzi
Area: Humanities.

AS.220.391. Performing Poetry & Fiction. 3.00 Credits.
Performing Fiction & Poetry: An Acting Workshop for Writers. This hands-
on performance workshop, combining literary and theatrical practice,
will look closely at what makes a performance or reading compelling,
clear, and resonant. Through textual analysis, vocal technique, and group
discussion, students will create a pliant and powerful reading style to
best serve their work. The course includes regular writing assignments in
poetry and fiction and weekly performance and group discussion.
Instructor(s): D. Yezzi
Writing Intensive.

AS.220.392. Intermediate Poetry: Tall Tales and Short on Narrative Poetry. 3.00 Credits.
Tall Tales and Short: On Narrative Poetry. Many of the most resonant and
influential stories in history have been told in verse—The Iliad, The Aeneid,
Beowulf, The Divine Comedy, The Prelude. This course will examine
narrative poems—from Homer to the present, both long and short—with
an eye toward how they function formally and generically. Students will
adapt an array age-old storytelling techniques for their own poems. There
will be weekly writing assignments in poetry and group discussion of
student writing.
Instructor(s): D. Yezzi
Area: Humanities
Writing Intensive.
AS.220.393. Intermediate Poetry: Poets in Conversation. 3.00 Credits.
An exploration of poetic process as ongoing discourse within and across generations. Readings, writing assignments, and in-class workshop of student poems will encourage and enable course participants to join the conversation themselves.
Instructor(s): D. Malech
Area: Humanities
Writing Intensive.

AS.220.397. Intermediate Poetry: The Lyric. 3.00 Credits.
What is a lyric poem in the 21st Century? What causes such a thing? What does it sound like? What is it good for? Who writes them? We will by reading lyric poems written over the last 500 years in English, and by writing our own original work we will find some answers to these questions. This class will have a special emphasis on Free Verse and the particular challenges and joys of such a poem. This workshop aims to generate new work and to cultivate skills necessary for a writer.
Permission Required.
Instructor(s): S. Scafidi
Area: Humanities.

AS.220.399. Intermediate Poetry: Playwriting for Poets: Suiting the Action. 3.00 Credits.
Many of the finest modern and contemporary poets were also groundbreaking dramatists, including Goethe, Yeats, Eliot, Millay, Cummings, Brecht, and Walcott. Taking these writers’ poetic dramas as models, students will explore the elements of playwriting - plot, character, rhythm, etc. - in order to create original dramatic works. Speeches, scenes, and short plays will be read aloud in class and considered in a workshop setting.
Instructor(s): D. Yezzi
Area: Humanities
Writing Intensive.

AS.220.400. Advanced Poetry Workshop. 3.00 Credits.
The capstone course in poetry writing. Consideration of various poetic models in discussion, some assigned writing, primarily workshop of student poems. Students will usually complete a collection poems.
(Formerly AS.220.396.)
Prerequisites: AS.220.201
Instructor(s): M. Salter
Area: Humanities.

AS.220.401. Advanced Fiction Workshop. 3.00 Credits.
The capstone course in writing fiction, primarily devoted to workshop of student stories. Some assignments, some discussion of literary models, two or three completed student stories with revisions. Completion of Intermediate Fiction is required for admission.
(Formerly AS.220.355)
Prerequisites: AS.220.200
Instructor(s): M. Klam; R. Puchner
Area: Humanities.

AS.220.403. Readings in Poetry: The Branch Will Not Break. 3.00 Credits.
Readings in Contemporary Poetry. Confession, place, myth and image are the four compass points of American poetry best embodied in the work of James Wright. With the work of Wright at the center of the compass, we will read the Selected Poems of four major living poets and discover how these directions and forces play out over the course of a career.
Permission required.
Instructor(s): S. Scafidi
Area: Humanities.

AS.220.406. Readings in Fiction: Hard-Boiled Fiction and Film Noir. 3.00 Credits.
Students read six novels by Hammett, Chandler, Cain, Burnett, and Woolrich and view seven films made from these novels by Huston, Hawks, Wilder, Dmytryk, Richards, Walsh, and Farrow. Cross-listed with Film and Media Studies.
Instructor(s): J. Irwin
Area: Humanities
Writing Intensive.

AS.220.409. Readings in Fiction: Faulkner, Fitzgerald, & Hemingway. 3.00 Credits.
An examination of the fiction of three American modernist masters in the context of the early 20th century movement in the verbal and visual arts.
Not a workshop course.
Instructor(s): J. Irwin
Area: Humanities.

AS.220.410. Readings in Poetry: Four Women Poets. 3.00 Credits.
A study of technique and strategy in the poetry of Emily Dickinson, Marianne Moore, Elizabeth Bishop, and Amy Clampitt. Not a workshop course.
Instructor(s): M. Salter
Area: Humanities.

AS.220.411. Readings in Poetry: Sex & Death in Contemporary American Poetry. 3.00 Credits.
Between sex and death the body has a varied wild life in American poetry. In a survey of contemporary work this seminar will consider the life of the body, its relationship to the imagination and the kaleidoscopic world of the senses. Reading erotic poems, elegies, poems of sickness and health, and of age and youth, we will find an intimate politics of the body. Students will read and respond critically to American poems written over the last forty years.
Instructor(s): S. Scafidi
Area: Humanities.

AS.220.412. Readings in Poetry: Eliot, Crane & Stevens. 3.00 Credits.
An examination of the poetry of Eliot, Crane and Stevens in the context of the modernist movement in the verbal and visual arts. Not a workshop course. Juniors and seniors majors are given preference.
Instructor(s): J. Irwin
Area: Humanities.

AS.220.416. Readings in Fiction: Five from the Fifties. 3.00 Credits.
We will examine five American writers who were emerging or thriving in the middle of the 20th century: John Cheever, Flannery O’Connor, Peter Taylor, John Updike, and Vladimir Nabokov. We will read short stories by all five, as well as the following novels: O’Connor’s Wise Blood, Updike’s Of the Farm, Nabokov’s Lolita and Pale Fire.
Instructor(s): B. Leithauser
Area: Humanities
Writing Intensive.

AS.220.417. Advanced Nonfiction Workshop. 3.00 Credits.
Classes will be devoted to writing and collective editing of factual work of significant length and ambition, including essays, journalistic reports, histories, and biographies. Instructor permission required.
Instructor(s): W. Biddle
Area: Humanities
Writing Intensive.
AS.220.418. Readings in Fiction: The Novella. 3.00 Credits.
Registration Restrictions: Permission required. Twentieth-century novellas, with a new author and book each week. The course asks: What can and has been accomplished by American fiction writers in fewer than 150 pages?
Instructor(s): B. Leithauser
Area: Humanities
Writing Intensive.

AS.220.420. Readings in Contemporary Fiction: Coetzee, Delillo, Freudenberg, Johnson. 3.00 Credits.
The central concern of this course is to read, study, think about, and discuss several novels and short story collections, paying special attention to the voice and structural techniques these authors have invented to create compelling works.
Instructor(s): R. Panek
Area: Humanities.

AS.220.422. Readings in Fiction: Women Behaving Badly! 3.00 Credits.
This course will focus on fiction that centers around a profoundly flawed female protagonist, an antiheroine. Why is it that we love some of these women in spite of their wrongdoing? How do we connect to a character who is acting in ways that we would never hope to act? And how is it that bad behavior is often perceived as sexy? Are evil women any less or more evil than their male counterparts? Students will read 8 books with villainesses whose crimes range from poor parenting to serial killing. One final paper (10-20 pages) will be due at the end of the semester on a topic of the student's choosing, relating to one or more of the protagonists from the reading list.
Instructor(s): J. Blau
Area: Humanities.

AS.220.423. Readings in Fiction: Castaways in Literature. 3.00 Credits.
Our primary text will be Defoe's Robinson Crusoe. We will read spin-offs of Robinson Crusoe (Muriel Spark's Robinson, J. M. Coetzee's Foe, Elizabeth Bishop's Crusoe in England) as well as Golding's Lord of the Flies and Sylvia Townsend Warner's Mr. Fortune's Maggot. Selections from Homer, Swift, and Byron. We will conclude with Shakespeare's The Tempest.
Instructor(s): B. Leithauser
Area: Humanities.

AS.220.424. Science as Narrative. 3.00 Credits.
Class reads the writings of scientists to explore what their words would have meant to them and their readers. Discussion will focus on the shifting scientific/cultural context throughout history. Authors include Aristotle, Copernicus, Galileo, Descartes, Newton, Darwin, Freud, Einstein, Heisenberg, Bohr, Crick and Watson.
Instructor(s): R. Panek
Area: Humanities
Writing Intensive.

AS.220.425. Readings in Fiction: The Story Cycle. 3.00 Credits.
A study of the short story cycle as a literary form. Authors may include Joyce, Schulz, Anderson, Welty, Calvino, Munro, Erdrich, Diaz and others.
Instructor(s): R. Puchner
Area: Humanities.

AS.220.426. Readings in Poetry: Early Auden and his Contemporaries. 3.00 Credits.
A close study of the writing that Auden, Isherwood, Spender, and MacNeice produced during the 1930s against the backdrop of the Great Depression, the Spanish Civil War, and the rise of Nazism. This is not a workshop course, but students will have the opportunity to respond artistically as well as analytically to the course readings.
Instructor(s): J. Arthur.

AS.220.427. Readings in Fiction: The Novella. 3.00 Credits.
A study of the novella as a literary form. Authors may include Melville, Turgenev, Tolstoy, Chekhov, Kafka, James, Wharton, Baldwin, Porter, Rulfo, Smiley, and others.
Instructor(s): B. Leithauser
Area: Humanities
Writing Intensive.

AS.220.428. Readings in Fiction: The Stories and Letters of Anton Chekhov. 3.00 Credits.
We will read the major long and short stories of Chekhov, along with selected letters written in the full course of his lifetime. Juniors and Seniors only.
Prerequisites: AS.220.105 AND AS.220.106 AND AS.220.200 AND 300 level Intermediate Fiction
Instructor(s): J. McGarry
Area: Humanities.

AS.220.429. Readings in Poetry: Poetry of Ireland Since 1900. 3.00 Credits.
A close study of twentieth- and twenty-first-century Irish poetry. Course readings will include work by W.B. Yeats, Austin Clarke, Michael Longley, Seamus Heaney, Eiléan Ní Chuilleanáin, Eavan Boland, Ciaran Carson, and others. This is not a workshop course, but students will have the opportunity to respond artistically as well as analytically to the course readings.
Instructor(s): J. Arthur
Area: Humanities.

AS.220.430. Readings in Poetry: Lives of the Poets. 3.00 Credits.
Lives of the Poets: Hecht, Merrill, Sexton, Plath. "The intellect of man is forced to choose / perfection of the life, or of the work," wrote Yeats. This course examines important intersections between the life and the work in the poems and memoirs of four, biographically interconnected poets. Poems treating subjects of depression and mental illness (Hecht, Sexton, Plath), the terror of war (Hecht), the depredations of disease (Merrill), and suicide (Sexton, Plath), find their sources in these poets fascinating—and, to varying degrees, troubled—lives.
Instructor(s): D. Yezzi
Area: Humanities.

AS.220.431. Readings in Fiction: Origins of the Short Story. 3.00 Credits.
This course will trace the development of the short story beginning with its tentative emergence from the shadow of the novel, through the early commercial period triggered by the invention of inexpensive newsprint, and to its full maturation at the turn of the 20th century. Works by E.T.A. Hoffmann, Heinrich Von Kleist, Alexander Pushkin, Nikolai Gogol, Ivan Turgenev, Guy de Maupassant, Henry James, Anton Chekhov, and Edith Wharton.
Instructor(s): T. Davies
Area: Humanities.
AS.220.432. Readings in Fiction: Innovators of the Short Story. 3.00 Credits.
In this class, we'll look at particularly influential writers who've had a lasting effect on the form of the short story, reshaping it through their own idiosyncratic vision. Authors may include Hawthorne, Kafka, Chekhov, Babel, Joyce, Borges, O'Connor, Welty, Barthelme, Paley, and Munro.
Instructor(s): R. Puchner
Area: Humanities.

AS.220.434. Readings in Poetry: The Mind in Motion: The Rhetoric of Poetry. 3.00 Credits.
This course examines how argument and formal thought shape poetry. Through class discussion about readings ranging from Donne to Dickinson to contemporary poets, and through critical and creative exercises, students will explore poems that reveal not only feeling and observation, but also the architecture of the analytical mind at work.
Instructor(s): D. Malech
Area: Humanities.

AS.220.435. Readings in Poetry: The Romance Tradition. 3.00 Credits.
A writer’s survey of the medieval romance and of the subsequent poetry that it inspired. Course readings will include Sir Gawain and the Green Knight, The Death of King Arthur, and romances by Chretien de Troyes, as well as poetry by Spenser, Tennyson, and Robert Browning. This is a workshop course, but students will have the opportunity to respond artistically as well as analytically to the course readings.
Instructor(s): J. Arthur
Area: Humanities.

AS.220.436. Readings in Fiction: Novels about Journalism. 3.00 Credits.
We will study the role journals play in the work of Virginia Woolf, Franz Kafka, Rainer Maria Rilke, and Anton Chekov. Readings include novels, stories, and diaries.
Instructor(s): J. McGarry
Area: Humanities.

AS.220.437. Creating the Poetry Chapbook. 3.00 Credits.
Students will build on previous work in the major by completing a project of sustained length, depth, and cohesion (25-35 pages) in their final semester. The course will include independent creative and critical work, peer review and discussion, and meetings with the instructor. Application only; Advanced Poetry prerequisite.
Prerequisites: AS.220.400
Instructor(s): J. Arthur
Area: Humanities.

AS.220.438. Readings in Poetry: Of Late: Poetry & Social Justice. 3.00 Credits.
In this Community-Based Learning course, students will explore poetry of social and political engagement in partnership with high-school age writers from Writers in Baltimore Schools. Participants will put learning into practice by organizing community conversation, reflection, and collaboration. Participation in some events outside of class time will be required.
Instructor(s): D. Malech
Area: Humanities.

AS.220.439. Readings in Fiction: Caribbean Voices. 3.00 Credits.
Caribbean history is reflected in the literature of emigration and collapse of empire. We'll study novels by Naipaul, Rhys, and other 20th century authors.
Instructor(s): W. Biddle
Area: Humanities
Writing Intensive.

AS.220.441. Readings in Poetry: Shakespeare and Company. 3.00 Credits.
A study of some of Shakespeare's sources and how he transformed them, and also how future generations transformed Shakespeare. Examples will include The Tempest and W.H. Auden's multi-part poem in response, The Sea and the Mirror. Students will write their own creative responses to some of Shakespeare's plays. Writing Seminars Majors only
Prerequisites: AS.220.105 AND AS.220.106 AND AS.220.201
Instructor(s): M. Salter
Area: Humanities.

AS.220.442. Readings in Fiction: Narrative Strategies of Jane Austen. 3.00 Credits.
We will read the major novels with the aim of detecting the chief patterns and devices the author uses to make the familiar and ubiquitous marriage plot suspenseful and gripping. Writing Seminars Majors only
Prerequisites: AS.220.105 AND AS.220.106 AND AS.220.200
Instructor(s): J. McGarry
Area: Humanities.

AS.220.443. Readings in Poetry: International Voices. 3.00 Credits.
International voices will combine the workshopping of poems by students with a study of contemporary poems written by black British writers and British writers in dialect, African-American writers, Caribbean writers, and Indian and South African poets who are writing in English. The study of broad themes and subjects will be combined with a particular appreciation of linguistic and acoustic matters - which means among other things that time will be spent listening to and evaluating recordings of the poets concerned. Writing Seminars Majors Only
Prerequisites: AS.220.105 AND AS.220.106 AND AS.220.201
Instructor(s): A. Motion
Area: Humanities.

AS.220.444. Divided Loyalties: Translating Poetry. 3.00 Credits.
Translation is impossible" and "All is translation": between these rival claims literary translating takes place. In this workshop course, students will translate a foreign-language poet of their choice and learn to place their approach to translating within the appropriate historical and theoretical contexts.
Prerequisites: AS.220.105 AND AS.220.106 AND AS.220.201
Instructor(s): C. Childers
Area: Humanities.

AS.220.445. Readings in Fiction: Novels about Journalism. 3.00 Credits.
Fiction writers writing about nonfiction writers: Miss Lonelyhearts, by Nathanael West; Bel Ami, by Guy de Maupassant; Psmith, Journalist, by P.G. Wodehouse; Scoop, by Evelyn Waugh; The Shipping News, by E. Annie Proulx.
Instructor(s): W. Biddle
Area: Humanities.
AS.220.446. Readings in Fiction: The Art of Fiction: the Novels of Henry James and Robert Louis Stevenson. 3.00 Credits.
Given the significant differences between their aims and styles as novelists - James the great investigator of the interior life, and Stevenson the equally great exponent of the adventure story - it’s somewhat surprising to find the two men were good friends who admired one another’s work. This course will use their friendship as a starting point to explore their novels in general, while paying particular attention to their narrative techniques; the novels under discussion will include Daisy Miller, Turn of the Screw, Portrait of a Lady, Treasure Island, Dr Jekyll and Mr Hyde, and Kidnapped. Students will also be asked to create original work that both responds to and takes off from their reading of these books.
Instructor(s): A. Motion
Area: Humanities.

AS.220.447. Theater and Social Concern. 3.00 Credits.
In this Community-Based Learning course, students will explore theatre and areas of social concern in partnership with high-school age writers from Writers in Baltimore Schools. Participants will put learning into practice by organizing community conversation, reflection, and collaboration. Participation in some events outside of class time will be required.
Instructor(s): D. Yezzi
Area: Humanities.

AS.220.448. Readings in Fiction: Hybrid Forms. 3.00 Credits.
We will read essays that have the texture and imagination of a short story; stories that are closer to poems, journalists who use the tools common to fiction, and novelists whose work straddles the line between autobiography and fiction. Our reading for the semester will be based around broad, thematic concerns. We will discuss the relationship between form and content, the ethics of narration, and ultimately, how we can apply the tools and techniques of the writers we’ve read to our own creative and critical writing. Students will be expected to write short, critical responses to the readings as well as generate a substantial body of creative text. At the end of the semester, students will submit a portfolio that includes one extended work of creative writing, along with a critical essay.
Instructor(s): Staff
Area: Humanities
Writing Intensive.

AS.220.449. Readings in Poetry: Exploring Baltimore Through Poetry. 3.00 Credits.
Students in this course will write poems based on an exploration of Baltimore itself: weekly assignments will require the students to get off campus, visit specific sites around town, and craft their observations into original poems. Course readings will include work by Baltimore authors past and present; other readings, drawn from further afield, will take up the question of what it means to explore a city. Writing Seminars majors only.
Prerequisites: AS.220.105 AND AS.220.106
Instructor(s): J. Arthur
Area: Humanities.

AS.220.501. Independent Study. 3.00 Credits.
Ordinarily no more than one independent study course may be counted among the eight Writing Seminars courses presented for graduation.

AS.220.502. Independent Study. 1.00 - 3.00 Credits.
Instructor(s): Staff.

AS.220.505. Writing Seminars Internship. 1.00 Credit.
Instructor(s): Staff.

AS.220.506. Writing Seminars Internship. 0.00 - 3.00 Credits.
Instructor(s): T. Davies.

AS.220.507. Honors Thesis. 3.00 Credits.
Permission Required.
Instructor(s): Staff.

AS.220.508. Honors Thesis. 0.00 - 3.00 Credits.
Department Permission Required.

AS.220.509. Practicing Journalism Internship. 1.00 Credit.
This internship is given in conjunction with local media and must be taken on a satisfactory/unsatisfactory basis. It covers many aspects of the operation of a metropolitan newspaper or magazine or TV station. Permission Required. Satisfactory/ Unsatisfactory only.
Instructor(s): M. Klam; T. Davies; W. Biddle.

AS.220.510. Practicing Journalism. 1.00 Credit.
Permission Required.

AS.220.513. Teaching Writing. 3.00 Credits.
Permission Required.
Instructor(s): D. Malech.

AS.220.514. Independent Study. 3.00 Credits.
Instructor(s): J. Arthur; J. McGarry; T. Davies; W. Biddle.

AS.220.517. Internship-Summer. 1.00 Credit.
Instructor(s): Staff.

AS.220.518. Practicing Journalism Internship. 1.00 Credit.
Instructor(s): D. Basford; J. Arthur; J. McGarry; T. Davies; W. Biddle.

AS.220.519. Practicing Journalism. 1.00 Credit.
Instructor(s): S. Dixon.

AS.220.528. Independent Study. 3.00 Credits.
Instructor(s): G. Blake; G. Williamson; J. McGarry; T. Davies.

The central concern of this course is to read, study, think about, and discuss several novels and short story collections, paying special attention to the voice and structural techniques these authors have invented to create compelling works. Restricted to Graduate Students.
Instructor(s): M. Klam
Area: Humanities.

We will examine a number of classic and contemporary coming-of-age novels. Students will compose their own: an original work of fiction that may well described as such.
Instructor(s): A. McDermott
Area: Humanities.

AS.220.610. Readings in Fiction: Alternatives to Realism.
Instructor(s): A. McDermott.

AS.220.613. Writing about Science.
A seminar in the writing of factual prose about scientific matters, whether for the general reader or for professional scientists as audience. Weekly writing, editing, and reading assignments. Permission required.
Instructor(s): A. Finkbeiner.

AS.220.614. Graduate - Science Workshop.
Intensive seminar, at a professional level, in writing factual prose about science for the general reader. Students find, research, and structure their own stories. Weekly writing, editing. Permission required.
Instructor(s): A. Finkbeiner.

AS.220.619. Graduate Poetic Forms I.
Instructor(s): M. Salter.
AS.220.623. Fiction Workshop.
Discussion and critique of fiction manuscripts by students enrolled in the M.F.A. program. Some assignments possible.
Instructor(s): R. Puchner.

AS.220.624. Graduate Fiction Workshop.
Discussion and critique of fiction manuscripts by students enrolled in the M.F.A. program. Some assignments possible.
Instructor(s): J. McGarry.

AS.220.625. Poetry Workshop.
Discussion and critique of poetry manuscripts by students enrolled in the M.F.A. program. Some assignments possible.
Instructor(s): D. Malech.

AS.220.626. Graduate Poetry Workshop.
Discussion and critique of poetry manuscripts by students enrolled in the M.F.A program. Some assignments possible.
Instructor(s): A. Motion.

A study of American poetry written after 1945 with discussion of aesthetic movements, events, historical and contextual, and the character of evolution and practices in poetic structures. Readings vary.
Instructor(s): D. Smith
Area: Humanities.

AS.220.630. Readings in Poetry: The Longer Poem as Anthology.
A study of three major poets (English, Irish, American) who each introduced signature tones, techniques, and themes in modern poetry. Some other figures, such as Louise Bogan and the World War I poets, may be discussed.
Instructor(s): J. McGarry.

A graduate course designed to develop both close reading and genre study, and to support the teaching of Introduction to Fiction and Poetry (IFP) I and II. Readings in selected works of American, English, and European poetry and short fiction. Course required by all graduate students in fiction and poetry.
Instructor(s): D. Yezzì; J. McGarry; M. Klam
Area: Humanities.

This course focuses on three poets whose individual relationships with form, inspiration, and innovation continue to shed light on the poetic process.
Instructor(s): D. Malech
Area: Humanities.

Based on a close reading of major texts, this course will look at the ways in which Romantic and post-Romantic British poetry deals with the passage of time, how it creates elegiac structures, and how it records various kinds of loss: the loss of self, the loss of traditional consolations (especially in terms of the environment), and the threatened loss of poetry itself. Students will be encouraged to respond creatively, as well as critically. Restricted to graduate students in the MFA program.
Instructor(s): A. Motion
Area: Humanities.

AS.220.651. Readings in Fiction: Five from the Fifties.
We will examine five American writers who were emerging or thriving in the middle of the 20th century: John Cheever, Bernard Malamud, Vladimir Nabokov, Jean Stafford, John Updike. We will read short stories by all five, as well as the following novels: Malamud’s The Assistant, Nabokov’s Lolita and Pale Fire. Restricted to graduate students in the MFA program.
Instructor(s): B. Leithauser
Area: Humanities.

This course will look at the way poets have responded to the environment, from the early Romantic period to the present day. In the process, it will study and show how the role of the natural world in poetry has changed from being a cause for celebration and a mirror for self-scrutiny, into a way of continuing these things while also expressing anxiety about the effects of global warming any other dangers to the health of the planet. Poets included in the discussion will include Wordsworth, Clare, Hopkins, Frost, Auden, Hughes and Heaney.
Instructor(s): A. Motion
Area: Humanities.

Which books do writers often foist on other writers, telling them You have to read this? In this course, we’ll look at books that have yet to find much popular appeal, but which writers often speak about in reverential tones. Authors may include James Salter, Paula Fox, Dezső Kosztolányi, J.L. Carr, Juan Rulfo, Tom Drury, Christina Stead, Evan S. Connell, Leonard Gardner, Joy Williams, and Penelope Fitzgerald.
Instructor(s): R. Puchner
Area: Humanities.

AS.220.654. Readings in Fiction: Rediscovered Masters.
Readings from modern novels and collections of short fiction which, however well received at time of publication, fell into subsequent eclipse before undergoing something of a revival. Many of the titles will be drawn from the series of New York Review of Books Classics.
Instructor(s): B. Leithauser
Area: Humanities.
A study of the interplay of the line and the sentence in poetry, with an emphasis on syntax. Some prose works will also be used for context. Poets employing syntax with great verve and precision, whether they obey or disrupt the rules, will be read in order to inform students' own stylistic choices.
Instructor(s): J. Arthur
Area: Humanities.

AS.220.656. Readings in Fiction: Doing Likewise: Imitation, Continuation, Updating, Upending.
In this course, we will look at stories and novels that take their inspiration from other authors, mostly Shakespeare. We’ll consider both the old work and the new. Written assignments will require class members to do likewise.
Instructor(s): A. McDermott
Area: Humanities.

A study of major figures, including Dickinson, Moore, Bishop, Clampitt, Brooks, and others. The theme of place and displacement will be a focus.
Instructor(s): M. Salt.
Area: Humanities.

Translation is impossible" and "All is translation": between these rival claims literary translating takes place. In this workshop course, students will translate a foreign-language poet of their choice and learn to place their approach to translating within the appropriate historical and theoretical contexts. Writing Seminars majors only. Special Notes: Students should have reading knowledge of at least one foreign language.
Instructor(s): C. Childers
Area: Humanities.

AS.220.800. Independent Study.
Instructor(s): Staff.

Instructor(s): Staff.

Cross Listed Courses
Film and Media Studies
AS.061.205. Introduction to Dramatic Writing: Film. 3.00 Credits.
In this course we will explore the basic principles of visual storytelling in narrative film as they apply to the design and execution of a screenplay. During the course of the semester, each student will work on different writing exercises while they search for their specific story and the best way to approach it. We will study different narrative tools and methods of screenwriting by analyzing films to ascertain how they work or fail to do so at script level. Through in-class critiques, group discussions and one-on-one sessions, students will apply these techniques to their own work as they undergo the process of designing, breaking down, outlining and writing a screenplay for a short film. In-class analysis and debate on the strengths and challenges posed by the students' work will help shape the thematic emphasis of the second half of the course.
Instructor(s): R. Wolfson
Area: Humanities
Writing Intensive.

AS.061.371. Unrealities: The Fantastic in Film & Fiction. 3.00 Credits.
The fantastic, the absurd, the blackly comic in films by Cocteau, Hitchcock, and others; and in the short fiction of Barthelme, Cortázar, Hrablal, and others. Several short creative exercises and a longer final project.
Instructor(s): L. Bucknell
Area: Humanities
Writing Intensive.

AS.061.373. Intermediate Dramatic Writing: Film. 3.00 Credits.
This course will explore different approaches towards understanding the fabric of story as it pertains to film. Students will be exposed to key challenges in conceiving, structuring and executing a compelling, memorable and vibrant feature-length screenplay. By studying key examples, we will discuss possible solutions to these issues. In every class, students will share their work in progress and will help each other find approaches or solutions to their specific challenges and issues. We will analyze films with screenplays that effectively play with the form to create lasting, thought-provoking and affecting stories. Through in-class critiques, group discussions and one-on-one sessions, students will apply new tools and approaches to their own work as they undergo the process of designing, breaking down, outlining and writing a full step outline, a beat sheet and the first ten pages of a feature length screenplay. As the semester progresses, in-class analysis and debate on the strengths and challenges posed by the students' work will shape the thematic emphasis of each class.
Prerequisites: AS.220.204 OR AS.061.205 OR AS.061.270
Instructor(s): R. Buso-garcia
Area: Humanities
Writing Intensive.

AS.061.376. Arts and Culture Journalism: Interactive Media, Online Publishing. 3.00 Credits.
Students will participate in the ongoing creation of BmoreArt.com, an online arts and culture publication that serves the Baltimore community. In conjunction with visiting professionals, students will investigate the Baltimore cultural community and create different types of editorial content using interactive media including film, video, sound, and writing. Students will produce creative content utilizing their individual areas of expertise - such as visual art, art history, music, literary arts, film, and theater - while working together as a professional organization. A strong emphasis will be placed on the student's collaborative participation and creative experimentation. Students with differing backgrounds in media will approach this project from unique perspectives, which will be valued and cultivated. Students with previous experience in journalism are welcome. An introductory writing or film course is suggested as a prerequisite.
Instructor(s): C. Ober
Area: Humanities
Writing Intensive.

AS.061.404. Advanced Dramatic Writing: Film. 3.00 Credits.
Intensive workshop course where students will write both a first draft and a full revision of a feature length screenplay. Classes will be designed and centered on the specific challenges of the students' works-in-progress, with an emphasis on exploring and discussing different narrative approaches and solutions that will enhance their writing and revision processes. Select films will be screened and analyzed as they pertain to the students’ scripts. Students will aim to have a polished draft of their screenplay to be submitted to industry-recognized screenwriting labs at the end of the semester.
Instructor(s): R. Buso-garcia
Writing Intensive.
Anthropology

AS.070.203. Healing: Politics and Poetics. 3.00 Credits.
Metaphors of health and illness; individual and social. The body in pain and the body politic. Ethnographies of historical memory vis-à-vis medicine, epidemics, sacredness, shamanism, terror, humanitarianism, truth and reconciliation.
Instructor(s): J. Obarrio
Area: Humanities, Social and Behavioral Sciences.

AS.070.337. Digital Media, Democracy, and Control. 3.00 Credits.
This course examines how digital technologies enable new publics that circumvent state and social controls as well as how they are mobilized to confirm existing racial, gendered, and political hierarchies.
Instructor(s): L. Humphreys
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

German Romance Languages Literatures

AS.211.472. Barbers and countesses: conflict and change in the Figaro trilogy from the age of Mozart to the 20th century. 3.00 Credits.
2016 marks the bicentennial of Rossini’s irreverent masterwork The Barber of Seville, which premiered in Rome in February 1816. Thirty years earlier, in 1786, Mozart’s The Marriage of Figaro had opened in Vienna. The two operas, based on the first two plays of Beaumarchais’ controversial “Figaro trilogy”, stage conflicts of class and gender, challenging the assumptions of the aristocracy as well as the ludicrous pretensions of the raising bourgeoisie. The same themes inform the post-modern portrayal of the past in John Corigliano’s The Ghosts of Versailles (1991), which ideally completes the musical afterlife of the trilogy. By studying how the plays were adapted to the opera stage within their different cultural and historical contexts, the course will explore the representation of the ideological, social, and political turmoil that, eventually, culminated in the French Revolution. The course will also include field trips and screenings of movies such as Stanley Kubrick’s Barry Lyndon (1975) and Milos Forman’s Amadeus (1984). This course may be used to satisfy major requirements in both the French and Italian majors.
Instructor(s): E. Refini
Area: Humanities
Writing Intensive.

AS.211.479. Dante’s Journey through the Afterlife. 3.00 Credits.
Dante’s Divine Comedy presents a complete picture of the medieval world-view in all its aspects: physical (the structure of the cosmos), historical (the major actors from Adam to Dante himself) and moral (a complete system of right and wrong). Dante shows how the Christian religion portrayed itself, other religions, the nature of God, humans, angels and devils, and human society. We will explore these topics both from the viewpoint of Dante’s own time, and in terms of its relevance to our own societal and cultural concerns.
Instructor(s): W. Stephens
Area: Humanities
Writing Intensive.

AS.212.205. Winter Is Coming: Writing and Rewriting French Dark Ages. 3.00 Credits.
This course will not aim at drawing the exhaustive literary landscape of French Middle Ages, neither will it be a Comparative Literature or History class. It may be considered a gateway to French Medieval literature, given that the Modern Fantasy has obviously improved the last decades, the latter being built as a rewriting of Medieval themes and Western European folklore. Looking at texts originally written in Old French, including prose and poetry, but also at the French Medieval iconography, we will try to understand the old roots of the Modern and so popular (but sacrificing) Fantasy Literature. Basic French will be required.
Instructor(s): M. Alinhoh
Area: Humanities.

AS.213.309. Walter Benjamin and His World. 3.00 Credits.
All readings and class discussions in English. This course will provide an introduction to the thought, writing, and world of Walter Benjamin—one of the most interesting and influential German writers of the early 20th century. Although he died in exile having published only a single book in his lifetime, in the past three decades his ideas and preoccupations have changed the way we think about Cultural Studies, Media Studies, Literary Studies, German thought, Jewish mysticism, and the philosophy of history. We will be examining some of his major writings in tandem with precursors such as Charles Baudelaire and Louis Aragon; contemporaries such as Theodor Adorno and Gershom Scholem; and the legacy of his work among contemporary theorists, critics, and artists.
Instructor(s): M. Caplan
Area: Humanities
Writing Intensive.

AS.213.336. Dancing About Architecture: Jewish Humor and the Construction of Cultural Discourse. 3.00 Credits.
Are all Jews funny, or only the ones from New York? This course will be an advanced-graduate examination of literary, theatrical, cinematic, and televised representations of Jewish culture focusing on the construction of cultural discourse through comedy. Taking as a point of departure Sigmund Freud’s Jokes and Their Relation to the Unconscious, we will consider the joke as a mode of narration and cultural coding with specific resonances for the Jewish encounter with modernity. Among the topics to be addressed in this course will be the origins of modern Jewish humor in traditional modes of storytelling and study; the problems of anxiety and otherness articulated and neutralized through humor; the significance of Jews in creating popular culture through the mass media (particularly though not exclusively in the United States) as well as the role of these mediums in transmitting and translating Jewish references to the general culture; the status of the Yiddish language as a vehicle for satire and a vehicle of resistance between tradition and modernity; the uses and abuses of Jewish stereotypes and the relationship of Jewish humor to anti-Semitism; the connections between Jewish humor and other modes of minority discourse; and the question of translation of Jewish humor both from Yiddish into other languages and from the Jewish “in-group” to a “post-ethnic” audience. Authors and performers to be examined will include Avrom Goldfaden, Sholem Aleichem, Franz Kafka, Dzigan and Szumacher, Lenny Bruce, the Marx Brothers, Mel Brooks, Phillip Roth, Woody Allen, Larry David, Sarah Silverman, and the Coen Brothers. All readings and discussions conducted in English.
Instructor(s): M. Caplan
Area: Humanities
Writing Intensive.
AS.213.361. The Holocaust in Film and Literature. 3.00 Credits.
How has the Holocaust been represented in literature and film? Are there special challenges posed by genocide to the traditions of visual and literary representation? Where does the Holocaust fit in to the array of concerns that the visual arts and literature express? And where do art and literature fit in to the commemoration of communal tragedy and the working through of individual trauma entailed by thinking about and representing the Holocaust? These questions will guide our consideration of a range of texts — nonfiction, novels, poetry — in Yiddish, German, English, French and other languages (including works by Elie Wiesel, Primo Levi, and Isaac Bashevis Singer), as well as films from French documentaries to Hollywood blockbusters (including films by Alain Resnais, Claude Lanzmann, and Quentin Tarantino). All readings in English.
Instructor(s): S. Spinner
Area: Humanities

AS.213.387. Major City, Minor Literature? Berlin in German-Jewish and Yiddish Literature. 3.00 Credits.
Between the two World Wars, a period of intense artistic and intellectual vitality, Berlin was an international center for theater, visual arts, and literature. Many important Yiddish-language writers were drawn to Berlin and, together with their German-language counterparts, produced a body of literature that explores issues of modernity and identity. By comparing works in Yiddish and German, we will learn about inter-War Berlin’s cultural diversity and richness, while also gaining insight into the particular issues of writing about Jewish identity in the 1920s, and the implications of writing in a minor language (Yiddish). We will read works by authors including Joseph Roth and Alfred Döblin in German, and Moyshe Kulbak and Dovid Bergelson in Yiddish. All texts will be in translation. Some questions we will explore include: • What is a minority/minor language or literature? • How did German and Yiddish interact in cultural and social spheres? • Can texts in different languages comprise a single body of literature? • What did it mean to be German and what did it mean to be Jewish? • Are assimilation and hybridity useful concepts? • Is there such a thing as Jewish modernism? • How did literature of the period respond to the rise of the Nazi party and the intensification of antisemitism?
Instructor(s): S. Spinner
Area: Humanities

AS.214.479. Dante Visits the Afterlife: The Divine Comedy. 3.00 Credits.
Dante’s Divine commedia is the greatest long poem of the Middle Ages; some say the greatest poem of all time. We will study the Commedia critically to find: (1) What it reveals about the worldview of late-medieval Europe; (2) how it works as poetry; (3) its relation to the intellectual cultures of pagan antiquity and Latin (Catholic) Christianity; (4) its presentation of political and social issues; (5) its influence on intellectual history, in Italy and elsewhere; (6) the challenges it presents to modern readers and translators; (7) what it reveals about Dante’s understanding of cosmology, world history and culture. We will read and discuss the Commedia in English, but students will be expected to familiarize themselves with key Italian terms and concepts. Students taking section 02 (for 4 credits) will spend an additional hour working in Italian at a time to be mutually decided upon by students and professor.
Instructor(s): W. Stephens
Area: Humanities
Writing Intensive

AS.215.353. Women Writing in Latin America: Prose and Poetry by Sor Juana, Mistral, Lisboa, Pizarnik, Castellanos, and other poets. 3.00 Credits.
The first objective of the course is to train students in close reading and analysis of literary texts. The second objective is to read prose and poetry by some of the canonical texts in the Latin American tradition written by women. Taught in English.
Instructor(s): S. Castro-Klaren
Area: Humanities
Writing Intensive

AS.215.463. Borges: His Fiction and Critical Essays. 3.00 Credits.
This course will deal with close readings of Borges ficciones and critical essays in order to determine how his thinking on the problem of writing and thinking is fictionalized in his stories.
Instructor(s): S. Castro-Klaren
Area: Humanities
Writing Intensive

This course will focus on the art of writing poetry, the art of reading poetry and the poetics of each of the poets whose work is the textual matter of the course.
Instructor(s): S. Castro-Klaren
Area: Humanities
Writing Intensive

AS.216.300. Contemporary Israeli Poetry. 3.00 Credits.
This course examines the works of major Israeli poets such as Yehuda Amichai, Nathan Zach, Dalia Rabikovitch, Erez Biton, Roni Somek, Dan Pagis, Yona Wollach, Yair Horwitz, Maya Bejerano, and Yitzhak Laor. Against the background of the poetry of these famous poets we will study recent developments and trends in Israeli poetry, including less known figures such as Mois Benarroch, Shva Salhoov and Almog Behar. Through close reading of the poems, the course will trace the unique style and aesthetic of each poet, and will aim at presenting a wide picture of contemporary Hebrew poetry.
Prerequisites: Students may receive credit for AS.216.300 or AS.300.413, but not both.
Instructor(s): N. Stahl; Z. Cohen
Area: Humanities
Writing Intensive

AS.216.342. The Holocaust in Israeli Society and Culture. 3.00 Credits.
This course examines the role of the Holocaust in Israeli society and culture. We will study the emergence of the discourse of the Holocaust in Israel and its development throughout the years. Through focusing on literary, artistic and cinematic responses to the Holocaust, we will analyze the impact of its memory on the nation, its politics and its self-perception.
Instructor(s): N. Stahl
Area: Humanities
Writing Intensive
AS.216.370. Israel Through Prose. 3.00 Credits.
This course examines representations of various aspects of Israeli society and culture in contemporary Israeli prose. The course will follow both a thematic and chronological path in order to study the ways in which Israeli prose reflects political, ideological, social and cultural aspects of contemporary Israel. In this context, we will read works by several major authors such as: Agnon, Shabtai, Kahanah-Carmon, Oz, Kenaz, Yehoshua, Grossman, Castel-Bloom, Matalon, Laor, Kashua and Hoffmann. Students who sign up for section 2 will work an additional hour in Hebrew with Professor Cohen at a time mutually agreed upon by the professor and the students enrolled.-Carmon, Oz, Kenaz, Yehoshua, Grossman, Castel-Bloom, Matalon, Laor, Kashua and Hoffmann. Instructor(s): N. Stahl; Z. Cohen Area: Humanities Writing Intensive.

AS.216.373. War in Israeli Arts and Culture. 3.00 Credits.
In this course we will study the various representations of what functions as one of Israel's most unifying and yet dividing forces: war. By analyzing literary and cinematic works as well as visual art and popular culture we will attempt to understand the role of war in shaping Israeli society, culture and politics. Topics such as commemoration and mourning, dissent and protest, trauma and memory and the changing image of the soldier will stand at the center of the course. Students with a knowledge of Hebrew wishing to do extra work in Hebrew should enroll in section 2 and the fourth hour will be scheduled at a time convenient to the enrollees and instructor. Instructor(s): N. Stahl; Z. Cohen Area: Humanities.

AS.216.398. Zionism: Literature, Film, Thought. 3.00 Credits.
This course studies the relation between Israeli culture and Zionism. Based on a close reading of both literary and non-literary Zionist texts, we will explore the thematic, social and political aspects of the Zionist movement. The course focuses on primary sources and its main goal is to familiarize students with the history of Zionism and its influence on Israeli culture. In the last part of the semester we will investigate the different meanings of Post-Zionism through contemporary literary and non-literary texts as well as recent Israeli films. Students wishing to do additional work in Hebrew should enroll in section 2 where students will meet for an additional hour at a time TBD and will earn 4 credits for the course. Prerequisites: Students may receive credit for AS.216.398 or AS.300.398, but not both. Instructor(s): N. Stahl; Z. Cohen Area: Humanities.

AS.216.412. The Divine in Literature and Cinema. 3.00 Credits.
This course studies various issues concerning literary and cinematic representations of the divine. We will investigate theoretical, theological, generic and aesthetic aspects of the topic and will familiarize ourselves with the general problem of the relation between religion, literature and cinema. Among the topics to be discussed are, negative theology in literature and film, theodicy and anti-theodicy, the question of religion and literary modernism, providence and narratology in the modern novel and in contemporary cinema. Instructor(s): N. Stahl.

AS.216.444. Apocalypse Now: Apocalypse in Literature and Cinema. 3.00 Credits.
This course studies literary and cinematic representations of the apocalypse. We will investigate theoretical, theological, generic and aesthetic aspects of the topic and seek to trace the narrative dynamics as well as literary and cinematic means of apocalyptic representations. We will discuss works from various periods, languages, cultures and religions. Among the issues to be discussed: what is the apocalypse, war and the apocalypse, the Holocaust as apocalypse, Biblical apocalypse, post-apocalyptic works, the apocalypse in popular culture, realism, anti-realism and the apocalypse. Instructor(s): N. Stahl Area: Humanities Writing Intensive.

AS.216.612. The Divine in Literature and Cinema.
This course studies various issues concerning literary and cinematic representations of the divine. We will investigate theoretical, theological, generic and aesthetic aspects of the topic and will familiarize ourselves with the general problem of the relation between religion, literature and cinema. Among the topics to be discussed are, negative theology in literature and film, theodicy and anti-theodicy, the question of religion and literary modernism, providence and narratology in the modern novel and in contemporary cinema. Instructor(s): N. Stahl.

Theatre Arts Studies
AS.225.324. Adaptation for the Stage. 3.00 Credits.
For aspiring playwrights, dramaturgs, and literary translators, this course is a workshop opportunity in learning to adapt both dramatic and non-dramatic works into fresh versions for the stage. Students with ability in foreign languages and literatures are encouraged to explore translation of drama as well as adaptation of foreign language fiction in English. Fiction, classical dramas, folk and fairy tales, independent interviews, or versions of plays from foreign languages are covered. Instructor(s): J. Martin Area: Humanities Writing Intensive.

AS.225.330. Playwriting Strategies. 3.00 Credits.
A seminar and workshop in playwriting with Dr. Joe Martin, playwright and dramaturge. Student writers, developing their plays, will learn how to open up to the creative process, “brainstorm,” refine their work, and shape it toward an act of artistic communication. Writer’s techniques, such as attending to plot or “story,” delineation of character, creating effective “dialog,” even overcoming “writer’s block,” will be addressed. This course is designed to be complementary to – not a replacement for – playwriting classes in the Writing Seminars. Instructor(s): J. Martin Writing Intensive.

Humanities Center
AS.300.113. Freshmen Seminar: Drama and Gender in Shakespeare’s England. 3.00 Credits.
In this seminar we will read male and female authored plays and discuss how they reflect contemporary social expectations in Tudor and Stuart England. Authors include William Shakespeare; Mary Sidney, Countess of Pembroke; Christopher Marlowe; Elizabeth Cary; Ben Jonson; and Mary Sidney, Lady Wroth. Instructor(s): E. Patton Area: Humanities.
AS.300.133. Freshmen Seminar: Women of Epic Fame in Literature and Drama, 800 BCE-1650 CE. 3.00 Credits.
From Homer’s Odyssey to Shakespeare’s Antony and Cleopatra, powerful women who achieve their ends by working from within the system are often overlooked or not fully explored. Our readings and discussions will foreground these women of fiction, while we also consider the social conditions of their living contemporaries. Readings will include: Homer’s Odyssey (Penelope); Virgil’s Aeneid (Dido); Dante’s Inferno (Beatrice); Milton’s Paradise Lost (Eve), and several accounts of Cleopatra in plays by Shakespeare and his contemporary women writers. Cross listed with Theater Arts, Writing Seminars, and WGS.
Instructor(s): T. Tower
Area: Humanities
Writing Intensive.

East Asian Studies
AS.310.116. Romantic Love in Chinese Literature. 3.00 Credits.
This course aims to introduce students to a variety of literary texts featuring romantic love from the 9th to the mid-20th centuries in China. The target materials cover a wide range of literary products from Bo Juyi’s court poem to the modern Shanghai novella by the woman writer Zhang Ailing (Eileen Chang). As we read romance in a variety of narrative forms such as fiction, drama, and poetry, we will examine changing ideas about marriage, love, sexuality, family, emotion, and morality within the literary discourse as well as in society. Thus, students are expected to connect various literary texts about romance to their socio-historical, literary, and political surroundings. At the same time, we will discuss the shifting significance of romance for writers and reading public and consider how literary texts formed ideas about romance in society. The course is organized chronologically and thematically. Reading assignments are all in English.
Instructor(s): F. Joo
Area: Humanities.

AS.300.139. Introduction to Intellectual History. 3.00 Credits.
This course offers a conceptual and historical introduction to Intellectual History. What makes the “history of ideas” different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call “ideas”? In what sense do they have a history? These are examples of the kind of questions addressed in the course.
Instructor(s): P. Marrati
Area: Humanities.

Interdepartmental
AS.360.133. Freshman Seminar: Great Books at Hopkins. 3.00 Credits.
Freshman Seminar: Students attend lectures by an interdepartmental group of Hopkins faculty and meet for discussion in smaller seminar groups; each of these seminars is led by one of the course faculty. In lectures, panels, multimedia presentations, and curatorial sessions among the University’s rare book holdings, we will explore some of the greatest works of the literary and philosophical traditions in Europe and the Americas. Close reading and intensive writing instruction are hallmarks of this course; authors for Fall 2016 include Homer, Plato, Boccaccio, Diderot, Shelley, Nietzsche, Nabokov, Douglass, and Woolf.
Instructor(s): A. Eakin Moss; E. Russo; R. Bett; W. Stephens
Area: Humanities
Writing Intensive.

Program in Latin American Studies
AS.361.316. Caribbean Writing in Shakespeare, V. S. Naipaul, and Alejo Carpentier. 3.00 Credits.
Readings and polemics concerned with Shakespeare’s play The Tempest (1610-1611) and its postcolonial afterlives; V. S. Naipaul’s novel A House for Mr. Biswas (1961); and Alejo Carpentier’s El siglo de las luces (1962). The socio historical and political contexts of each work and authorship will be considered in depth in terms of dominant notions of writing in current critical theory. Cross-listed with GRLL, English, and Writing Seminars.
Instructor(s): E. Gonzalez
Area: Humanities, Social and Behavioral Sciences.

Center for Africana Studies
AS.362.304. Reading and Writing Black Poetry. 3.00 Credits.
This course is an exploration of twentieth and twenty-first century black poetry and poetics. Readings include Paul Laurence Dunbar, Langston Hughes, Gwendolyn Brooks, Amiri Baraka, Sonia Sanchez, Nikki Giovanni, Lucille Clifton, Rita Dove, Natasha Trethewey, Terrance Hayes, Claudia Rankine, and Danz Smith. Texts will be mined for theme as well as formal technique as a basis for poetic experimentation.
Instructor(s): A. Gunn
Area: Humanities
Writing Intensive.

AS.300.143. Introduction to Comparative Literature. 3.00 Credits.
This course offers an introduction to the history, theory, and praxis of comparative literature. We will read texts from some of the founding figures of the discipline and look at the most recent debates in the field, including translation studies, literary theory, and world literature, among others. Particular attention will be given to the methodologies and problems of studying literatures in different linguistic traditions and the relation between literature and other areas of thought and culture, such as philosophy, art history, and psychoanalysis. Case studies in comparative approaches to literature will provide concrete examples to our discussions.
Instructor(s): L. Lisi
Area: Humanities.

AS.300.363. Reading Judith Shakespeare: poetry and drama by women writers in Elizabethan England (ca 1558-1650). 3.00 Credits.
Virginia Woolf’s account of the thwarted career of Shakespeare’s hypothetical sister, Judith (in A Room of One’s Own) frames our reading of plays and poetry by Shakespeare and contemporary women writers, including Isabella Whitney, Elizabeth Cary, Mary Sidney, Aemelia Lanyer, Mary Wroth, and others. Students will create fictional biographies of “Judith Shakespeare” and her literary accomplishments. Cross listed with English, Theater Arts, Writing Seminars, and WGS.
Instructor(s): E. Patton
Area: Humanities
Writing Intensive.
Program in Museums and Society
CS 389.343. Edgar Allan Poe and His Afterlives. 3.00 Credits.
We will investigate the creative development and iconic afterlife of a
canonical American author, Edgar Allan Poe, as a case-study in literary
legacy and cultural heritage. What is the lifespan of a literary work, and
how do works “stay alive” for later generations? Students will examine
rare Poe materials and create a digital exhibition of Poe archives.
Instructor(s): G. Dean
Area: Humanities, Social and Behavioral Sciences.

Whiting School of Engineering
http://engineering.jhu.edu/

Engineering education at Johns Hopkins began with the establishment of
an engineering school in 1913. Throughout its history, the Whiting School
has maintained close ties with the Krieger School of Arts and Sciences,
which has led pioneering education and research since the Faculty of
Philosophy was assembled in 1876. The Whiting School of Engineering
provides its students with an education and research environment that
fosters a lifetime ability to create and apply new knowledge and to
contribute to their professions.

The Whiting School offers 10 ABET-accredited programs in engineering
leading to the Bachelor of Science degree: biomedical engineering,
chemical and biomolecular engineering, civil engineering, computer
engineering, computer science, electrical engineering, engineering
mechanics, environmental engineering, materials science and
engineering, and mechanical engineering. The school also offers B.S. and
B.A. degrees in applied mathematics & statistics as well as B.A. degrees
in biomedical engineering, computer science, general engineering, and
geography.

Our commitment to advanced study and research yields outstanding
programs that lead to masters and doctoral degrees. In the descriptions
that follow, each department lists its faculty and their research, research
facilities, graduate programs, and the elementary and advanced courses
they offer. More details can be obtained from the departmental websites,
through the Whiting School homepage at http://engineering.jhu.edu.

Applied Mathematics and Statistics
http://engineering.jhu.edu/ams

The Department of Applied Mathematics and Statistics is devoted to the
study and development of mathematical disciplines especially oriented
to the complex problems of modern society. A broad undergraduate
and graduate curriculum emphasizes several branches of applied
mathematics: Probability, the mathematical representation and modeling
of uncertainty; Statistics, the analysis and interpretation of data;
Operations Research, the design, analysis, and improvement of actual
operations and processes; Optimization, the determination of best or
optimal decisions; Discrete Mathematics, the study of finite structures,
arrangements, and relations; and Scientific Computation, which includes
all aspects of numerical computing in support of the sciences.

Probability and Statistics is treated in the curriculum as a single
general area, dealing in a unified way with theory and methodology
for probabilistic representation of chance phenomena, applications of
stochastic modeling to physical and social sciences, formulation of
statistical models, fitting of statistical models to data, and interpretation
of data. Operations Research and Optimization represents a second general
area, dealing in unified fashion with the application of optimization
theory, mathematical programming, computer modeling, stochastic
modeling, and game theory to planning and policy problems such as
scheduling, allocation of resources, and facility location. Discrete
Mathematics includes the traditional themes of graph theory and
combinatorics, as well as newer topics arising from modern technological
and theoretical developments. The fourth general area, Computational
and Applied Mathematics, covers topics pertaining to computing, numerical
analysis, advanced matrix analysis, and mathematical modeling.
Financial Mathematics addresses applications by making use of applied
mathematics techniques and models from many of the above-mentioned
areas.

In its fundamental role of representing applied mathematics at Johns
Hopkins University, the Department of Applied Mathematics and
Statistics is complemented by the Department of Mathematics, with its
differing emphasis. Located in the School of Engineering, the Department
of Applied Mathematics and Statistics fulfills a special integrative role,
stemming in part from the affinity of engineers for applied mathematics
and in part from the increasing need for interaction between science and
engineering. The mathematical sciences, especially the mathematics
of modeling, provide a common language and tools through which
engineers can develop closer alliances and cooperation with other
scientists.

The department's degree programs include foundational and introductory
course work drawing from all areas of the curriculum, along with
specialized course work in areas such as probability, statistics,
operations research, and optimization. Students, in consultation
with their advisors, may develop challenging individual programs.
The department emphasizes mathematical reasoning, mathematical
modeling, abstraction from the particular, and innovative application
all in a problem-oriented setting. The aim is to prepare graduates for
professional careers in the mathematical sciences and related areas, in
academic institutions as well as in governmental, industrial, and research
organizations.

The undergraduate major in applied mathematics and statistics leads
to the B.A. and B.S. degrees. The graduate program leads to the M.A.,
M.S.E., and Ph.D. degrees. In addition, under a combined bachelor's/
master's program, exceptionally able undergraduates may be admitted
early to simultaneous graduate work.

Facilities
The department is located in Whitehead Hall. Office space and liberal
access to computing facilities are provided to resident graduate
students. A Reading/Commons Room provides the opportunity for
informal discussions among faculty and graduate students. The
university's Milton S. Eisenhower Library maintains an excellent
collection of literature in the mathematical sciences, including all of the
important current journals.

The undergraduate major in applied mathematics and statistics may
serve as preparation for employment as an applied mathematician, for
graduate study in applied mathematics or related areas, or as a general
quantitative training for a career in business, medicine, or other fields.
An undergraduate major in applied mathematics and statistics takes
an individually tailored program of courses within the department and in
the Department of Mathematics (calculus, and perhaps further courses
such as differential equations, analysis, complex variables, topology, and
modern algebra) and electives in science and engineering. By suitable
choice of electives, heavy concentration in a specific field of engineering
is possible.
In order to develop a sound program suited to individual needs and interests, the student should consult regularly with the faculty advisor. Additional advisory information, including information about the areas of focus described below, may be obtained from the department office.

With the advice and consent of the faculty advisor, each student constructs an individualized program meeting the requirements below. A written copy of the program should be on file with the faculty advisor, with whom it can be revised and updated from time to time.

**Bachelor’s Degrees**

Departmental majors can earn either the B.A. or the B.S. degree by meeting the general university requirements and the general requirements of the School of Engineering (see Requirements for a Bachelor's Degree [http://e-catalog.jhu.edu/undergrad-students/academic-policies/requirements-for-a-bachelors-degree], including Writing Requirement, in this catalog), and the departmental requirements. All courses used to meet the following departmental requirements must be taken for a letter grade and passed with grade of C- or higher:

1. **Calculus I, II, and III**
   - AS.110.106 & AS.110.107 Calculus I (Mathematics) 8
   - AS.110.108 & AS.110.109 Calculus II (Mathematics) 4
   - AS.110.202 Calculus III (satisfies the Calculus III requirements. Advanced placement is acceptable as well) 4
   - or AS.110.211 Honors Multivariable Calculus

2. **Linear Algebra and Differential Equations**
   - Two courses in linear algebra and differential equations. These two courses must, collectively, touch both areas. There are two ways to meet this two-course requirement:
     - Option A
       - Choose one of the following for Linear Algebra:
         - AS.110.201 Linear Algebra 4
         - or AS.110.212 Honors Linear Algebra
       - Choose one of the following for Differential Equations:
         - AS.110.302 Diff Equations/Applic 4
         - or AS.110.306 Honors Differential Equations
         - or AS.110.417 Partial Diff Equations
         - or EN.550.386 Scientific Computing: Differential Equations
         - or EN.550.388 Scientific Computing: Differential Equations in Vector Spaces
         - or EN.550.391 Dynamical Systems
     - Option B
       - EN.550.291 Linear Algebra and Differential Equations 4
       - Plus an additional course in linear algebra or differential equations chosen from among the following:
         - EN.550.385 Scientific Computing: Linear Algebra 4
         - or EN.550.386 Scientific Computing: Differential Equations
         - or EN.550.388 Scientific Computing: Differential Equations in Vector Spaces

     Choose one of the following (or one of the courses approved to meet the Masters/PhD Computing Requirement):
     - AS.171.426 Practical Scientific Analysis of Big Data 3-4
     - or AS.250.205 Introduction to Computing
     - or EN.500.200 Computing for Engineers and Scientists
     - or EN.510.202 Computation and Programming for Materials Scientists and Engineers
     - or EN.530.371 Quantitative Applications in Mechanical Engineering
     - or EN.540.305 Modeling and Statistical Analysis of Data for Chemical and Biomolecular Engineers
     - or EN.550.281 Computing in Applied Mathematics
     - or EN.550.383 Scientific Computing with Python
     - or EN.550.385 Scientific Computing: Linear Algebra
     - or EN.550.386 Scientific Computing: Differential Equations
     - or EN.550.388 Scientific Computing: Differential Equations in Vector Spaces
     - or EN.550.400 Mathematical Modeling and Consulting
     - or EN.550.413 Applied Statistics and Data Analysis
     - or EN.550.415 Practical Scientific Analysis of Big Data
     - or EN.550.433 Monte Carlo Methods

     - or EN.550.450 Computational Molecular Medicine
     - or EN.550.487 Numerical Methods for Financial Mathematics
     - or EN.550.493 Mathematical Image Analysis
     - or EN.560.220 Civil Engineering Analysis
     - or EN.570.210 Computation/Math Modeling
     - or EN.580.200 Introduction to Scientific Computing in BME using Python, Matlab, and R
     - or EN.580.223 Models and Simulations
     - or EN.600.475 Machine Learning

3. **Discrete Mathematics**
   - Choose one of the following:
     - EN.550.171 Discrete Mathematics 4
     - or EN.550.371 Cryptology and Coding
     - or EN.550.471 Combinatorial Analysis
     - or EN.550.472 Graph Theory

4. **Probability and Statistics**
   - Choose one of the following:
     - EN.550.420 Introduction to Probability 4
     - or EN.550.430 Introduction to Statistics 4

5. **Optimization**
   - EN.550.361 Introduction to Optimization 4

6. **Completion of an area of Focus, chosen from the list below.**
   - Two additional courses are to be taken in the area of focus, distinct from those used to satisfy requirements 5 and 6.

7. **Courses coded Quantitative Studies totaling 40 credits of which at least 18 credits must be in courses numbered 300 or higher.**
   (Courses used to meet the requirements above may be counted toward this total.)

8. **For the B.S. degree, at least 12 credits coded Natural Sciences**
Laboratory courses that accompany Natural Science courses may be used in reaching this total. (Courses used to meet the requirements above may be counted toward this total.)

Area of Focus
Two additional courses are to be taken in the area of focus.

Probability and Statistics
Choose two of the following: 7-8
- AS.110.405 Analysis I
- EN.550.400 Mathematical Modeling and Consulting
- EN.550.413 Applied Statistics and Data Analysis
- EN.550.426 Introduction to Stochastic Processes
- EN.550.433 Monte Carlo Methods
- EN.550.436 Data Mining
- EN.550.439 Time Series Analysis
- EN.550.450 Computational Molecular Medicine

Scientific Computing *
Choose two of the following: 7-8
- EN.550.385 Scientific Computing: Linear Algebra
- EN.550.386 Scientific Computing: Differential Equations
- EN.550.433 Monte Carlo Methods

Optimization and Operations Research
Choose two of the following: 8
- EN.550.362 Introduction to Optimization II
- EN.550.400 Mathematical Modeling and Consulting
- EN.550.453 Mathematical Game Theory
- EN.550.463 Network Models in Operations Research

Discrete Mathematics
Choose two of the following: 8
- AS.110.401 Advanced Algebra I
- EN.550.371 Cryptology and Coding
- EN.550.463 Network Models in Operations Research
- EN.550.471 Combinatorial Analysis
- EN.550.472 Graph Theory

Financial Mathematics
Choose two of the following: 8
- EN.550.342 Investment Science
- EN.550.427 Stochastic Processes and Applications to Finance
- EN.550.444 Introduction to Financial Derivatives
- EN.550.445 Interest Rate and Credit Derivatives
- EN.550.447 Quantitative Portfolio Theory and Performance Analysis

* Neither the pair of EN.550.385-EN.550.386 nor EN.550.386-EN.550.388 allowed in fulfillment of the area of focus.

Requirements 1–9 together constitute a minimal core program, allowing maximum flexibility in planning degree programs. Students often are able to complete a second major during a four-year program or to proceed to the department’s combined bachelor’s/master’s degree program.

It is highly recommended that students develop a coherent program of study (see below) or at least take additional departmental courses, in order to establish a broad foundation for a career as an applied mathematician. Of particular importance are additional courses in optimization (EN.550.362 Introduction to Optimization II), stochastic processes (EN.550.426 Introduction to Stochastic Processes), statistics (EN.550.413 Applied Statistics and Data Analysis), dynamical systems (EN.550.391 Dynamical Systems), mathematical modeling and consulting (EN.550.400 Mathematical Modeling and Consulting), scientific computing (EN.550.385 Scientific Computing: Differential Equations), and investment science (EN.550.442 Investment Science). Students planning to continue to graduate school in an applied mathematics program are encouraged to consider taking one or more graduate-level courses in probability (EN.550.620 Probability Theory I, EN.550.621 Probability Theory II), statistics (EN.550.630 Statistical Theory, EN.550.631 Statistical Theory II), optimization (EN.550.661 Foundations of Optimization, EN.550.662 Optimization Algorithms), combinatorics (EN.550.671 Combinatorial Analysis), graph theory (EN.550.672 Graph Theory), numerical analysis (EN.550.681 Numerical Analysis), or matrix analysis (EN.550.692 Matrix Analysis and Linear Algebra).

Honors
The Department of Applied Mathematics and Statistics awards departmental honors based on a number of factors, including performance in coursework, research experiences, teaching, and service. If a student completes a senior thesis (EN.550.501 Senior Thesis) and also earns a GPA or 3.5 or higher in Applied Mathematics and Statistics courses, then the student will automatically be awarded departmental honors.

Minor in Applied Mathematics and Statistics
The minor in applied mathematics and statistics should be attractive to students majoring in a variety of disciplines, in both the School of Engineering and the School of Arts and Sciences. The minor provides formal recognition of the depth and strength of a student’s quantitative knowledge beyond the minimal requirements of his/her major.

The requirements of the minor in applied mathematics and statistics are the following:

- Completion of an approved program of study containing at least 18 credits in courses coded Quantitative Studies. The first two courses in calculus (AS.110.106 Calculus I (Biology and Social Sciences)-AS.110.107 Calculus II (For Biological and Social Science) or AS.110.108 Calculus I-AS.110.109 Calculus II (For Physical Sciences and Engineering) or their equivalents) may not be used to fulfill this requirement.
- Among the courses comprising the 18 Q credits, there must be
  - (a) at least four courses in the Department of Applied Mathematics and Statistics (each of these must be a 3- or 4-credit course); and
  - (b) at least three 3- or 4-credit courses coded Q at the 300-level or above, of which at least two must be in the Department of Applied Mathematics and Statistics; and
  - (c) an approved semester course based on a high-level computer language chosen from the list below or one of the courses approved to meet the AMS Master’s/PhD Computing Requirement...

AS.171.426 Practical Scientific Analysis of Big Data 3-4
or AS.250.209 Introduction to Computing
or EN.500.200 Computing for Engineers and Scientists
or EN.510.202 Computation and Programming for Materials Scientists and Engineers
or EN.530.371 Quantitative Applications in Mechanical Engineering
or EN.540.309 Modeling and Statistical Analysis of Data for Chemical and Biomedical Engineers
or EN.550.281 Computing in Applied Mathematics
or EN.550.383 Scientific Computing with Python
or EN.550.385 Scientific Computing: Linear Algebra
or EN.550.386 Scientific Computing: Differential Equations
or EN.550.388 Scientific Computing: Differential Equations in Vector Spaces
or EN.550.400 Mathematical Modeling and Consulting
or EN.550.413 Applied Statistics and Data Analysis
or EN.550.419 Practical Scientific Analysis of Big Data
or EN.550.433 Monte Carlo Methods
or EN.550.436 Data Mining
or EN.550.443 Financial Computing in C++
or EN.550.450 Computational Molecular Medicine
or EN.550.481 Numerical Methods for Financial Mathematics
or EN.550.493 Mathematical Image Analysis
or EN.560.220 Civil Engineering Analysis
or EN.570.210 Computation/Math Modeling
or EN.580.200 Introduction to Scientific Computing in BME
using Python, Matlab, and R
or EN.580.223 Models and Simulations
or EN.600.479 Machine Learning

Various elements of the graduate program are summarized below. Further information is available from the department office.

Admission

To be admitted to an advanced degree program in the department, an applicant must show that he/she has the basic intellectual capacity and has acquired the skills necessary to complete the program successfully within a reasonable period of time. A faculty committee evaluates each applicant's credentials; there are no rigid requirements.

Prospective applicants should submit transcripts of previous academic work, letters of recommendation from persons qualified to evaluate the applicant's academic performance and potential for graduate study, a statement of purpose describing anticipated professional goals, and Graduate Record Examination (GRE) scores. Foreign students must submit scores from the Test of English as a Foreign Language (TOEFL) or International English Language Testing System (IELTS).

Most applicants have undergraduate majors in quantitative fields such as mathematics, statistics, engineering, or a field in the physical sciences, but any major is permitted. Regardless of the major, completion of a program in undergraduate mathematics at least through advanced calculus and linear algebra is essential to begin the normal graduate program.

Requirements for the Master's Degree in Applied Mathematics and Statistics

Students may work toward either the master of arts (M.A.) degree or the master of science in engineering (M.S.E.) degree in applied mathematics and statistics. All master's degrees in applied mathematics and statistics ordinarily require a minimum of two semesters of registration as a full-time resident graduate student.

To obtain departmental certification for the master's degree in Applied Mathematics and Statistics, the student must:

1. Complete satisfactorily at least eight one-semester courses of graduate work in a coherent program approved by the faculty advisor. All 600-level and 700-level courses (with the exception of seminar and research courses), and some 400-level courses in the department are satisfactory for this requirement. Certain courses in other departments are also acceptable. At most 3 courses outside the department may be counted toward the Master's degree requirements.

2. Meet either of the following options:
   • (a) submit an acceptable research report based on an approved project; or
   • (b) complete satisfactorily two additional one-semester graduate courses, as approved by the faculty advisor.

3. Satisfy the computing requirement by receiving a grade of B- or better in one of the following courses:
   EN.550.400 Mathematical Modeling and Consulting 4
   EN.550.413 Applied Statistics and Data Analysis 4
   EN.550.415 Practical Scientific Analysis of Big Data 3
   EN.550.433 Monte Carlo Methods 3
   EN.550.436 Data Mining 4
   EN.550.443 Financial Computing in C++ 4
   EN.550.450 Computational Molecular Medicine 4

A wide variety of advanced courses, seminars, and research opportunities is available in the Department of Applied Mathematics and Statistics. In addition to graduate programs in probability, statistics, operations research, optimization, discrete mathematics, scientific computation, and financial mathematics, advanced study is possible in interdisciplinary topics in cooperation with other departments, particularly the departments of Biostatistics, Computer Science, Economics, Geography and Environmental Engineering, Health Services Administration, Mathematics, and Sociology. A graduate student in the Department of Applied Mathematics and Statistics may thus develop a program that suits his/her individual interests and objectives.
4. Complete an area of focus by taking three courses in one of the following areas. A list of courses that can be counted toward each area of focus will be maintained and updated every year. Some courses from other departments can be eligible to count toward area of focus. They can be used within the three-course limit specified in point 1, above. This list of courses is based on recent offerings. Not all courses are available every year and substitute classes may be accepted if approved by the advisor and the Academic Affairs Committee. Higher level classes (700 or 800) can be accepted if given a letter grade.

**Probability Theory**
- EN.550.426 Introduction to Stochastic Processes
- EN.550.428 Stochastic Processes and Applications to Finance II
- EN.550.433 Monte Carlo Methods
- EN.550.620 Probability Theory I
- EN.550.621 Probability Theory II
- EN.550.622 Introduction to Stochastic Calculus
- EN.550.663 Stochastic Search & Optimization
- EN.550.664 Modeling, Simulation, and Monte Carlo

**Statistics and Statistical Learning**
- EN.550.413 Applied Statistics and Data Analysis
- EN.550.415 Practical Scientific Analysis of Big Data
- EN.550.434 Nonparametric Statistics
- EN.550.436 Data Mining
- EN.550.439 Time Series Analysis
- EN.550.450 Computational Molecular Medicine
- EN.550.630 Statistical Theory
- EN.550.631 Statistical Theory II
- EN.550.632 Bayesian Statistics
- EN.550.633 Advanced Topics in Bayesian Statistics

**Optimization and Operations Research**
- EN.550.461 Optimization in Finance
- EN.550.453 Mathematical Game Theory
- EN.550.463 Network Models in Operations Research
- EN.550.661 Foundations of Optimization
- EN.550.662 Optimization Algorithms
- EN.550.663 Stochastic Search & Optimization
- EN.550.665 Convex Optimization
- EN.550.666 Combinatorial Optimization

**Computational and Applied Mathematics**
- EN.550.443 Financial Computing in C++
- EN.550.492 Mathematical Biology
- EN.550.493 Mathematical Image Analysis
- EN.550.680 Shape and Differential Geometry
- EN.550.681 Numerical Analysis
- EN.550.692 Matrix Analysis and Linear Algebra
- EN.550.695 Advanced Parameterization in Science and Engineering

**Discrete Mathematics**
- EN.550.471 Combinatorial Analysis
- EN.550.472 Graph Theory
- EN.550.666 Combinatorial Optimization
- EN.550.671 Combinatorial Analysis
- EN.550.672 Graph Theory
- EN.600.463 Algorithms I
- EN.600.464 Randomized and Big Data Algorithms
- EN.600.469 Approximation Algorithms
- EN.600.470 Combinatorics & Graph Theory in Computer Science
- EN.600.471 Theory of Computation

* The Discrete Mathematics area of focus requires a minimum of one listed course taken within the Applied Mathematics and Statistics department, but the other two courses may include the listed Computer Science offerings. These courses can be used within the three-course limit specified in point 1, above.

5. Complete training on the responsible and ethical conduct of research, if applicable. Please see WSE Policy on the Responsible Conduct of Research.

6. Complete training on academic ethics.

An overall GPA of 3.0 must be maintained in courses used to meet the program requirements. At most two course grades of C or C+ are allowed to be used and the rest of the course grades must be B- or better.

Each candidate for the master’s degree must submit to the department for approval a written program stating how they plan to meet their degree requirements. This should be done early in the first semester of residence.

Doctoral students in other departments may concurrently undertake a master’s program in Applied Mathematics and Statistics with the permission of the AMS department and an application review. Application forms and information are available in the department office.

**Requirements for the Master’s Degree in Financial Mathematics**

The department offers an M.S.E. degree in Financial Mathematics. The structure of this program is summarized below. More detailed information about this program may be found on the department’s website.

Full-time students in this program are expected to attend courses for three semesters beginning in the fall semester, a summer internship after the spring semester of their first year, and return for a second fall semester.

For departmental certification for this degree, the student must complete the following courses or approved substitute courses with program approval:
**Core financial mathematics requirements (4 courses)**

**Summer Internship**

For courses used toward the degree, all grades must be C or higher, at most two grades can be below a B; and the overall average grade point average in these courses must be at least 3.0.

* Please see department website for approved electives.

**Requirements for the Bachelor’s/Master’s Program**

Highly motivated and exceptionally well-qualified undergraduates may apply for admission to the combined bachelor’s/master’s program in applied mathematics and statistics. Interested students should apply no later than fall semester of their senior year.

The requirements for this program consist of those for the bachelor’s and master’s programs.

**Requirements for the Ph.D. Degree**

The objective of the department’s Ph.D. program is to produce graduates who are broadly educated in applied mathematics and statistics and who can work at the current frontiers of their chosen specialized disciplines. The introductory phase of graduate study acquaints the student with a spectrum of topics, provides an opportunity to fill gaps in his or her background, and affords a close view of the doctoral research process and of potential research areas and advisors. Continuation to advanced study and dissertation research is based upon favorable evaluation of preparedness and potential. The progress of students is evaluated at the end of every semester. The culmination of the program is the doctoral dissertation, representing an original and significant contribution to knowledge in applied mathematics.

In addition to fulfilling the university requirement of a minimum of two consecutive semesters of registration as a full-time resident graduate student, the student must accomplish the following to obtain departmental certification for the Ph.D.:

- Pass the Introductory Examination, normally offered immediately before each semester.
- Pass the Ph.D. Candidacy Examination. This oral examination is normally taken in the third year of residency. The scope of the exam will be governed by a syllabus prepared by the student with the help of the student’s mentor or advisor.
- Pass the Graduate Board Oral Examination, normally taken in the third year of residence.
- Complete satisfactorily a one year elective course (or the equivalent) in some area of application of applied mathematics and statistics.
- Acquire teaching experience under the supervision of the faculty.
- Demonstrate a working knowledge of the utilization of computers in applied mathematics and statistics.
- Complete a program of original research and its clear exposition in a written dissertation. The dissertation must be approved by at least two faculty readers and be certified by them to be a significant contribution to knowledge and worthy of publication in scholarly journals. The candidate defends the dissertation in a public examination held under the auspices of the department.

Additional details on these items may be found on the department’s website.

**Course Program**

The most common way for students to gain the knowledge and skills to succeed in the Ph.D. program is through course work. In consultation with his or her advisor, each student will develop a program of proposed course work. The relevant courses for the Ph.D. are of three types: basic graduate-level courses, additional specialized courses appropriate to the student’s field of research, and an elective one year course selected to broaden the student in applied mathematics. To promote a well-rounded education and record, all full-time graduate students are expected to enroll in an appropriate number of courses for their stage in the program. Students are required to enroll in and attend EN.550.600 Department Seminar, the Applied Mathematics and Statistics Department Seminar, every semester. Grades of B- or better (or equivalent level of performance in pass/fail courses) are expected of all department Ph.D. graduate students in their course work.

**Basic Courses**

All students are encouraged to master basic material in:

- probability (EN.550.620), statistics (EN.550.630), and stochastic processes (EN.550.426);
- optimization (EN.550.661);
- numerical and matrix analysis (EN.550.681, EN.550.692); and
- discrete mathematics (EN.550.671, EN.550.672).

Normally, a student will have completed at least eight basic courses by the end of the fourth semester of residence.

**Specialized Courses**

Each student takes advanced courses appropriate to the proposed area of dissertation research, with the approval of the research advisor.
Elective Courses
A one-year graduate course (or the equivalent) in a field distinct from the student’s specialized area is required. This is a minimal requirement. Students are encouraged to take more than two semesters of elective course work, either covering one area in depth or covering two areas. Typical areas in other departments are biology, econometrics, mathematical economics, mathematical ecology, computational geometry, systems theory, health systems, mathematics, facility location, psychometrics, and physics. These courses may complement or supplement the student’s previous experience, but if a student has no previous experience in an area some elementary course work may be necessary as a prerequisite to acceptable graduate level courses. Although students are strongly encouraged to take the elective courses outside the department, with the approval of the advisor they may be chosen within the department, provided they are 600- or 700-level courses in a field clearly distinct from the student’s specialized area.

Financial Assistance
A limited number of teaching and research assistantships providing full tuition and a competitive academic year stipend are available to qualified full-time Ph.D. candidates. Furthermore, the following special fellowships are awarded:

- The Rufus P. Isaacs Fellowship, named in honor of a late member of the faculty acclaimed for his contributions to operations research.
- The Charles and Catherine Counselman Fellowship, generously endowed by Hopkins alumnus Charles Counselman.

In addition, summer employment opportunities are often available within the university and in the Baltimore-Washington corridor.

Faculty
Chair
E. Laurent Younes
Professor: mathematical imaging, shape theory and applied differential geometry, computational probability, statistics.

Vice Dean of Education
Edward R. Scheinerman
Professor: discrete mathematics, graph theory, social networks, random methods, partially ordered sets.

Director of Graduate Studies
Daniel Q. Naiman
Professor, Director of Financial Mathematics Master's Program: statistics, computational probability, bioinformatics

Director of Undergraduate Studies
Donniell E. Fishkind
Associate Research Professor: combinatorics, graph theory, matrix analysis

Associate Director of Undergraduate Studies
James A. Fill
Professor: probability, stochastic processes, random structures, and algorithms

Executive Director of Financial Mathematics Master’s Program
David Audley
Senior Lecturer: financial mathematics, term structure models, fixed income derivatives, and quantitative portfolio strategies.
Senior Lecturer
Beryl Castello
Senior Lecturer: operations research, optimization, facility location, inventory modeling.

Fred Torcaso
Senior Lecturer: stochastic processes, asymptotics, and partial differential equations.

Lecturers
Prashant Athavale
Lecturer: mathematical image processing, variational problems, multiscale analysis; bio-medical imaging

John Miller
Lecturer: financial mathematics, equity derivative trading and risk management, number theory

Joint, Part-Time and Visiting Appointments
Gregory Chirikjian
Professor: Mechanical Engineering, computational structural biology, applied mathematics, robotics.

John Goutsias
Professor: Electrical and Computer Engineering.

Benjamin F. Hobbs
Professor: Geography and Environmental Engineering, energy and environmental systems and economics.

Pablo Iglesias
Professor: Electrical and Computer Engineering.

Takeru Igusa
Professor: Civil Engineering.

S. Rao Kosaraju
Edward J. Schaefer Professor: Computer Science, design of algorithms, parallel computation, pattern matching, robotics computational geometry.

Scott Levin
Assistant Professor: Emergency Medicine, School of Medicine.

David Marchette
Lecturer: Naval Surface Warfare Center.

Michael I. Miller
Professor: Biomedical Engineering.

Jerry L. Prince
Professor: Electrical and Computer Engineering, multi-dimensional signal processing, medical imaging, computational geometry.

For current course information and registration go to https://sis.jhu.edu/classes/

Courses
EN.550.100. Introduction to Applied Mathematics and Statistics. 1.00 Credit.
A seminar-style series of lectures and assignments to acquaint the student with a range of intellectual and professional activities performed by applied mathematicians and statisticians. Problems arising in applied mathematics and statistics are presented by department faculty and outside speakers. Recommended Course Background: one semester of Calculus.
Instructor(s): E. Younes
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.103. Mathematics & Politics. 4.00 Credits.
Instructor(s): M. Sedlock
Area: Quantitative and Mathematical Sciences.

EN.550.105. Mathematics of Music. 3.00 Credits.
This course aims to promote students’ understanding of some important mathematical concepts by focusing on music and the sounds made by musical instruments as an area of mathematical application. Students will be exposed to basic concepts in mathematics including Fourier series, linear algebra, fundamental ideas from signal processing, and stochastic process models. The structure, organization, and synthesis of sounds and combinations of sounds will be explored.
Instructor(s): D. Naiman
Area: Quantitative and Mathematical Sciences.

EN.550.111. Statistical Analysis I. 4.00 Credits.
First semester of a general survey of statistical methodology. Topics include descriptive statistics, introductory probability, conditional probability, random variables, expectation, sampling, the central limit theorem, classical and robust estimation, confidence intervals, and hypothesis testing. Case studies from psychology, epidemiology, economics and other fields serve to illustrate the underlying theory. Some use of Minitab, Excel or R, but no prior computing experience is necessary. Recommended Course Background: four years of high school mathematics. Students who may wish to undertake more than two semesters of probability and statistics should consider EN.550.420-EN.550.430.
Prerequisites: Statistics Sequence restriction: students who have completed AS.230.205 or EN.550.113 may not enroll.;Statistics Sequence restriction: students who have completed any of these courses may not register: EN.550.211 OR EN.550.230 OR EN.550.310 OR EN.550.311 OR EN.550.420 OR EN.550.430 OR EN.550.413 OR EN.560.435 OR AS.280.345 OR AS.280.345 OR AS.200.314 OR AS.200.315 OR EN.560.348
Instructor(s): F. Torcaso; Z. Lubberts
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.112. Statistical Analysis II. 4.00 Credits.
Second semester of a general survey of statistical methodology. Topics include two-sample hypothesis tests, analysis of variance, linear regression, correlation, analysis of categorical data, and nonparametrics. Students who may wish to undertake more than two semesters of probability and statistics should strongly consider the EN.550.420-430 sequence.
Prerequisites: Prereqs: EN.550.111 OR EN.550.113 OR AS.230.205 OR AS.280.345 OR credit for AP Statistics
Instructor(s): D. Athreya; J. Paat
Area: Engineering, Quantitative and Mathematical Sciences.
EN.550.113. Statistics Through Case Study. 4.50 Credits.
A case-study based course treating basic statistical theory and methodology. All theoretical material will be presented in the context of timely real-world case studies. Topics covered will include basic probability, random variables and their distributions, the central limit theorem and normal approximation, sampling distributions, statistical inference, confidence intervals, and hypothesis testing. Recommended Course Background: Four years of high school mathematics.
Prerequisites: This course is not open to students who have received credit for 550.111 or AP Statistics.
Instructor(s): D. Athreya
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.171. Discrete Mathematics. 4.00 Credits.
Introduction to the mathematics of finite systems. Logic; Boolean algebra; induction and recursion; sets, functions, relations, equivalence, and partially ordered sets; elementary combinatorics; modular arithmetic and the Euclidean algorithm; group theory; permutations and symmetry groups; graph theory. Selected applications. The concept of a proof and development of the ability to recognize and construct proofs are part of the course. Recommended Course Background: Four years of high school mathematics.
Prerequisites: EN.550.171 may not be taken after EN.550.471 or EN.550.472.
Corequisites: EN.550.171 may not be taken concurrently with EN.550.471 or EN.550.472
Instructor(s): B. Castello
Area: Quantitative and Mathematical Sciences.

EN.550.200. Computing for Engineers and Scientists. 3.00 Credits.
This course introduces a variety of techniques for solving problems in engineering and science on a computer using MATLAB. Topics include structure and operation of a computer, the programming language MATLAB, computational mathematics, and elementary numerical analysis. Co-listed with EN.550.200
Prerequisites: AS.110.107 OR AS.110.109 or credit for those courses through AP Calculus.
Instructor(s): K. Hedrick
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.211. Probability and Statistics for the Life Sciences. 4.00 Credits.
This is an introduction to statistics aimed at students in the life sciences. The course will provide the necessary background in probability with treatment of independence, Bayes theorem, discrete and continuous random variables and their distributions. The statistical topics covered will include sampling and sampling distributions, confidence intervals and hypothesis testing for means, comparison of populations, analysis of variance, linear regression and correlation. Analysis of data will be done using Excel.
Prerequisites: AS.110.106 OR AS.110.108 OR AS.110.113; Statistics Sequence restriction: Students who have completed any of these courses may not register: EN.550.230 OR AS.280.345 OR AS.280.345 OR AS.200.315 OR EN.550.310 OR EN.550.311 OR EN.560.435 OR EN.550.420 OR EN.550.430 OR EN.560.434
Instructor(s): P. Athreya
Area: Quantitative and Mathematical Sciences.

EN.550.230. Introduction to Biostatistics. 4.00 Credits.
Prerequisites: Statistics Sequence restriction: Students who have completed any of these courses may not enroll: EN.550.211 OR AS.280.345 OR AS.200.314 OR AS.200.315 OR AS.200.315 OR EN.550.310 OR EN.550.311 OR EN.560.435 OR EN.550.420 OR EN.550.430 OR EN.560.348
Instructor(s): P. Athreya
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.251. Math Models/Decision Mkg. 4.00 Credits.
This course is an introduction to management science and the quantitative approach to decision making. Emphasis on model development and case studies, using spreadsheets or other computer software, applied to a variety of problems in manufacturing, transportation, finance, and general management.
Prerequisites: AS.110.106 or AS.110.108
Instructor(s): B. Castello
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.252. Math Models-Decision Making: Stochastic Models. 4.00 Credits.
This course is an introduction to management science and the quantitative approach to decision making. Our focus will be on the formulation and analysis of stochastic models, where some problem data may be uncertain. The covered topics may include Project Scheduling, Decision Analysis, Time Series Forecasting, Inventory Models with Stationary or Nonstationary Demand, Queuing Models, Discrete-Event Simulation, and Quality Management. We emphasize model development and case studies, using spreadsheets and other computer software. The applications we study occur in variety of applications. Recommended Course Background: One semester of calculus
Prerequisites: AS.110.106 or AS.110.108
Instructor(s): B. Castello
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.281. Computing in Applied Mathematics. 3.00 Credits.
PreReq: Calculus I Overview of some of the more common computational platforms in which to do applied mathematics. The course will cover computing in at least three general areas: numerical linear algebra using Matlab, symbolic mathematics using Maple, and statistics using R. Students will be presented with applications, basic mathematics that underlies the problems to be solved, and computational approaches to their solution.
Instructor(s): D. Naiman
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.284. VBA For Finance. 1.00 Credit.
Excel VBA is a powerful programming environment that lurks behind the Excel program that many of us have some familiarity with. This course aims to get students up to speed with working with this tool.
Instructor(s): D. Naiman.

EN.550.289. Linear Algebra and Differential Equations. 4.00 Credits.
An introduction to the basic concepts of linear algebra, matrix theory, and differential equations that are used widely in modern engineering and science. Intended for engineering and science majors whose program does not permit taking both AS.110.201 and AS.110.302.
Prerequisites: [(AS.110.106 OR AS.110.108 ) AND (AS.110.107 OR AS.110.109)] OR AS.110.113
Instructor(s): B. Castello
Area: Engineering, Quantitative and Mathematical Sciences.
EN.550.310. Probability & Statistics for the Physical and Information Sciences & Engineering. 4.00 Credits.
An introduction to probability and statistics at the calculus level, intended for engineering and science students planning to take only one course on the topics. Combinatorial probability, independence, conditional probability, random variables, expectation and moments, limit theory, estimation, confidence intervals, hypothesis testing, tests of means and variances, goodness-of-fit. Recommended co-requisite: multivariable calculus.
Prerequisites: [(AS.110.106 OR AS.110.108) AND (AS.110.107 OR AS.110.109)] OR AS.110.113; Statistics Sequence restriction: students who have completed any of these courses may not register: En.550.311 OR EN.560.435 OR EN.550.420 OR EN.550.430 OR EN.560.348
Instructor(s): P. Athavale
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.311. Probability and Statistics for the Biological Sciences and Engineering. 4.00 Credits.
An introduction to probability and statistics at the calculus level, intended for students in the biological sciences planning to take only one course on the topics. This course will be at the same technical level as En.550.310. Students are encouraged to consider En.550.420-430 instead. Combinatorial probability, independence, conditional probability, random variables, expectation and moments, limit theory, estimation, confidence intervals, hypothesis testing, tests of means and variances, and goodness-of-fit will be covered. Students cannot receive credit for both En.550.310 and En.550.311. Students cannot receive credit for En.550.311 after having received credit for En.550.420 or En.550.430. Recommended Course Corequisite: AS.110.202
Prerequisites: [(AS.110.106 OR AS.110.108) AND (AS.110.107 OR AS.110.109)] OR AS.110.113; Statistics Sequence restriction: students who have completed any of these courses may not register: En.550.310 OR EN.560.435 OR EN.550.420 OR EN.550.430 OR EN.560.348
Instructor(s): D. Sussman
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.342. Investment Science. 4.00 Credits.
This course offers a rigorous treatment of the subject of investment as a scientific discipline. Mathematics is employed as the main tool to convey the principles of investment science and their use to make investment calculations for good decision-making. Topics covered in the course include the basic theory of interest and its application to fixed-income securities, cash flow analysis and capital budgeting, mean-variance portfolio theory, and the associated capital asset pricing model, utility function theory and risk analysis, derivative securities and basic option theory, portfolio evaluation. The student is expected to be comfortable with the use of mathematics as a method of deduction and problem solving. En.550.342 is intended for students interested in financial mathematics, but without the mathematical background required for En.550.442. Both En.550.342 and En.550.442 will have the same lectures, but the assignments and examinations will differ. Students may not receive credit for both En.550.342 and En.550.442.
Prerequisites: AS.110.107 OR AS.110.109 OR AS.110.113; Students may not receive credit for both En.550.342 and En.550.442.
Instructor(s): J. Miller
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.361. Introduction to Optimization. 4.00 Credits.
Appropriate for undergraduate and graduate students without the mathematical background required for En.550.661. An introductory survey of optimization methods, supporting mathematical theory and concepts, and application to problems of planning, design, prediction, estimation, and control in engineering, management, and science. Study of varied optimization techniques including linear programming, network-problem methods, dynamic programming, integer programming, and nonlinear programming. Students should be familiar with computing and linear algebra. Recommended Course Background: one year of calculus
Prerequisites: (AS.110.107 OR AS.110.109 OR AS.110.113) AND (EN.550.291 OR AS.110.201 OR AS.110.212)
Instructor(s): D. Fishkind
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.362. Introduction to Optimization II. 4.00 Credits.
An introductory survey of optimization methods, supporting mathematical theory and concepts, and application to problems of planning, design, prediction, estimation, and control in engineering, management, and science. Study of varied optimization techniques including linear programming, network-problem methods, dynamic programming, integer programming, and nonlinear programming. Appropriate for undergraduate and graduate students without the mathematical background required for En.550.661.
Prerequisites: En.550.361 AND (AS.110.202 OR AS.110.211)
Instructor(s): D. Fishkind
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.371. Cryptology and Coding. 4.00 Credits.
Computing experience. A first course in the mathematical theory of secure and reliable electronic communication. Cryptology is the study of secure communication: How can we ensure the privacy of messages? Coding theory studies how to make communication reliable: How can messages be sent over noisy lines? Topics include finite field arithmetic, error-detecting and error-correcting codes, data compressions, ciphers, one-time pads, the Enigma machine, one-way functions, discrete logarithm, primality testing, secret key exchange, public key cryptosystems, digital signatures, and key escrow. Recommended Course Background: AS.110.204
Prerequisites: En.550.171 AND (En.550.291 OR AS.110.201 OR AS.110.212)
Instructor(s): D. Fishkind
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.383. Scientific Computing with Python. 4.00 Credits.
In this course, we will study numerical methods, and scientific computing using the Python language. We will discuss topics in numerical analysis, such as equation solving, differential equations, interpolation, integration etc. We will also introduce image analysis techniques such as filtering, denoising, inpainting, and segmentation. We will discuss core computer language concepts, algorithms, and data-structures using Python. No previous experience with computer programming is needed.
Prerequisites: (EN.550.291 OR AS.110.201 OR AS.110.212) AND (AS.110.202 OR AS.110.211)
Instructor(s): P. Athavale
Area: Quantitative and Mathematical Sciences.
EN.550.385. Scientific Computing: Linear Algebra. 4.00 Credits.
A first course on computational linear algebra and applications. Topics include floating-point arithmetic, algorithms and convergence, Gaussian elimination for linear systems, matrix decompositions (LU, Cholesky, QR), iterative methods for systems (Jacobi, Gauss–Seidel), and approximation of eigenvalues (power method, QR-algorithm). Theoretical topics such as vector spaces, inner products, norms, linear operators, matrix norms, eigenvalues, and canonical forms of matrices (Jordan, Schur) are reviewed as needed. Matlab is used to solve all numerical exercises; no previous experience with computer programming is required. 
Prerequisites: (EN.550.291 OR AS.110.201 OR AS.110.212) AND (AS.110.202 OR AS.110.211)
Instructor(s): G. Eyink
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.386. Scientific Computing: Differential Equations. 4.00 Credits.
A first course on computational differential equations and applications. Topics include floating-point arithmetic, algorithms and convergence, root-finding (midpoint, Newton, and secant methods), numerical differentiation and integration, and numerical solution of initial value problems (Runge–Kutta, multistep, extrapolation methods, stability, implicit methods, and stiffness). Theoretical topics such as existence, uniqueness, and stability of solutions to initial-value problems, conversion of higher order/ non-autonomous equations to systems, etc., will be covered as needed. Matlab is used to solve all numerical exercises; no previous experience with computer programming is required. 
Prerequisites: Prereqs: (AS.110.202 OR AS.110.21) AND (EN.550.291 OR AS.110.302 OR AS.110.306)
Instructor(s): G. Eyink
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.388. Scientific Computing: Differential Equations in Vector Spaces. 4.00 Credits.
A first course on computational differential equations in vector spaces and applications, a continuation of EN.550.385. Topics include root-finding for nonlinear systems of equations (bisection, Newton, and secant methods), numerical differentiation and integration, and numerical solution of initial-value problems (Runge–Kutta, multistep, extrapolation methods, stability, implicit methods, and stiffness) and boundary-value problems (shooting method, relaxation) for ordinary differential equations in finite-dimensional vector spaces. Theoretical topics such as existence, uniqueness, and stability of solutions to initial-value problems, conversion of higher-order/non-autonomous equations to systems, etc., will be covered as needed. Matlab is used to solve all numerical exercises. 
Prerequisites: Prereqs: EN.550.385 AND (EN.550.291 OR AS.110.302 OR AS.110.306)
Instructor(s): G. Eyink
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.391. Dynamical Systems. 4.00 Credits.
Mathematical concepts and methods for describing and analyzing linear and nonlinear systems that evolve over time. Topics include boundedness, stability of fixed points and attractors, feedback, optimality, Lyapounov functions, bifurcation, chaos, and catastrophes. Examples drawn from population growth, economic behavior, physical and engineering systems. The main mathematical tools are linear algebra and basic differential equations. 
Prerequisites: EN.550.291 OR AS.110.201 OR AS.110.211
Instructor(s): P. Athavale
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.400. Mathematical Modeling and Consulting. 4.00 Credits.
Creating, analyzing and evaluating optimization and mathematical models using case studies. Project-oriented practice and guidance in modeling techniques, with emphasis on communication of methods and results. Applications may include transportation networks, scheduling, industrial processes, and telecommunications. Computation will be emphasized throughout using MATLAB. 
Prerequisites: EN.550.361 OR EN.550.362
Instructor(s): B. Castello
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.413. Applied Statistics and Data Analysis. 4.00 Credits.
An introduction to basic concepts, techniques, and major computer software packages in applied statistics and data analysis. Topics include numerical descriptive statistics, observations and variables, sampling distributions, statistical inference, linear regression, multiple regression, design of experiments, nonparametric methods, and sample surveys. Real-life data sets are used in lectures and computer assignments. Intensive use of statistical packages such as S+ to analyze data. 
Prerequisites: EN.550.112 or EN.550.310 or EN.550.311 or EN.550.420
Instructor(s): M. Tang
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.414. Applied Statistics and Data Analysis II. 3.00 Credits.
Part II of a sequence on data analysis and linear models. Topics include categorical and discrete data analysis, mixed models, semiparametric and nonparametric regression, and generalized additive models. Applications of these methods using the R environment for statistical computing will be emphasized. 
Prerequisites: EN.550.413
Instructor(s): M. Tang
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.415. Practical Scientific Analysis of Big Data. 3.00 Credits.
This course explores common issues around computational analysis of massive data. We will learn about numerical inaccuracies in calculations, work with databases, and venture out into parallel computing (multi-threading and CUDA). Students will be introduced to streaming algorithms and elements of robust statistics. 
Instructor(s): T. Budavari
Area: Natural Sciences, Quantitative and Mathematical Sciences.
EN.550.416. Introduction to Statistical Learning, Data Analysis and Signal Processing. 4.00 Credits.
Introduction to high dimensional data sets: key problems in statistical and machine learning. Geometric aspects. Principal component analysis, linear dimension reduction, random projections. Concentration phenomena: examples and basic inequalities. Metric spaces and embeddings thereof. Kernel methods. Nonlinear dimension reduction, manifold models. Regression. Vector spaces of functions, linear operators, projections. Orthonormal bases; Fourier and wavelet bases, and their use in signal processing and time series analysis. Basic approximation theory. Linear models, least squares. Bias and variance tradeoffs, regularization. Sparsity and compressed sensing. Multiscale methods. Graphs and networks. Random walks on graphs, diffusions, page rank. Block models. Spectral clustering, classification, semi-supervised learning. Algorithmic and computational aspects of the above will be consistently in focus, as will be computational experiments on synthetic and real data. Linear algebra will be used throughout the course, as will multivariable calculus and basic probability (discrete random variables). Basic experience in programming in C or MATLAB or R or Octave. Recommended Course Background: More than basic programming experience in Matlab or R; some more advanced probability (e.g. continuous random variables), some signal processing (e.g. Fourier transform, discrete and continuous). Co-listed with AS.110.446
Prerequisites: (AS.110.201 OR AS.110.212) AND (EN.550.310 OR EN.550.311 OR EN.550.420) AND (AS.110.202 OR AS.110.211)
Instructor(s): M. Maggioni
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.417. Mathematical Modeling: Statistical Learning. 3.00 Credits.
Students will work independently or in groups on two or more projects using and developing machine learning methods such as linear and generalized linear regression, shrinkage method, Bayesian decision theory, variable selection, clustering, dimension reduction, functional data analysis, kernel smoothing methods and so on. These concepts will be briefly discussed in class, but some basic knowledge about them is expected. Some usual coding methods such as R, python, Matlab and C++ will also be discussed in class. Successful works could gradually turn into a part of an undergraduate or graduate thesis, or research papers. This course emphasizes on both mathematical reasons behind a model and computational skills to implement.
Prerequisites: EN.550.436
Instructor(s): M. Gu
Area: Quantitative and Mathematical Sciences.

EN.550.420. Introduction to Probability. 4.00 Credits.
Probability and its applications, at the calculus level. Emphasis on techniques of application rather than on rigorous mathematical demonstration. Probability, combinatorial probability, random variables, distribution functions, important probability distributions, independence, conditional probability, moments, covariance and correlation, limit theorems. Students initiating graduate work in probability or statistics should enroll in EN.550.620. Auditors are not permitted. Students can use any of the 6th, 7th or 8th editions of the textbook. Recommended Course Background: one year of calculus; Corequisite: multivariable calculus.
Prerequisites: Prereqs: AS.110.106 OR AS.110.108 AND AS.110.107 OR AS.110.109 OR AS.110.113
Instructor(s): F. Torcaso
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.426. Introduction to Stochastic Processes. 4.00 Credits.
Mathematical theory of stochastic processes. Emphasis on deriving the dependence relations, statistical properties, and sample path behavior including random walks, Markov chains (both discrete and continuous time), Poisson processes, martingales, and Brownian motion. Applications that illuminate the theory. Students may not earn credit for both EN.550.426 and EN.550.427.
Prerequisites: EN.550.420 AND (EN.550.291 OR AS.110.201 OR AS.110.212)
Instructor(s): J. Wierman
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.427. Stochastic Processes and Applications to Finance. 4.00 Credits.
A development of stochastic processes with substantial emphasis on the processes, concepts, and methods useful in mathematical finance. Relevant concepts from probability theory, particularly conditional probability and conditional expectation, will be briefly reviewed. Important concepts in stochastic processes will be introduced in the simpler setting of discrete-time processes, including random walks, Markov chains, and discrete-time martingales, then used to motivate more advanced material. Most of the course will concentrate on continuous-time stochastic processes, particularly martingales, Brownian motion, diffusions, and basic tools of stochastic calculus. Examples will focus on applications in finance, economics, business, and actuarial science. Students may not receive credit for both EN.550.427 and EN.550.426.
Prerequisites: Students may not receive credit for both EN.550.427 and EN.550.426
Instructor(s): J. Wierman
Area: Quantitative and Mathematical Sciences.

EN.550.428. Stochastic Processes and Applications to Finance II. 4.00 Credits.
A basic knowledge of stochastic calculus and Brownian motion is assumed. Topics include stochastic differential equations, the Feynman-Kac formula and connections to partial differential equations, changes of measure, fundamental theorems of asset pricing, martingale representations, first passage times and pricing of path-dependent options, and jump processes.
Prerequisites: EN.550.427
Instructor(s): J. Miller
Area: Quantitative and Mathematical Sciences.

EN.550.429. Introduction to Research in Discrete Probability. 3.00 Credits.
Aspects of the research process, including reading and writing mathematics, LaTeX, literature search, problem identification, problem-solving, oral presentations, Beamer, conference attendance, publication of results, and research ethics. An initial research experience, individually and/or in groups, with students identifying and developing projects in discrete mathematics and probability, such as percolation, random graphs, random walks, birthday problems, gambler’s ruin, coupon collector problems, and self-avoiding walks. Co-listed with EN.550.629 Instructor’s permission required. Open only to undergraduates.
Prerequisites: EN.550.171 AND EN.550.420
Instructor(s): J. Wierman
Area: Quantitative and Mathematical Sciences.
EN.550.430. Introduction to Statistics. 4.00 Credits.
Introduction to the basic principles of statistical reasoning and data analysis. Emphasis on techniques of application. Classical parametric estimation, hypothesis testing, and multiple decision problems; linear models, analysis of variance, and regression; nonparametric and robust procedures; decision-theoretic setting, Bayesian methods.
Prerequisites: EN.550.420 OR APPROVED ALTERNATIVE AND ( EN.550.291 OR AS.110.201 OR AS.110.212 )
Instructor(s): D. Athreya
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.431. Statistical Methods in Imaging. 3.00 Credits.
Denosing, segmentation, texture modeling, tracking, object recognition are challenging problems in imaging. We will present a collection of statistical models and methods in order to address these, including the E.M. algorithm, Maximum Entropy Modeling, Particle filtering, Markov Random Fields and Belief Propagation. Co-listed with EN.580.466. Some practice of Matlab or R is highly recommended.
Prerequisites: (AS.110.202 OR AS.110.211) AND (EN.550.310 OR EN.550.311 OR EN.550.420)
Instructor(s): B. Jedynak
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.433. Monte Carlo Methods. 3.00 Credits.
The objective of the course is to survey essential simulation techniques for popular stochastic models. The stochastic models may include classical time-series models, Markov chains and diffusion models. The basic simulation techniques covered will be useful in sample-generation of random variables, vectors and stochastic processes, and as advanced techniques, importance sampling, particle filtering and Bayesian computation may be discussed.
Prerequisites: EN.550.430
Instructor(s): J. Spall
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.434. Nonparametric Statistics. 3.00 Credits.
Nonparametric, or distribution-free methods for statistical data analysis design statistical decision regions under minimal assumptions on the observed data, avoiding, in particular, making the assumption that their distribution in known, or that it belongs to a specific parametric class (like Gaussian). The course will study the following topics: order statistics, rank-based methods, tests of independence, symmetry, location differences, scale differences and goodness-of-fit, permutation tests with an introduction to the problem of multiple comparisons.
Prerequisites: Prereqs: EN.550.310 OR EN.550.311 OR EN.550.430
Instructor(s): E. Younes
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.436. Data Mining. 4.00 Credits.
Data mining is a relatively new term used in the academic and business world, often associated with the development and quantitative analysis of very large databases. Its definition covers a wide spectrum of analytic and information technology topics, such as machine learning, artificial intelligence, statistical modeling, and efficient database development. This course will review these broad topics, and cover specific analytic and modeling techniques such as advanced data visualization, decision trees, neural networks, nearest neighbor, clustering, logistic regression, and association rules. Although some of the mathematics underlying these techniques will be discussed, our focus will be on the application of the techniques to real data and the interpretation of results. Because use of the computer is extremely important when "mining" large amounts of data, we will make substantial use of data mining software tools to learn the techniques and analyze datasets. Recommended Course Background: EN.550.413
Prerequisites: ( AS.110.202[C] OR AS.110.211[C] ) AND ( AS.110.201[C] OR AS.110.212[C] )
Instructor(s): T. Budavari
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.437. Machine Learning and Statistical Analysis in Finance. 4.00 Credits.
Managing and analyzing big data in finance can be of ultimate challenge but of ultimate opportunity. The need for statistical tools and machine learning techniques has been gradually influencing the marketplace. This course will explore several topics of machine learning and statistical finance, while the emphasis will be the applications on market prediction, risk detection and validity of finance models. The tentative topics include traditional finance models, linear models, kernel methods (e.g. support vector machine), hidden Markov models, decision trees, dimensionality reduction (e.g. PCA, low rank approximation), conditional modeling and conditional inference, and hypothesis testing. Students will be involved in several projects (computer experiments) to test those tools with real market data. Recommended Course Background: EN.550.428
Prerequisites: ( EN.550.420 OR EN.550.620 ) AND ( EN.550.430 OR EN.550.630 )
Instructor(s): L. Chang
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.439. Time Series Analysis. 3.00 Credits.
Time series analysis from the frequency and time domain approaches. Descriptive techniques; regression analysis; trends, smoothing, prediction; linear systems; serial correlation; stationary processes; spectral analysis.
Prerequisites: (EN.550.310 OR EN.550.311 OR EN.550.420) AND (AS.110.201 OR AS.110.212 OR EN.550.291)
Instructor(s): F. Torcaso
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.441. Equity Markets and Quantitative Trading. 3.00 Credits.
This course introduces equity markets from a mathematical point of view. The properties of equities and equity-linked instruments will be described. Several quantitative trading strategies will be studied. Order execution tactics and the effect of market structure will be analyzed. Students will select a specialized aspect of the equity markets to investigate and complete a related independent project.
Prerequisites: EN.550.442 or EN.550.444 or instructor's permission
Instructor(s): J. Miller
Area: Engineering, Quantitative and Mathematical Sciences.
EN.550.442. Investment Science. 4.00 Credits.
This course offers a rigorous treatment of the subject of investment as a scientific discipline. Mathematics is employed as the main tool to convey the principles of investment science and their use to make investment calculations for good decision-making. Topics covered in the course include the basic theory of interest and its application to fixed-income securities, cash flow analysis and capital budgeting, mean-variance portfolio theory, and the associated capital asset pricing model, utility function theory and risk analysis, derivative securities and basic option theory, portfolio evaluation. The student is expected to be comfortable with the use of mathematics as a method of deduction and problem solving. EN.550.442 will have the same lectures as EN.550.342, but the assignments and examinations will be more mathematically rigorous. EN.550.442 is intended primarily for advanced undergraduates and graduate students concentrating in financial mathematics. Students may not receive credit for both EN.550.342 and EN.550.442.
Prerequisites: Pre-reqs: (AS.110.107 OR AS.110.109 OR AS.110.113) AND (EN.550.291 OR AS.110.201 OR AS.110.212) AND (EN.550.310 OR EN.550.311 OR EN.550.420 OR EN.550.430); Students may not receive credit for both EN.550.342 and EN.550.442.
Instructor(s): J. Miller
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.443. Financial Computing in C++. 4.00 Credits.
The first part of course, will introduce the basic concepts of C++ including variables, functions, pointers and references, function and operator overloading and along with inheritance and polymorphism, templates and the C++ Standard Library. Basic ideas of object-oriented design will be introduced. The second part of the course will cover computational techniques for solving mathematical problems arising in finance. Numerical solution of parabolic partial differential equations for option valuation and their relation to tree methods together with a basic introduction of concepts such as convergence and stability as applied to finite difference schemes. Prerequisites EN.550.427 Stochastic Processes and Applications to Finance. No prior experience with C/C++ is required.
Prerequisites: EN.550.427
Instructor(s): M. Bichuch
Area: Quantitative and Mathematical Sciences.

EN.550.444. Introduction to Financial Derivatives. 4.00 Credits.
This course will develop the mathematical concepts and techniques for modeling cash instruments and their hybrids and derivatives.
Prerequisites: AS.110.302 AND EN.550.420
Instructor(s): D. Audley
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.445. Interest Rate and Credit Derivatives. 4.00 Credits.
Advances in corporate finance, investment practice and the capital markets have been driven by the development of a mathematically rigorous theory for financial instruments and the markets in which they trade. This course builds on the concepts, techniques, instruments and markets introduced in EN.550.444. In addition to new topics in credit enhancement and structured securities, the focus is expanded to include applications in portfolio theory and risk management, and covers some numerical and computational approaches.
Prerequisites: EN.550.444
Instructor(s): D. Audley
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.446. Risk Measurement/Management in Financial Markets. 4.00 Credits.
This course applies advanced mathematical techniques to the measurement, analysis, and management of risk. The focus is on financial risk. Sources of risk for financial instruments (e.g., market risk, interest rate risk, credit risk) are analyzed; models for these risk factors are studied and the limitation, shortcomings and compensatory techniques are addressed.
Prerequisites: EN.550.444
Instructor(s): D. Audley
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.447. Quantitative Portfolio Theory and Performance Analysis. 4.00 Credits.
This course focuses on modern quantitative portfolio theory, models, and analysis. Topics include intertemporal approaches to modeling and optimizing asset selection and asset allocation; benchmarks (indexes), performance assessment (including, Sharpe, Treynor and Jenson ratios) and performance attribution; immunization theorems; alpha-beta separation in management, performance measurement and attribution; Replicating Benchmark Index (RBI) strategies using cash securities / derivatives; Liability-Driven Investment (LDI); and the taxonomy and techniques of strategies for traditional management: Passive, Quasi-Passive (Indexing) Semi-Active (Immunization & Dedicated) Active (Scenario, Relative Value, Total Return and Optimization). In addition, risk management and hedging techniques are also addressed.
Prerequisites: Prereq: EN.550.442 OR EN.550.444
Instructor(s): D. Audley
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.448. Financial Engineering and Structured Products. 4.00 Credits.
This course focuses on structured securities and the structuring of aggregates of financial instruments into engineered solutions of problems in capital finance. Topics include the fundamentals of creating asset-backed and structured securities—including mortgage-backed securities (MBS), stripped securities, collateralized mortgage obligations (CMOs), and other asset-backed collateralized debt obligations (CDOs)—structuring and allocating cash-flows as well as enhancing credit; equity hybrids and convertible instruments; asset swaps, credit derivatives and total return swaps; assessment of structure-risk interest rate-risk and credit-risk as well as strategies for hedging these exposures; managing portfolios of structured securities; and relative value analysis (including OAS and scenario analysis).
Prerequisites: EN.550.444(C) OR EN.550.442(C)
Instructor(s): D. Audley
Area: Engineering, Quantitative and Mathematical Sciences.
EN.550.449. Advanced Equity Derivatives. 4.00 Credits.
This course will cover the pricing, trading and risk management of equity derivatives, with emphasis on more exotic derivatives such as path-dependent and multi-asset derivatives. The course will emphasize practical issues: students will build their own pricing and risk management tools, and gain experience simulating the dynamic hedging of a complex derivatives portfolio. Students will practice structuring and selling equity derivative products. Pricing issues such a model selection, unobservable input parameters and calibration will be discussed, and students will learn techniques to manage the often highly nonlinear and discontinuous risks associated with these products. The course will have a significant computing component: both in the classroom and as homework projects, students will use Excel, write VBA macros and write and call C++ routines in the Microsoft Windows environment (which is the most common computing environment used by the financial industry).
Prerequisites: EN.550.444
Instructor(s): J. Miller
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.450. Computational Molecular Medicine. 4.00 Credits.
Computational systems biology has emerged as the dominant framework for analyzing high-dimensional "omics" data in order to uncover the relationships among molecules, networks and disease. In particular, many of the core methodologies are based on statistical modeling, including machine learning, stochastic processes and statistical inference. We will cover the key aspects of this methodology, including measuring associations, testing multiple hypotheses, and learning predictors, Markov chains and graphical models. In addition, by studying recent important articles in cancer systems biology, we will illustrate how this approach enhances our ability to annotate genomes, discover molecular disease networks, detect disease, predict clinical outcomes, and characterize disease progression. Whereas a good foundation in probability and statistics is necessary, no prior exposure to molecular biology is required (although helpful).
Prerequisites: ( EN.550.420 AND EN.550.430 ) OR equivalent courses in probability and statistics.
Instructor(s): J. Bader
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.453. Mathematical Game Theory. 4.00 Credits.
Mathematical analysis of cooperative and noncooperative games. Theory and solution methods for matrix game (two players, zero-sum payoffs, finite strategy sets), games with a continuum of strategies, N-player games, games in rule-defined form. The roles of information and memory. Selected applications to economic, recreational, and military situations. Prereq: Multivariable Calculus, probability, linear algebra.
Prerequisites: ( AS.110.202 OR AS.110.211 ) AND EN.550.420 AND ( EN.550.291 OR AS.110.201 OR AS.110.212 )
Instructor(s): B. Castello
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.457. Topics in Operations Research. 1.50 Credits.
Study in depth of a special mathematical or computational area of operations research, or a particular application area. Recent topics: decision theory, mathematical finance, optimization software.
Instructor(s): B. Castello
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.461. Optimization in Finance. 4.00 Credits.
A survey of many of the more important optimization methods and tools that are found to be useful in financial applications.
Prerequisites: EN.550.442 OR EN.550.444
Instructor(s): F. Torcaso
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.463. Network Models in Operations Research. 4.00 Credits.
In-depth mathematical study of network flow models in operations research, with emphasis on combinatorial approaches for solving them. Introduction to techniques for constructing efficient algorithms, and to some related data structures, used in solving shortest-path, maximum-volume, flow, and minimum-cost flow problems. Emphasis on linear models and flows, with brief discussion of non-linear models and network design.
Prerequisites: EN.550.361 or EN.550.661
Instructor(s): B. Castello
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.465. Introduction to Convexity. 4.00 Credits.
Convexity is a simple mathematical concept that has become central in a diverse range of applications in engineering, science and business applications. Our main focus from the applications perspective will be the use of convexity within optimization problems, where convexity plays a key role in identifying the easy problems from the hard ones. The course will have an equal emphasis on expositing the rich mathematical structure of the field itself (properties of convex sets, convex functions, Helly-Caratheorody-Radon type theorems, polarity/duality, subdifferential calculus, polyhedral theory), and demonstrating how these ideas can be leveraged to model and solve optimization problems (via a detailed study of linear programming and basics of nonlinear convex optimization).
Recommended Course Background: Familiarity with basic real analysis, linear algebra.
Instructor(s): A. Basu
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.471. Combinatorial Analysis. 4.00 Credits.
Recommended Course Background: AS.550.291 OR AS.110.201
Prerequisites: Pre-reqs: (AS.110.106 OR AS.110.108) AND (AS.110.107 OR AS.110.109 OR AS.110.110) AND (AS.110.201 OR AS.110.212 OR EN.550.291)
Instructor(s): B. Castello
Area: Quantitative and Mathematical Sciences.

EN.550.472. Graph Theory. 4.00 Credits.
Study of systems of "vertices" with some pairs joined by "edges." Theory of adjacency, connectivity, traversability, feedback, and other concepts underlying properties important in engineering and the sciences. Topics include paths, cycles, and trees; routing problems associated with Euler and Hamilton; design of graphs realizing specified incidence conditions and other constraints. Attention directed toward problem solving, algorithms, and applications. One or more topics taken up in greater depth.
Prerequisites: EN.550.291 OR AS.110.201 OR AS.110.212
Corequisites: EN.550.171 may not be taken concurrently with EN.550.471 or EN.550.472
Instructor(s): D. Fishkind
Area: Quantitative and Mathematical Sciences.
EN.550.487. Numerical Methods for Financial Mathematics. 3.00 Credits.
Diffusion processes described by stochastic differential equations (SDEs) play an important role in the world of finance; one important tool in the study of complex SDEs is numerical simulation. In this class we concentrate on the numerical integration of SDEs, which requires a more complex mathematical construction than the integration of ordinary differential equations (ODEs). The algorithms for approximating SDE solutions are constructed on the basis of stochastic Taylor expansions, which can become particularly elaborate for systems with multiple noise sources. We propose to follow in detail all the steps from writing down an SDE to writing and running the computer code that will generate a solution of that SDE with a well-defined error. Python will be used for all applications, and more general programming concepts will be discussed as needed.
Instructor(s): C. Lalvescu
Area: Quantitative and Mathematical Sciences.

EN.550.492. Mathematical Biology. 3.00 Credits.
This course will examine the mathematical methods relevant to modeling biological phenomena, particularly dynamical systems and probability. Topics include ordinary differential equations and their simulation; stability and phase plane analysis; branching processes; Markov chains; and stochastically perturbed systems. Biological applications will be drawn from population growth, predator-prey dynamics, epidemiology, genetics, intracellular transport, and neuroscience.
Prerequisites: EN.550.420 AND ((AS.110.201 OR AS.110.212) AND (AS.110.302 or AS.110.306 OR EN.550.291))
Instructor(s): D. Athreya
Area: Natural Sciences, Quantitative and Mathematical Sciences.

EN.550.493. Mathematical Image Analysis. 3.00 Credits.
This course gives an overview of various mathematical methods related to several problems encountered in image processing and analysis, and presents numerical schemes to address them. It will focus on problems like image denoising and deblurring, contrast enhancement, segmentation and registration. The different mathematical concepts shall be introduced during the course; they include in particular functional spaces such as Sobolev and BV, Fourier and wavelet transforms, as well as some notions from convex optimization and numerical analysis. Most of such methods will be illustrated with algorithms and simulations on discrete images, using MATLAB. Prerequisites : linear algebra, multivariate calculus, basic programming in MATLAB. Recommended Course Background: Real analysis
Prerequisites: (AS.110.202 OR AS.110.211 ) AND (EN.550.291 OR AS.110.201 OR AS.110.212)
Instructor(s): N. Charon
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.500. Undergraduate Research. 1.00 - 3.00 Credits.
Reading, research, or project work for undergraduate students. Pre-arranged individually between students and faculty.
Instructor(s): B. Castello; C. Priebe; D. Fishkind; T. Budavari.

EN.550.501. Senior Thesis. 3.00 Credits.
Instructor(s): Staff.

EN.550.502. Undergraduate Independent Study. 1.00 - 3.00 Credits.
Reading, research, or project work for undergraduate students. Pre-arranged individually between students and faculty. Recent topics and activities: percolation models, data analysis, course development assistance, and dynamical systems.
Instructor(s): Staff.

EN.550.503. Preparation for Research. 1.00 Credit.
Primarily an independent study course. Readings, assignments, and discussion to prepare students for research in applied mathematics and statistics. Topics include the research process, problem-solving, mathematical writing, LaTeX, Beamer, reading mathematics, literature search, oral presentations, REU programs, and the publication process. Brief meetings to be arranged. Students are expected to spend 3 to 4 hours per week in addition to the meetings. Grading is Satisfactory/Unsatisfactory only.
Instructor(s): J. Wierman.

EN.550.505. Applied Mathematics Pedagogy. 3.00 Credits.
Instructor Permission Required - Opportunity for students to particiate
Instructor(s): B. Castello.

EN.550.510. Readings: Actuarial Math. 0.00 - 3.00 Credits.
Instructor(s): D. Audley.

EN.550.511. Senior Thesis. 3.00 Credits.
Preparation of a substantial thesis based upon independent student research, under the pre-arranged supervision of at least one faculty member in Applied Mathematics and Statistics. Instructor permission required.
Instructor(s): D. Geman; F. Torcaso.

EN.550.512. Group Undergraduate Research. 1.00 - 3.00 Credits.
Reading, research, or project work for undergraduate students. Pre-arranged meetings between students and faculty. This section has a weekly research group meeting that students are expected to attend.
Instructor(s): D. Fishkind; E. Fertig; E. Scheinerman.

EN.550.522. Undergraduate Internship. 1.00 Credit.
Instructor(s): D. Audley.

EN.550.590. Internship-Summer. 1.00 Credit.
Instructor(s): Staff.

EN.550.597. Research-Summer. 3.00 Credits.
Instructor(s): Staff.

EN.550.599. Independent Study. 3.00 Credits.
Instructor(s): D. Fishkind; E. Scheinerman; J. Fill; N. Lee.

EN.550.600. Department Seminar. 1.00 Credit.
A variety of topics discussed by speakers from within and outside the university. Required of all resident department graduate students.
Instructor(s): D. Robinson.

EN.550.620. Probability Theory I. 4.00 Credits.
The course objectives are to develop probabilistic reasoning and problem solving approaches, to provide a rigorous mathematical basis for probability theory, and to examine several important results in the theory of probability. Topics include axiomatic probability, independence, random variables and their distributions, expectation, integration, variance and moments, probability inequalities, and modes of convergence of random variables. The course will include introductory measure theory as needed. Students are expected to have previous study of both analysis and probability. This course is the first half of a yearlong sequence. The second semester’s course, EN.550.621 Probability Theory II, will cover classical limit theorems, characteristic functions, and conditional expectation.
Prerequisites: EN.550.420 and AS.110.405 or equivalent
Instructor(s): J. Fill.
EN.550.621. Probability Theory II. 4.00 Credits.
Probability at the level of measure theory, focusing on limit theory. Modes of convergence, Poisson convergence, three-series theorem, strong law of large numbers, continuity theorem, central limit theory, Berry-Esseen theorem, infinitely divisible and stable laws.
Prerequisites: EN.550.620[C] AND AS.110.405[C]
Instructor(s): J. Fill.

EN.550.622. Introduction to Stochastic Calculus. 3.00 Credits.
A graduate-level class on stochastic calculus, providing a rigorous introduction on stochastic integrals and differential equations.
Prerequisites: EN.550.621[C]
Instructor(s): M. Bichuch.

EN.550.623. Modern Applications of Probability and Statistics. 3.00 Credits.
This course explores several topics and tools toward modern applications of probability and statistics in computational, cognitive, engineering, and neural sciences. The course will introduce the theoretical background for each topic, while the emphasis will be on the applications that are not often covered in the standard probability and statistics courses. The tentative topics include: Gibbs distribution and the maximum entropy with connections to large deviations and information theory; Nonparametric statistics ("learning theory") and classifications including consistency, bias/variance tradeoff, and regularization; Markov chains and their applications in MCMC computing and hidden Markov models; Graphical models and their applications; Parameter estimation, the EM algorithm and applications on image template learning. For each topic, there will be a related project assignment, which is composed of both paper work problems and computer experiments, designed to demonstrate the mathematics and the utility of the approach in the topic. Students are required to submit their own work individually.
Prerequisites: EN.550.310 OR EN.550.311 OR (EN.550.420 AND EN.550.430)
Instructor(s): L. Chang.

EN.550.629. Introduction to Research in Discrete Probability. 3.00 Credits.
Aspects of the research process, including reading and writing mathematics, LaTeX, literature search, problem identification, problem-solving, oral presentations, Beamer, conference attendance, publication of results, and research ethics. An initial research experience, individually and/or in groups, with students identifying and developing projects in discrete mathematics and probability, such as percolation, random graphs, random walks, birthday problems, gambler's ruin, coupon collector problems, and self-avoiding walks. Co-listed with EN.550.429
Instructor's permission required. Open only to graduate students.
Instructor(s): J. Wierman.

EN.550.630. Statistical Theory II. 4.00 Credits.
The fundamentals of mathematical statistics will be covered. Topics include: distribution theory for statistics of normal samples, exponential statistical models, the sufficiency principle, least squares estimation, maximum likelihood estimation, uniform minimum variance unbiased estimation, hypothesis testing, the Neyman-Pearson lemma, likelihood ratio procedures, the general linear model, the Gauss-Markov theorem, simultaneous inference, decision theory, Bayes and minimax procedures, chi-square methods, goodness-of-fit tests, and nonparametric and robust methods.
Prerequisites: EN.550.420 or EN.550.620.
Instructor(s): D. Naiman.

EN.550.631. Statistical Theory II. 3.00 Credits.
Advanced concepts and tools fundamental to research in mathematical statistics and statistical inference: asymptotic theory, optimality, various mathematical foundations.
Instructor(s): D. Naiman.

EN.550.632. Bayesian Statistics. 3.00 Credits.
The course will cover Bayesian methods for exploratory data analysis. The emphasis will be on applied data analysis in various disciplines. We will consider a variety of topics, including introduction to Bayesian inference, prior and posterior distribution, hierarchical models, spatial models, longitudinal models, models for categorical data and missing data, model checking and selection, computational methods by Markov Chain Monte Carlo using R or Matlab. We will also cover some nonparametric Bayesian models if time allows, such as Gaussian processes and Dirichlet processes. Prerequisite: 550.630 (recommended) or 550.430
Prerequisites: EN.550.630 OR EN.550.430
Instructor(s): Y. Xu.

EN.550.633. Advanced Topics in Bayesian Statistics. 3.00 Credits.
This course covers advanced topics in Bayesian statistical analysis beyond the introductory course. Therefore knowledge of basic Bayesian statistics is assumed (at the level of “A first course in Bayesian statistical methods”, by Peter Hoff (Springer, 2009). The models and computational methods will be introduced with emphasis on applications to real data problems. This course will cover nonparametric Bayesian models including Gaussian process, Dirichlet process (DP), Polya trees, dependent DP, Indian buffet process, etc. Recommended Course Background: EN.550.632 or permission from the instructor
Instructor(s): Y. Xu.

EN.550.635. Topics in Bioinformatics. 4.00 Credits.
A readings course organized around research articles in the recent bioinformatics and computational biology literatures. In this term, the choice of papers will favor work on inferring phenotype from genotype, and modeling signaling networks, based on gene microarrays bearing the expression levels of thousands of transcripts, and on properties of proteins, such as predicting active sites and detecting harmful mutations. One major objective is to prepare students to comfortably read articles which involve extensive mathematical and statistical modeling as well as techniques from pattern recognition and machine learning. Most papers will be presented by the students. In addition, student expositions will be preceded by “tutorials” by the instructor on various aspects of statistical learning, modeling and prediction, such as properly estimating generalization error in cancer classification and avoiding over-fitting in learning networks of molecular interactions. Recommended Course Background: course in statistics; previous exposure to machine learning or pattern recognition
Instructor(s): D. Geman.
EN.550.636. System Identification and Likelihood Methods. 2.00 Credits.
The focus of this roundtable-format course will be stochastic modeling
as relates to system identification and maximum likelihood. The
principles and algorithms being covered in this course have tremendous
importance in the world at large. For example, maximum likelihood is
arguably the most popular method for parameter estimation in most
real-world applications. System identification is the term used in many
fields to refer to the process of mathematical model building from
experimental data, with a special focus on dynamical systems. The
system identification process refers to several important aspects
of model building, including selection of the model form (linear or
nonlinear, static or dynamic, etc.), experimental design, parameter
estimation, and model validation. This course will cover topics such as
the maximum likelihood formulation and theory for dynamical systems,
the EM (expectation-maximization) algorithm and its variants, Fisher
information, common model structures, online versus offline estimation,
the role of feedback in identification (i.e., open-loop versus closed-loop
estimation), standard and extended Kalman filtering, and uncertainty
characterization (e.g., confidence regions). Recommended Course
Background: Undergraduate-level matrix theory and ordinary differential
equations; graduate-level course in probability and statistics (e.g.,
550.430 or equivalent; in particular, students should have prior exposure
to maximum likelihood and Bayes’ rule). Prior experience in data analysis
and algorithms will be helpful.
Instructor(s): J. Spall.

EN.550.642. Investment Science-Commodities as a Unique Asset Class.
1.00 Credit.
The aims of the course are the following: 1. understand the properties
of commodities and shipping as an asset class distinct from bonds and
equity, 2. learn the fundamental economic results, e.g., theory of storage,
established for commodities by leading figures like Keynes and Kaldor,
3. recognize the specific difficulties of the different groups, i.e., energy,
metals, agricultural and shipping, 4. analyze the forward curve and its
stochastic modeling, with or without seasonality, 5. discuss the pricing
and hedging of options mostly traded in commodity markets, such as
Asian and spread, as well as the valuation of physical assets through
alternative approaches, 6. identify the different ways of investing in
Commodities: Futures, ETFs, indexes, structured notes. Students should
have rudimentary knowledge of financial markets.
Prerequisites: Rudimentary knowledge of financial markets; EN.550.420
and (AS.110.106 or AS.110.108)
Instructor(s): H. Geman.

EN.550.643. Graphical Models. 4.00 Credits.
This course describes how models based on networks encoding the
conditional dependency structure between random variables, also
called graphical models, can be used to design multivariate probability
distributions. A special focus will be made on important particular cases,
like Markov Chains, Bayesian networks or Markov Random Fields. We will
also discuss parametric estimation and inference problems, and issues
arising when some of the variables cannot be observed.
Prerequisites: EN.550.420 or equivalent AND EN.550.430 or equivalent
Instructor(s): L. Chang.

EN.550.646. Advanced Topics in Derivatives. 1.00 Credit.
Topics will include static arbitrage versus dynamic arbitrage, proof of
Black-Scholes formula using a change of measure, the Modigliani-
Miller representation of the corporation, Merton model of corporate
debt valuation, Asian options’ operational use, pricing and hedging;
stochastic volatility and local volatility models; elements of market
microstructure and high frequency trading. Grading will be mostly based
on oral presentations. The course is aimed at second year Master’s
students and will not begin meetings until mid-October.
Instructor(s): H. Geman.

EN.550.647. Financial Mathematics Masters Seminar. 1.00 Credit.
This course is only open to students enrolled in the MSE in Financial
Mathematics program. Advanced topics chosen according to the
interests of the instructor and graduate students. The course will focus
on recent research articles in the financial mathematics literature.
Instructor(s): D. Audley, D. Naiman.

EN.550.648. Credit and Systemic Risk. 3.00 Credits.
Credit risk is a topic which has become of fundamental importance after
the recent crisis, due to the larger number of credit quality deteriorations
and default events. This course deals with mathematical modeling
and valuation of credit risk. Students will be exposed to key theoretical
principles (doubly stochastic intensity processes, enlargement of
filtrations, risk measures), related to the construction of modern credit
risk management systems. The course will analyze computational
techniques for simulating default times, as well as methodologies for
measuring credit losses based on probabilistic tools. We will discuss
topics of currently high research interest, such as counterparty risk
valuation, systemic risk, liquidity risk, and default contagion.
Prerequisites: (EN.550.426 OR EN.550.427) AND EN.550.620
Instructor(s): A. Capponi.

EN.550.649. Advanced Financial Theory. 1.00 Credit.
The first part of the course will review in depth the main instruments in
the various asset classes, as well as the founding results on investment
decision, capital budgeting and project financing. The second part
will analyze the theory of the firm: capital structure, dilution and share
repurchase, dividend policy, Modigliani-Miller theorem and will lead to the
contingent claim pricing of corporate debt and equity as in Merton (1974)
and its extensions. The third part will extend the CAPM to the Arbitrage
Pricing Theory of Ross (1976) and its theoretical and operational
consequences. The fourth part will be dedicated to the stochastic
modelling of the yield curve to price caps, floors and swaptions, and their
use in the Asset Liability Management of a bank and insurance company.
This course will not begin until mid-October.
Instructor(s): H. Geman.
EN.550.653. **Commodities and Commodity Markets.** 3.00 Credits.
The first half of this course will be devoted to energy markets, both in terms of the market itself and how to model peculiar features of this business. First we will discuss fossil fuels, including physical and financial natural gas and LNG; crude and refined petroleum commodities; and possibly coal markets. Then the focus will turn to electricity markets, including market structures; energy, capacity and ancillary services markets; characteristics of demand; power plant commitment and dispatch; the “stack” or market supply curve; characteristics of different plants and fuels; regional differences in markets; and hedging techniques from trading vanilla products all the way to complex multi-commodity structures. We will discuss renewable energy sources, their characteristics, economics, and effects on the larger market, as well as emissions markets as a way of removing pollution externalities. The first half will conclude by elaborating on risk management techniques; credit; legislation and regulation; and derivative accounting as time permits. The second half of the course will turn to shipping, metals and agricultural markets. The metal physical markets will be described, the major Exchanges presented (LME, SHFE), as well as the warehousing issues in the case of base metals. The case of precious metals will be singled out, and gold in particular; and finally uranium and rare earths. Agricultural (grains and softs) markets will be presented, together with the crucial issues of biofuels, fertilizers, water, and arable land. In all cases, there will be a large focus on the trading activities – both to hedge and to gain exposure to commodities – in spot and derivative markets. Numerous examples of forward curves will be provided, as well as volatility skews. The valuation of swaps, spread options and Asian options will be (re)derived. Students should have rudimentary knowledge of financial markets. Recommended Course Background: EN.550.420 and AS.110.106 or AS.110.108
Instructor(s): G. Schultz; H. Geman.

EN.550.661. **Foundations of Optimization.** 3.00 Credits.
This course considers algorithms for solving various important nonlinear optimization problems and, in parallel, develops the supporting theory. Primary focus will be on unconstrained and bound-constrained optimization. Topics will include: necessary and sufficient optimality conditions; gradient, Newton, and quasi-Newton based line-search and trust-region methods; linear and nonlinear least-squares problems; linear and nonlinear conjugate gradient methods; stochastic optimization; optimal gradient methods; structured non-smooth optimization, and derivative-free optimization. Special attention will be paid to the large-scale case and will include topics such as limited-memory quasi-Newton methods, projected gradient methods, and subspace accelerated two-phase methods for bound-constrained optimization. Recommended Course Background: Multivariable Calculus, Linear Algebra, Real Analysis such as AS.110.405
Prerequisites: Pre-reqs: AS.110.202 OR AS.110.211 AND (AS.110.201 OR AS.110.212)
Instructor(s): D. Robinson.

EN.550.662. **Optimization Algorithms.** 3.00 Credits.
This course considers algorithms for solving various nonlinear constrained optimization problems and, in parallel, develops the supporting theory. Topics include: necessary and sufficient optimality conditions for constrained optimization; projected-gradient and two-phase accelerated subspace methods for bound-constrained optimization; simplex, interior-point, Bender’s decomposition, and the Dantzig-Wolfe decomposition methods for linear programming; duality theory; penalty, augmented Lagrangian, sequential quadratic programming, and interior-point methods for general nonlinear programming. In addition, we will consider the Alternating Direction Method of Multipliers (ADMM), which is applicable to a huge range of problems including sparse inverse covariance estimation, consensus, and compressed sensing.
Instructor(s): T. Lebaire.

EN.550.663. **Stochastic Search & Optimization.** 2.00 Credits.
An introduction to stochastic search and optimization, including discrete and continuous optimization problems. Topics will include the “no free lunch” theorems, beneficial effects of injected Monte Carlo randomness, algorithms for global and local optimization problems, random search, recursive least squares, stochastic approximation, simulated annealing, evolutionary and genetic algorithms, machine (reinforcement) learning, and statistical multiple comparisons. Students should have knowledge of basic matrix algebra. Recommended Course Background: Graduate course in probability and statistics
Instructor(s): J. Spall.

EN.550.664. **Modeling, Simulation, and Monte Carlo.** 3.00 Credits.
Concepts and statistical techniques critical to constructing and analyzing effective simulations; emphasis on generic principles rather than specific applications. Topics include model building (bias-variance tradeoff, model selection, Fisher information), benefits and drawbacks of simulation modeling, random number generation, simulation-based optimization, discrete multiple comparisons using simulations, Markov chain Monte Carlo (MCMC), and input selection using optimal experimental design.
Instructor(s): J. Spall.

EN.550.665. **Convex Optimization.** 3.00 Credits.
This course presents algorithms for convex optimization along with the supporting theoretical convergence results. The chosen topics covered, which are driven by big data and machine learning applications, include convex sets and functions, gradient methods (steepest descent, line searches, rates-of-convergence for weakly and strongly convex functions, Frank-Wolfe method), accelerated methods (heavy ball, Nesterov), stochastic gradient, coordinate descent, proximal and projected gradient methods, duality theory and duality-based algorithms (augmented Lagrangian, ADMM), and Newton/quasi-newton methods. Recommended Course Background: (AS.110.201 or AS. 110.212 or EN.550.291) and AS.110.405.
Instructor(s): D. Robinson.

EN.550.666. **Combinatorial Optimization.** 3.00 Credits.
The main goal of this course is to introduce students to combinatorial optimization techniques. The first part of the course will focus on combinatorial algorithms for classical problems. The next part of the course will show how polyhedral theory can be used to deal with combinatorial optimization problems in a unifying manner. Familiarity with linear programming and algorithms desirable but not strictly required. Recommended Course Background: Linear Algebra.
Instructor(s): A. Basu.
EN.550.671. Combinatorial Analysis. 4.00 Credits.
An introduction to combinatorial analysis at the graduate level. Meets concurrently with 550.471. See 550.471 for course description. Recommended Course Background: EN.550.291 or AS.110.201
Prerequisites: Pre-reqs: (AS.110.106 OR AS.110.108) AND (AS.110.107 OR AS.110.109 OR AS.110.113) AND (AS.110.201 OR AS.110.212 OR EN.550.291)
Instructor(s): E. Younes.

EN.550.672. Graph Theory. 4.00 Credits.
An introduction to graph theory at the graduate level. See 550.472 for course description. Meets with EN.550.472
Prerequisites: EN.550.291 OR AS.110.201 OR AS.110.212
Instructor(s): B. Castello.

EN.550.680. Shape and Differential Geometry. 3.00 Credits.
The purpose of this class is to provide an elementary knowledge of the differential geometry of curves and surfaces, and to place this in relation with the description and characterization of 2D and 3D shapes. Intrinsic local and semi-local descriptors, like the curvature or the second fundamental form will be introduced, with an emphasis on the invariance of these features with respect to rotations, translations, etc. Extension of this point of view to other class of linear transformations will be given, as well as other types of shape descriptors, like moments or medial axes. Recommended Course Background: Calculus III and linear algebra
Instructor(s): D. Fishkind
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.681. Numerical Analysis. 4.00 Credits.
Brief review of topics in elementary numerical analysis such as floating-point arithmetic, Gaussian elimination for linear equations, interpolation and approximation. Core topics to be covered: numerical linear algebra including eigenvalue and linear least-squares problems, iterative algorithms for nonlinear equations and least squares problems, and convergence theory of numerical methods. Other possible topics: sparse matrix computations, numerical solution of partial differential equations, finite element methods, and parallel algorithms.
Instructor(s): N. Charon.

EN.550.684. Mathematical Foundations of Computational Anatomy. 3.00 Credits.
The course will provide fundamental concepts and methods that pertain the analysis of the variation of anatomical shapes extracted from medical images. It will review basic properties of the most important shape representations (landmark, curves, surfaces, images...), describe distances and discrepancy measures that allow for their comparison, and introduce nonlinear optimal control methods that underlie the Large Deformation Diffeomorphic Metric Mapping (LDDMM) family of registration algorithms. The course will then discuss shape averaging methods and template-centered representations for the analysis of shape datasets. Recommended Course Background: Optimization (EN.550.361 or higher) and (AS.110.202 OR AS.110.211 or higher) AND AS.110.302 or higher.
Prerequisites: (AS.110.202 OR AS.110.211 or higher) AND (AS.110.302 or higher)
Instructor(s): E. Younes.

EN.550.690. Neural Networks and Feedback Control Systems. 2.00 Credits.
This roundtable course is an introduction to two related areas?neural networks (NNs) and control systems based on the use of feedback. Artificial NNs are effective conceptual and computational vehicles for many important applications; feedback control is relevant to virtually all natural and human-made systems. NNs are applied in areas such as system modeling and control, function approximation, time-series filtering/prediction/smoothing, speech/image/signal processing, and pattern recognition. Topics to be covered for NNs include network architecture, learning algorithms, and applications. Specific NNs discussed include perceptrons, feedback networks with backpropagation, and recurrent networks. This course also provides an introduction to feedback control systems, including the role of feedback in regulating systems and in achieving stability in systems. We consider stochastic (noise) effects in feedback systems. We also consider the interface of NNs and control by discussing how NNs are used in building modern control systems in problems where standard methods are infeasible. Recommended Course Background: Matrix theory, differential equations, and a graduate course in probability and statistics.
Instructor(s): J. Spall.

EN.550.691. Financial Mathematics Master's Summer Internship. 2.00 Credits.
This course is open only to AMS department master's students.
Instructor(s): D. Audley; D. Naiman; J. Miller; M. Bichuch.

EN.550.692. Matrix Analysis and Linear Algebra. 4.00 Credits.
A second course in linear algebra with emphasis on topics useful in analysis, economics, statistics, control theory, and numerical analysis. Review of linear algebra, decomposition and factorization theorems, positive definite matrices, norms and convergence, eigenvalue location theorems, variational methods, positive and nonnegative matrices, generalized inverses.
Prerequisites: (AS.110.202 OR AS.110.211) AND (AS.110.201 OR AS.110.212 OR EN.550.291) AND AS.110.405
Instructor(s): D. Fishkind.

EN.550.693. Turbulence Theory. 3.00 Credits.
An advanced introduction to turbulence theory for graduate students in the physical sciences, engineering and mathematics. Both intuitive understanding and exact analysis of the fluid equations will be stressed. Students should have previous familiarity with fluid mechanics.
Instructor(s): G. Eyink.

EN.550.694. Turbulence Theory II. 3.00 Credits.
This course will continue the theoretical investigation of fluid turbulence, directly following on from EN.550.693. Topics to be considered are turbulent vortex dynamics, Lagrangian dynamics, and special topics such as wall-bounded turbulence, free shear flows, two-dimensional and quasigeostrophic turbulence, MHD turbulence, etc. Cross-listed with Physics.
Prerequisites: EN.550.693
Instructor(s): G. Eyink.
EN.550.695. Advanced Parameterization in Science and Engineering. 3.00 Credits.
This course will present an overview of topics in science-based parameterization, including dynamics, probability and other applied mathematical methods. These concepts will be presented in a unified format, with some emphasis on scientific computing. Specific topics include: basic probability, statistical dynamics, (moment hierarchies, Liouville/forward equations, path-integral methods), asymptotic closure (homogenization, Chapman-Enskog), closure techniques without any separation of scales (non-linear Galerkin & Weighted residuals, algebraic closures, PDF-based closures, down-scaling), uncertainty quantification (variance & other measures of uncertainty, Bayesian estimation, ensemble methods), hybrid methods.
Instructor(s): G. Eyink
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.696. Geophysical and Astrophysical Turbulence Theory. 3.00 Credits.
This course will discuss turbulence theory relevant for planetary atmospheres and oceans (including Earth’s) and astrophysical plasmas. The three basic topics will be two-dimensional & geostrophic turbulence, compressible fluid turbulence, and magnetohydrodynamic turbulence. It would be useful for students to have taken courses EN.550.693-694, but these are not formal prerequisites and material from those courses will be reviewed as required. Exact mathematical results will be developed wherever possible to inform physical theories. The course focuses on coarse-grained nonlinear dynamics, turbulent cascades, wave-turbulence interactions, scaling theories, and relevant experimental observations from satellites and spacecraft.
Instructor(s): G. Eyink.

EN.550.697. Introduction to Control Theory and Optimal Control. 3.00 Credits.
A control system is a dynamical system on which one can act through a parameter that can be chosen freely at any point in time. In this class, we will be interested in two main problems. The first one is controllability, which studies conditions for the existence of controls allowing an initial point to be driven to any other point. The second one is optimal control, in which we will study methods to minimize a certain cost over all possible controls, possibly with endpoint constraints. Such problems have many applications in engineering: crossing a river with minimal fuel, planning trajectories of rocket engines etc. Pre-requisites: Multivariate Calculus, Linear Algebra, Differential Equations. Some familiarity with Optimization is recommended, but not mandatory.
Instructor(s): S. Arguillere.

EN.550.700. Master’s Research. 3.00 - 10.00 Credits.
Reading, research, or project work for Master’s level students. Arranged individually between students and faculty.
Instructor(s): Staff.

EN.550.701. Graduate Independent Study. 1.00 - 4.00 Credits.
Instructor(s): C. Priebe.

EN.550.723. Markov Chains. 3.00 Credits.
Recent advances in computer science, physics, and statistics have been made possible by corresponding sharply quantitative developments in the mathematical theory of Markov chains. Possible topics: rates of convergence to stationarity, eigenvalue techniques, Markov chain Monte Carlo, perfect simulation, self-organizing data structures, approximate counting and other applications to computer science, reversible chains, interacting particle systems.
Instructor(s): J. Fill.

EN.550.734. Introduction to Nonparametric Estimation. 3.00 Credits.
This course will cover the fundamental topics in the theory of nonparametric estimation. Several different nonparametric estimators (e.g., kernel, local polynomial, projection, spline, and trigonometric) and their statistical properties will be considered. Minimax lower bounds for a variety of nonparametric estimation problems will be discussed. A number of topics related to estimator asymptotic efficiency and adaptation will be studied. An overview of shape constrained nonparametric estimation will be presented for a variety of shape constraints (e.g., monotonicity and convexity).
Prerequisites: EN.550.630
Instructor(s): T. Lebair.

EN.550.735. Topics in Statistical Pattern Recognition. 3.00 Credits.
The Dissimilarity Representation for Pattern Recognition. This course will investigate aspects of statistical inference and statistical pattern recognition associated with observing only dissimilarities between entities rather than observing feature vectors associated with the individual entities themselves.
Instructor(s): C. Priebe.

EN.550.770. Topics In Discrete Math. 3.00 Credits.
Topics in Discrete Mathematics: Graphons. Just as real numbers can be defined as limits of convergent sequences of rational numbers, graphons are the limits of convergent sequences of graphs. The notion of a graphon is very recent (less than a decade old) but graphons already play an interesting role in pure combinatorics (extremal graph problems) and in applications/algorithms for huge networks. Active participation by students is key as we work our way through challenging ideas.
Instructor(s): E. Scheinerman.

EN.550.771. Probabilistic Method. 3.00 Credits.
One of the most powerful tools currently applied in combinatorics. This course covers the basic method, with applications to graph theory, combinatorics, and especially algorithm design.
Instructor(s): V. Lyzinski.

EN.550.782. Statistical Uncertainty Quantification. 3.00 Credits.
This course introduces uncertainty quantification (UQ) on mathematical models and data, with emphasis on the use of stochastic processes and probability theory. Topics include computer experiments, designs, conditional probability, Bayesian inference, Gaussian stochastic processes, continuity, reproducing kernel Hilbert space, covariance functions, computer model emulation, parameter estimation, approximation, dynamic linear models, Kalman filter, computation, sensitivity analysis, functional ANOVA, model selection and calibration. Examples of some continuous time processes will be introduced, such as Brownian motion, Brownian bridge, O-U process, with extensions to multi-dimensional input space. Uncertainty analysis of mathematical models will be the focus from both theoretical and computational perspectives. Applications will concentrate on understanding and predicting the behavior of complex systems in science and engineering. Prerequisite EN.550.420 or EN.550.620 Recommended course background:
EN.550.430 or EN.550.630.
Prerequisites: EN.550.420 OR EN.550.620
Instructor(s): M. Gu.
EN.550.790. Topics In Applied Math. 3.00 Credits.
Analysis of Algorithms. This course in the probabilistic analysis of algorithms (AofA) will be accessible to any student who has had at least one course in probability and will be most beneficial to those who have had at least one probability course at the measure-theoretic level. The course will review basic topics from the theory of probability that have proved useful in AofA. It will provide introductions to more advanced AofA-relevant topics chosen from such topics as: Markov chains, branching processes, urn models, Poissonization (and de-Poissonization), various metrics on distributions, fixed-point characterizations of distributions, convergence of sequences of stochastic processes, perfect simulation using Markov chains (and otherwise), and large deviation principles. The course will interweave probability theory and applications to AofA, focusing on the fundamentally important and exceptionally rich example of limiting distributions for various ways of measuring the cost of executing the QuickSort and QuickSelect algorithms.
Instructor(s): J. Fill.
EN.550.800. Dissertation Research. 3.00 - 20.00 Credits.
Instructor(s): Staff.
EN.550.810. Probability & Statistics. 1.00 - 4.00 Credits.
Instructor(s): C. Priebe.
EN.550.865. Optimization and Discrete Math. 1.00 - 4.00 Credits.
Discussion of new results in the specified research area based on journal articles, research monographs and current research. Each week a participant in the seminar will present a lecture. Organized by advanced graduate students with the sponsorship of an Applied Mathematics and Statistics faculty member.
Instructor(s): A. Basu; D. Robinson.
EN.550.892. Matrix Analysis II Seminar. 1.00 Credit.
Continuation of EN.550.692.
Instructor(s): D. Fishkind.
Cross Listed Courses
Mathematics
AS.110.795. Seminar in Data Analysis.
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.
Instructor(s): M. Maggioni
Area: Quantitative and Mathematical Sciences.
General Engineering
EN.500.200. Computing for Engineers and Scientists. 4.00 Credits.
This course introduces a variety of techniques for solving problems in engineering and science on a computer using MATLAB. Topics include structure and operation of a computer, the programming language MATLAB, computational mathematics, and elementary numerical analysis. Co-listed with EN.550.200.
Prerequisites: Prereqs: AS.110.107 OR AS.110.109
Instructor(s): J. Yoder; K. Hedrick; K. Lahouel
Area: Engineering, Quantitative and Mathematical Sciences.
Civil Engineering
EN.560.601. Applied Math for Engineers. 3.00 Credits.
This course presents a broad survey of the basic mathematical methods used in the solution of ordinary and partial differential equations: linear algebra, power series, Fourier series, separation of variables, integral transforms.
Instructor(s): M. Zhong
Area: Engineering, Quantitative and Mathematical Sciences.
Biomedical Engineering
EN.580.694. Statistical Connectomics. 3.00 Credits.
This course will cover the basics of an exciting emerging field of statistical connectomics (aka, brain-graphs). It is so new, that we are going to make some of it up in this class! The first week will be introductory lectures that I give. The rest of the semester will be run like a seminar; each week will focus on a different topic. On Tuesdays we will hear about a statistical method that operates on graphs, and on Thursdays we will read about some neuroscience data upon which one could apply these techniques. The final project will consist of implementing a statistical method devised for graphs on a brain-graph problem. Recommended background: coursework in probability, linear algebra, and numerical programming (eg, R, Python, Matlab).
Instructor(s): J. Vogelstein
Area: Engineering.
Computer Science
EN.600.442. Modern Cryptography. 3.00 Credits.
Modern Cryptography includes seemingly paradoxical notions such as communicating privately without a shared secret, proving things without leaking knowledge, and computing on encrypted data. In this challenging but rewarding course we will start from the basics of private and public key cryptography and go all the way up to advanced notions such as zero-knowledge proofs, functional encryption and program obfuscation. The class will focus on rigorous proofs and require mathematical maturity. [Analysis] Recommended Course Background: EN.600.363/463, EN.600.271/471 and EN.550.171 or equiv.
Instructor(s): A. Jain
Area: Engineering, Quantitative and Mathematical Sciences.
EN.600.675. Statistical Machine Learning. 3.00 Credits.
This is a second graduate level course in machine learning. It will provide a formal and an in-depth coverage of topics at the interface of statistical theory and computational sciences. We will revisit popular machine learning algorithms and understand their performance in terms of the size of the data (sample complexity), memory needed (space complexity), as well as the overall computational runtime (computation or iteration complexity). We will cover topics including nonparametric methods, kernel methods, online learning and reinforcement learning, as well as introduce students to current topics in large-scale machine-learning and randomized projections. Topics will vary from year-to-year but the general focus would be on combining methodology with theoretical and computational foundations. [Analysis or Applications] Prerequisites: EN.600.475 OR EN.600.476 OR EN.600.676 OR permission of the instructor.
Instructor(s): R. Arora.
www.bme.jhu.edu
Faculty and students in the Department of Biomedical Engineering have been breaking new ground in biomedical research for over 50 years, and we strive to continue this history of innovation and discovery every day. Some examples of biomedical engineering include instrumentation and systems for use in medical environments, health care delivery systems, therapeutic and prosthetic devices such as artificial organs and orthopedic implants, and the application of quantitative methods and engineering-based modeling to basic research in the biological sciences.
The Department of Biomedical Engineering offers three programs of study to prepare students to work in this area: an undergraduate program
leading to a bachelor’s degree with a choice of B.S. or B.A., a master’s degree program, and a doctoral degree program.

Research in the department focuses on several general areas: biomedical imaging, cell and tissue engineering, computational biology, computational medicine, molecular and cellular systems biology, and systems neuroscience and neuroengineering.

Facilities

The center of gravity for the Department of Biomedical Engineering is the Traylor, Ross, Miller, and Smith research buildings on the campus of the School of Medicine. This location favors a close association with other basic medical science programs and provides access to the clinical environment of one of the nation’s top-ranked hospitals. The Homewood campus houses the Whitaker Biomedical Engineering Institute. The Whitaker Institute was established as a vital link between the School of Medicine and the Whiting School of Engineering. The vision of the institute is of an integrative research and education enterprise that provides leadership in moving biomedical engineering to the forefront of biomedical science and practice.

The general facilities of the Department of Biomedical Engineering include seminar rooms that allow broadcasting throughout the university, physiology teaching laboratories, a microfabrication laboratory, a cell and tissue teaching and research laboratory, a fully-staffed mechanical shop, and the department’s design studio - a premiere work space for students to brainstorm, design, and develop prototypes for solutions to real-world clinical and global health challenges.

Each faculty member maintains a well-equipped laboratory for research in his or her area of interest. A wide variety of equipment in these laboratories is available to students as their interests draw them into active participation in research.

The profoundly interdivisional nature of biomedical engineering education at Johns Hopkins provides students with a wide range of general university facilities. These include the Human Stem Cell Core facility, the Institute for Basic Biomedical Sciences Microscope Core facility, the Tissue Microarray Core facility, the Flow Cytometry Core Facility, the Genetics Resources Core Facility, the Transgenic Core Laboratory, the Welch Medical Library at the School of Medicine, the Eisenhower Library at the Homewood campus, and computing laboratories that are available on both campuses.

The mission of the undergraduate programs is to provide state-of-the-art biomedical engineering education to students in order that they may continue their education in graduate, medical, and professional schools or pursue careers in industry. To this end, our responsibility is as much to the future as it is to the present. Through a strong research and educational environment, we strive to empower our students to explore and define their own frontiers as well as instill the ethical principles that will foster rewarding professional endeavors. The B.S. in Biomedical Engineering degree program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

The biomedical engineering program normally leads to the bachelor of science degree and requires at least 129 credits. The B.S. program is recommended for students who plan careers in engineering or who plan to attend graduate school in engineering. If a student wishes to take a more flexible program with less emphasis on engineering, a B.A. program is also available. Either the B.S. or the B.A. program can meet the needs of a student who plans graduate study in a nonengineering area.

The undergraduate program provides a strong foundation in mathematics, engineering, and science. It emphasizes preparation for advanced study in an area related to biomedical engineering and is broad enough to accommodate students who plan graduate work in biology, medicine, engineering, biophysics, physiology, or biomedical engineering.

Thus, the objective of the undergraduate program is to educate students majoring in biomedical engineering who will attain one or both of the following upon or within a few years of graduation:

- entry into graduate (M.S. or Ph.D. degree programs) or professional schools (medical, dental, veterinarian, business, public health, law)
- employment in jobs that utilize biomedical engineering or a related field.

Each student plans a curriculum suited to his or her goals with the assistance of a faculty advisor. Upon completion of the B.S. in biomedical engineering, students will demonstrate the ability to:

- apply knowledge of advanced mathematics, life sciences, natural sciences, and principles of engineering to problems at the interface of engineering, biology, and medicine and mathematically model and simulate biological systems using computers.
- design and conduct experiments, as well as analyze and interpret data; formulate hypotheses for experiments, including those on living systems; devise procedures for experiments, including those on living systems; collect and validate data using appropriate equipment; display, describe, summarize, and interpret experimental results in a lab report; relate the experimental results to previous work, including the interaction between living and non-living materials and systems; and practice lab safety.
- design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability; identify a need and define the biomedical engineering problem to be solved, determine the constraints to the problem and assess the successful likelihood for different approaches, undergo the design process of creation, synthesis, and integration and evaluate success of the design to meet the desired need.
- function on multidisciplinary teams; understand team goals and complementary roles and expertise of each team member; share opinions and viewpoints with other team members; and assume and fulfill individual responsibilities within a team.
- identify, formulate, and solve engineering problems; conceptualize the engineering problem, formulate a solution to the problem, and solve problems using experimental, mathematical and/or computational tools.
- understand professional and ethical responsibility; understand the guidelines for ethical and responsible use of human subjects and data for research; understand the guidelines for ethical and responsible use of animals for research; understand professional and ethical standards in the workplace and properly reference the work of others.
- communicate effectively; synthesize, summarize, and explain technical content in a written report; and synthesize, summarize, and explain technical content in an oral presentation.
- understand the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context; understand the contributions biomedical engineers can play in academia, industry, and government; and understand how
biomedical engineering solutions are of benefit inside and outside the U.S.

- recognize the need for, and gain an ability to engage in, life-long learning; use library resources, professional journals, and Internet effectively; update technical literacy to understand contemporary issues; and recognize the need for self-assessment.
- comprehend contemporary issues; understand recent developments in biomedical engineering; understand differing viewpoints in academia, government, industry, and business; and gain the ability to search and critically evaluate scientific literature.
- use the techniques, skills, and modern engineering tools necessary for engineering practice; gain proficiency in computer simulations and mathematical analysis tools; create mathematical models; develop laboratory skills applied to living systems; and utilize data acquisition systems.

The program also encourages individual study and research and gives academic credit for them. Students are welcome to work in laboratories on the Homewood campus or at the Medical Institutions in East Baltimore.

**Bachelor of Science in Biomedical Engineering**

Students seeking the B.S. degree are encouraged to focus their studies on one of five subspecialties that incorporates traditional engineering disciplines and biomedical applications. See the Biomedical Engineering Undergraduate Advising Manual for specifics on focus areas, lists of recommended mathematics and engineering electives, limitations on credits for courses with overlapping material, and the design content of engineering courses.

**Requirements for the B.S. Degree**

(See also General Requirements for Departmental Majors (p. 10).)

The B.S. degree in biomedical engineering requires 129 credits. The courses listed below must either be taken or passed by examination for advanced credit. Engineering, science, and mathematics courses may not be taken satisfactorily/unsatisfactorily. No more than 6 credits of engineering, science, or mathematics courses in which a grade of D was received may be counted.

**Basic Sciences (22 credits)**

**Humanities and Social Sciences (18 credits)**

These courses should form a coherent program, relevant to the student’s goals, with at least one course at the 300-level or higher. They should include:

- One course in which ethical and social issues related to technology or medicine is recommended.
- At least two semesters of writing-intensive courses.

**Biomedical Core Knowledge (35 credits)**

### Engineering Courses

**Cell/Tissue Engineering and Biomaterials Focus Area - Upper-Level**

- EN.510.422
- EN.510.421
- EN.510.415
- EN.510.407
- EN.510.403
- EN.510.315
- EN.510.314
- EN.510.313
- EN.510.312
- EN.510.311

### General Electives

Students may choose at least two courses from any area.

**Total Credits**

3

### Notes

* See Writing Requirement (p. ).

** Building on the foundation of this core curriculum, each student is required to take a cohesive sequence of advanced engineering encompassing one of five Biomedical Engineering focus areas. A student's choice of focus area is made before the start of the junior year and is based on their experience with the Biomedical Engineering Core and their answers to the questions given below:

**Systems Biology**—"Do you want to focus on understanding at a fundamental level how biological systems work?"

**Sensors, Micro/Nano Systems, and Instrumentation**—"Do you want to build things that facilitate research or clinical medicine?"

**Cell/Tissue Engineering and Biomaterials**—"Do you want to create replacement cells, tissues, and organs?"

**Computational Bioengineering**—"Do you want to focus on the use of mathematical theory or computers to solve complex biological and medical problems?"

**Imaging**—"Do you want to develop new imaging technology to reveal how biological systems work or diagnose disease?"

Courses in a focus area must be taken for a total of 21 or more credits. At least 18 credits must come from the relevant upper-level engineering course list; a maximum of three credits from the non-upper-level engineering course list may be used. Please refer to www.bme.jhu.edu/undergraduate/resources.htm for applicable courses designed for each focus area by faculty members with research interests appropriate to the area; all faculty members are active participants in shaping the undergraduate curriculum.

*** Among the technical elective courses offered, at least 6 credits must come from an approved list of design options. There are many combinations of courses, programs and independent study opportunities to satisfy this requirement. This is discussed in detail in the Undergraduate Handbook. Please refer to http://www.bme.jhu.edu/undergraduate/documents/BME-Undergraduate-Handbook.pdf.

The master's degree program is designed for students who wish to pursue careers in research and development, or as a step toward Ph.D. or M.D./Ph.D. education. The program has two degree options: a course-based plan consisting of 30 credits (equivalent to 10 full courses to be completed in one year) and a thesis-based track that requires 24 credits (equivalent to 8 full courses completed in the first year) plus a thesis project which is completed in a second year.

**Admission and Financial Aid**

Students with undergraduate degrees in engineering are eligible to apply. Exceptional students with degrees in basic sciences may also apply, but would normally have to take a number of courses to overcome deficiencies in their curriculum.

Financial aid is available for qualified students to serve as teaching assistants, and partial tuition remission may be available for previous Johns Hopkins students. In addition, thesis-track students (once selected for the thesis track) may be provided with additional financial aid to facilitate the research component of their degree (each financial aid package will be negotiated on an individual basis but typically will include either (or a combination of) tuition waivers or a monthly stipend.

Applications for admission are due by the appointed deadline (usually in early January).

For more information and to apply online, go to http://www.bme.jhu.edu/graduate/mse/apply.

**Requirements for the M.S.E. Degree**

**Course-based Degree Option**

The course-based degree option will require the completion of 30 credits (the equivalent of 10 full courses) that meet the following stipulations:

- The core requirement of two Systems Bioengineering courses. (EN.580.421, EN.580.422 or EN.580.429)
- Five additional 400-level or higher courses focused in a selected biomedical engineering sub-discipline (e.g., cell and tissue engineering, computational biology, imaging, instrumentation, or systems biology) as approved by the student's advisor.
- Three additional classes that will consist of math, science, medicine, or technology coursework related to biomedical engineering, which can also include up to 4 half courses (equivalent to 2 full courses) of the JHU Center for Leadership's Professional Development Courses (e.g., 633.645, 663.650, 663.646, and 663.651).

**Thesis-based Degree Option**

Each student will take a minimum of 24 credits (the equivalent of 8 full courses) at the 400-level or higher and complete a thesis, including one or more research/practicum courses.

Students fulfill the course requirement by taking two courses in the Systems Bioengineering (SBE) sequence (580.421, 580.422 or 580.429) and other advanced engineering, math and science courses. (JHU undergraduates will replace the SBE sequence and take two additional courses in advanced engineering, math or science.)

Thesis track students must also complete a thesis based on a research topic requiring application of quantitative or applied engineering principles to biomedical engineering.

**Master of Science in Engineering in Innovation and Design**

The Center for Bioengineering Innovation and Design (CBID), housed in the Department of Biomedical Engineering, focuses on the design aspect of Biomedical Engineering. This exciting program gives students opportunities to design, develop, build, and test devices that solve some of the most pressing problems facing clinicians today.

The mission of CBID is to:

- Improve human health by developing medical devices that solve important clinical problems
- Educate a new generation of medical device engineers and fellows
- Facilitate technology transfer and industry collaboration
In the graduate program CBID students will learn to identify clinical needs and innovate a novel solution to solve that clinical problem. Working in teams, students work closely with engineering faculty and physicians throughout the medical institution to come up with device ideas, build prototypes, research intellectual property, learn about the regulatory process, write business plans, and present their designs to fellow students, faculty, and outside advisors.

Undergraduate students in BME can also become involved in medical device design by joining an undergraduate design team which works on solving clinical problems by designing innovative devices.

Incorporated in all the BME design curriculum is a focus on technology commercialization. All students, graduate and undergraduate, will interact with clinical and corporate sponsors and have experiences that promote the development of leadership, communications, and marketing skills, thus helping to ensure our graduates’ professional success.

The CBID M.S.E. is a one-year program lasting from May through the following May. Please see our website for more information on our programs: http://cbid.bme.jhu.edu.

Information can also be found here: http://www.bme.jhu.edu/graduate/masters-design/

**Ph.D. in Biomedical Engineering through the School of Medicine**

Biomedical Engineering has emerged as one of the most exciting interdisciplinary research fields in modern science. Biomedical engineers apply modern approaches from the experimental life sciences in conjunction with theoretical and computational methods from the disciplines of engineering, mathematics, and computer science to the solution of biomedical problems of fundamental importance. The Biomedical Engineering Graduate Program of Johns Hopkins University is designed to train engineers to work at the cutting edge of this exciting discipline.

The cornerstone of the program is our belief in the importance of in-depth training of students in life sciences, modern engineering, mathematics, computer science, and in the conduct of original research leading to the doctoral dissertation. In-depth training in life sciences is achieved in one of two ways. Typically, incoming Ph.D. students enroll in the first year basic sciences curriculum of the Johns Hopkins University School of Medicine. That is, they learn human biology with the medical students. This is a unique and intensive curriculum covering a broad range of topics including molecules and cells, human anatomy, immunology, physiology, and neuroscience. Students choosing this option typically devote their entire first academic year to these courses. This curriculum is an excellent way to build a broad and solid foundation in the life sciences. Alternatively, students may elect alternative life sciences curricula. These curricula have been carefully designed to provide training in areas of the life sciences that are appropriate to each of the program’s research areas. This option is of particular value to students who enter the program having a strong background in the life sciences. In-depth training in engineering, mathematics, and computer science is achieved through elective courses that are taken in the second year.

All students are admitted with full financial support. This covers tuition and provides a modest stipend for the duration of their Ph.D. Because the students are fully funded, they can choose to perform their dissertation in essentially any laboratory in the University (subject to the approval of the Program directors). A special program with the National Heart, Lung, and Blood Institute of the National Institute of Health (NIH) allows students to also choose from research laboratories at the NIH.

Students typically do research rotations during the summer before start of the first academic semester, during the first year (typically as they are taking medical school courses), and during the following summer year. They are expected to choose a research laboratory before the start of the second academic year.

Emphasis is placed on original research leading to the doctoral dissertation. The research is usually experimental in nature, and students are expected to learn biological experimentation techniques. Nevertheless, experiment or theory can be emphasized in the research as desired by the student.

**Requirements for Admission**

The School of Medicine program accepts applications for the Ph.D. program until December 1 of each year. We typically recruit students in five areas: Computational Biology, Imaging, Tissue Engineering, Neural engineering, and Molecular, Neural, and Cardiac physiology (MNCP). The program is unique in that it offers the BME student the strengths of one of the best medical schools in the world. If you wish to combine engineering with cutting edge research in medicine, this may be the program for you.

In their first year, our students have the option of taking many of the same courses as the medical students, including human anatomy, molecules and cells, and genes to society. In their second year, our students take advanced engineering courses. Therefore, students that apply to our program need to not only have a strong background in engineering and mathematics, but also sufficient background in chemistry (including organic chemistry) and biology (at least two introductory courses).

The admission process is by committee. The applicant should specify which area they are interested in and write about the kind of research they are considering. The faculty in each area vote and rank the applicants. The final pool of applicants is ranked and voted on by the entire faculty.

About one third of our incoming students are international students. A short list of these students is formed by committee and the top candidates are interviewed by phone. Like all admitted students, international students receive full financial aid as well as a monthly stipend. They too have the freedom to choose from any lab.

Applications should be complete when submitted. In order to be considered a complete application we must have:

- A completed online application form.
- **Official transcripts from each college or university attended**—Sealed, official transcripts or certified records of all university (undergraduate and graduate) study must be submitted. If you have attended more than one institution, transcripts from each must be included with your application.
- **Official Graduate Record Examination**—GRE/MCAT scores will be acceptable and can be arranged through the Office of Graduate Affairs (address provided below). The GRE code for applying to graduate programs at the Johns Hopkins School of Medicine is 5316.
  - The BME Ph.D. program does not rely heavily on the GRE exam in making admissions or financial aid decisions. Research experience, course grades, and recommendations carry more weight. However, because the GRE score is part of the application
and does affect admissions decisions in some cases, foreign applicants who took the GRE in its electronic form, in a country where the electronic test is no longer offered, are advised to retake the exam in its paper form. Applications will be considered regardless of which form of the exam was taken.

- **Three letters of recommendation**—These letters should come from faculty members who are acquainted with you and your academic work. These letters should be sealed and comment on your aptitude and promise for independent research.

- **Personal Statement**—a typewritten statement (one page maximum) indicating the basis of your interest in graduate study and your career objectives. Included should be a discussion of any research experience you have had.

Applicants for admission must fulfill the following course prerequisites:

- one year of college level biology (may include quantitative biology or physiology)
- one semester of organic chemistry
- differential equations

If you are interested in applying and do not have the prerequisite courses, you may want to submit your application with an explanatory note indicating you have made or will make arrangements to take the prerequisites before you would matriculate, if your application is accepted. In the past, applicants have taken the prerequisites at their present schools, local community colleges, etc. Courses taken at any accredited college or university are acceptable.

Each applicant must have received a B.A. or B.S. degree or its equivalent prior to matriculation. A Masters degree is not required for admission to our program.

All written correspondence and supporting documents should be sent directly to:

The Office of Graduate Affairs
The Johns Hopkins School of Medicine
1830 E. Monument St., Suite 2-107
Baltimore, MD 21205-2196
410-614-3385 phone
410-614-3386 fax
grad_study@jhmi.edu

**Processing**
The Ph.D. Program admissions committee will not consider any application until it is complete. Once an application has been received the applicant will be notified if supporting materials are missing.

**Interview**
The admissions committee will review completed applications and invite applicants to come to Johns Hopkins for a personal interview with faculty. Applicants from North America must come for an interview to be considered for admission. In the case of overseas applicants, for whom such a trip is not possible, a small number of telephone interviews will be conducted. The final admissions decisions will be made from the pool of interviewed applicants. Interviews are generally conducted in March.

**Acceptance**
Applicants will be notified by early March of the outcome of their application. An offer of admission from the program will include a yearly stipend, full tuition, and paid medical and dental insurance. This applies to every accepted applicant, regardless of citizenship or national origin.

Those offered admission will be asked to let us know their decision as soon as possible. In any case, we must have the applicant’s decision by April 15. Applications can be found at [www.hopkinsmedicine.org/graduateprograms/application.cfm](http://www.hopkinsmedicine.org/graduateprograms/application.cfm).

**Financial Aid**
Fellowships for tuition and support stipends (regardless of citizenship or national origin) are available from the general funds of the university. U.S. citizens and Permanent Residents are eligible for support from training grants from the NIH. Students are encouraged to apply for individual fellowships from the National Science Foundation and for NRSA awards from the NIH. Only online applications for admission are accepted and must be received by December 1.

**Requirements for the Ph.D. Degree**
The first two years are ordinarily devoted to advanced courses in engineering science and in biomedical science. Engineering, mathematics, and other physical science courses to be taken are arranged between students and their advisors. Each student is assigned a faculty mentor during the first year. This relationship is designed to help students acclimate to the program. Eighteen credit hours of course work in engineering, mathematics, or physical sciences are required. In addition, students must complete eighteen credit hours of course work in the life sciences. Of these 36 credit hours, at least six must be at the graduate level. At least three credit hours in a course with strong engineering or mathematical theory content at the 600-level must be taken.

Summers are spent working in a biomedical laboratory to gain experience and to seek out a suitable thesis research area. By the beginning of the third year, students should start original research leading to the dissertation. Students must fulfill a modest teaching requirement during one year of their program. The remaining time is spent in thesis research. The program typically takes five to six years to complete.

The student must pass a preliminary oral examination which will be a Graduate Board examination. This is taken no later than the end of the second year. The student must then conduct original research, describe it in a dissertation, and pass a final oral examination that is a defense of the dissertation. There is a minimum residency requirement of two consecutive academic years.

**Integrated M.D./Ph.D. Program**
Candidates for the Ph.D. in biomedical engineering who wish to apply jointly for the M.D. degree must apply directly through the School of Medicine. Although the combined programs would normally require at least seven years to execute sequentially, the combined program can ordinarily be completed in six years, with appropriate planning. Good preparation in biology and chemistry as well as mathematics, engineering, and the physical sciences is essential. Life science graduate requirements are met by the first-year program of the School of Medicine. This program is more arduous than the Ph.D. program alone, but it may have marked advantages for students interested in clinical research and applications in hospital systems and in the delivery of health care. The catalog for the School of Medicine should be consulted for admissions requirements and procedures.

Information about applying to the combined M.D.-Ph.D. program can be found at [www.hopkinsmedicine.org/mdphd/admissions](http://www.hopkinsmedicine.org/mdphd/admissions). Applications submitted for consideration of the combined degree will be reviewed by the Medical School admissions committee. If the Medical School admissions
committee accepts the application, it is then passed along to the Biomedical Engineering Ph.D. Program admissions committee for review. A student applying to the combined program who wishes to be considered for the straight Ph.D. program must submit a written request to have his or her application forwarded to the Biomedical Engineering Ph.D. Program office for admission consideration if his or her application is not accepted by the Medical School admissions committee.

For current faculty and contact information go to http://www.bme.jhu.edu/people/completefacultylist.php

**Faculty**

**Chair**

Leslie Tung  
Interim Director and Director of the Undergraduate program in Biomedical Engineering: Functional electro-physiology of cultured cardiac cell networks, cardiac arrhythmias, analysis of multicellular structure, stem cell-derived cardiac cells.

**Professors**

Joel S. Bader  
Bioinformatics, computational biology, systems biology, synthetic biology.

Kathleen E. Cullen  
Multisensory integration for action and perception, neural mechanisms of motor learning, neural prosthesis and rehabilitation, computational neuroscience.

Jennifer H. Elisseeff  
Jules Stein Professor: tissue engineering, biomaterials, cartilage regeneration.

Andrew P. Feinberg  
Bloomberg Distinguished Professor: epigenetics of development and disease; stochasticity in development and cancer.

Taekjip Ha  
Bloomberg Distinguished Professor: single molecular engineering and biophysics, DNA/RNA nanotechnology, cell mechanics, super-resolution microscopy.

Xingde Li  
Endomicroscopy technologies, nanobiophotonics and molecular imaging, early detection (cancer, cardiovascular diseases, wound healing).

Michael I. Miller  
Herschel and Ruth Seder Chair in Biomedical Engineering: computational anatomy, medical imaging, image understanding.

Aleksander S. Popel  
Physiological flows and molecular transport, microcirculation, cell mechanics.

Steven L. Salzberg  
Bloomberg Distinguished Professor: bioinformatics and computational biology.

Lawrence P. Schramm  
Spinal cord injury and regeneration, neural regulation of the circulation.

Reza Shadmehr  
Director of the Biomedical Engineering PhD Program: human motor control and learning in health and disease, functional imaging of the brain, human neurophysiology, computational and theoretical neuroscience.

Jeffrey H. Siewersden  
Medical imaging, image-guidance, flat-panel imagers, cone-beam CT, volume imaging, MRI, image science, imaging performance, radiation therapy.

Nitish V. Thakor  
Medical instrumentation, medical micro and nanotechnologies, neurological instrumentation, signal processing, and neural prosthesis.

Natalia Trayanova  
Murray B. Sachs Professor: computational cardiac electrophysiology and electro-mechanics, mechanisms of arrhythmogenesis and cardiac anti-arrhythmia therapies, cardiac dyssynchrony and resynchronization, development of cardiac models from imaging modalities.

Rene Vidal  
Computer vision (camera sensor networks, recognition of human activities, dynamic scene analysis, structure from motion), biomedical imaging (processing of high angular resolution diffusion imaging, registration and segmentation of diffusion MRI, segmentation and fiber tracking of cardiac MRI, interactive medical image segmentation), machine learning (generalized principal component analysis, manifold learning and clustering, classification of dynamical systems), signal processing (consensus on manifolds, distributed optimization, compressive sensing).

Xiaqin Wang  
Neurophysiology of the auditory cortex, neural mechanisms of speech perception and learning, computational neuroscience.

Raimond L. Winslow  
Raj and Neera Singh Professor of Biomedical Engineering: computational cell biology, systems biology, cardiac electrophysiology.

**Associate Professors**

Michael A. Beer  
Genomics and computational molecular biology.

Warren L. Grayson  
Tissue engineering, stem cells, bioreactors, biomaterials, orthopaedics.

Jordan J. Green  
Cellular engineering, nanobiotechnology, biomaterials, controlled drug delivery and gene delivery.

Rachel Karchin  
Computational molecular biology, bioinformatics, genetic variation.

Scot C. Kuo  
Cell motility and mechanics, nanoscale biophysics, laser-based bioinstrumentation, advanced multiphoton and confocal microscopy.

Feilim Mac Gabhann  
Computational modeling of growth factor-receptor networks, personalized medicine, individualized medicine, experimental studies of interindividual variation, therapeutic cardiovascular remodeling, novel methods for data visualization and automated image analysis, computational models of virus-host interactions.

Sridevi Sarma  
Closed-loop deep brain stimulation, control theory, computational neuroscience and large-scale optimization.
Kevin J. Yarem
Director of the Biomedical Engineering MSE Program: metabolic
glycoengineering, glycochemistry, system biology of glycosylation,
carbohydrate-based cancer drug design and delivery, cellular responses
to static magnetic fields.

Kechen Zhang
Theoretical neuroscience, computational neuroscience, neural
computation.

Assistant Professors
Angelo Homayoun All
Spinal cord injury, stem cells, electrophysiology, imaging.

Patrick Cahan
Computational biology, stem cell biology, and single cell genomics.

Vikram Chib
Decision-making, motivation, movement, neuroscience, robotics,
neuroeconomics.

Nicholas J. Durr
Medical imaging, biomedical optics, endoscopy, ocular diagnostics,
bioelectronics, and medical device design.

Harry R. Goldberg
Assistant Dean of the School of Medicine: designing and incorporating
educational technology into the curricula.

Daniel Herzka
Cardiac magnetic resonance imaging, self-navigation, open-ended
imaging, fast imaging, high resolution imaging, applications of MRI in
cardiac electrophysiology, kinematic imaging, and fetal imaging.

J. Webster Stayman
Imaging physics, 3D image reconstruction, novel imaging systems,
image-guided interventions and diagnostic imaging.

Winston Timp
Epigenetics, single cell analysis, single molecule biophysics,
nanotechnology, systems biology, computational biology/bioinformatics.

Joshua T. Vogelstein
Big data science, connectomics, statistical neuroscience.

Youseph Yazdi
Medical instrumentation, medical device design, translation and
commercialization of medical devices, biophotonics, optical
spectroscopy.

Professors Emeriti
Richard J. Johns
University Distinguished Service Professor: Industrial liaison.

Murray B. Sachs
University Distinguished Service Professor: Auditory neurophysiology and
psychophysics

Artin A. Shoukas
Systems analysis of circulatory systems, systems physiology.

Eric D. Young
Auditory neurophysiology, neural modeling, sensory processes.

Adjunct Professor
Elliot R. McVeigh
Imaging.

Adjunct Associate Professor
Xiaofeng Jia
Novel application of neuro-electrophysiology for detection and
restoration of peripheral nerve and spinal cord injury, basic and clinical
investigations in neurological injuries and therapeutic hypothermia of
brain and spinal cord after asphyxial cardiac arrest.

Adjunct Assistant Professors
Thomas W. Gilbert
Extracellular matrix scaffold materials for development of regenerative
medicine.

J. Jeremy Rice
Muscle physiology, motor proteins, calcium handling, electrophysiology,
simulation, systems biology, neuroscience.

Research Professor
Gary Brooker
Mechanism of receptor independent hormone desensitization,
mechanisms of resistance to chemotherapeutic agents, optical methods
in microscopy.

Andre Levchenko
Intracellular signal transduction, cell engineering, cancer research.

Alexander A. Spector
Biosolid mechanics, cell mechanics and biophysics, membrane
mechanics, mechanotransduction, molecular motors, mathematical and
computational modeling.

Associate Research Professor
Patrick Barta

J. Tilak Ratnanather
Computational anatomy, biomedical imaging, numerical analysis,
mathematical biology of the cochlea.

Assistant Research Professor
Soumyadipata Acharya
Director of the Master's degree program in Bioengineering Innovation
and Design: Biomedical instrumentation, medical device innovation,
neuromusculoskeletal, brain machine interfaces, computational neuroscience.

Siamak Ardekani
Image-based (multi-detector CT and MRI) shape and motion analysis
of cardiac disease using mathematical models, analysis of brain
development and aging process using diffusion MRI and deformation
based morphometry.

Patrick M. Boyle
Computational simulations of cardiac electrophysiology to explore
mechanisms of arrhythmia initiation, perpetuation, and termination;
personalized treatment plans for cardiac radiofrequency ablation
procedures; novel anti-arrhythmia approaches based on cardiac
optogenetics.

David Masica
Novel computational methods to predict the impact of (epi)genetic
alterations on human disease and drug response.

J. Webster Stayman
Imaging physics, 3D image reconstruction, novel imaging systems,
image-guided interventions and diagnostic imaging.
Research Associate
Jason Benkoski
Biomaterials, surface functionalization, materials chemistry, self-assembly, mechanics, microscopy.

Ivy Dick
Ca2+ signaling mechanisms in neuronal and cardiac systems, Ca2+ channels, electrophysiology, channelopathies.

Matthew Jacobson
Tomographic image reconstruction, parameter estimation in medical imaging, cone beam CT, image guidance, geometric computer vision.

Kideok Jin
Drug resistant cancer, metastasis, angiogenesis, drug discovery.

Manu Ben Johny
Auditory neuroscience, perception and cortical representation of complex sounds, acoustic communication, comparative and evolutionary biology of hearing.

Niranjan Pandey
Quantitative and clinical neurophysiology, EEG, seizure detection, signal processing, instrumentation.

In Hong Yang
High throughput drug screening for axonal degeneration, myelination, electrical stimulation of nerve, stem cell differentiation.

Karen I. Zeller
Synthetic biology.

Senior Lecturers
Eileen Haase
Interim Director of the Biomedical Engineering Undergraduate Program: Freshmen Modeling and Design, System Bioengineering Laboratory I and II, Cell and Tissue Engineering Laboratory, Molecules and Cells, BME Teaching Practicum.

Lecturers
Robert H. Allen
Design, education, biomechanics, birth mechanics.

Lawrence B. Aronhime
Innovation, business, technology commercialization, accounting, entrepreneurship, engineering management, business history.

Paul Fearis
Industrial design, medical device design.

Elizabeth A. Logsdon
Engineering design education, online learning.

Wojciech B. Zbijewski
System modeling for optimization of X-ray CT imaging chain, integration in novel reconstruction algorithms.

Joint, Secondary, Part-Time, and Visiting Appointments
Mohamad E. Allaf
Associate Professor (Urology): laparoscopic and robotic surgery.

William S. Anderson
Associate Professor (Neurosurgery): cerebrospinal fluid disorders and movement disorders.

Hiroshi Ashikaga
Assistant Professor (Medicine): Spiral Reentry; Cardiac biomechanics, computational fluid dynamics; information theory, synchronization, computational neuroscience.

Isaac N. Bankman
Assistant Professor (Applied Physics Laboratory): biomedical signal and image processing.

Muynatun A. Lediju Bell
Assistant Professor (Electrical and Computer Engineering): ultrasonic imaging, photoacoustic imaging, coherence-based beamforming, image formation, image quality, light delivery systems, medical robotics, image-guided surgery, image-guided interventions, speckle tracking, technology development, medical device design, clinical translation.

Ronald D. Berger
Professor (Cardiology): mechanisms of sudden cardiac death, new modalities of ablation therapy, device development, signal processing.

Dan E. Berkowitz
Professor (Anesthesiology and Critical Care Medicine): molecular mechanisms of cardiovascular deconditioning in rodent models of microgravity, vasoregulatory dysfunction associated with obesity, diabetes, the role of leptin in vasoregulatory changes.

Paul A. Bottomley
Professor (Radiology): magnetic resonance imaging and spectroscopy, medical imaging.

Henry Brem
Professor (Neurosurgery): clinical treatments for brain tumore, anti-angiogenesis therapies, computer navigation systems used during surgery, brain tumor vaccines.

Jeff W.M. Bulte
Professor (Radiology): stem cells, cell therapy, imaging, nanotechnology, in vivo diagnostics.

John A. Carrino
Associate Professor (Radiology and Radiological Science): spine imaging novel MRI techniques, health services research informatics.

Charles C. Della Santina
Associate Professor (Otolaryngology-Head and Neck Surgery): electrical stimulation of the inner ear for restoring balance function, neurophysiology, vestibular function testing.

Andrew S. Douglas
Vice Dean for Faculty for the Whiting School of Engineering, Professor (Mechanical Engineering): nonlinear solid mechanics, soft tissue mechanics, mechanics of active materials.

Andrew Ewald
Associate Professor (Cell Biology and Oncology): cellular mechanisms and molecular regulation of epithelial morphogenesis in development and cancer.

Gene Fridman
Assistant Professor (Otolaryngology-Head and Neck Surgery): novel methods and devices for neural interfacing.

Paul A. Fuchs
Professor (Otolaryngology-Head and Neck Surgery): biophysics and sensory physiology of sensory hair cells and neurons on the inner ear.

Donald Geman
Professor (Applied Mathematics and Statistics): statistical learning, visual recognition, computational genomics.

Henry R. Halperin
Professor (Cardiology): cardiovascular medicine, MR compatible devices.

Justin Hanes
Professor (Ophthalmology): drug and gene delivery, biomaterials synthesis, particle transport through biological barriers.

Kalina Hristova
Professor (Materials Science and Engineering): biomolecular materials, biomembranes, biosensor development, signal transduction across biological membranes.

Chao-Wei Hwang
Assistant Professor (Cardiology): optimization of PCI and stent-based drug delivery using computational fluid dynamics, cell-based therapy for the heart and peripheral vasculature, active sensing drug delivery systems.

Pablo A. Iglesias
Professor (Electrical and Computer Engineering): computational biology, models of cellular signal transduction, directed cell motility, cell division, control systems.

Takanari Inoue
Associate Professor (Cell Biology): directed cell migration, tumor metastasis, primary cilia, synthetic chemical biology, technology development.

David A. Kass
Professor (Cardiology): molecular pathophysiology of heart failure and hypertrophy, pathobiology of cardiac dyssynchrony and resynchronization, cardiac stress regulation by phosphodiesterase 5, nitric oxide synthase uncoupling, structure-function of sarcomeric proteins to cardiac mechanics, heart failure with preserved ejection fraction.

A. Jay Khanna
Professor (Orthopaedic Surgery): spine surgery, minimally invasive, musculoskeletal imaging, image guidance for surgery, MRI, biomechanics, clinical outcomes.

Konstantinos Konstantopoulos
Professor (Chemical and Biomolecular Engineering): cell adhesion and microfluidics, nanoscale mechanics, receptor biochemistry, quantitative modeling and functional genomics.

Albert C. Lardo
Associate Professor (Cardiology): cardiovascular MRI, cardiovascular CT, image guided therapy.

Rong Li
Bloomberg Distinguished Professor (Cell Biology): cellular dynamics in space, time, and adaptation.

Hanzhang Lu
Associate Professor (Radiology):

W. Lowell Maughan
Professor (Department of Medicine): left ventricular function.

Robert E. Miller
Associate Professor (Pathology Informatics): clinical laboratory instrumentation, laboratory information systems.

Wayne Mitzner
Professor (Environmental Health Sciences, Program in Respiratory Biology and Lung Disease): modeling lung function, lung structure-function interactions, mechanical aspects of lung disease.

Hien Nguyen
Assistant Professor (Surgery): clinical outcomes in hernia surgery, critical care medicine, bariatric surgery and metabolic syndrome.

Arvind P. Pathak
Associate Professor (Radiology): functional and molecular imaging, systems biology, tumor microenvironment, multiscale imaging, computational and visualization tools.

Jerry L. Prince
Professor (Electrical and Computer Engineering): image processing and computer vision with application to medical imaging.

Alfredo Quinones-Hinojosa
Professor (Neurosurgery): stem cells in relation to the origin of brain tumors, role stem cells in fighting brain cancer, regaining neurological function.

Lewis H. Romer
Professor (Anesthesiology and Critical Care Medicine, Cell Biology, and Pediatrics, and the Center for Cell Dynamics): tissue engineering the micro-vasculature, extracellular matrix as an instructive environment, biophysics and biochemistry of matrix assembly, interactions between tyrosine kinases and Rho family GTPases in cell matrix adhesion, mechanochemical coupling in cell-matrix adhesion signaling, harnessing stem and progenitor cells for microvascular restitution.

Lakshmi Santhanam
Assistant Professor (Anesthesiology and Critical Care Medicine): molecular mechanisms of vascular stiffness.

Akira Sawa
Professor (Psychiatry and Behavioral Sciences): pathogenesis of mental illnesses, especially schizophrenia and mood disorders, at the molecular level.

Lew Schon
Associate Professor (Orthopaedic Surgery): surgical delivery systems for stem cells and bioactive molecules.

Mark J. Shelhamer
Associate Professor (Otolaryngology-Head and Neck Surgery): sensorimotor adaptation, nonlinear dynamics, vestibular and oculomotor modeling, space flight adaptation, traumatic brain injury.

Joseph M. Smith
Adjunct Associate Professor (Biomedical Engineering): health care innovations and technologies.

Jennifer Van Eyk
Professor (Cardiology): proteomics, mass spectrometry, cardiac disease, biomarker discovery, technology development.

Clifford R. Weiss
Assistant Professor (Radiology and Surgery): Clinical Director of the Johns Hopkins Center for Bioengineering, Innovation and Design (CBID).
Courses

EN.580.105. Intellectual Property Primer for Scientists and Engineers: Patents, Copyrights, and Trademarks. 1.00 Credit.
The course will outline the basics of intellectual property laws with an emphasis on practical aspects of protection of IP for scientists and engineers. Most of the course will cover the basics of patent law, but introductions will also be given to trademarks and copyrights. Specific problems in the areas of biotechnology, computer science and the Internet will also be highlighted. It is hoped that the attendees will obtain a basic understanding of how intellectual property is protected. No prior legal background is required.
Instructor(s): J. Szipil
Area: Social and Behavioral Sciences.

EN.580.106. Discover Hopkins: Nanoparticles for Drug Delivery Applications. 1.00 Credit.
Humans have used medication to treat diseases for many centuries; however, with the ever growing pharmaceuticals industry and stronger, more effective agents being designed, it has become clear that getting these drugs to their target cells only is a significant issue. Possibly the most striking example is intravenously (IV) administered chemotherapy agents. Patients receiving IV chemotherapy experience severe side-effects throughout their entire body such as hair loss, fatigue, nausea and general pain. This clearly illustrates the need for delivering drugs locally or targeting them to reach only the desired tissues, and this is where the field of nanoparticle drug delivery comes into play. Drug delivery involves encapsulating drugs in a delivery vehicle that can help sustain the release at therapeutic levels over an increased period of time and deliver it to the desired site. This course will focus on current developments as well as the methods used in the field of nanoparticle.
Instructor(s): C. Bishop; K. Maisel
Area: Engineering, Natural Sciences.

EN.580.111. BME Modeling and Design. 2.00 Credits.
Working in teams with upperclassmen this course (1) introduces biomedical engineering freshmen to an orderly method for analyzing and modeling biological systems and (2) introduces engineering principles to solve design problems that are biological, physiological, and/or medical. Freshmen are expected to use the informational content being taught in calculus, physics and chemistry and to apply this knowledge to the solution of practical problems encountered in biomedical engineering.
BME Freshmen only.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): Staff
Area: Engineering, Natural Sciences.

EN.580.112. BME Design Group. 3.00 Credits.
A two-semester course sequence where freshmen work with groups of BME upperclassmen mentors, and learn to use engineering principles to solve design problems that are biological, physiological, and/or medical. Freshmen are expected to use the informational content being taught in calculus, physics, and chemistry and apply this knowledge to the solution of practical problems encountered in biomedical engineering.
Instructor(s): E. Logsdon; N. Durr; R. Allen
Area: Engineering, Natural Sciences.

EN.580.200 Introduction to Scientific Computing in BME using Python, Matlab, and R. 3.00 Credits.
This course is an introduction to scientific programming and computing designed for first-year students. The aim is to develop core computer skills required to succeed in research. Programming projects are drawn from current biomedical applications within BME. Emphasis is on algorithm development, large scale data analysis, and effective visualization of results, using MATLAB, Python, and R. Prior programming experience is not required.
Instructor(s): W. Timp
Area: Engineering.

EN.580.202. BME in the Real World. 1.00 Credit.
Open only to engineering students; A series of weekly lectures to inform students about careers in biomedical engineering and to discuss technological, social, ethical, legal, and economic issues relevant to the profession. Topics include academic careers in biomedical engineering; biomedical engineering in industry (large corporations to sole entrepreneurship); health care delivery; ethical issues; legal issues (patenting, licensing, product liability); standards and government regulations; and economic issues in biomedical engineering industry (start-up companies, global businesses).
Instructor(s): A. Popel.

EN.580.211. BME Design Group. 3.00 Credits.
Sophomore-level version of EN.580.311-312 or Perm. Req’d
Instructor(s): E. Logsdon; N. Durr; R. Allen
Area: Engineering, Natural Sciences.

EN.580.212. BME Design Group. 3.00 Credits.
Sophomore-level version of EN.580.111-112. Permission of course directors required.
Instructor(s): E. Logsdon; N. Durr; R. Allen
Area: Engineering, Natural Sciences.

EN.580.220. The Science of Medicine. 2.00 Credits.
This two-credit elective will focus on the science of medicine and some of the most pressing issues that remain in biomedical science. Questions will include: Salamanders and starfish can regenerate lost body parts, why can’t humans (or can we)? What is the molecular signature of emotion? Is immortality possible? The format of instruction for this course will take full advantage of a flipped classroom environment: students will be expected to listen to e-presentations at home and complete assigned readings. Class time will be specifically devoted to fostering discussions with scientists and clinicians, debates about current controversies in scientific fields, and problem solving.
Instructor(s): C. Hanlon; E. Haase; H. Goldberg
Area: Natural Sciences.
EN.580.221. Molecules and Cells. 4.00 Credits.
An introduction to modern molecular and cellular biology in the context of potential biomedical engineering applications. Topics covered: reactions between molecules, including receptor-ligand and antigen-antibody specificity, protein structure, enzyme catalysis, genetic information, protein processing and secretion, cell physiology and cell functions. Along with detailed study of molecular pathways and cellular behavior, we will discuss the quantitative study of molecular and cellular biology. Recommended Course Background: AS.030.101 and AS.030.104
Instructor(s): E. Haase; F. Macgabhann; K. Yarema
Area: Natural Sciences.

EN.580.222. Systems and Controls. 4.00 Credits.
An introduction to linear systems: analysis, stability and control. Topics include first and second order systems, linear time invariant discrete and continuous systems, convolution, Fourier series, Fourier transforms, Laplace transforms, stability of linear systems, input output and state space representation of linear systems, stability, observability, controllability, and PID controller design. Recommended Course Background: AS.171.102 and AS.110.201. AS.110.302 or EN.550.291
Instructor(s): M. Miller; S. Sarma
Area: Engineering.

EN.580.223. Models and Simulations. 4.00 Credits.
This course introduces students to modeling and analysis of biological systems. The first portion of the course focuses on linear systems. Topics include harmonic oscillators, pharmacokinetics, reaction-diffusion equation, heat transfer, and fluid flow. The second half of the course focuses on non-linear systems. Topics include iterated maps, bifurcations, chaos, stability of autonomous systems, the Hodgkin-Huxley model, bistability, limit cycles, and the Poincare-Bendixson theorem. The course also introduces students to the Matlab programming language, which allows them to implement the models discussed in class. Recommended Course Background: AS.110.201, AS.110.302, or EN.550.291
Instructor(s): A. Popel; M. Beer
Area: Engineering.

EN.580.302. Careers in Biomedical Engineering. 1.00 Credit.
See description for EN.580.202. This course is designed for upperclassmen who wish to meet with weekly speakers to discuss careers issues. Junior/Senior Engineers only.
Instructor(s): A. Popel.

EN.580.311. BME Design Group. 3.00 Credits.
A two-semester course sequence where juniors and seniors work with a team leader and a group of BME freshmen and sophomores, to solve open-ended problems in biomedical engineering. Upperclassmen are expected to apply their general knowledge and experience, and their knowledge in their concentration area, to teach lower classmen and to generate the solution to practical problems encountered in biomedical engineering. Perm. Req’d.
Instructor(s): E. Logsdon; N. Durr; R. Allen
Area: Engineering, Natural Sciences.

EN.580.312. BME Design Group. 3.00 Credits.
A two semester course sequence where juniors and seniors work with a team leader and a group of BME freshmen and sophomores, to solve open-ended problems in biomedical engineering. Upperclassmen are expected to apply their general knowledge and experience, and their knowledge in their concentration area, to teach lower classmen and to generate the solution to practical problems encountered in biomedical engineering.
Instructor(s): E. Logsdon; N. Durr; R. Allen
Area: Engineering, Natural Sciences.

EN.580.321. Statistical Mechanics and Thermodynamics. 4.00 Credits.
Basic principles of statistical physics and thermodynamics with application to biological systems. Topics include fundamental principles of thermodynamics, chemical equilibrium and thermodynamics of reactions in solutions, and elementary statistical mechanics. Recommended Course Background: AS.110.108-AS.110.109, AS.030.101-AS.030.102, AS.171.101-AS.171.102; Freshman/Sophomore Chemistry and Physics
Instructor(s): M. Beer
Area: Engineering, Natural Sciences.

EN.580.407. Design Team Clinical Immersion. 1.00 Credit.
In this course design team leaders will undergo training in clinical need identification through clinical immersion in the Johns Hopkins Hospital System. Leaders will learn observation techniques, survey methods, mind-mapping and root-cause analysis. Dates: Tues 1/17- Friday 1/20, Monday 1/23 - Friday 1/27 The schedule for this class will change with clinical practice but will generally fall within the hours of 6am - 6pm.
Instructor(s): E. Logsdon; N. Durr.

EN.580.408. Design Team Leader Seminar. 1.00 Credit.
This course prepares undergraduate students to lead teams for the subsequent Design Teams course. This course will teach leadership skills, expose students to project options and clinical sponsors, and prepare them to plan and execute a biomedical design project. Course will meet in the Clark Hall Design Studio and the Carnegie Building (SoM) Design Studio.
Instructor(s): E. Logsdon; N. Durr; R. Allen.

EN.580.410. BME Teaching Practicum. 2.00 Credits.
Senior biomedical engineering students will assist the core course instructors and PhD students in managing the sections and recitations in the Design Studio.
Instructor(s): M. Beer.

EN.580.411. BME Design Group. 3.00 Credits.
Senior-level version of EN.580.311-312. Permission of course directors required
Instructor(s): E. Logsdon; N. Durr; R. Allen
Area: Engineering.

EN.580.412. BME Design Group. 3.00 Credits.
Senior-level version of EN.580.311-312. Permission of course directors required
Instructor(s): E. Logsdon; N. Durr; R. Allen
Area: Engineering.

EN.580.413. Design Team, Team Leader Seminar. 1.00 Credit.
This course is for Design Team leaders actively leading a team for the academic year. This course focuses on development of leadership, communication and team management skills in the context of biosdesign.
Instructor(s): E. Logsdon; N. Durr; R. Allen
Area: Engineering.

EN.580.414. Design Team, Team Leader Seminar. 1.00 Credit.
This course is for Design Team leaders actively leading a team for the academic year. This course focuses on development of leadership, communication and team management skills in the context of biosdesign.
Instructor(s): E. Logsdon; N. Durr; R. Allen
Area: Engineering.
EN.580.415. Ethics of Biomedical Engineering Innovation. 3.00 Credits.
Engineers confront problems and make decisions that hold long term social consequences for individuals, organizations, communities and the profession. For biomedical engineers, these decisions may relate to: inventions such as medical devices and pharmaceuticals; neural prosthetics and synthetic biological organisms; responsible and sustainable design; availability of biotechnology in the developing world. Using a combination of cases, fieldwork and readings, we examine the ethical issues, standards, theory and consequences of recent and emerging engineering interventions as a way to understand the profession and to form a basis for future decisions. In addition students will learn and practice multiple forms of communication, including oral, visual and written rhetoric. A particular focus will be communication targeted to different stakeholders including other professionals and the public. Students will apply good communication principle to the discussion of biomedical engineering ethics, develop their own ethical case studies and participate in group projects to aid ethical decision-making, and to improve communication of complex biomedical ethical issues to others.
Instructor(s): F. Macgabhann
Area: Social and Behavioral Sciences
Writing Intensive.

EN.580.416. BME Advanced Teaching Practicum. 3.00 Credits.
Senior biomedical engineering students will assist the core course instructors in managing the sections, recitations, or lab component of a course. Permission required.
Instructor(s): M. Beer.

EN.580.418. Principles of Pulmonary Physiology. 3.00 Credits.
This course will provide students with an introduction to concepts in the structure and function of the respiratory system. Topics to be covered will include basic anatomy, lung mechanics, gas exchange, tests of pulmonary function and cardiopulmonary exercise, and the effects of disease on aspects of the respiratory system. Class sessions will mix both lecture and hands-on measurement, and will include discussion of instrumentation used in pulmonary measurements and a field trip to a clinical physiology laboratory at JHH. Recommended background: Chemistry, Physics, and Calculus II, and EN.580.222 Systems and Controls or equivalent.
Instructor(s): D. Shade
Area: Engineering, Natural Sciences.

EN.580.420. Build-a-Genome. 4.00 Credits.
Must understand fundamentals of DNA structure, DNA electrophoresis and analysis, Polymerase Chain Reaction (PCR) and must be either a) Experienced with molecular biology lab work or b) Adept at programming with a biological twist. In this combination lecture/laboratory Synthetic Biology course students will learn how to make DNA building blocks used in an int'l. project to build the world’s first synthetic eukaryotic genome, Saccharomyces cerevisiae v. 2.0. Please study the wiki www.syntheticyeast.org for more details about the project. Following a biotechnology boot-camp, students will have 24/7 access to computational and wet-lab resources and will be expected to spend 15-20 hours per week on this course. Advanced students will be expected to contribute to the computational and biotech infrastructure. Successful completion of this course provides 3 credit hours toward the supervised research requirement for Molecular and Cellular Biology majors, or 2 credit hours toward the upper level elective requirement for Biology or Molecular and Cellular Biology majors.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): J. Bader; K. Zeller
Area: Engineering, Natural Sciences.

EN.580.421. Systems Bioengineering I. 4.00 Credits.
A quantitative, model-oriented investigation of the cardiovascular system. Topics are organized in three segments. (1) Molecular/cellular physiology, including electrical signaling and muscle contraction. (2) Systems cardiovascular physiology, emphasizing circuit-diagram analysis of hemodynamics. (3) Cardio-vascular horizons and challenges for biomedical engineers, including heart failure and its investigation/treatment by computer simulation, by gene-array analysis, by stem-cell technology, and by mechanical devices (left-ventricular assist and total-heart replacement). Recommended Course Background: EN.580.221 and EN.580.222
Instructor(s): N. Trayanova
Area: Engineering, Natural Sciences.

EN.580.422. Systems Bioengineering II. 4.00 Credits.
A quantitative, model-oriented approach to the study of the nervous system. Topics include functional anatomy of the central and autonomic nervous systems, neurons and networks, learning and memory, structure and function of the auditory and visual systems, motor systems, and neuro-engineering. Recommended Course Background: EN.580.221, EN.580.222, EN.580.223, AS.110.302, EN.580.421; Corequisite: EN.580.424
Instructor(s): E. Haase; X. Wang
Area: Engineering, Natural Sciences.

EN.580.423. Systems Bioengineering Lab I. 2.00 Credits.
A two-semester laboratory course in which various physiological preparations are used as examples of problems of applying technology in biological systems. The emphasis in this course is on the design of experimental measurements and on physical models of biological systems. Priority to Junior BME majors. Recommended Corequisite: EN.580.421.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): E. Haase
Area: Natural Sciences.
EN.580.424. Systems Bioengineering Lab. 2.00 Credits.
A laboratory course in which various physiological preparations are used as examples of problems of applying technology in biological systems. The emphasis in this course is on the design of experimental measurements and on physical models of biological systems. Recommended Corequisite: EN.580.422
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): E. Haase.

EN.580.425. Ion Channels in Excitable Membranes. 3.00 Credits.
Ion channels are key signaling molecules that support electrical communication throughout the body. As such, these channels are a central focus of biomedical engineering as it relates to neuroscience, computational biology, biophysics, and drug discovery. The course introduces the engineering and molecular strategies used to understand the function of ionic channels. The course also surveys key papers that paint the current picture of how ion channels open and conduct ions. Biological implications of these properties are emphasized throughout. Finally, the course introduces how optical and electrophysiological methods now promise to revolutionize understanding of ionic channels. This course can be seen as a valuable partner of Models of the Neuron (EN.580.439). Recommended Course Background: EN.580.421 and EN.580.422 or equivalent, AS.110.201, AS.110.302
Area: Engineering, Natural Sciences.

EN.580.429. Systems Bioengineering III. 4.00 Credits.
Computational and theoretical systems biology at the cellular and molecular level. Topics include organizational patterns of biological networks; analysis of metabolic networks, gene regulatory networks, and signal transduction networks; inference of pathway structure; and behavior of cellular and molecular circuits. Recommended Course Background: EN.580.221 and EN.580.222 or Permission Required.
Instructor(s): J. Bader
Area: Engineering, Natural Sciences.

EN.580.430. Introduction to Computational Medicine I. 4.00 Credits.
Computational medicine is an emerging discipline in which computer models of disease are developed, constrained using data measured from individual patients, and then applied to deliver precision health care. Introduction to Computational Medicine I is the first in a sequence of two courses on computational medicine. It covers the core concepts of computational physiological medicine and computational anatomy. The first half of this course will cover computational physiology. Students will learn how to: use biophysical laws and data to formulate computational models of physiological systems in health and disease; analyze the behaviors of these models using analytical and simulation approaches; apply models to understand their use in diagnosing and treating disease. The second half of this course will cover computational anatomy. Students will learn how to: model anatomies using magnetic resonance imaging data; compare anatomies via mappings onto anatomical atlases; discover anatomical biomarkers of disease; analyze changes in the connectivity of anatomies in disease. Class time will emphasize hands-on learning through data analysis, software development, and simulation. All instructional materials will be made available at the beginning of the course. Recommended Course Background: C++, Matlab or Python.
Prerequisites: ( AS.110.201 OR AS.110.212 ) AND ( AS.110.202 OR AS.110.211) AND ( EN.550.310 OR EN.550.311 OR EN.550.420 ) AND EN.550.430. Or permission of instructor.
Instructor(s): M. Miller; R. Winslow.
EN.580.434. Bioelectricity. 3.00 Credits.
This course has been revised to include numerous examples of bioelectrically active tissues and organs, complemented by relevant engineering principles. Topics include bioelectric currents and potentials, measurements of biological electric fields, wound repair in skin and epithelia, early history of bioelectricity, volume conductor theory, cardiac electrophysiology, and lead theory, electrotransportation of cells, galvanotaxis, stem cell development, bone repair, and neuronal growth. Recommended Prereqs: EN.580.421 and EN.580.422.
Instructor(s): L. Tung
Area: Engineering.

EN.580.437. Neuro Data Design I. 3.00 Credits.
In this year long course, students will work together in small teams to design, develop, and deploy a functioning tool for practicing brain scientists, either for accelerating research or augmenting the clinic. The first semester will focus on the tool, including determining feasibility (for us in a year) and significance (for the targeted brain science community), as well as a statement of work specifying deliverables and milestones. The second semester will focus on developing the tool, getting regular feedback, and iterating, using the agile/lean development process. Recommended Course Background: numerical programming.
Instructor(s): J. Vogelstein
Area: Engineering.

EN.580.439. Models of the Neuron. 4.00 Credits.
Single-neuron modeling, emphasizing the use of computational models as links between the properties of neurons at several levels of detail. Topics include thermodynamics of ion flow in aqueous environments, biology and biophysics of ion channels, gating, nonlinear dynamics as a way of studying the collective properties of channels in a membrane, synaptic transmission, integration of electrical activity in multi-compartment dendritic tree models, and properties of neural networks. Students will study the properties of computational models of neurons; graduate students will develop a neuron model using data from the literature. Recommended Course Background: AS.110.302 or equivalent.
Meets with EN.580.639
Instructor(s): R. Winslow; S. Sarma
Area: Engineering, Natural Sciences.

EN.580.441. Cellular Engineering. 3.00 Credits.
This course focuses on principles and applications in cell engineering. Class lectures include an overview of molecular biology fundamentals, protein/ligand binding, receptor/ligand trafficking, cell-cell interactions, cell-matrix interactions, and cell adhesion and migration at both theoretical and experimental levels. Lectures will cover the effects of physical (e.g., shear stress, strain), chemical (e.g., cytokines, growth factors) and electrical stimuli on cell function, emphasizing topics on gene regulation and signal transduction processes. Furthermore, topics in metabolic engineering, enzyme evolution, polymeric biomaterials, and drug and gene delivery will be discussed. This course is intended as Part 1 of a two-semester sequence recommended for students in the Cell and Tissue Engineering focus area. Recommended Course Background: EN.580.221 or AS.020.305 and AS.020.306 or equivalent and AS.030.205 Meets with EN.580.641
Instructor(s): J. Green; K. Yarema
Area: Engineering.

EN.580.442. Tissue Engineering. 3.00 Credits.
This course focuses on the application of engineering fundamentals to designing biological tissue substitutes. Concepts of tissue development, structure and function will be introduced. Students will learn to recognize the majority of histological tissue structures in the body and understand the basic building blocks of the tissue and clinical need for replacement. The engineering components required to develop tissue-engineered grafts will be explored including biomechanics and transport phenomena along with the use of biomaterials and bioreactors to regulate the cellular microenvironment. Emphasis will be placed on different sources of stem cells and their applications to tissue engineering. Clinical and regulatory perspectives will be discussed. Recommended Course Background: EN.580.221 or AS.020.305 and AS.020.306, AS.030.205 Recommended EN.580.441/EN.580.641 Co-listed with EN.580.642
Instructor(s): J. Elisseeff; W. Grayson
Area: Engineering.

EN.580.444. Biomedical Applications of Glycoengineering. 3.00 Credits.
This course provides an overview of carbohydrate-based technologies in biotechnology and medicine. The course will begin by briefly covering basics of glycobiology and glycochemistry followed by detailed illustrative examples of biomedical applications of glycoengineering. A sample of these applications include the role of sugars in preventative medicine (e.g., for vaccine development and probiotics), tissue engineering (e.g., exploiting natural and engineered polysaccharides for creating tissue or organs de novo in the laboratory), regenerative medicine (e.g., for the treatment of arthritis or degenerative muscle disease), and therapy (e.g., cancer treatment). A major part of the course grade will be based on class participation with each student expected to provide a “journal club” presentation of a relevant paper as well as participate in a team-based project designed to address a current unmet clinical need that could be fulfilled through a glycoengineering approach. Recommended Course Background: EN.580.221 Molecules and Cells
Instructor(s): K. Yarema
Area: Engineering, Natural Sciences.

EN.580.445. Networks. 3.00 Credits.
Networks are ubiquitous in our modern society. The World Wide Web that links us to and enables information flows with the rest of the world is the most visible example. It is, however, only one of many networks within which we are situated. Our social life is organized around networks of friends and colleagues. These networks determine our information, influence our opinions, and shape our political attitudes. They also link us, often through important but weak ties, to everybody else in the United States and in the world. Economic and financial markets also look much more like networks than anonymous marketplaces. Firms interact with the same suppliers and customers and use Web-like supply chains. Financial linkages, both among banks and between consumers, companies and banks, also form a network over which funds flow and risks are shared. Systemic risk in financial markets often results from the counterparty risks created within this financial network. Food chains, interacting biological systems and the spread and containment of epidemics are some of the other natural and social phenomena that exhibit a marked networked structure. This course will introduce the tools for the study of networks. It will show how certain common principles permeate the functioning of these diverse networks and how the same issues related to robustness, fragility, and interlinkages arise in several different types of networks. Biological applications will be highlighted as material is presented. Recommended Course Background: EN.580.222
Instructor(s): S. Sarma
Area: Engineering.
EN.580.446. Physical Epigenetics. 3.00 Credits.
Epigenetics describes information heritable during cell division other than DNA sequence per se. Recent advances show the critical role of epigenetics in controlling gene expression, embryonic development, and common human diseases such as cancer. This course will introduce fundamental epigenetic principles with a focus on mechanisms, modeling, and physical principles, relationship to genetics, and application to understanding human disease mechanisms. Recommended Course Background: EN.580.221 Molecules and Cells or equivalent (molecular and cell biology), college level calculus and calculus-based general physics.
Instructor(s): A. Feinberg; T. Ha
Area: Engineering, Natural Sciences.

EN.580.448. Biomechanics of the Cell. 3.00 Credits.
Mechanical aspects of the cell are introduced using the concepts in continuum mechanics. We will discuss the role of proteins, membranes and cytoskeleton in cellular function and how to describe them using simple mathematical models. Co-listed with EN.530.410 Recommended course background: AS.171.101-102, AS.110.108-109 and AS.110.202
Instructor(s): A. Spector; S. Sun
Area: Engineering.

EN.580.451. Cell and Tissue Engineering Lab. 3.00 Credits.
Cell and tissue engineering is a field that relies heavily on experimental techniques. This laboratory course will consist of three six experiments that will provide students with valuable hands-on experience in cell and tissue engineering. Students will learn basic cell culture procedures and specialized techniques related to faculty expertise in cell engineering, microfluidics, gene therapy, microfabrication and cell encapsulation. Experiments include the basics of cell culture techniques, gene transfection and metabolic engineering, basics of cell-substrate interactions I, cell-substrate interactions II, and cell encapsulation and gel contraction. Co-listed with EN.530.451. Senior and Graduate students only; others, instructor permission required. Fall semester only. Lab Fee: $100
Instructor(s): E. Haase
Area: Engineering, Natural Sciences.

EN.580.452. Cell and Tissue Engineering Lab. 3.00 Credits.
This laboratory course will consist of three experiments that will provide students with valuable hands-on experience in cell and tissue engineering. Experiments include the basics of cell culture techniques, gene transfection and metabolic engineering, basics of cell-substrate interactions I, cell-substrate interactions II, and cell encapsulation and gel contraction. Spring semester only.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): E. Haase
Area: Engineering, Natural Sciences.

EN.580.455. Introduction to Orthopaedic Biomechanics. 3.00 Credits.
This course will cover static and dynamic force in the musculoskeletal systems, joint reactions, soft and hard tissue response to force loads, muscle mechanics, material properties, biomechanical lumped parameter systems, modeling and injury mechanisms. Co-listed with EN.580.655.
Recommended Course Background: AS.110.302
Instructor(s): R. Allen
Area: Engineering.

EN.580.456. Introduction to Rehabilitation Engineering. 3.00 Credits.
The primary objective of this course is to introduce biomedical engineering students to the challenges of engineering solutions for persons functioning with disabilities. In order to achieve this goal, other objectives include: gaining a basic appreciation of the modalities used to treat impairments, the opportunities for application of engineering to improve treatment delivery, understanding the science and engineering applied to helping persons with disabilities function in the everyday world and an basic knowledge of the legal, ethical issues and employment opportunities in rehabilitation engineering. By the conclusion of this class, students should be able to: • Understand the breadth and scope of physical impairment and disability, including its associated pathophysiology • Characterize the material and design properties of current evaluation tools for assessment of impairments and adaptations for disability • Characterize the material and design properties of current modalities of treatment of impairments and adaptations for disability • Apply engineering analysis and design principles to critique current solutions for persons with disabilities in order to suggest improvements
Prerequisites: EN.580.421 AND EN.580.422
Instructor(s): S. Paul
Area: Engineering.

EN.580.457. Rehabilitation Engineering Design Lab. 3.00 Credits.
The primary objective of this course is to give biomedical engineering students who have completed 580.456 (Intro to Rehab Engineering) the opportunity to apply the knowledge they have gained in that course and their prior coursework to the development of a new, improved device to be used for measurement or treatment of an impairment or disability. In doing so, they will learn the biomedical engineering design process and its application to persons with disabilities. Working in groups of four to five, teams will work on a project derived from a needs analysis based on their visits to rehabilitation centers in the fall semester. Project will require instructor approval before the beginning of the spring semester. Each project will consist of a proposal for design of a new device or solution to a problem faced by persons with disabilities, preliminary “virtual” (e.g., CAD), and actual proof of concept working prototype.
Prerequisites: EN.580.422
Instructor(s): S. Paul
Area: Engineering.

EN.580.460. Theory of Cancer. 3.00 Credits.
The course will deal with important problems in cancer and how they can be approached using mathematical and computational modeling. The course will be organized around introductory material describing the biological and clinical problem and the mathematical and computational methodology that will be used for its analysis. This will be followed by analysis of key modeling papers dealing with the problem. An important part of the course will be a computational modeling project (small group or individual) dealing with modeling of cancer in which the students will extend existing models or formulate novel models of cancer, including cancer therapeutics. The students will strive to create models leading to new discoveries.
Instructor(s): A. Popel
Area: Engineering.
EN.580.462. Representations of Choice. 3.00 Credits.
In this course we will examine key computational topics from the nascent fields of decision neuroscience and neuroeconomics. After taking this course students will have an understanding of how the field emerged and will develop a critical appreciation of the advantages and limitations of different analytical approaches. Students will also be able to discuss the current knowledge on processes of valuation, value-learning and decision-making in relation to their computational representations at the behavioral and neural level. Linear Algebra and programming experience (python, matlab, or C) recommended.
Instructor(s): V. Chib
Area: Engineering.

EN.580.466. Statistical Methods in Imaging. 3.00 Credits.
Denosing, segmentation, texture modeling, tracking, object recognition are challenging problems in imaging. We will present a collection of statistical models and methods in order to address these, including the E.M algorithm, Maximum Entropy Modeling, Markov Random Fields, Markov Chain Monte Carlo, Boltzmann Machines and Multilayer Perceptrons. Recommended Course Background: AS.110.202 and EN.550.310 or equivalent.
Instructor(s): B. Jedynak
Area: Engineering, Quantitative and Mathematical Sciences.

EN.580.468. The Art of Data Science. 3.00 Credits.
In this course, we will cover the fundamentals of doing data science research, explaining best practices for each step, that collectively comprise an upward spiral. These steps include: (i) asking an interesting question, (ii) determining the degree to which the answer is known, (iii) assessing there currently exists data to likely obtain a satisfactory answer, (iv) exploring the data set, (v) cleaning up the dataset, (vi) formalizing a statistical inquiry, (vii) posing a statistical model which we hope will yield satisfactory answers, (viii) devising a test to assess the answer, (ix) building an estimator to assess the model, (x) checking the model, (xi) reporting the results, (xii) suggesting the next experiment to perform or question to answer to further enhance the model. Note that this course will largely be project based; each student will be expected to complete each of the above steps on some real data of interest to the student. Lectures will be minimal, giving introductory explanations one day, hopefully only part of the time. The rest of the time, we will work independently or in small groups to complete the weekly portion of the overall project. Please come ready to do science! If you don't have questions that you want answered, you can work in small groups, but each student will need to write the code and reports on their own. Recommended Course Background: No courses are formally required, though students will need to write numerical code (in R, Python, or Julia), and make reports using LaTeX, knitr, or Jupyter notebooks or similar...
Instructor(s): J. Vogelstein
Area: Engineering.

EN.580.471. Principles of Design of BME Instrumentation. 4.00 Credits.
This core design course will cover lectures and hands-on labs. The material covered will include fundamentals of biomedical sensors and instrumentation, FDA regulations, designing with electronics, biopotentials and ECG amplifier design, recording from heart, muscle, brain, etc., diagnostic and therapeutic devices (including pacemakers and defibrillators), applications in prosthetics and rehabilitation, and safety. The course includes extensive laboratory work involving circuits, electronics, sensor design and interface, and building complete biomedical instrumentation. The students will also carry out design challenge projects, individually or in teams (examples include "smart cane for blind," "computer interface for quadriplegic"). Students satisfying the design requirement must also register for EN.580.571. Lab Fee: $150. Recommended Course Background: EN.520.345
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): N. Thakor
Area: Engineering, Natural Sciences.

EN.580.472. Medical Imaging Systems. 3.00 Credits.
An introduction to the physics, instrumentation, and signal processing methods used in general radiography, X-ray computed tomography, ultrasound imaging, magnetic resonance imaging, and nuclear medicine. The primary focus is on the methods required to reconstruct images within each modality, with emphasis on the resolution, contrast, and signal-to-noise ratio of the resulting images. Cross-listed with Neuroscience and Electrical and Computer Engineering (EN.520.432).
Prerequisites: EN.580.222 OR EN.520.214
Instructor(s): J. Prince
Area: Engineering.

EN.580.473. Modern Biomedical Imaging Instrumentation and Techniques. 3.00 Credits.
An intermediate biomedical imaging course covering modern biomedical imaging instrumentation and techniques as applied to diagnostic radiology and other biomedical applications. It includes recent advances in various biomedical imaging modalities, multi-modality imaging and molecular imaging. The course is team taught by experts in the respective fields and provides a broad based knowledge of modern biomedical imaging to prepare students for graduate studies and research in biomedical imaging. Also, the course will offer tours and practical experience with modern biomedical imaging equipment in clinical and research settings. Co-listed with EN.520.434 Recommended course background: EN.520.432 or EN.580.472
Prerequisites: EN.520.432 OR EN.580.472
Instructor(s): B. Tsui
Area: Engineering, Natural Sciences.

EN.580.476. Magnetic Resonance in Medicine. 3.00 Credits.
This course provides the student with a complete introduction to the physical principles, hardware design, and signal processing used in magnetic resonance imaging and magnetic resonance spectroscopy. The course is designed for students who wish to pursue research in magnetic resonance. Recommended course background: EN.580.222 or EN.520.214. Co-listed with EN.580.673.
Instructor(s): D. Herzka
Area: Engineering.
EN.580.479. X-ray Imaging and Computed Tomography. 3.00 Credits.
This course provides students with an intermediate-level understanding of the physics, engineering, algorithms, and applications of medical x-ray imaging and computed tomography (CT). It is intended for senior undergraduates (EN.580.479) and/or graduate students (EN.580.679) in Biomedical Engineering, Computer Science, Electrical and Computer Engineering, or related fields in science and engineering. Topics include the physics of x-ray interaction and detection, image quality modeling and assessment, 3D image reconstruction (including analytical and iterative approaches), and applications in diagnostic and image-guided procedures. Recommended Course Background: EN.580.472 and/or EN.580.473 and familiarity with Matlab.
Instructor(s): J. Siewerdsen
Area: Engineering.
EN.580.483. Nuclear Medicine Imaging. 3.00 Credits.
This course provides an intermediate-level introduction to the instrumentation, image processing and reconstruction methods used in planar nuclear medicine imaging, single-photon emission computed tomography (SPECT) and positron emission tomography (PET). Topics include radioactive decay, nuclear medicine instrumentation including radiation detectors and associated electronics, analytic and statistical iterative tomographic reconstruction, imaging physics, and image quality in the context of these three modalities. This course will be taught at the School of Medicine Campus. Recommended Course Background: EN.520.432/EN.580.472 and EN.520.434/EN.580.473
Instructor(s): A. Rahmim, B. Tsui; E. Frey; Y. Du
Area: Engineering.
EN.580.488. Foundations of Computational Biology and Bioinformatics II. 3.00 Credits.
This course will introduce probabilistic modeling and information theory applied to biological sequence analysis, focusing on statistical models of protein families, alignment algorithms, and models of evolution. Topics will include probability theory, score matrices, hidden Markov models, maximum likelihood, expectation maximization and dynamic programming algorithms. Homework assignments will require programming in Python. Foundations of Computational Biology I is not a prereq. Recommended Course Background: Math through linear algebra and differential equations, EN.580.221 or equivalent, EN.600.226 or equivalent
Instructor(s): R. Karchin
Area: Engineering, Natural Sciences.
EN.580.491. Learning Theory. 3.00 Credits.
The course introduces the probabilistic foundations of learning theory. We will discuss topics in regression, estimation, optimal control, system identification, Bayesian learning, and classification. Our aim is to first derive some of the important mathematical results in learning theory, and then apply the framework to problems in biology, particularly animal learning and control of action. Recommended Course Background: AS.110.201 and AS.110.302
Instructor(s): R. Shadmehr
Area: Engineering.
EN.580.492. Build-a-Genome Mentor. 4.00 Credits.
In addition to producing and sequencing DNA segments like regular B-a-G students, mentors will help prepare and distribute reagents, and maintain a Moddle site to track student reagent use and productivity. Mentors will also be expected to mentor specific students who are learning new techniques for the first time, contribute to the computational and biotech infrastructure associated with Build-a-Genome, and pursue at least one independent research project. Successful completion of this course provides 3 credit hours toward the supervised research requirement for Molecular and Cellular Biology majors. Co-listed AS.020.451 Permission Required.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class;
Instructor(s): J. Bader; K. Zeller
Area: Engineering, Natural Sciences.
EN.580.493. Imaging Instrumentation. 4.00 Credits.
This course is intended to introduce students to imaging instrumentation. The class will be lab-oriented, giving hands-on experience with data collection and processing using a configurable optical system. Specific topics will include the programming and control of electromechanical elements, imaging data acquisitions, image formation and processing (e.g. 3D reconstruction), and imaging system analysis and optimization. Recommended Course Background: EN.580.222 Systems and Controls or EN.520.214 Signals and Systems. Programming experience highly desirable.
Instructor(s): J. Stayman
Area: Engineering.
EN.580.495. Microfabrication Lab. 4.00 Credits.
This laboratory course introduces the principles used in the construction of microelectronic devices, sensors, and micromechanical structures. Students will work in the laboratory on the fabrication and testing of a device. Accompanying lecture material covers basic processing steps, design and analysis CAD tools, and national foundry services. Co-listed with EN.530.495 and EN.520.495 Seniors only. Permission Required.
Instructor(s): A. Andreou; J. Wang
Area: Engineering, Natural Sciences.
EN.580.501. Fall BME Research - Freshman/Sophomore. 3.00 Credits.
Instructor(s): Staff.
EN.580.502. Spring BME Research - Freshman/Sophomore. 1.00 - 4.00 Credits.
Practicum in Biomedical Engineering Research projects or engineering design projects under the supervision of any member of the BME faculty.
Instructor(s): Staff.
EN.580.510. Biomedical Engineering Undergraduate Research. 1.00 - 3.00 Credits.
Student participation in ongoing research activities. Research is conducted under the supervision of a faculty member and often in conjunction with other members of the research group.
Instructor(s): Staff.
EN.580.511. Biomedical Engineering Undergraduate Research. 1.00 - 3.00 Credits.
Student participation in ongoing research activities. Research is conducted under the supervision of a faculty member and often in conjunction with other members of the research group.
Instructor(s): Staff.
EN.580.512. Spring BME Independent Study - Freshman/Sophomore. 0.00 - 4.00 Credits.
Directed readings or other literature research under the direction of any member of the BME faculty.
Instructor(s): Staff.

EN.580.531. Fall BME Research - Junior/Senior. 3.00 Credits.
Instructor(s): Staff.

EN.580.532. Spring BME Research - Junior/Senior. 3.00 Credits.
Research projects or engineering design projects under the supervision of any member of the BME faculty.
Instructor(s): Staff.

EN.580.541. Fall BME Independent Study - Junior/Senior. 3.00 Credits.
Directed readings or other literature research under the direction of any BME faculty member. Junior or Senior standing.
Instructor(s): Staff.

EN.580.542. Spring BME Independent Study - Junior/Senior. 0.00 - 4.00 Credits.
Directed readings or other literature research under the direction of any BME faculty member.
Instructor(s): Staff.

EN.580.550. Biomedical Engineering Group Undergraduate Research. 1.00 - 3.00 Credits.
Student participation in ongoing research activities. Research is conducted under the supervision of a faculty member and often in conjunction with other members of the research group. This section has a weekly research group meeting that students are expected to attend.
Instructor(s): Staff.

EN.580.551. Biomedical Engineering Group Undergraduate Research. 1.00 - 3.00 Credits.
Student participation in ongoing research activities. Research is conducted under the supervision of a faculty member and often in conjunction with other members of the research group. This section has a weekly research group meeting that students are expected to attend.
Instructor(s): Staff.

EN.580.580. Senior Design Project. 3.00 Credits.
Per Independent or team design project to design and evaluate a system. The design should demonstrate creative thinking and experimental skills, and must draw upon advanced topics of biomedical and traditional engineering. Permission Required.
Instructor(s): D. Yue; K. Ramesh; R. Allen.

EN.580.581. Senior Design Project. 3.00 Credits.
Independent or team design project to design and evaluate a system. The design should demonstrate creative thinking and experimental skills, and must draw upon advanced topics of biomedical and traditional engineering. Permission Required.
Instructor(s): R. Allen; Y. Yazdi.

EN.580.590. Biomedical Internship. 1.00 Credit.
Instructor(s): Staff.

EN.580.595. BME Senior Design-Summer. 3.00 Credits.
Instructor(s): J. Green; L. Schramm; R. Allen.

EN.580.597. BME Research - Summer. 3.00 Credits.
Instructor(s): Staff.

EN.580.598. Design Project. 3.00 Credits.
Instructor(s): R. Allen.

EN.580.599. Independent Study. 3.00 Credits.
Instructor(s): A. Shoukas; H. Goldberg; K. Yarema; N. Thakor; S. Kuo.

EN.580.601. Special Topics in Bioengineering Innovation and Design. 1.00 Credit.
This year long seminar series features experts from the medical device industry, venture capital firms, FDA, patent attorneys, entrepreneurs, and many more. They will share their real-world insights into the medical device innovation and commercialization process. Some of the topics covered will include bioethics, regulatory and reimbursement planning, medical device recalls, good design practices, and entrepreneurial success stories. The overarching philosophy of this seminar series is to complement the theoretical and practical aspects of the program curriculum, by learning from the experiences and insights of professionals in the field. These seminars are taken in a sequence of summer, fall, and spring. They are required for CBID masters students and are open to those students only.
Instructor(s): S. Acharya.

EN.580.602. Special Topics in Bioengineering Innovation and Design. 1.00 Credit.
This year long seminar series features experts from the medical device industry, venture capital firms, FDA, patent attorneys, entrepreneurs, and many more. They will share their real-world insights into the medical device innovation and commercialization process. Some of the topics covered will include bioethics, regulatory and reimbursement planning, medical device recalls, good design practices, and entrepreneurial success stories. The overarching philosophy of this seminar series is to complement the theoretical and practical aspects of the program curriculum, by learning from the experiences and insights of professionals in the field. For CBID MSE students only. Registration with instructor's permission only.
Instructor(s): S. Acharya.

EN.580.603. Special Topics in Bioengineering Innovation & Design. 1.00 Credit.
This year long seminar series features experts from the medical device industry, venture capital firms, FDA, patent attorneys, entrepreneurs, and many more. They will share their real-world insights into the medical device innovation and commercialization process. Some of the topics covered will include bioethics, regulatory and reimbursement planning, medical device recalls, good design practices, and entrepreneurial success stories. The overarching philosophy of this seminar series is to complement the theoretical and practical aspects of the program curriculum, by learning from the experiences and insights of professionals in the field. For CBID MSE students only.
Instructor(s): S. Acharya.

EN.580.604. I: Business of Bioengineering Innovation and Design. 3.00 Credits.
This course comprises two distinct, but related, components. The first is a broad introduction to the terms, concepts, and values of business and management. Particular emphasis will be placed on the economic, financial, and corporate contexts of our business culture, and how they impact the organization, strategy, and decision-making of business firms. The second component is an introduction to the sociological and economic forces that shape the development and diffusion of new technologies. This part is primarily designed to provide a framework for determining the commercial viability of new medical devices and the best path for realizing their value, including how to develop a compelling value proposition, analyze markets and competitors, and protect intellectual property. Throughout, the course utilizes individual exercises, case analyses, and team projects.
Instructor(s): L. Aronhime.
EN.580.605. II: Business of Bioengineering Innovation and Design. 3.00 Credits.
This course comprises two distinct, but related, components. The first is a broad introduction to the terms, concepts, and values of business and management. Particular emphasis will be placed on the economic, financial, and corporate contexts of our business culture, and how they impact the organization, strategy, and decision-making of business firms. The second component is an introduction to the sociological and economic forces that shape the development and diffusion of new technologies. This part is primarily designed to provide a framework for determining the commercial viability of new medical devices and the best path for realizing their value, including how to develop a compelling value proposition, analyze markets and competitors, and protect intellectual property. Throughout, the course utilizes individual exercises, case analyses, and team projects.
Instructor(s): L. Aronhime.

EN.580.607. Regulation of Medical Devices. 1.00 Credit.
This course introduces graduate students in Bioengineering Innovation and Design to the medical device regulatory framework, as it pertains to bringing a medical device from concept to market. Topics covered include: FDA Design Controls; Regulatory Approval mechanisms, including the 510k and PMA process; Investigational Device exemption (IDE); planning clinical trials needed for bringing a medical device to market; and postmarket surveillance. Students learn from a series of invited lecturers from the FDA as well as professionals from the medical device industry. This summer course is required for CBID masters students and is not open to any other students.
Instructor(s): L. Aronhime.

EN.580.608. Identification and Validation of Medical Device Needs. 6.00 Credits.
This course teaches the art and skill of identifying medical device opportunities by experiencing real world scenarios in an immersive clinical environment. Students rotate through multiple clinical disciplines and become part of the team of senior clinicians, surgeons, residents, fellows, nurses and medical technologists. They learn to identify unmet medical device needs through direct observations in a variety of clinical settings including the hospital ward and operating room, interviews (with patients, doctors, nurses, hospital administration), literature survey, and more. Concurrently, they learn the process of filtering all observations to a few valid medical device opportunities by assessing the market size, intellectual property landscape, regulatory framework, and competitor dynamics in addition to the clinical impact that such a device could have. The ability to identify a relevant medical device need is an important first step in the medical device innovation cycle; this course aims to provide students with practical hands-on training in that process.
Instructor(s): C. Weiss; H. Nguyen; S. Acharya.

EN.580.609. BME Teaching Practicum. 3.00 Credits.
Instructor(s): M. Beer.

EN.580.611. Medical Device Design and Innovation. 4.00 Credits.
For CBID MSE students only. Registration with instructor’s permission only.
Instructor(s): S. Acharya.

EN.580.612. Medical Device Design and Innovation. 4.00 Credits.
For CBID MSE students only.
Instructor(s): S. Acharya.

EN.580.618. Needs Identification and Validation for Global Health Innovation. 4.00 Credits.
Limited to CBID students only
Instructor(s): S. Acharya.

EN.580.619. Bioengineering Innovation and Design - Global Health. 4.00 Credits.
For CBID MSE students only. Registration with instructor’s permission only.
Instructor(s): S. Acharya.

EN.580.620. Principles and Practice of Global Health Innovation and Design. 4.00 Credits.
For CBID MSE students only. Instructor’s Permission Required.
Instructor(s): S. Acharya.

EN.580.621. Insight Informed Innovation I. 3.00 Credits.
For CBID MSE students only. Registration with instructor’s permission only.
Instructor(s): B. Craft; P. Fearis.

EN.580.623. Insight Informed Innovation II. 3.00 Credits.
This course is intended to equip students with a structured process and the tools required to: 1. Identify opportunities for new medical devices through unmet, unarticulated and underserved stakeholder needs 2. Link these insights to an exhaustive set of potential solutions 3. Synthesize solutions and features into product concepts Recommended Course Background: Insight Informed Innovation I (summer)
Instructor(s): B. Craft; P. Fearis.

EN.580.625. Structure and Function of the Auditory and Vestibulary Systems. 3.00 Credits.
This course will cover basic mechanisms and functions of the inner ear and brainstem. This is a companion course and alternates with EN.580.626, although these can be taken in either order. The focus is on transmission and transduction of sound and head movements by the auditory and vestibular periphery. Topics include: cellular and molecular mechanisms of mechanotransduction, synaptic signaling and development, primary afferents and the first-order brainstem nuclei, as well as clinical consequences of peripheral damage. Undergraduates with knowledge in Neuroscience welcome. Recommended Course Background: an introduction to neuroscience.
Instructor(s): E. Glowatzki; P. Fuchs.

EN.580.626. Structure & Function of the Auditory and Vestibular Brain. 3.00 Credits.
Brain mechanisms and perception of sound and balance. This course is an accompaniment for EN.580.625, although the courses can be taken in either order. Topics include representation of sound and balance in neural discharge patterns, anatomy of the central auditory and vestibular systems, synaptic transmission and signal processing in central neurons, and complex sound perception and movement control. Aspects such as speech perception, sound localization, vestibular reflexes and vestibular compensation are discussed with an integrated perspective covering perceptual, physiological, and mechanistic data. Recommended Course Background: EN.580.222 and EN.580.422 or equivalent. Taught at the School of Medicine, Traylor Bldg. 529.
Instructor(s): X. Wang.

EN.580.628. Topics in Systems Neuroscience. 1.00 Credit.
This course consists of weekly discussions of current literature in systems neuroscience. The selected readings will focus on neural mechanisms for perception, attention, motor behavior, learning, and memory, as studied using physiological, psychophysical, computational, and imaging techniques. Students are expected to give presentations and participate in discussions. Recommended Course Background: AS.110.302, EN.520.214, EN.580.421 or equivalent
Instructor(s): K. Zhang; X. Wang.
EN.580.630. Theoretical Neuroscience. 3.00 Credits.
Theoretical methods for analyzing information encoding and functional representations in neural systems. Models of single and multiple neural spike trains based on stochastic processes and information theory; detection and estimation of behaviorally relevant parameters from spike trans; system theoretic methods for analyzing sensory receptive fields; network models of neural systems. Both theoretical methods and the properties of specific well-studied neural systems will be discussed. Recommended Course Background: EN.580.422 or equivalent, EN.550.420 or equivalent, EN.580.222 or equivalent.
Instructor(s): K. Zhang; X. Wang.

EN.580.631. Introduction to Computational Medicine I. 4.00 Credits.
Computational medicine is an emerging discipline in which computer models of disease are developed, constrained using data measured from individual patients, and then applied to deliver precision health care. Introduction to Computational Medicine I is the first in a sequence of two courses on computational medicine. It covers the core concepts of computational physiological medicine and computational anatomy. The first half of this course will cover computational physiological medicine. Students will learn how to: use biophysical laws and data to formulate computational models of physiological systems in health and disease; analyze the behaviors of these models using analytical and simulation approaches; apply models to understand their use in diagnosing and treating disease. The second half of this course will cover computational anatomy. Students will learn how to: model anatomies using magnetic resonance imaging data; compare anatomies via mappings onto anatomical atlases; discover anatomical biomarkers of disease; analyze changes in the connectivity of anatomies in disease. Class time will emphasize hands-on learning through data analysis, software development, and simulation. All instructional materials will be made available at the beginning of the course. Recommended Course Background: C++, Matlab or Python.
Instructor(s): M. Miller; R. Winslow.

EN.580.632. Ionic Channels in Excitable Membranes. 3.00 Credits.
Ion channels are key signaling molecules that support electrical communication throughout the body. As such, these channels are a central focus of biomedical engineering as it relates to neuroscience, computational biology, biophysics, and drug discovery. The course introduces the engineering and molecular strategies used to understand the function of ionic channels. The course also surveys key papers that paint the current picture of how ion channels open and conduct ions. Biological implications of these properties are emphasized throughout. Finally, the course introduces how optical and electrophysiological methods now promise to revolutionize understanding of ionic channels. This course can be seen as a valuable partner of Models of the Neuron (EN.580.439). Recommended Course Background: EN.580.421 and EN.580.422 or equivalent, AS.110.201, AS.110.302
Instructor(s): D. Yue
Area: Engineering, Natural Sciences.
EN.580.639. Models of the Neuron. 4.00 Credits.
See description for EN.580.439. Differs in that an advanced modeling project using data from the literature is required. Graduate version of EN.580.439. Recommended Course Background: AS.110.302 or equivalent.
Instructor(s): R. Winslow; S. Sarma.

EN.580.641. Cellular Engineering. 3.00 Credits.
This course focuses on principles and applications in cell engineering. Class lectures include an overview of molecular biology fundamentals, protein/ligand binding, receptor/ligand trafficking, cell-cell interactions, cell-matrix interactions, and cell adhesion and migration at both theoretical and experimental levels. Lectures will cover the effects of physical (e.g. shear stress, strain), chemical (e.g. cytokines, growth factors) and electrical stimuli on cell function, emphasizing topics on gene regulation and signal transduction processes. Furthermore, topics in metabolic engineering, enzyme evolution, polymeric biomaterials, and drug and gene delivery will be discussed. This course is intended as Part 1 of a two-semester sequence recommended for students in the Cell and Tissue Engineering focus area. Meets with EN.580.441. Recommended Course Background: EN.580.221 or AS.20.305 and AS.20.306 (or equivalent) and AS.030.205
Instructor(s): J. Green; K. Yarema.

EN.580.642. Tissue Engineering. 3.00 Credits.
This course is intended to provide a comprehensive overview on the current state of the field of Orthopaedic Tissue Engineering. Students will apply engineering fundamentals learned in the Tissue Engineering course (580.442/580.642) with special emphasis on how they apply to bone, cartilage, and skeletal muscle tissue engineering. The development, structure, mechanics, and function of these tissues will be explored including biomechanics and transport phenomena along with the use of biomaterials and bioreactors to regulate the cellular microenvironment. Emphasis will be placed on different sources of stem cells and their applications to tissue engineering. Clinical and regulatory perspectives will be discussed. Co-listed with EN.580.442. Recommended Course Background: EN.580.221 or AS.020.305 and AS.020.306, AS.030.205, EN.580.441/EN.580.641
Instructor(s): J. Elisseeff; W. Grayson
Area: Engineering.
EN.580.643. Advanced Orthopaedic Tissue Engineering. 3.00 Credits.
This course is intended to provide a comprehensive overview on the current state of the field of Orthopaedic Tissue Engineering. Students will apply engineering fundamentals learned in the Tissue Engineering course (580.442/580.642) with special emphasis on how they apply to bone, cartilage, and skeletal muscle tissue engineering. The development, structure, mechanics, and function of each of these tissues will be discussed. Key articles from the last three decades that focus on stem cell- and cell-free, biomaterial-based approaches to regenerate functional tissues will be presented and analyzed. Practical (regulatory/commercial) considerations that restrict the translation of therapies to the clinic will be discussed. Undergraduate by permission only. Recommend Course Background: EN.580.442 or EN.580.642.
Instructor(s): W. Grayson.
EN.580.644. Biomedical Applications of Glycoengineering. 3.00 Credits.
This course provides an overview of carbohydrate-based technologies in biotechnology and medicine. The course will begin by briefly covering basics of glycobiology and glycochemistry followed by detailed illustrative examples of biomedical applications of glycoengineering. A sample of these applications include the role of sugars in preventative medicine (e.g., for vaccine development and probiotics), tissue engineering (e.g., exploiting natural and engineered polysaccharides for creating tissue or organs de novo in the laboratory), regenerative medicine (e.g., for the treatment of arthritis or degenerative muscle disease), and therapy (e.g., cancer treatment). A major part of the course grade will be based on class participation with each student expected to provide a “journal club” presentation of a relevant paper as well as participate in a team-based project designed to address a current unmet clinical need that could be fulfilled through a glycoengineering approach. Recommended Course Background: EN.580.221 Molecules and Cells or equivalent (molecular and cell biology), college level calculus and calculus-based general physics.
Instructor(s): K. Yarema
Area: Engineering, Natural Sciences.

EN.580.655. Introduction to Orthopedic Biomechanics. 3.00 Credits.
This course will cover static and dynamic force in the musculoskeletal systems, joint reactions, soft and hard tissue response to force loads, muscle mechanics, material properties, biomechanical lumped parameter systems, modeling and injury mechanisms. Co-listed with EN.580.455.
Recommended Course Background: AS.110.302
Instructor(s): R. Allen
Area: Engineering.

EN.580.668. The Art of Data Science. 3.00 Credits.
In this course, we will cover the fundamentals of doing data science research, explaining best practices for each step, that collectively comprise an upward spiral. These steps include: (i) asking an interesting question, (ii) determining the degree to which the answer is known, (iii) assessing there currently exists data to likely obtain a satisfactory answer, (iv) exploring the data set, (v) cleaning up the dataset, (vi) formalizing a statistical inquiry, (vii) positing a statistical model which we hope will yield satisfactory answers, (viii) devising a test to assess the answer, (ix) building an estimator to assess the model, (x) checking the model, (xi) reporting the results, (xii) suggesting the next experiment to perform or question to answer to further enhance the model. Note that this course will largely be project based; each student will be expected to complete each of the above steps on some real data of interest to the student. Lectures will be minimal, giving introductory explanations one day, hopefully only part of the time. The rest of the time, we will work independently or in small groups to complete the weekly portion of the overall project. Please come ready to do science! If you don't have questions that you want answered, you can work in small groups, but each student will need to write the code and reports on their own. Recommended background: No courses are formally required, though students will need to write numerical code (in R, Python, or Julia), and make reports using LaTeX, knitr, or Jupyter notebooks or similar.
Instructor(s): J. Vogelstein
Area: Engineering.

EN.580.673. Magnetic Resonance in Medicine. 3.00 Credits.
This course provides the student with a complete introduction to the physical principles, hardware design, and signal processing used in magnetic resonance imaging and magnetic resonance spectroscopy. The course is designed for students who wish to pursue research in magnetic resonance. Recommended course background: EN.580.222 or EN.520.214. Co-listed with EN.580.476.
Instructor(s): D. Herzka.

EN.580.678. Biomedical Photonics. 3.00 Credits.
This course will cover the basic optics principles including geometric, beam and wave description of light. The course will also cover the basic generation and detection techniques of light and the principles of optical imaging and spectroscopy. After the basis is established, we will focus on some commonly employed optical techniques and tools for biomedical research including various optical microscopy technologies, fiber optics, Raman spectroscopy, Fluorescence (lifetime), FLAT, FRET and FCS. The recent development in tissue optics, biomedical optical imaging/spectroscopy techniques (such as OCT, multiphoton fluorescence and harmonics microscopy, Structured Illumination, light scattering, diffuse light imaging and spectroscopy, optical molecular imaging, photo-acoustic imaging) will also be discussed. Representative biomedical applications of translational biomedical photonics technologies will be integrated into the corresponding chapters.
Instructor(s): X. Li
Area: Engineering.

EN.580.679. X-ray Imaging and Computed Tomography. 3.00 Credits.
This course provides students with an intermediate-level understanding of the physics, engineering, algorithms, and applications of medical x-ray imaging and computed tomography (CT). It is intended for senior undergraduates (EN.580.479) and/or graduate students (EN.580.679) in Biomedical Engineering, Computer Science, Electrical and Computer Engineering, or related fields in science and engineering. Topics include the physics of x-ray interaction and detection, image quality modeling and assessment, 3D image reconstruction (including analytical and iterative approaches), and applications in diagnostic and image-guided procedures. Recommended Course Background: EN.580.472 and/or EN.580.473 and familiarity with Matlab.
Instructor(s): J. Siewersden
Area: Engineering.

EN.580.683. Nuclear Medicine Imaging. 3.00 Credits.
This course provides an intermediate-level introduction to the instrumentation, image processing and reconstruction methods used in planar nuclear medicine imaging, single-photon emission computed tomography (SPECT) and positron emission tomography (PET). Topics include radioactive decay, nuclear medicine instrumentation including radiation detectors and associated electronics, analytic and statistical iterative tomographic reconstruction, imaging physics, and image quality in the context of these three modalities. This course will be taught at the School of Medicine Campus. Recommended Course Background: EN.520.432/EN.580.472 and EN.520.434/EN.580.473
Instructor(s): A. Rahmim; B. Tsui; E. Frey; Y. Du
Area: Engineering.

EN.580.684. Ultrasound Imaging: Theory and Applications. 3.00 Credits.
This course is designed to teach students the theory behind ultrasound imaging and provide an opportunity to apply this theory in a final project. The projects will be centered around advanced beamformers, photoacoustic imaging and thermal imaging. Recommended course background: EN.520.432 or EN.580.472 or equivalent.
Instructor(s): E. Boctor.
EN.580.688. Foundations of Computational Biology & Bioinformatics II. 3.00 Credits.
This course will introduce probabilistic modeling and information theory applied to biological sequence analysis, focusing on statistical models of protein families, alignment algorithms, and models of evolution. Topics will include probability theory, score matrices, hidden Markov models, maximum likelihood, expectation maximization and dynamic programming algorithms. Homework assignments will require programming in Python. Recommended Course Background: Math through linear algebra and differential equations, EN.580.221 or equivalent, EN.600.226 or equivalent.
Instructor(s): R. Karchin.

EN.580.689. Computational Personal Genomics. 3.00 Credits.
What can we learn from the genome sequence of an individual? Genomic technology now makes it possible to generate huge amounts of DNA sequence data for a single individual at a relatively low cost. To make sense of this data, we need to employ sophisticated computational methods to identify genetic variations that influence an individual’s health. In this course, we will first review the state of the art in sequencing technology, and discuss how this technology is being applied to study human biology and disease. We will then explore the computational methods used to turn raw sequence data into knowledge. Topics will include genetic variant detection; discovery of chromosomal rearrangements and fusions; methods to measure gene expression from RNA; and measurements of the microbiome living inside our bodies. Recommended Course Background: EN.600.439/639, EN.600.363/463, EN.600.688, EN.580.688 (any one is sufficient), or permission of the instructor. Course is also open to undergraduates.
Instructor(s): S. Salzberg
Area: Engineering.

EN.580.690. Systems Biology of Cell Regulation. 3.00 Credits.
This course will explore the recent advances in Systems Biology analysis of intracellular processes. Examples of the modeling and experimental studies of metabolic, genetic, signal transduction and cell cycle regulation networks will be studied in detail. The classes will alternate between consideration of network-driven and network element (gene, metabolite or protein)-driven approaches. Recommended Course Background: AS.110.201, AS.110.302 or equivalent, advanced biology.
Instructor(s): A. Levchenko.

EN.580.691. Learning Theory. 3.00 Credits.
This course introduces the probabilistic foundations of learning theory. We will discuss topics in regression, estimation, Kalman filters, Bayesian learning, classification, reinforcement learning, and active learning. Our focus is on iterative rather than batch methods for parameter estimation. Our aim is to use the mathematical results to model learning processes in the biological system. Recommended Course Background: Probability and Linear Algebra.
Instructor(s): R. Shadmehr.

EN.580.693. Imaging Instrumentation. 4.00 Credits.
This course is intended to introduce students to imaging instrumentation. The class will be lab-oriented, giving hands-on experience with data collection and processing using a configurable optical system. Specific topics will include the programming and control of electromechanical elements, imaging data acquisitions, image formation and processing (e.g. 3D reconstruction), and imaging system analysis and optimization. Recommended Course Background: EN.580.222 Systems and Controls or EN.520.214 Signals and Systems. Programming experience highly desirable.
Instructor(s): J. Stayman.

EN.580.694. Statistical Connectomics. 3.00 Credits.
This course will cover the basics of an exciting emerging field of statistical connectomics (aka, brain-graphs). It is so new, that we are going to make some of it up in this class! The first week will be introductory lectures that I give. The rest of the semester will be run like a seminar; each week will focus on a different topic. On Tuesdays we will hear about a statistical method that operates on graphs, and on Thursdays we will read about some neuroscience data upon which one could apply these techniques. The final project will consist of implementing a statistical method devised for graphs on a brain-graph problem. Recommended background: coursework in probability, linear algebra, and numerical programming (eg, R, Python, Matlab).
Instructor(s): J. Vogelstein
Area: Engineering.

EN.580.697. Neuro Data Design I. 3.00 Credits.
In this year long course, students will work together in small teams to design, develop, and deploy a functioning tool for practicing brain scientists, either for accelerating research or augmenting the clinic. The first semester will focus on scoping the tool, including determining feasibility (for us in a year) and significance (for the targeted brain science community), as well as a statement of work specifying deliverables and milestones. The second semester will focus on developing the tool, getting regular feedback, and iterating, using the agile/lean development process. Recommended Course Background: numerical programming.
Instructor(s): J. Vogelstein.

EN.580.701. CBID Masters Advanced Project. 3.00 - 10.00 Credits.
For second year CBID students.
Instructor(s): S. Acharya.

EN.580.702. CBID Masters Advanced Project. 3.00 - 10.00Credits.
Instructor(s): S. Acharya.

EN.580.727. Cell Engineering and Regenerative Medicine Seminar Series. 1.00 Credit.
Top researchers from around the world will present the latest research on stem cell science and clinical application followed by discussion. School of Medicine campus: PCTB, Mountcastle Auditorium
Instructor(s): J. Elisseeff.

EN.580.728. Advanced Seminar in Chemical Glycobiology & Carbohydrate Drug Design. 1.00 Credit.
This course uses the current literature to teach advanced topics in carbohydrate engineering. Students will be required to read current papers, selected textbook chapters and online content to prepare for interactive teaching sessions with faculty and other students. Potential topics will include: sugars as information storage entities and signaling molecules; methods to manipulate and characterize complex carbohydrates in vivo, through chemoenzymatic methods, and emerging high-throughput methodology; carbohydrate-based drug development; and the role of sugars in stem cell biology and tissue engineering. Evaluation will be both by faculty and fellow students. Graduate Level. Seniors by permission. Fall semester only.
Instructor(s): K. Yarema.
EN.580.729. Advanced Seminar in Chemical Glycobiology & Carbohydrate Drug Design. 1.00 Credit.
This course uses the current literature to teach advanced topics in carbohydrate engineering. Students will be required to read current papers, selected textbook chapters and online content to prepare for interactive teaching sessions with faculty and other students. Potential topics will include: sugars as information storage entities and signaling molecules; methods to manipulate and characterize complex carbohydrates in vivo, through chemoenzymatic methods, and emerging high-throughput methodology; carbohydrate-based drug development; and the role of sugars in stem cell biology and tissue engineering. Evaluation will be both by faculty and fellow students. Spring semester only.
Instructor(s): F. Macgabhann; S. Sarma.

EN.580.736. Distinguished Seminar Series in Computational Medicine. 1.00 Credit.
We live in a new era in the understanding, diagnosis and treatment of human disease. Over the past ten years, extraordinary advances in modeling and computing technologies have opened the door to an array of possibilities that were previously beyond the reach of biomedical researchers. Today’s powerful computational platforms are allowing us to begin to identify, analyze, and compare the fundamental biological components and processes that regulate human diseases and their impact on the body. The next step, then, is to harness the potential of these theoretical and computational tools and theory in a meaningful way -that is, to apply this new medicine to the exploration and treatment of many of our current diseases. This lecture series will feature world experts in computational medicine as well as laboratories at JHU’s institute for Computational Medicine (ICM). Fall semester only. S/U grading only.
Instructor(s): F. Macgabhann; S. Sarma.

EN.580.737. Distinguished Seminar Series in Computational Medicine. 1.00 Credit.
We live in a new era in the understanding, diagnosis and treatment of human disease. Today’s powerful computational platforms are allowing us to begin to identify, analyze, and compare the fundamental biological components and processes that regulate human diseases and their impact on the body. The next step, then, is to harness the potential of these theoretical and computational tools and theory in a meaningful way -that is, to apply this new medicine to the exploration and treatment of many of our current diseases. This lecture series will feature world experts in computational medicine as well as laboratories at JHU’s institute for Computational Medicine (ICM). Spring semester only.
Instructor(s): F. Macgabhann; S. Sarma.

EN.580.738. Advanced Seminars in Cardiac Electrophysiology and Mechanics. 1.00 Credit.
This course uses the current literature to teach advanced topics in cardiac electrophysiology and mechanics. Students will be required to read current articles and then conduct interactive teaching sessions with faculty and other students. Potential topics will include: ion channels, cardiac excitation-contraction coupling, myofilament regulation, cardiac arrhythmias, heart failure, therapies for arrhythmias and pump dysfunction. Evaluation will be both by faculty and fellow students. Graduate Level. Seniors by permission. Fall semester only.
Instructor(s): N. Trayanova; P. Boyle.

EN.580.739. Advanced Seminars in Cardiac Electrophysiology and Mechanics. 1.00 Credit.
This course uses the current literature to teach advanced topics in cardiac electrophysiology and mechanics. Students will be required to read current articles and then conduct interactive teaching sessions with faculty and other students. Potential topics will include: ion channels, cardiac excitation-contraction coupling, myofilament regulation, cardiac arrhythmias, heart failure, therapies for arrhythmias and pump dysfunction. Evaluation will be both by faculty and fellow students. Graduate Level. Seniors by permission only (signed add/drop form). Spring semester only.
Instructor(s): N. Trayanova; P. Boyle.

EN.580.746. Imaging Science Seminar. 1.00 Credit.
Fall semester only.
Instructor(s): M. Miller; R. Vidal.

EN.580.747. Imaging Science Seminar. 1.00 Credit.
Spring semester only.
Instructor(s): M. Miller; R. Vidal.

EN.580.748. Advanced Seminars in Magnetic Resonance Imaging. 3.00 Credits.
This course uses the current literature to teach advanced topics in magnetic resonance imaging. Students will be required to read current papers, selected textbook chapters and online content to prepare for interactive teaching sessions with faculty and other students. Potential topics will include: image artifacts, effect of motion, resolution and SNR, realtime imaging, clinical applications. Evaluation will be both by faculty and fellow students. Graduate Level. Seniors by permission. Fall semester only.
Instructor(s): E. McVeigh.

EN.580.749. Advanced Seminars in Magnetic Resonance Imaging. 3.00 Credits.
This course uses the current literature to teach advanced topics in magnetic resonance imaging. Students will be required to read current papers, selected textbook chapters and online content to prepare for interactive teaching sessions with faculty and other students. Potential topics will include: image artifacts, effect of motion, resolution and SNR, realtime imaging, clinical applications. Evaluation will be both by faculty and fellow students. Spring semester only.
Instructor(s): D. Herzka.
EN.580.771. Principles of the Design of Biomedical Instrumentation. 4.00 Credits.
This course is designed for graduate students interested in learning basic biomedical instrumentation design concepts and translating these into advanced projects based on their research on current state-of-the-art. They will first gain the basic knowledge of instrumentation design, explore various applications, and critically gain hands-on experience through laboratory and projects. At the end of the course, students would get an excellent awareness of biological or clinical measurement techniques, design of sensors and electronics (or electromechanical, chemical, microprocessor system and their use). They will systematically learn to design instrumentation with a focus on the use of sensors, electronics to design a core instrumentation system such as an ECG amplifier. Armed with that knowledge and lab skills, students will be encouraged to discuss various advanced instrumentation applications, such as brain monitor, pacemaker/defibrillator, or prosthetics. Further, they will be “challenged” to come up with some novel design ideas and implement them in a semester-long design project. Students will take part in reading the literature, learning about the state-of-the-art through journal papers and patents, and discussing, critiquing, and improving on these ideas. Finally, they will be implementing a selected idea into a semester-long advanced group project. Meets with 580.471 Graduate students only
Instructor(s): N. Thakor.

EN.580.781. Biomedical Engineering Seminar. 1.00 Credit.
Instructor(s): J. Bader.

EN.580.801. Research in Biomedical Engineering. 3.00 - 10.00 Credits.
Graduate Students only
Instructor(s): K. Yarema.

EN.580.802. Research in Biomedical Engineering. 3.00 - 10.00 Credits.
Directed research for MSE and PhD students
Instructor(s): K. Yarema.

EN.580.850. BME MSE Research Practicum. 6.00 Credits.
BME MSE Research Practicum For Thesis-Track Students
Instructor(s): K. Yarema.

Cross Listed Courses

General Engineering

EN.500.745. Seminar in Computational Sensing and Robotics. 1.00 Credit.
Seminar series in robotics. Topics include: Medical robotics, including computer-integrated surgical systems and image-guided intervention. Sensor based robotics, including computer vision and biomedical image analysis. Algorithmic robotics, robot control and machine learning. Autonomous robotics for monitoring, exploration and manipulation with applications in home, environmental (land, sea, space), and defense areas. Biorobotics and neuromechanics, including devices, algorithms and approaches to robotics inspired by principles in biomechanics and neuroscience. Human-machine systems, including haptic and visual feedback, human perception, cognition and decision-making, and human-machine collaborative systems. Cross-listed Mechanical Engineering, Computer Science, Electrical and Computer Engineering, and Biomedical Engineering.
Instructor(s): L. Whitcomb; N. Cowan; P. Kazanzides; R. Etienne Cummings; R. Vidal.

Electrical Computer Engineering

EN.520.315. Introduction to Information Processing of Sensory Signals. 3.00 Credits.
An introductory course to basic concepts of information processing of human communication signals (sounds, images) in living organisms and by machine. Recommended Course Background: EN.520.214 (or EN.580.222) or consent of the instructor.
Instructor(s): H. Hermansky
Area: Engineering.

EN.520.434. Modern Biomedical Imaging Instrumentation and Techniques. 3.00 Credits.
An intermediate biomedical imaging course covering modern biomedical imaging instrumentation and techniques as applied to diagnostic radiology and other biomedical applications. It includes recent advances in various biomedical imaging modalities, multi-modality imaging and molecular imaging. The course is team taught by experts in the respective fields and provides a broad based knowledge of modern biomedical imaging to prepare students for graduate studies and research in biomedical imaging. Also, the course will offer tours and practical experience with modern biomedical imaging equipments in clinical and research settings. Co-listed with EN.580.473
Prerequisites: EN.520.432 OR EN.580.472
Instructor(s): B. Tsui.

EN.520.445. Audio Signal Processing. 3.00 Credits.
This course gives a foundation in current audio and speech technologies, and covers techniques for sound processing by processing and pattern recognition, acoustics, auditory perception, speech production and synthesis, speech estimation. The course will explore applications of speech and audio processing in human computer interfaces such as speech recognition, speaker identification, coding schemes (e.g. MP3), music analysis, noise reduction. Students should have knowledge of Fourier analysis and signal processing.
Prerequisites: Students make take EN.520.445 or EN.520.645, but not both.
Instructor(s): M. Elhilali
Area: Engineering.

EN.520.601. Introduction to Linear Systems Theory. 3.00 Credits.
A beginning graduate course in multi-input multi-output, linear, time-invariant systems. Topics include state-space and input-output representations; solutions and their properties; multivariable poles and zeros; reachability, observability and minimal realizations; stability; system norms and their computation; linearization techniques.
Recommended Course Background: Undergraduate courses in control systems and linear algebra.
Instructor(s): P. Iglesias.

EN.520.622. Principles of Complex Networked Systems. 3.00 Credits.
By employing fundamental concepts from diverse areas of research, such as statistics, signal processing, biophysics, biochemistry, cell biology, and epidemiology, this course introduces a multidisciplinary and rigorous approach to the modeling and computational analysis of complex interaction networks. Topics to be covered include: overview of complex nonlinear interaction networks and their applications, graph-theoretic representations of network topology and stoichiometry, stochastic modeling of dynamic processes on complex networks and master equations, Langevin, Poisson, Fokker-Plank, and moment closure approximations, exact and approximate Monte Carlo simulation techniques, time-scale separation approaches, deterministic and stochastic sensitivity analysis techniques, network thermodynamics, and reverse engineering approaches for inferring network models from data.
Instructor(s): J. Goutsias.
Mechanical Engineering
EN.530.410. Biomechanics of the Cell. 3.00 Credits.
Mechanical aspects of the cell are introduced using the concepts in continuum mechanics. Discussion of the role of proteins, membranes and cytoskeleton in cellular function and how to describe them using simple mathematical models.
Instructor(s): S. Sun
Area: Engineering, Natural Sciences.

EN.530.426. Biofluid Mechanics. 3.00 Credits.
Course will cover selected topics from physiological fluid dynamics, including respiratory flow patterns, blood flow and pulse propagation, aerodynamics of phonation and speech, rheology of blood flow in the microcirculation, aquatic animal propulsion, and animal flight.
Instructor(s): R. Mittal
Area: Engineering.

EN.530.448. Biosolid Mechanics. 3.00 Credits.
This class will introduce fundamental concepts of statics and solid mechanics and apply them to study the mechanical behavior bones, blood vessels, and connective tissues such as tendon and skin.
Topics to be covered include concepts of small and large deformation, stress, constitutive relationships that relate the two, including elasticity, anisotropy, and viscoelasticity, and experimental methods.
Recommended Course Background: AS.110.201 and AS.110.302, as well as a class in statics and mechanics
Instructor(s): S. Sun
Area: Engineering.

Applied Mathematics Statistics
EN.550.450. Computational Molecular Medicine. 4.00 Credits.
Computational systems biology has emerged as the dominant framework for analyzing high-dimensional "omics" data in order to uncover the relationships among molecules, networks and disease. In particular, many of the core methodologies are based on statistical modeling, including machine learning, stochastic processes and statistical inference. We will cover the key aspects of this methodology, including measuring associations, testing multiple hypotheses, and learning predictors, Markov chains and graphical models. In addition, by studying recent important articles in cancer systems biology, we will illustrate how this approach enhances our ability to annotate genomes, discover molecular disease networks, detect disease, predict clinical outcomes, and characterize disease progression. Whereas a good foundation in probability and statistics is necessary, no prior exposure to molecular biology is required (although helpful).
Prerequisites: (EN.550.420 AND EN.550.430) OR equivalent courses in probability and statistics.
Instructor(s): J. Bader
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.635. Topics in Bioinformatics. 4.00 Credits.
A readings course organized around research articles in the recent bioinformatics and computational biology literatures. In this term, the choice of papers will favor work on inferring phenotype from genotype, and modeling signaling networks, based on gene microarrays bearing the expression levels of thousands of transcripts, and on properties of proteins, such as predicting active sites and detecting harmful mutations. One major objective is to prepare students to comfortably read articles which involve extensive mathematical and statistical modeling as well as techniques from pattern recognition and machine learning. Most papers will be presented by the students. In addition, student expositions will be preceded by "tutorials" by the instructor on various aspects of statistical learning, modeling and prediction, such as properly estimating generalization error in cancer classification and avoiding over-fitting in learning networks of molecular interactions. Recommended Course Background: course in statistics; previous exposure to machine learning or pattern recognition
Instructor(s): D. Geman.

Computer Science
EN.600.340. Introduction to Genomic Research. 3.00 Credits.
This course will use a project-based approach to introduce undergraduates to research in computational biology and genomics. During the semester, students will take a series of large data sets, all derived from recent research, and learn all the computational steps required to convert raw data into a polished analysis. Data challenges might include the DNA sequences from a bacterial genome project, the RNA sequences from an experiment to measure gene expression, the DNA from a human microbiome sequencing experiment, and others.
Topics may vary from year to year. In addition to computational data analysis, students will learn to do critical reading of the scientific literature by reading high-profile research papers that generated groundbreaking or controversial results. [Applications] Recommended Course Background: Knowledge of the Unix operating system and programming expertise in a language such as Perl or Python.
Instructor(s): S. Salzberg
Area: Engineering.

EN.600.438. Computational Genomics: Data Analysis. 3.00 Credits.
Genomic data has the potential to reveal causes of disease, novel drug targets, and relationships among genes and pathways in our cells. However, identifying meaningful patterns from high-dimensional genomic data has required development of new computational tools. This course will cover current approaches in computational analysis of genomic data with a focus on statistical methods and machine learning. Topics will include disease association, prediction tasks, clustering and dimensionality reduction, data integration, and network reconstruction. There will be some programming and a project component. [Applications] Recommended Course Background: EN.600.226 or other programming experience, probability and statistics, linear algebra or calculus. Students may receive credit for EN.600.438 or EN.600.638, but not both.
Prerequisites: Students may receive credit for EN.600.438 or EN.600.638, but not both.
Instructor(s): A. Battle
Area: Engineering.
EN.600.461. Computer Vision. 3.00 Credits.
This course gives an overview of fundamental methods in computer
vision from a computational perspective. Methods studied include:
camera systems and their modeling, computation of 3-D geometry from
binocular stereo, motion, and photometric stereo; and object recognition.
Edge detection and color perception are covered as well. Elements
of machine vision and biological vision are also included. Students
may receive credit for at most one of EN.600.361 or EN.600.461 or
EN.600.661. [Applications] Prerequisites (soft): intro programming, linear
algebra, and prob/stat.
Prerequisites: If you have completed EN.600.361 OR EN.600.661 you
cannot enroll in EN.600.461.
Instructor(s): A. Reiter
Area: Engineering, Quantitative and Mathematical Sciences.

EN.600.476. Machine Learning: Data to Models. 3.00 Credits.
How can robots localize themselves in an environment when navigating?
Can we predict which patients are at greatest-risk for complications in
the hospital? Which movie should I recommend to this user given his
history of likes? Many such big data questions can be answered using
the paradigm of probabilistic models in machine learning. These are
especially useful when common off-the-shelf algorithms such as support
vector machines and k-means fail. You will learn methods for clustering,
classification, structured prediction, recommendation and inference. We
will use Murphy’s book, Machine Learning: a Probabilistic Perspective,
as the text for this course. Assignments are solved in groups of size 1-3
students. The class will have 4 interactive sessions during which we
brainstorm how to solve example open-ended real-world problems with
the tools learnt in class. Students are also required to do a project of their
choice within which they experiment with the ideas learnt in class.
[Analysis or Applications] Students may receive credit for EN.600.476
or EN.600.676, but not both. Prerequisites include Intro Prob/Stat, Linear
Algebra and Intro Machine Learning as well as strong background in s.
Instructor(s): S. Saria
Area: Engineering, Quantitative and Mathematical Sciences.

EN.600.638. Computational Genomics: Data Analysis. 3.00 Credits.
Graduate level version of EN.600.438. [Applications] Recommended
Course Background: EN.600.226 or other programming experience,
probability and statistics, linear algebra or calculus. Students may receive
credit for EN.600.438 or EN.600.638 but not both.
Prerequisites: Students may receive credit for EN.600.438 or
EN.600.638, but not both.
Instructor(s): A. Battle
Area: Engineering.

EN.600.656. Machine Learning: Data to Models. 3.00 Credits.
Students in the class will be asked to do assignments in Matlab. Matlab
is typically easy to pick up if one is already familiar with a different
programming language. Students are expected to be mathematically
mature. One should have taken at least an introductory course in
probability theory and linear algebra. Though not required, exposure to
optimization or machine learning is recommended. Proficiency in at
least one programming language is expected. When in doubt, send the
instructor a copy of your transcript to see if the class is appropriate for
you. Also, sit through the first few sessions and first homework to get a
sense of fit. Requisites include Intro Prob/Stat, Linear Algebra and Intro
Machine Learning as well as strong background in s.
Instructor(s): S. Saria.

Center for Leadership Education
http://eng.jhu.edu/wse/cle

Center for Leadership Education
The Center for Leadership Education (CLE) at Johns Hopkins is
composed of several academic programs including the Entrepreneurship
and Management minor, the Marketing and Communications minor, the
Professional Communication Program, the Professional Development
Program and the Masters of Science in Engineering Management. In the
fall of 2016, the CLE will launch two minors: the Accounting and Financial
Management minor and the Business minor. Additionally, the CLE hosts a
variety of experiential programs that offer students an opportunity to gain
real-world business and leadership experience.

CLE Experiential Programs Include

Competitions and Other Educational Opportunities:

• The Annual JHU Business Plan Competition: Students compete for
cash prizes for best business plans in several different categories. The
competition is open to students from all divisions of the
university. The Medical Technology Category has separate
tracks for Undergraduate and Graduate Students and accepts
national and international competitors that meet the eligibility
requirements. http://bpc.jhu.edu

• Elevator Pitch Competition: AKPsi, a CLE student group, runs this
event giving students the opportunity to compete for cash prize for
the best elevator pitch. The competition is open to undergraduates
from the Homewood Campus. Students will submit their 90 second
video pitch. The selected finalists will then present before a judging
panel.

• Consulting Club Case Competition: The Johns Hopkins
Undergraduate Case Competition provides students with the
opportunity to learn, collaborate and share ideas with their peers
in order to solve a real world business case. The competition is
designed to not only develop their professional, communication and
business acumen but also to connect students with Hopkins alumni
in the consulting industry.

• Internships: Students can apply for sponsorship for academic credit
of unpaid business-related internships during the spring, summer or
fall semester.

• Intersession Courses: including P.R. and Media in the Big Apple,
featuring a two-day visit to P.R. firms in NYC.

Professional Associations:

• Alpha Kappa Psi: Students run a chapter of this national co-ed
business fraternity. http://akpsi.johnshopkins.edu

• American Marketing Association Student Chapter: Students
run a chapter of this national marketing organization. http://
www.jhuama.com

• Kairos Society: An international, student-run, not-for-profit foundation
based in the United States.

Social Entrepreneurship:

• A Helping Hand: AHH is a 10-week leadership education course for
young people in Baltimore who were affected by recreational center
closures. A personal growth program was developed that covers
money management, entrepreneurship, public speaking, resume
building, identity, self-esteem, decision-making and more. https://
johnshopkins.collegiatelink.net/organization/helpinghand

• Hopkins AND1: A student run program that partners Hopkins
student athletes with students from area Baltimore City High Schools
to help prospective athletes in Baltimore meet their NICAA academic eligibility requirements. The group provides SAT prep and academic tutoring.

- **Social Investment Outreach**: SIO provides people of underprivileged communities and developing countries with a means of helping themselves escape poverty through microcredit and sustainable community development. [http://sio.johnshopkins.edu](http://sio.johnshopkins.edu)

- **Students Consulting for Non-Profit Organizations**: A national organization of undergraduate students committed to developing communities through pro bono consulting engagements with non-profit organizations. [http://jhuscno.com](http://jhuscno.com)

**Other Experiential Opportunities**

- **Business in China Association**: BCA was created with a mission to bridging the east and west and improving our community's understanding of business in China. [https://www.facebook.com/jhubca](https://www.facebook.com/jhubca)

- **Hopkins Student Enterprises**: Students have the ability start and manage businesses that provide services to the campus and surrounding communities. HSE currently has 8 successful student run business serving the Homewood Campus. [http://hse.jhu.edu](http://hse.jhu.edu)

- **JHU TAMID**: JHUTAMID provides undergraduate students with an education on the Israeli and American economies. Members of JHUTAMID will have the unique opportunity to consult for major Israeli tech firms and help run an investment fund that specializes in the Tel Aviv Stock Exchange. [http://jhutamid.johnshopkins.edu](http://jhutamid.johnshopkins.edu)

- **JHU Undergraduate Consulting Club**: JHUCC’s aim is to help the undergraduate student body at Johns Hopkins learn more about consulting as a career track, by providing events and resources that will give students insight into the field of consulting and connect them with recruiters from firms. [https://www.facebook.com/jhumcc](https://www.facebook.com/jhumcc)

- **Marshal Salant Student Investment Team**: The team was founded with a generous $100K donation by alumnus Marshal L. Salant. The team portfolio is currently valued at over $250K. Profits from the portfolio are used to fund student scholarships. [http://www.jhu.edu/salant](http://www.jhu.edu/salant)

- **Business Roundtable**: Alpha Kappa Psi, Students Consulting for Nonprofit Organizations (SCNO), and the American Marketing Association (AMA) co-host this annual networking event every November. This event allows undergraduates to network with JHU alumni who are currently working in fields such as consulting, finance, and marketing. The event is set up in a roundtable format to allow students to connect with alumni on a more personal level in which students are able to ask alumni questions about their experiences in their respective industries.

For current faculty and contact information go to [http://eng.jhu.edu/wse/cle/page/our_people](http://eng.jhu.edu/wse/cle/page/our_people)

**Faculty**

**Director**

Timothy Weihs
Director of CLE, Professor of Materials Science & Engineering

**Program Directors**

Lawrence Aronhime
Senior Lecturer & Director of International Programs: accounting, finance, entrepreneurship, technology commercialization.

Annette Leps

Senior Lecturer & Director of Entrepreneurship & Management Program: accounting, finance, management

Julie Reiser
Senior Lecturer & Director of The Professional Communication Program: technical communication, oral presentations, research writing, dissertation writing, American literature and critical theory.

Eric Rice
Senior Lecturer & Director of Graduate Programs: organizational behavior, social entrepreneurship, management, negotiation and conflict management, leadership, public speaking, professional writing.

Pamela Sheff
Senior Lecturer & Director of Master of Science in Engineering Management Program: business and technical communication, marketing, public relations, science and scientific writing, oral presentations, higher education in prisons, community-based learning, entrepreneurship.

**Full Time Faculty**

Bob Graham
Lecturer: entrepreneurship, professional communications, oral presentations

Illysa Izenburg
Lecturer: engineering management

Leslie Kendrick
Senior Lecturer: marketing strategy, integrated marketing communications, sports marketing, international marketing.

Charlotte O’Donnell
Lecturer: oral presentations, professional communication, visual rhetoric

William Smedick
Senior Lecturer: leadership

**Part Time Faculty**

Michael Agronin
Lecturer: product development

Justin Beauchamp
Lecturer: leadership

Jennifer Bernstein
Lecturer: communications

Sue Conley
Lecturer: marketing

Laura Davis
Lecturer: communications, ESL

Marci DeVries
Lecturer: marketing

Kevin Dungey
Senior Lecturer: communications

David Fisher
Lecturer: business law

Mark Franceschini
Senior Lecturer: business ethics, internet law

Sean Furlong
Adam Trieser
Lecturer: business analytics

Tamara Warren-Chinyani
Lecturer: emotional intelligence

Caroline Wilkins
Lecturer: communications

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

EN.660.100. Hopkins Leadership Challenge Seminar. 1.00 Credit.
The Hopkins Leadership Challenge seminar is designed specifically for all incoming freshman. The classroom content will include discussions with current university leaders and will serve as an introduction to the history, services and involvement opportunities open to JHU undergraduates. The seminars will include discussion and assignments from The Leadership Challenge by Kouzes and Posner. The experiential component of the course will include programs designed to enhance classroom content and expose students to the on campus and off campus involvement opportunities available.
Instructor(s): C. Ouwerkerk; J. Beauchamp; M. Mattia; T. Sanchez
Area: Social and Behavioral Sciences.

EN.660.104. Exploring Leadership: For Hopkins Students Who Want to Make a Difference. 1.00 Credit.
Seminar is designed specifically for second year undergraduates at JHU and is limited to that population. An eight-week seminar and experiential program designed to provide the following learning outcomes for students enrolled: 1. Understand self-others and how to work effectively in communities 2. Understand the importance of integrity, moral purpose, and positive change. 3. Understand how change occurs and why people resist or promote change. 4. Understand the importance of enhancing and applying individual team strengths, developing greater levels of well being for you and in others, and thriving together as individuals and organizations. 5. Form positive connections and relationships with upper class students and alumni in areas of career interests. Sophomores only. S/U only.
Instructor(s): M. Butta; T. Olson.

EN.660.106. Clark Scholars Leadership Challenge. 1.00 Credit.
The Clark Scholars Leadership Challenge is a one credit pass/fail seminar and is designed specifically for the Clark Scholars at JHU who are interested in developing their leadership skills and applying those skills to Hopkins life. The seminar includes both a classroom component and an experiential component. The classroom content includes leadership topics, discussions with university leaders and serves as an introduction to the history, services and involvement opportunities at Hopkins. The experiential component includes programs such as JHU history, faculty student interaction, visits to other JHU campuses and more! Clark Scholars only. S/U only.
Instructor(s): W. Smedick
Area: Social and Behavioral Sciences.
EN.660.107. Leadership Concepts. 1.00 Credit.
Leadership Concepts is a seminar designed specifically for second year undergraduates at JHU and is limited to that population. A seven-week seminar and experiential program designed to provide the following learning outcomes for students enrolled: 1. Understand self-others and how to work effectively in communities. 2. Understand the importance of integrity, moral purpose, and positive change. 3. Understand how change occurs and why people resist or promote change. 4. Understand the importance of enhancing and applying individual team strengths, developing greater levels of well being for you and in others, and thriving together as individuals and organizations. 5. Form positive connections and relationships with upper class students and alumni in areas of career interests.
Instructor(s): T. Olson
Area: Social and Behavioral Sciences.

EN.660.108. Leading Students Through 1st Year Transitions. 1.00 Credit.
Leadership Students Through 1st Year Transitions is a seminar designed specifically for first and second year undergraduates at JHU and is limited to that population. A seven-week seminar and experiential program designed to provide the following learning outcomes for students enrolled: 1. Understand self-others and how to work effectively in communities. 2. Understand the importance of integrity, moral purpose, and positive change. 3. Understand how change occurs and why people resist or promote change. 4. Understand the importance of enhancing and applying individual team strengths, developing greater levels of well being for you and in others, and thriving together as individuals and organizations. 5. Form positive connections and relationships with upper class students and alumni in areas of career interests.
Instructor(s): J. Beauchamp
Area: Social and Behavioral Sciences.

EN.660.109. Career-Ready Leadership: Leading at all Levels. 1.00 Credit.
Career-Ready Leadership is a seminar designed specifically for first and second year undergraduates at JHU and is limited to that population. A seven-week seminar and experiential program designed to provide the following learning outcomes for students enrolled: 1. Preparing yourself for leadership. 2. Self care in leadership. 3. Applied skills for an organizational leader. 4. What organizations are seeking in leaders at all levels. 5. Leading in an entrepreneurial environment.
Instructor(s): M. Butta
Area: Social and Behavioral Sciences.

EN.660.110. Baltimore Scholars and Hop-in Leaders. 1.00 Credit.
Baltimore Scholars and Hop-in Leaders is a seminar designed specifically for first and second year Baltimore Scholars and Hop-in undergraduates at JHU and is limited to that population. A seven-week seminar and experiential program designed to provide the following learning outcomes for students enrolled: 1. Understand self-others and how to work effectively in communities. 2. Understand the importance of integrity, moral purpose, and positive change. 3. Understand how change occurs and why people resist or promote change. 4. Understand the importance of enhancing and applying individual team strengths, developing greater levels of well being for you and in others, and thriving together as individuals and organizations. 5. Form positive connections and relationships with upper class students and alumni in areas of career interests. Open to 1st and 2nd year students and limited to Baltimore Scholars and Hop-in cohort.
Instructor(s): T. Sanchez
Area: Social and Behavioral Sciences.

EN.660.111. Civic Engagement Service and Leadership. 1.00 Credit.
Civic Engagement Service and Leadership is a seminar designed specifically for first and second year undergraduates at JHU and is limited to that population. A seven-week seminar and experiential program designed to provide the following learning outcomes for students enrolled: 1. Understand self-others and how to work effectively in communities. 2. Understand the importance of integrity, moral purpose, and positive change. 3. Understand how change occurs and why people resist or promote change. 4. Understand the importance of enhancing and applying individual team strengths, developing greater levels of well being for you and in others, and thriving together as individuals and organizations. 5. Form positive connections and relationships with upper class students and alumni in areas of career interests.
Instructor(s): C. Ouwerkerk
Area: Social and Behavioral Sciences.

EN.660.200. Principles of Finance. 3.00 Credits.
This course covers central issues in financial management and corporate finance. Students will learn how financial managers make investment, financing and other decisions and what are the tools they use to reach such decisions. Topics covered include time value of money, risk, valuation, capital structure, capital budgeting, dividend policy and mean-variance portfolio selection. The course provides the analytical tools and the financial theories needed to implement sound financial decisions within a corporation (and outside of a corporation). Ideas are presented in a cohesive way within the framework of the no-arbitrage principle, the fundamental principle shaping all aspects of modern finance. Command of the subject is crucially important for anyone considering a career not only in investment banking, investment management or trading, but also in general management, corporate strategy, management consulting, entrepreneurship, and the non-profit world.
Prerequisites: EN.660.105 OR AS.180.102
Instructor(s): X. Sun.

EN.660.315. Business Development in Emerging Markets. 3.00 Credits.
In a rapidly globalizing world, business leaders find increasing numbers of development opportunities in emerging markets. This new class explores opportunities for the private sector particularly when coupled with development aid and assistance from the public sector. Each session will focus on building out a toolkit of mechanisms and strategies to unlock private finance for development goals, and reviews both large-scale projects and microfinance/impact investing. Topics to be covered include bonds and capital markets; constraints in access to finance in developing countries; understanding the main players in development finance; project finance for development; innovations in development finance; and impact investing. Recommended Course Background: EN.660.105 Introduction to Business prior to this course.
Instructor(s): J. Gorelick
Writing Intensive.

EN.660.343. Operations Management. 3.00 Credits.
This course aims to (1) direct your attention to fundamental problems and issues confronting all operations managers, (2) provide you with language, concepts, and insights which will help you to deal with these issues in order to gain competitive advantage through operations, and (3) further develop your ability to use analytical approaches and tools to understand and handle various managerial situations. Because the course deals with the management of “processes”, it applies to both profit and non-profit organizations, to both service and manufacturing organizations, and to virtually any functional area or industry.
Prerequisites: EN.660.105 OR AS.180.102
Instructor(s): B. Robeson.
EN.660.370. Multinational Firms in the International Economy. 3.00 Credits.
This course on international business focuses on relationships between multinational firms and national governments throughout the world. We will read historical and contemporary authors' conceptualizations of these relationships in the US and around the world. Students will apply concepts from the readings to real-world situations. The course is capped at 25 to allow discussion. No audits.
Prerequisites: EN.660.105
Instructor(s): I. Izenberg.

EN.660.446. Multidisciplinary Technical Teams. 3.00 Credits.
Leaders – whether of a team or an organization—are charged with setting, communicating, and overseeing the implementation of a vision. Leaders ensure sustainable growth and targeted change. Leaders and members of teams that are integrated across multiple engineering and science disciplines, face special challenges regarding managing innovation, creating a team environment that facilitates experimentation, providing a balance of autonomy and collegial support, maintaining technical expertise, and facilitating inter-disciplinary communication.
Instructor(s): D. Heisenberg.
Area: Engineering, Natural Sciences
Writing Intensive.

EN.660.604. Business of Bioengineering Innovation & Design I. 3.00 Credits.
This course comprises two distinct, but related, components. The first is a broad introduction to the terms, concepts, and values of business and management. Particular emphasis will be placed on the economic, financial, and corporate contexts of our business culture, and how they impact the organization, strategy, and decision-making of business firms. The second component is an introduction to the sociological and economic forces that shape the development and diffusion of new technologies. This part is primarily designed to provide a framework for determining the commercial viability of new medical devices and the best path for realizing their value, including how to develop a compelling value proposition, analyze markets and competitors, and protect intellectual property. Throughout, the course utilizes individual exercises, case analyses, and team projects. CBID MSE Students Only
Instructor(s): L. Aronhime.

EN.660.606. Business of Bioengineering Innovation & Design. 3.00 Credits.
This course comprises two distinct, but related, components. The first is a broad introduction to the terms, concepts, and values of business and management. Particular emphasis will be placed on the economic, financial, and corporate contexts of our business culture, and how they impact the organization, strategy, and decision-making of business firms. The second component is an introduction to the sociological and economic forces that shape the development and diffusion of new technologies. This part is primarily designed to provide a framework for determining the commercial viability of new medical devices and the best path for realizing their value, including how to develop a compelling value proposition, analyze markets and competitors, and protect intellectual property. Throughout, the course utilizes individual exercises, case analyses, and team projects. CBID MSE students only.
Instructor(s): L. Aronhime.

EN.660.665. Technology Entrepreneurship. 3.00 Credits.
The goal of the course is to provide a strategic framework (technological, market, regulatory, and financial) for determining the commercial value of new technologies and the best path for realizing that value. Through lectures, exercises, and case studies, students will develop and advance their own innovations and inventions, culminating in a business plan. No audits.
Instructor(s): L. Aronhime
Area: Engineering, Natural Sciences.

EN.661.129. Improv for Entrepreneurs and Leaders. 3.00 Credits.
From terror that strikes in the face of public speaking to self-doubt after an impromptu conversation, we’ve all had moments when we wished to be more confident communicators. Following the lead of innovative communities and businesses, this class turns to improvisation techniques to develop communication skills, encourage creative problem solving, and support teamwork. Designed for students without any acting experience, there are no prerequisites to participate. In a non-threatening, judgment-free atmosphere we begin with improv fundamentals to help students master the subtleties of communication through voice, expression, and body language. As students experiment with imaginative movement and play, they learn to respond spontaneously and confidently to unforeseen challenges. Working together in pairs and small groups, students build trust and operate as fluid and dynamic team members. Throughout the course students build skills to minimize stress, overcome rejection, find comfort in fear, unleash creativity, and trust in their ability to communicate effectively.
Instructor(s): Staff.

EN.661.500. Catalyst: A Student Run Magazine Independent Study. 1.00 - 3.00 Credits.
Students enrolled in this independent study will work as writers and editors for the student-run magazine. They will collaborate with the editorial team to produce content, develop magazine policies, and ensure that student work adheres to those policies. They may also create/direct artwork as needed.
Instructor(s): C. O’Donnell.

EN.663.615. Building Effective Posters and Slides. 1.50 Credits.
This course teaches techniques in visual communication geared to suit emerging scientists. Students will learn the fundamentals of visual design, including theories of form, color and visual perception. The course will cover principles of typography, grid systems and other methods of establishing visual hierarchy. There will also be a short unit on commercial photography. Students will put this knowledge to work in the classroom to produce slides, conference posters and data visualizations. GRADING: P/F for most students; letter grades for MSEM students.
Instructor(s): C. O’Donnell.

EN.663.630. Business Creation and Contracts. 1.50 Credits.
Introduces participants to the fundamental aspects of law associated with developing and bringing new products to the marketplace. Arranged in modules and taught largely through the case method, the course features the following topics: creating and forming businesses and contracts. GRADING: P/F for most students; letter grades for MSEM students.
Instructor(s): G. Galvez.
EN.663.631. Intellectual Property Law. 1.50 Credits.
Arranged in modules and taught largely through the case method, the course features the following topics: intellectual property; principal-agent relations; and product liability. Not only will participants learn the principles associated with each topic, but also they will master the questions and concerns to use when working with legal counsel on these issues in the future. GRADING: P/F for most students; letter grades for MSEM students.
Instructor(s): C. Mackesey.

EN.663.643. Science Outreach: Communicating Science to the Public. 1.50 Credits.
This course teaches students to communicate effectively with a non-specialized audience including the “voting public”, teachers and high school students. Class projects include developing materials for mainstream science news outlet and a hands-on presentation. Class content emphasizes writing clearly for a non-technical audience, creating appropriate visuals and hands-on manipulatives, developing oral presentation skills, giving and receiving feedback, and simulating the real world environment in which most communication occurs. This is a 7-week course and is not open to undergraduates.
Instructor(s): C. Reiser.

EN.663.644. Writing Articles and Technical Reports. 1.50 Credits.
Professionals in almost every occupation write – for multiple audiences in various information formats and for many reasons. Estimates of time spend writing in various occupations range from 25% to 35% of total work time. With so much time invested in the activity, it is imperative to learn to write effectively and efficiently. This Module addresses critical skills including how to find and qualify publishing opportunities; understanding and adjusting to different requirements; matching text to various audiences; developing striking visuals; and dealing with issues of clarity, coherence and style. This is a 7-week course and is not open to undergraduates.
Instructor(s): C. Grillo.

EN.663.645. Improving Presentation Skills for Scientists and Engineers. 1.50 Credits.
This course is designed to help scientists and engineers improve their oral presentation skills in a practice-intensive environment. Students will learn how to hone their message, to craft presentations that address both technical and non-technical audiences, and create clear, compelling PowerPoint presentations. All presentations will be recorded for self-evaluation, and students will receive extensive instructor and peer feedback. Graduate students only. This is a 7-week course and is not open to undergraduates.
Instructor(s): T. Mackesey.

EN.663.646. Improving Presentation and Interview Skills for Humanities Students. 1.50 Credits.
This course is designed to give Humanities students an opportunity to refine their lecturing and interviewing skills in a practice-intensive environment. Students will learn how to hone their message, to craft presentations that address both expert and non-expert audiences, and create clear, compelling PowerPoint presentations (if appropriate). All presentations will be recorded for self-evaluation, and students will receive extensive instructor and peer feedback. Graduate students only.
This is a 7-week course that begins halfway through the semester and is not open to undergraduates. Second 7 Weeks, Wednesday 4 – 6:30 pm.
Instructor(s): J. Reiser.

EN.663.647. Academic Writers’ Workshop. 1.50 Credits.
Do you struggle with writers’ block? Do you have trouble setting writing goals and sticking to them once the hustle and bustle of the semester begins? This module is for academic writers of all stripes and persuasions—dissertation students, creative writers, post-docs, and new faculty—who would like to work with other academic writers on setting writing goals, strategizing how to overcome individual obstacles that are impeding the writing process, and getting feedback on work in a positive, supportive atmosphere of non-specialists/non-experts. The module emphasizes productivity rather than critique. Suggested readings: How to Write a Lot by Daniel Silvia, The Now Habit by Neil Fiore.
Instructor(s): J. Reiser.

EN.663.648. Introduction to Dissertation Writing. 1.50 Credits.
This course is designed to help students in any discipline and in any phase of the dissertation process move their work forward. Whether you are a beginning student who has no idea what your topic is or an advanced student facing the submission process in a few months, you will be able to use this workshop to help you focus your efforts more effectively and find out best practices for doing dissertation writing here at JHU. Phd students only.
Instructor(s): H. Parker
Area: Engineering, Natural Sciences.

EN.663.649. Continuing Dissertation Writing Workshop. 1.50 Credits.
This workshop provides continuing dissertation writers with the structure of a traditional classroom environment to help facilitate work on the dissertation and to provide a framework of personal accountability in meeting personal writing goals. This course is only open to students who have taken EN.663.648 Introduction to Dissertation Writing. Graduate and Postdocs Only.
Prerequisites: EN.663.648 OR EN.661.710
Instructor(s): H. Parker
Area: Engineering, Natural Sciences.

EN.663.650. Finding a Job and Building Your Career. 1.50 Credits.
Finding a job often is hard work – a task that takes time, energy and skills. Moreover, advancing in your career requires planning and attention to issues and opportunities at work. This module is designed to assist you in sharpening skills required for your efforts in these regards. Among topics of concern are building a resume, writing letters of application, interviewing effectively, engaging a mentor, managing initial personal finance issues and adjusting to current trends in the workplace. Expect to produce a polished resume, an effective letter of application and a set of practiced interviewing skills and a personalized career development plan through the time period of the class. Graduate students only.
This is a 7-week course and is not open to undergraduates.
Instructor(s): R. Graham.

EN.663.651. The Entrepreneurial Cycle and Developing Effective Business Plans. 1.50 Credits.
So you have an idea for a business – now what? How do you convert your idea to a plan? What factors must you consider and how should you do that? How do you think about customers and competition? How much money do you need and where can you find it? How do you pitch your idea for maximum impact? Answers to these questions and more are the topics of concern for this module. Expect to build at least several sections of a business plan for your idea with the time period of the class.
Graduate students only.
Instructor(s): E. Rice.
EN.663.652. EQ vs. IQ: Achieving Emotional Intelligence and Understanding Diversity. 1.50 Credits.
We live in increasingly diverse society and an increasingly connected world. Times require new skills and awareness; “smarts” as defined by IQ is no longer sufficient for success. Instead, an understanding of other cultures, a willingness to explore the positions of various stakeholders in situations, the capacity and willingness to exercise empathy, and the ability to identify and work with the feelings of self and others are keys to successful participation in the workforce. This Module addresses these skills in theoretical and practical ways so as to expand the awareness and capacities of participants.
Instructor(s): I. Izenberg.

EN.663.654. Commercializing Your Invention or Idea. 1.50 Credits.
It is one thing to have an idea and quite another to move the idea from idea and basic research to use in the world of business or manufacturing. This course addresses the process and skills required to make that transition. Among the topics addressed in this class are the following: recognizing the potential of ideas, addressing the patent landscape, understanding markets, determining resource requirements, design and prototypes, and finding financing. Graduate and Post Doc Only.
Instructor(s): J. Reiter.

EN.663.655. Social Media Integration for Entrepreneurship. 1.50 Credits.
Graduate students only.

EN.663.656. Developing and Managing Websites. 1.50 Credits.
Explore how to develop and manage a website that supports an organization’s goals and objectives. This holistic approach to websites will include case studies, application-oriented exercises, and group assignments. Each student will develop a professional WordPress website, employing strategies for meeting organizational goals and customer needs, using best practices for engagement and design, and creating systems for successful management and revision. GRADING: P/F for most students; letter grades for MSEM students.
Instructor(s): R. Graham.

EN.663.657. EQ vs. IQ: Achieving Emotional Intelligence and Understanding Diversity. 1.50 Credits.

EN.663.658. Managing People and Resolving Conflicts. 1.50 Credits.
Have you ever had to deal with a difficult person at work or in the lab? Have you been a member of a team on which team dysfunction was so bad that it makes television sitcoms look normal? Why are some companies much more productive and pleasant to work with than others? Do you understand techniques of persuasion and how to participate effectively in negotiations? These topics are among the ideas we develop and practice in this class, using a combination of seminar style reading and discussion, lecture and in-class activity. Graduate students only.
Prerequisites: Students cannot have taken EN.663.663.
Instructor(s): E. Rice.
Area: Engineering, Natural Sciences.

EN.663.659. Searching the Academic Marketplace. 1.50 Credits.
The academic job search can be especially vexing, given the fewer graduates that actually enter that market as opposed to private industry. This class offers opportunities to generate search strategies and skills to help you find that academically based position. Among the topics you will explore are building your CV, interviewing, networking, and search listings.
Instructor(s): H. Parker.

EN.663.660. Marketing Communications. 1.50 Credits.
Marketing Communications This course, designed for students who have no previous instruction or experience in marketing, will introduce students to key marketing, communications, and strategic issues surrounding the process of bringing new products to the marketplace. Through cases, readings, discussion and hands-on team projects, students develop a flexible approach to thinking about marketing problems, maximizing resources and creating strategic solutions. Written and oral work focuses on communicating effectively with target audiences using integrated media and developing interpersonal skills essential for managers, including presenting to a hostile audience, running meetings, listening, and contributing to group decision-making. Grad students only.
Instructor(s): R. Graham.

EN.663.661. Searching the Academic Marketplace. 1.50 Credits.
Graduate and Post Doc Only.

EN.663.662. Understanding Diversity. 1.50 Credits.
We live in an increasingly diverse society and an increasingly connected world. Times require new skills and awareness; “smarts” as defined by IQ is no longer sufficient for success. Instead, an understanding of other cultures, a willingness to explore the positions of various stakeholders in situations, the capacity and willingness to exercise empathy, and the ability to identify and work with the feelings of self and others are keys to successful participation in the workforce. This Module addresses these skills in theoretical and practical ways so as to expand the awareness and capacities of participants.
Instructor(s): I. Izenberg.

EN.663.663. The People Side of Work: Management, Conflict Resolution and Negotiation. 1.50 Credits.
Graduate and Post Doc Only.
Instructor(s): E. Rice.

EN.663.664. Marketing Communications. 1.50 Credits.
Marketing Communications This course, designed for students who have no previous instruction or experience in marketing, will introduce students to key marketing, communications, and strategic issues surrounding the process of bringing new products to the marketplace. Through cases, readings, discussion and hands-on team projects, students develop a flexible approach to thinking about marketing problems, maximizing resources and creating strategic solutions. Written and oral work focuses on communicating effectively with target audiences using integrated media and developing interpersonal skills essential for managers, including presenting to a hostile audience, running meetings, listening, and contributing to group decision-making. Grad students only.
Instructor(s): R. Graham.

EN.663.665. Advanced Marketing Communications. 1.50 Credits.
This course, designed for students with previous marketing courses or experience, will explore key issues in marketing, communications and strategy, using hands-on team projects and other advanced activities. Students will develop will seek solutions to real-world problems, making marketing, communication and strategy decisions that maximize resources and create robust solutions for real-world clients, while enhancing their skills as managers who can oversee these processes. Instructor approval required. Grad students only.
Instructor(s): R. Graham.

EN.663.666. Managing Personal Finances. 1.50 Credits.
The class in Managing Personal Finance is designed to familiarize the student with the basic concepts and quantitative techniques of personal financial planning and financial literacy. The course begins on to the basic principles of financial planning in the areas of taxation, consumer credit, housing decisions, insurance, investing fundamentals and retirement planning. Graduate students only. No undergrads.
Instructor(s): A. Leps.

EN.663.667. Project Management. 1.50 Credits.
Projects are temporary activities devised to achieve very specific goals in a designated timeframe for a specified amount of resources. Often they involve disparate activities, frequently separated by distance and sometimes involving different staff and materials. For the project to successfully meet its objectives, all these items must be planned, coordinated and orchestrated. This module explores the processes and tools available to those who must manage projects to optimize outcomes within the primary constraints of time, quality, scope and budget. Class time involves presentations, examples and discussion.
Instructor(s): D. Tull.
**EN.663.671. Leading Change.** 1.50 Credits.
Change happens, like it or not! It is necessary for progress and the result of innovation, yet change makes individuals and organizations so uncomfortable that most people and groups within organizations vigorously resist change. So the questions become how to cause, how to embrace and how to lead constructive change in our selves, our organizations and our communities – in ways that colleagues and would-be colleagues support and contribute toward success. The primary format for learning in this course is seminar style with reading, researching and sharing of information as well as structured, experiential activities designed to build skills through practice and interpersonal exchange. Class time is devoted to discussion, observation, feedback, additional exercises and presentation. Additionally, participants engage in reflection and explanation of their considerations as the course progresses. GRADING: P/F for most students; letter grades for MSEM students. No undergraduates allowed except enrolled MSEM combined bachelor’s/master’s students.
Instructor(s): L. Foxwell.

**EN.663.672. Management and Technology Consulting.** 1.50 Credits.
Management consulting, an American innovation in organizational development, now has world-wide practice and effects. Almost every business sector – including private, governmental and NGO’s – employs consultants. Consultants must be able to effectively frame problems, understand their context, generate solutions, and protect the client and stakeholders, as well as work in a team environment and deliver a quality product. This class addresses the fundamental skills and expectations of working in this profession through a combination of lecture, discussion and exercise.
Instructor(s): A. Cocron; D. Long.

**EN.663.673. Leading Teams in Virtual, International and Local Settings.** 1.50 Credits.
Graduate and Postdocs Only.
Instructor(s): W. Smedick
Area: Engineering, Natural Sciences.

**EN.663.674. Fundamentals of Management.** 1.50 Credits.
Managers must juggle knowledge of and tasks associated with operations, finance, information technology, strategy, and projects. Much of managerial success, however, depends less on managers’ direct input – the sweat of their brows – than on their ability to enlist the active involvement of others: direct reports, other managers, other team members, and those above them on the organizational chart. It is imperative that managers be adept at influencing those over whom they have no formal authority as well as guiding and directing those who report to them. In this course, you will learn and practice the concepts and skills necessary to manage, direct, and guide others as well as content associated with building strategy and structure in organizations.
Instructor(s): I. Izenberg.

**EN.663.675. Communicating in a Crisis.** 1.50 Credits.
A crisis is a major occurrence with potentially negative consequences. In Chinese, the word “crisis” means “dangerous opportunity,” signifying that an individual or an organization can emerge stronger from a crisis – not without damage but stronger – with the right management and communication deployed effectively to the right audiences in the right channel. In this course, we will explore what managing a crisis well actually means. Who do you need to communicate with? What channels are appropriate? What messaging works for different audiences? Using the case method, live simulations, and real-world examples we will distinguish the factors that create opportunities from crises from those that deepen the danger.
Instructor(s): L. Foxwell.

**Cross Listed Courses**

**Entrepreneurship and Management**

**EN.660.101. Writing a Business Plan.** 1.00 Credit.
This one credit, four session course offered as preparation for the JHU Business Plan Competition, will cover the fundamentals of creating and delivering a business plan for a new venture. Topics to include: organizing the business plan, market analysis, competitive analysis, financial projections, strategies to meet the expectations of varied investors, identification of necessary resources and developing and delivering a persuasive, well-articulated pitch. No audits.
Instructor(s): A. Leps; J. Reiser; L. Aronhime; P. Sheff.

**EN.660.103. The Promise and Peril of Microfinance.** 1.00 Credit.
Microcredit, microlending and microfinance are relatively new tools, potentially useful to help alleviate poverty, contribute to local economies, earn a living and make profit. The promise and publicity has generated practices, experiments and businesses worldwide; microcredit even generated a Nobel Prize for Muhammad Yunus and the Grameen Bank in 2006. So too, the spread of the concept has produced excesses and controversy and more recently, scholarship in the practices and ideas. In this course we will explore the theory, practice and possibilities of the ideas with emphasis on both the developing world and western economies. The course uses lecture, discussion, case study and community investigation to explore the content. No audits.
Instructor(s): E. Rice.

**EN.660.105. Introduction to Business.** 4.00 Credits.
This course is designed as an introduction to the terms, concepts, and values of business and management. The course comprises three broad categories: the economic, financial, and corporate context of business activities; the organization and management of business enterprises; and, the marketing and production of goods and services. Topic specific readings, short case studies and financial exercises all focus on the bases for managerial decisions as well as the long and short-term implications of those decisions in a global environment. No audits.
Instructor(s): I. Izenberg; L. Aronhime; M. Furst
Area: Social and Behavioral Sciences
Writing Intensive.

**EN.660.203. Financial Accounting.** 3.00 Credits.
The course in Financial Accounting is designed for anyone who could be called upon to analyze and/or communicate financial results and/or make effective financial decisions in a for-profit business setting. No prior accounting knowledge or skill is required for successful completion of this course. Because accounting is described as the language of business, this course emphasizes the vocabulary, methods, and processes by which all business transactions are communicated. The accounting cycle, basic business transactions, internal controls, and preparation and understanding of financial statements including balance sheets, statements of income and cash flows are covered. No audits.
Instructor(s): A. Leps; L. Aronhime; S. Furlong.

---

**Instructor(s): I. Izenberg.**
EN.660.250. Principles of Marketing. 3.00 Credits.
This course explores the role of marketing in society and within the organization. It examines the process of developing, pricing, promoting and distributing products to consumer and business markets and shows how marketing managers use the elements of the marketing mix to gain a competitive advantage. Through interactive, application-oriented exercises, case videotapes, a guest speaker (local marketer), and a group project, students will have ample opportunity to observe key marketing concepts in action. The group project requires each team to research the marketing plan for an existing product of its choice. Teams will analyze what is currently being done by the organization, choose one of the strategic growth alternatives studied, and recommend why this alternative should be adopted. The recommendations will include how the current marketing plan will need to be modified in order to implement this strategy and will be presented to the instructor in written form and presented to the class. No audits.
Instructor(s): D. Sullivan; L. Kendrick; M. DeVries; M. Furst; S. Conley.

EN.660.300. Managerial Finance. 3.00 Credits.
This course is designed to familiarize the student with the basic concepts and techniques of financial management practice. The course begins with a review of accounting, securities markets, and the finance function. The course then moves to discussion of financial planning, financial statement analysis, time value of money, interest rates and bond valuation, stock valuation, and concludes with capital budgeting and project analysis. A combination of classroom discussions, problem sets, and case studies will be used. No audits.
Prerequisites: EN.660.203
Instructor(s): M. Priolo.

EN.660.303. Managerial Accounting. 3.00 Credits.
This course introduces management accounting concepts and objectives including planning, control, and the analysis of sales, expenses, and profits. Major topics include cost behavior, cost allocation, product costing (including activity based costing), standard costing and variance analysis, relevant costs, operational and capital budgeting, and performance measurement. Note: not open to students who have taken EN.660.204 Managerial Accounting. No audits.
Prerequisites: EN.660.203
Instructor(s): A. Leps.

EN.660.308. Business Law I. 3.00 Credits.
This course is designed to provide students an introduction to legal reasoning and analysis. Content distinguishes forms of business, civil versus criminal law, and agency principles; intellectual property concepts, contract Law, the UCC (Uniform Commercial Code) and consumer protection are explored and discussed in the context of assigned legal cases which are intended to develop a student’s ability to analyze and apply law. Note: not open to students who have taken 660.205 Business Law I. No audits.
Prerequisites: EN.660.105
Instructor(s): C. Jeffers; D. Fisher; L. Monti; W. Rakes
Area: Social and Behavioral Sciences.

EN.660.310. Case Studies in Business Ethics. 3.00 Credits.
This course is designed as a workshop using case studies to introduce students to the ethical concepts that are relevant to resolve moral issues in contemporary business and social settings—both global and personal in nature. Students will learn the reasoning and analytical skills needed to apply ethical concepts to their own decision-making, to identify moral issues involved in the management of specific problem areas in business and society, and to understand the social and natural environments which give rise to moral issues. The course focus is on performance articulated by clear reasoning and effective verbal and written communication concerning ethical issues in business and society. Not open to students who have taken EN.660.231 Case Studies in Business Ethics. No audits.
Prerequisites: EN.660.105
Instructor(s): I. Izenberg; M. Franceschini
Area: Humanities.

EN.660.311. Law and the Internet. 3.00 Credits.
Sometimes called “Cyber law,” this course uses the case study method to examine some of the most significant and compelling legal aspects, issues, and concerns involved with operating a business enterprise in an Internet environment. Some of the issues likely to be covered include jurisdiction, resolution of online disputes, trademarks, copyright, licenses, privacy, defamation, obscenity, the application of traditional concepts of tort liability to an Internet context, computer crime, information security, taxation, international considerations, and an analysis of other recent litigation and/or statutes. Note: not open to students who have taken EN.660.306 Law and the Internet. No audits.
Prerequisites: EN.660.205 OR EN.660.308
Instructor(s): D. Sandhaus
Area: Social and Behavioral Sciences.

EN.660.321. Managing & Marketing Social Enterprises. 3.00 Credits.
This course focuses on preparing students to engage in and lead social enterprises as we explore the options for creating social value. Using a combination of lecture, case study and project work, we investigate both for-profit and non-profit models for creating social value with special emphasis on the non-profit community. Particular emphasis is placed on the management challenges of social enterprises such as creating and conveying their message, options for dealing with finances, relationships within communities, and methods for building constituencies. Additionally, we address critical issues such as measures of success, scale, replication and failure. The class requires contact with organizations in the community as well as one long weekend away from campus. Recommended Course Background: EN.660.105 or EN.660.333 or EN.660.220/EN.660.340. No audits.
Instructor(s): E. Rice
Writing Intensive.
EN.660.329. Social Entrepreneurship Theory and Practice. Community Based Learning. 3.00 Credits.
Learn the principles, values and skills necessary to lead and succeed in organizations that make a positive difference in today's world. The course is designed to help students identify and provide opportunities to enhance their leadership skills. A "Blueprint for Success" will provide the framework for students to cultivate their own ideas for new socially conscious entrepreneurial ventures. Students will hear from successful current leaders in the field of social entrepreneurship and be provided the opportunity to network with JHU alumni, faculty and staff who are working or volunteering in for-profit or non-profit entities through occupations that make a difference.
Instructor(s): W. Smedick
Area: Social and Behavioral Sciences
Writing Intensive.

EN.660.331. Leading Teams. 3.00 Credits.
This course will allow students to develop the analytical skills needed to effectively lead and work in teams. Students will learn tools and techniques for problem solving, decision-making, conflict resolution, task management, communications, and goal alignment in team settings. They will also learn how to measure team dynamics and performance, and assess methods for building and sustaining high-performance teams. Students will also explore their own leadership, personality and cognitive styles and learn how these may affect their performance in a team. The course will focus on team-based experiential projects and exercises as well as opportunities for students to provide feedback to one another. No Audits. Recommended Course Background: EN.660.332 or EN.660.333.
Instructor(s): W. Smedick.

EN.660.332. Leadership Theory. 3.00 Credits.
Students will be introduced to the history of Leadership Theory from the "Great Man" theory of born leaders to Transformational Leadership theory of non-positional learned leadership. Transformational Leadership theory postulates that leadership can be learned and enhanced. The course will explore the knowledge base and skills necessary to be an effective leader in a variety of settings. Students will assess their personal leadership qualities and develop a plan to enhance their leadership potential.
Instructor(s): M. Coghlan; W. Smedick
Area: Social and Behavioral Sciences
Writing Intensive.

EN.660.333. Leading Change. 3.00 Credits.
In this course, we will use a combination of presentation, discussion, experiential learning, research and self-reflection to investigate issues surrounding leadership and change in communities and the economy. While considering both for-profit and non-profit entities, we will pursue topics including understanding and using theories of change; finding competitive advantage and creating strategic plans; making decisions, even in uncertain times; valuing differences; employing leadership styles; giving and receiving feedback; understanding employee relations; creating performance measures; and developing organizational cultures; and using the dynamics of influence. Not open to students who have taken EN.660.235. No audits. Recommended Course Background: EN.660.105
Instructor(s): W. Smedick
Writing Intensive.

EN.660.335. Negotiation and Conflict Resolution. 3.00 Credits.
The focus of this class is the nature and practice of conflict resolution and negotiation within and between individuals and organizations. The primary format for learning in this class is structured experimental exercises designed to expose students to different aspects of negotiation and to build tangible skills through interpersonal exchange. While some class time is devoted to presentations on theories and approaches, the class method primarily relies on feedback from fellow classmates on their observations of negotiation situations and on personal reflections by students after each structured experience. Topics include conflict style, negotiation, and group conflict. No audits. Recommended Course Background: EN.660.105, an additional course in the Entrepreneurship and Management Program or in the social sciences.
Instructor(s): E. Rice.

EN.660.336. Community Engineering: Interdisciplinary Problem Solving. Community Based Learning. 3.00 Credits.
So many big and seemingly intractable problems inhibit progress and diminish quality of life especially in and around urban communities. Surely there are ways to begin to tackle some of these problems, if we approach them from a multi-disciplinary perspective. This course provides that opportunity as students, who work primarily in teams, apply theory and ingenuity to investigate problems, propose solutions or invent devices that address some of these problems. Class time is spent in lecture, discussion, and applied community projects to master content. Time will be spent participating on teams and working in community organizations in addition to class.
Instructor(s): E. Rice; P. Beilenson
Area: Social and Behavioral Sciences
Writing Intensive.

EN.660.340. Principles of Management. 3.00 Credits.
This course introduces the student to the management process. The course takes an integrated approach to management by examining the role of the manager from a traditional and contemporary perspective while applying decision-making and critical-thinking skills to the challenges facing managers in today's globally diverse environment. The course examines the techniques for controlling, planning, organizing resources and leading the workforce. Not open to students who have taken EN.660.220 Principles of Management. No audits.
Prerequisites: EN.660.105
Instructor(s): I. Izenberg.

EN.660.341. Business Process and Quality Management. 3.00 Credits.
This course focuses on both quantitative and qualitative analytical skills and models essential to operations process design, management, and improvement in both service and manufacturing oriented companies. The objective of the course is to prepare the student to play a significant role in the management of a world-class company which serves satisfied customers through empowered employees, leading to increased revenues and decreased costs. The material combines managerial issues with both technical and quantitative aspects. Practical applications to business organizations are emphasized. Recommended Course Background: EN.660.105 Introduction to Business or EN.660.241 IT Management. No audits
Instructor(s): J. Reiter
Writing Intensive.
EN.660.351. Product and Brand Management. 3.00 Credits.
Consumers love those little bits of crunchy orange goodness called Cheetos®. But when Frito-Lay decided that consumers might also like Cheetos®-flavored lip balm, they reacted with a hailstorm of derision. This may be proof that our free market economy is just a rudderless, if hilarious, contraption. More likely, Cheetos® Lip Balm was an example of the challenges marketers face in product and brand management. This course is a conceptual and practical exploration of how marketers deliver products and build brands that translate into competitive advantage for their companies. Among the critical concepts typically addressed in the course are developing and positioning a brand, assembling the marketing mix media into a whole, establishing price, creating packaging, and tracking the customer experience. The course uses readings, lecture, exercises, cases and examples to explore these concepts. No audits.
Prerequisites: EN.660.250
Instructor(s): D. Crane.

EN.660.352. New Product Development. 3.00 Credits.
New product development is the ultimate interdisciplinary entrepreneurial art, combining marketing, technical, and managerial skills. A successful product lies at the intersection of the user’s need, a technical solution, and compelling execution. This class will bootstrap your experience in the art through exercises and team projects. We will examine products and services, consumer and industrial, simple and technologically complex. Case studies will feature primary sources and the instructor’s personal experiences as an inventor for a major consumer products company. Topics will span the product development cycle: identifying user needs, cool-hunting, brainstorming, industrial design, prototyping techniques, market research to validate new ideas, and project management – especially for managing virtual teams and foreign manufacturers. No audits.
Prerequisites: EN.660.250
Instructor(s): M. Agronin.

EN.660.354. Consumer Behavior. 3.00 Credits.
This course will explore how and why consumers make choices in the marketplace—the "buy-ology" of their behavior. We will learn the psychological, social, anthropological, and economic underpinnings of consumer behavior as well as the brain chemistry that affects choices in the marketplace. Students will learn how consumer behavior can and is influenced and the sometimes-unintended consequences of marketing campaigns designed to produce a particular behavior. Students will analyze how consumers solve problems, assess tradeoffs and make choices; how they integrate and react to retail surroundings, smells, product displays, brand, pricing strategies, social pressures, market structures and a myriad of other influences and motivations to buy. Students will also explore how marketers incorporate what is known about consumer behavior into advertising and promotional campaigns, market segmentation and positioning, pricing strategies and new product introductions. Student experiential project.
Instructor(s): R. Graham.

EN.660.355. Sports Marketing. 3.00 Credits.
This course will allow students to apply marketing principles and concepts to the sports marketing environment while gaining an understanding of how event sponsorships, endorsements, licensing and naming rights are used to achieve business objectives. Through case studies and a group project, students will be exposed to a broad range of sports entities including professional sports teams, governing organizations and sports media.
Prerequisites: EN.660.250 Principles of Marketing
Instructor(s): L. Kendrick.

EN.660.357. Copywriting and Creative Strategy. 3.00 Credits.
Uncover the process of creative thinking for innovation and conceiving big ideas in marketing. Students will be exposed to creative theory and practice as they select a consumer product and determine strategic market positioning, target demographics, media vehicles and creative guidelines. Then students will learn the craft of advertising copywriting for print, broadcast and digital media as they develop finished creative executions for the chosen organization that all build to a complete integrated marketing campaign. No audits.
Instructor(s): M. Kennedy
Writing Intensive.

EN.660.358. International Marketing. 3.00 Credits.
This course covers product, pricing, promotion, distribution, market research, organization and implementation and control policies relating to international marketing. It also explores the economic, cultural, political and legal aspects of international marketing. Through interactive and application-oriented assignments and cases, students will gain hands-on experience in analyzing and developing marketing strategies for organizations that market both consumer and business products/ services internationally. A group project will involve the development of an international marketing plan for a specific product. One or more local international marketers will be invited to speak to the class. No audits.
Prerequisites: EN.660.250
Instructor(s): M. Furst.

EN.660.359. Engineering Business and Management. 3.00 Credits.
An introduction to the business and management aspects of the engineering profession, project management, prioritization of resource allocation, intellectual property protection, management of technical projects, and product/production management. Preference will be given to Mechanical Engineering students. No audits. Recommended Course Background: EN.660.105
Instructor(s): Staff
Area: Engineering, Natural Sciences.

EN.660.361. Leadership & Management in Materials Science and Engineering. 3.00 Credits.
In this course, you will learn about leadership, social responsibility, strategy, finance, project management and people management specifically in the materials science and engineering fields. You will practice writing concise persuasive analyses and action plans and verbally defending your ideas. You will learn the ethical guidelines for the materials science profession, to resolve team conflicts and co-lead self-managed work teams, and determine how materials science supports society’s sustainability goals and the social responsibilities of materials scientists. Our class time will feel like a business meeting, and we will refer to class periods as meetings. When you complete this course, you will be prepared to be a working professional. Your Teaching Team looks forward to seeing you develop into a career engineer, scientist, manager, entrepreneur, professor or other professional over the years.
Instructor(s): I. Izenberg
Area: Engineering, Natural Sciences.
EN.660.401. Advanced Corporate Finance. 3.00 Credits.
The advanced course in corporate finance is designed to provide the upper level business student with a background in the more complex applications of financial management practice. Students will be exposed to advanced financial management concepts through a pedagogy combining classroom instruction, problem solution, business case analysis and work on a group project with coverage of the topics of capital markets, risk and portfolio theory, cost of capital, raising capital, capital structure, corporate dividend policy, real property valuation, merger and acquisition analysis, working capital management, commercial leasing strategies, international finance and derivatives analysis. No audits.
Prerequisites: EN.660.205 Business Law I
Area: Social and Behavioral Sciences.

EN.660.404. Business Law II. 3.00 Credits.
Building on the material from Business Law I, topics examined include entrepreneurship, business entities and business formation, principles of agency, real property, personal property, bailments, bankruptcy, secured transactions, employment discrimination, business financing, investor protection, antitrust and environmental law. No audits.
Prerequisites: EN.660.205 OR EN.660.308
Instructor(s): D. Fisher
Area: Social and Behavioral Sciences.

EN.660.405. Intellectual Property Law. 3.00 Credits.
This course explores the acquisition, protection and commercialization of intellectual property, such as patents, trademarks, copyrights and trade secrets, and its impact on businesses and organizations. The course addresses critical issues such as the various types of intellectual property, the protection and commercialization of intellectual property by business and legal means, and the valuation of intellectual property. In addition, the tension between exclusive rights in intellectual property and free competition will be discussed throughout this course. Through interactive class discussions and a group project, students will have ample opportunity to develop a better understanding pertaining to the different types of intellectual property and to develop an intellectual property strategic plan for protecting an intellectual property portfolio. Specifically, the group project requires each team to research a selected Maryland based company's intellectual property, its plan for protection and commercialization and its business goals, products and services. Each team will then analyze how well the company's current business goals relate to its intellectual property portfolio, and recommend changes to better meet these company's goals. Not open to students who have taken EN.660.305 Intellectual Property Law. No audits.
Prerequisites: EN.660.205 Business Law I
Area: Social and Behavioral Sciences.

EN.660.410. Computer Science Innovation and Entrepreneurship. 3.00 Credits.
This course is designed to give students in CS the requisite skills to generate and screen ideas for new venture creation and then prepare a business plan for an innovative technology of their own design. These skills include the ability to incorporate into a formal business case all necessary requirements, including needs identification and validation; business and financial models; and, market strategies and plans. Student teams will present the business plan to an outside panel made up of practitioners, industry representatives, and venture capitalists. In addition, this course functions as the first half of a two course sequence, the second of which will be directed by CS faculty and focus on the actual construction/programming of the business idea. Restricted to Juniors and Seniors majoring in Computer Science or by permission of instructor.
Prerequisites: Co-requisite: EN.660.321 OR EN.660.421;EN.660.226 AND EN.660.120
Instructor(s): L. Aronhime.

EN.660.414. Financial Statement Analysis. 3.00 Credits.
This course is designed to increase a student's ability to read and interpret financial statements and related information under both GAAP and IFRS (International Financial Reporting Standards). In addition to a review of the basic financial statements and accounting principles, the course will use industry and ratio analysis in addition to benchmarking and modeling techniques to encourage students to think in a more creative way when analyzing historic information or when forecasting financial statements. Students will assess firm profitability and risk, value assets and use spreadsheet models for financial forecasting and decision making. Not open to students who have taken EN.660.304 Financial Statement Analysis. No audits.
Prerequisites: EN.660.203
Instructor(s): A. Leps.

EN.660.420. Marketing Strategy. 3.00 Credits.
This writing intensive course helps students develop skills in formulating, implementing, and controlling a strategic marketing program for a given product-market entry. Using a structured approach to case analysis, students will learn how to make the kinds of strategic marketing decisions that will have a long-term impact on the organization and support these decisions with quantitative analyses. Through textbook readings, students will learn how to identify appropriate marketing strategies for new, growth, mature, and declining markets and apply these strategies as they analyze a series of marketing cases. The supplementary readings, from a broad spectrum of periodicals, are more applied and will allow students to see how firms are addressing contemporary marketing challenges. In addition to analyzing cases individually, each student will be part of a team that studies a case during the latter half of the semester, developing marketing strategy recommendations, including financial projections, and presenting them to the class. No audits.
Prerequisites: Prereq: EN.660.250
Instructor(s): L. Kendrick
Writing Intensive.
EN.660.450. Advertising & Integrated Marketing Communication. 3.00 Credits.
This course builds on the promotional mix concepts covered in Principles of Marketing (EN.660.250)—advertising, public relations, sales promotion and personal selling. Students will learn how marketers are changing the ways they communicate with consumers and the ways in which promotional budgets are allocated—and how this impacts the development of marketing strategies and tactics. Working with a client (provided by EdVenture Partners) that has chosen this JHU class as its “advertising agency” and an actual budget provided by the firm, the class will form small teams to mirror the functional organization of an actual ad agency (market research, media strategy/planning, copywriting/design, public relations, etc.). Student teams will then develop a promotional plan and corresponding budget to reach the desired target market (JHU undergrads who meet the client’s criteria), implement the plan and then evaluate its effectiveness through pre- and post campaign market research conducted on the target consumer. Note: Not open to students who have taken EN.660.450 as Advertising and Promotion. No audits. (Formerly Advertising and Promotion.)
Prerequisites: EN.660.250
Instructor(s): L. Kendrick.

EN.660.453. Social Media and Marketing. 3.00 Credits.
This course explores strategies for monitoring and engaging consumers in digital media. Students will gain practical knowledge about developing, implementing and measuring social media marketing campaigns. They will learn how to analyze what consumers are saying and connect with them by leveraging word of mouth, viral and buzz marketing through sites like Facebook, Twitter and YouTube. A series of assignments build upon each other toward a final social media marketing plan for a selected consumer product or service. Co-listed with EN.661.453.
Prerequisites: EN.660.250
Instructor(s): D. Mahoney.

EN.660.456. Marketing Communication Law & Ethics. 3.00 Credits.
This course focuses on the legal and ethical constraints of advertising and promotion marketing practice. Federal laws, media standards and professional ethics establish what can or cannot be said or done in marketing. Beyond that corporate and personal social responsibility must also be considered. Topics such as deception, copyright, publicity, comparative advertising and social media standards will be covered. Students will apply concepts to current practical examples and delve more deeply into subjects through a series of writing assignments. Co-listed with EN.661.456. No audits. Recommended Course Background: one writing course in any discipline (professional communication, expository writing, or writing seminars).
Instructor(s): K. Quesenberry
Writing Intensive.

EN.660.460. Entrepreneurship. 3.00 Credits.
This course provides students with a solid introduction to the entrepreneurial process of creating new businesses. Students will gain an appreciation for the investors’ perspective in assessing opportunities, evaluating strategies, and valuing the new enterprise. The course will cover the principal components of building a successful venture including management, market analysis, intellectual property protection, legal and regulatory issues, operations, entrepreneurial financing, and the role of the capital markets. Course work will include case studies and creation of investor marketing materials. Open to Juniors and Seniors. No Audits. Recommended Course Background: EN.660.203
Prerequisites: EN.660.105 OR EN.660.250
Instructor(s): E. Rice.

EN.660.461. Engineering Business and Management. 3.00 Credits.
An introduction to the business and management aspects of the engineering profession, project management, prioritization of resource allocation, intellectual property protection, management of technical projects, and product/production management. Preference will be given to Mechanical Engineering students. No audits. Recommended Course Background: EN.660.105
Instructor(s): I. Izenberg; M. Agronin
Area: Engineering.

EN.660.500. Business Internship. 1.00 Credit.
Students may qualify for an internship with one of the many local employers with whom CLE works or they may arrange a non-local internship on their own. For non-paid internships only, students may apply for sponsorship for academic credit through CLE. Applications must include a resume, transcript and written essay and will be evaluated on the basis of work experience, GPA, writing sample, and course work. Students are expected to complete two reports assigned by the internship coordinator. S/U only.
Instructor(s): L. Kendrick.

EN.660.501. Practicum In Entrepreneurship and Management. 3.00 Credits.
Students work on an existing business or marketing plan/case project under the close supervision of an Entrepreneurship and Management faculty member. Students must apply by submitting a cover letter, resume, unofficial transcript, and essay describing the business concept/marketing plan. Applications must be approved by both the faculty member and director of CLE. Students are expected to meet regularly with the faculty member and complete assigned readings and projects. Permission required. S/U only.
Instructor(s): L. Aronhime.

EN.660.567. Leadership Theory Independent Study. 3.00 Credits.
Students will be introduced to the history of Leadership Theory from the Great Man theory of born leaders to Transformational Leadership theory of non-positional learned leadership. Transformational Leadership theory postulates that leadership can be learned and enhanced. The course will explore the knowledge base and skills necessary to be an effective leader in a variety of settings. Students will assess their personal leadership qualities and develop a plan to enhance their leadership potential. Recommended Course Background: EN.660.105 or EN.660.220/EN.660.340. No audits.
Instructor(s): W. Smedick.

Professional Communication

EN.661.110. Professional Writing and Communication. 3.00 Credits.
This course teaches students to communicate effectively with a wide variety of specialize and non-specialized audiences. Projects include production of resumes, cover letters, proposals, instructions, reports, and other relevant documents. Class emphasizes writing clearly and persuasively, creating appropriate visuals, developing oral presentation skills, working in collaborative groups, giving and receiving feedback, and simulating the real world environment in which most communication occurs. Not open to students who have taken EN.661.110 as Technical Communication or Professional Communication for Science, Business and Industry or EN.661.120 Business Communication. No audits.
Prerequisites: Not open to students who have taken EN.661.110 as Technical Communication or Business and Industry or EN.661.120 Business Communication.
Instructor(s): Staff
Writing Intensive.
EN.661.111. Professional Writing and Communication for International Students. 3.00 Credits.
This course teaches ESL students to communicate effectively with a wide variety of specialized and non-specialized audiences and will provide ESL-specific help with grammar, pronunciation, and idiomatic expression in these different contexts. Projects include production of resumes, cover letters, proposals, instructions, reports, and other relevant documents. Class emphasizes writing clearly and persuasively, creating appropriate visuals, developing oral presentation skills, working in collaborative groups, giving and receiving feedback, and simulating the real world environment in which most communication occurs. Note: not open to students who have taken EN.661.110 as Technical Communication or Professional Communication for Science, Business, and Industry or EN.661.120 Business Communication. No audits.
Prerequisites: Not open to students who have taken EN.661.110 as Technical Communication or Professional Communication for Science, Business, and Industry or EN.661.120 Business Communication.
Instructor(s): L. Davis
Writing Intensive.

EN.661.128. Improv for Scientists and Engineers. 3.00 Credits.
From terror that strikes in the face of public speaking to self-doubt after an impromptu conversation, we've all had moments when we wished to be more confident communicators. Following the lead of innovative communities and businesses, this class turns to improvisation techniques to develop communication skills, encourage creative problem solving, and support teamwork. Designed for students without any acting experience, there are no prerequisites to participate. In a non-threatening, judgment-free atmosphere we begin with improv fundamentals to help students master the subtleties of communication through voice, expression, and body language. As students experiment with imaginative movement and play, they learn to respond spontaneously and confidently to unforeseen challenges. Working together in pairs and small groups, students build trust and operate as fluid and dynamic team members. Throughout the course students build skills to minimize stress, overcome rejection, find comfort in fear, unleash creativity, and trust in their ability to communicate effectively.
Instructor(s): Staff

EN.661.150. Oral Presentations. 3.00 Credits.
This course is designed to help students push through any anxieties about public speaking by immersing them in a practice-intensive environment. They learn how to speak with confidence in a variety of formats and venues - including extemporaneous speaking, job interviewing, leading a discussion, presenting a technical speech, and other relevant scenarios. Students learn how to develop effective slides that capture the main point with ease and clarity, hone their message, improve their delivery skills, and write thought-provoking, well-organized speeches that hold an audience's attention. No audits.
Instructor(s): J. Reiser; L. Davis
Writing Intensive.

EN.661.160. Online Media and Society. 3.00 Credits.
This online course takes a comprehensive and critical view of the history, roles and responsibilities of media in society. It explores the organization, creation, economics, control and effects of mass communications in the United States and the world. Students will learn how both traditional and new digital media has come to play such an integral role in our society while exploring the exciting career opportunities in journalism, public relations, advertising, radio, film, TV and the Internet. Students will apply concepts to current practical examples through a course blog and delve more deeply into subjects through writing assignments. No on-campus components required. No audits.
Instructor(s): K. Quesenberry.

EN.661.250. Oral Presentations. 3.00 Credits.
This course is designed to help students push through any anxieties about public speaking by immersing them in a practice-intensive environment. They learn how to speak with confidence in a variety of formats and venues - including extemporaneous speaking, job interviewing, leading a discussion, presenting a technical speech, and other relevant scenarios. Students learn how to develop effective slides that capture the main point with ease and clarity, hone their message, improve their delivery skills, and write thought-provoking, well-organized speeches that hold an audience's attention. No audits. Not open to students that have taken EN.661.150.
Prerequisites: Not open to students who have taken EN.661.150.
Instructor(s): Staff
Writing Intensive.

EN.661.251. Oral Presentations for International Students. 3.00 Credits.
This course is designed to help students push through any anxieties about public speaking by immersing them in a practice-intensive environment. They learn how to speak with confidence in a variety of formats and venues - including extemporaneous speaking, job interviewing, leading a discussion, presenting a technical speech, and other relevant scenarios. Students learn how to develop effective slides that capture the main point with ease and clarity, hone their message, improve their delivery skills, and write thought-provoking, well-organized speeches that hold an audience's attention. Special attention will be placed on diction, pronunciation, tone, pace and emphasis of language. Additional attention also will be given to syntax as well as non-verbal communication patterns. No audits. Not open to students that have taken EN.661.151
Prerequisites: Not open to students that have taken EN.661.151.
Instructor(s): L. Davis
Writing Intensive.

EN.661.301. Writing for the Law. 3.00 Credits.
This course teaches students to communicate effectively in various modes of legal discourse that are fundamental to the practice of law. Students will engage in writing nearly every session and will learn the basics of legal writing, editing (both the student's and others' work), and written/oral advocacy skills. Students can expect to work with litigation-related documents such as pleadings, preliminary and dispositive motions, and appellate briefs as well as non-litigation-related documents such as opinion articles, publications, essays, and various business-related contracts.
Instructor(s): D. Sandhaus; M. Franceschini
Writing Intensive.
EN.661.306. Special Topics in Professional Writing: Freelance Travel Writing. 3.00 Credits.
In this course, students will learn the fundamentals of magazine and travel writing as well as best practices for working as a freelance writer. After gaining familiarity with the genre by reading several “classics” of travel writing and a selection of exemplary magazine articles, students will learn how to brainstorm ideas, plan research, interview skillfully, and write/revise/submit work for publication. Students will also have the opportunity to meet with important executives from travel magazines and publishing houses. We will use Washington, DC, and Baltimore as the basis for most of our work, but the course might also include day trips to Philadelphia and New York. At the end of the course, students will create an ePortfolio to showcase their articles, profiles, reviews, trade placements, blog entries, and pitches/queries to potential editors. Recommended: one prior course in writing but may be waived with instructor’s permission.
Instructor(s): E. Rice; P. Sheff; R. Graham
Area: Social and Behavioral Sciences
Writing Intensive.

EN.661.315. Culture of the Engineering Profession. 3.00 Credits.
This course focuses on building understanding of the culture of engineering while preparing students to communicate effectively with the various audiences with whom engineers interact. Working from a base of contemporary science writing (monographs, non-fiction, popular literature and fiction), students will engage in discussion, argument, case study and project work to investigate: the engineering culture and challenges to that culture, the impacts of engineering solutions on society, the ethical guidelines for the profession, and the ways engineering information is conveyed to the range of audiences for whom the information is critical. Additionally, students will master many of the techniques critical to successful communication within the engineering culture through a series of short papers and presentations associated with analysis of the writings and cases. No audits. WSE juniors and seniors or by instructor approval.
Instructor(s): E. Rice; P. Sheff; R. Graham
Area: Social and Behavioral Sciences
Writing Intensive.

EN.661.317. Culture of the Medical Profession. 3.00 Credits.
This course builds understanding of the culture of medicine as well as the ways in which different strata within society have access to and tend to make decisions about health and health related services while preparing students to communicate effectively with the various audiences with whom medical professionals interact. Working from a base of contemporary science writing (monographs, non-fiction, popular literature and fiction), students engage in discussion, argument, case study and project work to investigate topics such as the medical culture, the ways medicine is viewed by different segments of society, issues associated with access to health care, ethical dilemmas and guidelines for medical decisions, the impacts of medical and engineering solutions on society, decision making within client/patient groups, social and cultural differences that effect behavioral change, and the ways medical information is conveyed to the range of audiences for whom the information is critical. Additionally, students will master many of the techniques critical to successful communication through a series of short papers and presentations associated with analysis of the writings and cases. For sophomores, juniors, and seniors or by permission of instructor. No audits.
Instructor(s): J. Bernstein
Area: Social and Behavioral Sciences
Writing Intensive.

EN.661.355. Special Topics in Professional Writing: Blogging about Food and Culture. 3.00 Credits.
Explore Baltimore’s thriving food and restaurant scene while learning the art of criticism and best practices for blogging. In this journalism class taught by former New York Times Magazine editor Sarah Smith, students will study the work of some of the best writers in the field, from Laurie Colwin to Pete Wells, and using that work as a guide, write their own essays, reviews and features, which the class will discuss in a workshop setting. Instructor will include the basics of reporting and research; differences in writing for print and online media; ethics and legal concerns; and practical advice for pitching editors and setting up blogs. Recommended Course Background: At least one previous writing course.
Instructor(s): S. Smith
Writing Intensive.

EN.661.357. Copywriting & Creative Strategy. 3.00 Credits.
Uncover the process of creative thinking for innovation and conceiving big ideas in marketing. Students will be exposed to creative theory and practice as they select a consumer product and determine strategic market positioning, target demographics, media vehicles and creative guidelines. Then students will learn the craft of advertising copywriting for print, broadcast and digital media as they develop finished creative executions for the chosen organization that all build to a complete integrated marketing campaign. Co-listed with EN.660.357. No audits.
Prerequisites: EN.660.250 Principles of Marketing
Instructor(s): K. Quesenberry
Writing Intensive.

EN.661.361. Corporate Communications & P.R.. 3.00 Credits.
This course focuses on the ways that organizations, both for-profit and non-profit, manage their communications to deliver strategic, coherent and compelling messages to their varied stakeholders. Using case studies and team-based, real world projects, we will explore topics including public and media relations, corporate image, branding, advertising, internal and external communications, crisis management, investor relations, ethics and social responsibility. In the process, we will consider issues ranging from organizational culture and leadership styles to defining strategy, managing conflict, defending positions and disagreeing agreeably. No audits. Recommended Course Background: AS.220.105, EN.661.110, AS.060.113 or AS.060.114, AS.060.215, EN.660.250, EN.660.105, and EN.661.250
Instructor(s): P. Sheff
Writing Intensive.

EN.661.370. Visual Rhetoric. 3.00 Credits.
This course introduces students to basic concepts in visual communication. Students use principles of design thinking to produce projects that are both conceptually and visually compelling. Along the way, they learn design tools and techniques that help them refine their schemes. They also develop their vocabularies in visual communication so that they can better discuss their own work. Topics include: visual perception, composition/form, color theory, typography, photography, text, layers, grids and other systems of visual information architecture.
Instructor(s): C. O’Donnell.
EN.661.380. Business Analytics. 3.00 Credits.
In this course students learn the procedures and processes that researchers use to determine answers to questions such as how to price a product, how to differentiate one product from another, and how to evaluate customer response to an offering. The materials combine fundamentals of research design with statistics procedures to answer the questions that entrepreneurs and marketing managers must answer as they walk business plans, develop their product mix, set prices, create advertising and test products. The course combines case study, simulated situations, lecture, discussion and real-time projects to produce answers using the techniques, tools and procedures typically used in North American enterprises.
Instructor(s): A. Treiser; S. Ozdemir
Area: Quantitative and Mathematical Sciences.

EN.661.390. Catalyst: A Student-Run Magazine. 3.00 Credits.
Catalyst is a student-run magazine that focuses on research, technology, entrepreneurship and design. Students enrolled in this course will learn the fundamental principles of journalism through producing content for the online magazine. The class will cover basic journalistic writing and interviewing techniques. Students will get a primer on media law, newsroom ethics and procedure. As their skills progress, they will learn to pitch, write and edit a variety of stories types – from basic news stories, to profiles, features and reviews. All students will publish at least one piece of writing in the magazine at the end of the semester.
Instructor(s): C. O'Donnell
Writing Intensive.

EN.661.400. Practical Applications of Business Analytics. 3.00 Credits.
With higher transparency and increased sophistication in data collection, modern technology has become a central component in decision-making in all sectors of business. Unfortunately, most casual observers of critical data are ill-equipped to meaningfully analyze this new information. This course will provide students with an overview of best practices in the field coupled with real-world examples and case studies. Recommended Course Background: EN.661.203 Business Analytics or a statistics based course prior to this course.
Prerequisites: EN.661.380 OR EN.550.111
Instructor(s): J. Gorelick
Area: Quantitative and Mathematical Sciences.

EN.661.410. Research Writing for ESL. 3.00 Credits.
This course is designed to help ESL writers succeed in writing, editing, and completing a large research project specific to their discipline. This could be a research report, journal article, literature review, dissertation chapter, grant proposal, or other relevant document. The course provides intensive help with grammar, idiomatic phrasing, and overall clarity for writers whose native language is not English. The course includes both individual consultation and group workshops. Undergraduates must be conducting research with a faculty member or must obtain special permission of instructor to register for the course. S/U grading only (students may elect to take this course for a traditional letter grade if their departments require them to do so; students must inform the instructor by the second week of class). Co-listed with EN.661.610. No audits.
Instructor(s): D. Link-Farajali
Writing Intensive.

EN.661.425. Ethics of Biomedical Innovation. 3.00 Credits.
Engineers confront problems and make decisions that hold long term social consequences for individuals, organizations, communities and the profession. For biomedical engineers, these decisions may relate to: inventions such as medical devices and pharmaceuticals; neural prosthetics and synthetic biological organisms; responsible and sustainable design; availability of biotechnology in the developing world. Using a combination of cases, fieldwork and readings, we examine the ethical issues, standards, theory and consequences of recent and emerging engineering interventions as a way to understand the profession and to form a basis for future decisions. In addition students will learn and practice multiple forms of communication, including oral, visual and written rhetoric. A particular focus will be communication targeted to different stakeholders including other professionals and the public. Students will apply good communication principle to the discussion of biomedical engineering ethics, develop their own ethical case studies and participate in group projects to aid ethical decision-making, and to improve communication of complex biomedical ethical issues to others. Co-listed with EN.580.425.
Instructor(s): E. Logsdon; E. Rice; F. Macgabhann; Y. Yazdi
Area: Social and Behavioral Sciences
Writing Intensive.

EN.661.453. Social Media and Marketing. 3.00 Credits.
This course explores strategies for monitoring and engaging consumers in digital media. Students will gain practical knowledge about developing, implementing and measuring social media marketing campaigns. They will learn how to analyze what consumers are saying and connect with them by leveraging word of mouth, viral and buzz marketing through sites like Facebook, Twitter and YouTube. A series of assignments build upon each other toward a final social media marketing plan for a selected consumer product or service. Co-listed with EN.660.453. No audits.
Prerequisites: EN.660.250 Principles of Marketing; Students may receive credit for EN.661.453 or EN.660.453 but not both.
Instructor(s): K. Quesenberry
Writing Intensive.

EN.661.454. Blogging and Digital Copywriting. 3.00 Credits.
Learn how to develop, write and manage content for marketing communication on the Web and build an online presence through search engine optimization (SEO) and search engine marketing (SEM). Each student will create his/her own professional WordPress blog and gain knowledge on how to market it. They will also learn copywriting for various digital formats including Email marketing, website copy and social media while gaining an understanding of web analytics, conversion optimization, writing for keywords and mobile marketing. Recommended Course Background: one writing course in any discipline (professional communication, expository writing, or writing seminars). No audits.
Prerequisites: Prereq. EN.660.250-Principles of Marketing.
Instructor(s): K. Quesenberry
Writing Intensive.
EN.661.456. Marketing Communication Law & Ethics. 3.00 Credits.
This course focuses on the legal and ethical constraints of advertising and promotion marketing practice. Federal laws, media standards and professional ethics establish what can or cannot be said or done in marketing. Beyond that corporate and personal social responsibility must also be considered. Topics such as deception, copyright, publicity, comparative advertising and social media standards will be covered. Students will apply concepts to current practical examples through a course blog and delve more deeply into subjects through a series of writing assignments. Co-listed with EN.660.456. No audits. Recommended Course Background: one writing course in any discipline (professional communication, expository writing, or writing seminars).
Prerequisites: EN.660.250
Instructor(s): K. Quesenberry
Writing Intensive.

EN.661.487. Advanced Communication Skills for Science and Engineering. 3.00 Credits.
This course helps students build advanced communication skills that are critical for leveraging their academic experience in the real world. Course emphasizes reporting information, polishing CVs and resumes, presenting conference papers, participating in poster sessions, tailoring information to both specialist and non-specialist audiences, and writing grant proposals for funding. Undergraduates are required to be conducting research with a faculty member or by special permission of instructor. Co-listed with EN.661.687. No audits.
Instructor(s): J. Reiser
Writing Intensive.

EN.661.610. Research Writing for International Students. 3.00 Credits.
This course is designed to help ESL writers succeed in writing, editing, and completing a large research project specific to their discipline. This could be a research report, journal article, literature review, dissertation chapter, grant proposal, or other relevant document. The course provided intense help with grammar, idiomatic phrasing, and overall clarity for writers whose native language is not English. The course includes both individual consultation and group workshops. P/F grading only (students may elect to take this course for a traditional letter grade if their departments require them to do so; students must inform the instructor by the second week of class). No audits.
Instructor(s): D. Link-Farajali
Writing Intensive.

EN.661.611. Professional Communication for ESL. 3.00 Credits.
This course teaches ESL students to communicate effectively with a wide variety of specialized and non-specialized audiences and will provide ESL-specific help with grammar, pronunciation, and idiomatic expression in these different contexts. Projects include production of resumes, cover letters, proposals, instructions, reports, and other relevant documents. Class emphasizes writing clearly and persuasively, creating appropriate visuals, developing oral presentation skills, working in collaborative groups, giving and receiving feedback, and simulating the real world environment in which most communication occurs. Not open to students who have taken EN.661.110 as Technical Communication or Professional Communication for Science, Business, and Industry or EN.661.120 Business Communication. Co-listed with EN.661.411.
Instructor(s): L. Davis.

This course will prepare you to be competitive in the world of business by offering you some of the oral and written communication techniques you need to be successful. While working to enhance pronunciation, grammar, idiomatic expressions, and business vocabulary, you will work to speak comfortably in business social settings and meetings and to write effectively in a variety of modes not limited to e-mails, memoranda, resumes, and summary reports. The overall goal for all assignments is to speak and to write in clear, effective English. Moreover, improving oral and written communications will give you confidence, help you to make a good impression, and just maybe give you that “edge” you need to get the job you want or the project you desire once employed. Finally, individual pronunciation conferences will be scheduled with each of you throughout the semester. Financial Math students only. P/F only. No audits.
Instructor(s): D. Link-Farajali; L. Davis.

EN.661.613. Professional Writing and Communication for International Students: Financial Math. 1.50 Credits.
This course will prepare you to be competitive in the world of business by offering you some of the oral and written communication techniques you need to be successful. While working to enhance pronunciation, grammar, idiomatic expressions, and business vocabulary, you will work to speak comfortably in business social settings and meetings and to write effectively in a variety of modes not limited to e-mails, memoranda, resumes, and summary reports. The overall goal for all assignments is to speak and to write in clear, effective English. Moreover, improving oral and written communications will give you confidence, help you to make a good impression, and just maybe give you that “edge” you need to get the job you want or the project you desire once employed. Finally, individual pronunciation conferences will be scheduled with each of you throughout the semester. Financial Math students only. P/F only.
Instructor(s): D. Link-Farajali.

Engineering Management
EN.662.611. Strategies: Accounting & Finance. 3.00 Credits.
This course includes a review of financial accounting with an emphasis on the implications of GAAP selections and other managerial decisions on the financial statements. Historic financial performance is assessed using ratio analysis. Relevant cash flows are used in capital budgeting situations; projects are analyzed using discounted cash flow techniques as a measure of valuation. Managerial accounting topics of financial forecasting, cost accumulation, cost allocation, product costing, and variance analysis are used in decision making. For M.S. in Engineering Management only; graded (not P/F); no audits.
Instructor(s): A. Leps.

EN.662.620. Professional Presentations. 3.00 Credits.
This course is designed to help scientists and engineers improve their oral presentation skills in a practice-intensive environment. Students will learn how to hone their message, to craft presentations that address both technical and non-technical audiences, and create clear, compelling PowerPoint presentations. All presentations will be recorded for self-evaluation, and students will receive extensive instructor and peer feedback. MSEM students only. This is a 7-week course and is not open to undergraduates. Suggested readings: The Art of Explanation by Lee Lever, Presentation Zen by Garr Reynolds
Instructor(s): J. Reiser.
EN.662.650. Marketing Communications. 1.50 Credits.
Written and oral work focuses on communicating effectively with target audiences using integrated media and developing interpersonal skills essential for managers, including presenting to a hostile audience, running meetings, listening, and contributing to group decision-making.
MSEM students only, no undergrads.
Instructor(s): R. Graham.

EN.662.692. Strategies for Innovation & Growth. 3.00 Credits.
This course requires participants to work in groups to address, design and plan a business solution for an engineering problem with social implications. More specifically, students will work on cross-disciplinary teams to develop a commercially viable new technology. They must select a problem amenable to an engineering solution, investigate the problem, research the issues and potential, develop a design for the technology, investigate the competitive advantage, and create and present a business plan for the idea. Course content will address many of the issues that will be encountered during the process of bringing an idea to fruition. For M.S. in Engineering Management only; graded (not P/F); no audits.
Instructor(s): P. Sheff.

EN.662.802. Master of Science in Engineering Management Internship. 3.00 Credits.
MSEM Internship for 3 credits in the management portion of the MSEM program.
Instructor(s): W. Smedick.

EN.662.811. M.S. in Engineering Management Seminar. 1.00 Credit.
Professional development seminar for engineering management students featuring outside speakers with engineering management experience. For M.S. in Engineering Management only; P/F only; no audits.
Instructor(s): S. Ozdemir.

EN.662.812. M.S. in Engineering Management (MSEM) Seminar. 1.00 Credit.
Professional development seminar for engineering management students featuring outside speakers with engineering management experience. For M.S. in Engineering Management only; P/F only; no audits.
Instructor(s): P. Sheff.

Accounting & Financial Management

The Accounting & Financial Management program offers Johns Hopkins Arts & Sciences, Engineering, and Peabody students a focused, quantitative minor that will prepare them more effectively for careers in small companies, major corporations, and consultancies as well as acceptance into graduate programs in accountancy and business.

The objective of the Minor in Accounting and Financial Management is to enable students in all disciplines to complement their major fields of study with academic training that will help them prepare for and compete within this expanding marketplace. The minor is not only relevant for students who plan to seek employment but critical for those who plan to attend graduate programs in accounting and business immediately after graduation. The Accounting and Financial Management Minor will help the CLE’s graduates prepare for career opportunities in several fields that have high salaries and are predicted to grow substantially.

See the Undergraduate tab above for specific requirements for the minor.

To complete the Accounting & Financial Management minor, students must complete:

• Four core courses

Core Requirements:
All four courses are required.

<table>
<thead>
<tr>

Course and Grade Rules and Limitations:
The Accounting & Financial Management minor requires a minimum of 22 credits.

A maximum of 6 credits of courses taken from outside WSE and KSAS (including transfer course & study abroad) may be applied to the A&FM minor.
A maximum of 3 credits may be taken on an S/U basis, after freshman Fall semester.

All courses applied to the A&FM minor must be completed with a grade of C- or above.

**Master of Science in Engineering Management**

http://engineering.jhu.edu/msem/

The Master of Science in Engineering Management (MSEM) degree program combines advanced course work in highly-specialized technical fields with a professional education in contemporary business, entrepreneurship, and management practices. Graduates of the program will be provided with the educational background to pursue professional management roles in industry.

**Facilities**

The MSEM program has a dedicated seminar room housed in Whitehead 105. Students are able to study, conduct research and build prototypes within this space.

**Graduate Requirements**

*Please consult directly with the MSEM program director or MSEM academic advisor to confirm the below requirements; changes may have occurred since annual publication.*

Students in the MSEM program will take ten courses to fulfill degree requirements, with the following guidelines:

- Five advanced courses in the engineering/technical concentration
- 3 full-fall semester management courses, a full spring semester MSEM Seminar courses and 6 half-semester courses.
- No grade lower than C may be applied to the program
- Courses must be at the 400-level or higher
- Departments sponsoring technical concentrations may impose stricter requirements for course work within the concentration

At the discretion of the student’s advisors, an MSEM student may be permitted to double-count up to two JHU courses (one for the technical concentration and one for the management concentration) or apply undergraduate or graduate courses taken at JHU or elsewhere but not applied to a degree, in accordance with conditions in the WSE Policy on Double-Counting Courses.

**Advising**

MSEM students will receive advising on the engineering/technical concentration from a designated faculty member affiliated with that concentration. MSEM students will be advised regarding the management concentration by members of the Center for Leadership Education faculty.

**Faculty**

Faculty members teaching the technical concentration courses are listed in their respective engineering departments elsewhere in this catalog. Faculty members teaching the management concentration courses are listed in the Center for Leadership Education section of this catalog.

**Management Concentration**

The Center for Leadership Education has constructed a five-course program tailored to the needs of future engineering managers. MSEM students will participate in a cohort program, which begins each fall, where all students in an entering class will take the following five management courses together:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN.662.611</td>
<td>Strategies: Accounting &amp; Finance (fall)</td>
<td>3</td>

</tr>
<tr>
<td>EN.662.642</td>
<td>(spring)</td>
<td></td>
</tr>
<tr>
<td>EN.662.692</td>
<td>Strategies for Innovation &amp; Growth (fall)</td>
<td>3</td>
</tr>
<tr>
<td>EN.662.632</td>
<td>Business Law and Intellectual Property</td>
<td></td>
</tr>
</tbody>
</table>

In addition, all MSEM students are required to attend the MSEM Seminar (EN.662.811 M.S. in Engineering Management Seminar/EN.662.812 M.S. in Engineering Management (MSEM) Seminar) course while enrolled in the program. This will meet weekly and addresses three important content areas: Innovation and design thinking; personal skills and development especially in the communication arena; and talks with practicing engineering managers. The Engineering Management program reserves the right to change the list of eligible courses at its discretion.

**Internship Option**

MSEM Course # EN.662.802: Engineering Management Internship Assessment

This course involves the assessment of a student’s internship experience via a report and oral presentation. The questions and general format of the report and presentation will be provided by the instructor (http://memp.pratt.duke.edu/sites/memp.pratt.duke.edu/files/EGRMGMT_551_External.doc). The report and presentation will be evaluated by the instructor and both must be approved to obtain credit for this course. One full course counting toward graduation. Smedick (Summer semester)

**Technical Concentrations**

In addition to fulfilling the management concentration requirements, MSEM students must complete the requirements for one of fifteen technical concentrations. These are:

- Biomaterials
- Chemical & Biomolecular Engineering (pending finalized MHEC recognition- please contact Angela Ruddle for more information regarding concentration requirements and status)
- Civil Engineering
- Communications Science
- Computer Science
- Fluid Mechanics
- Materials Science and Engineering
- Mechanical Engineering
- Mechanics and Materials
- Nano-Biotechnology
- Nanomaterials and Nanotechnology
- Operations Research
- Probability and Statistics
- Smart Product and Device Design
- Environmental Systems Analysis, Economics and Public Policy
Biomaterials
(Sponsored by the Department of Materials Science & Engineering (p. 1015))

Prerequisites
• UG calculus, chemistry, biology, physics and introductory biomaterials course equivalent to EN.510.316 Biomaterials I

Required Courses (3)

<table>

</table>

Substitutions for required courses can be made at the advisor’s discretion.

Computer Science
(Sponsored by the Department of Computer Science (p. 935))

Curricular Requirements
• Any five regular graduate courses approved by the advisor, 400-level or higher, from the Department of Computer Science, not including the senior thesis. Three 1-credit graduate courses may be combined to constitute one regular graduate course.

Fluid Mechanics
(Sponsored by the Department of Mechanical Engineering (p. 1036))

Any five courses in Fluid Mechanics or closely related discipline, at the 400-level or higher, as approved by the Faculty advisor. At least two of the required technical courses must be at the 600-level or higher.

Materials Science & Engineering
(Sponsored by the Department of Materials Science & Engineering (p. 1015))

Prerequisites
• UG calculus, chemistry and physics; biology is recommended

Required Courses (1)

EN.510.608 Electrochemistry 3
EN.510.611 Solid State Physics 3
EN.510.612 Solid State Physics 3
EN.510.619 EN.510.624 X-Ray Scattering, Diffraction and Imaging 3
EN.510.657  Materials Science of Thin Films  3

Alternative selections can be made at the advisor’s discretion.

**Nanomaterials and Nanotechnology**

*(Sponsored by the Department of Materials Science & Engineering (p. 1015))*

**Prerequisites**
- UG calculus, chemistry, and physics

**Required Courses (2)**
- EN.510.422  Micro and Nano Structured Materials & Devices  3
- EN.670.619  Fundamental Physics and Chemistry of Nanomaterials  3

Substitutions for required courses can be made at the advisor’s discretion.

**Electives (3)**
- Electives should be related to Materials Science and Engineering and must be approved by the DMSE graduate committee
- See list of pre-approved elective courses or courses off list by petition

**Recommended Structure**

Total Credits: 6

**List of Pre-approved Electives**

| EN.510.400  Introduction to Ceramics | 3 |
| EN.510.403  Materials Characterization | 3 |
| EN.510.405  Materials Science of Energy Technologies | 3 |
| EN.510.422 Micro and Nano Structured Materials & Devices | 3 |
| EN.510.426 Biomolecular Materials I - Soluble Proteins and Amphiphiles | 3 |
| EN.510.428 Material Science Laboratory I | 3 |
| EN.510.429 Material Science Laboratory II | 3 |
| EN.510.430 Biomaterials Lab | 3 |
| EN.510.456 Introduction to Surface Science | 3 |
| EN.510.604 Mechanical Properties of Materials | 3 |
| EN.510.605 Electrical, Optical and Magnetic Properties of Materials | 3 |
| EN.510.606 Polymer Chemistry & Biology | 3 |
| EN.510.607 Biomaterials II: Host response and biomaterials applications | 3 |
| EN.510.608 Electrochemistry | 3 |
| EN.510.611 Solid State Physics | 3 |
| EN.510.612 Solid State Physics | 3 |
| EN.510.619 | |
| EN.510.624 X-Ray Scattering, Diffraction and Imaging | 3 |
| EN.510.657 Materials Science of Thin Films | 3 |

**Operations Research**

*(Sponsored by the Department of Applied Mathematics & Statistics (p. 824))*

**Prerequisites**
- Calculus-based background in Probability and Statistics. Students wishing to strengthen their background in this area may enroll in EN.550.420 Introduction to Probability and/or EN.550.430 Introduction to Statistics, but these courses may not be used in fulfillment of this concentration’s requirements.

**Required Courses (3)**
- EN.570.495 Optimization Foundations for Environmental Engineering and Policy Design  3
  - or EN.550.661 Foundations of Optimization
- EN.570.497 Risk and Decision Analysis  3
- EN.570.608 0-4
  - or EN.550.400 Mathematical Modeling and Consulting

Substitutions for required courses can be made at the advisor’s discretion

**Elective Courses (2)**
- Any two courses from the following list, or a substitution as approved by the student’s concentration advisor. As course offerings vary over time, an updated list of acceptable courses will be maintained on the MSEM program website.

| EN.510.493 Economic Foundations for Environmental Engineering and Policy Design | 3 |
| EN.570.496 Urban and Environmental Systems | 3 |
| EN.550.662 Optimization Algorithms | 3 |
| EN.550.426 Introduction to Stochastic Processes | 4 |
| EN.550.427 Stochastic Processes and Applications to Finance | 4 |
| EN.550.433 Monte Carlo Methods | 3 |
| EN.550.463 Network Models in Operations Research | 4 |

Alternative selections can be made at the advisor’s discretion.

**Probability and Statistics**

*(Sponsored by the Department of Applied Mathematics & Statistics (p. 824))*

**Admissions Requirements**
- One upper-division undergraduate course in probability (equivalent to EN.550.420 Introduction to Probability)
- One upper-division undergraduate course in mathematical statistics (equivalent to EN.550.430 Introduction to Statistics)

**Curricular Requirements**
- Any five (5) of the following courses, approved by the faculty advisor:

| EN.550.413 Applied Statistics and Data Analysis | 4 |
| EN.550.426 Introduction to Stochastic Processes | 4 |
| EN.550.433 Monte Carlo Methods | 3 |
Additional Requirements

• An overall GPA of 3.0 must be maintained in courses used to meet the program’s technical requirements. At most two course grades of C or C+ are allowed to be used, and the rest of the course grades must be B- or better.
• Students must satisfy the department’s graduate student computing requirement.
• With advisor’s approval, one non-departmental course containing appropriate mathematical or statistical content can be counted to satisfy the five course requirement.

Smart Product and Device Design
(Sponsored jointly by the Department of Mechanical Engineering (p. 1036) and the Department of Electrical & Computer Engineering (http://e-catalog.jhu.edu/departments-program-requirements-and-courses/engineering/electrical-computer-science))

Required Courses
EN.530.646 Robot Devices, Kinematics, Dynamics, and Control 3
EN.530.414 Computer-Aided Design 3
EN.520.491 CAD Design of Digital VLSI Systems I (Juniors/Seniors) 3
EN.530.421 Mechatronics 3
EN.520.448 Electronics Design Lab 3

Substitutions for required courses can be made at the advisor’s discretion.

Elective Courses (2)
Any of the courses listed in the Mandatory list (see Part A above)
EN.570.496 Urban and Environmental Systems 3
EN.570.618 Multiobjective Programming and Planning 3
EN.570.676 Stochastic Programming 3

Other courses in environmental economics, systems, or policy, as approved by the advisor.

Additional Notes

• All courses must be approved by the student’s advisor.
• All course must be at the 400-level or above.
• Students with a background in quantitatively rigorous economics sufficient for the economics requirement to be waived must still take five (5) courses in this area of concentration.
• No more than one course in environmental engineering may be used to fulfill the area of concentration and only with careful consultation with the student’s advisor. Candidate courses in environmental engineering include:
  • EN.570.446 Biological Process of Wastewater Treatment, EN.570.490 Solid Waste Engineering and Management, EN.570.491 Hazardous Waste Engineering and Management, EN.570.647 Hydrologic Transport in the Environment, EN.570.657 Air Pollution, etc.
  • No more than one C may be used toward the degree in this concentration.

W.P. Carey Minor in Entrepreneurship and Management

http://engineering.jhu.edu/cle

The Entrepreneurship & Management (E&M) program offers Johns Hopkins Arts & Sciences, Engineering, and Peabody students a broad array of courses designed to equip them to lead in business, professional, and academic arenas. Some students simply take a course or two.
Many choose to fulfill the seven-course E&M minor, pairing it with their engineering, liberal arts, or public health major. The minor’s three core courses, Introduction to Business, Financial Accounting, and Marketing Principles, provide a strong foundation in the fundamentals of entrepreneurial enterprises. Students can then select any three upper-level courses (plus the required work in statistics) to complete the minor or elect to focus further in Accounting and Finance, Business Law, Leadership and Organizational Behavior, or Professional Communication.

The minor in entrepreneurship and management focuses on business and management from a multidisciplinary viewpoint, with a quantitative emphasis. The program, part of the Center for Leadership Education (p. 876), offers students a diversified learning experience that emphasizes the concepts, practices, and skills necessary for effective leadership as managers and entrepreneurs in the public and private sectors.

The primary goal of the program is to provide Hopkins students with the knowledge and skills to become effective leaders and entrepreneurs. Individuals with excellent technical training and abilities often move into management positions or start new ventures. As their careers progress, they will be better prepared for success if they have the ability to understand financial reports, interpret statistical data, organize and effectively lead a team, design strategy, analyze and correct problems in the firm’s operations, and understand the dynamics of the marketplace.

The minor is purposely designed to serve different types of students. The program will help prepare students for entrance to law school, an MBA program, or other graduate school. After graduation, other students will start working in engineering or technical positions, then later move into management or start their own businesses. A third group of students is primarily interested in gaining knowledge to follow more generalized careers in finance and business.

**Facilities**

The CLE Full-time Faculty and staff offices are located in Whitehead Hall, suites 102, 104 and 105. Part-time Faculty and ESL Specialists offices are located in Maryland 16. Course assistants’ office hours are held in room 104.

**Minor in Entrepreneurship and Management**

The requirements of the minor in entrepreneurship and management can be downloaded from the Center for Leadership Education’s website under the “W.P. Carey Program in Entrepreneurship and Management” tab (http://eng.jhu.edu/wse/cle/page/em_minor). Students wishing to complete a minor in entrepreneurship and management may also obtain more information from the CLE Faculty Support Staff office located in Whitehead 105.

**Core Requirements**

1. Statistics - These courses expose students to the foundations of statistics that are used extensively in business decision-making. These topics include correlation, estimation, hypothesis testing, linear regression, prediction, and forecasting. Students may take either two elementary statistics courses or one intermediate/advanced calculus-based statistics course from the list below.

   - Option One: Two Elementary Statistics Courses (EN.550.112 is the required second course). Credit earned for AP Statistics (equivalent to EN.550.111) will satisfy the first of the two required courses.
     - EN.550.111  Statistical Analysis I  4
     - EN.550.112  Statistical Analysis II  4
   - Option Two: One Intermediate/Calculus-Based Course (must have Calculus as a prerequisite)
     - EN.550.211  Probability and Statistics for the Life Sciences  3-4
       - or EN.550.310  Probability & Statistics for the Physical and Information Sciences & Engineering  3
     - EN.550.311  Probability and Statistics for the Biological Sciences and Engineering
     - EN.550.430  Introduction to Statistics
     - EN.540.305  Modeling and Statistical Analysis of Data for Chemical and Biomolecular Engineering
     - EN.560.348  Probability & Statistics for Engineers

2. Entrepreneurship and Management Fundamentals - Students must complete three fundamental courses in entrepreneurship and management. These courses are:

   - EN.660.105  Introduction to Business  4
   - EN.660.203  Financial Accounting  3
   - EN.660.250  Principles of Marketing  3

3. Upper-Level Elective Courses in Entrepreneurship and Management

Students must complete three upper level courses in entrepreneurship and management. Courses may be chosen from a number of areas, including:

- Accounting & Finance - These courses educate students about financial concepts, investments, and financial markets. This information is valuable for the entrepreneur starting a new venture, a manager to be effective with a corporation, and management consultants.

- Business Law - These courses educate students about legal issues in business and how the law is used to protect intellectual property.

- Leadership & Organizational Behavior - These courses provide knowledge of both general principles and specific practices needed for working effectively with people in an organization. These courses focus on leadership, team building, ethics, and psychology.

Students who wish to complete a focus area in one of the areas listed above must complete three courses from that area, with at least one at the 400-level.

Lists of acceptable courses are provided below. These lists are regularly updated and may be obtained at the Center for Leadership Education office or on the center’s website (http://eng.jhu.edu/wse/cle/page/em_minor).

**Accounting and Finance Courses**

- EN.660.300  Managerial Finance  3
- EN.660.303  Managerial Accounting  3
- EN.660.401  Advanced Corporate Finance  3
EN.660.410  Computer Science Innovation and Entrepreneurship 3
EN.660.304  or EN.660.414  Financial Statement Analysis 3
EN.660.460  Entrepreneurship 3
AS.180.263  Corporate Finance 3
EN.570.334  Engineering Microeconomics 3

* The course 232.410 Corporate Finance from the Carey Business School may also be used as an Accounting and Finance course.

Business Law Courses
EN.660.308  Business Law I 3
EN.660.310  Case Studies in Business Ethics 3
EN.660.311  Law and the Internet 3
EN.660.404  Business Law II 3
EN.660.405  Intellectual Property Law 3
EN.660.460  Entrepreneurship 3

Leadership and Organizational Behavior Courses
EN.660.321  Managing & Marketing Social Enterprises 3
EN.660.331  Leading Teams 3
EN.660.332  Leadership Theory 3
EN.660.333  Leading Change 3
EN.660.335  Negotiation and Conflict Resolution 3
EN.660.336  Community Engineering: Interdisciplinary Problem Solving-Community Based Learning 3
EN.660.340  Principles of Management 3
EN.660.341  Business Process and Quality Management 3
EN.660.361  Engineering Business and Management 3
EN.660.460  Entrepreneurship 3

Marketing and Communication Courses
Students may use only one Marketing and Communications course as an upper-level elective for the Entrepreneurship and Management minor.

EN.660.310  Case Studies in Business Ethics 3
EN.660.352  New Product Development 3
EN.660.354  Consumer Behavior 3
EN.660.355  Sports Marketing 3
EN.660.358  International Marketing 3
EN.660.420  Marketing Strategy 3
EN.660.450  Advertising & Integrated Marketing Communication 3
EN.661.315  Culture of the Engineering Profession 3
EN.661.317  Culture of the Medical Profession 3
EN.661.357  Copywriting & Creative Strategy 3
EN.661.361  Corporate Communications & P.R. 3
EN.661.390  Catalyst: A Student-Run Magazine 3
EN.661.453  Social Media and Marketing 3
EN.661.454  Blogging and Digital Copywriting 3
EN.661.456  Marketing Communication Law & Ethics 3

Course and Grade Rules and Limitations
The E&M minor requires a minimum of 22 credits.

A maximum of 6 credits of courses taken from outside WSE and KSAS (including transfer course & study abroad) may be applied to the E&M minor.

One course may be taken on an S/U basis.

All courses applied to the E&M minor must be completed with a grade of C- or above.

For current faculty and contact information go to http://engineering.jhu.edu/cle/faculty

Faculty
Director
Timothy Weihs
Director of CLE, Professor of Materials Science & Engineering.

Program Directors
Lawrence Aronhime
Senior Lecturer & Director of International Programs: accounting, finance, entrepreneurship, technology commercialization.

Annette Leps
Senior Lecture and Director of Entrepreneurship & Management Program: accounting, finance, management.

Julie Reiser
Senior Lecturer & Director of Marketing & Communications: technical communication, oral presentations, research writing, dissertation writing, American literature and critical theory.

Eric Rice
Senior Lecturer & Director of Graduate Programs: organizational behavior, social entrepreneurship, management, negotiation and conflict management, leadership, public speaking, professional writing.

Pamela Sheff
Senior Lecturer & Director of Master of Science in Engineering Management Program: business and technical communication, marketing, public relations, science and scientific writing, oral presentations, higher education in prisons, community-based learning, entrepreneurship.

Full Time Faculty
Bob Graham
Lecturer: entrepreneurship, professional communication, oral presentations.

Illysa Izenberg
Lecturer: engineering management.

Leslie Kendrick
Senior Lecturer: marketing strategy, integrated marketing communications, sports marketing, international marketing, internships.

Charlotte O’Donnell
Lecturer: oral presentations, professional communication, visual rhetoric.

William Smedick
Senior Lecturer: leadership theory, leadership in teams.
Part Time Faculty

Michael Agronin
Lecturer: new product development.

Justin Beauchamp
Lecturer: Leadership

Jennifer Bernstein
Lecturer: professional communication.

Susan Conley
Lecturer: Marketing

Laura Davis
Lecturer: Professional communication for ESL and Oral presentations for ESL.

Marcie DeVries
Lecturer: marketing.

Kevin Dungey
Senior Lecturer: oral presentations.

Sean Furlong
Lecturer: Financial Accounting

David Fisher
Lecturer: business law.

Mark Franceschini
Senior Lecturer: business law, business ethics, Internet law.

Mary Beth Furst
Lecturer: Introduction to Business.

Guido Galvez
Lecturer: business.

Jeremy Gorelick
Lecturer: business analytics, business development.

Christine Grillo
Lecturer: writing articles, writing technical reports.

Jason Heiserman
Lecturer: oral presentations.

Christopher Jeffers
Lecturer: business law.

Mark Kennedy
Lecturer: copywriting.

Andrew Kulanko
Senior Lecturer: oral presentations.

Andres Lares
Lecturer: sports negotiation.

Seth LeJacq
Lecturer: communication

Denise Link-Farajali
Lecturer: professional communication: financial math for ESL, research writing for ESL.

David Mahoney
Lecturer: social media, marketing.

Michael Mattia
Lecturer: leadership.

Lindsay Monti
Lecturer: business law.

Marco Priolo
Lecturer: managerial finance.

Bryan Rakes
Lecturer: business law.

Joshua J. Reiter
Senior Lecturer: business process management, total quality management, information technology management, Internet-based business applications, creativity and innovation, entrepreneurship.

Elaine Richman
Lecturer: writing articles, writing technical reports.

Tiffany Sanchez
Lecturer: leadership.

Douglas Sandhaus
Senior Lecturer: business law, business ethics, Internet law.

Dennis Sullivan
Lecturer: marketing.

Jay Thompson
Lecturer: professional communication.

Adam Treiser
Lecturer: business analytics.

Tamara Warren-Chinyani
Lecturer: emotional intelligence, diversity.

Caroline Wilkins
Lecturer: professional communication.

Marketing and Communications

The Marketing & Communications (M&C) program offers Johns Hopkins Arts & Sciences, Engineering and Peabody students a broad array of courses designed to equip them to lead in the marketing and communications fields, and complements major courses of study in departments across campus. Students who opt to declare the minor will choose between two tracks: the Marketing Management track and the Integrated Marketing Communications track. Courses are also open to students who choose not to declare the minor.

The Marketing Management track is geared towards students who wish to pursue a career in product or marketing management at a large-scale enterprise. This track emphasizes learning how to manage both the message and the financial impact of marketing campaigns, as well as how to manage a product line from development to launch.

The Integrated Marketing Communications track is designed for students who want to be more involved in the creative side of the marketing field, including areas such as advertising, public relations and social media. This track emphasizes forming marketing messages, and the production of creative content and deliverables for a variety of different industries.
See the Undergraduate tab above for specific requirements for the minor.

To complete the Marketing and Communications minor, student must complete

- Three core courses
- One or two foundational courses, depending on the track selected
- Four upper-level courses in the desired track; one course must be at the 400-level.

Core courses; all three required

Course and Grade Rules and Limitations
The Marketing and Communications minor requires 25 credits for the Marketing Management track and 28 credits for the Integrated Marketing Communications track.

A maximum of 6 credits of courses taken from outside WSE and KSAS (including transfer course & study abroad) may be applied to the M&C minor.

A maximum of three credits may be taken on an S/U basis.

All courses applied to the M&C minor must be completed with a grade of C- or above.

Lecturer: emotional intelligence, diversity.

Caroline Wilkins  
Lecturer: professional communication.

**Professional Communication Program**

http://eng.jhu.edu/wse/cle

Strong communications skills are the key to success in any discipline. The Professional Communication Program (PCP) offers Johns Hopkins undergraduates a variety of hands-on courses designed to develop their abilities to research, write, speak, and display data persuasively. Starting with the highly popular foundation courses EN.661.110 Professional Writing and Communication and EN.661.150 Oral Presentations, the program expands to specialized workshops and seminars on topics ranging from science and research writing, engineering culture and ethics to entrepreneurship, public relations and social media. PCP students create journals, write blogs, present pitches and posters, and conduct multimedia PR campaigns. All PCP courses are small—19 or fewer students—ensuring that everyone receives the skilled attention necessary to grow as a writer and presenter. Since many of our students are international, PCP offers English as a Second Language (ESL) sections of Professional Writing and Communication and Oral Presentations as well as free ESL tutoring.
Professional Development Program

The Professional Development Program (PDP) answers the need to broaden graduate education as expressed in many recent academic articles. For example, The Commission on Pathways Through Graduate School (http://pathwaysreport.org) noted in their final report that more than one-half of all doctoral degree holders in science, engineering or health fields work outside the academy. And while employers believe these graduates bring value, recent graduates lack skills and knowledge in areas like working on teams, entrepreneurship, communication, and project management.

The Professional Development Program is designed to address these needs. The program currently offers a series of some twenty, 7-week courses in topics such as writing business plans, managing people, writing winning proposals and improving presentations. Courses are open to all full time graduate students (masters, PhD and post-doctoral fellows) at Johns Hopkins. A small and growing number of masters degree programs in the Whiting school (only) accept a limited number of these courses as elective credits. Speak with your degree advisor to learn more.

For more information, including a current class schedule and a listing of all modules, visit: engineering.jhu.edu/pdp

Lecturer: engineering management.

Annette Leps
Senior Lecturer & Director of Entrepreneurship & Management Program: accounting, finance, management.

Charlotte O'Donnell
Lecturer: oral presentations, professional communication, visual rhetoric.

Julie Reiser
Senior Lecturer & Director of The Professional Communication Program: technical communication, oral presentations, research writing, dissertation writing, American literature and critical theory.

Pam Sheff
Senior Lecturer & Director of Master of Science in Engineering Management Program: business and technical communication, marketing, public relations, science and scientific writing, oral presentations, higher education in prisons, community-based learning, entrepreneurship.

Part Time Faculty

Jennifer Bernstein
Lecturer: professional communication.

Laura Davis
Lecturer: professional communication for ESL and oral presentations for ESL.

Kevin Dungey
Senior Lecturer: oral presentations.

Mark Franceschini
Senior Lecturer: business law, business ethics, internet law.

Jason Heiserman
Lecturer: oral presentations.

Chris Jeffers
Lecturer: intellectual property law.

Andrew Kulanko
Senior Lecturer: oral presentations.

Denise Link-Farajali
Lecturer: professional communication, financial math for ESL, research writing for ESL.

Caroline Wilkins
Lecturer: professional communication.

William Smedick
Senior Lecturer: leadership theory, leadership in teams.

Part Time Faculty

Kevin Dungey
Chemical and Biomolecular Engineering

http://www.jhu.edu/chembe/

Chemical and Biomolecular Engineering (ChemBE) is dedicated to the design and exploitation of chemical, biological, and to the study of phenomena for chemical and biological applications. As a result of the scope and breadth of this rigorous undergraduate program, our students commonly secure employment in industries such as chemical and pharmaceutical production, biomedicine, biotechnology, material design, food, and energy. Graduates may embark on a career to explore new products such as:

- Novel polymers and materials
- Biofuels
- Gene Therapy Products
- Cells and Tissues
- Nanodevices

The demands on the modern engineer are high, and graduates must possess a wide range of skills in order to be competitive in a global market. The ChemBE program successfully satisfies these demands. Students take advanced courses in chemistry, physics, mathematics, and biology. Additionally, students are trained in transport, kinetics, and thermodynamics, which are essential to solving real-world engineering problems. Students also hone their professional and communication skills (report writing, oral presentations, and teamwork) in courses involving experimental projects, process design and product design.

Depending on their interests and future career goals, students can choose electives from exciting areas including green engineering, nanotechnology, and bioengineering. These courses, along with undergraduate research opportunities offered by our faculty, are designed to prepare graduates for careers in the chemical industry, biotechnology, pharmaceuticals or microelectronics. The curriculum also offers an outstanding foundation for advanced graduate studies in chemical and biomolecular engineering, biomedical engineering, materials engineering, or for medical, law, or business school.

Students also have the opportunity to develop more in-depth specialty in one or two areas within chemical and biomolecular engineering. Our two tracks are Interfaces and Nanotechnology (IN) and Molecular and Cellular Bioengineering (MCB).

Interfaces and Nanotechnology (IN) Track
Interesting and new physics exist at nanometer length scales, as the surface area of an object begins to approach and exceed its volume. In this focus area, students are trained in the fundamental sciences used to solve problems in nanotechnology and interfacial science. Students take a chemistry course in Materials and Surface Characterization, an advanced physical chemistry laboratory course, and two electives such as Colloids and Nanoparticles, Supramolecular Materials and Nanomedicine and Micro/Nanotechnology: the Science and Engineering of Small Structures.

Molecular and Cellular Bioengineering (MCB) Track
Fields in biotechnology and biomedicine often involve processes at biological, cellular and molecular levels. Common areas utilizing skills in the MCB focus area include the genetic manipulation of cells for protein and vaccine production, and the study and treatment of diseases such as arteriosclerosis and cancer. Students in this focus area must take a laboratory course in Biochemistry, and two electives such as Metabolic Systems Biotechnology, The Design of Biomolecular Systems, and Computational Protein Structure Prediction. In addition, students will take the Biomolecular Engineering Laboratory to learn the hands-on skills required for future careers in biological systems at the molecular and cellular level.

Our mission is to define and educate a new archetype of innovative and fundamentally-grounded engineer at the undergraduate and graduate levels through the fusion of fundamental chemical engineering principles and emerging disciplines. We will nurture our passion for technological innovation, scientific discovery, and leadership in existing and newly created fields that transcend traditional boundaries. We will be known for developing leaders in our increasingly technological society who are unafraid to explore uncharted engineering, scientific, and medical frontiers that will benefit humanity. Recent graduates of the Chemical and Biomolecular Engineering program will attain within a few years of graduation:

- succeed in careers in industrial, academic or government organizations in which they apply their chemical and biomolecular engineering skills to solve diverse long-standing or emerging problems
- excel in their graduate program, medical school or other professional education
- be recognized as future leaders in their chosen field
- perpetuate the JHU legacy of passion for learning, technical excellence, community service and research innovation to foster knowledge creation, lead discovery and impact society.

The department also offers graduate programs leading to the Master of Science and Ph.D. degrees. These programs emphasize research leading to a written thesis.
Undergraduate students strongly involved in research may be interested in our B.S./M.S.E. program in Chemical and Biomolecular Engineering that allows students to obtain a master’s of science in engineering immediately after completion of their bachelors.

Facilities
The offices and state-of-the-art laboratories of Chemical and Biomolecular Engineering are located in Croft Hall and Maryland Hall on the Homewood campus. The research laboratories are well-equipped for studies in the areas of biochemical engineering, cell and tissue engineering, phase equilibria, membrane science, polymer science, interfacial phenomena, separation processes, fluid mechanics, and nucleation phenomena. The Milton S. Eisenhower Library on the Homewood campus contains over two million volumes and access to more than 325 electronic journals. The university’s other libraries located at the School of Medicine and at the Applied Physics Laboratory are also available to students. Through close collaborations with scientists at the National Institutes of Health, and the National Institute of Standards and Technology, The Institute for Genomic Research, Human Genome Sciences, Inc., and the Food and Drug Administration, students and faculty also have access to a variety of world-class facilities and other resources for research.

Financial Aid
Undergraduate scholarships and financial assistance are described on the Student Financial Services (http://finaid.johnshopkins.edu) website. Part-time work is available in the Chemical and Biomolecular Engineering research laboratories on research projects supported by grants and contracts. There also is a federally sponsored work-study program for qualified students.

Financial assistance to graduate students is available in the forms of research assistantships, teaching assistantships, fellowships, and partial or full tuition remission. The financial aid package is specified following acceptance into the graduate program.

Graduates receive a Bachelor of Science degree in Chemical and Biomolecular Engineering accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org. As permitted under the ABET guidelines, we are continually updating our undergraduate programs to include the latest advances in chemical and biomolecular engineering. Such modifications will enable us to offer the best possible education experience to our undergraduate students. For the latest chemical engineering educational programs, potential applicants are referred to our website at http://www.jhu.edu/chembe/

Requirements for the B.S. Degree
(See also General Requirements for Departmental Majors (p. 10))

The Bachelor of Science degree requires a minimum of 128 credits. Additional details are given in the Chemical and Biomolecular Engineering Undergraduate Advising Manual available from the department or online. The 128 credits must include:

<table>
<thead>
<tr>
<th>Chemical and Biomolecular Engineering Core Courses</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN.540.101 Chemical Engineering Today</td>
<td>1</td>
</tr>
<tr>
<td>EN.540.202 Introduction to Chemical &amp; Biological Process Analysis</td>
<td>4</td>
</tr>
<tr>
<td>EN.540.203 Engineering Thermodynamics</td>
<td>3</td>
</tr>
<tr>
<td>EN.540.301 Kinetic Processes</td>
<td>3</td>
</tr>
</tbody>
</table>

| Total Credits | 90 |

- Humanities and Social Sciences Courses. Eighteen credits designated as Humanities or Social and Behavioral Sciences are required. Students are required to take these courses in at least two subject areas other than writing. At least one of these courses must be an advanced course at the 300-level or higher. See the Chemical and Biomolecular Engineering Undergraduate Advising Manual for more details.
- Writing Courses. Two writing intensive courses are required. One of the courses must be EN.661.315 Culture of the Engineering Profession. The courses that are taken to satisfy the university writing requirement must be passed with a grade of C- or better.
- Undesigned Electives. A minimum of 128 credits is required for the degree. Therefore, in addition to all the credits taken to fulfill the requirements mentioned in the various sections above (e.g., chemical engineering core courses, engineering electives, basic science,
advanced chemistry electives, mathematics requirement, and Humanities and Social and Behavioral Sciences courses) additional credits (called undesignated credits) are required.

* Students also must have a grade point average of at least 2.00 in the chemical and biomolecular engineering core courses to graduate. The core courses for GPA calculation comprise all of the above courses except for EN.540.101 Chemical Engineering Today and EN.540.490 Chemical Laboratory Safety.

** Students need additional courses beyond these courses. Requirements include additional courses in Chemistry and Biology. Students who are pursuing tracks in Molecular and Cellular Bioengineering or Interfaces and Nanotechnology have additional and/or alternate requirements.

*** Calculus is so essential to Chemical Engineering that a grade of C- or better in both Calculus I and Calculus II is required.

### Tracks

Students pursuing a degree in Chemical and Biomolecular Engineering have the option of concentrating on specific fields including Interfaces and Nanotechnology and Molecular and Cellular Bioengineering. Students completing a track will have this fact designated on their official university checklist. These focus areas have additional and/or alternate requirements, as described.

### Molecular and Cellular Bioengineering (MCB) Track

Students must fulfill the following requirements:

- Students take either AS.020.306 Cell Biology or EN.540.307 Cell Biology for Engineers.
- The Advanced Chemistry and Biology laboratory requirement is fulfilled with AS.020.315 Biochemistry Laboratory or AS.250.253 Protein Engineering and Biochemistry Lab.
• Six credits of bioengineering electives are required. See department for a list of approved electives.
• Students take EN.540.313 Chemical and Biomolecular Engineering Lab instead of EN.540.311 Chemical Engineering Lab I.

**Interfaces and Nanotechnology (IN) Focus Area**

Students must fulfill the following requirements:

• Students take EN.540.204 Applied Physical Chemistry.
• The Advanced Chemistry and Biology laboratory requirement is fulfilled with AS.030.307 Physical Chemistry Instrumentation Laboratory III.
• AS.030.452 Materials & Surface is required and satisfied three credits of the advanced chemistry electives.
• Six credits of interfaces and nanotechnology electives are required. See department for a list of approved electives.

**B.S./M.S.E. Program in Chemical and Biomolecular Engineering**

The B.S./M.S.E. program in Chemical and Biomolecular Engineering allows students to obtain a master of science in engineering immediately after the bachelor of science degree by adding at least a year of study. For students who qualify academically, the Whiting School of Engineering allows a 50 percent waiver after the completion of eight semesters or having received the Bachelor of Science degree.

**Master of Science in Engineering**

Students have two options in pursuing an M.S.E. in Chemical and Biomolecular Engineering.

1. Master of Science in Engineering (requiring an essay)
   - The student must complete six graduate (600-799) level courses approved by the student’s research advisor. The student and advisor select these courses to design a curriculum appropriate for the student’s research interest and educational goals.
   - These six courses cannot include seminars, independent study, graduate research, or special studies.
   - At least four of the six courses must be in the Department of Chemical and Biomolecular Engineering.
   - Students are allowed to count 400-level courses toward their M.S.E. degree if (1) the course is not offered at the 600-level, and (2) if the department offering the course considers it to be a graduate-level course in their program. Courses offered at both the 400- and 600-level must be taken at the 600-level to fulfill M.S.E. course requirements. All ChemBE coursework must be taken at the 600-level.
   - The student must also enroll in at least one semester of graduate seminars EN.540.600 Chemical and Biomolecular Engineering Seminar and EN.540.601 Chemical and Biomolecular Engineering Seminar throughout his or her tenure in the Department of Chemical and Biomolecular Engineering at Johns Hopkins University.
   - Students must have a B average in coursework to complete this degree.
   - No D grade in ChemBE courses can be counted towards the requirements. In a given semester, one D grade, one F grade, or two C grades will result in probation. Once on probation, an additional grade of C or below will result in termination from the program.
   - Students must remain in good research standing with his or her research advisor. Failure to do so will result in probation and transfer to the coursework M.S.E. program.
   - The student must write an essay based on original research and literature review and present his or her results at an open seminar attended by the faculty and students. The essay must be approved by the departmental graduate committee which...
consists of the graduate research advisor and at least one more faculty member from the Department of Chemical and Biomolecular Engineering.

2. Master of Science in Engineering (course work only)
   • The student must complete ten graduate (600-799) level courses approved by the Director of Graduate Studies. The student and Director of Graduate Studies select these courses to design a curriculum appropriate for the student’s interest and educational goals.
   • These ten courses cannot include seminars, independent study, graduate research or special studies.
   • At least six of the ten courses must be in the Department of Chemical and Biomolecular Engineering.
   • Students are allowed to count 400-level courses toward their M.S.E. degree if (1) the course is not offered at the 600-level, and (2) if the department offering the course considers it to be a graduate-level course in their program. Courses offered at both the 400- and 600-level must be taken at the 600-level to fulfill M.S.E. course requirements. All ChemBE coursework must be taken at the 600-level.
   • The student must also enroll in at least one semester of graduate seminars (EN.540.600 Chemical and Biomolecular Engineering Seminar/EN.540.601 Chemical and Biomolecular Engineering Seminar) throughout his or her tenure in the Department of Chemical and Biomolecular Engineering at Johns Hopkins University.
   • Students must have a B average in coursework to complete this degree.
   • No D grade in ChemBE courses can be counted towards the requirements. In a given semester, one D grade, one F grade, or two C grades will result in probation. Once on probation, an additional grade of C or below will result in termination from the program.

**Recommended courses for all M.S.E. students**
Completion of two of the four core courses of the Ph.D. program is recommended (but not required) for M.S.E. students. The four core Ph.D. courses are:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credit</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN.540.630</td>
<td>Thermodynamics, Statistical Mechanics, and Kinetics</td>
<td>3</td>
</tr>
<tr>
<td>EN.540.652</td>
<td>Advanced Transport Phenomena</td>
<td>3</td>
</tr>
<tr>
<td>EN.540.602</td>
<td>Metabolic Systems Biotechnology</td>
<td>3</td>
</tr>
<tr>
<td>EN.540.615</td>
<td>Interfacial Science with Applications to Nanoscale Systems</td>
<td>3</td>
</tr>
</tbody>
</table>

Additional information and requirements can be found in the department Graduate Handbook.

**Doctor of Philosophy**
The Ph.D. degree is awarded for original research performed under the guidance of a thesis advisor. The formal requirements for this degree are:

1. Successful completion of six graduate-level courses including the four required core courses.
2. Successful completion of the Preliminary Research Exam during the student’s first year.
3. Successfully serve as a teaching assistant for at least two required undergraduate courses.
4. Completion of an original research project, documented in a dissertation that is defended by the candidate in a public presentation.
5. Successful completion of the Graduate Board Oral Exam.

**Course Work**
Student must successfully complete six graduate-level courses including the four required core courses listed below:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credit</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN.540.630</td>
<td>Thermodynamics, Statistical Mechanics, and Kinetics</td>
<td>3</td>
</tr>
<tr>
<td>EN.540.652</td>
<td>Advanced Transport Phenomena</td>
<td>3</td>
</tr>
<tr>
<td>EN.540.602</td>
<td>Metabolic Systems Biotechnology</td>
<td>3</td>
</tr>
<tr>
<td>EN.540.615</td>
<td>Interfacial Science with Applications to Nanoscale Systems</td>
<td>3</td>
</tr>
</tbody>
</table>

Students are strongly encouraged to take the four required courses in the first fall semester. However, students who do not have an undergraduate degree in Chemical Engineering or a closely related field may need additional courses and should discuss an appropriate course plan with the director of the graduate program.

The remaining two engineering or science courses are chosen with the help of the student’s advisor to design a curriculum appropriate for the student’s research interest. These two courses cannot include seminars, independent study, graduate research or special studies.

Each of the six courses must be passed with a letter grade of B- or higher. In addition, the student must maintain an overall grade point average (GPA) of 3.0 or better. If the student’s GPA falls below 3.0, the student must re-take one or more of the courses and earn a higher grade, upon which the prior grade in those courses are not counted toward the GPA. If a student receives a grade of C+ or lower in a required core course, the student will be allowed to re-take the course once to achieve a grade of B- or higher. Failure to receive a B- or better the second time will be cause for dismissal from the program. Receipt of grades of C+ or lower in two or more required courses will ordinarily be cause for dismissal from the program without the opportunity to re-take those courses.

**In addition:**
• all first year students must enroll in EN.500.401 Research Laboratory Safety during their first semester.
• students must enroll in graduate seminars (EN.540.600 Chemical and Biomolecular Engineering Seminar/EN.540.601 Chemical and Biomolecular Engineering Seminar) every semester. Students are expected to attend department seminars throughout their tenure in the department.

**Ph.D. Thesis Criteria and Graduate Board Oral Exam**
Candidates must write a dissertation conforming to university requirements that describes the students work and results in detail. A public defense of the dissertation is required, and will be followed by a closed examination session. Because the closed examination session fulfills the university Graduate Board Oral (GBO) examination requirement, all procedures pertaining to GBOs as established by the University Graduate Board must be followed.

Additional information can be found in the department Graduate Handbook.

Facultый

Chair
Konstantinos Konstantopoulos
Professor: cell and molecular engineering; cell signaling, adhesion and migration; microfluidics; nanobioengineering; cancer metastasis.

Professors
Michael J. Betenbaugh
Professor: genomics, recombinant DNA biotechnology, biopharmaceuticals, metabolic engineering, insect and mammalian cell culture, glycosylation engineering, and cell death processes.

Michael A. Bevan
Professor and Director of Graduate Studies: colloidal interactions, dynamics, assembly, nanoparticle materials and devices, biomacromolecular interactions

Marc D. Donohue
Professor: phase equilibria, statistical thermodynamics, kinetics of diffusion and phase transitions, adsorption.

David H. Gracias
Professor: micro and nanotechnology, surface science, metamaterials, complex systems, nanoelectronics, nanomedicine, regenerative medicine, drug delivery and microfluidics.

Jeffrey J. Gray
Professor and Director of Graduate Admissions: biomolecular modeling, protein-protein docking, therapeutic antibodies, allostery, protein-surface interactions and design.

Marc A. Ostermeier
Professor: biomolecular engineering, molecular evolution, protein engineering, combinatorial methods, biosensors, protein therapeutics.

Denis Wirtz
Professor and Vice Provost for Research: cell adhesion and migration, cell mechanics, cytoskeleton, receptor-ligand interactions, cancer, particle tracking, new proteomics tools.

Associate Professors
Sharon Gerecht
Associate Professor: embryonic and adult stem cells, vascular regeneration, micro/nano fabrication, biomaterials, tissue engineering.

Joelle Frechette
Associate Professor and Director of Master’s Studies: properties of surfaces, thin films; fluid interfaces and confined fluids; measurements of surface forces and adhesion; micro and nanotechnology; microfluidics; nanoparticles.

Assistant Professors
Honggang Cui
Assistant Professor: nanoscience and nanotechnology, biomolecular engineering, peptide synthesis and assembly, drug delivery, supramolecular polymers, nanoparticle imaging, diagnosis, and cancer therapeutics.

Zachary R. Gagnon
Assistant Professor: electrokinetic phenomena in micro/nanofluidic environments, cell signaling, cell migration, micro/nano fabrication, dielectrophoresis, biological separation, manipulation and characterization in microdevices.

Rebecca B. Schulman
Assistant Professor: nanotechnology, self-assembly, theory and experiment, nucleation, bionanotechnology, DNA, nanoelectronics, biomolecular engineering, single-molecular analysis.

Chao Wang
Assistant Professor: heterogenous catalysis, renewable energy technologies e.g., photoelectrochemical solar cells and lithium batteries, and green chemical engineering.

Senior Lecturer
Lise Dahuron
Senior Lecturer and Director of Undergraduate Studies: separations, distillation, membrane technology, new product development, process design.

An Goffin
Senior Lecturer: fluid and bioactive interfaces, kinetic processes, principles in chemical engineering, product design.

Professor Emeritus
Joseph L. Katz
Professor Emeritus: nucleation processes (e.g., condensation of supersaturated vapors, boiling of superheated liquids and its applications, e.g., the Ouzo effect, parts per quad-rillion detection) formation of nanosized ceramic oxide powders in flames, new proteomics tools.

Research Professor
Gregory Aranovich
Research Professor: molecular thermodynamics, phase equilibria, adsorption phenomena, separation processes, and diffusion.

Assistant Research Professor
Daniele Gilkes

Eva Lai
Assistant Research Professor: biomedical sciences, biomonitoring technologies, regenerative medicine, tissue engineering.

Adjunct Professor
Joseph Shiloach
Senior Investigator, National Institute of Diabetes and Digestive and Kidney Diseases

Adjunct Assistant Professor
Jerry S. H. Lee
Program Director, National Cancer Institute and National Institute of Health

Associate Research Professor
George Oyler

Adjunct Assistant Research Scientist
Sai Prakash

Joint, Part-Time and Visiting Appointments
Steven An
Associate Professor, Johns Hopkins University Bloomberg School of Public Health

Patrick Bryssse
Professor, Johns Hopkins University School of Medicine, Division of Environmental Health Engineering

Jennifer Elisseeff
EN.540.101. Chemical Engineering Today. 1.00 Credit.
A series of weekly lectures to introduce students to chemical and biomolecular engineering and its role as a profession in addressing contemporary technological, social, ethical, and economic issues in today's world. The lectures will include examples of how chemical and biomolecular engineers apply the principles of physics and chemistry to develop new products, improve process efficiencies, and alleviate the strain on the ecosystem through the design of novel environmentally conscious processes. In addition, the lectures will highlight exciting new areas now being advanced by chemical and biomolecular engineers, such as biochemical engineering, tissue engineering, nanoparticle fabrication, and processing smart polymers for applications in computer technology and as sensors. Freshmen Only.
Instructor(s): L. Dahuron
Area: Engineering.

EN.540.202. Introduction to Chemical & Biological Process Analysis. 4.00 Credits.
Introduction to chemical and biomolecular engineering and the fundamental principles of chemical process analysis. Formulation and solution of material and energy balances on chemical processes. Reductionist approaches to the solution of complex, multi-unit processes will be emphasized. Introduction to the basic concepts of thermodynamics as well as chemical and biochemical reactions.
Prerequisites: Prereqs: (AS.030.101 OR AS.030.103) AND (AS.171.101 OR AS.171.107) AND (AS.030.102 OR AS.030.103 OR AS.110.109 OR AS.171.102)
Instructor(s): L. Dahuron
Area: Engineering.

EN.540.203. Engineering Thermodynamics. 3.00 Credits.
Formulation and solution of material, energy, and entropy balances with an emphasis on open systems. A systematic problem-solving approach is developed for chemical and biomolecular process-related systems. Extensive use is made of classical thermodynamic relationships and constitutive equations for one and two component systems. Applications include the analysis and design of engines, refrigerators, heat pumps, compressors, and turbines.
Prerequisites: Concurrent: AS.110.202; EN.540.202
Instructor(s): C. Wang; J. Frechette
Area: Engineering.

EN.540.204. Applied Physical Chemistry. 3.00 Credits.
The topics in this course include thermodynamic models for multicomponent phase equilibrium including vapor liquid equilibrium, phase diagrams, activity models and colligative properties in both non-electrolyte and electrolyte solutions. A link between average thermodynamic properties and microstates and molecular interactions is made via a discussion of intermolecular forces and the partition function. Also covered are thermodynamic relationships to describe chemical equilibria, and basic concepts in quantum mechanics and statistical mechanics.
Prerequisites: EN.540.203.
Instructor(s): D. Gracias
Area: Engineering.
EN.540.290. Chemical Engineering Modeling and Design for Sophomores. 3.00 Credits.
The courses EN.540.290, 291, 390, and 391 guide the students through the open-ended problems in product and process design. Product design concerns the recognition of customer needs, the creation of suitable specifications, and the creation of new products to fulfill a societal need. Process design concerns the quantitative description of processes which serve to produce chemically-derived materials and the estimation of process profitability. Students work in small teams to complete a major project demonstrating their understanding of and proficiency in the principles of unit operations and design. Students report weekly both orally and in writing on their accomplishments. Some projects are single semester, but others can be multi-semester. Students can start in any semester and can work on projects for as many semesters as they want. 
Instructor(s): M. Donohue 
Area: Engineering.

EN.540.291. Chemical Engineering Modeling and Design for Sophomores. 3.00 Credits.
The courses 540.290, 291, 390, and 391 guide the students through the open-ended problems in product and process design. Product design concerns the recognition of customer needs, the creation of suitable specifications, and the creation of new products to fulfill a societal need. Process design concerns the quantitative description of processes which serve to produce chemically-derived materials and the estimation of process profitability. Students work in small teams to complete a major project demonstrating their understanding of and proficiency in the principles of unit operations and design. Students report weekly both orally and in writing on their accomplishments. Some projects are single semester, but others can be multi-semester. Students can start in any semester and can work on projects for as many semesters as they want. 
Instructor(s): M. Donohue 
Area: Engineering.

EN.540.301. Kinetic Processes. 3.00 Credits.
Review of numerical methods applied to kinetic phenomena and reactor design in chemical and biological processes. Homogeneous kinetics and interpretation of reaction rate data. Batch, plug flow, and stirred tank reactor analyses, including reactors in parallel and in series. Selectivity and optimization considerations in multiple reaction systems. Non isothermal reactors. Elements of heterogeneous kinetics, including adsorption isotherms and heterogeneous catalysis. Coupled transport and chemical/biological reaction rates. 
Prerequisites: EN.540.303 or programming course.;EN.540.203 AND EN.540.303 
Instructor(s): A. Goffin; H. Cui 
Area: Engineering.

EN.540.303. Transport Phenomena I. 3.00 Credits.
Molecular mechanisms of momentum transport (viscous flow), energy transport (heat conduction), and mass transport (diffusion). Isothermal equations of change (continuity, motion, and energy). The development of the Navier Stokes equation. The development of non isothermal and multi component equations of change for heat and mass transfer. Exact solutions to steady state, isothermal unidirectional flow problems, to steady state heat and mass transfer problems. The analogies between heat, mass, and momentum transfer are emphasized throughout the course. 
Prerequisites: Concurrent: AS.110.302 
Instructor(s): K. Konstantopoulos 
Area: Engineering.

EN.540.304. Transport Phenomena II. 4.00 Credits.
Prerequisites: EN.540.303. 
Instructor(s): Z. Gagnon 
Area: Engineering.

EN.540.305. Modeling and Statistical Analysis of Data for Chemical and Biomolecular Engineers. 3.00 Credits.
This course seeks to build the student’s strength in Chemical Engineering computing and data analysis. To this end, in the first part of the course, we will become familiar with the Matlab/Octave computing environment and solve problems in Chemical Engineering that involve concepts from Process Analysis, Thermodynamics, Transport Phenomena, and Kinetics. In the subsequent part, we will build on the skills learnt earlier and tackle problems in Data Analysis and Hypothesis testing. 
Prerequisites: EN.540.202 AND AS.110.302 
Instructor(s): R. Schulman 
Area: Engineering.

EN.540.306. Chemical & Biomolecular Separation. 4.00 Credits.
This course covers staged and continuous-contacting separations processes critical to the chemical and biochemical industries. Separations technologies studied include distillation, liquid-liquid extraction, gas absorption, membrane ultrafiltration, reverse osmosis, dialysis, adsorption, and chromatography. Particular emphasis is placed on the biochemical uses of these processes and consequently on how the treatment of these processes differs from the more traditional approach. 
Prerequisites: EN.540.203 AND EN.540.305 or programming course. 
Instructor(s): M. Betenbaugh 
Area: Engineering.

EN.540.307. Cell Biology for Engineers. 3.00 Credits.
This course explores fundamental structural details and molecular functions of different parts of the cell. Considerable emphasis is placed on experimental/quantitative approaches to answering these questions. Topics include Central dogma and the nucleus; protein trafficking; ion transporters; cytoskeleton; molecular motors; cell cycle and cell division; signal transduction, cell growth and cancer; cell death, the extracellular matrix; cell adhesion, cell junctions and epithelium; and muscle contraction, cell motility and morphogenesis. 
Prerequisites: Cell Biology restriction: students who have completed AS.020.306 may not enroll. 
Instructor(s): J. Yang; R. Li 
Area: Natural Sciences.
EN.540.309. Product Design Part 1. 2.00 Credits.
This course guides the student through the contrasting aspects of product design and of process design. Product design concerns the recognition of customer needs, the creation of suitable specifications, and the selection of best products to fulfill the needs. Process design concerns the quantitative description of processes which serve to produce many commodity chemicals, the estimation of process profitability, and the potential for profitability improvement through incremental changes in the process. Students work in small teams to complete a major project demonstrating their understanding of and proficiency in the primary objectives of the course. Students report several times both orally and in writing on their accomplishments. This course is the first part two semester sequence that optionally can be taken instead of for EN.540.314 Chemical and Biomolecular Engineering Product and Process Design. The material covered is the same as in EN.540.314, but more time is allowed so that laboratory tests can be performed and/or prototypes can be made. Note that both courses in this sequence must be taken in order to satisfy the requirement that students take EN.540.314 as part of the Chemical and Biomolecular Engineering program.
Prerequisites: EN.540.306 AND EN.540.301; Students must have completed Lab Safety training prior to registering for this class.; EN.540.303 AND EN.540.490
Instructor(s): M. Donohue
Area: Engineering.
EN.540.310. Product Design Part 2. 2.00 Credits.
This course is one part of a two semester sequence that optionally can be taken instead of for This course is the second part of a two semester sequence (with EN.540.309) that optionally can be taken instead of EN.540.314 Chemical and Biomolecular Engineering Product Design. Students continue to work with their team on their product design project. Students report several times both orally and in writing on their accomplishments. The material covered is the same as in EN.540.314, but more time is allowed so that laboratory tests can be performed and/or prototypes can be made. Note that both courses, EN.540.309 and EN.540.310 must be taken to satisfy the Undergraduate degree requirement of the Chemical and Biomolecular Engineering program. The two courses can be started in any term.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.; EN.540.309
Instructor(s): M. Donohue
Area: Engineering.
EN.540.311. Chemical Engineering Lab I. 6.00 Credits.
This course challenges students with laboratory projects that are not well-defined. Students work in groups to develop an effective approach to experiments. They identify the important operating variables, decide how best to obtain them using measured or calculated values. Based on their results they predict, carryout, analyze and improve experiments. Each student analyzes three of the following projects: distillation, gas absorption, and one of the projects in EN.540.313. In addition to technical objectives, this course stresses oral and written communication. Students will have additional meeting times with the instructors and some writing professors outside of class.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.; EN.540.301, EN.540.304, EN.540.306, EN.540.490 and EN.661.315
Instructor(s): A. Goffin; C. Pereira; L. Dahuron; M. Ostermeier; S. Gerecht
Area: Engineering
Writing Intensive.
EN.540.312. Chemical and Biomolecular Engineering Lab: Part 2. 3.00 Credits.
Students who, as a part of an exchange program, participated in a laboratory course at the Technical University of Denmark at Copenhagen during the summer are required to register for this course to complete their equivalency requirement for the Chemical and Biomolecular Engineering Laboratory course offered in fall at JHU. The final grade for this course will incorporate the DTU grade. In addition, students perform one experimental project and submit a full professional report along with the senior lab reports. Students make a 15-min presentation to the junior class about their projects and of their experience in Denmark.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.; EN.540.301 AND EN.540.304 AND EN.540.306 AND EN.540.490 AND EN.661.315
Instructor(s): L. Dahuron
Area: Engineering
Writing Intensive.
EN.540.313. Chemical and Biomolecular Engineering Lab. 6.00 Credits.
This course challenges students with laboratory projects that are not well-defined. Students work in groups to develop an effective approach to experiments. They identify the important operating variables, decide how best to obtain them using measured or calculated values. Based on their results they predict, carryout, analyze and improve experiments. Each student analyzes at least two of the following biomolecular projects: bioreactor, biocatalysis and membrane separation and one of the projects in EN.540.311. In addition to technical objectives, this course stresses oral and written communication. Students will have additional meeting times with the instructors and some writing professors outside of class.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.; EN.540.301 AND EN.540.304 AND EN.540.306 AND EN.540.490 AND EN.661.315
Instructor(s): A. Goffin; L. Dahuron; M. Ostermeier; S. Gerecht
Area: Engineering
Writing Intensive.
EN.540.314. ChemBE Product Design. 2.00 Credits.
This course guides the student through the contrasting aspects of product design and of process design. Product design concerns the recognition of customer needs, the creation of suitable specifications, and the selection of best products to fulfill the needs. Process design concerns the quantitative description of processes, which serve to produce many commodity chemicals, the estimation of process profitability, and the potential for profitability improvement through incremental changes in the process. Students work in small teams to complete a major project demonstrating their understanding of and proficiency in the primary objectives of the course. Students report several times both orally and in writing on their accomplishments. This course is the second part two semester sequence that optionally can be taken instead of for EN.540.314 Chemical and Biomolecular Engineering Product and Process Design. The material covered is the same as in EN.540.314, but more time is allowed so that laboratory tests can be performed and/or prototypes can be made. Note that both courses in this sequence must be taken in order to satisfy the requirement that students take EN.540.314 as part of the Chemical and Biomolecular Engineering program.
Prerequisites: EN.540.306 AND EN.540.301; Students must have completed Lab Safety training prior to registering for this class.; EN.540.303 AND EN.540.490
Instructor(s): M. Donohue
Area: Engineering.
EN.540.390. Chemical Engineering Modeling and Design for Juniors. 3.00 Credits.
The courses EN.540.290, 291, 390, and 391 guide the students through the open-ended problems in product and process design. Product design concerns the recognition of customer needs, the creation of suitable specifications, and the creation of new products to fulfill a societal need. Process design concerns the quantitative description of processes which serve to produce chemically-derived materials and the estimation of process profitability. Students work in small teams to complete a major project demonstrating their understanding of and proficiency in the principles of unit operations and design. Students report weekly both orally and in writing on their accomplishments. Some projects are single semester, but others can be multi-semester. Students can start in any semester and can work on projects for as many semesters as they want.
Instructor(s): M. Donohue
Area: Engineering.

EN.540.391. Chemical Engineering Modeling and Design for Juniors. 3.00 Credits.
The courses 540.290, 291, 390, and 391 guide the students through the open-ended problems in product and process design. Product design concerns the recognition of customer needs, the creation of suitable specifications, and the creation of new products to fulfill a societal need. Process design concerns the quantitative description of processes which serve to produce chemically-derived materials and the estimation of process profitability. Students work in small teams to complete a major project demonstrating their understanding of and proficiency in the principles of unit operations and design. Students report weekly both orally and in writing on their accomplishments. Some projects are single semester, but others can be multi-semester. Students can start in any semester and can work on projects for as many semesters as they want.
Instructor(s): M. Donohue
Area: Engineering.

EN.540.400. Project in Design: Pharmacokinetics. 3.00 Credits.
This is a design course in which the design projects will be to develop pharmacokinetic models of the human body that can be used to understand the temporal distribution, spatial distribution and bioavailability of pharmaceutical drugs. The course (and software to be developed) will cover the spectrum of factors affecting pharmaceutical bioavailability including drug formulation, mode of dosing and dosing rate, metabolism and metabolic cascades, storage in fatty tissues, and diffusional limitations (such as in crossing the blood-brain barrier or diffusional differences between normal and cancerous cells). The goal is to develop process models of the human body that will predict pharmaceutical bioavailability as a function of time and organ (or cell) type that will work for a wide variety of pharmaceuticals including small molecules, biologics, and chemotherapy agents. This course is organized to replicate group project work as it is practiced in industry. The class is divided into groups (typically 3 or 4 students) and each group will meet separately each week with the instructor. Hence, there are no regularly scheduled class times; student groups sign up for weekly meeting times using Starfish in Blackboard. These meetings typically will be 90 minutes long. The expectations and assignments for this course are quite different from most other courses. There are no weekly lectures by the instructor. Rather, each week each group will make a PowerPoint presentation on the week’s topic or their progress on their project.
Instructor(s): M. Donohue
Area: Engineering, Natural Sciences.

EN.540.401. Projects in Design: Alternative Energy. 3.00 Credits.
This course is a group design project (i.e. not a lecture course) to use chemical process simulation tools to model a real-world, alternative-energy process of interest to Chemical and Biomolecular Engineers. The goal of the project will be to develop a process model that is sufficiently complete and robust that it can be used to understand the important factors in the process design and/or operation. This design project is focused on the role alternative energy will play in our country’s future. About a third of the course will be devoted to understanding the role of energy and alternative energy in the US and world economies. The remainder of the course will be devoted to a technical and economic analysis of the an alternative energy technology. This course is organized to replicate group project work as it is practiced in industry. The class is divided into groups (typically 3 or 4 students) and each group will meet separately each week with the instructor. Hence, there is no regularly scheduled class times; student groups sign up for weekly meeting times using Starfish in Blackboard. These meetings typically will be 60 minutes long. The expectations and assignments for this course are quite different from most other courses. There are no weekly lectures by the instructor. Rather, each week each group will make a PowerPoint presentation on the week’s topic or their progress on their project. Meets EN.540.619
Prerequisites: EN.540.202 AND EN.540.203 AND EN.540.301 AND EN.540.305
Instructor(s): M. Donohue
Area: Engineering.

EN.540.402. Metabolic Systems Biotechnology. 3.00 Credits.
The aim of this course is to provide a fundamental understanding of the quantitative principles and methodologies of systems biology and biochemical engineering of metabolism. This includes concepts of cellular growth, cellular stoichiometric models, metabolic networks, metabolite fluxes, and genome-scale metabolic models. Quantitative methods and systems biology approaches for metabolic flux analysis and metabolic control theory will be included as well as an analysis of biochemical systems and bioreactors including a consideration of mass transport processes.
Prerequisites: AS.020.306 OR ( EN.580.440 OR EN.580.441 ) OR EN.540.307
Instructor(s): M. Betenbaugh
Area: Engineering.

EN.540.403. Colloids and Nanoparticles. 3.00 Credits.
Fundamental principles related to interactions, dynamics, and structure in colloidal, nanoparticle, and interfacial systems. Concepts covered include hydrodynamics, Brownian motion, diffusion, sedimentation, electrophoresis, colloidal and surface forces, polymeric forces, aggregation, deposition, and experimental methods. Modern topics related to colloids in nano- science and technology will be discussed throughout the course with frequent references to recent literature.
Meets with EN.540.603
Instructor(s): M. Bevan
Area: Engineering.
EN.540.405. The Design of Biomolecular Systems. 3.00 Credits.
This course covers new topics in the design of systems of biomolecules, both in vitro and in vivo, for decision making and control. The course will begin with an overview of how logical decision making and control with biomolecules as is achieved in biology and then proceed to consider various strategies of engineering similar systems. The focus of the course will be on systems level principles rather than the biochemistry of molecule design. Topics will include engineering of transcriptional networks and genetic control for logically programming of cells, the design of in vitro mimics of genetic controls, molecular computing and systems aspects of metabolic engineering. The course will also cover quantitative and computational techniques for the simulation and analysis of biomolecular systems. Co-listed with EN.540.605
Instructor(s): R. Schulman
Area: Engineering.

EN.540.409. Dynamic Modeling and Control. 4.00 Credits.
Introduction to modeling, dynamics, and control. Unsteady state analysis of biomolecular and chemical process control systems. State space and Laplace transform techniques, block diagram algebra, and transfer functions. Feedback and feedforward control. Frequency response and stability analysis. Applications in chemical engineering (chemical reactors and separative processes) as well as biomolecular engineering (biosynthesis, pharmacokinetic modeling and biomolecular modeling based upon central dogma/gene expression). Introduction to nonlinear dynamics.
Prerequisites: EN.540.301 AND EN.540.306
Instructor(s): A. Goffin
Area: Engineering, Quantitative and Mathematical Sciences.

EN.540.414. Computational Protein Structure Prediction and Design. 3.00 Credits.
This class will introduce the fundamental concepts in protein structure, biophysics, optimization and informatics that have enabled the breakthroughs in computational structure prediction and design. Problems covered will include protein folding and docking, design of ligand-binding sites, design of turns and folds, design of protein interfaces. Class will consist of lectures and hands-on computer workshops. Students will learn to use molecular visualization tools and write programs with the PyRosetta protein structure software suite, including a computational project. Programming experience is recommended.
Instructor(s): J. Gray
Area: Engineering.

EN.540.415. Interfacial Science with Applications to Nanoscale Systems. 3.00 Credits.
Nanostructured materials intrinsically possess large surface area (interface area) to volume ratios. It is this large interfacial area that gives rise to many of the amazing properties and technologies associated with nanotechnology. In this class we will examine how the properties of surfaces, interfaces, and nanoscale features differ from their macroscopic behavior. We will compare and contrast fluid-fluid interfaces with solid-fluid and solid-solid interfaces, discussing fundamental interfacial physics and chemistry, as well as touching on state-of-the-art technologies.
Instructor(s): J. Frechette
Area: Engineering.

EN.540.418. Projects in the Design of a Chemical Car. 2.00 Credits.
Ready to put those concepts from class into practice? Members work over the course of the semester to design and build a chemically powered vehicle that will compete with other college teams at the American Institute of Chemical Engineers (AIChE) Regional Conference. In this course, the students work in small groups to design and construct the chassis along with chemically powered propulsion and break mechanisms within the constraints of the competition. In addition, students will give oral presentation, write reports, and do thorough safety analysis of their prototypes. Both semesters (EN.540.418 and EN.540.419) must be completed with passing grades to receive credit. This course may be repeated.
Instructor(s): L. Dahuron
Area: Engineering.

EN.540.419. Projects in the Design of a Chemical Car. 2.00 Credits.
Ready to put those concepts from class into practice? Members work over the course of the semester to design and build a chemically powered vehicle that will compete with other college teams at the American Institute of Chemical Engineers (AIChE) Regional Conference. In this course, the students work in small groups to design and construct the chassis along with chemically powered propulsion and break mechanisms within the constraints of the competition. In addition, students will give oral presentation, write reports, and do thorough safety analysis of their prototypes. Both semesters (EN.540.418 and EN.540.419) must be completed with passing grades to receive credit.
Instructor(s): L. Dahuron
Area: Engineering.

EN.540.421. Project in Design: Pharmacodynamics. 3.00 Credits.
This is continuation of 540.400 Project in Design: Pharmacokinetics. It is a design course in which the design projects will be to develop pharmacodynamic models of the human body that can be used to understand the physiologic effects of drugs on the body. The course (and software to be developed) will cover the spectrum of ways in which pharmaceuticals affect human physiology. The goal is to develop process models of the human body that will predict pharmaceutical effects as a function of time and organ (or cell) type that will work for a wide variety of pharmaceuticals including small molecules, biologics, and chemotherapy agents. This course is organized to replicate group project work as it is practiced in industry. The class is divided into groups (typically 3 or 4 students) and each group will meet separately each week with the instructor. Hence, there is no regularly scheduled class times; student groups sign up for weekly meeting times using Starfish in Blackboard. These meetings typically will be 90 minutes long. The expectations and assignments for this course are quite different from most other courses. There are no weekly lectures by the instructor. Rather, each week each group will make a PowerPoint presentation on the week’s topic or their progress on their project. Prerequisites 540.421 has a prerequisite of 540.400 Pharmacokinetics
Prerequisites: EN.540.400
Instructor(s): M. Donohue
Area: Engineering, Natural Sciences.
EN.540.422. Introduction to Polymeric Materials. 3.00 Credits.
Polymeric materials are ubiquitous in our society from Nature-made proteins and polysaccharides to synthetic plastics and fibers. Their applications range from day-to-day consumables to high performance materials used in critically demanding areas, such as aviation, aerospace and medical devices. The objective of this course is to provide an introductory overview on the field of polymer science and engineering. Students will learn some basic concepts in polymer synthesis, characterization, and processing. With the basic concepts established, industrial applications of polymeric materials will be discussed in two categories: structural polymers and functional polymers. Structural polymers, including plastics, fibers, rubbers, coatings, adhesives, and composites, will be discussed in terms of their structure, processing, and property relationship with a flavor of industrial relevant products and applications. Future trends in developing environmentally friendly polymers from renewable resources (“green polymer chemistry”) will also be covered. Lectures on functional polymers will be focused on their unique properties that are enabled by rational molecular design, controlled synthesis and processing (e.g. supramolecular assembly, and microfabrication). This class of specialty materials can find their use in high performance photovoltaics, batteries, membranes, and composites, and can also serve as "smart" materials for use in coatings, sensors, medical devices, and biomimicry.
Prerequisites: AS.030.205 or by instructor permission.
Instructor(s): H. Cui; K. Qi
Area: Engineering.

EN.540.428. Supramolecular Materials and Nanomedicine. 3.00 Credits.
Nanomedicine is a quickly growing area that exploits the novel chemical, physical, and biological properties of nanostructures and nanostructured materials for medical treatments. This course presents basic design principles of constructing nanomaterials for use in drug delivery, disease diagnosis and imaging, and tissue engineering. Three major topics will be discussed, including 1) nanocarriers for drug delivery that are formed through soft matter assembly (e.g., surfactants, lipids, block copolymers, DNA, polyelectrolytes, peptides), 2) inorganic nanostructures for disease diagnosis and imaging (e.g., nanoparticles of gold and silver, quantum dots and carbon nanotubes), and 3) supramolecular scaffolds for tissue engineering and regenerative medicine. Students are expected to learn the physical, chemical and biological properties of each nanomaterial, the underlying physics and chemistry of fabricating such material, as well as their advantages and potential issues when used for biomedical applications. This course will also provide students opportunities for case studies on commercialized nanomedicine products. After this class, students should gain a deeper understanding of current challenges in translating nanoscience and nanotechnology.
Instructor(s): H. Cui
Area: Engineering.

EN.540.436. Design: Pharmacokinetics/Dynamics. 3.00 Credits.
This is a one semester overview of year long course; students that want a comprehensive understanding of pharmacokinetics and pharmacodynamics should take the 2 courses EN.540.400 and EN.540.421. This course covers the principles of pharmacokinetics and pharmacodynamics. Computer models of pharmacokinetic and pharmacodynamics behavior will be developed and then used to design better drug delivery regimens and to analyze drug chemistry modifications. The course (and software to be developed) will cover the spectrum of factors affecting pharmaceutical effects on physiology including drug formulation, mode of dosing and dosing rate, metabolism and metabolic cascades, storage in fatty tissues, and diffusional limitations (such as in crossing the blood-brain barrier or diffusional differences between normal and cancerous tissues). This course is organized to replicate group project work as it is practiced in industry. The class is divided into groups (typically 3 or 4 students) and each group will meet separately each week with the instructor. Hence, there is no regularly scheduled class times; student groups sign up for weekly meeting times using Starfish in Blackboard. These meetings typically will be 90 minutes long. The expectations and assignments for this course are quite different from most other courses. There are no weekly lectures by the instructor. Rather, each week each group will make a PowerPoint presentation on the week's topic or their progress on their project. Prerequisites 540.436 has a prerequisite of 540.301 Kinetic Processes.
Prerequisites: EN.540.301
Instructor(s): M. Donohue
Area: Engineering, Natural Sciences.

EN.540.437. Application of Molecular Evolution to Biotechnology. 3.00 Credits.
One of the most promising strategies for successfully designing complex biomolecular functions is to exploit nature's principles of evolution. This course provides an overview of the basics of molecular evolution as well as its experimental implementation. Current research problems in evolution-based biomolecular engineering will be used to illustrate principles in the design of biomolecules (i.e. protein engineering, RNA/ DNA engineering), genetic circuits and complex biological systems including cells. Meets with EN.540.637
Prerequisites: AS.020.305 OR EN.580.221 OR permission of instructor.
Instructor(s): M. Ostermeier
Area: Engineering, Natural Sciences.

EN.540.438. Advanced Topics in Pharmacokinetics and Pharmacodynamics I. 3.00 Credits.
This course involves a semester-long project in pharmacodynamics. Topics are chosen in consultation with instructor.
Prerequisites: EN.540.400 AND EN.540.421 OR EN.540.436
Instructor(s): M. Donohue
Area: Engineering, Natural Sciences.

EN.540.439. Advanced Topics in Pharmacokinetics and Pharmacodynamics II. 3.00 Credits.
This course involves a semester-long project in pharmacodynamics. Topics are chosen in consultation with instructor.
Prerequisites: EN.540.421 OR EN.540.436
Instructor(s): M. Donohue
Area: Engineering, Natural Sciences.
EN.540.440. Micro/Nanotechnology: The Science and Engineering of Small Structures. 3.00 Credits.
The field of micro / nanotechnology has been gaining tremendous momentum as evidenced by an explosive rise in the number of publications, patents and commercial activities. This is an introductory course intended to expose students to the field as well as real world applications. Lectures will include an overview of scaling of material properties at the nanoscale, micro and nanofabrication methods and essential analytical tools of relevance to the field. All through the course, we will go over electronic, optical and biological applications of emerging micro and nanoscale devices and materials. Co-listed with EN.540.640.
Instructor(s): D. Gracias
Area: Engineering.

EN.540.452. Eukaryotic Cell Biotechnology. 2.00 Credits.
This course involves integrated lecture/discussion and laboratory components to review and participate in current and emerging topics involving eukaryotic biotechnology. Lectures and discussions review how fundamentals of biochemical kinetics and biomolecular engineering are connected to emerging problems in mammalian, algal, and stem cell biotechnology. Laboratory activities are connected to diverse scientific and technological fundamental topics on these same themes. Journal article and research presentations provide a context for laboratory activities with respect to emerging industrial applications for eukaryotic cell types. Research design and strategy is discussed in terms of its ultimate implementation in laboratory, pilot plant, and eventually manufacturing facilities. Methodologies implemented include cell and metabolic engineering for improving yields and production rates of proteins, cells, and tissues. Example topics include expansion of mammalian, stem cells, and algae for the production of membrane proteins, biologics, biofuels, and complex metabolites. Consent of instructor only.
Instructor(s): M. Betenbaugh
Area: Engineering.

EN.540.460. Polymer Physics. 3.00 Credits.
This course will cover the physics aspect of macromolecular/polymeric materials. We will discuss the molecular origin of key physical phenomena, such as chain relaxation, time temperature superposition, free volume, high strain rate behavior, phase transitions, flow and fracture as well as physical aging. Many real world examples will be used throughout the course. We will also discuss the recent advances in biopolymers, polymers for 3D printing, electro-spinning and polymers for tissue engineering. Students should have introductory training in Materials Science.
Prerequisites: AS.030.101 AND AS.171.101
Instructor(s): Z. Xia
Area: Engineering, Natural Sciences.

EN.540.462. Polymer Design and Bioconjugation. 3.00 Credits.
This course will focus on conventional to most recent inventions on polymer and conjugation chemistry. The weekly lectures will include the reaction strategy, designs and characterization techniques, structure-property relationship, simplistic approaches and versatile application oriented-solutions to Biomaterials and Tissue engineering related challenges. Students will learn how to devise creative strategies, process design and product development. Preliminary knowledge of organic chemistry is expected.
Instructor(s): A. Singh
Area: Engineering, Natural Sciences.

EN.540.490. Chemical Laboratory Safety. 1.00 Credit.
This course is meant to provide the student with a basic knowledge of laboratory safety; hazards, regulations, personal protective equipment, good laboratory practice, elementary toxicology, and engineering controls. It has been developed by the Department of Chemical and Biomolecular Engineering to assist with regulatory compliance, minimize hazards, and reduce the severity of any incidents that may occur in the department’s laboratories. The course is a prerequisite of EN.540.311/EN.540.313. It is required of all Chemical and Biomolecular Engineering undergraduates. In addition once per year a three-hour refresher seminar must be taken by all students involved in laboratory research.
Instructor(s): D. Kuespert
Area: Engineering.

EN.540.501. Independent Research. 3.00 Credits.
Instructor(s): Staff.

EN.540.502. Independent Study. 0.00 - 3.00 Credits.
Instructor(s): J. Frechette; K. Konstantopoulos; M. Donohue; M. Ostermeier; S. Gerecht.

EN.540.503. Independent Research. 0.00 - 3.00 Credits.

EN.540.509. Undergraduate Internship. 1.00 Credit.
Internship unpaid and approved by ChemBE faculty.

EN.540.511. Group Undergraduate Research. 1.00 - 3.00 Credits.
Students do individual projects (or in collaboration with faculty and/or graduate students) in areas basic to chemical engineering. This section has weekly research group meeting that students are expected to attend.
Instructor(s): Staff.

EN.540.513. Group Undergraduate Research. 1.00 - 3.00 Credits.
Students do individual projects (or in collaboration with faculty and/or graduate students) in areas basic to chemical engineering. This section has weekly research group meeting that students are expected to attend.
Instructor(s): Staff.

EN.540.522. Independent Research. 0.00 - 3.00 Credits.
Instructor(s): Staff.

EN.540.596. Summer Internship.
Summer internship paid and approved by ChemBE faculty.
Instructor(s): Staff.

EN.540.597. Research. 3.00 Credits.
Instructor(s): Staff.

EN.540.598. Summer Internship. 1.00 Credit.
Summer internship unpaid and approved by ChemBE faculty.
Instructor(s): Staff.

EN.540.599. Independent Study - Summer. 0.00 - 3.00 Credits.
Instructor(s): Staff.

EN.540.600. Chemical and Biomolecular Engineering Seminar. 1.00 Credit.
Lectures are presented on current subjects relevant to chemical engineering.
Instructor(s): C. Wang
Area: Engineering.

EN.540.601. Chemical and Biomolecular Engineering Seminar. 1.00 Credit.
Instructor(s): C. Wang
Area: Engineering.
EN.540.602. Metabolic Systems Biotechnology. 3.00 Credits.
The aim of this course is to provide a fundamental understanding of the quantitative principles and methodologies of systems biology and biochemical engineering of metabolism. This includes concepts of cellular growth, cellular stoichiometric models, metabolic networks, metabolite fluxes, and genome-scale metabolic models. Quantitative methods and systems biology approaches for metabolic flux analysis and metabolic control theory will be included as well as an analysis of biochemical systems and bioreactors including a consideration of mass transport processes.
Instructor(s): M. Betenbaugh
Area: Engineering.

EN.540.603. Colloids and Nanoparticles. 3.00 Credits.
Fundamental principles related to interactions, dynamics, and structure in colloidal, nanoparticle, and interfacial systems. Concepts covered include hydrodynamics, Brownian motion, diffusion, sedimentation, electrophoresis, colloidal and surface forces, polymeric forces, aggregation, deposition, and experimental methods. Modern topics related to colloids in nano-science and technology will be discussed throughout the course with frequent references to recent literature.
Meets with EN.540.403
Instructor(s): M. Bevan
Area: Engineering.

EN.540.605. The Design of Biomolecular Systems. 3.00 Credits.
This course covers new topics in the design of systems of biomolecules, both in vitro and in vivo, for decision making and control. The course will begin with an overview of how logical decision making and control with biomolecules as is achieved in biology and then proceed to consider various strategies of engineering similar systems. The focus of the course will be on systems level principles rather than the biochemistry of molecule design. Topics will include engineering of transcriptional networks and genetic control for logically programming of cells, the design of in vitro mimics of genetic controls, molecular computing and systems aspects of metabolic engineering. The course will also cover quantitative and computational techniques for the simulation and analysis of biomolecular systems. Co-listed with EN.540.405
Instructor(s): R. Schulman
Area: Engineering.

EN.540.606. Chemical & Biomolecular Separation. 3.00 Credits.
This course covers staged and continuous-contacting separations processes critical to the chemical and biochemical industries. Separations technologies studied include distillation, liquid-liquid extraction, gas absorption, membrane ultrafiltration, reverse osmosis, dialysis, adsorption, and chromatography. Particular emphasis is placed on the biochemical uses of these processes and consequently on how the treatment of these processes differs from the more traditional approach. Only with permission of the instructor. Co-listed with EN.540.306
Instructor(s): M. Betenbaugh.

EN.540.610. Chemical and Biomolecular Engineering Design: Spring. 3.00 Credits.
This course is one part of a two semester sequence. This course guides the student through the contrasting aspects of product design and of process design. Product design concerns the recognition of customer needs, the creation of suitable specifications, and the selection of best products to fulfill the needs. Process design concerns the quantitative description of processes which serve to produce many commodity chemicals, the estimation of process profitability, and the potential for profitability improvement through incremental changes in the process. Students work in small teams to complete a major project demonstrating their understanding of and proficiency in the primary objectives of the course. Students report several times both orally and in writing on their accomplishments. Laboratory tests can be performed and/or prototypes can be made. Note that both courses, 540.609 and 540.610 must be taken, the two courses can be started in any term.
Instructor(s): M. Donohue
Area: Engineering.

EN.540.614. Computational Protein Structure Prediction and Design. 3.00 Credits.
This class will introduce the fundamental concepts in protein structure, biophysics, optimization and informatics that have enabled the breakthroughs in computational structure prediction and design. Problems covered will include protein folding and docking, design of ligand-binding sites, design of turns and folds, design of protein interfaces. Class will consist of lectures and hands-on computer workshops. Students will learn to use molecular visualization tools and write programs with the PyRosetta protein structure software suite, including a computational project. Programming experience is recommended.
Instructor(s): J. Gray
Area: Engineering.

EN.540.615. Interfacial Science with Applications to Nanoscale Systems. 3.00 Credits.
Nanostructured materials intrinsically possess large surface area (interface area) to volume ratios. It is this large interfacial area that gives rise to many of the amazing properties and technologies associated with nanotechnology. In this class we will examine how the properties of surfaces, interfaces, and nanoscale features differ from their macroscopic behavior. We will compare and contrast fluid-fluid interfaces with solid-fluid and solid-solid interfaces, discussing fundamental interfacial physics and chemistry, as well as touching on state-of-the-art technologies.
Instructor(s): J. Frechette
Area: Engineering.
EN.540.619. Projects in Design: Alternative Energy. 3.00 Credits.
This course is a group design project (i.e. not a lecture course) to use chemical process simulation tools to model a real-world, alternative-energy process of interest to Chemical and Biomolecular Engineers. The goal of the project will be to develop a process model that is sufficiently complete and robust that it can be used to understand the important factors in the process design and/or operation. This design project is focused on the role alternative energy will play in our country's future. About a third of the course will be devoted to understanding the role of energy and alternative energy in the US and world economies. The remainder of the course will be devoted to a technical and economic analysis of an alternative energy technology. This course is organized to replicate group project work as it is practiced in industry. The class is divided into groups (typically 3 or 4 students) and each group will meet separately each week with the instructor. Hence, there is no regularly scheduled class times; student groups sign up for weekly meeting times using Starfish in Blackboard. These meetings typically will be 60 minutes long. The expectations and assignments for this course are quite different from most other courses. There are no weekly lectures by the instructor. Rather, each week each group will make a PowerPoint presentation on the week's topic or their progress on their project. Graduate level. Meets with EN.540.401
Prerequisites: EN.540.202 AND EN.540.203 AND EN.540.301 AND EN.540.305
Instructor(s): M. Donohue
Area: Engineering.

EN.540.621. Project in Design: Pharmacodynamics. 3.00 Credits.
This course covers pharmacodynamics, i.e. how pharmaceuticals affect biological processes. The course will use MatLab to aid in the design of new drug formulations.
Instructor(s): M. Donohue
Area: Engineering, Natural Sciences.

EN.540.622. Introduction to Polymeric Materials. 3.00 Credits.
Polymeric materials are ubiquitous in our society from Nature-made proteins and polysaccharides to synthetic plastics and fibers. Their applications range from day-to-day consumables to high performance materials used in critically demanding areas, such as aviation, aerospace and medical devices. The objective of this course is to provide an introductory overview on the field of polymer science and engineering. Students will learn some basic concepts in polymer synthesis, characterization, and processing. With the basic concepts established, industrial applications of polymeric materials will be discussed in two categories: structural polymers and functional polymers. Structural polymers, including plastics, fibers, rubbers, coatings, adhesives, and composites, will be discussed in terms of their structure, processing, and property relationship with a flavor of industrial relevant products and applications. Future trends in developing environmentally friendly polymers from renewable resources ("green polymer chemistry") will also be covered. Lectures on functional polymers will be focused on their unique properties that are enabled by rational molecular design, controlled synthesis and processing (e.g. supramolecular assembly, and microfabrication). This class of specialty materials can find their use in high performance photovoltaics, batteries, membranes, and composites, and can also serve as "smart" materials for use in coatings, sensors, medical devices, and biomimicry.
Instructor(s): H. Cui; K. Qi
Area: Engineering.

EN.540.628. Supramolecular Materials and Nanomedicine. 3.00 Credits.
Nanomedicine is a quickly growing area that exploits the novel chemical, physical, and biological properties of nanostructures and nanostructured materials for medical treatments. This course presents basic design principles of constructing nanomaterials for use in drug delivery, disease diagnosis and imaging, and tissue engineering. Three major topics will be discussed, including 1) nanocarriers for drug delivery that are formed through soft matter assembly (e.g., surfactants, lipids, block copolymers, DNA, polyelectrolytes, peptides), 2) inorganic nanostructures for disease diagnosis and imaging (e.g., nanoparticles of gold and silver, quantum dots and carbon nanotubes), and 3) supramolecular scaffolds for tissue engineering and regenerative medicine. Students are expected to learn the physical, chemical and biological properties of each nanomaterial, the underlying physics and chemistry of fabricating such material, as well as their advantages and potential issues when used for biomedical applications. This course will also provide students opportunities for case studies on commercialized nanomedicine products. After this class, students should gain a deeper understanding of current challenges in translating nanoscience and nanotechnology into medical therapies.
Instructor(s): H. Cui
Area: Engineering, Natural Sciences.

EN.540.630. Thermodynamics, Statistical Mechanics, and Kinetics. 3.00 Credits.
In this course we will aim for understanding the thermodynamics of chemical and bio-molecular systems. We will first review classical, macroscopic thermodynamics covering concepts such as equilibrium, stability and the role of thermodynamic potentials. Our goal will be to gain a feel for the generality of thermodynamics. Statistical mechanics provides a link between the mechanics of atoms and macroscopic thermodynamics. We will introduce this branch in two distinct ways: 1) following standard methods of developing concepts such as ensembles and partition functions, and 2) where we will treat the basis of statistical mechanics as a problem in inference. With this foundation, we will consider concepts relevant to understanding the liquid state. Chemical transformations in a liquid are of importance in much of chemistry and biology; quasi-chemical generalizations of the potential distribution theorem will be introduced to present these ideas. We hope to give an overview of modern developments relating equilibrium work to non-equilibrium work, as these are of increasing importance in studies on single molecule systems. Registration by instructor permission only.
Instructor(s): C. Wang
Area: Engineering.
EN.540.632. Project in Design: Pharmacokinetics. 3.00 Credits.
This is a design course in which the design projects will be to
develop pharmacokinetic models of the human body that can be
used to understand the temporal distribution, spatial distribution and
bioavailability of pharmaceutical drugs. The course (and software to be
developed) will cover the spectrum of factors affecting pharmaceutical
bioavailability including drug formulation, mode of dosing and dosing
rate, metabolism and metabolic cascades, storage in fatty tissues,
and diffusional limitations (such as in crossing the blood-brain barrier
or diffusional differences between normal and cancerous cells). The
goal is to develop process models of the human body that will predict
pharmacokinetic bioavailability as a function of time and organ (or cell)
type that will work for a wide variety of pharmaceuticals including small
molecules, biologics, and chemotherapy agents. This course is organized
to replicate group project work as it is practiced in industry. The class
is divided into groups (typically 3 or 4 students) and each group will meet
separately each week with the instructor. Hence, there is no regularly
scheduled class times; student groups sign up for weekly meeting
times using Starfish in Blackboard. These meetings typically will be 90
minute long. The expectations and assignments for this course are
quite different from most other courses. There are no weekly lectures
by the instructor. Rather, each week each group will make a PowerPoint
presentation on the week’s topic or their progress on their project.
Instructor(s): M. Donohue
Area: Engineering, Natural Sciences.

EN.540.636. Design: Pharmacokinetics/Dynamics. 3.00 Credits.
One semester overview of year long course, students that want
a comprehensive understanding of pharmacokinetics and
pharmacodynamics should take the 2 all 540.632 Projects in Design: Pharmacokinetics Spring 540.621 Projects in Design:
Pharmacodynamics. This course covers the principles of
pharmacokinetics and pharmacodynamics. Computer models
of pharmacokinetic and pharmacodynamics behavior will be developed
and then used to design better drug delivery regimens and to analyze
drug chemistry modifications.
Instructor(s): M. Donohue
Area: Engineering, Natural Sciences.

EN.540.637. Application of Molecular Evolution to Biotechnology. 3.00 Credits.
One of the most promising strategies for successfully designing complex
biomolecular functions is to exploit nature’s principles of evolution.
This course provides an overview of the basics of molecular evolution
as well as its experimental implementation. Current research problems
in evolution-based biomolecular engineering will be used to illustrate
principles in the design of biomolecules (i.e. protein engineering, RNA/
DNA engineering), genetic circuits and complex biological systems
including cells. A course in Biochemistry or Molecular Biology is
recommended Meets with EN.540.437

EN.540.638. Advanced Topics in Pharmacokinetics and Pharmacodynamics I. 3.00 Credits.
This course involves a semester-long project in pharmacodynamics.
Topics are chosen in consultation with instructor.
Prerequisites: EN.540.400 AND EN.540.421 OR EN.540.436
Instructor(s): M. Donohue
Area: Engineering, Natural Sciences.

EN.540.639. Advanced Topics in Pharmacokinetics and Pharmacodynamics II. 3.00 Credits.
This course involves a semester-long project in pharmacodynamics.
Topics are chosen in consultation with instructor.
Prerequisites: EN.540.400 AND EN.540.421 OR EN.540.436
Instructor(s): M. Donohue
Area: Engineering, Natural Sciences.

EN.540.640. Polymer Physics.
This course reviews current research problems in biomolecular design
both from computational and experimental approaches. Current methods
in structure prediction (folding, docking and design) will illustrate
fundamental concepts in protein structure, biophysics, and optimization.
Current research problems in evolution-based biomolecular engineering
will illustrate principles in the design of biomolecules (i.e. protein
engineering, RNA/DNA engineering), metabolic pathways, signaling
pathways, genetic circuits and complex biological systems including
cells. Students should have introductory training in Materials Science.
Instructor(s): Z. Gagnon
Area: Engineering, Natural Sciences.

EN.540.641. Nanobioengineering Laboratory. 3.00 Credits.
Students explore different experimental methodologies in
Nanobioengineering. Students work in small teams to complete one or
more major projects expanding their understanding and applying their
theoretical knowledge to practical problems. The course will employ a
variety of experimental methods, from material synthesis to biological
applications. Students report several times either orally and in writing
on their accomplishments. Project meetings may be held outside of the
appointed class time. Graduate students only
Instructor(s): A. Goffin; J. Frechette.

EN.540.650. Micro/Nanotechnology: The Science and Engineering of Small Structures. 3.00 Credits.
The field of micro / nanotechnology has been gaining tremendous
momentum as evidenced by an explosive rise in the number of
publications, patents and commercial activities. This is an introductory
course intended to expose students to the field as well as real world
applications. Lectures will include an overview of scaling of material
properties at the nanoscale, micro and nanofabrication methods and
essential analytical tools of relevance to the field. All through the course,
we will go over electronic, optical and biological applications of emerging
micro and nanoscale devices and materials. Co-listed with EN.540.440.
Instructor(s): D. Gracias.

EN.540.652. Advanced Transport Phenomena. 3.00 Credits.
It is the goal of this course to move the graduate student (and advanced
undergraduate student) from the introductory level of transport
phenomena (undergraduate) to a level that will allow them to be effective
in researching transport-related topics in a variety of biomedical,
chemical and biochemical engineering areas. The basic equations that
govern mass, momentum, and energy transport will be derived and used
to solve problems that demonstrate the physical insight necessary to
apply these equations to original situations. Some topics include solution
techniques utilizing expansions of harmonic functions, singularity
solutions, lubrication theory for flow in confined geometries, boundary
layer theory, Stokes flow, forced convection, buoyancy-driven flow, Taylor-
Aris dispersion, and reaction-diffusion.
Instructor(s): Z. Gagnon
Area: Engineering, Natural Sciences.

EN.540.660. Polymer Physics.
This course reviews current research problems in biomolecular design
both from computational and experimental approaches. Current methods
in structure prediction (folding, docking and design) will illustrate
fundamental concepts in protein structure, biophysics, and optimization.
Current research problems in evolution-based biomolecular engineering
will illustrate principles in the design of biomolecules (i.e. protein

Instructor(s): A. Singh
Area: Engineering, Natural Sciences.

EN.540.671. Advanced Thermodynamics and Kinetics in Practice. 3.00 Credits.
In this graduate level course, we will cover important principles in thermodynamics and kinetics along with examples relevant to engineering practice. After a short review of the first and second law of thermodynamics, we will move on to their application in engines and refrigeration. We will discuss the thermodynamic properties of systems consisting of pure species and mixtures, and address phase equilibria. With the key thermodynamic concepts in place, we will discuss topics in kinetics, including the fundamentals of reaction rates, rate laws, multiple reactions and non-elementary reaction kinetics. Finally, we will address how reactor type and properties, transport limitations, and phase equilibria influence reaction rate.
Instructor(s): A. Goffin; C. Pereira

EN.540.673. Advanced Chemical Reaction Engineering in Practice. 3.00 Credits.
Chemical reaction engineering deals with the analysis on data and the design of equipment in which reactions occur. Reactors may contain one or more phases and be used to conduct chemical or biochemical transformations. The course will cover the fundamental aspects of kinetics, data acquisition, data interpretation, heterogeneous catalysis and heat and mass transfer for each type of reactor. Special emphasis will be placed on the practical application of reaction engineering in the petrochemical, chemical, biochemical and materials industries. The course will make student aware of the needs and opportunities for chemical reaction engineering in industry.
Instructor(s): C. Pereira
Writing Intensive.

EN.540.690. Chemical and Biomolecular Engineering Design. 3.00 Credits.
This course is one part of a two semester sequence in Chemical and Biomolecular Engineering Product Design. It is intended for students in the ChemBE master’s program. This course guides the student through the complex process of new product design. Product design concerns the recognition of customer needs, the creation of suitable specifications, and the selection of best products to fulfill needs. Students work in small teams to develop a new product idea, design the product and then iterate on prototype development. Students report several times both orally and in writing on their accomplishments. Time is allowed so that laboratory tests can be performed and/or prototypes can be built. Note that generally both courses, 540.609 and 540.610 must be taken to complete the prototype development. The two courses can be started in any term.

Cross Listed Courses
Institute for NanoBio Technology
EN.670.619. Fundamental Physics and Chemistry of Nanomaterials. 3.00 Credits.
This course will cover the physics and chemistry relevant to the design, synthesis, and characterization of nanoparticles. Topics include nanoparticle synthesis, functionalization, surface engineering, and applications in diagnostics and therapeutics. The properties of semiconductor quantum dots and magnetic nanoparticles will be reviewed along with techniques for nanoparticle manipulation, particle tracking, and bio-microscopy. Patterning tools including soft lithography, optical lithography, e-beam lithography, and template lithography will be discussed. Electron and scanning probe microscopy will be reviewed. Cross-listed with Materials Science & Engineering and Chemical & Biomolecular Engineering.
Instructor(s): Staff.

Civil Engineering
http://www.civil.jhu.edu/

Civil engineers apply sophisticated analysis and design techniques to advance the needs of society for shelter, infrastructure, and a safe environment. Graduates are employed in the fields of structural analysis and design, soil mechanics and foundation design, environmental engineering and policy, materials engineering, and coastal and ocean engineering, and increasingly are taking on far-reaching management roles in infrastructure, hazard mitigation, sustainability, and technical roles in the planning, design, and construction of large-scale engineered systems. In addition, a civil engineering degree provides exposure to broad societal challenges and the logical thinking necessary for pursuing careers in other professional fields, such as law, business, and medicine.

The Department of Civil Engineering offers programs at the undergraduate, graduate, and postdoctoral levels. Civil Engineering at Hopkins offers a unique balance centered in mechanics fundamentals, and enriched by state-of-the-art tools in modeling, simulation, and physical experimentation. The small size of the CE Department fosters a collegial, close-knit relationship between the students, staff, and faculty, while our partnerships with other Johns Hopkins departments provide a wide range of collaborative opportunities that span the larger disciplines of fluids, systems, structures, and materials. A wide range of research opportunities distinguishes the program. Students have participated in projects on structural reliability, earthquake resistance of structures, testing and analysis of historic bridges, computational design of materials, failure of brittle materials, cold-formed steel members and their connections, and coastal and ocean engineering to name a few. A five-year bachelor’s/master’s degree program is also offered. Graduates of Johns Hopkins University have traditionally risen to leadership roles in education, research, industry, and government.

The department sponsors an undergraduate and graduate seminar series, as well as the Richard J. Carroll endowed lectureship; all of which are designed to bring prominent civil engineers to campus to speak with students and faculty.

Facilities

The Department’s teaching and research labs are located in Latrobe Hall. Teaching laboratories include a modern multi-use facility for
The Department of Civil Engineering offers an undergraduate program that strives to educate intellectual leaders of the profession by instilling in them a fundamental understanding of the mathematical and physical principles that underlie civil engineering science, an appreciation for the challenges of creative engineering design, and a sense of responsibility for professional service. Civil Engineering is a broad field with many subdisciplines. The Civil Engineering curriculum exposes students to the fields of structural engineering, engineering mechanics, systems engineering, environmental engineering, water resources, and geotechnical engineering.

The program has as its objectives that within a few years our graduates attain:

1. an advanced degree in engineering or
   a. required experience toward professional licensure as an engineer, or
   b. an advanced degree in a field other than engineering, or
   c. a position within an organization that broadly supports the goals of civil engineering; and
   d. a position or degree that values adaptability and innovation in their work.

Upon completion of the B.S. in civil engineering, students will demonstrate:

- an ability to apply knowledge of mathematics, science, and engineering
- an ability to design and conduct experiments, as well as to analyze and interpret data
- an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- an ability to function on multidisciplinary teams
- an ability to identify, formulate, and solve engineering problems
- an understanding of professional and ethical responsibility
- an ability to communicate effectively
- the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
- a recognition of the need for, and an ability to engage in lifelong learning
- a knowledge of contemporary issues
- an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice

The program has been accredited by ABET, the Accreditation Board for Engineering and Technology, since 1936.

**Requirements for the B.S. Degree**

The B.S. degree in civil engineering requires 128 credits. A brief summary of the requirements are listed below. For more detailed information students should look at the Department of Civil Engineering website (http://engineering.jhu.edu/civil/undergraduate-studies). Each student is assigned a faculty advisor who provides the guidance needed to meet these requirements.

Note that no course listed as a requirement may be taken as Satisfactory/Unsatisfactory (S/U) and a maximum of 3 credits from the Humanities and Social Science (H/S) requirements may be taken S/U. Technical electives may be taken S/U only with the approval of the advisor. No more than two grades of D in the required engineering and technical electives may be counted.

Technical Electives (9 credits)

Students may explore one or more of the civil technical areas (engineering mechanics, environmental engineering, geotechnical engineering, structural engineering, systems engineering and water resources) in greater depth through technical electives.***

Total Credits 146

* Basic Sciences (as defined by ABET) include courses in or related to astronomy, biology, climatology, ecology, geology, meteorology, and oceanography. Generally Natural Science (N) courses from the Departments of Earth & Planetary Sciences and Biology are acceptable. Faculty advisors can provide more guidance when needed.

** Classes in the Humanities and Social and Behavioral Sciences provide students with an appreciation for societal concerns and humanistic issues, tools that are essential for a professional who serves the public good. One writing-intensive requirement must be fulfilled by the H/S electives. This can either be done through AS.060.113/AS.060.114 Expository Writing or a 300-level, Writing-Intensive, H or S elective course.

*** Technical electives (all required to be at or above the 300-level) are designed to provide students with greater depth in one or more of the civil engineering technical areas above. To that end, a minimum of one 3-credit technical elective must be in a civil engineering technical area. One 3-credit technical elective must have an E distribution credit, but may be a course offered outside of the traditional civil engineering areas, and one 3-credit technical elective may come from any (Q), (N), or (E) course. While the Department of Civil Engineering allows some flexibility in students’ choice of technical electives, we advise that to the extent possible, students select their technical electives from within the department’s offerings.

Minor in Civil Engineering

This program is available to nondepartmental majors only who would like an overview of the principles of civil engineering. In addition to the prerequisite courses of AS.171.101 General Physics:Physical Science Major I for Physical Science Majors, AS.110.108 Calculus I, and AS.110.109 Calculus II (For Physical Sciences and Engineering), 18 credits are required for the minor, including 12 credits from fundamental civil engineering courses and 6 credits from a two-course sequence in one of three civil technical areas (geotechnical engineering, structural engineering, or systems engineering). No D grades can be counted toward the minor.

Total Credits 27

Financial Aid

Scholarships and other forms of financial assistance for undergraduates are described under Admissions and Finances (p. 9). In addition, some undergraduate students are employed by departmental faculty to provide assistance on research projects.

Combined Bachelor’s/Master’s Programs

The Department of Civil Engineering offers combined bachelor's/master's degrees. One program combines a B.S. in Civil Engineering with a Master of Science in Engineering (M.S.E.) in Civil Engineering. For students who are admitted to this program, the two degrees typically require five years total to complete. The other option combines a B.S. in Civil Engineering with a Master of Science in Engineering Management (M.S.E.M.) (http://mse.mse.mse.engineering.jhu.edu). Formal application through the M.S.E.M. Department (http://mse.mse.engineering.jhu.edu) is required. Students enrolled in a Combined B.S./M.S.E.M. program are awarded a Dean's Master's Fellowship, covering half their tuition, after they have completed eight semesters of undergraduate study. More information about these programs can be found at http://engineering.jhu.edu/academics/combined-bachelors-masters/.

Civil engineering today is a dynamic, complex, and technologically sophisticated field. Powerful computational methods and high-strength materials offer new opportunities and new challenges. The Department of Civil Engineering offers a graduate program that is based primarily in mechanics of materials, systems, and structures. Fundamental to these areas is research in solid, structural, and stochastic mechanics. The
graduate program is designed to instill in the student the fundamental theoretical concepts of mechanics as well as practical knowledge of modern materials, systems, and structural engineering. To be admitted to the program, students are expected to have graduated with an outstanding record in an appropriate undergraduate program.

Requirements for the M.S.E. Degree
After admission to the M.S.E. program, students must successfully complete one of two requirements in order to obtain the M.S.E. degree: either the 10 courses (course-only) option, or the 8 courses and a final M.S.E. Essay and Defense option. All courses must be 300-level or above, with a maximum of two (2) courses at the 300-level. With approval from the academic advisor, one of the 10 courses required for the M.S.E. degree may be a course at the 300-level or above from the Center for Leadership Education. Academic advisors, in consultation with the faculty in the Civil Engineering Department, will determine whether the 8 or 10 courses leading to this degree are appropriate and if they have been completed satisfactorily. No more than one course with a grade lower than a B- may be counted toward the course requirement. Typically the M.S.E. degree requires one to two years to complete, if the student is making steady progress. In some cases, the degree may take longer.

The M.S.E. Essay must be approved by the student’s faculty advisor and one reader, who will typically be a full-time Johns Hopkins Civil Engineering faculty member. Any external reader must be approved by the Chair of the Civil Engineering Department. M.S.E. students are expected to give a presentation to the department regarding their thesis research. This requirement can be waived in extraordinary circumstances with approval of the Department Chair. Click here for the Master’s Essay Readers’ Letter.

Typically limited financial support is available for M.S.E. students. Funding decisions will be made on an individual basis by the student’s research advisor.

Requirements for the Ph.D. Degree
There are a number of Whiting School of Engineering policies related to Ph.D. students, which are listed at http://engineering.jhu.edu/graduate-policies. Ph.D. student requirements for the Civil Engineering Department include:

- 8 Courses, at the 600- or 700-level, completed with a grade of B or better
- Department Qualifying Examination (DQE)
- Annual Meetings and Reports to Ph.D. Advisory Committee
- Graduate Board Oral Examination (GBO)
- Responsible Conduct of Research Course (AS.360.625) and Academic Ethics (EN.500.603)
- Final Ph.D. Thesis Defense
- Responsible Conduct of Research Course (AS.360.625)
- Academic Ethics Course (EN.500.603)
- First semester coursework and teaching assistant/research assistant duties where assigned
- Determination of permanent advisor in first semester

Year 1 Intersession:
- Intersem research
- Oral Department Qualifying Exam (DQE) (completed in early January)
- Annual review completed by January 31

Year 1 Spring:
- Second semester coursework and teaching assistant/research assistant duties where assigned
- Advisor and student identify Ph.D. Thesis Committee and student meets with members individually

Year 1 Summer:
- Research

Year 2 Fall:
- Research
- Coursework (typically finishing up this semester)
- Ph.D. Thesis Committee Meeting required prior to end of Fall semester

Year 2 Intersession:
- Research
- Annual review completed by January 31

Year 2 Spring:
- Research
- Coursework (if necessary)

Year 2 Summer:
- Research

Year 3:
- Research (Year-round)
- Ph.D. Thesis Committee Meeting
- Annual review completed by January 31
- GBO: Exact timing determined by advisor in consultation with the student

Year 4 and Beyond:
- Research (Year-round)
- Ph.D. Thesis Committee Meeting every Fall prior to the end of the semester
- Annual review completed by January 31

Final semester:
- Thesis Defense
- Language/Communication Testing and Placement
All Ph.D. students who do not have a prior degree from an English speaking university must take an English Language Assessment. If it is determined at the assessment that the student needs further English language instruction, he/she will be required to take 370.600 or equivalent.

Determination of Permanent Advisor

In some cases students are admitted to work with a specific advisor, in which case the permanent advisor is the faculty member listed in the admissions letter. In most instances students are not assigned a specific advisor at the time of the admission letter, in which case the Director of Graduate Studies will advise students on their coursework for the first semester.

During September and October of the first semester, these students should meet with the faculty, discuss their research interests, and learn more about the research being conducted by the faculty. By the beginning of November the student must state his/her preference(s) for a permanent advisor. The faculty will meet and determine the final advisor placements prior to the end of the semester. Every effort will be made to match students with their requested advisors, but financial constraints may not always make this possible.

Intersession

Intersession (the period between Fall and Spring terms) is an important time for research. Intersession is not a vacation. Any leave taken during intersession is subject to the policies outlined in the Graduate Student Assistant Leave Guidelines (http://engineering.jhu.edu/include/content/pdf/RA_TA%20leave%20guidelines%20(FINAL).pdf). Release time (if any) granted in that period must be approved by the advisor.

Department Qualifying Examination (DQE)

The DQE is a comprehensive oral exam designed to determine whether or not the student is properly prepared to continue in the Ph.D. program. All first-year students studying for a Ph.D. take the DQE after their first semester of enrollment, typically in early January of the first year. This exam tests whether the student is prepared to continue in their Ph.D. studies based on their grasp of basic undergraduate-level and introductory graduate-level Civil Engineering knowledge. Possible outcomes of the exam are Pass or Fail. Only an outcome of Pass will allow the student to continue in the Ph.D. program. If the outcome of the exam is Fail, the student may pursue, with approval from the chair, a M.S.E. degree. Financial support for such a student during this period is not typical.

Annual Reviews

Reviews of all Ph.D. students in Civil Engineering must be performed annually prior to January 31, which is consistent with the WSE policy found on the WSE Academic Policies & Procedures (http://engineering.jhu.edu/graduate-studies/academic-policies-procedures-graduate) webpage. The review process follows the format given in the annual review form. The completed form must be submitted to the Academic Program Coordinator by January 31. If this annual review is not completed by this date, the student’s funding may be jeopardized.

Ph.D. Thesis Committee

Every Ph.D. student must have a Thesis Committee of at least 3 faculty members. The Advisor, in consultation with his/her Student, selects the makeup of the committee, and this information is recorded in the student’s file. The student is expected to meet with this committee a minimum of once per year. The thesis committee also typically serves as a subset of the actual GBO examination committee and forms the final Ph.D. defense committee. This committee must consist of a minimum of 2 full-time faculty of the Civil Engineering Department.

Ph.D. Thesis Committee Meeting

Thesis Committee meetings are expected to occur annually in the fall from Year 2 until the Ph.D. final defense. The student is required to submit a report to the committee members at least one week prior to the meeting. A typical report would include a literature review of the field relevant to the student’s research, a progress report of research performed to date, goals for research in the coming year, and a basic timeline of expected activities in the remaining years of the Ph.D. degree. The committee meeting should consist of a presentation of key aspects of the report, along with discussion and feedback from the Thesis Committee. In certain cases, particularly in later years of the Ph.D. degree, it may be deemed acceptable for the student to meet individually with members of the committee in lieu of the group meeting; however, such an exception can only be granted with permission of the Advisor and all committee members. Once the Thesis Committee meeting is completed, the Ph.D. Thesis Committee Meeting Form must be signed by the members of the committee and submitted to the Department.

Responsible Conduct of Research

Every Ph.D. student of the Whiting School of Engineering is required to take a Responsible Conduct of Research course (details on the requirement can be found on the WSE Policy on the Responsible Conduct of Research Training (http://engineering.jhu.edu/wse-research/resources-policies-forms/responsible-conduct-of-research) webpage). For Civil Engineering students, this should be completed in the Fall or Spring of the first year of studies. Students who do not complete this requirement prior to Fall of their third year of studies may put their funding in jeopardy.

GBO Examination

The University maintains complete guidelines for the Graduate Board Orals here. (http://homewoodgrad.jhu.edu/academics/graduate-board/degree-candidacy) The GBO committee consists of 5 members, (3 in Department, 2 outside) with 2 alternates (1 in Department, 1 outside) and is selected by the Chair of the Department and the Director of Graduate Studies, who will consult with the student’s advisor. When a Ph.D. student and advisor feel that the student is ready to take the GBO, the advisor should consult with the Director of Graduate Studies and the Civil Engineering Academic Program Coordinator to initiate the process of scheduling the exam. Both students and advisors should be aware that 4-6 weeks advance notice is needed in order to allow for scheduling the exam with the faculty and with the Graduate Board.

The exact format of each GBO examination is specified by the individual Chair of the GBO committee. The student may be requested to provide to the GBO committee prior to the examination some written document describing his or her research. In such cases, the latest annual Thesis Committee report and/or a recent conference or journal publication may suffice. It is typical that the student would be asked to provide a brief presentation of research at the beginning of the examination (no more than 10 slides, no longer than 10 minutes). The examination questions may be on any topic of the committee members’ choosing, but many of the questions relate to the student’s coursework and research. At the conclusion of the examination, the GBO committee may recommend pass, conditional, pass, fail with re-examination, fail (final) as detailed here (http://homewoodgrad.jhu.edu/academics/graduate-board/degree-candidacy).

M.S.E. Degree for Ph.D. Students
Ph.D. students may petition for a M.S.E. degree following their GBO Examination. If the student passes the GBO, he/she may file for a non-terminal M.S.E. degree. If the student fails (final) the GBO, he/she may petition for a terminal M.S.E. degree. In all instances the students must have satisfied the M.S.E. degree course requirements as detailed here (http://engineering.jhu.edu/civil/graduate-studies/mse-requirements).

In instances where the research is highly interdepartmental, the student, with permission of the advisor, may request that the M.S.E. degree be awarded by another department in the Whiting School of Engineering. In such cases, the student must have satisfied M.S.E. degree requirements and receive the approval of, and an accepted application to, the awarding Department, as well as satisfied M.S.E. degree requirements of the Civil Engineering Department and receive approval from the Civil Engineering Chair. In all cases, the awarding of any JHU M.S.E. degree to a Civil Engineering Ph.D. student may only occur after the student has completed the GBO exam.

**Thesis Defense**
The Thesis Defense is the final examination before conferral of the Ph.D. degree. The student defends his/her thesis in a seminar setting that is open to the public. The seminar is followed by a comprehensive examination of the student, focused on the thesis research.

**Ethics:** The Department of Civil Engineering is dedicated to upholding the highest standards of academic and research integrity. Plagiarism, and other forms of unethical conduct, are not tolerated. Students are referred to the Graduate Student Resources (http://engineering.jhu.edu/graduate-studies/full-time-graduate-student-resources) webpage of the Whiting School of Engineering for these and other policies related to graduate students.

**Defense Committee:** A committee of at least 3 members administers the exam (typically the Ph.D. Thesis Committee). The Advisor, in consultation with the Department, selects the committee members, at least 2 of whom must be full-time faculty of the Civil Engineering Department. This should be done at the beginning of the semester in which the student plans to graduate. It is the student’s responsibility to keep the committee members apprised of all deadline dates.

**Scheduling and Pre-Defense:** The defense should be scheduled at least 3 weeks in advance through the Department’s Academic Coordinator. A complete written dissertation should be given to the committee at least 14 days in advance of the defense. Failure to meet this 2 week deadline will result in rescheduling the Ph.D. defense. The date and place of the defense, along with the thesis abstract, should be circulated 5-7 days prior to the defense.

**Post-Defense:** Completion of the Ph.D. requirements typically takes 4-8 weeks after a successful defense examination. All data and source codes related to the thesis should be properly archived according to requirements set forth by the Advisor. Any changes or additions specifically requested by the reviewers before or during the defense seminar should be incorporated into the thesis in consultation with the Advisor. A final copy of the thesis must then be made available to the reviewers for inspection no less than 48 hours before the deadline date for filing set by the Graduate Board. Upon approval, the student should submit a copy of the thesis and the Department’s “Certification for Advanced Degrees” form to the Department Administrative Assistant. In return, the Department will send to the Graduate Board Office or the Whiting School of Engineering Graduate Committee the “Certification of Completion of Department Requirements for an Advanced Degree,” signed by the Department Chairman.

**Additional Information:** It is the responsibility of the student to be aware of requirements and deadlines. It is suggested that this information be obtained before the start of the semester of intended graduation. All students should plan the timing of the final defense accordingly (making sure to account for the 4-8 week period following the defense) to satisfy any deadlines related to upcoming graduation or exhaustion of funding.

University requirements for the thesis can be obtained from the Graduate Board (http://homewoodgrad.jhu.edu/academics/graduate-board/degree-candidacy) website. Information sheets entitled “Dissertation Requirements” are available to student and contain details on the form, cost and timing for submitting the thesis. Doctoral Theses must be submitted to both the ETD (Library) and the Department of Civil Engineering. The deadline date for filing is set by the Graduate Board Office. This date also applies to filing with the Whiting School Graduate Committee and with the Department. A receipt of ETD approval must be sent to the department, Graduate Board/WSE Office of Academic Affairs (for M.S.E. students).

**Financial Aid**
A limited amount of financial assistance is available to Civil Engineering graduate students is available in the form of teaching assistantships, research assistantships, and partial or complete tuition fellowships, including fellowships from the Joseph Meyerhoff Scholarship Fund, the Richard D. Hickman Endowment, and the Hoomes Rich Graduate Fellowship. Fellowships and Assistantships are awarded on a competitive basis and continued support is subject to the student’s performance and future availability of research or teaching assistantship funds.

For current faculty and contact information go to http://engineering.jhu.edu/civil/faculty/

**Faculty**

**Chair**
Lori Graham-Brady
Professor

**Professors**
Lori Graham-Brady
Professor: probabilistic mechanics, finite elements, stochastic modeling of materials.

Somnath Ghosh
Professor and Michael G. Callas Chair in Civil Engineering: multiscale mechanics, finite elements, material fatigue modeling.

Takeru Igusa
Professor: structural dynamics, earthquake engineering, analysis of uncertainties.

Benjamin Schafer
Professor, Swinney Family Faculty Scholar: structural stability, computational mechanics, experimental methods, thin-walled structures.

**Associate Professor**
James K. Guest
Associate Professor: topology optimization, structural and material design optimization, computational mechanics, architected materials.

**Assistant Professors**
Stavros Gaitanaros
Assistant Professor: design and mechanics of cellular materials at the macro- and nanoscale.

Judith Mitrani-Reiser
Assistant Professor: performance-based engineering, structural dynamics, earthquake engineering, multi-hazard loss estimation.

Michael D. Shields
Assistant Professor: stochastic simulation, uncertainty quantification, computational stochastic mechanics.

Sauleh Siddiqui
Assistant Professor: optimization, equilibrium problems, systems in energy and environmental markets, transportation, and public health.

Professor Emeritus
Robert A. Dalrymple
Professor and Willard and Lillian Hackerman Chair in Civil Engineering: coastal engineering, water wave mechanics, fluid mechanics.

Lecturers
Rachel H. Sangree
Lecturer, Program Chair EP Civil Engineering: structural engineering, historic structures.

Xin Chen
Lecturer (part-time): geotechnical engineering, infrastructure asset management.

John A. Matteo
Lecturer (part-time): Director of Design: structural engineering and architecture, historic structures.

Lucas de Melo
Lecturer (part-time): geotechnical engineering.

Adjunct Professor
Byung-Lip (Les) Lee

Thomas Dean Kirsch
Joint Appointment, Associate Professor, Department of Emergency Medicine, Department of International Health: disaster planning and response, wilderness medicine, health care management.

Scott Levin
Joint Appointment, Associate Professor, Department of Emergency Medicine: systems engineering in health care, medical decision making, human factors engineering in health care, emergency department crowding and patient outcomes.

Jonathan Links
Joint Appointment, Director, Center for Public Health Preparedness: environmental health sciences, imaging, dosimetry, radiation, dirty bombs, OpenCourseWare, nuclear medicine, radiological terror, public health preparedness.

Alan Stone
Joint Appointment, Professor, Department of Geography and Environmental Engineering.

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

**EN.560.101. Freshman Experiences in Civil Engineering. 1.00 Credit.**
An introduction to civil engineering for first-year students. This course welcomes freshmen to the major by exploring civil engineering design and the range of design projects in which professional civil engineers engage. Students will have the opportunity to practice the design process using hands-on team-based projects, with emphasis on creative design, graphical communication, and teamwork.

**Prerequisites:** Students must have completed Lab Safety training prior to registering for this class.

**Instructor(s):** R. Sangree

**Area:** Engineering.

**EN.560.141. Perspectives on the Evolution of Structures. 3.00 Credits.**
Why do buildings and bridges look the way they do today? Students will be provided the tools to answer this question for themselves through a study of the history of the design of buildings and bridges throughout the world from both engineering and architectural/aesthetic perspectives. Only simple mathematics is required (no calculus). Students will participate in individual and group critique of structures from engineering, architectural, and social points of view.

**Instructor(s):** B. Schafer, R. Sangree

**Area:** Engineering, Quantitative and Mathematical Sciences
Writing Intensive.

**EN.560.201. Statics & Mechanics of Materials. 4.00 Credits.**
Basic principles of classical mechanics applied to the equilibrium of particles and rigid bodies at rest, under the influence of various force systems. In addition, the following topics are studied: free body concept, analysis of simple structures, friction, centroids and centers of gravity, and moments of inertia. Includes laboratory experience. Co-listed with EN.530.201. Recommended Course Background: AS.171.101, or EN.530.103/EN.530.104 or instructor permission.

**Prerequisites:** Students must have completed Lab Safety training prior to registering for this class.

**Instructor(s):** R. Sangree

**Area:** Engineering.
EN.560.202. Dynamics. 4.00 Credits.
Basic principles of classical mechanics applied to the motion of particles, system of particles and rigid bodies. Kinematics: analytical description of motion; rectilinear and curvilinear motions of particles; rigid body motion. Kinetics: force, mass, and acceleration; energy and momentum principles. Introduction to vibration. Includes laboratory experience. 
Prerequisites: Students must have completed Lab Safety training prior to registering for this class. (EN.560.201 OR EN.530.201) AND AS.110.109 AND (AS.171.101 or EN.530.103 AND EN.530.104)
Instructor(s): L. Graham-Brady; S. Gaitanaros
Area: Engineering.

EN.560.206. Solid Mechanics & Theory of Structures. 4.00 Credits.
Application of the principles of structural analysis for statically determinant and indeterminate structures (trusses, cables, beams, arches, and frames). Calculation of internal forces and stresses in members and structures. Determination of deflections by equilibrium and energy methods. Analysis of indeterminate structures by flexibility and stiffness methods. 
Prerequisites: EN.560.201 OR EN.530.201
Instructor(s): M. Shields
Area: Engineering.

EN.560.220. Civil Engineering Analysis. 3.00 Credits.
Civil engineering problems are formulated and then solved by numerical methods. Matrix inversion, data fitting and interpolation, root-finding, and solutions of ordinary and partial differential equations are presented. Matlab programming will be introduced to facilitate the solutions. Recommended Course Background: AS.110.106, AS.110.107/AS.110.109
Instructor(s): B. Schafer
Area: Engineering.

EN.560.305. Soil Mechanics. 4.00 Credits.
Prerequisites: EN.560.351 OR EN.570.351; Students must have completed Lab Safety training prior to registering for this class. Prerequisite: EN.560.206.
Corequisites: EN.570.351 or EN.560.351
Instructor(s): L. de Melo
Area: Engineering.

EN.560.320. Structural Design I. 3.00 Credits.
Introduction to structural design using common building materials (structural steel, reinforced concrete, and wood). Emphasis will be placed on the application of solid mechanics principles to the design of structural components (beams, columns, and tension members). 
Instructor(s): R. Sangree
Area: Engineering.

EN.560.325. Structural Design II. 3.00 Credits.
A continuation of Structural Design I, this course explores the behavior and conceptual design of structures. Emphasis is placed on identifying load paths through typical gravity and lateral load systems, modeling loads on real structures, and designing structural systems. Designing connections capable of transferring loads through a structural system will also be covered. Recommended Course Background: EN.560.320
Prerequisites: EN.560.206
Instructor(s): R. Sangree
Area: Engineering.

EN.560.330. Foundation Design. 3.00 Credits.
Application of soil mechanics theory and soil test results to the analysis and design of foundations for structures; retaining walls; embankments; design of pile and shallow footing foundations; slope stability. 
Instructor(s): L. de Melo
Area: Engineering.

EN.560.348. Probability & Statistics for Engineers. 3.00 Credits.
Development and applications of the analysis of uncertainty, including basic probability, statistics and decision theory. Recommended Course Background: AS.110.109
Prerequisites: Statistics Sequence restriction: Students who have completed any of these courses may not register: EN.550.310 OR EN.550.311 OR EN.560.435 OR EN.550.420 OR EN.550.430.
Instructor(s): L. Graham-Brady
Area: Engineering.

EN.560.351. Introduction to Fluid Mechanics. 3.00 Credits.
Introduction to the use of the principles of continuity, momentum, and energy to fluid motion. Topics include hydrostatics, ideal-fluid flow, laminar flow, turbulent flow, form and surface resistance with application to fluid measurement, flow in conduits, and channels, pumps, or turbines. 
Co-listed with EN.570.351.
Instructor(s): R. Dalrymple
Area: Engineering.

EN.560.380. Introduction to Ocean Wind Engineering. 3.00 Credits.
Fundamentals of hydrodynamics, aerodynamics and flow-structure interactions with applications in coastal/ocean engineering and wind engineering. Topics include wind and current past blunt bodies, flow-induced structure vibrations, ocean waves and wave/flood loads, wind field and wind loads, sustainable energy from wind and wave and model testing. 
Instructor(s): W. Marr
Area: Engineering.

EN.560.404. Solid Mechanics for Structures. 3.00 Credits.
Basic solid mechanics for structural engineers. Stress, strain and constitutive laws. Linear elasticity and viscoelasticity. Introduction to nonlinear mechanics. Static, dynamic and thermal stresses. Specialization of theory to one- and two-dimensional cases: plane stress and plane strain, rods, and beams. Work and energy principles; variational formulations. 
Instructor(s): S. Gaitanaros
Area: Engineering.
EN.560.429. Preservation Engineering: Theory and Practice. 3.00 Credits.
The renovation of existing buildings often holds many advantages over new construction, including greater economy, improved sustainability, and the maintenance of engineering heritage and architectural character in our built environment. Yet, the renovation of existing structures presents many challenges to structural engineers. These challenges include structural materials that are no longer in widespread use (e.g., unreinforced masonry arches and vaults, cast iron, and wrought iron) as well as structural materials for which analysis and design practices have changed significantly over the last half-century (e.g., wood, steel, and reinforced concrete). This course will examine structures made of a wide variety of materials and instruct the student how to evaluate their condition, determine their existing capacity, and design repairs and/or reinforcement. The investigation and analysis procedures learned from this course may then be applied to create economical and durable structural alterations that allow for the reuse of older buildings. Site visits near Homewood campus will supplement lectures.
Prerequisites: (EN.560.201 OR EN.530.201) AND EN.560.206 AND EN.560.320 or equivalent for graduate students.
Instructor(s): J. Matteo; R. Sangree
Area: Engineering.

EN.560.431. Preservation Engineering II: Theory and Practice. 3.00 Credits.
Building on the content in Preservation Engineering I: Theory and Practice, this course will begin with materials introduced at the start of the Industrial Revolution—namely with the beginning of the use of iron materials as major structural elements within buildings. The course will continue with the introduction of cast iron, wrought iron, and finally, structural steel members. After introducing iron materials the course will continue with the early use of reinforced concrete as a major structural material. The course will discuss the historic structural analysis methods associated with such materials and contrast such methods with more modern analytical approaches. It will also discuss concrete deterioration and repair methods. Concepts related to masonry facade investigation and repair will be presented along with the analytical methods associated with thin-shell masonry construction from the 19th and 20th centuries. The course will conclude with a review of the assessment and retrofit of historic foundations.
Instructor(s): E. Meade; J. Spivey
Area: Engineering.

EN.560.440. Applied Finite Element Methods. 3.00 Credits.
Finite Element Methods (FEM) are one of the most powerful engineering tools that are widely used in various disciplines. This course introduces concepts, capabilities, and limitations of FEM and is intended to facilitate applications of FEM in student’s research. The course covers fundamental theories with a focus on stiffness formulation techniques, element types, and computational procedures. The course also offers finite element programming with MATLAB.
Instructor(s): N. Nakata
Area: Engineering.

EN.560.442. Equilibrium Models in Systems Engineering. 3.00 Credits.
Provide an introduction to equilibrium problems involving systems. The course will start with an introduction to optimization theory followed by various equilibrium problems including market, spatial, and network models. Solution techniques to these types of problems will be discussed, along with applications to systems engineering. Recommended Course Background: AS.110.201 and AS.110.109 or equivalent.
Instructor(s): S. Siddiqui
Area: Engineering.

EN.560.445. Advanced Structural Analysis. 3.00 Credits.
Matrix methods for the analysis of statistically indeterminate structures such as beams, plane and space trusses, and plane and space frames. Stiffness and flexibility methods. Linear elastic analysis and introduction to nonlinear analysis.
Prerequisites: EN.560.206
Instructor(s): J. Guest
Area: Engineering.

EN.560.447. Systems Science for a Dynamic World. 3.00 Credits.
The course provides an interdisciplinary overview of mathematical and computational models of human driven systems. It spans a wide range of topics including the spread of infectious diseases, the dynamics of revolution and civil violence, ethnic segregation, land use change, urban disaster preparedness, computational reconstruction of ancient civilizations, and more. The course prepares students to develop their own models—alone or in teams. The NetLogo modeling environment will be presented, although students are welcome to use any language. Students are assessed by class projects at the end of the course.
Instructor(s): E. Hatna; J. Epstein
Area: Engineering, Social and Behavioral Sciences.

EN.560.451. Civil Engineering Design I. 2.00 Credits.
A study of the engineering design process from problem definition to the final design. There are team projects which include written and oral presentations. Senior only or Permission Required
Instructor(s): J. Matteo
Area: Engineering.

EN.560.452. Civil Engineering Design II. 3.00 Credits.
A study of the engineering design process from problem definition to the final design. There are team projects which include written and oral presentations. Requirements: Student must be a senior in Civil Engineering.
Instructor(s): J. Matteo
Area: Engineering.

EN.560.481. Engineering Design of Underwater Life Support. 3.00 Credits.
The physiological and psychological aspects of man in the sea are presented with the related engineering requirements. Topics include hyperbaric physiology, decompression theory, carbon dioxide absorption, thermal protection, psychrometrics, saturation diving, life support equipment, deep dive systems, diving operations and hazards.
Instructor(s): W. Marr
Area: Engineering.

EN.560.491. Civil Engineering Seminar I. 0.50 Credit.
Seminar series of speakers on various aspects of civil engineering. Juniors and Seniors in Civil Engineering are expected to enroll in this sequence; juniors and seniors receive one-half credit. Different speakers are invited each semester. Satisfactory/ Unsatisfactory only
Instructor(s): R. Sangree
Area: Engineering.

EN.560.492. Civil Engineering Seminar II. 0.50 Credit.
Seminar series of speakers on various aspects of civil engineering. Juniors and Seniors in Civil Engineering are expected to enroll in this sequence; juniors and seniors receive one-half credit. Different speakers are invited each semester. Satisfactory/ Unsatisfactory only
Prerequisites: EN.560.491
Instructor(s): R. Sangree
Area: Engineering.
EN.560.493. Civil Engr Seminar III. 0.50 Credit.
Seminar series of speakers on various aspects of civil engineering.
Juniors and Seniors in Civil Engineering are expected to enroll in this sequence; juniors and seniors receive one-half credit. Different speakers are invited each semester. Satisfactory/ Unsatisfactory only
Prerequisites: EN.560.492.
Instructor(s): R. Sangree
Area: Engineering.

EN.560.494. Civil Engineering Seminar IV. 0.50 Credit.
Seminar series of speakers on various aspects of civil engineering.
Juniors and Seniors in Civil Engineering are expected to enroll in this sequence; juniors and seniors receive one-half credit. Different speakers are invited each semester. Satisfactory/ Unsatisfactory only
Prerequisites: EN.560.493
Instructor(s): R. Sangree
Area: Engineering.

EN.560.498. Survey of Systems Engineering Tools. 3.00 Credits.
Introduction to analytical tools in the three major functional areas of systems engineering: design, analysis and control. Recommended Corequisite: EN.560.348 or equivalent course in probability theory. Restricted to Civil Engineering majors or by permission of instructor.
Instructor(s): T. Igusa
Area: Engineering.

EN.560.501. Undergraduate Research. 0.00 - 3.00 Credits.
Research in Civil Engineering
Instructor(s): Staff.

EN.560.511. Group Undergraduate Research. 0.00 - 3.00 Credits.
This section has a weekly research group meeting that students are expected to attend.
Instructor(s): Staff.

EN.560.525. Independent Study. 1.00 - 3.00 Credits.
Instructor(s): J. Guest; R. Dalrymple; S. Siddiqui; T. Igusa.

EN.560.526. Independent Study - Civil Engineering. 0.00 - 3.00 Credits.
Instructor(s): Staff.

EN.560.536. Research in Civil Engineering. 0.00 - 3.00 Credits.
Instructor(s): Staff.

EN.560.590. Civil Engineering Internship. 1.00 Credit.
Instructor(s): B. Schafer; J. Guest.

EN.560.597. Summer Research - Civil Engineering. 3.00 Credits.
Instructor(s): Staff.

EN.560.601. Applied Math for Engineers. 3.00 Credits.
This course presents a broad survey of the basic mathematical methods used in the solution of ordinary and partial differential equations: linear algebra, power series, Fourier series, separation of variables, integral transforms.
Instructor(s): M. Zhong
Area: Engineering, Quantitative and Mathematical Sciences.

EN.560.602. GPU Programming for Engineers. 3.00 Credits.
Video graphics cards can be repurposed to perform massively parallel computations rapidly. This course will provide students the ability to program these graphics cards to speed up numerical computations. The course will begin with an introduction to C++ programming followed by concepts in parallel computing. Finally, the CUDA extensions to C++ that is used on Nvidia graphics cards. Students will be programming GPUs during the course. Recommended course background: Some programming experience.
Instructor(s): R. Dalrymple
Area: Engineering.

EN.560.604. Solid Mechanics for Structures. 3.00 Credits.
Basic solid mechanics for structural engineers. Stress, strain and constitutive laws. Linear elasticity and viscoelasticity. Introduction to nonlinear mechanics. Static, dynamic and thermal stresses. Specialization of theory to one- and two-dimensional cases: plane stress and plane strain, rods, and beams. Work and energy principles; variational formulations.
Instructor(s): S. Siddiqui
Area: Engineering.

EN.560.608. Multilevel and Multiobjective Optimization in Systems. 3.00 Credits.
This course will introduce nonlinear optimization and convexity in higher dimensions to model large-scale systems. Graduate students only. Recommended Course Background: AS.110.201 or EN.550.291, AS.110.202.
Instructor(s): S. Siddiqui
Area: Engineering.

EN.560.618. Probabilistic Methods in Civil Engineering and Mechanics. 3.00 Credits.
Covers probabilistic computational modeling in civil engineering and mechanics: Monte Carlo simulation, sampling methods and variance reduction techniques, simulation of stochastic processes and fields, and expansion methods. Applications to stochastic finite element, uncertainty quantification, reliability analysis, and model verification and validation.
Instructor(s): M. Shields.

EN.560.619. Advanced Structural Analysis. 3.00 Credits.
Matrix methods for the analysis of statistically indeterminate structures such as beams, plane and space trusses, and plane and space frames. Stiffness and flexibility methods. Linear elastic analysis and introduction to nonlinear analysis.
Instructor(s): J. Guest
Area: Engineering.

EN.560.627. Topology Optimization for the Design of Materials, Devices, and Structures. 3.00 Credits.
Introduction to optimization theory and algorithms and their application to the design of structures, including structural systems, mechanisms, devices, and materials. Strong emphasis on topology optimization using finite element methods and design problems governed by solid and structural mechanics. Extensions to other physics and multiple physics are also introduced (e.g., fluids, heat transfer, optics, etc.). Course assumes familiarity with finite element methods and assumes no prior coursework in optimization.
Instructor(s): J. Guest
Area: Engineering.
EN.560.630. Structural Dynamics. 3.00 Credits.
Functional and computational examination of elastic and inelastic single degree of freedom systems with classical and non-classical damping subject to various input excitations including earthquakes with emphasis on the study of system response. Extension to multi-degree of freedom systems with emphasis on modal analysis and numerical methods. Use of the principles of structural dynamics in earthquake response.
Instructor(s): Staff.

EN.560.640. Advanced Systems Engineering: Concept, Design, Development and Integration. 3.00 Credits.
This is a course in the concept, design, development and integration of systems from individual systems to system-of-systems. Lessons are reinforced by case studies and assignments, taking a holistic systems view and integrating aspects of product development and system architecture within systems engineering. This course will teach UML and SysML as model based system engineering languages for systems design, analysis, and documentation in a concurrent engineering, team-oriented design setting. The system language IDEFx will be covered to the degree that students can read and interpret legacy systems documented using IDEFx. In addition to lectures, a case study approach will be employed to develop analytical, technical, management, and teamwork skills through exercises in planning, documentation, presentation, and the creative process of systems engineering design.
Instructor(s): R. Dalrymple.
Area: Engineering.

EN.560.642. Systems Modeling and Simulation. 3.00 Credits.
Students will learn to develop agent-based and systems dynamics models to simulate complex systems. Models with hierarchical and other structures will be examined, and applications will be chosen based on student interest.
Instructor(s): T. Speller.

EN.560.660. Modeling Complex Systems Colloquium. 3.00 Credits.
Course will address various themes related to modeling complex systems through critical evaluation of technical articles, open discussion, faculty presentations, and computational workshops. Teams of 3-5 faculty will develop monthly units based on different themes, examples of which may include: optimization and uncertainty modeling in science and engineering, particle-based modeling, experimental and field measurements in multi-scale models, linking atomistic-to-continuum-scale models, challenges in climate and ocean modeling, homogenization and upscaling of small-scale data. This course is a requirement for MCS IGERT trainees, but it is open to all graduate students.
Instructor(s): L. Graham-Brady.

EN.560.682. Introduction to Water Wave Mechanics. 3.00 Credits.
The theories governing water wave motion, from linear to nonlinear waves, is presented. Wave propagation and transformation, including shoaling, refraction, and diffraction, is shown. Wave breaking and the basic interaction of waves with structures and the ocean bottom are covered.
Instructor(s): R. Dalrymple.

EN.560.691. Graduate Seminar. 1.00 Credit.
Graduate students are expected to register for this course each semester. Both internal and outside speakers are included.
Instructor(s): Staff.

EN.560.692. Civil Engineering Graduate Seminar. 1.00 Credit.
Seminar series of speakers on various aspects of civil engineering. Different speakers are invited each semester. Full time civil engineering graduate students must enroll in the seminar course every semester unless excused by the Department.
Instructor(s): M. Shields.

EN.560.724. Cold-Formed Steel Structures. 3.00 Credits.
Practical introduction to the analysis, design, and experimentation of cold-formed steel members and structures. Followed by an in-depth treatment of the theories which underpin modern analytical and computational tools used in exploring cold-formed steel behavior, and an introduction to topics under current research.
Instructor(s): B. Schafer.

EN.560.730. Finite Element Methods. 3.00 Credits.
Variational methods and mathematical foundations, Direct and Iterative solvers, 1-D Problems formulation and boundary conditions, Trusses, 2-D/3D Problems, Triangular elements, QUAD4 elements, Higher Order Elements, Element Pathology, Improving Element Convergence, Dynamic Problems.
Instructor(s): S. Ghosh.

EN.560.731. Structural Stability. 3.00 Credits.
Instructor(s): B. Schafer.

EN.560.742. Non-Linear Finite Elements. 3.00 Credits.
This course will discuss state of the art theoretical developments and modeling techniques in nonlinear computational mechanics, for problems with geometric and material nonlinearities. Large deformation of elastic-plastic and visco-plastic materials, contact-friction and other heterogeneous materials like composites and porous materials will be considered. A wide variety of applications in different disciplines, e.g. metal forming, composite materials, polycrystalline materials will be considered. Co-listed with EN.530.772.
Instructor(s): S. Ghosh.

EN.560.772. Non-Linear Finite Elements. 3.00 Credits.
This course will discuss state of the art theoretical developments and modeling techniques in nonlinear computational mechanics, for problems with geometric and material nonlinearities. Large deformation of elastic-plastic and visco-plastic materials, contact-friction and other heterogeneous materials like composites and porous materials will be considered. A wide variety of applications in different disciplines, e.g. metal forming, composite materials, polycrystalline materials will be considered. Co-listed with EN.530.772.
Instructor(s): S. Ghosh.

EN.560.826. Graduate Independent Study. 1.00 - 3.00 Credits.
Independent Study
Instructor(s): T. Igusa.
Area: Engineering.
EN.560.835. Graduate Research. 3.00 - 20.00 Credits.
Instructor(s): Staff.

EN.560.836. Graduate Research. 3.00 - 20.00 Credits.
Instructor(s): Staff.

Cross Listed Courses
Earth Planetary Sciences
AS.270.205. Introduction to Geographic Information Systems and Geospatial Analysis. 3.00 Credits.
The course provides a broad introduction to the principles and practice of Geographic Information Systems (GIS) and related tools of Geospatial Analysis. Topics will include history of GIS, GIS data structures, data acquisition and merging, database management, spatial analysis, and GIS applications. In addition, students will get hands-on experience working with GIS software.
Instructor(s): X. Chen
Area: Engineering, Natural Sciences.

Geography Environmental Engineering
EN.570.351. Introduction to Fluid Mechanics. 3.00 Credits.
Introduction to the use of the principles of continuum, momentum, and energy to fluid motion. Topics include hydrostatics, ideal-fluid flow, laminar flow, turbulent flow. Recommended Course Background: Statics, Dynamics, and AS.110.302
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): T. Hristov
Area: Engineering.

Computational Medicine

icm.jhu.edu

The Institute for Computational Medicine (ICM) is proud to offer an undergraduate minor in Computational Medicine, the first educational program in CM, reflecting Johns Hopkins University’s leadership in this field. Like the ICM itself, the undergraduate minor in Computational Medicine is integrative and multidisciplinary. The 19 ICM Core Faculty who serve as advisors to the undergraduate minor hold primary and joint appointments in multiple Johns Hopkins University departments and schools including Biomedical Engineering, Computer Science, Electrical and Computer Engineering, Mechanical Engineering, Applied Mathematics and Statistics (WSE); Neurosurgery, Emergency Medicine, Medicine, and the Divisions of Cardiology and Health Sciences Informatics (SOM); and Health Policy and Management (BSPH).

With a minor in CM, undergraduates will have a solid grounding in the development and application of computational methods in multiple key areas of medicine. Specifically, undergraduates will understand how mathematical models can be constructed from biophysical laws or experimental data, and how predictions from these models facilitate diagnosis and treatment of a disease. Undergraduates will become conversant with a wide variety of statistical, deterministic and stochastic modeling methods, skills that are essential to the advancement of modern medicine, and are prized both in academic research and industrial research.

CM research at ICM is sub-divided into four key areas: Computational Molecular Medicine (http://icm.jhu.edu/research-areas-2/computational-molecular-medicine); Computational Physiological Medicine (http://icm.jhu.edu/research-areas-2/computational-physiological-medicine); Computational Anatomy (http://icm.jhu.edu/research-areas-2/computational-anatomy); Computational Healthcare (http://icm.jhu.edu/research-areas-2/computational-healthcare). Techniques for and applications in each of these four key subareas are introduced during the required core courses, exposing undergraduates to the breadth of Computational Medicine, and enabling each student to identify a preferred area of interest:

- **Computational Physiological Medicine** develops mechanistic models of biological systems in disease, and applies the insights gained from these models to develop improved diagnostics and therapies. Therapies could be diverse drugs, electrical stimulation, mechanical support devices and more.
- **Computational Molecular Medicine** harnesses the enormous amount of disease-relevant data produced by next-generation sequencing, microarray and proteomic experiments of large patient cohorts, using statistical models to identify the drivers of disease and the susceptible links in disease networks.
- **Computational Anatomy** uses medical imaging to analyze the variation in structure of human organs in health and disease. Such image analysis has been integrated into clinical workflows to assist in the diagnosis and prognosis of complex diseases.
- **Computational Healthcare** is an emerging field devoted to understanding populations of patients and their interaction with all aspects of the healthcare process.

CM is distinct from Computational Biology in its focus on human health, disease, and treatment; translation to and application in the clinic is a near-term goal of all CM research. Applications of CM are as broad as medicine itself, and include: identification of optimal drugs using associated genomic and proteomic biomarkers; discovery of image-based biomarkers for diagnosis and prognosis; design and dynamic adjustment of individualized non-drug therapies such as deep brain stimulation, cardiac stimulation, and cochlear implants; modeling and learning from patient EHR data to improve patient outcomes and efficiency of care; optimization of healthcare policy decisions by quantitative analysis; and more. CM is one of the pillars of the University’s Strategic Initiative in Individualized Health.

**Computational Medicine (CM)** is an emerging discipline devoted to the development of quantitative approaches for understanding the mechanisms, diagnosis and treatment of human disease through applications of mathematics, engineering and computational science. The core approach of CM is to develop computational models of the molecular biology, physiology, and anatomy of disease, and apply these models to improve patient care. CM approaches can provide insight into and across many areas of biology, including genetics, genomics, molecular networks, cellular and tissue physiology, organ systems, and whole body pharmacology.

**Minor Prerequisites**
Before attempting the minor, undergraduates will have taken the following courses:

1. Calculus I
2. Calculus II
3. Probability and Statistics: either a single course covering both (e.g. EN.550.310), or a course devoted to each (e.g., EN.550.420 and EN.550.430) – this may be taken concurrent with core course EN.580.431
4. At least one (1) additional course in mathematics or applied mathematics (at least 3 credits)
5. At least one (1) computer programming course (at least 3 credits)
6. At least one (1) biological sciences course (at least 3 credits)

**Core Courses**

Introduction to Computational Medicine I (EN.580.431) and Computational Molecular Medicine (EN.550.450) are the required two-semester core courses.

EN.580.431 is a newly developed class that covers computational anatomy and physiology and will be jointly taught by ICM faculty from multiple departments.

The second semester is an expansion of EN.580.431, with emphasis on molecular medicine and computational healthcare. EN.550.450 requires background in probability theory and statistics. Students requiring additional training in these areas may do this course work in their junior year, and take this course in their senior year.

**Distinguished Seminar Series**

Students in the minor **ARE REQUIRED** to register at least twice for the ICM Distinguished Seminar Series in Computational Medicine (EN.580.737). Eight distinguished seminars are held each academic school year, four each semester (unless otherwise advertised). Students enrolled in the minor are **REQUIRED** to attend no less than 6 such seminars in person. Attendance is recorded.*

This is recognized as a P/F (satisfactory/unsatisfactory) course. Enrolled students must receive an "S" grade for both semesters of enrollment. Contact ICM Administrative Office for further details.

**Elective Courses**

Following satisfaction of the prerequisites, to complete the minor, undergraduates must take at least 6 CM courses totaling at least 18 credits. This includes two one-semester core courses plus four approved courses selected from those listed below. The following restrictions are noted:

1. At most 3 of the 18 credits can consist of independent research in Computational Medicine, as defined and agreed to in advance by the minor advisor;
2. The 18 credits will all be at 300-level or above, and courses must be passed at a C- level or above;
3. At least 2 non-core/elective courses must be outside student's home department
4. At least 2 non-core/elective courses must have a substantial biology or medicine component, as identified in the list below with an (M) designation.
5. At least 1 non-core/elective course must have a substantial computational component, as identified in the list below with an (C) designation
6. All courses must be passed at a C- level or above

**Declaring the Minor**

Interested students should contact Tiphany Cantey, ICM Administrative Coordinator, to receive guidance on declaring the minor:

Phone: 410-516-4116
Email: t (asampath@jhu.edu)cantey1@jhu.edu (tcantey1@jhu.edu)

Specific questions regarding the minor requirements and courses can be directed to Dr. Joshua Vogelstein (jovo@jhu.edu), Director of Undergraduate Studies for the CM minor.

**Faculty**

**Director**

Raimond Winslow
Director of Institute for Computational Medicine, Director of Center for Cardiovascular Bioinformatics and Modeling, Raj and Neera Singh Professor of Biomedical Engineering

**Director of Undergraduate Studies**

Joshua T. Vogelstein
Assistant Professor, Dept. of Biomedical Engineering

**Undergraduate Advisors**

William S. Anderson  
Associate Professor, Dept. of Neurosurgery, Attending Neurosurgeon at The Johns Hopkins Hospital  
Joel Bader  
Associate Professor, Dept. of Biomedical Engineering, Bioinformatics and Computational Biology Lab  
Patrick Barta  
Associate Professor, Dept. of Biomedical Engineering, Center for Imaging Sciences  
Patrick Boyle  
Assistant Research Professor, Dept. of Biomedical Engineering  
Nicolas Charon  
Assistant Professor, Dept. of Applied Mathematics and Statistics, Center for Imaging Sciences  
Joshua Epstein  
Professor of Emergency Medicine, Director of Center for Advanced Modeling in the Social, Behavioral and Health Sciences  
Feilim Mac Gabhann  
Assistant Professor, Dept. of Biomedical Engineering  
Donald Geman  
Professor, Applied Mathematics and Statistics, Center for Imaging Sciences  
Rachel Karchin  
Associate Professor, Dept. of Biomedical Engineering, The William R. Brody Faculty Scholar  
Michael I. Miller  
Herschel and Ruth Seder Professor, Dept. of Biomedical Engineering, Director of Center for Imaging Sciences  
Rajat Mittal  
Professor, Dept. of Mechanical Engineering  
Tilak Ratnanather  
Associate Research Professor, Dept. of Biomedical Engineering  
Suchi Saria  
Assistant Professor, Dept. of Computer Science  
Sridevi Sarma  
Assistant Professor, Dept. of Biomedical Engineering  
Natalia Trayanova  
Murray B. Sachs Professor, Dept. of Biomedical Engineering  
Rene Vidal  
Associate Professor, Dept. of Biomedical Engineering, Computer Science, Mechanical Engineering, and Electrical and Computer Engineering, Director of Vision Dynamics and Learning Lab  
Laurent Younes  
Professor and Chair, Dept. of Applied Mathematics and Statistics

---

**Computer Science**

http://cs.jhu.edu/

Computing has grown to be a pervasive element of science, business, society, and entertainment. The availability of relatively inexpensive high performance computing capabilities, ubiquitous high speed and wireless networking, and mobile computing have powered a technology-driven restructuring of the way society and most professions now operate. Information, and its associated processing and transport, is the commodity upon which corporations are built and lives are improved. At the center of this revolution, making it happen, are those who study computer science.

There are two dimensions to the field of computer science that establish it as a unique area. CS can be viewed as a stand-alone discipline worthy of study unto itself, and/or as an empowering discipline to be studied in conjunction with other areas. Core CS careers include (but are not limited to) software design and development, computer systems engineering or administration, and information security. Application areas span a wide range of fields and disciplines such as robotics, medical or health informatics, gaming/entertainment, business computing, and scientific research to name a few.

Because computer science is a highly diverse and broadly applied field, studies can proceed in many different directions. Accordingly, the undergraduate and graduate programs in the Department of Computer Science at Johns Hopkins are flexible curricula designed to accommodate a wide range of goals. A student at Johns Hopkins can pursue appropriately customized versions of the following computer science programs: minor, bachelor of science, bachelor of arts, masters of science in engineering, and doctor of philosophy. Most of this catalog section is devoted to details regarding these programs.

Computer science research laboratories are currently active in the following areas at Hopkins: algorithm design and analysis, human-computer interaction, machine learning, health informatics, computational medicine, computer vision and image processing, computer graphics, geometric modeling, programming languages, natural language and speech processing, information retrieval, cryptography and information security, secure and robust systems, storage systems, high-performance and scientific computing, computational genomics, networks and distributed systems, stream processing, parallel and distributed databases, robotics, computer-integrated surgical systems, and wireless and sensor systems.

Additionally, interdisciplinary research centers in the university have heavy involvement by Computer Science faculty: the Information Security Institute (ISI), the Center for Computer-Integrated Surgical Systems and Technology (CISST), the Laboratory for Computational Sensing and Robotics (LCSR), the Center for Language and Speech Processing (CLSP), the Institute for Data Intensive Engineering and Science (IDIES), and the Malone Center for Engineering in Healthcare (MCEH). An important component of the educational process in the department is the opportunity for undergraduate and graduate student participation in the research programs of the faculty. In particular, original research in close association with individual faculty members is emphasized at the graduate level.

There are several closely related programs at the undergraduate and graduate levels which involve significant coursework and faculty involvement from the Department of Computer Science. The Laboratory for Computational Sensing and Robotics (LCSR) offers a minor in
robotics and also a minor in computer integrated surgery through the Engineering Research Center for Computer Integrated Surgical Systems and Technology. Details of these programs may be found elsewhere in this catalog in the section pertaining to the Laboratory for Computational Sensing and Robotics (p. 1062). Undergraduates with a strong interest in system design and performance may elect to pursue a bachelor degree in computer engineering (p. 962). This field of study includes course work in computer science, as well as electrical and computer engineering. Although jointly administered by both departments, specific goals and requirements of the computer engineering degree may be found in the catalog section pertaining to the Department of Electrical and Computer Engineering only.

At the graduate level, the LCSR (p. 1062) offers a Master of Science in Engineering (M.S.E.) in Robotics, designed for students from a wide variety of engineering, scientific, and mathematical backgrounds to advance their interdisciplinary knowledge in robotics. Details of this program may be found in the LCSR section of this catalog, or on the web at www.lcsr.jhu.edu/MSE. Lastly, the Master of Science in Security Informatics (M.S.S.I.) is a specialized graduate program offered through the Information Security Institute (p. 1007) (ISI) in the WSE. The field of security informatics is fundamentally based on information security and assurance technologies (hardware, software, and networks) as related to issues such as policy, management, privacy/trust, health care, and law, from both national and international perspectives. Interested students can obtain detailed information regarding the M.S.S.I. online at www.jhuisi.jhu.edu or in the ISI section of this catalog.

For additional information regarding the academic programs available in Computer Science, and the facilities provided, please consult the sections which follow, or the departmental website www.cs.jhu.edu.

**Facilities**

The CS department is primarily housed in Malone Hall, a state of the art, open concept research facility. Additional department research space is located in the adjacent HACKerman Hall.

The general department computing facilities include numerous workstations and servers. Undergraduate laboratories combine to provide approximately 24 Linux workstations, and several Windows stations. One of these labs is a collaboration room allowing students to work in a team-based environment, with several private breakout rooms as well. At the graduate level there is a Master’s Lab consisting of a collaboration area and workstation area, both consisting of several Linux workstations. All Ph.D. students are assigned dedicated desks in their research labs. Additionally, multiple high-speed networked laser printers, as well as a networked color copier and remotely accessible Linux compute servers are available to both graduate and undergraduate students.

Focused research laboratories have significant resources that provide greater specialization, including isolated networks of PCs for security studies, high-performance computing clusters, sensor and wireless computing testbeds, robots and computer vision systems, a mock operating room equipped with medical robots and imaging equipment, and more.

The general department computing facilities are tied together by our own LAN, and access to specialized hardware in other departments, labs, and institutions is available via the university intranet and the Internet. In addition, the university provides wireless access to the JHU intranet and the Internet, as well as server systems that provide e-mail accounts for all students.

(See also General Requirements for Departmental Majors (p. 10))

The objectives of our bachelor degree programs are to train computer scientists who will be able to:

- Successfully engage in professional practice in the computing sciences or apply computer science tools and techniques to another field of interest.
- Pursue advanced study in the computing sciences.
- Behave in a professional and ethical manner.
- Lead teams and provide vision for innovation.
- Work successfully in both independent and team environments.

A successful major program of study leads to either the Bachelor of Science in Computer Science (B.S.) or the Bachelor of Arts in Computer Science (B.A.). Students should decide which degree program to complete by about their junior year. Both degree programs require specific courses and/or credits in several key areas: computer science, math, basic science, humanities and social sciences. However, there is much flexibility in how these requirements are fulfilled. Undergraduate majors may choose to pursue a broad selection of computer science and distributional courses, or to pursue a particular focus area within the field. Current foci primarily reflect departmental and school research strengths: big data, computational biology, fundamentals of computing, information security, natural language processing, robotics, systems and networking; while a few are directed towards career paths: business computing, software engineering, and video game design. Further information on these focus areas may be found in the computer science undergraduate advising manual (http://www.cs.jhu.edu/undergraduate-studies/academics/ugrad-advising-manual).

All undergraduate students majoring or minoring in computer science must have a faculty advisor in the department. They will be assigned an advisor as entering freshmen or upon deciding on the major/minor. Every major must follow a program approved by his/her faculty advisor.

The department also offers a minor in computer science, and tangentially, a minor in computer integrated surgery and a minor in robotics. Some students majoring in computer science may be eligible for a combined bachelor’s/master’s degree program. Requirements for these programs are included here as well. Additional details regarding undergraduate programs can be found in the department’s undergraduate advising manual (http://www.cs.jhu.edu/undergraduate-studies/academics/ugrad-advising-manual) or on the website at www.cs.jhu.edu.

**Requirements for the B.S. Degree**

The Bachelor of Science in Computer Science degree program is accredited by the Computing Accreditation Commission of ABET, www.abet.org (http://www.abet.org). It provides for the acquisition of the following knowledge base and skill set:

- An ability to apply knowledge of computing and mathematics appropriate to the discipline.
- An ability to analyze a problem, and identify and define the computing requirements appropriate to its solution.
- An ability to design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs.
- An ability to function effectively on teams to accomplish a common goal.
• An understanding of professional, ethical, legal, security, and social issues and responsibilities.
• An ability to communicate effectively with a range of audiences.
• An ability to analyze the local and global impact of computing on individuals, organizations, and society.
• Recognition of the need for and an ability to engage in continuing professional development.
• An ability to use current techniques, skills, and tools necessary for computing practice.
• An ability to apply mathematical foundations, algorithmic principles, and computer science theory in the modeling and design of computer-based systems in a way that demonstrates comprehension of the trade-offs involved in design choices.
• An ability to apply design and development principles in the construction of software systems of varying complexity.

To meet the course credit requirements for the B.S. in computer science, the student must complete a minimum of 126 credits. The basic requirements for the B.S. degree are as follows:

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Computer Science</td>
<td>42</td>
</tr>
<tr>
<td>Mathematics</td>
<td>24</td>
</tr>
<tr>
<td>Basic Sciences</td>
<td>16</td>
</tr>
<tr>
<td>Humanities/Social Sciences</td>
<td>18</td>
</tr>
<tr>
<td>Two Writing Intensive Courses</td>
<td></td>
</tr>
<tr>
<td>Electives</td>
<td>26</td>
</tr>
<tr>
<td>Total Credits</td>
<td>126</td>
</tr>
</tbody>
</table>

Details and course recommendations for these distributional requirements are below. These requirements add up to 100 credits and fulfill general university and WSE requirements, leaving 26 pure elective credits. Except for electives, courses should not be taken on a satisfactory/unsatisfactory basis. By university policy, no more than 18 D or D+ credits can be counted toward the total credit requirements for a degree.

### Computer Science (42 credits)

The following foundational courses in computer science must be included in a student’s program:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN.600.104</td>
<td>Computer Ethics</td>
<td>1</td>
</tr>
<tr>
<td>EN.600.107</td>
<td>Introductory Programming in Java (or equivalent)</td>
<td>3</td>
</tr>
<tr>
<td>EN.600.120</td>
<td>Intermediate Programming</td>
<td>4</td>
</tr>
<tr>
<td>EN.600.226</td>
<td>Data Structures</td>
<td>4</td>
</tr>
<tr>
<td>EN.600.233</td>
<td>Computer System Fundamentals</td>
<td>3</td>
</tr>
<tr>
<td>EN.600.271</td>
<td>Automata &amp; Computation Theory</td>
<td>3</td>
</tr>
<tr>
<td>EN.600.363</td>
<td>Introduction To Algorithms</td>
<td>3</td>
</tr>
<tr>
<td>or EN.600.463 Algorithms I</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

At least 16 credit hours must be at the 300-level or above, including EN.600.363/463. At least one course in each classification area of Analysis, Applications and Systems must be chosen. An exhaustive list of the area classifications for each of our courses may be found on the department’s website.

Students must take at least one of the following courses which contain oral communication components. The course satisfying this requirement may overlap other requirements:

- EN.600.250 User Interfaces and Mobile Applications
- EN.600.255 Introduction to Video Game Design
- EN.600.321/42 Object Oriented Software Engineering

### Mathematics (24 credits)

The following courses must be included:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>AS.110.108</td>
<td>Calculus I</td>
<td>4</td>
</tr>
<tr>
<td>AS.110.109</td>
<td>Calculus II (For Physical Sciences and Engineering)</td>
<td>4</td>
</tr>
<tr>
<td>EN.550.171</td>
<td>Discrete Mathematics</td>
<td>4</td>
</tr>
</tbody>
</table>

The remaining courses must be 200-level or above, chosen from Mathematics (110.xxx) or Applied Math and Statistics (550.xxx), and must include coverage of both probability and statistics. Some highly recommended math electives are Probability & Statistics, Linear Algebra, Calculus III, and Differential Equations. Note that students will need at least six courses to fulfill the credit requirement.

### Basic Sciences (16 credits)

At least two semesters of physics or two semesters of chemistry, with the associated laboratories, must be included. The remaining courses must be chosen in accordance with the list posted on the department’s website, which includes most courses in Physics, Chemistry, Biology, Biophysics, Earth & Planetary Sciences, Natural Sciences designated engineering courses, and some Natural Sciences designated courses in Neuroscience & Cognitive Science, but not all. At most 2 credits from satisfactory/unsatisfactory intersession courses may be used to fulfill this requirement.

### Humanities/Social Sciences (18 credits)

Six courses in the Humanities and Social and Behavioral Sciences must be taken, with each course at least 3 credits. These courses must have either an Humanities or Social and Behavioral Sciences area designator on them; however, foreign language courses (without an Humanities or Social and Behavioral Sciences) may also be used to satisfy this requirement.

### Writing Requirement

Students are required to fulfill the university’s requirement of two writing intensive courses, each at least 3 credits. Students must receive at least a C- grade or better in these writing courses. At least one course must be explicitly focused on writing skills (eg, Expository Writing, Professional Communication, Fiction & Poetry). These courses may overlap other requirements.

### Electives

Electives are to be chosen by the student with guidance and approval of his/her advisor.

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total Credits</td>
<td>126</td>
</tr>
</tbody>
</table>

* No more than 6 independent type credits (courses numbered 600.5xx) and no more than 3 credits of short courses (1-credit special topics courses) can be counted toward this requirement. However, B.S. students doing the Senior Honors Thesis (EN.600.519-EN.600.520) may use an additional three credits of independent work toward their CS requirements, for a total of 9 credits.

No courses with grades below C- or with satisfactory/unsatisfactory grades can be used to fulfill this requirement unless they are not offered for a grade.
** Up to 6 of the 42 required credits may be from an approved list of relevant courses in other departments, which includes courses cross-listed in CS. These courses may only count as "CS other" credits, not upper level CS credits (regardless of course level in the other department). See department website for the list.

*** AP Statistics credits may not be used to satisfy these credit requirements; however, they do meet the need for coverage of statistics (not probability).

## Requirements for the B.A. Degree

To meet the course credit requirements for the B.A. in computer science, the student must complete a minimum of 120 credits. The basic requirements for the B.A. degree are:

<table>
<thead>
<tr>
<th>Course Area</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Computer Science</td>
<td>32</td>
</tr>
<tr>
<td>Mathematics</td>
<td>20</td>
</tr>
<tr>
<td>Basic Sciences</td>
<td>12</td>
</tr>
<tr>
<td>Humanities/Social Sciences</td>
<td>18</td>
</tr>
<tr>
<td>Foreign Language</td>
<td>6</td>
</tr>
<tr>
<td>4 Writing Intensive Courses</td>
<td></td>
</tr>
<tr>
<td>Electives</td>
<td>32</td>
</tr>
<tr>
<td><strong>Total Credits</strong></td>
<td>120</td>
</tr>
</tbody>
</table>

Details and course recommendations of these distributional requirements are below. These requirements add up to 88 credits and fulfill general university distribution requirements. Except for electives, courses should not be taken on a satisfactory/unsatisfactory basis. By university policy, no more than 18 D or D+ credits can be counted toward the total credit requirements for a degree.

### Computer Science (32 credits)

The following foundational courses in computer science must be included in a student’s program:

- EN.600.107 Introductory Programming in Java (or equivalent) 3
- EN.600.120 Intermediate Programming 4
- EN.600.226 Data Structures 4
- EN.600.233 Computer System Fundamentals 3
- EN.600.271 Automata & Computation Theory 3
- EN.600.363 Introduction To Algorithms 3
  or EN.600.463 Algorithms I

At least 15 credit hours must be at the 300-level or above, including EN.600.363/463.

**Mathematics (20 credits)**

The following courses must be included:

- AS.110.108 Calculus I 4
- AS.110.109 Calculus II (For Physical Sciences and Engineering) 4
- EN.550.171 Discrete Mathematics 4

The remaining courses may be chosen from Mathematics (110.xxx) or Applied Math and Statistics (550.xxx). At least one course must be 200-level or above. **

**Basic Sciences (12 credits)**

At least two semesters of physics or chemistry or a combination of both, with the associated laboratories, must be included. The remaining courses must be chosen in accordance with the list posted on the department website, which includes most courses in Physics, Chemistry, Biology, Biophysics, Earth & Planetary Sciences, ‘N’ designated engineering courses, and some ‘N’ designated courses in Neuroscience and Cognitive Science, but not all. At most 2 credits from (S/U) intersession courses may be used to fulfill this requirement.

### Humanities/Social Sciences (18 credits)

Six courses in the Humanities/Social Sciences must be taken, with each course at least 3 credits. At least two 3-credit courses at the 300-level or above are required. As befits a B.A. degree, students have ample flexibility to choose courses that broaden the scope of their study, in consultation with their advisors. A subset of the courses selected to satisfy this requirement should demonstrate coherence within an area. Any course with Humanities or Social Sciences area designators may fulfill these distributional requirements.

**Foreign Language (6 credits)**

Two courses in a foreign language, with a total of at least 6 credits are required. These foreign language credits are in addition to the 18 required Humanities/Social Sciences credits.

**Writing Requirement**

All primary computer science majors pursuing a B.A. degree are required to fulfill the university’s requirement of four writing intensive courses, each at least 3 credits. At least one course must be explicitly focused on writing skills (eg, Expository Writing, Professional Communication, Fiction & Poetry). Students must receive at least a C- grade in these courses. These courses may overlap other requirement areas.

### Electives

Electives are to be chosen by the student with guidance and approval of his/her advisor.

**Total Credits** 120

* No more than 3 independent type credits (courses numbered 600.5xx) and no more than 3 credits of short courses (1-credit special topics courses) can be counted toward this requirement. However, B.A. students doing the Senior Honors Thesis (EN.600.519-EN.600.520) may use an additional 3 credits of independent work toward their CS requirements, for a total of 6 credits.

** Highly recommended: Probability/Statistics, Linear Algebra, Calculus III, Differential Equations. Note that students will need at least five courses to fulfill the credit requirement.

### Minor in Computer Science

To satisfy the course credit requirements for a minor in computer science, a student must take a minimum of seven courses, with a total of at least 23 credits, earning at least a C- in each course. These must include four core courses, to provide the student with a foundation, and three upper-level courses (300-level and above), to allow the student to pursue an advanced area in depth.
While not explicitly required, we also strongly recommend taking EN.550.171 Discrete Mathematics as preparation for several computer science courses, including EN.600.271 Automata & Computation Theory and EN.600.363 Introduction To Algorithms.

### Core Courses

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN.600.107</td>
<td>Introductory Programming in Java (or AP credit)</td>
<td>3</td>
</tr>
<tr>
<td>EN.600.120</td>
<td>Intermediate Programming</td>
<td>4</td>
</tr>
<tr>
<td>EN.600.226</td>
<td>Data Structures</td>
<td>4</td>
</tr>
<tr>
<td>EN.600.233</td>
<td>Computer System Fundamentals</td>
<td>3</td>
</tr>
<tr>
<td>EN.600.271</td>
<td>Automata &amp; Computation Theory</td>
<td></td>
</tr>
</tbody>
</table>

### Upper-Level Courses

Minors must take three CS courses at the 300-level or above. These courses should be chosen to form a cohesive minor and must be accepted by the computer science minor advisor. It is strongly recommended that students choose all three courses from within one of the three research areas of analysis, applications, and systems."

<table>
<thead>
<tr>
<th>Total Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>23</td>
</tr>
</tbody>
</table>

* With the approval of a faculty member in the Department of Computer Science, serving as a computer science minor advisor, substitutions for these core courses are possible.

** Each upper-level course description in this catalog includes its area for reference. In addition, a current listing of courses with area designators is provided on the departmental website. Some upper level courses have math pre-requisites as well (Probability/Statistics or Linear Algebra most commonly), so plan ahead.

Short courses cannot be used toward the minor requirements. All courses must be taken for a grade, not Satisfactory/Unsatisfactory.

Students whose primary major is in the Whiting School may use the same courses to satisfy the requirements of the primary major and also those of a computer science minor. Students who plan to fulfill requirements for a minor must go to the Department of Computer Science director of undergraduate studies to declare the minor and be advised on course selections, and inform the Office of Academic Advising by the end of their junior year.

### Short Courses

The Department of Computer Science offers 1-credit short courses covering a variety of topics in computer science and engineering. The purpose of the short courses is to expose students to topics of current interest in the field of computer science and engineering. Short courses are taught not only by faculty and graduate students in the Department of Computer Science and visiting faculty from other universities, but by individuals from local government or industry who have demonstrable expertise in a given area and are practicing the application of computer science theory and concepts.

Students should be aware that short course offerings are likely to change from year to year, depending on instructor commitments: there is no guarantee that the same course will be available at a later time. Students interested in getting details about a particular short course can contact the instructor through the departmental office. No more than 3 credits of short courses may be applied toward the computer science course credit requirement for the B.S. or the B.A. degrees.

### Double Majors with Computer Science

It is possible for students to pursue a double major program in which one of the majors is computer science. The computer science requirements are flexible enough to allow for combination with most majors in the Whiting School of Engineering and the Krieger School of Arts and Sciences. Whether computer science is your primary or secondary major, you will be assigned a faculty advisor in the department. In order to declare a first or second major in computer science, students should see the Director of Undergraduate Studies before the start of senior year. Those students must also inform the Office of Academic Affairs of the Whiting School of Engineering and the Registrar of their double major status. Subject to restrictions set by the department offering a second major, students whose primary major is in the Whiting School may use courses to satisfy both the requirements of the student’s primary major and those of a double major.

### Combined Bachelor's/Master's Program

As early as the end of their sophomore year, qualified students may apply for admission to a combined bachelor's/master's program which combines a B.S. or B.A. degree (in any department) with a master of science in engineering degree in Computer Science. This program allows students to simultaneously pursue both an undergraduate and a graduate degree program of study. Generally, the combined B.S./M.S.E. or B.A./M.S.E. program is accomplished in five years, although some students take more or less time. Applicants are judged on the basis of their performance in courses and their letters of recommendation.

Double counting of at most two courses is subject to current WSE and departmental policies. Students may not take a 600.3xx course as an undergraduate and the corresponding 600.4xx course for the M.S.E.; likewise for 600.4xx/6xx course offerings. Upon admission to the program students will be assigned a graduate faculty advisor in the Computer Science Department who must approve the courses to be applied toward the master’s degree. For information on the requirements of the M.S.E. degree, see the Graduate Programs tab on this page, or ask in the departmental office for the document that lists those requirements.

Every graduate student in the Department of Computer Science must follow a program approved by a faculty advisor in the department. The advisor assigned to a student may change, subject to the acceptance of the new advisor.

### Requirements for the M.S.E. Degree

The Master of Science in Engineering (M.S.E.) is a daytime in-person program offered by the Department of Computer Science. Most students complete the program in three full-time semesters. Two consecutive semesters of residence as a full-time graduate student are required. Those interested in part-time evening/remote study should refer to Engineering for Professionals at ep.jhu.edu.

Entering students are expected to have completed a program of study equivalent to that required by the B.S. in computer science. Applicants from other disciplines are expected to have coursework (or equivalent experience) in intermediate programming (C++ and Java), data structures, computer system fundamentals, and automata theory. Upon admission to the Master of Science in Engineering program, a student is assigned a graduate advisor from the Department of Computer Science who must approve the courses to be applied to the M.S.E. degree.

The Department of Computer Science classifies its courses into three sub-areas: Analysis, Applications, and Systems. All M.S.E. candidates must complete at least two courses (3 class hours (credits) each) from each of these three areas. Each upper-level course description in this
catalog includes its area for reference. A course in multiple areas may only be counted toward one requirement. A current listing of courses with area designators (http://cs.jhu.edu/courses/courseareas.pdf) is provided on the departmental website. While this listing includes a few highly relevant courses outside the Department of Computer Science, only one such course may be applied toward the area requirements. M.S.E. students must also complete an additional two elective courses (chosen from any CS area or from closely related departments such as Electrical and Computer Engineering, Cognitive Science, Mathematics, or Applied Mathematics and Statistics) for a total of eight graduate courses.

Computer Science graduate students may count 400-level courses in our department towards their degree, in addition to the standard 600-level and above graduate courses. The coursework program must be approved by the student's faculty advisor.

In addition to the eight courses, a student must elect one of the following options in order to fulfill the degree requirements:

- Two additional (graduate) courses in Computer Science, approved as above.
- A supervised research project including an approved project report that will be made publicly available.
- An original, faculty-approved master's essay, submitted to the Milton S. Eisenhower Library.

By satisfying the Ph.D. qualifying course requirements and the first qualifying project, a student will also satisfy the M.S.E. degree requirements (unless more than two course requirements have been satisfied using courses transferred from other institutions). Please refer to the Ph.D. program information for details.

All M.S.E. degree candidates are encouraged to regularly attend the department seminars. You may enroll in EN.600.601 Computer Science Seminar-EN.600.602 Computer Science Seminar; however, these courses may not be counted toward the degree course requirements.

Course Requirement Details

- All courses counted toward the M.S.E. degree requirement must be taken at a graduate-appropriate level. In the Department of Computer Science, this includes courses that are 600-level and above, as well as 400-level courses.
- At most, two courses with grades less than B- may be counted toward the coursework requirements. No courses with grades less than C- may be counted.
- The overall grade point average of the courses counted toward the coursework requirements must be a 3.0 or higher (B average).
- At most, two independent study courses can be counted toward the course requirements.
- Other than independent study courses, no courses with grades of P can be counted toward the coursework requirement. Courses with grades of P will not be included in the grade point average calculation.
- One of the courses required for the M.S.E. degree, but only one, can be replaced by 3 credits from comparable short courses.
- A majority of the courses counted toward the degree must be taught in the Department of Computer Science.
- At most, two courses can be transferred from graduate programs of other institutions to be counted toward the degree requirements. Such transfer courses must be approved by the student's faculty advisor and the department. It is the obligation of the student to provide all necessary data to the Department of Computer Science regarding the course(s) for which transfer credit is being requested.
- A grade of D or F results in probation; a second D or F is cause for being dropped from the program.
- Any master's student engaged in research for payment or to help meet degree requirements is required to complete Responsible Conduct of Research training. Students receiving payment from NIH training grants or fellowships must take the in person course—AS.360.625 Responsible Conduct of Research. All other students can take the course online—AS.360.624 Responsible Conduct of Research (Online). Instructions for accessing and signing up for the course can be found here: http://engineering.jhu.edu/wse-research/resources-policies-forms/responsible-conduct-of-research/online-training-course-for-the-responsible-conduct-of-research/ Additional information regarding this training can be found here: http://engineering.jhu.edu/wse-page/conduct-of-research-training. Students who are required to complete this training will not receive a diploma until the course has been completed.

Tuition Support

M.S.E. students are not normally eligible for tuition waivers, but will be able to work on campus up to 19.99 hours per week for hourly rates. There are also course assistant positions available for qualified students who are seeking financial support. Those interested must apply at the start of each semester for specific courses in need.

Requirements for the Ph.D. Degree

The goal of the Doctor of Philosophy (Ph.D.) program in the Department of Computer Science is to prepare first-rate scholars in the analysis, systems, and applications areas of computer science. Successful graduates may assume significant positions in academia, research institutes, industry, or government laboratories.

Applications for admission to the Ph.D. program in Computer Science are reviewed by a faculty committee. Although the specific criteria are not rigid, all students admitted will exhibit exceptional intellectual achievements and promise. Applicants must submit letters of recommendation, GRE scores, and (for foreign applicants) TOEFL scores.

In keeping with Hopkins' traditions, program requirements are flexible, as described below. For more detailed policies regarding the PhD program, please visit the Advising Manual (http://www.cs.jhu.edu/graduate-studies/phd-requirements) on our departmental website.

University Residency

Two consecutive semesters of residence as a full-time graduate student are required.

Seminar Attendance

All Ph.D. degree candidates are required to enroll and maintain satisfactory attendance in Computer Science Seminar 600.601-602 each semester for the duration of their enrollment in the program. Although seminar attendance is required, the seminar may not be counted toward the qualifying course requirement.

Responsible Conduct of Research

All doctoral students are required to take AS.360.625 Responsible Conduct of Research. Students are expected to complete the course by the end of the first year but have until the start of the fourth semester to meet this requirement. Failure to do so may result in a loss of funding.
Additional information regarding this requirement can be found here: http://eng.jhu.edu/wse/page/conduct-of-research-training.

Qualifying Course Requirements
The Department of Computer Science classifies its courses into three research areas: analysis, applications, and systems. All Ph.D. candidates must complete at least two courses (3 class hours each) from each of these three areas. Each upper-level course description in this catalog includes its area for reference. A course in multiple areas may only be counted toward one requirement. A current listing of courses with area designators (http://cs.jhu.edu/courses/courseareas.pdf) is provided on the departmental website. While this listing includes a few highly relevant courses outside the Department of Computer Science, only one such course may be applied toward the area requirements. Ph.D. students must also complete an additional two elective graduate courses (chosen from any CS area or from closely related departments such as Electrical and Computer Engineering, Cognitive Science, Mathematics, or Applied Mathematics and Statistics) for a total of eight courses. Computer Science graduate students may count 400-level courses in our department towards their degree, in addition to the standard 600-level and above graduate courses. The coursework program must be approved by the student's faculty advisor. The overall grade point average for these eight courses must be at least equivalent to a B+. No course with a grade of less than C- may be counted toward this Ph.D. qualifying course requirement. Other than independent study courses, no courses with grades of P can be counted toward the coursework requirement. Courses with grades of P will not be included in the grade point average calculation. One of the courses required for the degree, but only one, may be replaced by 3 credits from comparable short courses. With approval of the student's faculty advisor, up to two courses can be transferred from graduate programs of other institutions; more than two such courses can be transferred with approval of the department. It is the obligation of the student to provide all necessary data to the Department of Computer Science regarding the course(s) for which transfer credit is being requested. Students are expected to complete the course requirements by the end of their second year as a Ph.D. candidate.

Qualifying Project Requirements
A Ph.D. student must complete two projects, each under the supervision and with the written agreement of a different faculty member in the Department of Computer Science. Upon conclusion of each project, the student must write a “Project Report” describing the project in detail. This report will be a public document and will be kept on file in the department office. The supervising faculty member must approve the project report. Students are expected to complete the qualifying projects by the end of their third year as a Ph.D. candidate.

Upon completion of the Ph.D. qualifying course requirements and the first qualifying project, students are ordinarily eligible to receive a master of science in engineering degree. The degree will be awarded upon student request.

Graduate Board Oral Examination (GBO)
This examination is a university requirement, ideally taken in the student's third year. The oral exam is administered by a panel consisting of the research sponsor, two faculty members from the Department of Computer Science, and two from outside the department. The exam seeks to establish the student's readiness to conduct original research in the area of his or her “Preliminary Research Proposal,” which should be distributed to the examiners in advance and presented by the student at the start of the exam.

Part-Time Ph.D.
Two consecutive semesters of residence as a full-time graduate student are required by the university. Part-time students may pass both the Ph.D. qualifying requirements and the Graduate Board oral exam within four years of being admitted to the program. Attempting to obtain a Ph.D. is a major commitment and involves close coordination with a faculty advisor in the department. Part-time students must be able to establish and maintain these close links.

Departmental Seminar
Ph.D. students must give an official departmental seminar on their research area. This is to be done after the GBO and prior to the dissertation defense, or as part of the dissertation defense.

Dissertation and Defense
Ph.D. students must write a dissertation consisting of original research in their chosen area. They must deliver a public presentation of the dissertation before a dissertation committee consisting of the faculty advisor, a second faculty member in the Department of Computer Science (who must have a primary tenure-track appointment in the Department if the advisor does not), and one or more other members with Ph.D. degrees. In conformity with University requirements, the members of the dissertation committee must submit a referee’s letter to the Graduate Board recommending that the dissertation be accepted. Completed dissertations will be formatted and submitted to the Milton S. Eisenhower Library for electronic publication (http://guides.library.jhu.edu/etd).

Teaching Requirement
Beginning in Fall 2015, all Ph.D. students are required to serve as a Teaching Assistant at least one semester during their program of study. As part of the requirement, the supervising course instructor must give the TA an opportunity to be in front of a group of students at least once during the course. Students are required to sign-up for the course EN.600.807 Teaching Practicum during the semester in which the requirement is being fulfilled, and at the end of the semester his/her performance will be evaluated by the course instructor.

Student Progress Review
Ph.D. students are reviewed annually by their advisor(s) and the department, and notified in writing as to their standing in the program. Students deemed to not be making satisfactory progress may be placed on probation.

Financial Aid
Financial aid is available for candidates of high promise. Fellowships provide a student with a stipend plus tuition. Research assistantships are available on sponsored research projects directed by members of the faculty. Teaching assistantships normally consist of tuition plus a stipend commensurate with the teaching or grading duties assigned. Students determined to have significant deficiency in spoken English may be required to take one or more semesters of English as a Second Language in order to qualify for employment as a teaching or research assistant.

For current faculty and contact information go to http://cs.jhu.edu/faculty/

Faculty Chair
Yair Amir
Professor: distributed systems, resilient clouds and critical infrastructure, overlay networks, distributed algorithms.

Professor Emeritus
Gerald M. Masson
Fault tolerant computing, systems diagnosis theory, distributed computing, real-time error monitoring of hardware/software, software design for testability, interconnection networks.

Professors
Randal Burns
Storage systems, high performance and scientific computing, and database federations.

Jason M. Eisner
Computational linguistics (syntax and phonology), natural language processing, statistical machine learning, programming language design.

Gregory D. Hager
Mandell Bellmore Professor; Director, Malone Center for Engineering in Healthcare: vision, robotics, human-machine systems, computer-integrated medicine.

Philipp Koehn
Statistical machine translation.

S. Rao Kosaraju
Edward J. Schaefer Professor in Engineering: design of algorithms, pattern matching, and derandomization.

Aviel Rubin
Technical Director, Information Security Institute: system and networking security, computer privacy, applied cryptography.

Steven Salzberg
Bloomberg Distinguished Professor: genomics, bioinformatics, genome assembly, gene finding, sequence analysis algorithms.

Scott F. Smith
Programming languages, type systems, security in language design, component programming languages.

Alexander Szalay
Bloomberg Distinguished Professor: data intensive computing, theoretical astrophysics, galaxy formation.

Russell H. Taylor
John C. Malone Professor; Director, LCSR & CISST ERC: medical robotics, computer-integrated interventional medicine, medical image analysis, human-machine robotic systems.

David Yarowsky
Natural language and speech processing, information retrieval, machine translation, and machine learning.

Alan Yuille
Bloomberg Distinguished Professor: computational models of vision, mathematical models of cognition, artificial intelligence, neural networks.

Associate Professors
Michael Kazhdan
Computer graphics, surface reconstruction, image and geometry processing.

Michael Schatz
Bloomberg Distinguished Associate Professor: novel algorithms for comparative genomics, human genetics, and personalized medicine.

Assistant Professors
Yanif Ahmad
Data management, stream processing, declarative languages, parallel and distributed databases.

Raman Arora
Machine learning, statistical signal processing, stochastic approximation algorithms, applications to speech and language processing.

Alexis Battle
Genetics of complex traits, graphical models, transfer learning, structured regularization methods.

Vladimir Braverman
Algorithms, massive data sets, data streams, and database systems.

Michael Dinitz
Theoretical computer science, approximation algorithms, applications to networks and distributed computing.

Matthew Green
Applied cryptography, cryptographic protocol design, analysis of practical security systems, privacy-preserving storage and identification technologies.

Abhishek Jain
Cryptography, security, theoretical computer science.

Benjamin Langmead
Computational genomics, sequence alignment, text indexing, parallel and high performance computing.

Xin Li
Theory of computation, randomness, complexity theory, distributed computing, cryptography.

Suchi Saria
Machine learning, computational medicine, health informatics, and applications of machine learning in natural language processing, activity recognition and human-machine systems.

Ilya Shpitser
John C. Malone Assistant Professor: causal inference and missing data, graphical models, longitudinal data analysis in medicine and epidemiology.

Benjamin Van Durme
Artificial intelligence, natural language processing (computational semantics), and streaming algorithms.

Research Professors
Amihood Amir
Algorithms design and analysis, multidimensional pattern matching, knowledge discovery algorithms, real time systems algorithms, computational molecular biology.

Peter Kazanzides
Medical robots, computer-assisted surgery, real-time systems.

Nassir Navab
Augmented reality, vision, medical image computing and computer assisted interventions.
Associate Research Professors
Philippe Burlina
Computer vision, visual analysis and communications, multi-modality image exploitation, enterprise software systems for content and e-process management.

Chris Callison-Burch
Statistical natural language processing, machine translation, paraphrasing, evaluation of human language technologies.

Susan Hohenberger-Waters
Cryptography, computer security, algorithms, and complexity theory.

James Mayfield
Information retrieval, cross-language retrieval, information extraction, natural language processing.

Andreas Terzis
P2P, overlay and sensor networks, resilient internet infrastructure, NP-based architectures.

Qinqing Zhang
Wireless communications and networking, Mobile Ad-hoc networks, cellular system and network technologies, multimedia applications and QoS, Internet protocol and algorithm design, performance analysis.

Assistant Research Professors
Mark Dredze
Machine learning, natural language processing, health informatics.

Kevin Duh
Natural language processing, machine learning.

Peng Huang
Computer systems, software engineering, programming languages.

Xin Jin
Networked systems, cloud computing, networking.

Simon Leonard
Visual servoing, hand-eye coordination.

Christine Piatko
Computational geometry, information visualization, information retrieval.

Austin Reiter
Application of computer vision to robotics, machine vision, 3D reconstruction, image registration, visual recognition.

I-Jeng Wang
Wireless networking, Bayesian networks, probabilistic models.

Associate Teaching Professors
Sara Miner More
Foundations of computing, computer science education, cryptography, information flow.

Joanne Selinski
Director of Undergraduate Studies: CS education, software engineering.

Senior Lecturer
Peter Fröhlich
Programming languages, software engineering, systems software, video game design, web applications.

Part-time Lecturers
Sheela Kosaraju
Computer ethics.

Harold Lehmann
Medical informatics.

Visiting Professor
Mitra Basu
Computational biology, pattern recognition, neural networks, artificial intelligence.

Associate Research Scientist
Anton Dahbura
Executive Director, Information Security Institute: Information security, fault-tolerant computing, distributed systems, testing.

Assistant Research Scientist
Matt Post
Machine translation, syntax, parsing and language modeling.

Adjunct Professors
Gabor Fichtinger
Applied surgical robotics, surgical CAD/CAM systems, percutaneous therapies, stereotactic radiosurgery.

Peter Freeman
Future internet, history and future of computing, innovation and science policy.

John W. Sheppard
Artificial intelligence, machine learning, data mining.

Adjunct Assistant Professor
Han Liu
Statistical machine learning, high dimensional nonparametric learning and massive-data analysis, multiple hypotheses testing, time series analysis, genomics, proteomics, cognitive neuroscience.

Adjunct Associate Research Professors
Seth Nielson
Network security.

Lanier Watkins
Critical infrastructure security, network security.

Joint Appointments
Joel Bader
Associate Professor (Biomedical Engineering): bioinformatics and computational biology.

Emad Boctor
Assistant Professor (Radiology-Medical Imaging Physics): image-guided intervention, ultrasound imaging, elasticity, and thermal imaging.

Tamas Budavari
Assistant Professor (Applied Mathematics and Statistics): computational statistics, bayesian inference, low-dimensional embeddings, streaming and randomized algorithms.

Gregory Chirikjian
Professor (Mechanical Engineering): robotics, kinematics, dynamics, control, motion planning.

Noah Cowan
Associate Professor (Mechanical Engineering): sensor-based control of locomotion and manipulation, and biologically inspired robotics.

Ralph Etienne-Cummings

Professor (Electrical and Computer Engineering): mixed-signal VLSI, computational sensors, robotics, neuromorphic engineering.

James Fill

Professor (Applied Mathematics and Statistics): probability, stochastic processes, random structures, and algorithms.

Liliana Florea

Assistant Professor (McKusick-Nathans Institute for Genetic Medicine): application of computation techniques towards modeling and solving problems in biology and genetic medicine.

Rachel Karchin

Associate Professor (Biomedical Engineering): computational molecular biology, bioinformatics, genetic variation.

Sanjeev Khudanpur

Associate Professor (Electrical and Computer Engineering): information theory, statistical language modeling for speech recognition and machine translation

Marin Kobilarov

Assistant Professor (Mechanical Engineering): intelligent robotic vehicles, analytical and computational methods for mechanics, control, motion planning, and reasoning under uncertainty.

Michael I Miller

Professor (Biomedical Engineering): image understanding, computer vision, medical imaging, computational anatomy.

Mihaela Pertea

Assistant Professor (Medicine): computational tools for RNA-seq analysis, gene finding, splice site prediction, sequence motif finding.

Carey Priebe

Professor (Applied Mathematics and Statistics): computational statistics, kernel and mixture estimates, statistical pattern recognition, and statistical image analysis.

Jerry L. Prince

William B. Kouwenhoven Professor (Electrical and Computer Engineering) (Associate Director for Research, CISST ERC): image processing, computer vision, medical imaging.

Rebecca Schulman

Assistant Professor (Chemical and Biomolecular Engineering): molecular programming, DNA nanotechnology, self-assembly (theory and experiment), theoretical and systems biology, smart materials, nanoscale robotics.

Ralph Semmel

Professor (Director, APL): artificial intelligence, database systems, software engineering.

Jeff Siewersden

Professor (Biomedical Engineering): imaging physics, diagnostic radiology, image-guided interventions.

James Taylor

Associate Professor (Biology): genome informatics.

Rene Vidal

Professor (Biomedical Engineering): computer vision, machine learning, robotics, and control.

Joshua T. Vogelstein

Assistant Professor (Biomedical Engineering): big data science, connectomics, statistical neuroscience.

Louis Whitcomb

Professor (Mechanical Engineering): dynamics and control of mechanical systems.

Raimond L. Winslow

Professor (Biomedical Engineering): modeling of biological systems, nonlinear systems theory, grid computing and data management, biomedical ontologies.

Thomas B. Woolf

Professor (Physiology): bioinformatics, computational biophysics.

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

EN.600.104. Computer Ethics. 2.00 Credits.

Students will examine a variety of topics regarding policy, legal, and moral issues related to the computer science profession itself and to the proliferation of computers in all aspects of society, especially in the era of the Internet. The course will cover various general issues related to ethical frameworks and apply those frameworks more specifically to the use of computers and the Internet. The topics will include privacy issues, computer crime, intellectual property law -- specifically copyright and patent issues, globalization, and ethical responsibilities for computer science professionals. Work in the course will consist of weekly assignments on one or more of the readings and a final paper on a topic chosen by the student and approved by the instructor.

Instructor(s): S. Kosaraju

Area: Humanities.

EN.600.105. M & Ms: Freshman Experience. 1.00 Credit.

This course is required for all freshmen Computer Science majors. Transfers into the major and minors may enroll by permission only. Students will attend four 3-week blocks of meetings with different computer science professors, focused on a central theme. Active participation is required. Satisfactory/Unsatisfactory only.

Instructor(s): J. Selinski.

EN.600.107. Introductory Programming in Java. 3.00 Credits.

This course introduces fundamental structured and object-oriented programming concepts and techniques, using Java, and is intended for all who plan to use computer programming in their studies and careers. Topics covered include variables, arithmetic operators, control structures, arrays, functions, recursion, dynamic memory allocation, files, class usage and class writing. Program design and testing are also covered, in addition to more advanced object oriented concepts including inheritance and exceptions as time permits. First-time programmers are strongly advised to take EN.600.108 concurrently in Fall/Spring semesters. Prerequisites: Students may receive credit for EN.600.107 or EN.600.112, but not both.

Instructor(s): S. More

Area: Engineering.
EN.600.108. Introduction to Programming Lab. 1.00 Credit.
This course is intended for novice programmers, and must be taken in conjunction with EN.600.107. The purpose of this course is to give first-time programmers extra hands-on practice with guided supervision. Students will work in pairs each week to develop working programs, with checkpoints for each development phase. Must have familiarity with computers. Satisfactory/Unsatisfactory only.
Prerequisites: Coreq for EN.600.108: EN.600.107
Instructor(s): S. More
Area: Engineering.

EN.600.112. Introductory Programming for Scientists and Engineers. 3.00 Credits.
An introductory learning by doing programming course for scientists, engineers, and everybody else who will need basic programming skills in their studies and careers. We cover the fundamentals of structured, modular, and (to some extent) object-oriented programming as well as important design principles and software development techniques. We will apply our shiny new programming skills by developing computational solutions in the Python programming language to a number of real-world problems from a variety of disciplines. This course may not be used for the CS major or minor requirements, except as a substitute for 600.107. Summer only: Students will be expected to do significant programming (15-20 hours/wk). Attendance and participation is required. Students must have a laptop on which to install and run the programming environment.
Prerequisites: Students who have taken EN.600.107 may not register for EN.600.112; Students who have taken EN.600.111 may not register for EN.600.112.
Instructor(s): J. Selinski
Area: Engineering.

EN.600.113. IPSE Lab. 1.00 Credit.
This course is intended for novice programmers, and must be taken in conjunction with EN.600.112. The purpose of this course is to give first-time programmers hands-on practice with guided supervision. Students may receive credit for EN.600.108 or EN.600.113, but not both. Corequisite: EN.600.112. Satisfactory/Unsatisfactory only.
Prerequisites: Corequisite: EN.600.112; Students may receive credit for EN.600.108 or EN.600.113, but not both.
Instructor(s): J. Selinski
Area: Engineering.

EN.600.120. Intermediate Programming. 4.00 Credits.
This course teaches intermediate to advanced programming, using C and C++. (Prior knowledge of these languages is not expected.) We will cover low-level programming techniques, as well as object-oriented class design, and the use of class libraries. Specific topics include pointers, dynamic memory allocation, polymorphism, overloading, inheritance, templates, collections, exceptions, and others as time permits. Students are expected to learn syntax and some language specific features independently. Course work involves significant programming projects in both languages. Recommended Course Background: AP CS, EN.600.107, EN.600.111, EN.600.112 or equivalent.
Instructor(s): M. Kazhdan; S. More
Area: Engineering.

EN.600.145. Mini Term: Introduction to Computer-Integrated Surgery. 1.00 Credit.
This course will give an introduction to the concepts and major elements of computer-integrated surgery (CIS) through clinical applications. Students will learn to ask questions and look for answers the way clinical engineers build and analyze CIS systems. Major topics will include medical imaging, image processing, surgical planning, surgical robotics, robot navigation, systems integration, and clinical validation. No computer programming will be necessary to complete the assignments.
Instructor(s): S. Leonard
Area: Engineering.

EN.600.226. Data Structures. 4.00 Credits.
This course covers the design and implementation of data structures including arrays, stacks, queues, linked lists, binary trees, heaps, balanced trees (e.g. 2-3 trees, AVL-trees) and graphs. Other topics include sorting, hashing, memory allocation, and garbage collection. Course work involves both written homework and Java programming assignments.
Prerequisites: EN.600.107 or EN.600.120 or permission of instructor.
Instructor(s): J. Selinski; P. Froehlich; S. More
Area: Engineering, Quantitative and Mathematical Sciences.

EN.600.233. Computer System Fundamentals. 3.00 Credits.
[Formerly EN.600.333/433] We study the design and performance of a variety of computer systems from simple 8-bit micro-controllers through 32/64-bit RISC architectures all the way to ubiquitous x86 CISC architecture. We’ll start from logic gates and digital circuits before delving into arithmetic and logic units, registers, caches, memory, stacks and procedure calls, pipelined execution, super-scalar architectures, memory management units, etc. Along the way we’ll study several typical instruction set architectures and review concepts such as interrupts, hardware and software exceptions, serial and other peripheral communications protocols, etc. A number of programming projects, frequently done in assembly language and using various processor simulators, round out the course. [Systems]. Students may receive credit for only one of EN.600.233, EN.600.333 or EN.600.433.
Instructor(s): P. Froehlich
Area: Engineering.

EN.600.250. User Interfaces and Mobile Applications. 3.00 Credits.
This course will provide students with a rich development experience, focused on the design and implementation of user interfaces and mobile applications. A brief overview of human computer interaction will provide context for designing, prototyping and evaluating user interfaces. Students will invent their own mobile applications and implement them using the Android SDK, which is JAVA based. An overview of the Android platform and available technologies will be provided, as well as XML for layout, and general concepts for effective mobile development. Students will be expected to explore and experiment with outside resources in order to learn technical details independently. There will also be an emphasis on building teamwork skills, and on using modern development techniques and tools.
Prerequisites: EN.600.120 AND EN.600.226
Instructor(s): J. Selinski
Area: Engineering.
EN.600.255. Introduction to Video Game Design. 3.00 Credits.
A broad survey course in video game design (as opposed to mathematical game theory), covering artistic, technical, as well as sociological aspects of video games. Students will learn about the history of video games, archetypal game styles, computer graphics and programming, user interface and interaction design, graphical design, spatial and object design, character animation, basic game physics, plot and character development, as well as psychological and sociological impact of games. Students will design and implement an experimental video game in interdiciplinary teams of 3-4 students as part of a semester-long project. Section 1 requires programming skills, including at least one programming course (preferably 2 or more). Section 2 requires artistic skills, including at least one multimedia course (preferably 2 or more). Open to sophomores and above.
Corequisites: Co-req: 600.256
Instructor(s): P. Froehlich
Area: Engineering.

EN.600.256. Introduction to Video Game Design Lab. 1.00 Credit.
A lab course in support of 600.255: Introduction to Video Game Design covering a variety of multi-media techniques and applications from image processing, through sound design, to 3D modeling and animation. See 600.255: Introduction to Video Game Design for details about enrolling.
Corequisites: EN.600.255(C)
Instructor(s): P. Froehlich.

EN.600.271. Automata & Computation Theory. 3.00 Credits.
This course is an introduction to the theory of computing. topics include design of finite state automata, pushdown automata, linear bounded automata, Turing machines and phrase structure grammars; correspondence between automata and grammars; computable functions, decidable and undecidable problems, P and NP problems, NP-completeness, and randomization. Students may not receive credit for EN.600.271 and EN.600.471 for the same degree.
Prerequisites: EN.550.171
Instructor(s): X. Li
Area: Engineering, Quantitative and Mathematical Sciences.

EN.600.316. Database Systems. 3.00 Credits.
This course serves as an introduction to the architecture and design of modern database management systems. topics include query processing algorithms and data structures, data organization and storage, query optimization and cost modeling, transaction management and concurrency control, high-availability mechanisms, parallel and distributed databases, and a survey of modern architectures including NoSQL, column-oriented and streaming databases. Course work includes programming assignments and experimentation in a simple database framework written in Java. [Systems] Students may receive credit for EN.600.316 or EN.600.416, but not both.
Prerequisites: EN.600.120 AND EN.600.226; Students may receive credit for EN.600.316 or EN.600.416, but not both.
Instructor(s): Y. Ahmad
Area: Engineering.

EN.600.318. Operating Systems. 3.00 Credits.
This course covers fundamental topics related to operating systems theory and practice. Topics include processor management, storage management, concurrency control, multi-programming and processing, device drivers, operating system components (e.g., file system, kernel), modeling and performance measurement, protection and security, and recent innovations in operating system structure. Course work includes the implementation of operating systems techniques and routines, and critical parts of a small but functional operating system. Students may receive credit for EN.600.318 or EN.600.418 but not both. Recommended Course Background: EN.600.211
Prerequisites: Students may receive credit for EN.600.318 or EN.600.418 but not both.;Prereqs: EN.600.120 AND EN.600.226 AND (EN.600.233 OR EN.600.333)
Instructor(s): P. Froehlich
Area: Engineering.

EN.600.320. Parallel Programming. 3.00 Credits.
This course prepares the programmer to tackle the massive data sets and huge problem size of modern scientific and enterprise computing. Google and IBM have commented that undergraduate CS majors are unable to break the single server mindset (http://www.google.com/intl/en/press/pressrel/20071008_ibm_univ.html). Students taking this course will abandon the comfort of serial algorithmic thinking and learn to harness the power of cutting-edge software and hardware technologies. The issue of parallelism spans many architectural levels. Even "single server" systems must parallelize computation in order to exploit the inherent parallelism of recent multi-core processors. The course will examine different forms of parallelism in four sections. These are: (1) massive data-parallel computations with Hadoop; (2) programming compute clusters with MPI; (3) thread-level parallelism in Java; and, (4) GPGPU parallel programming with NVIDIA's Cuda. Each section will be approximately 3 weeks and each section will involve a programming project. The course is also suitable for undergraduate and graduate students from other science and engineering disciplines that have prior programming experience. [Systems] Students may receive credit for EN.600.320 or EN.600.420, but not both. Recommended Course Background: EN.600.233
Instructor(s): R. Burns
Area: Engineering.
EN.600.321. Object Oriented Software Engineering. 3.00 Credits.
This course covers object-oriented software construction methodologies and their application. The main component of the course is a large team project on a topic of your choosing. Course topics covered include object-oriented analysis and design, UML, design patterns, refactoring, program testing, code repositories, team programming, and code reviews. [Systems or Applications] (http://pl.cs.jhu.edu/oose/index.shtml)
Students may receive credit for EN.600.321 or EN.600.421, but not both. **Prerequisites:** Students may receive credit for 600.321 or 600.421, but not both; EN.600.120 AND EN.600.226
Instructor(s): P. Froehlich
Area: Engineering.

EN.600.322. Compiler Design. 3.00 Credits.
Introduction to compiler design, including lexical analysis, parsing, syntax-directed translation, symbol tables, run-time environments, and code generation and optimization. Students are required to write a compiler as a course project. [Systems] Co-listed with EN.600.428
**Prerequisites:** EN.600.120 AND EN.600.226
Instructor(s): P. Froehlich
Area: Engineering.

EN.600.323. Data-Intensive Computing. 3.00 Credits.
Data-Intensive Computing is an experiential education course in computing with massive data sets that covers the software, algorithms, and systems used to ingest, store, and analyze. Specific topics include: NoSQL software systems including key/value stores and graph databases, scientific python, array databases, (semi)-external memory array and graph algorithms, extract-transform-load (ETL) processing, spatial indexing, OpenCL GPU code acceleration, and performance management of clusters. The course will utilize the unique computing resources at JHU, including the DataScope (5PB of storage), the GPU cluster (110 TFlops), and the Homewood High Performance Computing Cluster (1600 cores). The entire course will take place in several lengthy lab sessions each week. Course time will be divided roughly into team projects (30%), ad-hoc tasks (50%), presentation (10%) and using collaboration tools for concurrent reading and authoring and interactive self-assessment. [Systems]
**Prerequisites:** EN.600.320 OR EN.600.420
Instructor(s): R. Burns
Area: Engineering.

EN.600.325. Declarative Methods. 3.00 Credits.
Suppose you could simply write down a description of your problem, and let the computer figure out how to solve it. What notation could you use? What strategy should the computer then use? In this survey class, you'll learn to recognize when your problem is an instance of satisfiability, constraint programming, logic programming, dynamic programming, or mathematical programming (e.g., integer linear programming). For each of these related paradigms, you'll learn to reformulate hard problems in the required notation and apply off-the-shelf software that can solve any problem in that notation — including NP-complete problems and many of the problems you'll see in other courses and in the real world. You'll also gain some understanding of the general-purpose algorithms that power the software. [Analysis] Students can only receive credit for EN.600.325 or EN.600.425, but not both.
Instructor(s): J. Eisner
Area: Engineering.

EN.600.326. Compilers and Interpreters. 3.00 Credits.
Introduction to compiler design, including lexical analysis, parsing, syntax-directed translation, symbol tables, run-time environments, and code generation and optimization. Students are required to write a compiler as a course project. [Systems] Co-listed with EN.600.428
**Prerequisites:** EN.600.120 AND EN.600.226
Instructor(s): P. Froehlich
Area: Engineering.

EN.600.335. Artificial Intelligence. 3.00 Credits.
The course situates the study of Artificial Intelligence (AI) first in the broader context of Philosophy of Mind and Cognitive Psychology and then treats in-depth methods for automated reasoning, automatic problem solvers and planners, knowledge representation mechanisms, game playing, machine learning, and statistical pattern recognition. The class is recommended for all scientists and engineers with a genuine curiosity about the fundamental obstacles to getting machines to perform tasks such as deduction, learning, and planning and navigation. Strong programming skills and a good grasp of the English language are expected; students will be asked to complete both programming assignments and writing assignments. The course will include a brief introduction to scientific writing and experimental design, including assignments to apply these concepts. [Applications] Prereq: 600.226, 550.171; Recommended: linear algebra, prob/stat. Students can only receive credit for 600.335 or 600.435, but not both. **Prerequisites:** EN.600.226[C] AND EN.550.171[C]
Instructor(s): P. Koehn
Area: Engineering.

EN.600.337. Distributed Systems. 3.00 Credits.
This course teaches how to design and implement protocols that enable processes to exchange information, cooperate, and coordinate efficiently in a consistent manner over a computer network. Topics include communication protocols, group communication, distributed databases, distributed operating systems, and security. [Systems]. Students may receive credit for EN.600.337 or EN.600.437 but not both. **Prerequisites:** Students may receive credit for 600.337 or 600.437, but not both; EN.600.226[C] AND EN.600.421[C]
Instructor(s): Y. Amir
Area: Engineering.

EN.600.340. Introduction to Genomic Research. 3.00 Credits.
This course will use a project-based approach to introduce undergraduates to research in computational biology and genomics. During the semester, students will take a series of large data sets, all derived from recent research, and learn all the computational steps required to convert raw data into a polished analysis. Data challenges might include the DNA sequences from a bacterial genome project, the RNA sequences from an experiment to measure gene expression, the DNA from a human microbiome sequencing experiment, and others. Topics may vary from year to year. In addition to computational data analysis, students will learn to do critical reading of the scientific literature by reading high-profile research papers that generated groundbreaking or controversial results. [Applications] Recommended Course Background: Knowledge of the Unix operating system and programming expertise in a language such as Perl or Python.
Instructor(s): S. Salzberg
Area: Engineering.
**EN.600.344. Computer Network Fundamentals. 3.00 Credits.**
Topics covered will include application layer protocols (e.g. HTTP, FTP, SMTP), transport layer protocols (UDP, TCP), network layer protocols (e.g. IP, ICMP), link layer protocols (e.g. Ethernet) and wireless protocols (e.g. IEEE 802.11). The course will also cover routing protocols such as link state and distance vector, multicast routing, and path vector protocols (e.g. BGP). The class will examine security issues such as firewalls and denial of service attacks. We will also study DNS, NAT, Web caching and CDNs, peer to peer, and protocol tunneling. Finally, we will explore security protocols (e.g. TLS, SSH, IPsec), as well as some basic cryptography necessary to understand these. Grading will be based on hands-on programming assignments, homeworks and two exams. [Systems] Students can only receive credit for EN.600.344 or EN.600.444, not both.
Prerequisites: Prereqs For EN.600.344: EN.600.233/333/433 or permission. Students can only receive credit for EN.600.344 or EN.600.444, not both
Instructor(s): A. DeSimone
Area: Engineering.

**EN.600.355. Video Game Design Project. 3.00 Credits.**
An intensive capstone design project experience in video game development. Students will work in groups of 4-8 on developing a complete video game of publishable quality. Teams will (hopefully) include programmers, visual artists, composers, and writers. Students will be mentored by experts from industry and academia. Aside from the project itself, project management and communication skills will be emphasized. Enrollment is limited to ensure parity between the various disciplines. [General] May involve travel to MICA. Junior or senior standing recommended.
Prerequisites: EN.600.255 AND EN.600.256 or permission of instructor
Instructor(s): P. Froehlich
Area: Engineering.

**EN.600.371. Software Tools Practicum. 3.00 Credits.**
This course will survey the wide range of tools, frameworks and packages that form a foundation for much of the modern Internet. Each week, a group of students will present a particular software package to the class, exploring the architectural, historical and competitive aspects. The weekly lab work and assignments will focus on testing the software and understanding its contributions to providing the services that support the Internet. The software will be chosen from a list of popular packages like Hudson, Drupal, Docker, WordPress, Node.js, jQuery, Ruby on Rails, Git, Coffeescript, Ember, Angular, MongoDB, Couch, and others. Students will select one package and work with others to explore the packages, learn how they work and then summarize this knowledge by creating a presentation for the class. [General] CS majors only.
Prerequisites: EN.600.120 AND EN.600.226
Instructor(s): P. Wayner
Area: Engineering.

**EN.600.365. Knowledge Discovery from Text. 3.00 Credits.**
The world is full of text: webpages, emails, newspaper articles, tweets, medical records, and so on. The purpose of text is for people to convey knowledge to other people. This course focuses on how computers analyze large, potentially streaming, text collections to automatically discover knowledge on their own (and to help people better find it themselves). Lectures and assignments will cover relevant topics in automatic classification (applied machine learning), linguistics, high-performance computing, and systems engineering, working with software systems for automatic question answering, populating knowledge bases, and aggregate analysis of social media such as Twitter. [Applications] Prerequisites: EN.600.120 AND EN.600.226
Instructor(s): B. Van Durme; T. Lippincott
Area: Engineering.

**EN.600.364. Introduction To Algorithms. 3.00 Credits.**
This course concentrates on the design of algorithms and the rigorous analysis of their efficiency. Topics include the basic definitions of algorithmic complexity (worst case, average case); basic tools such as dynamic programming, sorting, searching, and selection; advanced data structures and their applications (such as union-find); graph algorithms and searching techniques such as minimum spanning trees, depth-first search, shortest paths, design of online algorithms and competitive analysis. [Analysis] Students may receive credit for EN.600.363 or EN.600.463, but not both.
Prerequisites: EN.600.226 and EN.550.171 or permission; Students may receive credit for EN.600.363 or EN.600.463, but not both.
Instructor(s): V. Braverman
Area: Engineering, Quantitative and Mathematical Sciences.
EN.600.416. Database Systems. 3.00 Credits.
Similar material as EN.600.316, covered in more depth. Intended for upper-level undergraduates and graduate students. Students may receive credit for EN.600.316 or EN.600.416, but not both. Recommended Course Background: EN.600.120 and EN.600.226
Prerequisites: Students may receive credit for EN.600.316 or EN.600.416, but not both.
Instructor(s): Y. Ahmad
Area: Engineering.
EN.600.418. Operating Systems. 3.00 Credits.
Similar material as EN.600.318, covered in more depth. Intended for upper-level undergraduates and graduate students. Students may receive credit for EN.600.318 or EN.600.418, but not both. [Systems] Prerequisites: Students may receive credit for EN.600.318 or EN.600.418 but not both.
Instructor(s): P. Froehlich
Area: Engineering.
EN.600.420. Parallel Programming. 3.00 Credits.
Graduate level version of EN.600.320. Students may receive credit for EN.600.320 or EN.600.420, but not both. Recommended Course Background: EN.600.120 or equivalent.
Instructor(s): R. Burns
Area: Engineering.
EN.600.421. Object Oriented Software Engineering. 3.00 Credits.
Graduate level version of EN.600.321 [Systems or Applications]. Students may receive credit for EN.600.321 or EN.600.421, but not both. Recommended Course Background: EN.600.226 and EN.600.120
Instructor(s): S. Smith
Area: Engineering.
EN.600.422. Data-Intensive Computing. 3.00 Credits.
Graduate student version of EN.600.323. [Systems] Students may receive credit for EN.600.323 or EN.600.422, but not both. Prerequisites: EN.600.320 OR EN.600.420
Instructor(s): R. Burns
Area: Engineering.
EN.600.424. Network Security. 3.00 Credits.
This course focuses on communication security in computer systems and networks. The course is intended to provide students with an introduction to the field of network security. The course covers network security services such as authentication and access control, integrity and confidentiality of data, firewalls and related technologies, Web security and privacy. Course work involves implementing various security techniques. A course project is required. [Systems] Recommended. Course Background: EN.600.120 (or equivalent)
Prerequisites: EN.600.226 AND ( EN.600.344 OR EN.600.444 ) or permission
Instructor(s): S. Nielson
Area: Engineering.
EN.600.425. Declarative Methods. 3.00 Credits.
Students can only receive credit for EN.600.325 or EN.600.425, not both. Graduate level version of EN.600.325. Recommended Course Background: EN.600.226, EN.600.271, AS.110.107/AS.110.109
Instructor(s): J. Eisner
Area: Engineering.
EN.600.426. Principles of Programming Languages. 3.00 Credits.
Functional, object-oriented, and other language features are studied independent of a particular programming language. Students become familiar with these features by implementing them. Most of the implementations are in the form of small language interpreters. Some type checkers and a small compiler will also be written. The total amount of code written will not be overly large, as the emphasis is on concepts. The ML programming language is the implementation language used. [Analysis] Requistes include 600.226. No Freshmen or Sophomores.
Instructor(s): S. Smith
Area: Engineering, Quantitative and Mathematical Sciences.
EN.600.428. Compilers & Interpreters. 3.00 Credits.
Introduction to compiler design, including lexical analysis, parsing, syntax-directed translation, symbol tables, run-time environments, and code generation and optimization. Students are required to write a compiler as a course project. Co-listed with EN.600.328. Students should have knowledge of C/C++ programming and data structures. Graduate version of EN.600.328. Students may receive credit for EN.600.328 or EN.600.428, but not both.
Prerequisites: EN.600.120 AND EN.600.226
Instructor(s): P. Froehlich
Area: Engineering.
EN.600.429. Functional Programming at Work - Haskell and Domain-Specific Languages. 3.00 Credits.
This course studies pure functional programming in the Haskell language and the use of functional programming to build domain specific languages (DSLs): customized, application specific programming languages. This course starts with an introduction to Haskell and its essential ideas of lazy evaluation and type inference. Advanced functional programming topics will include type classes, monads and monad transformers, arrows, templates, dependent types, parser combinators, and multiple parameter type classes. The class will study existing DSLs and DSL implementation techniques, including languages for reactive programming, computer vision, hardware design, computer music, and parallel processing. Students will implement a DSL of their choice in Haskell.
Instructor(s): J. Peterson
Area: Engineering.
EN.600.430. Ontologies and Knowledge Representation. 3.00 Credits.
Knowledge representation (KR) deals with the possible structures by which the content of what is known can be formally represented in such a way that queries can be posed and inferences drawn. Ontology concerns the hierarchi- cal classification of entities from given domains of knowledge together with the relations between various classes or subclasses. We begin with KR, examining the standard variety of frameworks developed or implemented over the last twenty years, including 1st-order logic and automated theorem proving, networks, frames, and description logics. Then we move on to a study of the problems inherent in ontology development and examine the some of the currently prevalent environments, including Universal Modeling Language, OWL and Protege', RDFS and semantic web applications. [Analysis] Recommended Course Background: EN.600.107
Instructor(s): R. Rynasiewicz
Area: Humanities, Quantitative and Mathematical Sciences.
EN.600.433. Computer Systems. 3.00 Credits.
Graduate version of 600.333. Students may receive credit for 600.333 or 600.433, but not both. [Systems]
Instructor(s): P. Froehlich
Area: Engineering.
EN.600.435. Artificial Intelligence. 3.00 Credits.
The course situates the study of Artificial Intelligence (AI) first in the broader context of Philosophy of Mind and Cognitive Psychology and then treats in-depth methods for automated reasoning, automatic problem solvers and planners, knowledge representation mechanisms, game playing, machine learning, and statistical pattern recognition. The class is a recommended for all scientists and engineers with a genuine curiosity about the fundamental obstacles to getting machines to perform tasks such as deduction, learning, and planning and navigation. Strong programming skills and a good grasp of the English language are expected; students will be asked to complete both programming assignments and writing assignments. The course will include a brief introduction to scientific writing and experimental design, including assignments to apply these concepts. [Applications] Prereq: 600.226; Recommended: linear algebra, prob/stat. Students can only receive credit for 600.335 or 600.435, not both.
Prerequisites: Have not taken EN.600.335;EN.600.226
Instructor(s): P. Koehn
Area: Engineering.

EN.600.436. Algorithms for Sensor-Based Robotics. 3.00 Credits.
This course surveys the development of robotic systems for navigating in an environment from an algorithmic perspective. It will cover basic kinematics, configuration space concepts, motion planning, and localization and mapping. It will describe these concepts in the context of the ROS software system, and will present examples relevant to mobile platforms, manipulation, robotics surgery, and human-machine systems. [Analysis] Formerly EN.600.336. Students may receive credit for only one of EN.600.336, EN.600.436 and EN.600.636.
Prerequisites: EN.600.226 and Linear Algebra and Probability; Students may receive credit for only one of EN.600.336, EN.600.436 and EN.600.636.
Instructor(s): S. Leonard
Area: Engineering.

EN.600.437. Distributed Systems. 3.00 Credits.
Graduate version of 600.337 Systems. Students may receive credit for 600.337 or 600.437 but not both. Recommended Course Background: EN.600.120 AND EN.600.226
Prerequisite: EN.600.226
Instructor(s): Y. Amir
Area: Engineering.

EN.600.438. Computational Genomics: Data Analysis. 3.00 Credits.
Genomic data has the potential to reveal causes of disease, novel drug targets, and relationships among genes and pathways in our cells. However, identifying meaningful patterns from high-dimensional genomic data has required development of new computational tools. This course will cover current approaches in computational analysis of genomic data with a focus on statistical methods and machine learning. Topics will include disease association, prediction tasks, clustering and dimensionality reduction, data integration, and network reconstruction. There will be some programming and a project component. [Applications] Recommended Course Background: EN.600.226 or other programming experience, probability and statistics, linear algebra or calculus. Students may receive credit for EN.600.438 or EN.600.638, but not both.
Prerequisites: Students may receive credit for EN.600.438 or EN.600.638, but not both.
Instructor(s): A. Battle
Area: Engineering.

EN.600.439. Computational Genomics. 3.00 Credits.
Your genome is the blueprint for the molecules in your body. It’s also a string of letters (A, C, G and T) about 3 billion letters long. How does this string give rise to you? Your heart, your brain, your health? This, broadly speaking, is what genomics research is about. This course will familiarize you with a breadth of topics from the field of computational genomics. The emphasis is on current research problems, real-world genomics data, and efficient software implementations for analyzing data. Topics will include: string matching, sequence alignment and indexing, assembly, and sequence models. Course will involve significant programming projects. [Applications] Prerequisites: Students may receive credit for 600.439 or 600.639, but not both.; Prerequisite: EN.600.120 AND EN.600.226
Instructor(s): B. Langmead
Area: Engineering.

EN.600.441. Machine Learning for Genomic Data - Trends and Applications. 3.00 Credits.
Genomic data is becoming available in large quantities, but understanding how genetics contributes to human disease and other traits remains a major challenge. Machine learning approaches allow us to automatically analyze and combine genomic data, build predictive models, and identify genetic elements important to disease and cellular processes. This course will cover uses of machine learning in diverse genomic applications. Students will present and discuss current literature. Topics include predicting disease risk from genomic data, integrating diverse genomic data types, gene network reconstruction, and other topics guided by student interest. The course will include a project component with the opportunity to explore publicly available genomic data. Recommended course background: coursework in data mining, machine learning. [Applications] Students may receive credit for 600.441 or 600.641, but not both.
Prerequisites: Students may receive credit for 600.441 or 600.641, but not both.
Instructor(s): A. Battle
Area: Engineering.

EN.600.442. Modern Cryptography. 3.00 Credits.
Modern Cryptography includes seemingly paradoxical notions such as communicating privately without a shared secret, proving things without leaking knowledge, and computing on encrypted data. In this challenging but rewarding course we will start from the basics of private and public key cryptography and go all the way up to advanced notions such as zero-knowledge proofs, functional encryption and program obfuscation. The class will focus on rigorous proofs and require mathematical maturity. [Analysis] Recommended Course Background: EN.600.363/463, EN.600.271/471 and EN.550.171 or equiv.
Instructor(s): A. Jain
Area: Engineering, Quantitative and Mathematical Sciences.

EN.600.443. Security & Privacy in Computing. 3.00 Credits.
Lecture topics will include computer security, network security, basic cryptography, system design methodology, and privacy. There will be a heavy work load, including written homework, programming assignments, exams and a comprehensive final. The class will also include a semester-long project that will be done in teams and will include a presentation by each group to the class. [Applications] Recommended Course Background: A basic course in operating systems and networking, or permission of instructor.
Instructor(s): A. Rubin
Area: Engineering.
EN.600.444. Computer Networks. 4.00 Credits.
This course considers intersystem communications issues. Topics covered include layerd network architectures; the OSI model; bandwidth, data rates, modems, multiplexing, error detection/correction; switching; queuing models; circuit switching, packet switching; performance analysis of protocols, local area networks; and congestion control. Recommended Course Background: EN.600.120 and EN.600.233. Students can only receive credit for EN.600.344 or EN.600.444, not both.
Prerequisites: Students can only receive credit for EN.600.344 or EN.600.444, not both.
Instructor(s): M. Green
Area: Engineering.

EN.600.445. Computer Integrated Surgery I. 4.00 Credits.
This course focuses on computer-based techniques, systems, and applications exploiting quantitative information from medical images and sensors to assist clinicians in all phases of treatment from diagnosis to preoperative planning, execution, and follow-up. It emphasizes the relationship between problem definition, computer-based technology, and clinical application and includes a number of guest lectures given by surgeons and other experts on requirements and opportunities in particular clinical areas. Required Course Background: AS.110.201 or permission of instructor. Recommended Course Background: EN.600.120, EN.600.457, EN.600.461, image processing.
Prerequisites: Students may receive credit for 600.445 or 600.645, but not both.;EN.600.226
Instructor(s): R. Taylor
Area: Engineering.

EN.600.446. Computer Integrated Surgery II. 3.00 Credits.
This weekly lecture/seminar course addresses similar material to EN.600.445, but covers selected topics in greater depth. In addition to material covered in lectures/seminars by the instructor and other faculty, students are expected to read and provide critical analysis/presentations of selected papers in recitation sessions. Students taking this course are required to undertake and report on a significant term project under the supervision of the instructor and clinical end-users. Typically, this project is an extension of the term project from EN.600.445, although it does not have to be. Grades are based both on the project and on classroom recitations. Students wishing to attend the weekly lectures as a 1-credit seminar should sign up for EN.600.452. Students may also take this course as EN.600.646. The only difference between EN.600.446 and EN.600.646 is the level of project undertaken. Typically, EN.600.646 projects require a greater degree of mathematical, image processing, or modeling background. Prospective students should consult with the instructor as to which course number is appropriate. [Applications] Students may receive credit for EN.600.446 or EN.600.646, but not both.
Prerequisites: Prereq for EN.600.446: EN.600.445 or EN.600.645 or permission
Instructor(s): R. Taylor
Area: Engineering.

EN.600.447. Computer Integrated Surgery III. 3.00 Credits.
This course will place a particular emphasis on the techniques of provable security deployed cryptographic products and protocols. Our focus will be on the techniques used in practical security systems, the mistakes that lead to failure, and the approaches that might have avoided the problem. We will place a particular emphasis on the techniques of provable security and the feasibility of reverse-engineering undocumented cryptographic systems. [Systems] Recommended Course Background: EN.600.344/444 (Computer Networks) and EN.550.171 (Discrete Math)
Prerequisites: EN.600.226
Instructor(s): G. Ateniese
Area: Engineering.

EN.600.448. Practical Cryptographic Systems. 3.00 Credits.
This semester-long course will teach systems and cryptographic design principles by example: by studying and identifying flaws in widely-deployed cryptographic products and protocols. Our focus will be on the techniques used in practical security systems, the mistakes that lead to failure, and the approaches that might have avoided the problem. We will place a particular emphasis on the techniques of provable security and the feasibility of reverse-engineering undocumented cryptographic systems. [Systems] Recommended Course Background: EN.600.344 or EN.600.444
Instructor(s): M. Green
Area: Engineering.

EN.600.449. Computer Graphics. 3.00 Credits.
This course introduces computer graphics techniques and applications, including image processing, rendering, modeling, and animation. [Applications] Permission of instructor is required for students not satisfying a prerequisite. Students may receive credit for EN.600.357 or EN.600.457, but not both.
Prerequisites: Students may receive credit for EN.600.357 or EN.600.457, but not both.;EN.600.120 AND EN.600.226
Instructor(s): M. Kazhdan
Area: Engineering, Quantitative and Mathematical Sciences.
EN.600.459. Computational Geometry. 3.00 Credits.
This course will provide an introduction to computational geometry. It will cover a number of topics in two- and three-dimensions, including polygon triangulations and partitions, convex hulls, Delaunay and Voronoi diagrams, arrangements, and spatial queries. Time-permitting, we will also look at kD-trees, general BSP-trees, and quadtrees. [Analysis]
Recommended Course Background: EN.600.120 AND EN.600.226 AND (EN.600.363 OR EN.600.463).
Prerequisites: Students may receive credit for EN.600.459 or EN.600.659, but not both.
Instructor(s): M. Kazhdan
Area: Engineering, Quantitative and Mathematical Sciences.

EN.600.460. Software Vulnerability Analysis. 3.00 Credits.
This course will examine vulnerabilities in C source, stack overflows, writing shell code, etc. Also, vulnerabilities in web applications: SQL injection, cookies, as well as vulnerabilities in C binary fuzzing, and exploit development without source among other topics. Co-listed with EN.650.460
Instructor(s): S. Checkoway
Area: Engineering.

EN.600.461. Computer Vision. 3.00 Credits.
This course gives an overview of fundamental methods in computer vision from a computational perspective. Methods studied include: camera systems and their modelling, computation of 3-D geometry from binocular stereo, motion, and photometric stereo; and object recognition. Edge detection and color perception are covered as well. Elements of machine vision and biological vision are also included. Students may receive credit for at most one of EN.600.361 or EN.600.461 or EN.600.661. [Applications] Prerequisites (soft): intro programming, linear algebra, and prob/stat.
Prerequisites: If you have completed EN.600.361 OR EN.600.661 you cannot enroll in EN.600.461.
Instructor(s): A. Reiter
Area: Engineering, Quantitative and Mathematical Sciences.

EN.600.463. Algorithms I. 3.00 Credits.
This course concentrates on the design of algorithms and the rigorous analysis of their efficiency. Topics include the basic definitions of algorithmic complexity (worst case, average case); basic tools such as dynamic programming, sorting, searching, and selection; advanced data structures and their applications (such as union-find); graph algorithms and searching techniques such as minimum spanning trees, depth-first search, shortest paths, design of online algorithms and competitive analysis. [Analysis] Students may receive credit for EN.600.363 or EN.600.463, but not both.
Instructor(s): V. Braverman
Area: Engineering, Quantitative and Mathematical Sciences.

EN.600.464. Randomized and Big Data Algorithms. 3.00 Credits.
The course emphasizes algorithmic design aspects, and how randomization can be a helpful tool. The topics covered include: tail inequalities, linear programming relaxation & randomized rounding, de-randomization, existence proofs, universal hashing, markov chains, metropolis and metropolis-hastings methods, mixing by coupling and by eigenvalues, counting problems, semi-definite programming and rounding, lower bound arguments, and applications of expanders. [Analysis] (www.cs.jhu.edu/~cs464) Recommended Course Background: EN.600.363 or EN.600.463.
Prerequisites: Students may receive credit for 600.464 or 600.664, but not both.
Instructor(s): V. Braverman
Area: Engineering, Quantitative and Mathematical Sciences.

EN.600.465. Natural Language Processing. 4.00 Credits.
This course is an in-depth overview of techniques for processing human language. How should linguistic structure and meaning be represented? What algorithms can recover them from text? And crucially, how can we build statistical models to choose among the many legal answers? The course covers methods for trees (parsing and semantic interpretation), sequences (finite-state transduction such as morphology), and words (sense and phrase induction), with applications to practical engineering tasks such as information retrieval and extraction, text classification, part-of-speech tagging, speech recognition and machine translation. There are a number of structured but challenging programming assignments. [Applications] Recommended Course Background: EN.600.226
Instructor(s): J. Eisner
Area: Engineering.

EN.600.466. Information Retrieval and Web Agents. 3.00 Credits.
An in-depth, hands-on study of current information retrieval techniques and their application to developing intelligent WWW agents. Topics include a comprehensive study of current document retrieval models, mail/news routing and filtering, document clustering, automatic indexing, query expansion, relevance feedback, user modeling, information visualization and usage pattern analysis. In addition, the course explores the range of additional language processing steps useful for template filling and information extraction from retrieved documents, focusing on recent, primarily statistical methods. The course concludes with a study of current issues in information retrieval and data mining on the World Wide Web. Topics include web robots, spiders, agents and search engines, exploring both their practical implementation and the economic and legal issues surrounding their use. Recommended Course Background: EN.600.226
Instructor(s): D. Yarowsky
Area: Engineering.

EN.600.468. Machine Translation. 3.00 Credits.
Google translate can instantly translate between any pair of over fifty human languages (for instance, from French to English). How does it do that? Why does it make the errors that it does? And how can you build something better? Modern translation systems learn to translate by reading millions of words of already translated text, and this course will show you how they work. The course covers a diverse set of fundamental building blocks from linguistics, machine learning, algorithms, data structures, and formal language theory, along with their application to a real and difficult problem in artificial intelligence. Recommended Course Background: prob/stat, EN.600.226; EN.600.465
Instructor(s): P. Koehn
Area: Engineering.

EN.600.469. Approximation Algorithms. 3.00 Credits.
This course provides an introduction to approximation algorithms. Topics include vertex cover, TSP, Steiner trees, cuts, greedy approach, linear programming, randomized rounding, lower bound arguments, and applications of expanders. [Analysis]
Recommended Course Background: EN.600.363 or EN.600.463.
Prerequisites: Students may receive credit for 600.469 or 600.669, but not both.
Instructor(s): M. Dinitz
Area: Engineering, Quantitative and Mathematical Sciences.
EN.600.470. Combinatorics & Graph Theory in Computer Science. 3.00 Credits.
This course covers fundamental topics in combinatorics and graph theory with a focus on applications in computer science. Topics covered include counting techniques, graph theory, and combinatorial algorithms. Students will learn to apply these concepts to solve problems in computer science and related fields. Recommended Course Background: Probability Theory and Linear Algebra
Prerequisites: EN.550.171
Area: Engineering, Quantitative and Mathematical Sciences
Instructor(s): X. Li

EN.600.471. Theory of Computation. 3.00 Credits.
This course delves into the theoretical foundations of computer science. Students will study automata theory, computability, and complexity theory. Topics include Turing machines, reducibility, and the Church-Turing thesis. Recommended Course Background: Probability Theory and Linear Algebra
Prerequisites: EN.600.271 and EN.600.470, unless one is for an undergraduate degree and the other for graduate.
Area: Engineering, Quantitative and Mathematical Sciences
Instructor(s): X. Li

EN.600.473. Algorithmic Game Theory. 3.00 Credits.
This course provides an introduction to algorithmic game theory, focusing on the study of games from the perspective of computation and theoretical computer science. Topics include complexity of computing equilibria and algorithms for doing so, (in)efficiency of mechanisms of all sorts. Recommended Course Background: Probability Theory and Linear Algebra
Prerequisites: EN.600.470 or EN.600.670
Area: Engineering, Quantitative and Mathematical Sciences
Instructor(s): M. Dinitz

EN.600.474. Machine Learning: Data to Models. 3.00 Credits.
This course introduces the foundational concepts of modern Machine Learning, including core principles, popular algorithms and modeling platforms. Students will be expected to implement several machine learning algorithms in a common learning framework. Additionally, analytical homework questions will explore various machine learning concepts, building on the pre-requisites that include probability, linear algebra, multi-variate calculus and basic optimization. Students in the course will develop a learning system for a final project. Recommended Course Background: Probability Theory and Linear Algebra
Prerequisites: EN.550.171
Area: Engineering, Quantitative and Mathematical Sciences
Instructor(s): X. Li

EN.600.475. Machine Learning: A Probabilistic Perspective. 3.00 Credits.
This course introduces the foundations of modern Machine Learning, whose goal is to develop computational systems that can learn from data to improve their performance. This course covers fundamental concepts and algorithms that can be learned from data to improve performance. Recommended Course Background: Probability Theory and Linear Algebra
Prerequisites: EN.550.171
Area: Engineering, Quantitative and Mathematical Sciences
Instructor(s): R. Arora

EN.600.477. Causal Inference. 3.00 Credits.
This course introduces the foundational concepts of modern Machine Learning, including core principles, popular algorithms and modeling platforms. Students will be expected to implement several machine learning algorithms in a common learning framework. Additionally, analytical homework questions will explore various machine learning concepts, building on the pre-requisites that include probability, linear algebra, multi-variate calculus and basic optimization. Students in the course will develop a learning system for a final project. Recommended Course Background: Probability Theory and Linear Algebra
Prerequisites: EN.550.171
Area: Engineering, Quantitative and Mathematical Sciences
Instructor(s): I. Shpitser

EN.600.476. Machine Learning: Data to Models. 3.00 Credits.
This course introduces the foundational concepts of modern Machine Learning, including core principles, popular algorithms and modeling platforms. Students will be expected to implement several machine learning algorithms in a common learning framework. Additionally, analytical homework questions will explore various machine learning concepts, building on the pre-requisites that include probability, linear algebra, multi-variate calculus and basic optimization. Students in the course will develop a learning system for a final project. Recommended Course Background: Probability Theory and Linear Algebra
Prerequisites: EN.550.171
Area: Engineering, Quantitative and Mathematical Sciences
Instructor(s): R. Arora

Area: Engineering, Quantitative and Mathematical Sciences.
EN.600.479. Representation Learning. 3.00 Credits.
Often the success of a machine learning project depends on the choice of features used. Machine learning has made great progress in training classification, regression and recognition systems when good representations, or features, of input data are available. However, much human effort is spent on designing good features which are usually knowledge-based and engineered by domain experts over years of trial and error. A natural question to ask then is Can we automate the learning of useful features from raw data? Representation learning algorithms such as principal component analysis aim at discovering better representations of inputs by learning transformations of data that disentangle factors of variation in data while retaining most of the information. The success of such data-driven approaches to feature learning depends not only on how much data we can process but also on how well the features that we learn correlate with the underlying unknown labels (semantic content in the data). This course will focus on scalable machine learning approaches for learning representations from large amounts of unlabeled, multi-modal, and heterogeneous data. We will cover topics including deep learning, multi-view learning, dimensionality reduction, similarity-based learning, and spectral learning. Students may receive credit for 600.479 or 600.679 but not both. [Analysis or Applications] Required course background: machine learning or basic probability and linear algebra.
Prerequisites: If you have completed EN.600.679 you may not enroll in EN.600.479.
Instructor(s): R. Arora
Area: Engineering.

EN.600.484. Augmented Reality. 3.00 Credits.
Undergraduate level version of EN.600.684. Students may take EN.600.384 or EN.600.684, but not both.
Prerequisites: Prereqs: EN.600.120 AND EN.600.226 AND (AS.110.201 OR EN.550.291)
Instructor(s): N. Navab
Area: Engineering.

EN.600.485. Probabilistic Models of the Visual Cortex. 3.00 Credits.
The course gives an introduction to computational models of the mammalian visual cortex. It covers topics in low-, mid-, and high-level vision. It briefly discusses the relevant evidence from anatomy, electrophysiology, imaging (e.g., fMRI), and psychophysics. It concentrates on mathematical modelling of these phenomena taking into account recent progress in probabilistic models of computer vision and developments in machine learning, such as deep networks. [Applications or Analysis]. Recommended Course Background: AS.110.106 or AS.110.108; Programming experience (Python preferred).
Instructor(s): A. Yuille
Area: Quantitative and Mathematical Sciences.

EN.600.488. Foundations of Computational Biology & Bioinformatics II. 3.00 Credits.
This course will introduce probabilistic modeling and information theory applied to biological sequence analysis, focusing on statistical models of protein families, alignment algorithms, and models of evolution. Topics will include probability theory, score matrices, hidden Markov models, maximum likelihood, expectation maximization and dynamic programming algorithms. Homework assignments will require programming in Python. Foundations of Computational Biology I is not a prereq. [Analysis] Co-listed with EN.580.488. Recommended Course Background: math through linear algebra and differential equations, at least one prob/stat course, EN.580.221 or equivalent, EN.600.226 or equivalent.
Instructor(s): R. Karchin
Area: Engineering, Natural Sciences.

EN.600.503. Independent Study. 1.00 - 3.00 Credits.
Individual guided study for undergraduate students under the direction of a faculty member in the department. The program of study, including the credit to be assigned, must be worked out in advance between the student and the faculty member involved. Permission required.
Instructor(s): Staff.

EN.600.504. Undergraduate Independent Study. 3.00 Credits.
For undergraduate students. Permission of faculty sponsor is required.
Instructor(s): Staff.

EN.600.507. Undergraduate Research. 1.00 - 3.00 Credits.
Individual research for undergraduates under the direction of a faculty member in the department. The program of research, including the credit to be assigned, must be worked out in advance between the student and the faculty member involved. Permission required.
Instructor(s): Staff.

EN.600.508. Undergraduate Research. 3.00 Credits.
Permission of faculty sponsor is required.
Instructor(s): Staff.

EN.600.509. Computer Science Internship. 1.00 Credit.
Individual work in the field with a learning component, supervised by a faculty member in the department. The program of study and credit assigned must be worked out in advance between the student and the faculty member involved. Students may not receive credit for work that they are paid to do. As a rule of thumb, 40 hours of work is equivalent to one credit. Permission required.
Instructor(s): Staff.

EN.600.510. Computer Science Internship. 0.00 - 4.00 Credits.
Individual work in the field with a learning component, supervised by a faculty member in the department. The program of study must be worked out in advance between the student and the faculty member involved. Students may not receive credit for work that they are paid to do. As a rule of thumb, 40 hours of work is equivalent to one credit, which is the limit per semester. Permission of faculty sponsor is required.
Instructor(s): Staff.

EN.600.517. Group Undergraduate Research. 1.00 - 3.00 Credits.
Independent research for undergraduates under the direction of a faculty member in the department. This course has a weekly research group meeting that students are expected to attend. The program of research, including the credit to be assigned, must be worked out in advance between the student and the faculty member involved.
Instructor(s): Staff.
EN.600.519. Senior Honors Thesis. 3.00 Credits.
The student will undertake a substantial independent research project under the supervision of a faculty member, potentially leading to the notation Departmental Honors with Thesis on the final transcript. Students are expected to enroll in both semesters of this course during their senior year. Project proposals must be submitted and accepted in the preceding spring semester (junior year) before registration. Students will present their work publicly before April 1st of senior year. They will also submit a first draft of their project report (thesis document) at that time. Faculty will meet to decide if the thesis will be accepted for honors. Computer science majors only. Students should have a 3.5 GPA in computer science courses at the end of their junior year and permission of faculty sponsor. See EN.600.491 for faculty section numbers
Instructor(s): Staff.
EN.600.520. Senior Honors Thesis. 0.00 - 3.00 Credits.
For computer science majors only, a continuation of EN.600.519. Recommended Course Background: EN.600.519
Instructor(s): Staff.
EN.600.546. Senior Thesis in CIS. 3.00 Credits.
Prerequisites: EN.600.445 or perm req'd.
Instructor(s): R. Taylor.
EN.600.591. Computer Science Workshop I. 1.00 - 3.00 Credits.
An applications-oriented, computer science project done under the supervision and with the sponsorship of a faculty member in the Department of Computer Science. Computer Science Workshop provides a student with an opportunity to apply theory and concepts of computer science to a significant project of mutual interest to the student and a Computer Science faculty member. Permission to enroll in CSW is granted by the faculty sponsor after his/her approval of a project proposal from the student. Interested students are advised to consult with Computer Science faculty members before preparing a Computer Science Workshop project proposal.
Instructor(s): D. Yarowsky; J. Selinski; P. Froehlich; S. Smith.
EN.600.592. Computer Science Workshop II.
Permission of faculty sponsor is required.
Instructor(s): D. Yarowsky; J. Selinski; P. Froehlich; S. Smith.
EN.600.595. Independent Study-Summer. 3.00 Credits.
Instructor(s): Staff.
EN.600.597. Research-Summer. 3.00 Credits.
Instructor(s): Staff.
EN.600.599. Internship. 1.00 Credit.
Instructor(s): Staff.
EN.600.601. Computer Science Seminar. 1.00 Credit.
Required for all full-time CS PhD students. Recommended for MSE students.
Instructor(s): S. Smith.
EN.600.602. Computer Science Seminar. 1.00 Credit.
Required for all CS PhD students. Strongly recommended for MSE students.
Instructor(s): S. Smith.
EN.600.615. Big Data, Small Languages, Scalable Systems. 3.00 Credits.
This class will study domain-specific data management tools, focusing on extremely scalable system design based on the domain's semantic and structural properties. We will study a variety of data models including stream, graph, array and probabilistic data, and their processing on modern architectures such as column- and key-value stores, stream and XQuery engines. Further topics include the use of novel hardware such as solid state disks, phase change memory, GPUs, and FPGAs. The class includes a semester long group project to develop a query processor for an application of the group's choice (e.g. on system log, finance, web, sensor, speech data). Recommended Course Background: EN.600.315/EN.600.415 or equivalent.
Instructor(s): Y. Ahmad.
EN.600.624. Advanced Topics in Data-Intensive Computing. 3.00 Credits.
The advent of cloud computing has lead to an explosion of storage system and data analysis software, including NoSQL databases, bulk-synchronous processing, graph computing engines, and stream processing. This course will explore scale-out software architectures for data-processing tasks. It will examine the algorithms and data-structures that underlie scalable systems and look at how hardware and networking trends influence the design and deployment of cloud computing. Recommended Course Background: EN.600.320/420 or permission of instructor. [Systems]
Instructor(s): R. Burns.
EN.600.625. Events Semantics in Theory and Practice. 3.00 Credits.
This course explores selected topics in the nature of event representations from the perspective of cognitive science, computer science, linguistics, and philosophy. These fields have developed a rich array of scientific theories about the representation of events, and how humans make inferences about them -- we investigate how (and if) such theories could be applied to current research topics and tasks in computational semantics such as inference from text, automated summarization, veridicality assessment, and so on. In addition to classic articles dealing with formal semantic theories, the course considers available machine-readable corpora, ontologies, and related resources that bear on event structure, such as WordNet, PropBank, FrameNet, etc..
The course is aimed to marry theory with practice: students with either a computational or linguistic background are encouraged to participate. [Applications]
Instructor(s): B. Van Durme; K. Rawlins.
EN.600.629. Wireless Networks. 3.00 Credits.
This course covers the basics of mobile communication and wireless networking for computer science majors by keeping a balance between communication and networking topics. In this course, the students will be exposed to wireless transmission fundamentals (path loss, shadowing, modulation, coding and channel models), and learn about medium access control protocols, wireless local area networks (IEEE 802.11), and wireless mobile networks and applications, including cellular networks (cellular concept, channel reuse, capacity limits, and cellular systems), fourth generation systems, long term evolution (LTE), mobile applications, and mobile IP. [Systems] Recommended Course Background: EN.600.344/EN.600.444.
Instructor(s): M. Zadeh.
EN.600.636. Algorithms for Sensor-Based Robotics. 3.00 Credits.
Graduate level version of EN.600.436 (see description above). Formerly EN.600.436. Students may receive credit for only one of EN.600.336, EN.600.436 or EN.600.636. Recommended Course Background: EN.600.226, AS.110.106, and Prob/Stat.
Prerequisites: Students may receive credit for only one of EN.600.336, EN.600.436 and EN.600.636.
Instructor(s): A. Jain.

EN.600.638. Computational Genomics: Data Analysis. 3.00 Credits.
Graduate level version of EN.600.438. [Applications] Required Course Background: EN.600.226 or other programming experience, probability and statistics, linear algebra or calculus. Students may receive credit for EN.600.438 or EN.600.638 but not both.
Prerequisites: Students may receive credit for EN.600.438 or EN.600.638, but not both.
Instructor(s): A. Battle
Area: Engineering.

EN.600.659. Introduction to Computational Geometry. 3.00 Credits.
This course will provide an introduction to computational geometry. It will cover topics in two- and three-dimensions, including polygon triangulations and partitions, convex hulls, Delaunay and Voronoi diagrams, arrangements, and spatial queries. [Analysis] Recommended Course Background: EN.600.363/463
Instructor(s): M. Kazhdan.

EN.600.643. Advanced Topics in Computer Security. 3.00 Credits.
Topics will vary from year to year, but will focus mainly on network perimeter protection, host-level protection, authentication technologies, intellectual property protection, formal analysis techniques, intrusion detection and similarly advanced subjects. Emphasis in this course is on understanding how security issues impact real systems, while maintaining an appreciation for grounding the work in fundamental science. Students will study and present various advanced research papers to the class. There will be homework assignments and a course project.
Instructor(s): A. Rubin.

EN.600.645. Computer Integrated Surgery I. 4.00 Credits.
Graduate version of EN.600.445 (see description). Students may earn credit for EN.600.445 or EN.600.645, but not both. Prerequisites: data structures, and linear algebra, or permission; Recommended Course Background: intermediate programming in C/C++, EN.600.457, EN.600.461, image processing. [Applications]
Instructor(s): R. Taylor
Area: Engineering.

EN.600.646. Computer Integrated Surgery II. 3.00 Credits.
Students may receive credit for EN.600.446 or EN.600.646, but not both. Advanced version of EN.600.446. [Applications]
Prerequisites: EN.600.445 OR EN.600.645 OR PERMISSION OF INSTRUCTOR
Instructor(s): R. Taylor.

EN.600.649. Computational Genomics: Applied Comparative Genomics. 3.00 Credits.
The goal of this course is to study the leading computational and quantitative approaches for comparing and analyzing genomes starting from raw sequencing data. The course will focus on human genomics and human medical applications, but the techniques will be broadly applicable across the tree of life. The topics will include genome assembly & comparative genomics, variant identification & analysis, gene expression & regulation, personal genome analysis, and cancer genomics. The grading will be based on assignments, a midterm & final exam, class presentations, and a significant class project. [Applications] Expected course background: familiarity with UNIX scripting and/or programming.
Instructor(s): M. Schatz.

EN.600.657. Advanced Topics for Computer Graphics. 3.00 Credits.
This course presents advanced methodologies and their applications to computer graphics. Recommended Course Background: any computer science courses above the 400-level in computer graphics & linear algebra; or permission of instructor.
Instructor(s): M. Kazhdan.

EN.600.659. Introduction to Computational Geometry. 3.00 Credits.
This course will provide an introduction to computational geometry. It will cover a number of topics in two- and three-dimensions, including polygon triangulations and partitions, convex hulls, Delaunay and Voronoi diagrams, arrangements, and spatial queries. [Analysis] Recommended Course Background: EN.600.363/463
Instructor(s): M. Kazhdan.
EN.600.660. FFT in Graphics & Vision. 3.00 Credits.
In this course, we will study the Fourier Transform from the perspective of representation theory. We will begin by considering the standard transform defined by the commutative group of rotations in 2D and translations in two- and three-dimensions, and will proceed to the Fourier Transform of the non-commutative group of 3D rotations. Subjects covered will include correlation of images, shape matching, computation of invariances, and symmetry detection. Recommended Course Background: AS.110.201 and comfort with mathematical derivations.
Instructor(s): M. Kazhdan.

EN.600.666. Topics in Illumination and Reflectance Modeling for Computer Vision and Medical Imaging Applications. 3.00 Credits.
The vast majority of all imagery on which computer vision is performed starts with a source of illumination in conjunction with a material reflectance property. Having a rigorous understanding of these phenomena is important for most students who want to be involved with further research in computer vision and computer integrated surgery, particularly for experimentation and development of new systems. This short course is for individuals who have already taken Computer Vision, and want to delve deeper into underlying physical modeling of light illumination, reflection, colorimetry, polarization and even sensor fusion of images taken at different Wavelengths.
Prerequisites: EN.600.361 OR EN.600.461 or Instructor permission required.
Instructor(s): L. Wolff.

EN.600.664. Randomized and Big Data Algorithms. 3.00 Credits.
Graduate level version of EN.600.464. Recommended Course Background: EN.600.363 or EN.600.463. Students may receive credit for EN.600.464 or EN.600.664, but not both.
Instructor(s): V. Braverman
Area: Engineering.

EN.600.666. Information Extraction. 3.00 Credits.
Introduction to statistical methods of speech recognition (automatic transcription of speech) and understanding. The course is a natural continuation of EN.600.465 but is independent of it. Topics include elementary information theory, hidden Markov models, the Baum and Viterbi algorithms, efficient hypothesis search methods, statistical decision trees, the estimation-maximization (EM) algorithm, maximum entropy estimation and estimation of discrete probabilities from sparse data for acoustic and language modeling. Weekly assignments and several programming projects. Co-listed as EN.520.666. Recommended Course Background: EN.600.120 and EN.550.310 or equivalent, expertise in C or C++ programming
Instructor(s): S. Khudanpur.

EN.600.667. Advanced Distributed Systems & Networks. 3.00 Credits.
The course explores the state of the art in distributed systems, networks and Internet research and practice, trying to see what it would take to push the envelop a step further. The course is conducted as a discussion group, where the professor and students brainstorm and pick interesting semester-long projects with high potential future impact. Example areas include robust scalable infrastructure (distributed datacenters, cloud networking, scada systems), real-time performance (remote surgery, trading systems), hybrid networks (mesh networks, 3G/WiFi/Bluetooth). Students should feel free to bring their own topics of interest and ideas. Recommended Course Background: a systems course (distributed systems, operating systems, computer networks, parallel programming) or permission of instructor.
Instructor(s): Y. Amir.

EN.600.668. Advanced Topics in Software Security. 3.00 Credits.
Topics vary but mainly focus on recent advances in exploitation techniques and defenses for software including software running on embedded systems software, browsers, and nontraditional devices such as microcontrollers in PCs. Recommended Course Background: EN.600.460 or EN.650.442 or permission of instructor
Instructor(s): S. Checkoway.

EN.600.669. Approximation Algorithms. 3.00 Credits.
Graduate version of EN.600.469. Students may receive credit for EN.600.469 or EN.600.669, but not both.
Prerequisites: EN.600.363 OR EN.600.463 OR permission
Instructor(s): M. Dinitz.

EN.600.670. Pseudorandomness and Combinatorial Constructions. 3.00 Credits.
Randomness is very useful in almost all areas of computer science, such as algorithms, distributed computing and cryptography. However, computers generally do not have access to truly uniform random bits. To deal with this, we rely on various pseudorandom objects to reduce either the quantity or the quality of the random bits needed. In this course, we will develop provably good pseudorandom objects for a variety of tasks. We will frequently require explicit combinatorial constructions. That is, we will want to efficiently and deterministically construct such objects. Along the way, we will also explore the close connections of such objects to many other areas in computer science and mathematics, such as graph theory, coding theory, complexity theory and arithmetic combinatorics. [Analysis] Recommended Course Background: EN.600.271/417, EN.600.363/463 and probability.
Instructor(s): X. Li.

EN.600.675. Statistical Machine Learning. 3.00 Credits.
This is a second graduate level course in machine learning. It will provide a formal and an in-depth coverage of topics at the interface of statistical theory and computational sciences. We will revisit popular machine learning algorithms and understand their performance in terms of the size of the data (sample complexity), memory needed (space complexity), as well as the overall computational runtime (computation or iteration complexity). We will cover topics including nonparametric methods, kernel methods, online learning and reinforcement learning, as well as introduce students to current topics in large-scale machine-learning and randomized projections. Topics will vary from year-to-year but the general focus would be on combining methodology with theoretical and computational foundations. [Analysis or Applications]
Prerequisites: EN.600.475 OR EN.600.476 OR EN.600.676 OR permission of the instructor.
Instructor(s): R. Arora.
EN.600.676. Machine Learning: Data to Models. 3.00 Credits.
Students in the class will be asked to do assignments in Matlab. Matlab is typically easy to pick up if one is already familiar with a different programming language. Students are expected to be mathematically mature. One should have taken at least an introductory course in probability theory and linear algebra. Though not required, exposure to optimization or machine learning is recommended. Proficiency in at least one programming language is expected. When in doubt, send the instructor a copy of your transcript to see if the class is appropriate for you. Also, sit through the first few sessions and first homework to get a sense of fit. Requisites include Intro Prob/Stat, Linear Algebra and Intro Machine Learning as well as strong background in s.
Instructor(s): S. Saria.

EN.600.677. Causal Inference. 3.00 Credits.
Advanced graduate version of EN.600.477. [Analysis] Pre-requisites: familiarity with the R programming language, multivariate calculus, basics of linear algebra and probability. Students may receive credit for EN.600.477 or EN.600.677, but not both.
Prerequisites: Students may receive credit for EN.600.477 or EN.600.677, but not both.
Instructor(s): I. Shpitser.
Area: Engineering, Quantitative and Mathematical Sciences.

EN.600.678. Advanced Topics in Causal Inference. 3.00 Credits.
This course will cover advanced topics on all areas of causal inference, including learning causal effects, path-specific effects, and optimal policies from data featuring biases induced by missing data, confounders, selection, and measurement error, techniques for generalizing findings to different populations, complex probabilistic models relevant for causal inference applications, learning causal structure from data, and inference under interference and network effects. The course will feature a final project which would involve either an applied data analysis problem (with a causal inference flavor), a literature review, or theoretical work. [Analysis] Pre-requisite: EN.600.477/677 or permission.
Prerequisites: EN.600.477 OR EN.600.677
Instructor(s): I. Shpitser.

EN.600.679. Representation Learning. 3.00 Credits.
Graduate level version of EN.600.479. Students may receive credit for 600.479 or 600.679 but not both. [Analysis or Applications] Required course background: machine learning or basic probability and linear algebra. Co-listed with EN.600.479
Prerequisites: If you have completed EN.600.479 you may not enroll in EN.600.679.
Instructor(s): R. Arora.

EN.600.682. Deep Learning for Image Understanding. 3.00 Credits.
This course discusses advanced topics on the recent progresses using deep learning, specifically deep convolutional neural networks in computer vision and medical image analysis. Topics will be selected from most recent papers from CVPR/ICCV/ArXiv/NIPS/MICCAI, with the core focus on object/scene recognition, object detection, domain transfer learning and computer-aided diagnosis. This course is targeted toward graduate students who are interested in mastering the understanding of the recent massive amount of literature and applying the skills to a course project (with lectures, paper reading, in-class presentation & discussion and a final research project). [Applications]
Prerequisites: Prereq: EN.600.461 OR EN.600.661
Instructor(s): L. Lu.

EN.600.683. Vision as Bayesian Inference. 3.00 Credits.
This is an advanced course on computer vision from a probabilistic and machine learning perspective. It covers techniques such as linear and non-linear filtering, geometry, energy function methods, markov random fields, conditional random fields, graphical models, probabilistic grammars, and deep neural networks. These are illustrated on a set of vision problems ranging from image segmentation, semantic segmentation, depth estimation, object recognition, object parsing, scene parsing, action recognition, and text captioning. [Analysis or Applications] Required course background: calculus, linear algebra (AS.110.201 or equiv.), probability and statistics (AS.550.311 or equiv.), and the ability to program in Python and C++. Background in computer vision (EN.600.461/661) and machine learning (EN.600.475) suggested but not required.
Instructor(s): A. Yuille.

EN.600.684. Augmented Reality. 3.00 Credits.
This course introduces students to the field of Augmented Reality. It reviews its basic definitions, principles and applications. It then focuses on Medical Augmented Reality and its particular requirements. The course also discusses the main issues of calibration, tracking, multi-modal registration, advance visualization and display technologies. Homework in this course will relate to the mathematical methods used for calibration, tracking and visualization in medical augmented reality. Students may also be asked to read papers and implement various techniques within group projects. Recommended Course Background: EN.600.120, EN.600.226, and AS.110.201. [Applications]
Prerequisites: Students may take only EN.600.384 or EN.600.684, not both.
Instructor(s): N. Navab.

EN.600.688. Foundations of Computational Biology & Bioinformatics II. 3.00 Credits.
This course will introduce probabilistic modeling and information theory applied to biological sequence analysis, focusing on statistical models of protein families, alignment algorithms, and models of evolution. Topics will include probability theory, score matrices, hidden Markov models, maximum likelihood, expectation maximization and dynamic programming algorithms. Homework assignments will require programming in Python. Co-listed with EN.580.688. Recommended Course Background: math through linear algebra and differential equations, at least one prob/stat course, EN.580.221 or equivalent, EN.600.226 or equivalent.
Instructor(s): R. Karchin.

EN.600.692. Unsupervised Learning: From Big Data to Low-Dimensional Representations. 3.00 Credits.
In the era of data deluge, the development of methods for discovering structure in high-dimensional data is becoming increasingly important. This course will cover state-of-the-art methods from algebraic geometry, sparse and low-rank representations, and statistical learning for modeling and clustering high-dimensional data. The first part of the course will cover methods for modeling data with a single low-dimensional subspace, such as PCA, Robust PCA, Kernel PCA, and manifold learning techniques. The second part of the course will cover methods for modeling data with multiple subspaces, such as algebraic, statistical, sparse and low-rank subspace clustering techniques. The third part of the course will cover applications of these methods in image processing, computer vision, and biomedical imaging. Requisites include Linear Algebra, Optimization, and prior exposure to Machine I.
Instructor(s): R. Vidal.
EN.600.707. Selected Topics in CS Education. 0.50 Credit.
This course will explore current issues and research in computer science education. Topics will be drawn from literature, news items, and participant experience. Current faculty and students with interests in academic careers are encouraged to attend.
Instructor(s): J. Selinski.

EN.600.716. Selected Topics on Innovative Data Systems. 1.00 Credit.
This weekly reading group will survey and dissect the cutting-edge on innovative data systems research. Topics will encompass methods and abstraction in core systems and data management areas (e.g., cloud computing, scalable programming and storage), as well as use-cases and war stories from industry, and science and engineering applications. View on web: Our semester schedule is posted at damsel.cs.jhu.edu/blockparty
Instructor(s): Y. Ahmad.

EN.600.726. Selected Topics in Programming Languages. 1.00 Credit.
This seminar course covers recent developments in the foundations of programming language design and implementation. Topics covered include type theory, process algebra, higher-order program analysis, and constraint systems. Students will be expected to present papers orally.
Instructor(s): S. Smith.

EN.600.728. Selected Topics in Category Theory. 1.00 Credit.
Students in this course will read a sampling of standard texts in Category Theory (e.g., the books by Awodey, Mac Lane, Pierce, or others) and papers relevant to the research of participants.
Instructor(s): N. Filardo.

EN.600.745. Seminar in Computational Sensing and Robotics. 1.00 Credit.
This weekly seminar will focus on research issues in computer integrated surgery, including subjects such as medical image analysis, statistical modeling, visualization, vision/sensing, surgical planning, medical robotics, and clinical applications. The purpose of the course is to widening the knowledge and awareness of the participants in current research in these areas, as well as to promote greater awareness and interaction between multiple research groups within the University and beyond. The format of the course is informal presentation by a pre-eminent invited speaker, followed by free discussion. Formerly Seminar in Computer Integrated Surgery (CISST)
Instructor(s): P. Kazanzides.

EN.600.746. Seminar: Medical Image Analysis. 1.00 Credit.
This weekly seminar will focus on research issues in medical image analysis, including image segmentation, registration, statistical modeling, and applications. It will also include selected topics relating to medical image acquisition, especially where they relate to analysis. The purpose of the course is to provide the participants with a thorough background in current research in these areas, as well as to promote greater awareness and interaction between multiple research groups within the University. The format of the course is informal. Students will read selected papers. All students will be assumed to have read these papers by the time the paper is scheduled for discussion. But individual students will be assigned on a rotating basis to lead the discussion on particular papers or sections of papers. Co-listed with En.520.746.
Instructor(s): J. Prince; R. Taylor.

EN.600.757. Selected Topics in Computer Graphics. 1.00 Credit.
In this course we will review current research in computer graphics. We will meet for an hour once a week and one of the participants will lead the discussion for the week.
Instructor(s): M. Kazhdan.

EN.600.760. CS Theory Seminar. 1.00 Credit.
Seminar series in theoretical computer science. Topics include algorithms, complexity theory, and related areas of TCS. Speakers will be a mix of internal and external researchers, mostly presenting recently published research papers.
Instructor(s): M. Dinitz; V. Braverman; X. Li.

EN.600.764. Seminar in Algorithms. 1.00 Credit.
This course will explore algorithms and theoretical computer science with a focus on algorithms for massive data. Examples of topics include streaming algorithms, approximation algorithms, online algorithms. Students will be encouraged to select a paper and lead a discussion. External speakers will be invited to present current work as well. This course is a good opportunity for motivated students to learn modern algorithmic methods. Recommended Course Background: EN.600.463 or equivalent.
Instructor(s): V. Braverman
Area: Engineering.

EN.600.765. Selected Topics in Natural Language Processing. 1.00 Credit.
A reading group exploring important current research in the field and potentially relevant material from related fields. Enrolled students are expected to present papers and lead discussion.
Prerequisites: EN.600.465 or permission of instructor
Instructor(s): J. Eisner.

EN.600.766. Selected Topics in Meaning, Translation and Generation of Text. 1.00 Credit.
A seminar focused on current research and survey articles on computational semantics.
Instructor(s): B. Van Durme; K. Rawlins.

EN.600.767. Selected Topics in Systems Research. 1.00 Credit.
Students will review, present, and discuss current research in computer systems, distributed systems, and computer networks, in the contexts of dependability, performance and scalability.
Instructor(s): Y. Amir.

EN.600.768. Selected Topics in Machine Translation. 1.00 Credit.
Students in this course will review, present, and discuss current research in machine translation. Permission of instructor.
Instructor(s): P. Koehn.

EN.600.770. Selected Topics in Algorithms for Metric Spaces. 1.00 Credit.
This course will focus on algorithms that use, simplify, or exploit metric spaces. Examples of topics we will address include metric embeddings and applications, algorithms to exploit low dimensionality, graph spanners and sparsifiers, and data structures such as distance oracles and compact routing schemes that allow us to efficiently find distances and paths. This course will mostly be in the form of a reading group, and students will present a paper and lead a discussion. Recommended Course Background: EN.600.363 or EN.600.463 or permission of the instructor.
Instructor(s): M. Dinitz.
EN.600.771. Probability on Strings, Trees, and Sequences. 1.00 Credit.
Many areas of practical computer science focus on discrete data that is sequential or tree-shaped: natural language processing (sentences and their analyses), computational biology (DNA and protein structures), programming languages (computer programs and their interpretations), and compression (sequences of bits). When the data is noisy or ambiguous, decision-making requires probabilistic methods. We will survey formal tools for manipulating sets of strings, trees, sequences, and defining probabilistic models over these sets. Much of the material covers advanced topics at the intersection of formal language and automata theory, probability, and algorithms. Respectively, these three areas will enable us to represent sets, represent uncertainty, and process everything efficiently.
Instructor(s): A. Lopez.

EN.600.772. Selected Topics in Linear Programming and Semi-definite Programming. 1.00 Credit.
Linear programming and semi-definite programming are powerful techniques in convex optimization. They have been used to achieve the best known approximation results for many important combinatorial optimization problems, such as vertex cover, max cut, sparsest cut and MAX-2-SAT. In this course we will together explore the applications of these techniques in computer science, as well as some recent results about their limitations. Time permitting, we may also discuss their connections to the well-known unique games conjecture. This course will be in the form of a reading group, and students are encouraged to select a paper and lead a discussion. Recommended course background: EN.600.463 and EN.600.464.
Instructor(s): X. Li.

EN.600.775. Selected Topics in Machine Learning. 1.00 Credit.
This seminar is recommended for all students interested in data intensive computing research areas (e.g., machine learning, computer vision, natural language processing, speech, computational social science). The meeting format is participatory. Papers that discuss best practices and the state-of-the-art across application areas of machine learning and data intensive computing will be read. Student volunteers lead individual meetings. Faculty and external speakers present from time-to-time. Recommended Course Background: machine learning or permission of the instructor.
Instructor(s): M. Dredze; R. Arora; S. Saria.

EN.600.780. Selected Topics in Computational Genomics. 1.00 Credit.
This course will survey current areas where computer science approaches have been applied to genomics research. Chiefly, the course focuses on DNA sequencing data analysis, including sequence alignment, de novo assembly, error correction, and DNA data compression. Subject matter will be partially guided by student interests. Students will present papers orally.
Instructor(s): B. Langmead.

EN.600.801. PhD Research. 3.00 - 20.00 Credits.
Instructor(s): Staff.
EN.600.802. PhD Research. 3.00 - 20.00 Credits.
Instructor(s): Staff.
EN.600.803. Masters Research. 3.00 - 10.00 Credits.
Permission required. Independent research for masters or pre-dissertation PhD students.
Instructor(s): Staff.
EN.600.804. Masters Research. 1.00 - 3.00 Credits.
Independent research for masters or pre-dissertation PhD students. Permission required.
Instructor(s): Staff.

EN.600.807. Teaching Practicum. 1.00 - 3.00 Credits.
PhD students will gain valuable teaching experience, working closely with their assigned faculty supervisor. Successful completion of this course fulfills the PhD teaching requirement. (grad students) Permission req’d.
Instructor(s): J. Selinski.

EN.600.809. Independent Study. 1.00 - 3.00 Credits.
Permission required. Individual study in an area of mutual interest to a graduate student and a faculty member in the department.
Instructor(s): Staff.

EN.600.810. Graduate Independent Study. 1.00 - 3.00 Credits.
Permission required.
Instructor(s): Staff.

EN.600.891. Independent Study-Summer. 1.00 - 3.00 Credits.
Instructor(s): Staff.

EN.600.895. Research-Summer. 1.00 - 3.00 Credits.
Instructor(s): Staff.

Cross Listed Courses

Cognitive Science
AS.050.814. Research Seminar in Computer Vision.
This course covers advanced topics in computational vision. It discusses and reviews recent progress and technical advances in visual topics such as object recognition, scene understanding, and image parsing.
Instructor(s): A. Yuille.

Physics Astronomy
AS.171.205. Introduction to Practical Data Science: Beautiful Data. 3.00 Credits.
The class will provide an overview of data science, with an introduction to basic statistical principles, databases, fundamentals of algorithms and data structures, followed by practical problems in data analytics. Recommend Course Background: Familiarity with principles of computing.
Instructor(s): S. Szalay
Area: Natural Sciences, Quantitative and Mathematical Sciences.

General Engineering
EN.500.745. Seminar in Computational Sensing and Robotics. 1.00 Credit.
Seminar series in robotics. Topics include: Medical robotics, including computer-integrated surgical systems and image-guided intervention. Sensor based robotics, including computer vision and biomedical image analysis. Algorithmic robotics, robot control and machine learning. Autonomous robotics for monitoring, exploration and manipulation with applications in home, environmental (land, sea, space), and defense areas. Biorobotics and neuromechanics, including devices, algorithms and approaches to robotics inspired by principles in biomechanics and neuroscience. Human-machine systems, including haptic and visual feedback, human perception, cognition and decision making, and human-machine collaborative systems. Cross-listed Mechanical Engineering, Computer Science, Electrical and Computer Engineering, and Biomedical Engineering.
Instructor(s): L. Whitcomb; N. Cowan; P. Kazanzides; R. Etienne Cummings; R. Vidal.
**Electrical Computer Engineering**

EN.520.434. Modern Biomedical Imaging Instrumentation and Techniques. 3.00 Credits.

An intermediate biomedical imaging course covering modern biomedical imaging instrumentation and techniques as applied to diagnostic radiology and other biomedical applications. It includes recent advances in various biomedical imaging modalities, multi-modality imaging, and molecular imaging. The course is team taught by experts in the respective fields and provides a broad based knowledge of modern biomedical imaging to prepare students for graduate studies and research in biomedical imaging. Also, the course will offer tours and practical experience with modern biomedical imaging equipments in clinical and research settings. Co-listed with EN.580.473

**Prerequisites:** EN.520.432 OR EN.580.472

Instructor(s): B. Tsui.

EN.520.447. Information Theory. 3.00 Credits.

This course will address some basic scientific questions about systems that store or communicate information. Mathematical models will be developed for (1) the process of error-free data compression leading to the notion of entropy, (2) data (e.g. image) compression with slightly degraded reproduction leading to rate-distortion theory and (3) error-free communication of information over noisy channels leading to the notion of channel capacity. It will be shown how these quantitative measures of information have fundamental connections with statistical physics (thermodynamics), computer science (string complexity), economics (optimal portfolios), probability theory (large deviations), and statistics (Fisher information, hypothesis testing).

Instructor(s): S. Khudanpur

Area: Engineering, Quantitative and Mathematical Sciences.

EN.520.701. Current Topics in Language and Speech Processing. 1.00 Credit.

This biweekly seminar will cover a broad range of current research topics in human language technology, including automatic speech recognition, natural language processing and machine translation. The Tuesday seminars will feature distinguished invited speakers, while the Friday seminars will be given by participating students. A minimum of 75% attendance and active participation will be required to earn a passing grade. Grading will be S/U.

Instructor(s): J. Vogelstein

Area: Engineering.

**Mechanical Engineering**

EN.530.707. Robot System Programming. 3.00 Credits.

This course seeks to introduce students to open-source software tools that are available today for building complex experimental and fieldable robotic systems. The course is grouped into sections, each of which building on the previous in increasing complexity and specificity: tools and frameworks supporting robotics research, robotics-specific software frameworks, integrating complete robotic systems, and culminates with an independent project of the student's own design using small mobile robots or other robots in the lab. Students will need to provide a computer or a virtual-box (with at least a few GB of memory and a several tens of GB of disk space) running Ubuntu (https://www.ubuntu.com or one of its variants such as Xubuntu) and ROS (http://ros.org/). Students should have an understanding of intermediate programming in C/C++ (including data structures and dynamic memory allocation) Familiarity with Linux programming. Familiarity with software version control systems (e.g. subversion, mercurial, git), linear algebra. Recommended Course Background: EN.530.646 Robot Devices, Kinematics, Dynamics, and Control and EN.600.636 Algorithms for Sensor Based Robotics. Students should see the 2016 course homepage http://dscl.lcsr.jhu.edu/ME530707_2016 for more information and to get started with the course. Recommended Course Background: EN.530.646 and EN.600.436.

Instructor(s): L. Whitcomb.

**Biomedical Engineering**

EN.580.468. The Art of Data Science. 3.00 Credits.

In this course, we will cover the fundamentals of doing data science research, explaining best practices for each step, that collectively comprise an upward spiral. These steps include: (i) asking an interesting question, (ii) determining the degree to which the answer is known, (iii) assessing there currently exists data to likely obtain a satisfactory answer, (iv) exploring the data set, (v) cleaning up the dataset, (vi) formalizing a statistical inquiry, (vii) positing a statistical model which we hope will yield satisfactory answers, (viii) devising a test to assess the answer, (ix) building an estimator to assess the model, (x) checking the model, (xi) reporting the results, (xii) suggesting the next experiment to perform or question to answer to further enhance the model. Note that this course will largely be project based; each student will be expected to complete each of the above steps on some real data of interest to the student. Lectures will be minimal, giving introductory explanations one day, hopefully only part of the time. The rest of the time, we will work independently or in small groups to complete the weekly portion of the overall project. Please come ready to do science! If you don't have questions that you want answered, you can work in small groups, but each student will need to write the code and reports on their own. Recommended Course Background: No courses are formally required, though students will need to write numerical code (in R, Python, or Julia), and make reports using LaTeX, knitr, or Jupyter notebooks or similar.

Instructor(s): L. Whitcomb

Area: Engineering.
EN.580.473. Modern Biomedical Imaging Instrumentation and Techniques. 3.00 Credits.
An intermediate biomedical imaging course covering modern biomedical imaging instrumentation and techniques as applied to diagnostic radiology and other biomedical applications. It includes recent advances in various biomedical imaging modalities, multi-modality imaging, and molecular imaging. The course is taught by experts in the respective fields and provides a broad-based knowledge of modern biomedical imaging to prepare students for graduate studies and research in biomedical imaging. Also, the course will offer tours and practical experience with modern biomedical imaging equipment in clinical and research settings. Co-listed with EN.630.43X Recommended course background: EN.520.432 or EN.580.472
Prerequisites: EN.520.432 OR EN.580.472
Instructor(s): B. Tsui
Area: Engineering, Natural Sciences.

EN.580.668. The Art of Data Science. 3.00 Credits.
In this course, we will cover the fundamentals of doing data science research, explaining best practices for each step, that collectively comprise an upward spiral. These steps include: (i) asking an interesting question, (ii) determining the degree to which the answer is known, (iii) assessing there currently exists data to likely obtain a satisfactory answer, (iv) exploring the data set, (v) cleaning up the dataset, (vi) formalizing a statistical inquiry, (vii) positing a statistical model which we hope will yield satisfactory answers, (viii) devising a test to assess the answer, (ix) building an estimator to assess the model, (x) checking the model, (xi) reporting the results, (xii) suggesting the next experiment to perform or question to answer to further enhance the model. Instructor(s): J. Vogelstein
Area: Engineering.

EN.580.688. Foundations of Computational Biology & Bioinformatics II. 3.00 Credits.
This course will introduce probabilistic modeling and information theory applied to biological sequence analysis, focusing on statistical models of protein families, alignment algorithms, and models of evolution. Topics will include probability theory, score matrices, hidden Markov models, maximum likelihood, expectation maximization and dynamic programming algorithms. Homework assignments will require programming in Python. Recommended Course Background: Math through linear algebra and differential equations, EN.580.221 or equivalent, EN.600.226 or equivalent.
Instructor(s): R. Karchin.

EN.580.689. Computational Personal Genomics. 3.00 Credits.
What can we learn from the genome sequence of an individual? Genomic technology now makes it possible to generate huge amounts of DNA sequence data for a single individual at a relatively low cost. To make sense of this data, we need to employ sophisticated computational methods to identify genetic variations that influence an individual’s health. In this course, we will first review the state of the art in sequencing technology, and discuss how this technology is being applied to study human biology and disease. We will then explore the computational methods used to turn raw sequence data into knowledge. Topics will include genetic variant detection; discovery of chromosomal rearrangements and fusions; methods to measure gene expression from RNA; and measurements of the microbiome living inside our bodies. Recommended Course Background: EN.600.439/639, EN.600.363/463, EN.600.688, EN.580.688 (any one is sufficient), or permission of the instructor. Course is also open to undergraduate students.
Instructor(s): S. Salzberg
Area: Engineering.

EN.600.688, EN.580.688 (any one is sufficient), or permission of the instructor.

EN.580.694. Statistical Connectomics. 3.00 Credits.
This course will cover the basics of an exciting emerging field of statistical connectomics (aka, brain-graphs). It is so new, that we are going to make some of it up in this class! The first week will be introductory lectures that I give. The rest of the semester will be run like a seminar; each week will focus on a different topic. On Tuesdays we will hear about a statistical method that operates on graphs, and on Thursdays we will read about some neuroscience data upon which one could apply these techniques. The final project will consist of implementing a statistical method devised for graphs on a brain-graph problem. Recommended background: coursework in probability, linear algebra, and numerical programming (eg, R, Python, Matlab).
Instructor(s): J. Vogelstein
Area: Engineering.

Information Security Institute
EN.650.624. Advanced Network Security. 3.00 Credits.
This course focuses on advanced security topics and research in computer networks. It builds on the basic overview of network security covered in previous security courses. Beyond the basics of developing security network communications and applications, this advanced course dives deeper into the theory and practice behind network attack, the growing reality of weaponized zero-day vulnerabilities, and the current state-of-the-art responses. Course work includes reviewing contemporary security research papers, hands-on experiments in defending/attacking networks, and writing analyses.
Prerequisites: EN.650.424 OR EN.660.424 or permission of the instructor.
Instructor(s): S. Nielson
Area: Engineering.

Electrical and Computer Engineering
http://www.ece.jhu.edu/

The Department of Electrical and Computer Engineering at Johns Hopkins is committed to providing a rigorous educational experience that prepares students for further study and successful careers, and is dedicated to research that contributes to fundamental knowledge in both analytical and experimental aspects of the field. The mission of our undergraduate programs is to provide a stimulating and flexible curriculum in fundamental and advanced topics in electrical and computer engineering, basic sciences, mathematics, and humanities, in an environment that fosters development of analytical, computational,
and experimental skills and that involves students in design projects and research experiences. At the graduate level, our mission is to provide advanced training that prepares master’s graduates to work at the forefront of knowledge in their chosen specialty, and prepares doctoral students for original research that will advance the frontiers of knowledge in their chosen areas.

The department focuses its teaching and research programs in four major areas:

1. systems, control, communications, and signal processing;
2. photonics and optoelectronics;
3. integrated electronics and computer engineering; and
4. information extraction from acoustic and visual signals.

The faculty offers undergraduate courses at both the introductory and intermediate levels in these areas, and graduate courses leading to research topics at the forefront of current knowledge. Guided individual study projects available for undergraduates provide opportunities for student participation in activities in the department and in the research programs of the faculty. In the graduate program, original research in close association with individual faculty members is emphasized.

Current Research Activities

Systems, Control, Communications, and Signal Processing

Current research in systems and control includes the development of analysis, design and state estimation techniques for hybrid and nonlinear systems; optimization methods in filtering, estimation, and control; efficient implementation and analysis of iterative algorithms on specialized computing structures; design and analysis of robust linear and hybrid control algorithms. There is also a significant effort in systems biology, particularly the analysis of signaling pathways in biological systems. Research in speech processing involves work in all aspects of language or speech science and technology, with fundamental studies under way in areas such as language modeling, pronunciation modeling, natural language processing, neural auditory processing, acoustic processing, optimality theory, and language acquisition. Image analysis efforts currently concern statistical analysis of restoration and reconstruction algorithms, development of statistical image models for image restoration and segmentation, geometric modeling for object detection and estimation, morphological image analysis, and magnetic resonance imaging. There is opportunity for joint work in image analysis with faculty in the Department of Radiology, School of Medicine.

Photonics and Optoelectronics

Current research activities include work in fiber optic sensors and endoscopic 3-D imaging devices for medical applications, theory of nonlinear waves, optical communications, and quantum well devices. Other areas of interest involve the study of the nonlinear interactions of light with matter and single elementary particles, X-ray sources and lasers, optical bi-stability, radiation protection, laser beam control and steering, the nonlinear optics of semiconductors, nonlinear optics of biological objects as well as research on sub-femtosecond pulses and devices based on single atoms. Semiconductor device studies include optical detectors, VLSI circuit design and modeling and microwave devices and circuits. Study of a laser radar and RF photonics is also being pursued. Theoretical and experimental studies involving linear optical properties of various materials and passive remote sensing of the atmosphere are being investigated.

Integrated Electronics and Computer Engineering

Computer engineering research activities include work on computer structures (with emphasis on microprocessors), parallel and distributed processing, fault-tolerant computing, analysis of algorithms, and VLSI analog architectures for machine vision, associative processing, and micropower computing.

Facilities

The department maintains extensive facilities for teaching and research in Barton Hall and Hackerman Hall. The two main teaching labs (Electrical Engineering Lab and Computer Engineering Lab) make extensive use of state-of-the-art design environments such as CADENCE, Xilinx Tools, TI DSP systems, VHDL, and Verilog. In addition, the department includes the computational sensory motor system lab, the cellular signaling control lab, the parallel computing and imaging lab, the photonics and optoelectronics lab, the semiconductor microstructures lab, and the sensory communication and microsystem lab, adaptive and the sensory communication microsystem lab.

The Department of Electrical and Computer Engineering offers two bachelor’s degree programs: one in Electrical Engineering and one in Computer Engineering (with the close collaboration of the Computer Science Department (p. 935)). Each program is described below. Both degree programs are accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

Bachelor of Science in Electrical Engineering

Mission

The faculty of the Electrical Engineering Program at Johns Hopkins is committed to providing a rigorous educational experience that prepares students for further study and to professionally and ethically practice engineering in a competitive global environment. The mission of the program is to provide a stimulating and flexible curriculum in fundamental and advanced topics in electrical engineering, basic sciences, mathematics, and humanities, in an environment that fosters development of analytical, computational, and experimental skills and that involves students in design projects and research experiences; and to provide our electrical engineering graduates with the tools, skills and competencies necessary to understand and apply today’s technologies and become leaders in developing and deploying tomorrow’s technologies.

Educational Objectives

The Program Educational Objectives (PEOs) for electrical engineering (EE) at the Johns Hopkins University describe what EE graduates are expected to attain within a few years of graduation. The PEOs are determined in consultation with the Electrical and Computer Engineering External Advisory Committee and approved by the ECE faculty.

The educational objectives of the EE program are:

- Our graduates will become successful practitioners in engineering and other diverse careers.
- Some graduates will pursue advanced degree programs in engineering and other disciplines.
Outcomes

Students graduating with a B.S. in electrical engineering will have demonstrated:

- An ability to apply knowledge of mathematics, science, and engineering
- An ability to design and conduct experiments, as well as to analyze and interpret data
- An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- An ability to function on multidisciplinary teams
- An ability to identify, formulate, and solve engineering problems
- An understanding of professional and ethical responsibility
- An ability to communicate effectively
- The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
- A recognition of the need for, and an ability to engage in life-long learning
- A knowledge of contemporary issues
- An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice

Each student and faculty advisor must consider these objectives in planning a set of courses and projects that will satisfy degree requirements. The sample programs and the program checklist are provided in a separate advising manual and illustrate course selections that will help students meet the program objectives.

Faculty and others will assess student performance to ensure that our educational objectives are met. Students will have opportunities to assess their own educational progress and achievements in several ways, including exit interviews and alumni surveys. Through regular review processes, including Academic Council departmental reviews, visits by the departmental external advisory board, course evaluations, and ABET visits, students will have opportunities to discuss their educational experiences and expectations. The outcomes of these assessment processes will be used by the faculty to improve the content and delivery of the educational program.

The success of each student’s program will depend on effective faculty advising. Every undergraduate student in the Electrical Engineering Program must follow a program approved by the faculty advisor. The faculty advisor must be a member of the Electrical and Computer Engineering faculty.

Requirements for the Bachelor of Science in Electrical Engineering

The Bachelor of Science degree in electrical engineering requires a minimum of one hundred and twenty-six (126) credits that must include:

- Forty-five (45) credits of ECE courses including the following:
  - EN.520.213 Circuits 4
  - EN.520.214 Signals & Systems 4
  - EN.520.219 Fields, Matter & Waves 3
  Choose one of the following: 3

- The Bachelor of Science degree in electrical engineering requires a minimum of one hundred and twenty-six (126) credits that must include:
  - Sixteen (16) credits of basic sciences (physics, chemistry, biology, earth and planetary sciences), which must include AS.171.101 General Physics: Physical Science Major I, AS.171.102 General Physics: Physical Science Majors II, AS.173.111 General Physics, or AS.173.112 General Physics Laboratory II.

- Six (6) credits of advanced laboratory, design intensive, or senior design project courses.

- Six (6) credits of engineering courses from School of Engineering departments other than ECE or Applied Mathematics and Statistics or General Engineering (note: Entrepreneurship and Management courses in the Center for Leadership Education CANNOT be counted as "other engineering courses"). Students must complete enough of the approved non-ECE advanced design labs so that they have at least twelve (12) credits of combined ECE and non-ECE advanced laboratory, design intensive, or senior design project courses.

Mathematics Department or the Applied Mathematics and Statistics Department (20 credits)

Total Credits: 10

- Sixteen (16) credits of basic sciences (physics, chemistry, biology, earth and planetary sciences), which must include AS.171.101 General Physics: Physical Science Major I, AS.171.102 General Physics: Physical Science Majors II, or AS.173.111 General Physics.
Laboratory I and AS.173.112 General Physics Laboratory II. Courses in this group may not be taken Satisfactory/Unsatisfactory.

- **At least six (6), three-credit courses in humanities and social sciences.** The humanities and social sciences courses are one of the strengths of the academic programs at Johns Hopkins. They represent opportunities for students to appreciate some of the global and societal impacts of engineering, to understand contemporary issues, and to exchange ideas with scholars in other fields. Some of the courses will help students to communicate more effectively, to understand economic issues, or to analyze problems in an increasingly international world. The selection of courses should not consist solely of introductory courses, but should have both depth and breadth. Typically, this means that students should take at least three (3) courses in a specific area with at least one of them at an advanced level.

- A programming language requirement must be met by taking or EN.600.120 Intermediate Programming.

- **Two (2) writing intensive courses** (at least 3 credits each) are required. The writing intensive courses may not be taken Satisfactory/Unsatisfactory and require a C- or better grade. Students may wish to consider a course in Technical Communications to fulfill one of the writing intensive requirements. The course EN.661.315 Culture of the Engineering Profession, is recommended by the ECE Faculty as a writing intensive course.

Additional details concerning advising and degree requirements are in the Electrical Engineering Advising Manual. The B.S. in Electrical Engineering degree program is accredited by the Engineering Accreditation Commission of ABET, [http://www.abet.org](http://www.abet.org).

The sample program shown has an emphasis on systems and communications aspects of electrical engineering. Other sample programs can be found in the advising manual.

### Bachelor of Science in Computer Engineering

#### Mission

The Computer Engineering Program at Johns Hopkins is supported by faculty in the Department of Electrical and Computer Engineering and the Department of Computer Science, who are committed to providing a rigorous educational experience that prepares students for further study and to professionally and ethically practice engineering in a competitive global environment. The mission of the program is to provide students with a broad, integrated education in the fundamentals and advanced topics in computer engineering, basic sciences, mathematics, and humanities in an environment that fosters the development of analytical, computational, and experimental skills, and that involves students in design projects and research experiences; and to provide our computer engineering graduates with the tools, skills and competencies necessary to understand and apply today’s technologies and become leaders in developing and deploying tomorrow’s technologies.

#### Educational Objectives

The Program Educational Objectives (PEOs) for computer engineering (CE) at the Johns Hopkins University describe what CE graduates are expected to attain within a few years of graduation. The PEOs are determined in consultation with the Electrical and Computer Engineering External Advisory Committee and approved by the ECE faculty.

The educational objectives of the CE program are:
The Bachelor of Science degree in Computer Engineering requires a program that follows a program approved by a faculty advisor. The outcomes of these educational experiences and expectations, which will be used by the faculty to improve the content and delivery of the educational program, will be assessed through review processes, including Academic Council departmental reviews, visits by the departmental external advisory board, course evaluations, and ABET visits; students will have opportunities to discuss their review processes, including exit interviews and alumni surveys. Through regular assessments, students will be able to engage in lifelong learning and appreciate some of the global and societal context.

Outcomes

Students graduating with a B.S. in computer engineering will have demonstrated:

- An ability to apply knowledge of mathematics, science, and engineering
- An ability to design and conduct experiments, as well as to analyze and interpret data
- An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- An ability to function on multidisciplinary teams
- An ability to identify, formulate, and solve engineering problems
- An understanding of professional and ethical responsibility
- An ability to communicate effectively
- The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
- A recognition of the need for, and an ability to engage in life-long learning
- A knowledge of contemporary issues
- An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice

Each student and faculty advisor must consider these objectives in planning a set of courses and projects that will satisfy degree requirements. The sample programs and the program checklist included in this advising manual illustrate course selections that will help students meet the program objectives.

Faculty and others will assess student performance to ensure that our educational objectives are met. Students will have opportunities to assess their own educational progress and achievements in several ways, including exit interviews and alumni surveys. Through regular review processes, including Academic Council departmental reviews, visits by the departmental external advisory board, course evaluations, and ABET visits; students will have opportunities to discuss their educational experiences and expectations. The outcomes of these assessment processes will be used by the faculty to improve the content and delivery of the educational program.

The success of each student’s program will depend on effective faculty advising. Every undergraduate student in the Computer Engineering Program must follow a program approved by a faculty advisor.

Requirements for the Bachelor of Science in Computer Engineering

The Bachelor of Science degree in Computer Engineering requires a minimum of 126 credits, which must include the following:

- Forty-two (42) credits in Computer Engineering, which must include:

  - Electrical and Computer Engineering courses (15 credits)
  - EN.520.142 Digital Systems Fundamentals
  - EN.520.213 Circuits

  a. Fifteen (15) credits of Electrical and Computer Engineering courses, which must include EN.520.142 Digital Systems Fundamentals, and.

  b. Fifteen (15) credits of Computer Science courses which must include EN.600.120 Intermediate Programming, EN.600.226 Data Structures and Computer System Fundamentals (EN.600.233 Computer System Fundamentals).

  c. The program must also contain a substantial advanced laboratory and design experience component, appropriate for the student’s interests. This requirement can be met by taking twelve (12) credits of advanced laboratory, design intensive, or senior design project courses from those given in the degree planning checklist in Section I.C. At least six (6) of these 12 credits must be from ECE or CS courses. A GPA of at least 2.0 must be maintained in Computer Engineering courses. Courses in this category may not be taken Satisfactory/Unsatisfactory.

  - Six (6) credits of engineering courses from School of Engineering departments other than Computer Science, ECE, Applied Mathematics and Statistics, or General Engineering (note: Entrepreneurship and Management courses in the Center for Leadership Education cannot be counted as “other engineering courses”). Students must complete enough of the approved non-CS/ECE advanced design labs so that they have at least twelve (12) credits of advanced laboratory, design intensive, or senior design project courses. Courses in this group may not be taken Satisfactory/Unsatisfactory.

  - Twenty-four (24) credits in mathematics courses taken from the Mathematics Department or the Applied Mathematics and Statistics Department. AS.110.109 Calculus II (For Physical Sciences and Engineering), AS.110.202 Calculus III, AS.110.201 Linear Algebra or EN.550.291 Linear Algebra and Differential Equations, EN.550.171 Discrete Mathematics, EN.550.310 Probability & Statistics for the Physical and Information Sciences & Engineering, EN.550.311 Probability and Statistics for the Biological Sciences and Engineering or EN.550.420 Introduction to Probability must be taken. Elementary or precalculus courses such as AS.110.105 or EN.550.111-EN.550.112 are not acceptable. Calculus I may be waived through an examination taken during freshman orientation. If not waived, it must be taken as a prerequisite to Calculus II.) Courses in this category may not be taken Satisfactory/Unsatisfactory.

  - Sixteen (16) credits of basic sciences (physics, chemistry, biology, earth and planetary sciences), which must include AS.171.101 General Physics: Physical Science Major I-AS.171.102 General Physics: Physical Science Majors II, AS.173.111 General Physics Laboratory I-AS.173.112 General Physics Laboratory II, and AS.030.101 Introductory Chemistry I. Courses in this category may not be taken Satisfactory/Unsatisfactory.

  - At least six (6) three-credit courses in humanities and social sciences. The humanities and social sciences courses are one of the strengths of the academic programs at Johns Hopkins. They represent opportunities for students to appreciate some of the global and societal impacts of engineering, to understand contemporary issues, and to exchange ideas with scholars in other fields. Some of the courses will help students to communicate more effectively, to understand economic issues, or to analyze problems in an increasingly international world. The selection of courses should not consist solely of introductory courses but should have both depth and breadth. This means that students should take at least
three (3) courses in a specific area with at least one of them at an advanced level.

- At least two (2) writing intensive courses are required (at least 3 credits each). These courses may not be taken Satisfactory/Unsatisfactory and require a grade of C- or better. Students may wish to consider a course in Technical Communications to fulfill one of the writing intensive requirements.

Additional details concerning advising and degree requirements are in the Computer Engineering Advising Manual. The B.S. in Computer Engineering degree program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

The sample program shown has an emphasis on hardware/device aspects of computer engineering. Other sample programs can be found in the advising manual.

**Bachelor of Arts Degree in Electrical Engineering**

To meet the requirements for the B.A. degree, the program must include:

- Eighteen (18) credits of humanities and social sciences courses.
- Four writing intensive courses.
- Twenty (20) credits of mathematics or mathematical statistics courses. Typically these include AS.110.108 Calculus I, AS.110.109 Calculus II (For Physical Sciences and Engineering), and AS.110.202 Calculus III or equivalent, and AS.110.201 Linear Algebra. Elementary or pre-calculus courses such as AS.110.105 or EN.550.111-EN.550.112 are not acceptable.
- Thirty (30) credits of ECE courses. Three credits of computer science courses may be counted toward this 30-credit requirement.
- Additional credits giving a total of at least 120 credits.
- Additional information on academic policies and degree requirements can be found in the Undergraduate Academic Policies section of this catalog.

The student should be aware that the B.A. degree program is not accredited by the Accreditation Board for Engineering and Technology (ABET).

**Minor in Robotics**

A minor in Robotics is offered by the Laboratory for Computational Sensing and Robotics. Detailed information regarding this program can be found at: http://lcsr.jhu.edu/robotics-minor/.

**Minor in Computer-Integrated Surgery**

A minor in Computer-Integrated Surgery is offered by the Laboratory for Computational Sensing and Robotics. Detailed information regarding this program can be found at: http://lcsr.jhu.edu/computer-integrated-surgery-minor/.

**Bachelor’s/Master’s Program**

At the end of their sophomore year, students who are majors in electrical and computer engineering may apply for admission to the combined bachelor’s/master’s program which combines a B.S. in electrical
engineering with a master of science in engineering. If accepted, they must take at least two courses per semester that satisfy the requirements of the M.S.E. program.

Every graduate student in the Department of Electrical and Computer Engineering must follow a program approved by a faculty advisor in the department. The advisor assigned to the student upon admission may be changed, subject to the approval of the new advisor. Additional details are in the department’s Graduate Student Advising Manual.

Master of Science in Engineering (M.S.E.) Degree

The department offers a comprehensive and flexible Master of Science in Engineering (M.S.E.) degree program that includes courses from several areas of Electrical and Computer Engineering. In addition, the following specialized M.S.E. tracks are offered: 1) Communications, 2) Control Systems, 3) Language and Speech Processing, 4) Image Processing, 5) Microsystems and Computer Engineering, 6) Photonics and Optoelectronics, and 7) Robotics.

Requirements for the M.S.E. Degree

A student who has completed a program of study similar to that required for the B.S. in electrical engineering degree must complete the following requirements for the M.S.E. degree:

- Eight one-semester graduate (400-799) courses approved by the advisor must be satisfactorily completed. At least five of these courses must come from the full-time ECE Department (520.XXX) but cannot include Independent Study, Dissertation Research, ECE Seminar or Special Studies.
- Further depth of understanding must be demonstrated by either satisfactorily completing two additional one-semester graduate (400-799) courses approved by the advisor (one of which must come from the full-time ECE Department (520.XXX)), or by writing an M.S.E. thesis acceptable to a member of our faculty, or by completing a special project acceptable to a member of our faculty and writing the corresponding report.
- A course (including independent study) is satisfactorily completed if a grade of A, B, C, or P is obtained. No more than one C grade can be counted toward the requirements and a D or F or second C grade results in probation. A second D or F or a third C grade results in termination from our program.
- Students may transfer in up to two courses from outside JHU. These courses must have been completed after the undergraduate degree was conferred and not applied to a degree elsewhere.
- Every graduate course designated Independent Study, Dissertation Research, or Special Studies counted toward the M.S.E. degree must include a written report. A copy of the report will become part of the student’s permanent file.
- Every student must register for a minimum of two semesters as a full-time resident graduate student (this rule does not apply to students in the concurrent B.S./M.S.E. program). Full-time resident M.S.E. students must be enrolled in at least 9 credits to maintain full-time resident status (in fall/spring semesters).
- Every student must be registered in the semester that degree requirements are met; this includes students who have no courses remaining in which to enroll but must resolve coursework for which an "Incomplete" grade was assigned and those who must complete other academic requirements, such as a language or computing requirement (these students may apply for Nonresident Status).
- Every student must earn the M.S.E. degree within five consecutive academic years (ten semesters). Only semesters during which a student has a university-approved leave of absence are exempt from the ten semester limit; otherwise, all semesters from the beginning of the student’s graduate studies – whether the student is resident or not – count toward the ten semester limit.
- Every student must complete training on academic ethics.
- Every student must complete training on the responsible and ethical conduct of research, if applicable (Please see the WSE Policy on the Responsible Conduct of Research).

Doctor of Philosophy (Ph.D.) Degree

Graduate study in Electrical and Computer Engineering is oriented toward the Ph.D. degree, with emphasis on scholarship and research rather than formal course work. Our Ph.D. program is designed to be easily tailored to the needs and interests of individual students. There are no lists of required courses. The program is directed at independent, highly motivated individuals who desire to work closely with faculty members at the forefront of research in a variety of scientific areas, such as:

- Computational and Biomorphic Systems
- Computational Systems Biology and Bioinformatics
- Computer Engineering
- Control Systems
- Image Processing and Analysis
- Integrated Circuits and Microsystems
- Language and Speech Processing
- Photonics and Optoelectronics
- Signal Processing

Requirements for the Ph.D. Degree

University requirements for the Ph.D. degree are listed under Academic Information for Graduate Students (p. 55). In addition, the department requires satisfactory completion of the Ph.D. departmental examination and the university Graduate Board oral examination, preparation of a preliminary research proposal, a departmental seminar presentation, and an oral dissertation defense.

The departmental examination is offered twice yearly. Each faculty member prepares a set of questions, and the student must select and complete the sets of questions of three faculty members. This examination must be passed before the beginning of the fifth semester of full-time graduate study. After passing the examination, the student can be accepted by a faculty member who will oversee the student’s research. This research advisor then guides the remainder of the student’s program leading to the Ph.D. degree.

The university Graduate Board oral examination is administered by a panel consisting of the research advisor, another faculty member in Electrical and Computer Engineering, and three faculty members from other departments. This examination must be taken before the end of the sixth semester.

In the course of research leading to the Ph.D. degree, the student must submit a preliminary research proposal to the department, and present a departmental seminar. Finally, a public dissertation defense will be conducted before a panel of readers consisting of at least three Electrical and Computer Engineering faculty members. Further details concerning M.S.E. and Ph.D. degree requirements are published in a manual for graduate students in Electrical and Computer Engineering.
Financial Aid
Financial aid is available for candidates of high promise. Research assistantships are available on sponsored research projects directed by members of the faculty.

For current faculty and contact information go to http://www.ece-jhu.org/index.php/people

Faculty
Chair
Ralph R. Etienne-Cummings
Mixed-signal VLSI, computational sensors, robotics, neuromorphic engineering.

Director of Undergraduate Programs
Trac D. Tran
Filter banks, wavelets, multirate systems and applications.

Director of Graduate Programs
Pablo A. Iglesias
Edward J. Schaefer Professor: systems biology, mathematical modeling of biological systems, control theory.

Professors
Andreas G. Andreou
CMOS devices and integrated circuits, bioelectronics, nanoelectronics, life science microsystems, natural and synthetic sensory systems, neural computation.

John I. Goutsias
Signal and image processing, computational systems biology, bioinformatics, modeling and analysis of complex networked systems.

Hynek Hermansky
Julian S. Smith Professor: emulating and integrating human-like processing strategies into speech engineering systems; neural information processing; human sensory perception; speech and speaker recognition; speech coding and enhancement; and machine learning.

Jin U. Kang
Jacob Suter Jammer Professor: fiber optic devices and lasers, biophotonics, optical imaging and sensing.

Alexander E. Kaplan

Jacob B. Khurgin
Quantum electronics, nonlinear optics.

Gerard G. L. Meyer
Parallel computing, computational methods, fault tolerant computing.

Jerry L. Prince
William B. Kouwenhoven Professor: image processing and computer vision with application to medical imaging.

T.E. (Ed) Schlesinger
Professor and Benjamin T. Tome Dean: solid state electronic and optical devices, nanotechnology, and information storage systems.

Howard L. Weinert
Fast compact algorithms and software for extracting signals from noise

James West
electroacoustics, physical acoustics, and architectural acoustics.

Associate Professors
Mounya Elhilali
Biological basis of sound and speech perception, neural signal processing, computational neuroscience, cognitive neuromorphic engineering.

Sanjeev P. Khudanpur
Information theory, statistical language modeling.

Assistant Professors
Muyinatu A. Lediju Bell (eff 7/1/16)
Ultrasound imaging, photoacoustic imaging, image quality improvements, advanced beamforming methods, light delivery systems, medical robotics, image-guided surgery, technology development, medical device design, clinical translation.

Najim Dehak
Speech processing and modeling; speaker and language recognition; audio segmentation; emotion recognition and health applications.

Amy C. Foster
Silicon photonics, nonlinear optics, nanophotonics, integrated biophotonics.

Mark A. Foster
Ultrafast and nonlinear optics, all-optical signal processing, ultrafast phenomena and measurement, nonlinear dynamics.

Enrique Mallada
Networked dynamics, control, optimization, power networks.

Danielle C. Tarraf
Systems and control theory, with emphasis on hybrid systems; network analysis and control; automata theory, algebra, and combinatorics as they apply in systems and control.

Susanna M. Thon
Renewable energy conversion and storage, photovoltaics, optoelectronics, nanoengineering and nanophotonics, and scalable fabrication.

Archana Venkataraman (eff 8/1/16)
Functional neuroimaging (fMRI, EEG), machine learning & probabilistic inference, network modeling of the brain, integration of imaging, genetics and behavioral data.

Joint, Part-Time, Visiting, and Emeritus Appointments
Emad M. Boctor
Assistant Professor (Radiology): image-guided intervention, ultrasound imaging, elasticity, and thermal imaging.

Paul A. Bottomley
Russell H. Morgan Professor (Radiology): magnetic resonance imaging, metabolic MRI.

Sang (Peter) Chin
Assistant Research Professor: compressive sensing, novel signal processing, game theory, extremal graph theory, differential geometry, and quantum computing and verification.

A. Brinton Cooper III
Associate Research Professor: error control coding, coded wireless, and optical communication.
Noah J. Cowan  
Associate Professor (Mechanical Engineering): navigation and control in biological systems; animal biomechanics and multisensory control; robotic systems, dynamics, and control; system identification of rhythmic systems; medical robotics.

Richard V. Cox  
Research Professor/Director, Human Language Technology Center of Excellence.

Frederic M. Davidson  
Professor Emeritus

Eric C. Frey  
Professor (Radiology): algorithms for computed tomography, small animal X-ray microcomputed tomography, quantitative PET, SPECT and nuclear medicine imaging, image evaluation, scatter compensation in SPECT, simultaneous dual isotope SPECT and Monte Carlo simulation of radiation transport.

Israel Gannot  
Associate Research Professor.

Dennice F. Gayme  
Assistant Professor (Mechanical Engineering): dynamics and control of nonlinear, networked and spatially distributed systems. Applications include: the electric power grid, wall turbulence and wind farms.

Peter Gehlbach  
Associate Professor (Ophthalmology): angiogenesis; diabetic retinopathy; microsurgical instrument development; gene therapy; macular degeneration.

Donald J. Geman  
Professor (Applied Mathematics and Statistics): computer vision, computational biology, statistical learning.

Robert E. Glaser  
Lecturer: advanced digital logic systems.

Moise H. Goldstein Jr.  
Professor Emeritus.

Willis Gore  
Professor Emeritus.

Gregory D. Hager  
Professor and Chair (Computer Science): vision, robotics, human-machine systems, computer-integrated medicine.

Richard I. Joseph  
Jacob Suter Jammer Professor Emeritus.

Marin Kobilarov  
Assistant Professor (Mechanical Engineering): dynamics and control motion planning reasoning under uncertainty robotics and aerospace.

Xingde Li  
Professor (Biomedical Engineering): endomicroscopy technologies, nanobiophotonics and molecular imaging, early detection.

Michael I. Miller  
Hershel and Ruth Seder Professor (Biomedical Engineering and Director, Center for Imaging Science): computational anatomy, medical imaging, image understanding.

C. Harvey Palmer Jr.  
Professor Emeritus.

Dzung L. Pham  
Associate Professor (Radiology): homeomorphic brain image segmentation, neuroanatomical atlases in MIPAV, robust tissue classification, statistical characterization of brain tissue in MRI.

Philippe O. Pouliquen  
Assistant Research Professor: optoelectronic, mixed signal, low power VLSI, CAD tools for VLSI.

Carey E. Priebe  

Arman Rahmim  
Assistant Professor (Radiology): 3D and spatiotemporal 4D tomographic image reconstruction algorithms; texture and shape analysis as applied to medical imaging (SPECT/PET); diffuse optical tomography (DOT) through the intact brain; cardiac and respiratory motion compensation methods; dynamic whole-body PET/CT parametric imaging; advanced quantitation methods for enhanced prognosis and treatment response assessment in cancer patients; adaptive multi-modality integration of anatomical (e.g. MRI or CT) information into functional (e.g. PET) image reconstruction; Monte Carlo simulation approaches, using high performance computing and mathematical anthropomorphic models; application of numerical observer studies as preliminary substitute for human observers for optimization and validation; modeling and incorporation of resolution degrading effects within image reconstruction tasks.

Charbel G. Rizk  
Associate Research Scientist: integrated system-on-chip sensors; integrated photonics, controls, autonomous systems, UAV platforms, and sensors; biomimetic devices for medical applications.

Wilson J. Rugh  
Edward J. Schaefer Professor Emeritus.

Suchi Saria  
Assistant Professor (Computer Science): machine learning; statistical inference; computational health informatics; probabilistic methods; time series models; information extraction in domains with structured and unstructured data (e.g., text, sensing devices, electronic health records, smart rooms); predictive modeling in healthcare.

Nitish V. Thakor  
Professor (Biomedical Engineering): medical instrumentation, medical micro and nanotechnologies, neurological instrumentation, signal processing, computer applications.

Xiaoying Tang  
Adjunct Assistant Professor: quantitative medical image analysis; neuroimaging; computational anatomy; computational neuroinformatics.

Benjamin M. W. Tsui  
Professor (Radiology): quantitative SPECT, PET and CT imaging techniques, image reconstruction methods, computer simulation tools and methods in imaging, image quality assessment, small animal SPECT, PET and CT imaging techniques.

Rene Vidal
Courses

EN.520.123. Computational Modeling for Electrical and Computer Engineering. 3.00 Credits.
In this course, the students will acquire the skills of solving complex real world Electrical and Computer Engineering problems using computational modeling tools. This course will cover two aspects of solving those ECE problems. The first aspect consists of learning to map ECE tasks to mathematical models. The second aspect consists of introducing the students to the basic of computational algorithms needed to work with the models, and programming such algorithms in MATLAB.
Instructor(s): N. Dehak
Area: Engineering.

EN.520.137. Introduction To Electrical & Computer Engineering. 3.00 Credits.
An introductory course covering the principles of electrical engineering including sinusoidal wave forms, electrical measurements, digital circuits, and applications of electrical and computer engineering. Laboratory exercises, the use of computers, and a design project are included in the course.
Instructor(s): T. Tran
Area: Engineering, Quantitative and Mathematical Sciences.

EN.520.142. Digital Systems Fundamentals. 3.00 Credits.
Number systems and computer codes, switching functions, minimization of switching functions, Quine - McCluskey method, sequential logic, state tables, memory devices, analysis, and synthesis of synchronous sequential devices.
Instructor(s): P. Julian
Area: Engineering, Quantitative and Mathematical Sciences.

EN.520.150. Light, Image and Vision. 3.00 Credits.
This course is designed for beginning undergraduate students and covers the principle of optics and imaging from the human vision perspective. The topics for the course include the basic principles and properties of light, imaging and image formation, optical imaging and display systems, and human vision. The course include bio-weekly labs that allows students to implement and experience the concepts learned during the lectures.
Instructor(s): J. Kang
Area: Engineering.

EN.520.211. ECE Engineering Team Project. 1.00 Credit.
This course introduces the student to the basics of engineering team projects. The student will become a member of and participate in the different aspects of an ECE team project over several semesters. (Freshmen and Sophomores)
Instructor(s): A. Andreou; C. Rizk; J. Kang; J. West
Area: Engineering.

EN.520.212. ECE Engineering Team Project (Freshmen and Sophomores). 1.00 Credit.
This course introduces the student to the basics of engineering team projects. The student will participate in an ECE engineering team project as a member. The student is expected to participate in the different aspects of the project over several semesters. (Freshmen and Sophomores) Permission of instructor required.
Instructor(s): C. Rizk; J. Kang; J. West
Area: Engineering.

EN.520.213. Circuits. 4.00 Credits.
An introductory course on electric circuit analysis. Topics include time domain and frequency domain analysis techniques, transient and steady-state response, and operational amplifiers.
Prerequisites: AS.110.108 and AS.110.109
Instructor(s): B. Mohanty; H. Weinert
Area: Engineering.

EN.520.214. Signals & Systems. 4.00 Credits.
An introduction to discrete-time and continuous-time signals and systems covers representation of signals and linear time-invariant systems and Fourier analysis.
Prerequisites: Corequisite: AS.110.202; Prerequisite: EN.520.213
Instructor(s): M. Elhilali
Area: Engineering, Quantitative and Mathematical Sciences.

EN.520.216. Introduction To VLSI. 3.00 Credits.
This course teaches the basics of switch-level digital CMOS VLSI design. This includes creating digital gates using MOS transistors as switches, laying out a design using CAD tools, and checking the design for conformance to the Scalable CMOS design rules. Recommended: EN.520.213.
Prerequisites: EN.520.142 and recommended: 520.213
Instructor(s): A. Andreou
Area: Engineering.

EN.520.219. Fields, Matter & Waves. 3.00 Credits.
Vector analysis, electrostatic fields in vacuum and material media, stationary currents in conducting media, magnetostatic fields in vacuum and material media. Maxwell's equations and time-dependent electric and magnetic fields; electromagnetic waves and radiation, transmission lines, wave guides, applications.
Prerequisites: Co-req: AS.110.202; Prerequisites: ((AS.171.101 and AS.171.102) or (AS.171.101 and AS.171.108) or (AS.171.107 and AS.171.108)) and AS.110.109 Pre/Corequisite: AS.110.202
Instructor(s): M. Foster
Area: Engineering, Natural Sciences.

EN.520.220. Fields, Matter & Waves. 3.00 Credits.
Magnetostatic fields in vacuum and material media. Maxwell's equations and time-dependent electric and magnetic fields; electromagnetic waves and radiation, transmission lines, wave guides, applications.
Prerequisites: EN.520.219 or equivalent
Instructor(s): M. Foster
Area: Engineering, Natural Sciences.
EN.520.222. Computer Architecture. 3.00 Credits.
A study of the structure and organization of classical von Neuman uniprocessor computers. Topics include a brief history of modern machines starting from the Turing computer model, instruction sets, addressing, RISC versus CICS, traps and interrupt handling, twos complement arithmetic, adders and ALUs, CSA's Booth's algorithm, multiplication and division, control unit design, microprogramming, dynamic versus static linking, memory systems and memory hierarchy, paging segmentation, cache hardware, cache organizations, and replacement policies.
Prerequisites: EN.520.142
Instructor(s): P. Pouliquen
Area: Engineering.

EN.520.240. Introduction to Mechatronics. 3.00 Credits.
Introduction to Mechatronics is mostly hands-on, interdisciplinary design class consisting of lectures about key topics in mechatronics, and lab activities aimed at building basic professional competence. After completing the labs, the course will be focused on a final mini-project for the remainder of the semester. This course will encourage and emphasize active collaboration with classmates. Each team will plan, design, manufacture and/or build, test, and demonstrate a robotic system that meets the specified objectives.
Instructor(s): C. Rizk
Area: Engineering.

EN.520.270. Introduction to Renewable Energy Engineering. 3.00 Credits.
This course provides an introduction to the science and engineering of renewable energy technologies. The class will begin with an overview of today's energy landscape and proceed with an introduction to thermodynamics and basic heat engines. Specific technologies to be discussed include photovoltaics, fuel cells and hydrogen, biomass, wind power and energy storage. The class should be accessible to those from a variety of science and engineering disciplines. Recommended Course Background: Introductory Physics and Calculus.
Instructor(s): H. Hermansky
Area: Engineering.

EN.520.315. Introduction to Information Processing of Sensory Signals. 3.00 Credits.
An introductory course to basic concepts of information processing of human communication signals (sounds, images) in living organisms and by machine. Recommended Course Background: EN.520.214 (or EN.580.222) or consent of the instructor.
Instructor(s): H. Hermansky
Area: Engineering.

EN.520.345. Electrical & Computer Engineering Laboratory. 3.00 Credits.
This course consists of 11 one-week laboratory experiments intended to provide an introduction to analog and digital circuits commonly used in engineering. Topics include phase and frequency response, transistors, operational amplifiers, filters, and other analog circuits. The experiments are done using computer controlled digital oscilloscopes, function generators, and power supplies.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Prerequisites: ( ( AS.171.101 AND AS.171.102) OR (AS.171.107 AND AS.171.108) ) AND EN.520.213.
Instructor(s): A. Foster; S. Ramesh
Area: Engineering.

EN.520.349. Microprocessor Lab I. 3.00 Credits.
This course introduces the student to the programming of microprocessors at the machine level. 68HC08, 8051, and eZ8 microcontrollers are programmed in assembly language for embedded control purposes. The architecture, instruction set, and simple input/output operations are covered for each family. Upon completion, students can use these flash-based chips as elements in other project courses. Recommended Course Background: EN.520.142 or equivalent.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): R. Glaser
Area: Engineering.

EN.520.353. Control Systems. 3.00 Credits.
Modeling, analysis, and an introduction to design for feedback control systems. Topics include state equation and transfer function representations, stability, performance measures, root locus methods, and frequency response methods (Nyquist, Bode).
Prerequisites: Prereqs: EN.530.343 AND EN.520.214
Instructor(s): E. Mallada Garcia
Area: Engineering.

EN.520.372. Programmable Device Lab. 3.00 Credits.
The use of programmable memories (ROMs, EPROMs, and EEPROMs) as circuit elements (as opposed to storage of computer instructions) is covered, along with programmable logic devices (PALS and GALs). These parts permit condensing dozens of standard logic packages (TTL logic) into one or more off-the-shelf components. Students design and build circuits using these devices with the assistance of CAD software. Topics include programming EEPROMs; using PLDs as address decoders; synchronous sequential logic synthesis for PLDs; and PLD-based state machines. Recommended Course Background: EN.520.142 and EN.520.345
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): R. Glaser
Area: Engineering.

EN.520.391. CAD Design of Digital VLSI Systems I (Juniors). 3.00 Credits.
An introductory course in which students, manually and through computer simulations, design digital CMOS integrated circuits and systems. The design flow covers transistor, physical, and behavioral level descriptions, using SPICE, Layout, and Verilog HDL VLSI CAD tools. After design computer verification, students can fabricate and test their semester-long class projects. Juniors Only. Recommended Course Background: EN.520.142, EN.520.216 or equivalent; Corequisite: EN600.333, EN.600.334, EN.520.349 or EN.520.372
Instructor(s): R. Etienne Cummings
Area: Engineering.

EN.520.401. Basic Communication. 3.00 Credits.
This course covers the principles of modern analog and digital communication systems. Topics include: amplitude modulation formats (DSB, SSB VSB), exponential modulation formats (PM, FM), superheterodyne receivers, digital representation of analog signals, sampling theorem, pulse code modulation formats (PCM, DPCM, DM, spread-spectrum), signals with additive Gaussian noise, maximum likelihood receiver design, matched filtering, and bit error rate analyses of digital communication systems.
Prerequisites: Prereqs: EN.520.214 AND EN.550.310 or equivalent.
Instructor(s): Staff
Area: Engineering.
EN.520.402. Digital Communications. 3.00 Credits.
This is a first course in digital communications. Topics covered are sampling theorem, representation and reconstruction of analog signals from sampled values, quantization noise, pulse code modulation, delta modulation, digital waveform encoding, signal space descriptions of binary and M-ary signaling schemes (BPSK, QAM, FSK, PAM, PSK), optimal receivers, effects of additive Gaussian noise on bit error rates, digital transmission through band-limited channels, and multicarrier transmission systems (OFDM). System concepts will be emphasized through implementation with TIMS hardware. This course is a replacement for EN.520.401 and EN.520.465 and cannot be taken by students who have taken these courses.
Prerequisites: ( EN.520.214 ) AND ( EN.550.310 OR EN.550.311 OR EN.550.420 OR equivalent);EN.520.401 AND EN.520.465. This course is a replacement for EN.520.401 and EN.520.465 and cannot be taken by students who have taken these courses.
Instructor(s): Staff
Area: Engineering, Natural Sciences.

EN.520.403. Introduction to Optical Instruments. 3.00 Credits.
This course is intended to serve as an introduction to optics and optical instruments that are used in engineering, physical, and life sciences. The course covers first basics of ray optics with the laws of refraction and reflection and goes on to description of lenses, microscopes, telescopes, and imaging devices. Following that basics of wave optics are covered, including Maxwell equations, diffraction and interference. Operational principles and performance of various spectrometric and interferometric devices are covered including both basics (monochromatic, Fabry-Perot and Michelson interferometers), and advanced techniques of near field imaging, laser spectroscopy, Fourier domain spectroscopy, laser Radars and others.
Prerequisites: Students may take EN.520.403 or EN.520.603, but not both.
Instructor(s): J. Khurgin
Area: Engineering.

EN.520.407. Introduction to the Physics of Electronic Devices. 3.00 Credits.
This course is designed to develop and enhance the understanding of the basic physical processes taking place in the electronic and optical devices and to prepare students for taking classes in semiconductor devices and circuits, optics, lasers, and microwaves devices, as well as graduate courses. Both classical and quantum approaches are used. Specific topics include theory of molecular bonding; basics of solid state theory; mechanical, transport, magnetic, and optical properties of the metals; semiconductors; and dielectrics.
Instructor(s): J. Khurgin
Area: Engineering.

EN.520.412. Machine Learning for Signal Processing. 3.00 Credits.
This course will focus on the use of machine learning theory and algorithms to model, classify and retrieve information from different kinds of real-world complex signals such as audio, speech, image and video.
Prerequisites: Student may earn credit for EN.520.612 or EN.520.412, but not both.;AS.110.201 AND EN.550.310 AND EN.520.435
Instructor(s): N. Dehak
Area: Engineering.

EN.520.414. Image Processing & Analysis. 3.00 Credits.
The course covers fundamental methods for the processing and analysis of images and describes standard and modern techniques for the understanding of images by humans and computers. Topics include elements of visual perception, sampling and quantization, image transforms, image enhancement, color image processing, image restoration, image segmentation, and multisolution image representation. Laboratory exercises demonstrate key aspects of the course.
Prerequisites: EN.520.214.;Students may earn credit for EN.520.614 or EN.520.414, but not both.
Instructor(s): J. Goutsias
Area: Engineering.

EN.520.416. Processing of Audio and Visual Signals. 3.00 Credits.
This course consists of two parts. The lecture component of this course is covered by attending EN.520.315. Concurrently, on the more advanced graduate level, there is an additional requirement of critical analysis of the material covered, and the hands-on homework complementing the lectures. Recommended Course Background: EN.520.214 (or EN.550.222) or consent of the instructor.
Instructor(s): H. Hermansky
Area: Engineering.

EN.520.419. Iterative Algorithms. 3.00 Credits.
An introduction to the study of the structure, behavior and design of iterative algorithms. Topics include problem formulations, algorithm description and classification, the deterministic iterative (DI) schema, doubling schema, cluster point sets, periodic points, DI schemas without stop rule, the monotonic DI schema, contractive and affine maps, bounded and Cauchy sequences, asymptotically regular sequences, monotonic sequences.
Prerequisites: AS.110.201 AND AS.110.202
Instructor(s): G. Meyer
Area: Engineering, Quantitative and Mathematical Sciences.
EN.520.424. FPGA Synthesis Lab. 3.00 Credits.
An advanced laboratory course in the application of FPGA technology to information processing, using VHDL synthesis methods for hardware development. The student will use commercial CAD software for VHDL simulation and synthesis, and implement their systems in programmable XILINX 20,000 gate FPGA devices. The lab will consist of a series of digital projects demonstrating VHDL design and synthesis methodology, building up to final projects at least the size of an 8-bit RISC computer. Projects will encompass such things as system clocking, flip-flop registers, state-machine control, and arithmetic. The students will learn VHDL methods as they proceed through the lab projects, and prior experience with VHDL is not a prerequisite.
Prerequisites: 520.142 and 520.345. Recommended Courses: 600.333 (Computer System Fundamentals) or 520.349 (Microprocessor Lab);
Students must have completed Lab Safety training prior to registering for this class.; Students may take EN.520.624 or EN.520.644, but not both.
Instructor(s): P. Pouliquen
Area: Engineering, Quantitative and Mathematical Sciences.

EN.520.425. FPGA Senior Projects Laboratory. 3.00 Credits.
Laboratory course for FPGA based senior projects. Students will work in teams to complete a design project that makes use of embedded FPGAs. The projects will make use of the Spartan2 XSA boards and other resources from the FPGA Synthesis lab course. Possible projects include: A 16 or 32 bit RISC processor with student designed ISA architecture, assembler, and mini operating system; or a Spartan2 emulation of an existing microprocessor such as an 8051, an optical communication system to transmit stereo music using various modulation schemes for comparison (This would include FM or AM and at least one digital scheme such as FSK); or a digital receiver for commercial AM or FM radio. Students are expected to complete a demonstration and produce a poster session final report. Senior status, no exceptions.
Prerequisites: Prereq: 520.424 and senior status,
Instructor(s): Staff
Area: Engineering.

EN.520.427. Product Design Lab. 3.00 Credits.
This project-based course is designed to help students learn how to turn their ideas into commercial products. In the first half of the course, emphasis will be placed on the product development process: student teams will gradually build up a complete contract book including a mission statement, competitive analysis, patent review, product specifications, system schematics, economic analysis, development schedule, etc. In the second half of the course, each team will be expected to implement its design and demonstrate a prototype of their product’s core functionality. At the end of the semester, a final written report will be submitted in the form of a utility patent. Students are encouraged to take this course in conjunction with Electronic Design Lab (ECE 520.448) in the Spring semester and leverage the groundwork developed here to enable production of a fully functional and marketable prototype by the end of the academic year.
Instructor(s): P. Pouliquen
Area: Engineering.

EN.520.432. Medical Imaging Systems. 3.00 Credits.
An introduction to the physics, instrumentation, and signal processing methods used in general radiography, X-ray computed tomography, ultrasound imaging, magnetic resonance imaging, and nuclear medicine. The primary focus is on the methods required to reconstruct images within each modality, with emphasis on the resolution, contrast, and signal-to-noise ratio of the resulting images. Co-listed as EN.580.472
Prerequisites: Student may earn credit for EN.520.632 or EN.520.432, but not both.; EN.580.222 OR EN.520.214
Instructor(s): J. Prince
Area: Engineering.

EN.520.433. Medical Image Analysis. 3.00 Credits.
This course covers the principles and algorithms used in the processing and analysis of medical images. Topics include, interpolation, registration, enhancement, feature extraction, classification, segmentation, quantification, shape analysis, motion estimation, and visualization. Analysis of both anatomical and functional images will be studied and images from the most common medical imaging modalities will be used. Projects and assignments will provide students experience working with actual medical imaging data.
Prerequisites: EN.520.432 OR EN.580.472 OR EN.550.310 OR EN.550.311
Instructor(s): J. Prince
Area: Engineering.

EN.520.434. Modern Biomedical Imaging Instrumentation and Techniques. 3.00 Credits.
An intermediate biomedical imaging course covering modern biomedical imaging instrumentation and techniques as applied to diagnostic radiology and other biomedical applications. It includes recent advances in various biomedical imaging modalities, multi-modality imaging and molecular imaging. The course is team taught by experts in the respective fields and provides a broad based knowledge of modern biomedical imaging to prepare students for graduate studies and research in biomedical imaging. Also, the course will offer tours and practical experience with modern biomedical imaging equipments in clinical and research settings. Co-listed with EN.580.473
Prerequisites: EN.520.432 OR EN.580.472
Instructor(s): B. Tsui

EN.520.435. Digital Signal Processing. 3.00 Credits.
Methods for processing discrete-time signals. Topics include signal and system representations, z- transforms, sampling, discrete Fourier transforms, fast Fourier transforms, digital filters.
Prerequisites: EN.520.214.; Students may receive credit for EN.520.435 or EN.520.635, but not both.
Instructor(s): H. Weinert
Area: Engineering.

EN.520.445. Audio Signal Processing. 3.00 Credits.
This course gives a foundation in current audio and speech technologies, and covers techniques for sound processing by processing and pattern recognition, acoustics, auditory perception, speech production and synthesis, speech estimation. The course will explore applications of speech and audio processing in human computer interfaces such as speech recognition, speaker identification, coding schemes (e.g. MP3), music analysis, noise reduction. Students should have knowledge of Fourier analysis and signal processing.
Prerequisites: Students make take EN.520.445 or EN.520.645, but not both.
Instructor(s): M. Elhilali
Area: Engineering.
EN.520.447. Information Theory. 3.00 Credits.
This course will address some basic scientific questions about systems that store or communicate information. Mathematical models will be developed for (1) the process of error-free data compression leading to the notion of entropy, (2) data (e.g. image) compression with slightly degraded reproduction leading to rate-distortion theory and (3) error-free communication of information over noisy channels leading to the notion of channel capacity. It will be shown how these quantitative measures of information have fundamental connections with statistical physics (thermodynamics), computer science (string complexity), economics (optimal portfolios), probability theory (large deviations), and statistics (Fisher information, hypothesis testing).
Instructor(s): S. Khudanpur
Area: Engineering, Quantitative and Mathematical Sciences.

EN.520.448. Electronics Design Lab. 3.00 Credits.
An advanced laboratory course in which teams of students design, build, test and document application specific information processing microsystems. Semester long projects range from sensors/actuators, mixed signal electronics, embedded microcomputers, algorithms and robotics systems design. Demonstration and documentation of projects are important aspects of the evaluation process. Recommended:
EN.600.333, EN.600.334, EN.520.349, EN.520.372, EN.520.490 or EN.520.491.
Prerequisites: EN.520.345 or equivalent
Recommended: 600.333, 600.334, 520.216, 520.349, 520.372, 520.490 or 520.491.
Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): P. Julian; R. Etienne Cummings.

EN.520.450. Advanced Micro-Processor Lab. 3.00 Credits.
This course covers the usage of common microcontroller peripherals. Interrupt handling, timer operations, serial communication, digital to analog and analog to digital conversions, and flash ROM programming are done on the 68HC08, 8051, and eZ8 microcontrollers. Upon completion, students can use these flash-based chips as elements in other project courses. Recommended Course Background: EN.520.349.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): R. Glaser.

EN.520.452. Advanced ECE Engineering Team Project. 3.00 Credits.
This course introduces the student to running an ECE engineering team project. The student will participate in the team project as a leading member and is expected to manage both the team members and the different aspects of the project over several semesters. Permission of the instructor is required for new team members. (Junior and Seniors)
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): A. Andreou; C. Rizk; J. Kang; J. West
Area: Engineering.

EN.520.453. Advanced ECE Engineering Team Project. 3.00 Credits.
The course introduces the student to running an engineering team project. The student will participate in the ECE engineering team project as a leading member. The student is expected to participate in the different aspects of the project over several semesters and manage both team members and the project. (Juniors and Seniors) Permission of instructor is required.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): C. Rizk; J. Kang; J. West
Area: Engineering.

EN.520.454. Control Systems Design. 3.00 Credits.
Classical and modern control systems design methods. Topics include formulation of design specifications, classical design of compensators, state variable and observer based feedback. Computers are used extensively for design, and laboratory experiments are included.
Prerequisites: Students may earn credit for EN.520.654 or EN.520.454, but not both.
Instructor(s): P. Iglesias
Area: Engineering.

EN.520.457. Basics of Wave and Quantum Mechanics. 3.00 Credits.
Basic principles of quantum mechanics for engineers. Topics include the quantum theory of simple systems, in particular atoms and engineered quantum wells, the interaction of radiation and atomic systems, and examples of application of the quantum theory to lasers and solid-state devices. Recommended Course Background: AS.171.101-AS.171.102 and EN.520.219-EN.520.220
Instructor(s): A. Kaplan
Area: Engineering.

EN.520.459. Quantum Mechanics for Engineering. 3.00 Credits.
This course will describe some of the basic ideas in and early development of quantum mechanics. This course is intended for students without any previous background in this subject. A description of some of the fundamental ideas in Quantum Mechanics will be offered from a practical point of view and from a perspective that should be useful to engineers who want to understand how these concepts manifest in materials and devices. Topics include the Schrodinger Wave Equation and the concept of a wave function, quantization in atoms and engineered semiconductor heterostructures, the interaction of radiation and atomic systems, and examples of the application of quantum theory in lasers and electronic solid-state devices. Recommended background for this course includes freshmen-year physics (including fundamentals of electricity and magnetism) and sophomore-year mathematics (including partial derivatives, basic differential equations, and fundamentals of linear algebra).
Instructor(s): T. Schlesinger
Area: Engineering, Quantitative and Mathematical Sciences.

EN.520.465. Digital Communications I. 3.00 Credits.
This course introduces the basic tools and topics of modern digital communication beginning with the mathematical representation and spectral properties of random signals and a basic introduction to the detection of real and complex signals in the presence of noise. Memoryless modulation and demodulation schemes are thoroughly studied for the Gaussian channel, and measures of performance are developed. Topics in wireless communication will be introduced. Recommended Course Background: EN.520.401, EN.550.310 or EN.550.420
Instructor(s): F. Davidson
Area: Engineering, Quantitative and Mathematical Sciences.
EN.520.473. Magnetic Resonance in Medicine. 3.00 Credits.
This course provides a wide-ranging introduction to the physics and principles of magnetic resonance imaging (MRI). Topics include the resonance phenomenon, relaxation, signal formation, spatial localization, image contrast, hardware, signal processing, and image reconstruction. MATLAB simulation exercises will demonstrate key aspects of MRI and a laboratory component using the clinical MRI systems at the School of Medicine will reinforce concepts learned in class. Textbook: Principles of Magnetic Resonance Imaging by D. Nishimura (from www.lulu.com) should be obtained before the start of the course. Recommended Course Background: EN.520.434 or EN.580.473) or (EN.520.432 or EN.580.472).
Co-listed with EN.580.476 and EN.580.673.
Instructor(s): J. Khurgin
Area: Engineering, Natural Sciences.

EN.520.482. Introduction to Lasers. 3.00 Credits.
This course covers the basic principles of laser oscillation. Specific topics include propagation of rays and Gaussian beams in lens-like media, optical resonators, spontaneous and stimulated emission, interaction of optical radiation and atomic systems, conditions for laser oscillation, homogeneous and inhomogeneous broadening, gas lasers, solid state lasers, Q-switching and mode locking of lasers.
Prerequisites: EN.520.219 AND EN.520.220
Instructor(s): J. Khurgin
Area: Engineering, Natural Sciences.

EN.520.483. Bio-Photonics Laboratory. 3.00 Credits.
This laboratory course involves designing a set of basic optical experiments to characterize and understand the optical properties of biological materials. The course is designed to introduce students to the basic optical techniques used in medicine, biology, chemistry and material sciences.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): J. Kang; S. Ramesh.

EN.520.485. Advanced Semiconductor Devices. 3.00 Credits.
This course is designed to develop and enhance the understanding of the operating principles and performance characteristics of the modern semiconductor devices used in high speed optical communications, optical storage and information display. The emphasis is on device physics and fabrication technology. The devices include heterojunction bipolar transistors, high mobility FET’s, semiconductor lasers, laser amplifiers, light-emitting diodes, detectors, solar cells and others.
Instructor(s): J. Khurgin
Area: Engineering, Natural Sciences.

EN.520.486. Physics of Semiconductor Electronic Devices. 3.00 Credits.
The course is designed to develop and enhance the understanding of the physical principles of modern semiconductor electronic and opto-electronic devices. The course starts with the basics of band structure of solid with emphasis on group IV and III-V semiconductors as well as two dimensional semiconductors like graphene. It continues with the statistics of carriers in semiconductors and continues to electronic transport properties, followed by optical properties. The course goes on to investigate the properties of two dimensional electronic gas. The second part of the course describes operational principles of bipolar and unipolar transistors, light emitting diodes, photodetectors, and quantum devices.
Prerequisites: Students may earn credit for EN.520.486 or EN.520.686, but not both.
Instructor(s): J. Khurgin.

EN.520.491. CAD Design of Digital VLSI Systems I (Juniors/Seniors). 3.00 Credits.
Juniors and Seniors Only.
Prerequisites: Student may take EN.520.491 or EN.520.691, but not both.
Instructor(s): R. Etienne Cummings
Area: Engineering.

EN.520.492. Mixed-Mode VLSI Systems. 3.00 Credits.
This laboratory course is an introduction to the principles of microfabrication for microelectronics, sensors, MEMS, and other synthetic microsystems that have applications in medicine and biology. Course comprises of laboratory work and accompanying lectures that cover silicon oxidation, aluminum evaporation, photoresist deposition, photolithography, plating, etching, packaging, design and analysis CAD tools, and foundry services. Seniors only or Perm. Req’d. Co-listed as EN.580.495 & EN.530.495
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): A. Andreou; J. Wang
Area: Engineering, Natural Sciences.

EN.520.498. Senior Design Project. 3.00 Credits.
Capstone design project, in which a team of students engineers a system and evaluates its performance in meeting design criteria and specifications. Example application areas are micro-electronic information processing, image processing, speech recognition, control, communications, and biomedical instrumentation. The design needs to demonstrate creative thinking and experimental skills, and needs to draw upon knowledge in basic sciences, mathematics, and engineering sciences. Interdisciplinary participation, such as by biomedical engineering, mechanical engineering, and computer science majors, is strongly encouraged. Instructor permission required.
Instructor(s): Staff
Area: Engineering.

EN.520.499. Senior Design Project. 3.00 Credits.
Capstone design project, in which a team of students engineer a system and evaluate its performance in meeting design criteria and specifications. Example application areas are microelectronic information processing, image processing, speech recognition, control, communications and biomedical instrumentation. The design needs to demonstrate creative thinking and experimental skills, and needs to draw upon knowledge in basic sciences, mathematics and engineering sciences. Interdisciplinary participation, such as by biomedical engineering, mechanical engineering and computer science majors, is strongly encouraged.
Instructor(s): Staff
Area: Engineering.
EN.520.501. Independent Study-Freshmen-Sophomores. 3.00 Credits. Individual, guided study under the direction of a faculty member in the department. The program of study or research, including the credit to be assigned, must be worked out in advance between the student and the faculty member involved. May be taken either term by freshmen or sophomores. Instructor permission required. Instructor(s): A. Andreou, F. Davidson; J. Kang; J. Prince.

EN.520.502. Indep Study - Fresh/Soph. 0.00 - 3.00 Credits. Individual, guided study under the direction of a faculty member in the department. The program of study or research, including the credit to be assigned, must be worked out in advance between the student and the faculty member involved. Instructor(s): A. Andreou.

EN.520.503. Independent Study-Juniors-Seniors. 3.00 Credits. Individual, guided study under the direction of a faculty member in the department. The program of study or research, including the credit to be assigned, must be worked out in advance between the student and the faculty member involved. May be taken either term by juniors or seniors. Instructor permission required. Instructor(s): Staff.

EN.520.504. Independent Study - Juniors/Seniors. 0.00 - 3.00 Credits. Individual study, including participation in research, under the guidance of a faculty member in the department. The program of study or research, time required, and credit assigned must be worked out in advance between the student and the faculty member involved. May be taken either term by juniors or seniors. Instructor(s): Staff.

EN.520.506. ECE Undergraduate Research. 1.00 - 3.00 Credits. Independent research under the direction of a faculty member in the department. The program of study or research, including the credit to be assigned, must be worked out in advance between the student and the faculty member involved. Instructor(s): N. Dehak; P. Iglesias.

EN.520.516. ECE Group Undergraduate Research. 1.00 - 3.00 Credits. Independent research under the direction of a faculty member in the department. The program of research, including the credit to be assigned, must be worked out in advance between the student and the faculty member involved. This section has a weekly research group meeting that students are expected to attend. Instructor(s): G. Meyer; J. Kang; M. Foster; S. Thon.

EN.520.545. Research. 1.00 - 3.00 Credits. Instructor Approval Required. Independent study or research over the summer under the direction of a faculty member in the department. The program of research, including the credit to be assigned, must be worked out in advance between the student and the faculty member involved. Instructor(s): D. Tarraf.

EN.520.548. Independent Research. 0.00 - 3.00 Credits. Instructor(s): J. West, P. Iglesias; S. Thon.

EN.520.550. Electrical Engineering - Internship. 0.00 - 3.00 Credits. Instructor(s): J. Kang; T. Tran.

EN.520.595. Independent Study. 3.00 Credits. Instructor(s): A. Andreou; J. Kang; J. West; R. Etienne Cummings; T. Tran.

EN.520.597. Research-Summer. 3.00 Credits. Instructor(s): Staff.

EN.520.599. Internship-Summer. 1.00 Credit. Instructor(s): F. Davidson; G. Meyer; J. Kang; M. Miller.

EN.520.600. Electrical & Computer Engineering Seminar. 1.00 Credit. Seminar for Electrical & Computer Engineering; required of all doctoral students who have not passed the qualifying exam. Repeatable course. Instructor(s): P. Iglesias Area: Engineering, Natural Sciences.

EN.520.601. Introduction to Linear Systems Theory. 3.00 Credits. A beginning graduate course in multi-input multi-output, linear, time-invariant systems. Topics include state-space and input-output representations; solutions and their properties; multivariable poles and zeros; reachability, observability and minimal realizations; stability; system norms and their computation; linearization techniques. Recommended Course Background: Undergraduate courses in control systems and linear algebra. Instructor(s): P. Iglesias.

EN.520.603. Introduction to Optical Instruments. 3.00 Credits. This course is intended to serve as an introduction to optics and optical instruments that are used in engineering, physical, and life sciences. The course covers first basics of ray optics with the laws of refraction and reflection and goes on to description of lenses, microscopes, telescopes, and imaging devices. Following that basics of wave optics are covered, including Maxwell equations, diffraction and interference. Operational principles and performance of various spectrometric and interferometric devices are covered including both basics (monochromatic, Fabry-Perot and Michelson interferometers), and advanced techniques of near field imaging, laser spectroscopy, Fourier domain spectroscopy, laser Radars and others. Prerequisites: Students may take EN.520.403 or EN.520.603, but not both. Instructor(s): J. Khurgin Area: Engineering.

EN.520.611. Ultrafast Optical Phenomena. 3.00 Credits. This course will give and introduction to the field of ultrafast phenomena which studies processes in nature and engineering occurring on the shortest of time scales. Topics will include the complex representation of ultrafast optical signals, nonlinear optics, pulse propagation effects resulting from dispersion and nonlinearity, the fundamentals of ultrafast sources including mode locking and amplification, ultrafast measurement techniques, and the wide range of cutting-edge applications of ultrafast sources. Instructor(s): M. Foster Area: Engineering, Natural Sciences.

EN.520.612. Machine Learning for Signal Processing. 3.00 Credits. This course will focus on the use of machine learning theory and algorithms to model, classify and retrieve information from different kinds of real world complex signals such as audio, speech, image and video. Recommended Course Background: AS.110.201, EN.550.310, and EN.520.435. Prerequisites: Students may earn credit for EN.520.412 or EN.520.612, but not both. Instructor(s): N. Dehak Area: Engineering.
EN.520.613. Advanced Topics in Optical Medical Imaging. 3.00 Credits.
The course will review the recent advances in photonics technologies for medical imaging and sensing. The course is designed for graduate students with a background in optics and engineering. The main topics for the course are: Light Source and Devices for Biomedical Imaging; Fluorescence, Raman, Rayleigh Scatterings; Optical Endoscopy and Virtual biopsy; Novel imaging contrast dyes, nanoparticles, and optical clearing reagents; Label-free optical technologies in clinical applications; Neurophotonics and Optogenetics.
Instructor(s): J. Kang.

EN.520.614. Image Processing & Analysis. 3.00 Credits.
The course covers fundamental methods for the processing and analysis of images and describes standard and modern techniques for the understanding of images by humans and computers. Topics include elements of visual perception, sampling and quantization, image transforms, image enhancement, color image processing, image restoration, image segmentation, and multiresolution image representation. Laboratory exercises demonstrate key aspects of the course.
Prerequisites: Students may earn credit for EN.520.614 or EN.520.414, but not both.
Instructor(s): J. Goutsias
Area: Engineering.

EN.520.615. Image Processing & Analysis II. 3.00 Credits.
The course covers fundamental methods for the processing and analysis of images and describes standard and modern techniques for the understanding of images by humans and computers. Topics include elements of visual perception, sampling and quantization, image transforms, image enhancement, color image processing, image restoration, image segmentation, and multiresolution image representation. Laboratory exercises demonstrate key aspects of the course. Grad students only.
Prerequisites: Students may earn credit for EN.520.615 or EN.520.415, but not both.
EN.520.414 OR EN.520.614
Instructor(s): J. Goutsias
Area: Engineering.

EN.520.618. Hybrid Systems. 2.00 Credits.
This graduate level seminar style class focuses on the emerging field of hybrid systems. Topics covered include mathematical models of hybrid systems, analysis and controller synthesis techniques, and model complexity reduction.
Instructor(s): D. Tarraf
Area: Engineering.

EN.520.620. Selected Topics in Theory of Iterative Algorithms. 3.00 Credits.
This course covers information on the non-deterministic schema and cyclic iterative schemas, Jacobians, Hessians and Mean Value Theorems, spectral norm, convex sets and positive definite majs.
Instructor(s): G. Meyer.

EN.520.621. Introduction To Nonlinear Systems. 3.00 Credits.
Instructor(s): P. Iglesias
Area: Engineering, Natural Sciences.

EN.520.622. Principles of Complex Networked Systems. 3.00 Credits.
By employing fundamental concepts from diverse areas of research, such as statistics, signal processing, biophysics, biochemistry, cell biology, and epidemiology, this course introduces a multidisciplinary and rigorous approach to the modeling and computational analysis of complex interaction networks. Topics to be covered include: overview of complex nonlinear interaction networks and their applications, graph-theoretic representations of network topology and stoichiometry, stochastic modeling of dynamic processes on complex networks and master equations, Langevin, Poisson, Fokker-Plank, and moment closure approximations, exact and approximate Monte Carlo simulation techniques, time-scale separation approaches, deterministic and stochastic sensitivity analysis techniques, network thermodynamics, and reverse engineering approaches for inferring network models from data.
Instructor(s): J. Goutsias.

EN.520.623. Medical Imaging Analysis. 3.00 Credits.
Graduate version of 520.433. This course covers the principles and algorithms used in the processing and analysis of medical images. Topics include, interpolation, registration, enhancement, feature extraction, classification, segmentation, quantification, shape analysis, motion estimation, and visualization. Analysis of both anatomical and functional images will be studied and images from the most common medical imaging modalities will be used. Projects and assignments will provide students experience working with actual medical imaging data.
Prerequisites: EN.520.432 OR EN.580.472 AND EN.550.310 OR EN.550.311
Instructor(s): J. Prince.

EN.520.624. Integrated Photonics. 3.00 Credits.
This course gives an introduction to integrated photonics. Topics include: material platforms, fabrication approaches, devices and device operation, numerical modeling, nonlinear processes, and applications. Devices discussed include waveguides, resonators, sensors, modulators, detectors, lasers and amplifiers. Recommended Course Background: EN.520.219-EN.520.220, EN.520.495, or equivalent.
Instructor(s): A. Foster
Area: Engineering, Natural Sciences.

EN.520.625. Photovoltaics and Energy Devices. 3.00 Credits.
This course provides an introduction to the science of photovoltaics and related energy devices. Topics covered include basic concepts in semiconductor device operation and carrier statistics; recombination mechanisms; p-n junctions; silicon, thin film, and third generation photovoltaic technologies; light trapping; and detailed balance limits of efficiency. Additionally, thermophotovoltaics and electrical energy storage technologies are introduced. A background in semiconductor device physics (EN.520.485, or similar) is recommended.
Instructor(s): S. Thon.
EN.520.629. Networked Dynamical Systems. 3.00 Credits.
Networks and dynamics are pervasive in our world today. Power systems, the Internet, social networks, and biological systems are only a few of the numerous scenarios in which objects or individuals can affect and be affected by other members of a large group. This course examines modeling, analysis and design of networked dynamical systems - i.e., dynamic entities interconnected by a network - as well as various applications of such systems in science and engineering. Topics covered include (algebraic) graph theory, basic models of networked dynamical systems, continuous-time and discrete-time distributed averaging (consensus), coordination algorithms (rendezvous, formation, flocking, and deployment), and distributed algorithm computation and optimization over networks. Some of the motivating applications that will be analyzed are robotic coordination, coupled oscillators, social networks, web PageRank, sensor networks, power grids, and epidemics. Recommended Course Background: Linear Algebra (AS.110.201), Control Systems (EN.520.353), or equivalents, basic Matlab skills, and sufficient mathematical maturity.
Instructor(s): E. Mallada Garcia.

EN.520.631. Ultrasound and Photoacoustic Beamforming. 3.00 Credits.
This course will discuss basic principles of ultrasound and photoacoustic imaging and provide an in-depth analysis of the beamforming process required to convert received electronic signals into a usable image. We will cover basic beamforming theory and apply it to real clinical and preclinical data. The course will culminate with student projects to design and implement a new beamformer derived from the principles taught in class.
Instructor(s): M. Bell.

EN.520.632. Medical Imaging Systems. 3.00 Credits.
An introduction to the physics, instrumentation, and signal processing methods used in general radiography, X-ray computed tomography, ultrasound imaging, magnetic resonance imaging, and nuclear medicine. The primary focus is on the methods required to reconstruct images within each modality, with emphasis on the resolution, contrast, and signal-to-noise ratio of the resulting images.
Prerequisites: Student may earn credit for EN.520.632 or EN.520.432, but not both.
Instructor(s): J. Prince
Area: Engineering.

EN.520.633. Intro To Robust Control. 3.00 Credits.
The subject of this course is robust analysis and control of multivariable systems. Topics include system analysis (small gain arguments, integral quadratic constraints); parametrization of stabilizing controllers; $H_{\infty}$ optimization based robust control design; and LTI model order reduction (balanced truncation, Hankel reduction). Recommended Course Background: EN.520.601 or EN.530.616 or EN.580.616
Instructor(s): Staff
Area: Engineering.

EN.520.635. Digital Signal Processing. 3.00 Credits.
Methods for processing discrete-time signals. Topics include signal and system representations, $z$-transforms, sampling, discrete Fourier transforms, fast Fourier transforms, digital filters.
Prerequisites: Students may earn credit for EN.520.635 or EN.520.435, but not both.
Instructor(s): H. Weinert
Area: Engineering.

EN.520.636. Feedback Control in Biological Signaling Pathways. 3.00 Credits.
This course considers examples of the use of feedback control in engineering systems and looks for counterparts in biological signaling networks. To do this will require some knowledge of mathematical modeling techniques in biology, so a part of the course will be devoted to this.
Instructor(s): P. Iglesias.

EN.520.644. FPGA Synthesis Lab. 3.00 Credits.
An advanced laboratory course in the application of FPGA technology to information processing, using VHDL synthesis methods for hardware development. The student will use commercial CAD software for VHDL simulation and synthesis, and implement their systems in programmable XILINX 20,000 gate FPGA devices. The lab will consist of a series of digital projects demonstrating VHDL design and synthesis methodology, building up to final projects at least the size of an 8-bit RISC computer. Projects will encompass such things as system clocking, flip-flop registers, state-machine control, and arithmetic. The students will learn VHDL methods as they proceed through the lab projects, and prior experience with VHDL is not a prerequisite.
Prerequisites: Students may take EN.520.424 or EN.520.644, but not both.
Instructor(s): P. Pouliquen
Area: Engineering, Quantitative and Mathematical Sciences.

EN.520.645. Audio Signal Processing. 3.00 Credits.
This course gives a foundation in current audio and speech technologies, and covers techniques for sound processing by processing and pattern recognition, acoustics, auditory perception, speech production and synthesis, speech estimation. The course will explore applications of speech and audio processing in human computer interfaces such as speech recognition, speaker identification, coding schemes (e.g. MP3), music analysis, noise reduction. Students should have knowledge of Fourier analysis and signal processing.
Prerequisites: Students make take EN.520.445 or EN.520.645, but not both.
Instructor(s): M. Elhilali
Area: Engineering.

EN.520.646. Wavelets & Filter Banks. 3.00 Credits.
This course serves as an introduction to wavelets, filter banks, multirate signal processing, and time-frequency analysis. Topics include wavelet signal decompositions, bases and frames, QMF filter banks, design methods, fast implementations, and applications. Recommended Course Background: EN.520.435, AS.110.201, C/C++ and Matlab programming experience.
Instructor(s): T. Tran.

EN.520.648. Compressed Sensing and Sparse Recovery. 3.00 Credits.
Sparsity has become a very important concept in recent years in applied mathematics, especially in mathematical signal and image processing, as in inverse problems. The key idea is that many classes of natural signals can be described by only a small number of significant degrees of freedom. This course offers a complete coverage of the recently emerged field of compressed sensing, which asserts that, if the true signal is sparse to begin with, accurate, robust, and even perfect signal recovery can be achieved from just a few randomized measurements. The focus is on describing the novel ideas that have emerged in sparse recovery with emphasis on theoretical foundations, practical numerical algorithms, and various related signal processing applications. Recommended Course Background: Undergraduate linear algebra and probability.
Instructor(s): T. Tran.
EN.520.650. Control Systems Design. 3.00 Credits.
Classical and modern control systems design methods. Topics include formulation of design specifications, classical design of compensators, state variable and observer based feedback. Computers are used extensively for design, and laboratory experiments are included.
Prerequisites: Students may earn credit for EN.520.654 or EN.520.454, but not both.
Instructor(s): P. Iglesias
Area: Engineering.

EN.520.666. Information Extraction. 3.00 Credits.
Introduction to statistical methods of speech recognition (automatic transcription of speech) and understanding. The course is a natural continuation of EN.600.465 but is independent of it. Topics include elementary information theory, hidden Markov models, the Baum and Viterbi algorithms, efficient hypothesis search methods, statistical decision trees, the estimation-maximization (EM) algorithm, maximum entropy estimation and estimation of discrete probabilities from sparse data for acoustic and language modeling. Co-listed as EN.600.666.
Prerequisites: EN.550.310 AND EN.600.120 or equivalent, expertise in C or C++ programming.
Instructor(s): S. Khudanpur.

EN.520.673. Magnetic Resonance in Medicine. 3.00 Credits.
This course provides a wide-ranging introduction to the physics and principles of magnetic resonance imaging (MRI). Topics include the resonance phenomenon, relaxation, signal formation, spatial localization, image contrast, hardware, signal processing, and image reconstruction. MATLAB simulation exercises will demonstrate key aspects of MRI and a laboratory component using the clinical MRI systems at the School of Medicine will reinforce concepts learned in class. Textbook Principles of Magnetic Resonance Imaging by D. Nishimura (from www.lulu.com) should be obtained before the start of the course. Recommended Course Background: (EN.520.434 or EN.580.473) or (EN.520.432 or EN.580.472). Co-listed with EN.580.476 and EN.580.673.
Instructor(s): Staff.

EN.520.678. Biomedical Photonics. 3.00 Credits.
This course will cover the basic optics principles including geometric, beam and wave description of light. The course will also cover the basic generation and detection techniques of light and the principles of optical imaging and spectroscopy. After the basis is established, we will focus on some commonly employed optical techniques and tools for biomedical research including various optical microscopy technologies, fiber optics, Raman spectroscopy, Fluorescence (lifetime), FRAT, FRET and FCS. The recent development in tissue optics, biomedical optical imaging/spectroscopy techniques (such as OCT, multiphoton fluorescence and harmonics microscopy, Structured illumination, light scattering, diffuse light imaging and spectroscopy, optical molecular imaging, photo-acoustic imaging) will also be discussed. Representative biomedical applications of translational biomedical photonics technologies will be integrated into the corresponding chapters.
Instructor(s): X. Li
Area: Engineering.

EN.520.680. Speech and Auditory Processing by Humans and Machines. 3.00 Credits.
This graduate level seminar focuses on works that are relevant to building advanced systems for information extraction from auditory signals. It loosely compliments and expands on the lecture material from the graduate course EN.520.515. Participants will take turns in presenting and critically discussing selected topics, with an aim of using this knowledge in their research projects. When available, guest speakers may at times contribute or substitute for the presentation of the participants. Recommended Course Background: Completion or concurrent participation in EN.520.515 or consent of the instructor.
Instructor(s): H. Hermansky.

EN.520.682. Introduction to Lasers. 3.00 Credits.
This course covers the basic principles of laser oscillation. Specific topics include propagation of rays and Gaussian beams in lens-like media, optical resonators, spontaneous and stimulated emission, interaction of optical radiation and atomic systems, conditions for laser oscillation, homogeneous and inhomogeneous broadening, gas lasers, solid state lasers, Q-switching and mode locking of lasers. Recommended Course Background: EN.520.219 and EN.520.220
Instructor(s): J. Khurgin.

EN.520.683. Bio-Photonics Laboratory. 3.00 Credits.
This laboratory course involves designing a set of basic optical experiments to characterize and understand the optical properties of biological materials. The course is designed to introduce students to the basic optical techniques used in medicine, biology, chemistry and material sciences. Graduate version of EN.520.483
Instructor(s): J. Kang; S. Ramesh.
EN.520.686. Physics of Semiconductor Electronic Devices. 3.00 Credits.
The course is designed to develop and enhance the understanding of
the physical principles of modern semiconductor electronic and opto-
electronic devices. The course starts with the basics of band structure
of solid with emphasis on group IV and III-V semiconductors as well
as two dimensional semiconductors like graphene. It continues with
the statistics of carriers in semiconductors and continues to electronic
transport properties, followed by optical properties. The course goes
on to investigate the properties of two dimensional electronic gas. The
second part of the course describes operational principles of bipolar and
unipolar transistors, light emitting diodes, photodetectors, and quantum
devices.
Prerequisites: Students may earn credit for EN.520.486 or EN.520.686,
but not both.
Instructor(s): J. Khurgin
Area: Engineering.

EN.520.691. CAD Design of Digital VLSI Systems I (Grad). 3.00 Credits.
Graduate students only.
Prerequisites: Student may take EN.520.491 or EN.520.691, but not both.
Instructor(s): R. Etienne Cummings
Area: Engineering.

EN.520.692. Mixed-Mode VLSI Systems. 3.00 Credits.
Silicon models of information and signal processing functions,
with implementation in mixed analog and digital CMOS integrated
circuits. Aspects of structured design, scalability, parallelism, low
power consumption, and robustness to process variations. Topics
include digital-to-analog and analog-to-digital conversion, delta-sigma
modulation, bioinstrumentation, and adaptive neural computation.
The course includes a VLSI design project. Recommended Course
Background: EN.521.491 or equivalent.
Instructor(s): P. Pouliquen.

EN.520.701. Current Topics in Language and Speech Processing. 1.00
Credit.
This biweekly seminar will cover a broad range of current research topics
in human language technology, including automatic speech recognition,
natural language processing and machine translation. The Tuesday
seminars will feature distinguished invited speakers, while the Friday
seminars will be given by participating students. A minimum of 75%
attendance and active participation will be required to earn a passing
grade. Grading will be S/U.
Instructor(s): S. Khudanpur

EN.520.702. Current Topics in Language and Speech Processing. 1.00
Credit.
This biweekly seminar will cover a broad range of current research topics
in human language technology, including automatic speech recognition,
natural language processing and machine translation. The Tuesday
seminars will feature distinguished invited speakers, while the Friday
seminars will be given by participating students. A minimum of 75%
attendance and active participation will be required to earn a passing
grade. Cross-listed with Computer Science. Grading will be S/U.
Instructor(s): S. Khudanpur
Area: Engineering.

EN.520.735. Sensory Information Processing. 3.00 Credits.
Analysis of information processing in biological sensory organs
and in engineered microsystems using the mathematical tools of
communication theory. Natural or synthetic structures are modeled
as microscale communication networks implemented under physical
constraints, such as size and available energy resources and are studied
at two levels of abstraction. At the information processing level we
examine the functional specification, while at the implementation level
we examine the physical specification and realization. Both levels are
characterized by Shannon's channel capacity, as determined by the
channel bandwidth, the signal power, and the noise power. The link
between the information processing level and the implementation level
of abstraction is established through first principles and phenomenological
otherwise, models for transformations on the signal, constraints on the
system, and noise that degrades the signals.
Instructor(s): A. Andreou.

EN.520.738. Advanced Electronic Lab Design. 3.00 Credits.
This course is the graduate expansion of the EN.520.448 Electronic
Lab Design, which is an advanced laboratory course in which
teams of students design, build, test and document application
specific information processing microsystems. Semester long
projects range from sensors/actuators, mixed signal electronics,
embedded microcomputers, algorithms and robotics systems design.
Demonstration and documentation of projects are important aspects
of the evaluation process. For this graduate expansion, all projects
will be based on recently published research from IEEE Transactions.
The students will be required to fully research, analyze, implement
and demonstrate their chosen topic. The emphasis will be on VLSI
microsystems, although other topics will also be considered. Open to
graduate students only.
Instructor(s): P. Julian; R. Etienne Cummings.

EN.520.746. Seminar: Medical Image Analysis. 1.00 Credit.
This weekly seminar will focus on research issues in medical image
analysis, including image segmentation, registration, statistical modeling,
and applications. It will also include selected topics relating to medical
image acquisition, especially where they relate to analysis. The purpose
of the course is to provide the participants with a background in current
research in these areas, as well as to promote greater awareness and
interaction between multiple research groups within the University. The
format of the course is informal. It will meet weekly for approximately
1.5 hours. Students will read selected papers and will be assigned on a
rotating basis to lead the discussion. Co-listed as EN.600.746.
Instructor(s): J. Prince.

EN.520.771. Advanced Integrated Circuits. 1.00 Credit.
Instructor(s): A. Andreou.

EN.520.772. Advanced Integrated Circuits. 1.00 Credit.
Instructor(s): R. Etienne Cummings.

EN.520.773. Advanced Topics In Microsystem Fabrication. 1.00 Credit.
Graduate-level course on topics that relate to microsystem integration of
complex functional units across different physical scales from nano to
micro and macro. Topics will include emerging fabrication technologies,
micro-electromechanical systems, nanolithography, nanotechnology,
soft lithography, self-assembly, and soft materials. Discussion will also
include biological systems as models of microsystem integration and
functional complexity. Perm. Req’d.
Instructor(s): A. Andreou.
EN.520.800. Independent Study. 1.00 - 3.00 Credits.
Individual, guided study under the direction of a faculty member in the department. May be taken either term by graduate students. Instructor(s): Staff.

EN.520.801. Dissertation Research. 3.00 - 20.00 Credits.
EN.520.802. Dissertation Research. 3.00 - 20.00 Credits.
Instructor(s): Staff.

EN.520.809. Special Studies. 1.00 - 3.00 Credits.
Individual study in an area of mutual interest to a student and a faculty member in the department. Permission of Instructor required. Instructor(s): A. Andreou; F. Davidson; J. Khurgin; N. Thakor; T. Tran.

EN.520.890. Independent Study-Summer. 1.00 - 3.00 Credits.
Instructor(s): Staff.

Cross Listed Courses

General Engineering
EN.500.745. Seminar in Computational Sensing and Robotics. 1.00 Credit.
Seminar series in robotics. Topics include: Medical robotics, including computer-integrated surgical systems and image-guided intervention. Sensor based robotics, including computer vision and biomedical image analysis. Algorithmic robotics, robot control and machine learning. Autonomous robotics for monitoring, exploration and manipulation with applications in home, environmental (land, sea, space), and defense areas. Birobotics and neurorobics, including devices, algorithms and approaches to robotics inspired by principles in biomechanics and neuroscience. Human-machine systems, including haptic and visual feedback, human perception, cognition and decision making, and human-machine collaborative systems. Cross-listed Mechanical Engineering, Computer Science, Electrical and Computer Engineering, and Biomedical Engineering. Instructor(s): L. Whitcomb; N. Cowan; P. Kazanzides; R. Etienne Cummings; R. Vidal.

Materials Science Engineering
EN.510.314. Electronic Properties of Materials. 3.00 Credits.
Fourth of the Introduction to Materials Science series, this course is devoted to a study of the electronic, optical and magnetic properties of materials. Lecture topics include electrical and thermal conductivity, thermoelectricity, transport phenomena, dielectric effects, piezoelectricity, and magnetic phenomena. This course contains computational modules; some prior knowledge of computer programming is needed. Recommended Course Background: EN.510.202 (Computation and Programming for Materials Scientists and Engineers) or equivalent. Prerequisites: EN.510.311
Instructor(s): P. Searson
Area: Engineering, Natural Sciences.

EN.510.418. Electronic and Photonic Processes and Devices. 3.00 Credits.
This course is intended for advanced undergraduates and graduate students and will cover the fundamentals and properties of electronic and optical materials and devices. Subject matter will include a detailed and comprehensive discussion of the physical processes underlying modern electronic and optical devices. Detailed descriptions of modern semiconductor devices such as lasers and detectors used in optical communications and information storage and processing will be presented. Also listed as EN.510.618/EN.510.418.
Instructor(s): T. Poehler
Area: Engineering, Natural Sciences.

EN.510.611. Solid State Physics. 3.00 Credits.
An introduction to solid state physics for advanced undergraduates and graduate students in physical science and engineering. Topics include crystal structure of solids; band theory; thermal, optical, and electronic properties; transport and magnetic properties of metals, semiconductors, and insulators. The concepts of solid state principles in modern electronic, optical, and structural materials are discussed. Cross-listed with Electrical and Computer Engineering. Instructor(s): T. Poehler.

EN.510.612. Solid State Physics. 3.00 Credits.
Basic solid state physics principles applied to modern electronic, optical, and structural materials. Topics discussed will include magnetism, superconductivity, polymers, nano-structured materials, electronic effects, and surface physics. For advanced undergraduates and graduate students in physical science and engineering. Recommended Course Background: EN.510.611
Instructor(s): T. Poehler.

EN.510.618. Electronic and Photonic Processes and Devices. 3.00 Credits.
This course is intended for advanced undergraduates and graduate students and will cover the fundamentals and properties of electronic and optical materials and devices. Subject matter will include a detailed and comprehensive discussion of the physical processes underlying modern electronic and optical devices. Detailed descriptions of modern semiconductor devices such as lasers and detectors used in optical communications and information storage and processing will be presented. Also listed as EN.510.618/EN.510.418.
Instructor(s): T. Poehler.

Mechanical Engineering
EN.530.682. Haptic Applications. 4.00 Credits.
An introduction to the required theoretical and practical background in the design and development of haptic applications. Haptic technology enables users to touch and/or manipulate virtual or remote objects in simulated environments or tele-operation systems. This course aims to cover the basics of haptics through lectures, lab assignments, a term project, and readings on current topics in haptics. Through lab assignments, students learn to create haptic-enabled virtual environments using software development toolkits and a haptic device. Students will be required to complete a project with approval of the instructor. Recommended course background: ME, CS, and ECE graduate and senior undergraduate students who are being enthusiastic to learn about haptics and knowledgeable in basic C++ programming. Students with experience with other programming languages (Python, Java, etc.) should be able to self-tutor themselves to complete lab assignments. Instructor(s): M. Zadeh.

Biomedical Engineering
EN.580.472. Medical Imaging Systems. 3.00 Credits.
An introduction to the physics, instrumentation, and signal processing methods used in general radiography, X-ray computed tomography, ultrasound imaging, magnetic resonance imaging, and nuclear medicine. The primary focus is on the methods required to reconstruct images within each modality, with emphasis on the resolution, contrast, and signal-to-noise ratio of the resulting images. Cross-listed with Neuroscience and Electrical and Computer Engineering (EN.520.432).
Prerequisites: EN.580.222 OR EN.520.214
Instructor(s): J. Prince
Area: Engineering.
EN.580.483. Nuclear Medicine Imaging. 3.00 Credits.
This course provides an intermediate-level introduction to the instrumentation, image processing and reconstruction methods used in planar nuclear medicine imaging, single-photon emission computed tomography (SPECT) and positron emission tomography (PET). Topics include radioactive decay, nuclear medicine instrumentation including radiation detectors and associated electronics, analytic and statistical iterative tomographic reconstruction, imaging physics, and image quality in the context of these three modalities. This course will be taught at the School of Medicine Campus. Recommended Course Background: EN.520.432/EN.580.472 and EN.520.434/EN.580.473
Instructor(s): A. Rahmim; B. Tsui; E. Frey; Y. Du
Area: Engineering.

Computer Science
EN.600.479. Representation Learning. 3.00 Credits.
Often the success of a machine learning project depends on the choice of features used. Machine learning has made great progress in training classification, regression and recognition systems when good representations, or features, of input data are available. However, much human effort is spent on designing good features which are usually knowledge-based and engineered by domain experts over years of trial and error. A natural question to ask then is Can we automate the learning of useful features from raw data? Representation learning algorithms such as principal component analysis aim at discovering better representations of inputs by learning transformations of data that disentangle factors of variation in data while retaining most of the information. The success of such data-driven approaches to feature learning depends not only on how much data we can process but also on how well the features that we learn correlate with the underlying unknown labels (semantic content in the data). This course will focus on scalable machine learning approaches for learning representations from large amounts of unlabeled, multi-modal, and heterogeneous data. We will cover topics including deep learning, multi-view learning, dimensionality reduction, similarity-based learning, and spectral learning. Students may receive credit for 600.479 or 600.679 but not both. [Analysis or Applications] Required course background: machine learning or basic probability and linear algebra.
Prerequisites: If you have completed EN.600.679 you may not enroll in EN.600.479.
Instructor(s): R. Arora
Area: Engineering.

EN.600.679. Representation Learning. 3.00 Credits.
Graduate level version of 600.479. Students may receive credit for 600.479 or 600.679 but not both. [Analysis or Applications] Required course background: machine learning or basic probability and linear algebra. Co-listed with EN.600.479
Prerequisites: If you have completed EN.600.479 you may not enroll in EN.600.679.
Instructor(s): R. Arora.

General Engineering

The General Engineering program offers both a B.A. with a major in general engineering and a number of non-departmental courses.

Bachelor of Arts in General Engineering

The Bachelor of Arts in General Engineering is a liberal arts degree that is designed to provide students with both a focus in some area of humanities or social sciences and the fundamental engineering principles needed to understand modern technology, innovations, and engineering practices. It is intended for undergraduate students who desire a background in engineering and technology yet have neither the desire nor the intention to become professional engineers. These students may, for example, plan to pursue graduate or professional study in architecture, business, law (e.g., intellectual property, patent law), or medicine. They may wish to work in areas which relate to engineering and technology or to thrive in the global industrial economy. The Bachelor of Arts in General Engineering is a true liberal arts degree with an emphasis in engineering.

This degree is not an engineering degree, and is not suitable for employment as a professional engineer. This program is not accredited by the Accreditation Board for Engineering and Technology. Students desiring careers as professional engineers should complete a B.S. degree in one of the engineering disciplines offered by the Whiting School.

The distinctive features of the Bachelor of Arts in General Engineering include:

- **Breadth.** Course requirements for the Bachelor of Arts in General Engineering encourage breadth, including mathematics, natural sciences, humanities and/or social sciences, international studies (language or other courses and experience in a foreign country), and in engineering. The curriculum also allows for many free electives.

- **Flexibility.** This program is designed to allow students, in consultation with their advisor, the flexibility to choose a program of study that matches their interests. The engineering focus area and the humanities and social science requirements may be departmentally based or may follow a theme designed by the student and his/her advisor. Students are encouraged to minor in any area of their choosing.

- **Interdisciplinary Study.** The distribution requirements are ideal for students who seek to understand areas at the interface between technical fields (such as robotics, nanotechnology, and biomaterials) or the connections between a technical area and a discipline in the humanities or social sciences (for example environment issues and international trade or ethics and biotechnology).

- **International Dimensions of Engineering.** Students are required to develop knowledge of the international dimensions of engineering. They may do this by studying abroad or by taking a combination of language and other classes that develop an understanding of the culture, technology, or society in a foreign country.

**Requirements for the B.A. Degree**

All undergraduate students majoring in the Bachelor of Arts in General Engineering must follow a program approved by their advisor. Candidates must fulfill the overall requirements for the bachelor’s degree (p. 10) described in this catalog. These include the university writing requirement, distribution requirement and 120 credit minimum. Sample curricula and details on concentrations can be found in the Advising Manual for general engineering (www.engineering.jhu.edu/academics).

</tbody>
</table>

Two terms of laboratory course (Integrated lab from AS.030.107 may count as 1 lab) 2
Two elective courses (area code N) 4
Total Credits 15

Humanities and Social Sciences (24 credits)

Writing Requirement. Students must complete at least four (minimum of 12 credits) writing intensive courses (catalog code W) and one of these courses must specifically develop writing skills, such as EN.661.110 Professional Writing and Communication or AS.060.113 Expository Writing.

Humanities or Social Science Focus. A minimum of four courses (12 credits) must be taken as a coherent group in either the humanities or social sciences, of which two are at the advanced (300+) level.

Humanities or Social Science Elective. Three additional courses (9 credits) in either the humanities or social sciences. These electives are typically used to take courses in economics and the history of science and technology, depending on the courses chosen to fulfill the concentration requirements detailed above.

International Dimensions of Engineering
Because of the importance of the globalization of technology, all students completing the B.A. in general engineering are required to demonstrate competence in being able to address technical issues within the context of another society. This can be done in one of three different ways.

First, students are encouraged to study abroad for a minimum of one fall or one spring semester in any foreign country (except Canada). In that country, they must take the equivalent of a minimum of 12 credits which are transferred to their Hopkins transcript. In this case, these credits can satisfy any degree requirements (Humanities or Social Sciences, Engineering Concentration, Mathematics, Free Electives, etc.).

Second, students may complete the equivalent of two semesters of the same foreign language (students may not use language courses in their native language to satisfy this requirement) and one additional course which relates to the culture, economy, social structure, or politics of a country to which uses this foreign language (9 credits).

Third, students may demonstrate proficiency in a foreign language by taking an intermediate course in a foreign language (this can include their native tongue) and two additional courses which relate to the culture, economy, social structure, or politics of a country which uses this foreign language (9 credits).

Engineering Core (15 credits)
One course (3 credits) that is an introduction to an engineering discipline. Examples include:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN.500.101</td>
<td>What Is Engineering?</td>
<td>3</td>
</tr>
<tr>
<td>EN.520.137</td>
<td>Introduction To Electrical &amp; Computer Engineering</td>
<td>3</td>
</tr>
<tr>
<td>EN.530.101</td>
<td>Freshman Experiences in Mechanical Engineering</td>
<td>2</td>
</tr>
<tr>
<td>EN.560.141</td>
<td>Perspectives on the Evolution of Structures</td>
<td>3</td>
</tr>
<tr>
<td>EN.570.108</td>
<td>Introduction Environmental Engineering</td>
<td>3</td>
</tr>
</tbody>
</table>

One course (at least 3 credits) in a computer language. Examples include:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN.500.200</td>
<td>Computing for Engineers and Scientists</td>
<td>4</td>
</tr>
<tr>
<td>EN.600.107</td>
<td>Introductory Programming in Java</td>
<td>3</td>
</tr>
</tbody>
</table>

Three courses in the fundamentals of engineering science (at least one course from three of the following four areas):

Area 1: Circuits
EN.520.213 Circuits 4

Area 2: Statics
EN.530.201 Statics and Mechanics of Materials 4
or EN.560.201 Statics & Mechanics of Materials

Area 3: Materials Science
EN.510.201 Introductory Materials Science for Engineers 3
or EN.510.311 Structure of Materials

Area 4: Thermodynamics
EN.530.231 Mechanical Engineering Thermodynamics 3
or EN.540.203 Engineering Thermodynamics

Engineering Focus Area (20 credits)
The engineering focus area must consist of at least six courses (minimum of 20 credits) that are related thematically or departmentally, at least three (3) of which must be at the advanced level (300 or above). While examples of focus areas are provided in the Advising Manual, students are encouraged to develop their own focus areas in consultation with their faculty advisor.

Free Electives
Between five and nine full courses (at least 3 credits each) to ensure a minimum of 120 credits in total. The number of courses required will
depend on how the International Dimensions requirement is satisfied and on the courses chosen in other areas. Students must select these courses in consultation with their advisor. These free electives are designed to allow students to develop a curriculum of study uniquely suited to their interests.

Students are required to have a minimum cumulative GPA of 2.0 to graduate. Further, a maximum of 12 “D” credits may be counted toward degree requirements. There is a maximum limit of six “D” credits in any combination of courses used to satisfy the Humanities or Social Sciences focus, the Engineering Core and the Engineering Focus Area (47 total credits).

Courses
EN.500.101. What Is Engineering?. 3.00 Credits.
This is a course of lectures, laboratories, and special projects. Its objective is to introduce students not only to different fields of engineering but also to the analytic tools and techniques that the profession uses. Assignments include hands-on and virtual experiments, oral presentations of product design, and design/construction/testing of structures. Freshmen only or Permission Required.
Instructor(s): S. Larson
Area: Engineering.

EN.500.103. Hopkins Engineering Sampler Seminar. 1.00 Credit.
This course provides students with an overview of the undergraduate programs in the Whiting School of Engineering. Faculty from various departments will introduce students to their discipline including aspects of their personal research. Freshmen only.
Instructor(s): E. Scheinerman
Area: Engineering.

EN.500.110. What is Engineering?-Summer. 3.00 Credits.
To introduce engineering ideas, thoughts, and problem-solving to potential engineering students. The course is intended to establish the framework within which engineers typically operate.
Registration Requirement: Algebra II with Trig. Open only to high school students admitted to the Engineering Innovation Summer Program.
Undergraduates should refer to EN.500.101.
Instructor(s): K. Borgsmiller.

EN.500.111. Hopkins Engineering Applications & Research Tutorials. 1.00 Credit.
Instructor(s): Staff
Area: Engineering.

EN.500.125. Spatial Reasoning and Visualization for Engineers. 1.00 Credit.
This course will enhance students ability to imagine and mentally manipulate objects in three-dimensional space—a talent that is important in engineering. Through guided practice and fun hands-on activities, students will hone their spatial skills. This course is only for engineering freshmen. Registration is by invitation only, based on the results of the summer spatial reasoning diagnostic assessment. S/U only.
Instructor(s): A. Stephens
Area: Engineering.

EN.500.200. Computing for Engineers and Scientists. 4.00 Credits.
This course introduces a variety of techniques for solving problems in engineering and science on a computer using MATLAB. Topics include structure and operation of a computer, the programming language MATLAB, computational mathematics, and elementary numerical analysis. Co-listed with EN.550.200.
Prerequisites: Prereqs: AS.110.107 OR AS.110.109
Instructor(s): J. Yoder; K. Hedrick; K. Lahouel
Area: Engineering. Quantitative and Mathematical Sciences.

EN.500.401. Research Laboratory Safety. 1.00 Credit.
An introduction to laboratory safety including chemical, biological, radiation, and physical hazards. Includes information on hazard assessment techniques, laboratory emergencies, and general lab standards for Whiting School of Engineering. The class will feature hands-on exercises with real-life experiments. Intended for students who have not yet begun working in a research laboratory.
Instructor(s): D. Kuespert.

EN.500.403. Introduction to Research Laboratory Safety. 0.50 Credit.
This course covers laboratory hazards including chemical, biological, radiation (non-ionizing and ionizing), and physical hazards, as well as JHU-specific procedures. This course is intended for undergraduates beginning work in a research laboratory for the first time, as well as other students with no laboratory safety background. Credit may be received for only one of these courses, EN.500.703 Research Lab Safety Review, and EN.540.490 Chemical and Laboratory Safety. Co-listed with EN.500.703, AS.360.403, and AS.360.703. ***NOTE: Most coursework is on Blackboard and must be completed before the live class meeting. A brief introduction to safety in Johns Hopkins University experimental research laboratories.
Instructor(s): D. Kuespert.
EN.500.496. Practical Ethics for Future Leaders. 3.00 Credits.
This is a new interdisciplinary course on leadership, decision making, and the application of ethics to real world problems. JHU students are future leaders of innovation across many fields, including but not limited to engineering, business, law, journalism, government, science and medicine. The goal of this new course is to give students a deep and practical grounding in how leaders make decisions, and in particular difficult decisions where there is no clearly right answer. In the first part of the course, we will cover important concepts in the practical application of ethics; in decision making; and leadership. In the second part of the course, we will take a deep look at major ethical issues resulting from the newfound capabilities made possible by emerging technologies. This term, the main question will be, should humans eliminate disease-carrying mosquitoes using gene editing technology? In future terms, the question will be different. The awesome power of emerging technologies to modify our world - our food supply, our health, even people - will only increase and become more pressing in coming years. Questions include: Is modifying wild animals ethical, on its face? Who gets to decide this, and how do they decide? Animals interact with humans and cross borders - can one jurisdiction (county, state or country) make changes to wild populations that would impact others?

Instructor(s): D. Mathews; F. Macgabhann; I. Gannot
Area: Social and Behavioral Sciences.

EN.500.551. Engineering Research Practicum. 1.00 Credit.
Instructor(s): E. Bouwer; J. Selinski; S. Smith.

EN.500.602. Seminar: Environmental and Applied Fluid Mechanics. 1.00 Credit.
Instructor(s): J. Katz.

EN.500.603. Academic Ethics.
Instructor(s): C. Kavanagh; C. Smith.

EN.500.703. Research Laboratory Safety Review. 1.00 Credit.
This course briefly reviews hazards in the laboratory and provides information regarding JHU-specific procedures such as chemical and biological waste handling. This course is intended for incoming postdoctoral fellows with some experience in laboratory safety; those with no background should take EN.500.403 instead. Credit may be received for only one of these courses, EN.500.403 Intro to Research Lab Safety, and EN.540.490 Chemical and Laboratory Safety. Co-listed with EN.500.403, EN.360.403, and EN.360.703. **Note:** Most coursework is on Blackboard and must be completed before the live class meeting. A review of hazards and safety procedures specific to Johns Hopkins University laboratories.

Instructor(s): D. Kuespert.

EN.500.745. Seminar in Computational Sensing and Robotics. 1.00 Credit.
Seminar series in robotics. Topics include: Medical robotics, including computer-integrated surgical systems and image-guided intervention. Sensor based robotics, including computer vision and biomedical image analysis. Algorithmic robotics, robot control and machine learning. Autonomous robotics for monitoring, exploration and manipulation with applications in home, environmental (land, sea, space), and defense areas. Biorobotics and neurorobotics, including devices, algorithms and approaches to robotics inspired by principles in biomechanics and neuroscience. Human-machine systems, including haptic and visual feedback, human perception, cognition and decision making, and human-machine collaborative systems. Cross-listed Mechanical Engineering, Computer Science, Electrical and Computer Engineering, and Biomedical Engineering.

Instructor(s): L. Whitcomb; N. Cowan; P. Kazanzides; R. Etienne Cummings; R. Vidal.

EN.500.781. Preparation for University Teaching. 1.50 Credits.
This course will prepare graduate students to teach at the university level. Topics covered include large and small class teaching, characteristics of student learning, syllabus construction, grading students, and developing a teaching portfolio. Full-time EN Graduate Students only. Co-listed with AS.360.781.

Instructor(s): R. Shingles.

EN.500.851. Engineering Research Practicum. 1.00 - 9.00 Credits.
Instructor(s): Staff.

Cross Listed Courses

Civil Engineering
EN.560.141. Perspectives on the Evolution of Structures. 3.00 Credits.
Why do buildings and bridges look the way they do today? Students will be provided the tools to answer this question for themselves through a study of the history of the design of buildings and bridges throughout the world from both engineering and architectural/aesthetic perspectives. Only simple mathematics is required (no calculus). Students will participate in individual and group critique of structures from engineering, architectural, and social points of view.

Instructor(s): B. Schafer; R. Sangree
Area: Engineering, Quantitative and Mathematical Sciences
Writing Intensive.

Institute for NanoBio Technology
EN.670.495. Animation in Nanotechnology & Medicine. 3.00 Credits.
Instructor(s): M. Rietveld; P. Searson
Area: Engineering, Natural Sciences.

EN.670.616. Introduction to NanoBio Tutorials II. 1.00 Credit.
Ph.D. students and postdoctoral fellows in the HHMI/IGERT/PSOC/CCNE/CNTC training programs study and present topics in nanotechnology for biology and medicine.

Instructor(s): P. Searson.

EN.670.695. Animation in Nanotechnology & Medicine. 3.00 Credits.
Instructor(s): M. Rietveld; P. Searson
Area: Engineering, Natural Sciences.

Geography and Environmental Engineering

http://engineering.jhu.edu/dogee/

The Department of Geography and Environmental Engineering is concerned with the improved understanding and description of environmental problems including questions of pollutant fate and transport, water resources engineering, environmental chemistry, geomorphology, drinking water and wastewater treatment, ecosystem dynamics, and technology, society, and environmental change. Drawing from a number of disciplines and approaches, elements within these systems are examined, and interconnections among elements are explored. Some broadly defined examples of subjects collaboratively studied by our faculty and students are listed below.

- Engineering processes to alleviate environmental problems. This requires knowledge of both natural processes and engineering design. The former addresses phenomena that are basic to understanding how engineering can help solve environmental problems. The latter involves the application of such understanding to problem solutions.
• Surficial, atmospheric and subsurface processes involving interactions of chemical, biological, and hydrological processes in the environment.
• Application of engineering solutions in the context of the public decision making process including economic, social, and administrative factors.
• Analysis of interrelationships between engineering and administrative decisions and cultural, institutional, and governmental sectors of society, especially in the urban environment.

Engineering designs and public decisions must rest upon a sound knowledge of fundamental scientific processes as well as economic policy and social science. Research and study are focused on both basic, and the applied aspects of environmental problems. Interdisciplinary work is necessary, combining, for example, the basic sciences, engineering, and environmental economics. Because of its diversity of interests and association with other departments of the university, the department can offer a broad range of graduate programs based on the natural, social, and engineering sciences.

Department Areas of Interest, Study, and Research

The following areas of interest help illustrate the depth and breadth of academic and research opportunities available through DoGEE. The interests and expertise of students and faculty within the department are continually expanding and changing. Unique combinations of course work and research experience make it possible for students to identify and address issues in new, imaginative ways. Students are encouraged to work with their advisors to build upon these areas of interest to construct a program that best suits their interests and professional goals and includes sufficient depth and rigor.

The Environmental Engineering area of interest is concerned with issues that involve water and wastewater treatment, transport and fate of contaminants in natural and engineered environments, hazardous and solid waste management, hydrology, and environmental fluid dynamics. Current research efforts are directed to:
• applying biological, chemical, and physical processes to treatment of contaminants in drinking water or wastewaters;
• evaluating colloidal stability in natural and engineered systems;
• exploring contaminant transport and interphase transfer, and the influence of these processes on chemical or biological transformations; and
• examining heat and mass transport and scaling mechanics at the land-atmosphere interface.

The Water and Air Resources Engineering area of interest is concerned with the occurrence, movement, and management of water and air through and above the surface of the Earth. This area involves many faculty in the department and has close interactions with faculty and students throughout Hopkins including those in the Center for Environmental and Applied Fluid Mechanics. Research in this area currently deals with:
• surface hydrology and groundwater; the dispersion of pollutants in the atmosphere and surface and subsurface waters;
• water supply, distribution, and risk analysis;
• measurement and modeling of turbulent environmental flows;
• mathematical modeling of subsurface and atmospheric transport phenomena;
• movement of water and chemicals in the vadose zone and in water supply aquifers;
• the impact of climate change on water resources; and
• river system dynamics.

The Environmental Chemistry area of interest is devoted to understanding the chemical and biological reactions and mobility of contaminants in natural environments and engineered aquatic systems. Research is focused on
• identifying chemical and biological constituents of aquatic environments that catalyze, inhibit, or react with organic and inorganic contaminants;
• exploring how protonation, complex formation, sorption, and partitioning affect rates of contaminant transformation;
• examining interconnections between physical, chemical, and biological phenomena affecting contaminants; and
• developing structure-property and structure-reactivity relationships that provide a basis for predicting transformation and fate.

The goal of the area of interest in Systems Analysis and Economics for Public Decision Making is to develop competence in the modeling and analysis of public policy alternatives for environmental, energy, and natural resources management, including private sector responses to those policies. Students typically choose one or more from among the following:
• Systems analysis involves courses in the mathematics of optimization and decision analysis, including linear and non-linear programming, integer programming, stochastic programming, simulation, Bayesian analysis, and multiobjective decision making. Applications include water management, pollution trading, simulation of energy market responses to environmental policies, and integrated assessment of climate adaptation.
• Economics includes specialized training in resource economics, microeconomic theory, cost-benefit analysis, public finance, and econometrics. Applications include the economics of public infrastructure, water and energy pricing and regulation, demand forecasting, and incentives for green technology adoption.
• Statistics and Big Data includes courses on probability, statistics, causal inference, experimental designs, data mining, and specialized courses in supervised and unsupervised learning algorithms. Applications include detection of pollution and climatic trends, pollution enforcement, program impact evaluation, and identification of markets for green products.

Besides methods courses, students can take policy courses in applications of interest. Courses are drawn from DoGEE, Civil Engineering, Applied Math & Statistics, Economics, the Carey Business School, Public Health, and the School of Advanced International Studies.

The Geomorphology, Hydrology, and Ecology area of interest promotes the fundamental understanding of processes at the Earth’s surface. Research is presently focused on:
Facilities

Student and staff offices and laboratories are located in Ames and Krieger halls. In addition to computers for scientific modelling laboratories, DoGEE has two undergraduate teaching labs and more than 16 individual laboratories for environmental engineering research. Each lab is equipped with different instruments and equipment for its function. The majority of the instruments are state of the art, and instruments are constantly added and upgraded. Some of our major instruments are:

- Liquid Chromatography / Inductively Coupled Plasma / Mass Spectrometer (LC/ICP/MS)
- Liquid Chromatography / Mass Spectrometer (LC/MS)
- Gas Chromatography / Mass Spectrometer (GC/MS)
- Gas Chromatography (GC)
- Atomic Absorption Spectrophotometer (AA)
- Ultra Centrifuge
- Capillary Electrophoresis (CE)
- High Performance Liquid Chromatography (HPLC)
- LGR Liquid-Water Isotope Analyzer (LWIA)

For microbiological research, DoGEE has a Biological Safety Level 2 lab located in Ames Hall. In addition to DNA research equipment, the lab is equipped with a Biological Safety fume hood, two ultra-centrifugation systems, and two -80 degree C freezers.

For Limnology and Hydrology research, DoGEE labs are equipped with a variety microscopes and field equipment. The landscape hydrology lab is equipped with an LGR Liquid-Water Isotope Analyzer, artificial EM river, and fluid mechanic equipment.

Students have access to treatment plants and other municipal and state facilities that may be useful in conducting research, as well as to vehicles and boats for field trips and field research of all types. Extensive computer facilities are available both in the department and in the university as a whole.

The Department of Geography and Environmental Engineering offers:

- an undergraduate Bachelor of Science (B.S.) degree in Environmental Engineering
- four focus areas within the environmental engineering major:
  - Environmental Management and Economics
  - Environmental Engineering Science
  - Environmental Transport
  - Environmental Health Engineering
- an undergraduate Bachelor of Arts (B.A.) in Geography
- two focus areas within the Geography major:
  - Human Geography
  - Physical Geography
- three minors:
  - a minor in environmental engineering
  - a minor in environmental sciences
  - a minor in engineering for sustainable development
- a five-year combined (B.S./M.S. or B.S./M.S.E.) program.

As part of these minor programs, or as part of other programs of the student’s own design, the department offers electives in such areas as ecology, geomorphology, water and wastewater pollution treatment processes, environmental systems analysis, and environmental policy studies.

Major in Environmental Engineering

The mission of our undergraduate program is to provide students with a broadly based yet rigorous education in the fundamental subjects central to the field, in a milieu that fosters development of a spirit of intellectual inquiry and the problem-solving skills required to address the open-ended issues characteristic of the real world.

Our B.S. program provides a strong foundation in the physical, chemical, and biological sciences, as well as in mathematics, engineering science, and engineering design. It is broad and flexible enough to accommodate students with a variety of interests in environmental engineering. This training should provide an ideal preparation for future employment in business or industry or for subsequent training at the graduate level, either in environmental engineering or in a field such as environmental law, public health, or medicine.

physical dynamics of tidal freshwater wetland evolution; land use impacts on forest dynamics;
- sediment transport, channel dynamics, and benthic ecology in rivers;
- acquisition of metals by plants, fungi, and bacteria;
- dynamics and stability of microbial communities;
- estuarine paleoecology; and maintenance and flushing flows in mountainous rivers.

The Technology, Society, and Environmental Change area of interest focuses primarily on the relationships among social organization, technological and industrial change, the production of space and place, government policy and environmental outcomes. Substantive domains of inquiry include:

- globalization and regional/local processes of economic, political, and cultural change. In particular, this entails grappling in particular with the behavior of multinational corporations and governments and the regional/local consequences of technological changes and institutional activities and decision making. Comparative studies of industrial transformations and their social and environmental consequences are emphasized.
- urbanization and regional growth and decay. This involves the study of spatial differentiation in population distributions and their well-being arising out of the spatial mobilities of capital and labor, shifts in industrial structure, and processes of technological and cultural change. Comparative studies of urbanization processes—particularly Baltimore's—are encouraged; and
- the dynamics of environmental and social change. This requires consideration of philosophic, economic, and broad-based cultural backgrounds to environmental problems. Issues such as environmental justice, environmental ethics, and a critical application of appropriate knowledge (scientific, economic, cultural) for environmental decision making are strongly emphasized.

For microbiological research, DoGEE has a Biological Safety Level 2 lab located in Ames Hall. In addition to DNA research equipment, the lab is equipped with a Biological Safety fume hood, two ultra-centrifugation systems, and two -80 degree C freezers.

For Limnology and Hydrology research, DoGEE labs are equipped with a variety microscopes and field equipment. The landscape hydrology lab is equipped with an LGR Liquid-Water Isotope Analyzer, artificial EM river, and fluid mechanic equipment.

Students have access to treatment plants and other municipal and state facilities that may be useful in conducting research, as well as to vehicles and boats for field trips and field research of all types. Extensive computer facilities are available both in the department and in the university as a whole.

Program Objectives

The B.S. in Environmental Engineering degree program is accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org.

The Program in Environmental Engineering educates students to think critically, communicate clearly, and collaborate effectively as they apply the fundamental scientific principles of engineering to environmental problems. We emphasize the importance of intellectual growth, professional ethics, and service to society. Our graduates are prepared to be successful:

- engineering professionals in private and governmental organizations, and
- students in the best graduate programs.

Our department is noted for our students' exceptionally high pass rate of the "Fundamentals of Engineering" (FE) exam offered by the National Council of Examiners for Engineering and Surveying (NCEES).

Focus Areas within the Environmental Engineering (EE) Major

Students must select among four different focus areas:

- Environmental Management and Economics
- Environmental Engineering Science
- Environmental Transport
- Environmental Health Engineering

With the assistance of a faculty advisor, each student will plan a curriculum suited to his or her ultimate career goals. The program also encourages and supports individual study and research. Program requirements total 125 credits.

Mathematics with a focus on applications (19 credits)

Humanities and Social Sciences (HS) (18 credits)

A minimum of six courses totaling 18 credits in Humanities or Social Sciences. The six courses must include:

1. one advisor-approved course that specifically develops writing skills (e.g., a how to write class),
2. EN.570.334 Engineering Microeconomics, and
3. four additional Humanities and Social Sciences courses with at least two at the 300-level or higher. EN.570.406 Environmental History can be taken as part of these requirements.

Please note that the writing course will fulfill one of the two writing intensive courses required by the university.

Note: most medical schools require a year of English literature and/or composition.

Required course:

  Total Credits: **9**

  The Design and Synthesis sequence is a five-credit project course (2 credits fall semester, 3 credits spring semester) and involves a comprehensive study of the engineering design process from problem definition to final design. The course involves team projects that include written and oral presentations. Students will form small teams that will work with local companies or government agencies in executing the project. Prerequisite: senior standing in the Environmental Engineering major.

- **Environmental Engineering Requirements (26 credits)**

  Total Credits: **26**

- **Technical Electives (TE) (minimum of 12 credits)**

  (selected in consultation with an advisor)

  At least three Engineering, Quantitative Studies, or Natural Sciences at or above the 300-level, subject to approval by the department totaling at least 12 credits.

  Technical electives must fulfill the following requirements:

  1. TEs must total 12 credits of advanced 300-level Engineering, Quantitative Studies, or Natural Sciences courses, and

  2. TEs must be approved by the department. (For ABET requirements at least one from: Solid Waste; Hazardous Waste; Air Pollution; Environmental Health Engineering, if not satisfied as part of the Environmental Engineering electives.) Up to six credits of independent study or research may be applied toward engineering requirements (e.g., EN.570.501 Undergraduate Research/EN.570.502 Undergraduate Research, EN.570.505 Undergraduate Independent Study, or Senior Thesis). Note earlier comments for premedical majors.

  It is strongly recommended that students take additional advanced classes in computing and numerical methods. EE students are strongly encouraged to take at least one course in organic chemistry (e.g., AS.030.205 Organic Chemistry I). The organic chemistry course will meet the TE requirement.

**Guidance for Technical Electives for the EE Major**

Technical electives are intended to provide students with courses with technical content and extend mastery in appropriate subject matter.

  - TEs require use of fundamental science or mathematics, have appropriate prerequisites (e.g., university-level calculus, physics, chemistry, or other N or Q courses) and generally at a 300-level or higher.
  - TEs must have the appropriate level of rigor which is defined as encompassing both of the following requirements:
    - 5-10 homework assignments; and
    - a culminating project (final project, group project, paper) or final examination. Lecture-only classes (no homework or exams) will not qualify as a TE for the EE major.
  - TEs require accumulation and depth of analytical skill or knowledge. In general, this precludes survey courses or courses that have no technical prerequisites that are taught by multiple professors or a series of guest lecturers, or cover a broad spectrum of a topic instead of building mastery in one area.
Exceptions are possible only with the approval of either the Departmental Chair or Director of Undergraduate Studies.

**Sample EE Program (Focus Area: Environmental Engineering Science)**

**Note:** This program is based on the assumption that students have not previously completed A.P. courses in calculus, physics, chemistry, etc.

**Minor in Environmental Engineering**

Environmental engineers play particularly pivotal roles as professionals who bridge the gap between understanding complex scientific concepts and helping to formulate public policies that affect the environment. Environmental engineering has become an important aspect of engineering practice in most engineering fields, and the discipline spans the professional spectrum from the private sector through governmental...
agencies to academia. An undergraduate minor in environmental engineering allows engineering students to pursue an interest in this field and to incorporate aspects of environmental engineering into careers in other engineering disciplines.

Students in any undergraduate major in the Whiting School of Engineering are eligible for admission to the environmental engineering minor program. Students will work with an advisor in the Department of Geography and Environmental Engineering to develop a program that meets the requirements for the minor and is consistent with the educational requirements of their major field of engineering study.

Requirements of the EE minor program consist of:

- a set of required core science and mathematics courses, already common to civil and chemical engineering majors;
- four required courses in environmental engineering (total of 12 credits, listed below); and
- two elective courses, one taken at the freshman or sophomore level, and the other taken at the junior or senior level.

**Core Courses (EE Minor)**

Advanced placement credits and/or equivalent courses in other schools or departments are acceptable, subject to advisor approval.

**Required Courses (total of 12 credits)**

**Elective Courses**

(Total of 6 credits) one course from each of two groups is required. Double counting of these courses with specified required courses in the student’s major is not allowed. Substitution for one required course may be possible under special circumstances, with explicit approval of the environmental engineering minor advisor. Additional course electives are possible but require approval of the environmental engineering minor advisor.

**Total Credits** 6

* Engineering science courses that are developed for juniors and seniors and also introductory graduate-level courses. One course is required.

For further information, contact Dr. William P. Ball, EE Minor Coordinator, 410-516-5434, bball@jhu.edu, or Adena Rojas, Senior Academic Program Coordinator, 410-516-5533, arojas@jhu.edu.

**Minor in Environmental Sciences**

The environmental sciences minor has been developed to encourage and facilitate studies in environmental sciences by students completing degrees in the other science and engineering disciplines. The environmental sciences (ES) minor requires:

- completion of a set of courses in the core sciences,
- two introductory courses dealing with the environment, and
- three or more upper-level environmental sciences courses, as described.

**Core Sciences (ES Minor)**

Because of the interdisciplinary nature of environmental science, it is important that professionals from various areas of expertise acquire a common language and set of core concepts to make discussion and cooperation possible. The following courses represent the minimum set of requirements:

**Mathematics (12 credits)**

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Name</th>

</table>
At least one of these four courses: 4
AS.110.201 Linear Algebra
or AS.110.211 Honors Linear Algebra
AS.110.202 Calculus III
or AS.110.211 Honors Multivariable Calculus
AS.110.302 Diff Equations/Applic
EN.550.291 Linear Algebra and Differential Equations

Biology (3 credits)
One course, such as:
AS.020.151 General Biology I 3

Physics (10 credits)
AS.171.101 General Physics: Physical Science Major I 4
or AS.171.107 General Physics for Physical Sciences Majors (AL) 4
AS.171.102 General Physics: Physical Science Majors II 4
or AS.171.108 General Physics for Physical Science Majors (AL) 4
AS.173.111 General Physics Laboratory I 1
AS.173.112 General Physics Laboratory II 1

Chemistry (13 credits)
AS.030.101 Introductory Chemistry I 3
AS.030.105 Introductory Chemistry Lab I 1
AS.030.106 Introductory Chemistry Laboratory II 1

Total Credits 30

Environmental Sciences
Students must take two introductory courses dealing with the environment and three or more of the upper-level environmental science courses on the following lists:

Introductory Courses (6 credits)
EN.570.110 Introduction to Engineering for Sustainable Development
EN.570.205 Ecology
EN.570.239 Emerging Environmental Issues
AS.270.110 Freshman Seminar: Sustainable + Non-Sustainable Resources
AS.270.220 The Dynamic Earth: An Introduction to Geology
AS.270.221 The Dynamic Earth Laboratory

Upper-Level Courses (9 credits)
EN.570.239 Emerging Environmental Issues
EN.570.301 Environmental Engineering Fundamentals I
EN.570.302 Water & Wastewater Treatment
EN.570.328 Geography & Ecology of Plants
EN.570.353 Hydrology
EN.570.411 Engineering Microbiology
EN.570.441 Environmental Inorganic Chemistry
EN.570.442 Environmental Organic Chemistry
EN.570.443 Aquatic and Biofluid Chemistry
EN.570.445 Physical and Chemical Processes
EN.570.446 Biological Process of Wastewater Treatment
EN.570.491 Hazardous Waste Engineering and Management
AS.270.302 Aqueous Geochemistry
AS.270.311 Geobiology
AS.270.313 Isotope Geochemistry
AS.270.314 Planetary Tectonics and Geodynamics
AS.270.350 Sedimentary Geology
AS.270.369 Geochem Earth/Environment

Pairing Your Major with the ES Minor
Many of the most creative and productive advances in environmental sciences in recent years have come from scientists trained in traditional disciplines (biology, chemistry, geology, physics, and engineering) who have devoted themselves to the study of environmental problems. Completion of the degree requirements of a traditional discipline provides depth and rigor that, when supplemented with additional academic training in environmental science, can be applied to professional work in a variety of environmental subjects, as the following examples show:

Biological Processes
Response of ecosystems to change, microbial degradation of pollutants, biogeochemical cycling of greenhouse gases. Illustrative majors: Biology, Biomedical Engineering, Biophysics, Biochemical Engineering.

Physical Processes
Erosion of hillslopes, rivers, and coastlines; sediment production, transport, and fate; groundwater, movement of contaminant plumes; oceanography; atmospheric physics; aerosol formation; global warming. Illustrative majors: Civil Engineering, Chemical and Biomolecular Engineering, Mechanical Engineering, Physics, Earth and Planetary Sciences.

Environmental Chemistry

Environmental Systems
Environmental modeling, risk assessment, environmental systems design, pollution control strategies. Illustrative majors: Civil Engineering, Applied Mathematics and Statistics.

Faculty Advising
A faculty advisor is assigned to each student in the environmental sciences minor program to assist in planning his/her academic program and to approve the choice of courses to satisfy the minor. Faculty advisors are available in the following areas:

Minor in Engineering for Sustainable Development
Engineers will be increasingly called upon to help devise solutions to the tremendous problems of poverty, inequality, and social and environmental dislocation that afflict major parts of the globe in the 21st century. Working as an engineer in this context involves negotiating highly complex social, economic, and political realities and dealing with a wide range of institutions and actors, including national and local governments, multilateral lenders such as the World Bank, diverse non-governmental organizations (NGOs), and local communities. It also increasingly involves working in interdisciplinary teams with social scientists, public health and medical workers, humanitarian aid workers, bankers, politicians, and the like. “Sustainable” development implies a development path that is socially equitable, culturally sensitive, and environmentally appropriate over a multi-generational time frame. The minor in Engineering for Sustainable Development exposes engineering

Environmental Sciences Minor at Johns Hopkins University - 2016-2017
students to some of the key issues related to development, methods of information-gathering in diverse and difficult settings, and working effectively with non-engineers on complex problems.

The minor encompasses seven courses. The core course is EN.570.110 Introduction to Engineering for Sustainable Development. Five additional courses will be selected in a program devised in consultation with the minor advisor.

Of the Five Additional Courses
- Three must be grouped around a specific theme, region or within a specific discipline. Themes might include, for example, public health, environment, or economic development. Regions include Africa, Latin America, or Asia. Disciplinary concentrations might be in Anthropology, Economics, Geography, History, Political Science, Public Health, or Sociology.
- Three of the courses must be at the 300-level or above.
- One of the courses must cover methods for gathering and evaluating information in a development context.

Examples include:
- AS.070.319 Logic of Anthropological Inquiry
- AS.070.347 Anthropology and Public Action
- AS.280.345 Public Health Biostatistics
- AS.280.350 Fundamentals of Epidemiology
- AS.230.202 Research Methods for the Social Sciences

Bachelor of Arts in Geography
Geographical knowledge constitutes a vital store of information concerning the distribution over the earth’s surface of those environmental conditions (both naturally occurring and anthropogenic) essential to support an immense diversity of human life and activity.

The study of Geography focuses on understanding how physical, biotic, social, and economic processes are perpetually reshaping environments and landscapes in ways either favorable or unfavorable for different life forms in general and for different and distinctive kinds of human occupancy and culture in particular. Geographical education seeks to instill a deep appreciation of the grand diversity of ways in which the peoples of the earth have learned to use and modify their environments creatively. It also focuses on the environmental problems that arise in association with such processes of modification. While geography in general looks to maintain a strong bond between physical and human dimensions of landscape formation, specialization within that general framework is also encouraged.

Human Geography
- Mathematics
- Physical and ecological conditions for different life forms. Training in physical geography aims to build sufficient technical expertise to handle a wide range of environmental problems concerning the atmosphere, the Earth, and the hydrosphere, with special emphases upon water, surficial processes, and ecology.

Requirements for the B.A. Degree
(See also General Requirements for Departmental Majors (p. 10) and Writing Requirement sections.)

The B.A. in geography offers a broad background in the sciences (particularly biological and ecological), the social sciences, and the humanities. All geography majors must fulfill the general university requirements and take four fundamental courses in geography. They may then choose a concentration in either physical or human geography. In addition to these courses focused on their special interest, they may freely select electives to fill the 120 credit hours required for the B.A. degree. Students work closely with their faculty advisor to create a program that fulfills their individual academic objectives and includes sufficient depth and rigor.

Focus Areas within the Geography Major
Students may select between two different focus areas within the geography major:

Human Geography
Requirements
- Three of the courses must be at the 300-level or above.
- One of the courses must cover methods for gathering and evaluating information in a development context.

Examples include:
- AS.230.202 Research Methods for the Social Sciences
- AS.230.205 Introduction to Social Statistics
- AS.280.345 Public Health Biostatistics
- AS.280.350 Fundamentals of Epidemiology
- AS.230.202 Research Methods for the Social Sciences

Bachelor of Arts in Geography
Geographical knowledge constitutes a vital store of information concerning the distribution over the earth’s surface of those environmental conditions (both naturally occurring and anthropogenic) essential to support an immense diversity of human life and activity.

The study of Geography focuses on understanding how physical, biotic, social, and economic processes are perpetually reshaping environments and landscapes in ways either favorable or unfavorable for different life forms in general and for different and distinctive kinds of human occupancy and culture in particular. Geographical education seeks to instill a deep appreciation of the grand diversity of ways in which the peoples of the earth have learned to use and modify their environments creatively. It also focuses on the environmental problems that arise in association with such processes of modification. Requirements for the B.A. Degree
(See also General Requirements for Departmental Majors (p. 10) and Writing Requirement sections.)

The B.A. in geography offers a broad background in the sciences (particularly biological and ecological), the social sciences, and the humanities. All geography majors must fulfill the general university requirements and take four fundamental courses in geography. They may then choose a concentration in either physical or human geography. In addition to these courses focused on their special interest, they may freely select electives to fill the 120 credit hours required for the B.A. degree. Students work closely with their faculty advisor to create a program that fulfills their individual academic objectives and includes sufficient depth and rigor.

Focus Areas within the Geography Major
Students may select between two different focus areas within the geography major:

Human Geography
Requirements
- Three of the courses must be at the 300-level or above.
- One of the courses must cover methods for gathering and evaluating information in a development context.

Examples include:
- AS.230.202 Research Methods for the Social Sciences
- AS.230.205 Introduction to Social Statistics
- AS.280.345 Public Health Biostatistics
- AS.280.350 Fundamentals of Epidemiology
- AS.230.202 Research Methods for the Social Sciences
3. those sciences directly related to the student’s area of specialization, such as environmental chemistry, physical geography, or biogeography, and
4. courses which focus on the environment itself: the atmosphere, earth, and hydrosphere.

Requirements
- AS.110.202 Calculus III; EN.550.310 Probability & Statistics for the Physical and Information Sciences & Engineering (or the equivalent).
- at least four appropriate introductory courses (12 or more credits) are also required in such fields as chemistry, biology, geology, or physics.
- a minimum of eight courses (about 24 credits) at the intermediate level in their field of major interest (in consultation with their geography minor advisor).

Undergraduates with an interest in environmental chemistry, for example, would take fundamental courses such as organic chemistry, biochemistry, and thermodynamics, while those oriented toward the earth sciences would take courses in petrology, thermodynamics, fluid mechanics, and other aspects of geology. For a student interested in biogeography—dealing with the spatial pattern of plants, the role of environmental factors in influencing those distributions, and the effect of changes in vegetation on the landscape—the department offers courses in plant geography, ecology, and paleoecology.

Program in Public Decision Making
Undergraduates majoring in geography may satisfy departmental requirements through the program in Systems Analysis and Economics for Public Decision Making. In addition to prerequisites from other departments (e.g., EN.550.361 Introduction to Optimization-EN.550.362 Introduction to Optimization II and AS.180.101 Elements of Microeconomics-AS.180.102 Elements of Microeconomics), students in this program take at least four courses from the public decision making curriculum, including EN.570.495 Optimization Foundations for Environmental Engineering and Policy Design and EN.570.493 Economic Foundations for Environmental Engineering and Policy Design.

Back to top (p. 995)

The department welcomes applicants with backgrounds in the sciences, engineering, or in the liberal arts interested in applying their specialized knowledge to the pressing problems of human interaction with the environment. Students can select courses suited to a particular field of interest. Once fundamentals have been mastered, students have complete freedom to study in related fields. Independent study and vigorous exchange of ideas in seminars and laboratory are indispensable parts of each student’s program. The department emphasizes study in related fields of natural and social sciences because of the importance of adapting the latest scientific information and methods for research and practice, and because the fundamental sciences are most effectively mastered at an educational institution. Research and teaching are integral parts of our graduate program.

Graduates of the department have found jobs in university departments of civil and environmental engineering, economics, biology, chemistry, geography, and geology; in federal, state, and municipal government; in private industry; and in private research and consulting organizations.

A note counting 400 level courses as graduate level courses: many of DoGEE’s 400 level courses are graduate level courses and count as such. That said, the courses are scheduled in such a way that are accessible to be taken by advanced DoGEE undergrads with approval from their advisor. 400 level courses are generally taken by either 1st year graduate students or seniors.

Requirements for Advanced Degrees
Course work requirements for the master’s degree and doctorate are generally flexible. Former training and experience and the special field of interest influence the development of each student’s program of advanced study.

No 100-level or 200-level courses can be counted toward the credit requirements for master’s degrees. As a rule, 300 level courses are generally not permitted to be taken for credit requirements; any special exception requests must be approved the Department chair.

Proficiency in one foreign language is required for all degree candidates in Human Geography. Based on the nature and need of students’ educational and research programs, faculty advisors may require proficiency in one foreign language for an M.A. or a Ph.D. degree. There is no language requirement for the M.S. or M.S.E. degrees.

Ph.D. Degree
The goals for students in our Ph.D. program are
- to develop reasoning skills that can be applied to new and unanticipated issues;
- learn how to pose questions and answer them in a logical manner;
- acquire a depth of understanding and technical knowledge in a particular study area, on par with others worldwide; and
- make a significant contribution to our understanding in this particular study area. The emphasis in the Ph.D. degree is upon a sound foundation in the fundamentals required in a given area with considerable flexibility in course selection determined by the interests and background of each graduate student. The doctoral student must take the equivalent of about two full academic years of formal course work. Roughly half of this is done in the principal subject, and the rest is chosen from allied fields. Students may request to move to non-resident status in their final semester, with the approval of the department and Dean’s Office once they have completed all exams and a defense date has been scheduled.

All students must pass departmental and Graduate Board oral examinations for the doctorate. Usually these examinations are taken after two years of academic work. Research leading to the dissertation should make an original contribution to the chosen field of specialization, and the result must be worthy of publication. A final dissertation defense that involves an open seminar and a closed oral examination is required of all DoGEE doctoral students.

Master of Science (M.S.) Degree
The M.S. degree is open to students with undergraduate degrees in engineering, mathematics, biology, chemistry, physics, geology, and other scientific disciplines. The M.S. degree program includes the following requirements:
- a minimum of 30 credits including no more than 1 credit of seminar, 1 credit of intersession course work, and 6 credits of independent research counting toward the 30 credits.
- at least 50% of the required 30 credits must come from courses within the department.
- students are permitted to apply up to two classes with a grade of “C” toward their degree.
• up to two semesters of AAP or EP courses can be taken and counted to receive a master's degree as long as there is sufficient rigor as deemed by the advisor. Students must have written consent from advisor (an email will suffice) prior to signing up for the course.

M.S. students have the option to complete an independent research project, submitted as a formal essay. A minimum of two semesters is required to complete the M.S. degree without the research project option. Three to four semesters are typically required to complete the degree with a research project.

M.S. students are strongly recommended to take as prerequisites for the M.S. program mathematics through differential equations and computing skills. Additionally, M.S. students who choose to follow Contaminant Fate and Transport, Environmental Process Engineering, and Water Resources Engineering concentrations are encouraged to take an introductory fluid mechanics course. Whether introductory fluid mechanics will count towards an M.S. student’s graduation credits is decided on a case-by-case basis by the department. Each individual’s program of study is planned by the student in consultation with department faculty and must be approved by the faculty advisor.

Concentrations for the M.S. Degree

Environmental Science
This concentration provides a broad yet rigorous background for environmental professionals. Using the department’s areas of interest, study, and research as guides and in consultation with their advisors, M.S. students can construct their own concentration that complements and expands their interests and professional goals. Additionally, M.S. students can choose to follow or pull from the M.S.E. concentration tracks: Contaminant Fate & Transport, Environmental Management and Economics, Environmental Process Engineering, and Water Resources Engineering.

Environmental Science and Policy
This concentration is similar to Environmental Science but includes economics and systems courses. Four courses are recommended in environmental science, including the following:

- EN.570.445 Physical and Chemical Processes 3
- EN.570.446 Biological Process of Wastewater Treatment 3
- EN.570.448 Physical and Chemical Processes II 3

M.A. and M.S. students pursuing this program who do not have prior background in environmental engineering can substitute EN.570.301 Environmental Engineering Fundamentals I and EN.570.302 Water & Wastewater Treatment in lieu of the courses suggested above.

The other environmental science courses should be chosen from the following:

- EN.570.411 Engineering Microbiology 4
- EN.570.442 Environmental Organic Chemistry 3
- EN.570.443 Aquatic and Biofluid Chemistry 3
- EN.570.491 Hazardous Waste Engineering and Management 3

Four courses are required in environmental policy, including:

- EN.570.493 Economic Foundations for Environmental Engineering and Policy Design 3
- EN.570.495 Optimization Foundations for Environmental Engineering and Policy Design 3

Choose one of the following:

- EN.570.497 Risk and Decision Analysis
- EN.570.607 Energy Policy and Planning Models
- EN.570.657 Air Pollution
- EN.570.676 Stochastic Programming

The final two courses would be a project or electives in environmental science, engineering, policy, or systems that are appropriate to the student's goals.

Master of Science in Engineering (M.S.E.) Degree

The M.S.E. degree is open to students with an ABET-accredited undergraduate engineering degree or demonstrated equivalent. The M.S.E. degree program includes the following requirements:

- a minimum of 30 credits including no more than 1 credit of seminar, 1 credit of intersession course work, and 6 credits of independent research counting toward the 30 credits.
- at least 50% of the required 30 credits must come from courses within the department.
- students are permitted to apply up to two classes with a grade of “C” toward their degree.
- 5-6 required courses and 4-5 recommended elective courses depending on concentration (Note: In order to substitute an alternate course for a recommended elective, students must receive written approval from their advisor).
- prerequisites (required) for the M.S.E. program includes mathematics through differential equations and computing skills.
- up to two semesters of AAP or EP courses can be taken and counted to receive a master’s degree as long as there is sufficient rigor as deemed by the advisor. Students must have written consent from advisor (an email will suffice) prior to signing up for the course.

The M.S.E. program is typically a two semester program based on course work alone. However, M.S.E. students have the option to complete an independent research project, submitted as a formal essay or group project report. An M.S.E. degree with significant research components will usually require three to four semesters for completion and is generally intended for those students planning to work in engineering practice. Each individual’s program of study is planned by the student in consultation with department faculty and must be approved by the faculty advisor. M.S.E. students select from the concentrations below.

Recommended Electives Note: Students should select elective courses from the list of recommended electives appropriate for each concentration. In order to substitute an alternate course for a recommended elective, students must receive written approval from their advisor and should submit a copy of the approval to the Department for their permanent file.

Concentrations for the M.S.E. Degree

Contaminant Fate and Transport
This concentration emphasizes understanding of physical, chemical, and biological phenomena that affect the movement and transformation of pollutants in the environment.

Required courses:

- EN.570.411 Engineering Microbiology 4
- EN.570.441 Environmental Inorganic Chemistry 3
- EN.570.442 Environmental Organic Chemistry 3
EN.570.443 Aquatic and Biofluid Chemistry 3
EN.570.452 Experimental Methods in Environmental Engineering and Chemistry 4

One course in applied mathematics, numerical analysis, or engineering mathematics, such as:
EN.570.495 Optimization Foundations for Environmental Engineering and Policy Design
EN.570.497 Risk and Decision Analysis 3
EN.570.493 Economic Foundations for Environmental Engineering and Policy Design 3

Recommended electives include:
EN.570.446 Biological Process of Wastewater Treatment 3
EN.570.412 Landscape Hydrology and Watershed Analysis 3
EN.570.657 Air Pollution 3
EN.570.619 Methods in Microbial Community Analysis 3
EN.570.490 Solid Waste Engineering and Management 3

Environmental Process Engineering
This concentration involves the analysis and design of processes of water treatment, waste treatment, and environmental remediation, and includes a solid grounding in the chemical, biological, and physical principles underlying treatment and remediation technologies.

Required courses:
EN.570.411 Engineering Microbiology 4
EN.570.443 Aquatic and Biofluid Chemistry 3
EN.570.445 Physical and Chemical Processes 3
EN.570.446 Biological Process of Wastewater Treatment 3
EN.570.448 Physical and Chemical Processes II 3
EN.570.452 Experimental Methods in Environmental Engineering and Chemistry 4

One course in applied mathematics, numerical analysis, or engineering mathematics, such as:
EN.570.495 Optimization Foundations for Environmental Engineering and Policy Design
EN.570.497 Risk and Decision Analysis 3
EN.570.493 Economic Foundations for Environmental Engineering and Policy Design 3

Additional Requirements: an introductory fluid mechanics course. If this prerequisite is lacking, it can be taken as part of the course of study, but the credits will not be counted toward the 30-credit requirement.

Recommended electives include:
At least one course in Geomorphology, Hydrology, or Ecology 3
At least one course in Systems Analysis and Economics 3
EN.570.442 Environmental Organic Chemistry 3
EN.570.491 Hazardous Waste Engineering and Management 3

Water Resources Engineering
This concentration combines a solid grounding in environmental fluid mechanics and hydrology with electives in modeling, water development planning, policy, and contaminant fate and transport.

Required courses:
EN.570.353 Hydrology 3
EN.570.412 Landscape Hydrology and Watershed Analysis 3

EN.570.395 Principles of Estuarine Environment: Chesapeake Bay 3
AS.270.405 Modeling the Hydrological Cycle 3

One course in applied mathematics, numerical analysis, or engineering mathematics, such as:
EN.570.495 Optimization Foundations for Environmental Engineering and Policy Design
EN.570.497 Risk and Decision Analysis 3

Additional requirements: an introductory fluid mechanics course. If this prerequisites is lacking, it can be taken as part of the course of study, but the credits will not be counted toward the 30-credit requirement.

Recommended electives include:
At least one course in Systems Analysis or Economics
EN.570.493 Economic Foundations for Environmental Engineering and Policy Design
EN.570.497 Risk and Decision Analysis 3
EN.570.443 Aquatic and Biofluid Chemistry 3
EN.570.445 Physical and Chemical Processes 3

Environmental Management and Economics
This concentration focuses on using models of physical and economic systems to analyze and improve the design of public policies and environmental control systems.

Required courses:
EN.570.493 Economic Foundations for Environmental Engineering and Policy Design 3
EN.570.495 Optimization Foundations for Environmental Engineering and Policy Design 3
EN.570.497 Risk and Decision Analysis 3

Recommended electives include:
At least one course in physical, chemical, or biological processes
EN.570.618 Multiobjective Programming and Planning 3
EN.570.676 Stochastic Programming 3
* Or other environmental economics course.

M.A. Degree
The M.A. degree is open to students with undergraduate degrees in social sciences or the humanities. It requires:

• a minimum of 30 credits including no more than 1 credit of seminar, 1 credit of intersession course work, and 6 credits of independent research counting toward the 30 credits.
• at least 50% of the required 30 credits must come from courses within the department.
• students are permitted to apply up to two classes with a grade of “C” toward their degree.
• up to two semesters of AAP or EP courses can be taken and counted toward their degree.

In addition to these course credits, M.A. students have the option to complete an independent research project, submitted as a formal essay. Students can focus on one of the department’s areas of interest, study, or
research or construct their own program that complements and expands their undergraduate experience; three semesters are typically required to complete the degree. Each program of study is planned by the student in consultation with department faculty and must be approved by the faculty advisor.

**Financial Aid**

Financial aid is granted on the basis of merit and availability. Criteria for consideration for these awards include academic excellence, professional or research experience, and career commitment to the field. Continued support is subject to the student’s performance, availability of research or TA funds, and requisite staffing of current projects. Ph.D. students receive priority for full financial support. Pending available funding, partial tuition fellowships are offered to qualified master’s students. Ph.D. applicants are nominated by the department for consideration for fellowships.

Furthermore, many students within the department have been awarded graduate research fellowships available to Ph.D. and Masters students through programs administered by the National Science Foundation and the Environmental Protection Agency. The Johns Hopkins Environment, Energy, Sustainability & Health Institute (E²SHI) invites applications for one-year fellowships of up to $25,000 to support Johns Hopkins University doctoral students pursuing interdisciplinary research in environment, energy, sustainability, or health topics.

For current faculty and contact information go to http://engineering.jhu.edu/dogee/faculty.html

**Faculty**

**Chair**
Marsha Wills-Karp
allergy, asthma, immunology, pulmonary biology, environmental health, air pollution, genetics of asthma, microbiome

**Professors**
William P. Ball
Professor: environmental engineering, physical and chemical processes, water quality

Edward J. Bouwer
Abel Wolman Professor of Environmental Engineering: environmental microbiology, waste treatment

Grace S. Brush
Professor: ecology, paleoecology, plant geography

J. Hugh Ellis
Professor: environmental systems

Paul Ferraro
Bloomberg Distinguished Professor of Water and Environmental Economics: evaluation of environmental program impacts, behavioral economics

Steve H. Hanke
Professor: applied micro- and macroeconomics and finance

Benjamin F. Hobbs
Theodore K. and Kay W. Schad Professor of Environmental Management: environmental, energy, and water systems, economics

A. Lynn Roberts
Professor: environmental chemistry

Erica J. Schoenberger
Professor: economic geography, environmental history, environmental politics and policy, history of mining, history of the automobile, interdisciplinary scientific collaboration

Alan T. Stone
Professor: environmental and aquatic chemistry

**Assistant Professors**
Kai Loon Chen
Assistant Professor: physiochemical processes, particle interaction, membrane processes, environmental nanotechnology

Ciaran Harman
Assistant Professor: landscape hydrology and transport

Sarah Preheim
Assistant Professor: environmental microbiology, microbial ecology, bioinformatics

**Associate Teaching Professor**
Hedy V. Alavi
Associate Teaching Professor: hazardous and solid waste engineering and management

**Professor Emeritus**
John J. Boland
Professor Emeritus: environmental economics and policy

**Research Professor Emeritus**
Eugene D. Shchukin
Research Professor Emeritus: colloid and surface science

**Lecturer**
Justin C. Williams
Senior Lecturer: environmental and urban systems

**Joint, Part-Time, and Visiting Appointments**
Joseph Katz
Professor (Mechanical Engineering): experimental fluid mechanics, development of advanced diagnostics techniques

Charles Meneveau
Professor (Mechanical Engineering): environmental fluid mechanics, engineering, turbulence

Marc B. Parlange
Adjunct Professor: hydrology, environmental fluid mechanics, atmospheric interactions

Andrea Prosperetti
Professor (Mechanical Engineering): fluid mechanics, bubble mechanics, numerical simulations

Kellogg Schwab
Associate Professor (Environmental Health Engineering, Bloomberg School of Public Health): environmental public health, pathogen microbiology

Ben Zaitchik
Assistant Professor: (Earth & Planetary Science) understanding, managing, and coping with climatic and hydrologic variability
Courses

EN.570.108. Introduction Environmental Engineering. 3.00 Credits.
Overview of environmental engineering including water/air quality issues, water supply/wastewater treatment, hazardous/solid waste management, pollution prevention, global environmental issues, public health considerations/environmental laws, regulations and ethics. Cross-listed with Public Health Studies.
Instructor(s): H. Alavi
Area: Engineering.

EN.570.110. Introduction to Engineering for Sustainable Development. 3.00 Credits.
Instructor(s): E. Schoenberger
Area: Humanities, Social and Behavioral Sciences.

EN.570.130. Climate, Environment and Society. 3.00 Credits.
Climate change will put major stress on the environment and society. Some predict wars over water and climate-induced mass migration. What can the past teach us about how we cope or fail to cope with climate change? What do we think the future holds and what do we think we can do about it? The class involves reading, discussion, debate and research.
Freshman only.
Instructor(s): E. Schoenberger
Area: Humanities, Social and Behavioral Sciences.

EN.570.147. Adam Smith & Karl Marx. 3.00 Credits.
Smith and Marx are iconic figures in the history of political economic thought, often cited, rarely read. They are positioned as polar opposites in highly consequential debates about how society should be ordered. In this class, we will read and discuss their work, closely and carefully.
We concentrate on the two iconic texts – The Wealth of Nations and Capital, Vol. 1 – but also explore some of their less well-known writings.
Freshmen Only.
Instructor(s): E. Schoenberger; P. Jelavich
Area: Humanities, Social and Behavioral Sciences Writing Intensive

EN.570.205. Ecology. 3.00 Credits.
Introduction to processes governing the organization of individual organisms into populations, communities, and ecosystems. Interactions between individual organisms, groups of organisms, and the environment, including adaptation, natural selection, competition.
Instructor(s): G. Brush
Area: Natural Sciences.

EN.570.210. Computation/Math Modeling. 3.00 Credits.
An introduction to the use of computers in developing mathematical models. A structured approach to problem definition, solution, and presentation using spreadsheets and mathematical software. Modeling topics include elementary data analysis and model fitting, numerical modeling, dimensional analysis, optimization, simulation, temporal and spatial models. Recommended Course Background: AS.110.108 or equivalent.
Instructor(s): M. Beaudin
Area: Engineering, Quantitative and Mathematical Sciences.

EN.570.222. Environment and Society. 3.00 Credits.
Humans make their living in the environment. How do we that changes nature and changes us. This class explores human impacts on the environment, how we have thought about our relationship to nature over the millennia, and contemporary environmental discourses.
Instructor(s): E. Schoenberger
Area: Humanities, Social and Behavioral Sciences.

EN.570.239. Emerging Environmental Issues. 3.00 Credits.
Scientific principles underpinning environmental issues, with an emphasis on potential impacts of anthropogenic perturbation on human and ecosystem health. Recommended Course Background: two semesters of Chemistry.
Instructor(s): A. Roberts
Area: Engineering, Natural Sciences.

EN.570.285. Understanding Aid: Anthropological Perspectives for Technology-Based Interventions. 3.00 Credits.
This course combines anthropological perspectives with the discussion and examination of technology-based interventions in the field of development and aid policies, with particular focus on activities related to water resources, sanitation, and hygiene. Readings and discussions analyze some of the theoretical, historically rooted, and practical issues that challenge those who hope to provide effective aid. A key aim of this course is to provide students with better understanding of cultural, social, environmental and economic issues relevant to technical intervention in developing countries.
Instructor(s): E. Cervone; W. Ball
Area: Humanities, Social and Behavioral Sciences.

EN.570.301. Environmental Engineering Fundamentals I. 3.00 Credits.
Fundamentals and applications of physical and chemical processes in the natural environment and engineered systems. This class will cover material balances, chemical equilibrium, chemical kinetics, vapor pressure, dissolution, sorption, acid-base reactions, transport phenomena, reactor design, water quality, and environmental implications of nanotechnology.
Instructor(s): K. Chen
Area: Engineering, Natural Sciences.

EN.570.302. Water & Wastewater Treatment. 3.00 Credits.
Theory and design of water and wastewater treatment processes including coagulation, sedimentation, filtration, adsorption, gas transfer, aerobic and anaerobic biological treatment processes, disinfection, and hydraulic profiles through treatment units.
Prerequisites: EN.570.301 or permission required.
Instructor(s): W. Weiss
Area: Engineering, Natural Sciences.

EN.570.303. Environmental Engineering Principles and Applications. 3.00 Credits.
Fundamentals and applications of physical, chemical, and biological processes in the natural environment and engineered systems. The first part of this class will cover material balances, chemical equilibrium, chemical kinetics, vapor pressure, dissolution, sorption, acid-base reactions, transport phenomena, reactor design, and water quality. The second part of this class focuses on the principles and design of water and wastewater treatment processes, such as coagulation, sedimentation, filtration, biological treatment processes, and disinfection.
Instructor(s): K. Chen
Area: Engineering, Natural Sciences.
EN.570.304. Environmental Engineering Laboratory. 3.00 Credits.
Introduction to laboratory measurements relevant to water supply and wastewater discharge, including pH and alkalinity, inorganic and organic contaminants in water, reactor analysis, bench testing for water treatment, and measurement and control of disinfection by-products. Recommended Course Background: EN.570.210 or Instructor Permission; Corequisite: EN.570.302.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): A. Roberts
Area: Engineering, Natural Sciences.

EN.570.305. Environmental Engineering Systems Design. 4.00 Credits.
Techniques from systems analysis applied to environmental engineering design and management problems: reservoir management, power plant siting, nuclear waste management, air pollution control, and transportation planning. Design projects are required.
Instructor(s): J. Ellis
Area: Engineering, Quantitative and Mathematical Sciences.

EN.570.314. Microbial Ecology. 3.00 Credits.
This course will highlight the latest methods in biotechnology revealing ecological principles determining the diversity and dynamics of microbial communities in a variety of ecosystems. We will explore advanced topics in ecology, such as niche theory, cooperation and speciation with examples from human health, engineering and environmental microbiology. Recommended Course Background: Ecology - EN.570.205 or Microbiology - AS.020.329
Instructor(s): S. Preheim
Area: Natural Sciences.

EN.570.320. Topics on Appropriate and Sustainable Technology for Developing Communities. 1.00 Credit.
Lectures, readings and discussions on general and location-specific issues related to collaborative student projects about appropriate technology-based interventions. Focus is on improving student understanding about some of the environmental, social, health, and economic issues relevant to the development of sustainable technical interventions for under-developed communities and about the role of engineers in designing, planning, implementing, and evaluating such interventions.
Instructor(s): W. Ball
Area: Engineering, Social and Behavioral Sciences.

EN.570.328. Geography & Ecology of Plants. 3.00 Credits.
Patterns of aquatic and terrestrial plant species; historical changes in patterns using paleobotanical techniques; emphasis on biological and physical mechanisms controlling the patterns; the role of climate and man on plant distributions; several field trips; project required, which is the basis for the final grade.
Instructor(s): G. Brush
Area: Natural Sciences.

EN.570.334. Engineering Microeconomics. 3.00 Credits.
This course uses a calculus-based approach to introduce principles of engineering economics and microeconomics (demand and production theory) and their uses in engineering decision making. Recommended Course Background: AS.110.202
Instructor(s): B. Hobbs; P. Ferraro
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

EN.570.351. Introduction to Fluid Mechanics. 3.00 Credits.
Introduction to the use of the principles of continuity, momentum, and energy to fluid motion. Topics include hydrostatics, ideal-fluid flow, laminar flow, turbulent flow. Recommended Course Background: Statics, Dynamics, and AS.110.302
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): T. Hristov
Area: Engineering.

EN.570.353. Hydrology. 3.00 Credits.
The occurrence, distribution, movement, and properties of the waters of the Earth. Topics include precipitation, infiltration, evaporation, transpiration, groundwater, and streamflow. Analyzes include the frequency of floods and droughts, time-series analyzes, flood routing, and hydrologic synthesis and simulation. Recommended Course Background: AS.110.302, EN.570.351
Instructor(s): C. Harman
Area: Engineering.

EN.570.395. Principles of Estuarine Environment: Chesapeake Bay. 3.00 Credits.
Topics include the physical, chemical, and biological components of the Chesapeake Bay ecosystem from the time it started to form some 10,000 to 12,000 years ago, when sea level began to rise as the continental glaciers receded; the geology, geomorphology, and biology of the watershed drained by the estuary; relationships between the watershed and the estuary through the millennia and the effect of climate, geomorphology, and humans on the ecology of the ecosystem and its economic productivity.
Instructor(s): G. Brush
Area: Engineering, Natural Sciences.

EN.570.402. Practicum on Appropriate and Sustainable Technology for Developing Communities. 2.00 Credits.
Suggested: Microeconomics, Introductory Statistics and Optimization.
Instructor(s): W. Ball
Area: Engineering.

EN.570.403. Ecology. 3.00 Credits.
This is a graduate level of EN.570.205; Additional Writing Requirements.
Instructor(s): G. Brush
Area: Natural Sciences
Writing Intensive.

EN.570.406. Environmental History. 3.00 Credits.
Environmental history explores the interactions between social change and environmental transformation, or the ways in which societies modify landscapes and are themselves affected by geological, climatological and changing ecological conditions. Topics include the relationship between climate change and human evolution, the environmental impacts of market-based commodity production and regional economic specialization; the relationship between urbanization and environmental change; how warfare affects and is affected by environmental conditions.
Instructor(s): E. Schoenberger
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
EN.570.407. Comparison of Environmental Challenges and Governance in China and the US. 3.00 Credits.
In cooperation with the School of the Environment at Nanjing University, Nanjing, China, this course will study China's environmental challenges and governance in the context of America's own environmental challenges and governance system. Case studies will involve greenhouse gas emissions and a comparison of water quality issues in Tai Lake and the Chesapeake Bay. We will consider how developments may shape business, government, and culture, and the ways in which China and America may learn from one another. The class sessions will be conducted in part “live,” in part by teleconference with Nanjing University, and in part by web (including communications with Nanjing University students and faculty). The objectives for the course are to 1) Provide students with basic information and concepts of law, business, and governance needed to understand 21st century environmental governance challenges; 2) Provide students exposure to important environmental problems facing both China and America; 3) Provide students with alternative frameworks needed to sift through and understand the wealth of information about environmental challenges and opportunities faced by China in the globalized world; and 4) Encourage students to learn to observe and think independently about how to frame and address questions of China environmental challenges and governance which may be key to the 21st century.
Instructor(s): E. Bouwer, H. Alavi
Area: Social and Behavioral Sciences.

EN.570.411. Engineering Microbiology. 4.00 Credits.
Fundamental aspects of microbiology and biochemistry as related to environmental pollution and water quality control processes, biogeochemical cycles, microbiological ecology, energetics and kinetics of microbial growth, and biological fate of pollutants.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): E. Bouwer
Area: Engineering, Natural Sciences.

EN.570.412. Landscape Hydrology and Watershed Analysis. 3.00 Credits.
The purpose of this class is to understand the landscape-scale controls on the fluxes of water and waterborne materials through watersheds. This class differs from the Hydrology and Hydrologic Modeling classes in its focus on data analysis, and its embrace of the complexity of real landscapes. There will be significant quantitative components to the material taught, but emphasis will be on developing a greater sense of the way that landscapes “function”, and how this function is related to real-world issues of water resources and pollution. Students will gain an understanding of how climate, geologic and ecosystem setting, and human impacts control the partitioning of water between different fates, the flowpaths through the landscape and the storage and residence time of water. They will also learn conceptual and practical tools for analyzing hydrologic and other landscape data, and integrating this data in a holistic approach to watershed analysis. The class will be of interest for students intending to go into watershed or landscape management, and anyone wishing to pursue research in hydrology, geomorphology or ecology at landscape and watershed scales. The class will include at least one field trip to an instrumented watershed. GIS skills will be an advantage but are not required.
Prerequisites: AS.270.405 or EN.570.353 or equivalent.
Instructor(s): C. Harman
Writing Intensive.

EN.570.415. Current Trends in Environmental Microbiology. 3.00 Credits.
This course will highlight recent discoveries and advances in environmental microbiology such as the identification of novel microbes, changing paradigms in nitrogen cycling, single-cell activity methods and novel methods in microbial community analysis. We will explore these topics by reading and discussing the current literature, supported by short lectures and in class activities related to the topics. Background in microbiology or microbial ecology is recommended. This course will meet with EN.570.615.
Instructor(s): S. Preheim
Area: Engineering, Natural Sciences.

EN.570.416. Data Analytics in Environmental Health and Engineering. 3.00 Credits.
Data analytics is a field of study involving computational statistics, data mining and machine learning, to explore data sets, explain phenomena and build predictive models. The course begins with an overview of some traditional analysis approaches including ordinary least squares regression and related topics, notably diagnostic testing, detection of outliers and methods to impute missing data. More recent developments are presented, including ridge regression. Generalized linear models follow, emphasizing logistic regression and including models for polytomous data. Variable subsetting is addressed through stepwise procedures and the LASSO. Supervised machine learning topics include the basic concepts of boosting and bagging and several techniques: Decision Trees, Classification and Regression Trees, Random Forests, Conditional Random Forests, Adaptive Boosting, Support Vector Machines and Neural Networks. Unsupervised machine learning approaches are addressed through applications using k-means Clustering, Partitioning Around Medoids and Association Rule Mining. Methods for assessing model predictive performance are introduced including Confusion Matrices, k-fold Cross-Validation and Receiver Operating Characteristic Curves. Public health and environmental applications are emphasized, with modeling techniques and analysis tools implemented in R.
Instructor(s): J. Ellis
Area: Engineering, Quantitative and Mathematical Sciences.

EN.570.418. Multiobjective Programming and Planning. 3.00 Credits.
Public sector problems are typically characterized by a multiplicity of objectives and decision makers. This course presents a relatively new area of systems analysis which is useful for such problems: multiobjective programming or vector optimization theory. The fundamental concepts are developed and various methods are presented, including multiattribute value and utility theory. Undergraduate level of EN.570.618. Recommended Course Background: EN.570.495 or Permission Required.
Instructor(s): J. Williams
Area: Engineering.

EN.570.419. Environmental Engineering Design I. 2.00 Credits.
Through general lectures and case study examples, this course will expose students to some of the non-technical professional issues that they will face as professional engineers and in their second-semester senior design project.
Instructor(s): E. Bouwer
Area: Engineering.
EN.570.420. Air Pollution. 3.00 Credits.
The course consists of an introduction to the fundamental concepts of air pollution. Major topics of concern are aspects of atmospheric motion near the earth's surface; basic thermodynamics of the atmosphere; atmospheric stability and turbulence; equations of mean motion in turbulent flow, mean flow in the surface boundary layer; mean flow, turbulence in the friction layer; diffusion in the atmosphere; statistical theory of turbulence; plume rise. Emphasis is placed upon the role and utility of such topics in a systems analysis context, e.g., development of large and mesoscale air pollution abatement strategies. Comparisons of the fundamental concepts common to both air and water pollution are discussed. This course meets with EN.570.657, Air Pollution.
Instructor(s): J. Ellis.

EN.570.421. Environmental Engineering Design II. 3.00 Credits.
Engineering design process from problem definition to final design. Team projects include written/oral presentations. Students will form small teams that work with local companies or government agencies in executing the project. Recommended Course Background: EN.570.302, EN.570.352, and EN.570.419
Instructor(s): E. Bouwer; H. Alavi
Area: Engineering.

EN.570.423. Principles of Geomorphology. 4.00 Credits.
Analysis of the factors responsible for the form of the landscape. The concept of the cycle of erosion is discussed primarily in terms of the principles that govern the processes of erosion. Climate, conditions of soil formation, and the distribution of vegetation are considered as they relate to the development of landforms. Recommended Course Background: AS.270.220 or permission required.
Instructor(s): P. Wilcock
Area: Natural Sciences.

EN.570.428. Problems in Applied Economics. 3.00 Credits.
This course focuses on a monetary approach to national income determination and the balance of payments. Money and banking, as well as commodity and financial markets, are dealt with under both central banking, as well as alternative monetary regimes. Particular emphasis is placed on currency board systems. Students learn how to properly conduct substantive economic research, utilizing primary data sources, statistical techniques and lessons from economic history. Findings are presented in the form of either memoranda or working papers of publishable quality. Exceptional work may be suitable for publication through the Johns Hopkins Institute for Applied Economics, Global Health, and the Study of Business Enterprise. Advanced excel programming skills are required and students are expected to be pre-screened for research at the Library of Congress in Washington, D.C.. Bloomberg certification is a pre-requisite.
Prerequisites: EN.660.203 AND AS.180.101 AND AS.180.102
Instructor(s): S. Hanke
Area: Social and Behavioral Sciences
Writing Intensive.

EN.570.432. Sediment Transport & River Mechanics. 3.00 Credits.
Sediment entrainment, transport, and deposition; the interaction of flow and transport in shaping river channels. Review of boundary layer flow; physical properties of sediment; incipient, bed-load, and suspended-load motion; bed forms; hydraulic roughness; velocity and stress fields in open channels; scour and deposition of bed material; bank erosion; size, shape, planform, and migration of river channels. Techniques of laboratory, theoretical, and numerical modeling are developed and applied to problems of channel design, restoration, and maintenance. Recommended Course Background: EN.570.351
Instructor(s): P. Wilcock
Area: Engineering, Natural Sciences.

EN.570.441. Environmental Inorganic Chemistry. 3.00 Credits.
Advanced undergraduate/graduate course that explores the chemical transformations of elements of the periodic table. Thermodynamic, kinetic, and mechanistic tools needed to address the multiple chemical species and interfaces that are present in natural waters and water-based technological processes are emphasized. Ligand exchange, metal ion exchange, adsorption/desorption, precipitation/dissolution, electron and group transfer reactions, and other concepts from coordination chemistry will be covered. Applications include elemental sources and sinks in ocean waters, reactive transport in porous media, weathering and soil genesis, nutrient and toxic element uptake by organisms, water treatment chemistry, and rational design of synthetic chemicals. Co-listed with EN.570.641
Instructor(s): A. Stone
Area: Natural Sciences.

EN.570.442. Environmental Organic Chemistry. 3.00 Credits.
Advanced undergraduate/graduate course focusing on examination of processes that affect the behavior and fate of anthropogenic organic contaminants in aquatic environments. Students learn to predict chemical properties influencing transfers between hydrophobic organic chemicals, air, water, sediments, and biota, based on a fundamental understanding of intermolecular interactions and thermodynamic principles. Recommended Course Background: AS.030.104 or permission required.
Instructor(s): A. Roberts
Area: Engineering, Natural Sciences.

EN.570.443. Aquatic and Biofluid Chemistry. 3.00 Credits.
Equilibrium speciation of natural waters, biofluids, and engineered systems. Topics include acids, bases, pH, and buffering; the precipitation and dissolution of solids; complexation and chelation; oxidation and reduction reactions; regulation and design. Intended for students from a variety of backgrounds. Recommended Course Background: One year of both Chemistry and Calculus. Meets with EN.570.643 (Aquatic and Biofluid Chemistry).
Instructor(s): A. Stone
Area: Engineering, Natural Sciences.
EN.570.445. Physical and Chemical Processes. 3.00 Credits.
The application of basic physical and chemical concepts to the analysis of environmental engineering problems. Principles of chemical equilibrium and reaction, reaction engineering, interphase mass transfer, and adsorption are presented in the context of process design for unit operations in common use for water and wastewater treatment. Topics addressed include mass balances, hydraulic characteristics of reactors, reaction kinetics and reactor design, gas transfer processes (including both fundamentals of mass transfer and design analysis), and adsorption processes (including both fundamentals of adsorption and design analysis).
Prerequisites: EN.570.301 AND EN.570.302 or permission of instructor
Instructor(s): W. Ball
Area: Engineering.

EN.570.446. Biological Process of Wastewater Treatment. 3.00 Credits.
Fundamentals and application of aerobic and anaerobic biological unit processes for the treatment of municipal and industrial wastewater. Recommended Course Background: EN.570.411
Instructor(s): E. Bouwer
Area: Engineering, Natural Sciences.

EN.570.448. Physical and Chemical Processes II. 3.00 Credits.
Fundamentals and applications of physical and chemical processes used in water and wastewater treatment. This class will cover particle interactions, coagulation, flocculation, granular media filtration, membrane processes, and emerging water treatment processes. Recommended Course Background: EN.570.445 or Permission Required.
Instructor(s): K. Chen
Area: Engineering.

EN.570.449. Social Theory for Engineers. 3.00 Credits.
Engineers work in a social context. This course addresses a number of questions about that social context. How should we understand how societies come about, how they evolve, and why the rules of the game are what they are? What is the relationship between the individual and society, what does it mean to be 'modern,' are there different forms of rationality? How might all this impinge on what it means to be an engineer?
Instructor(s): E. Schoenberger
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

EN.570.452. Experimental Methods in Environmental Engineering and Chemistry. 4.00 Credits.
An advanced laboratory covering principles of modern analytical techniques and their applications to problems in environmental sciences. Topics include electrochemistry, spectrometry, gas and liquid chromatography. The course is directed to graduate students and advanced undergraduates in engineering and natural sciences. Co-listed with EN.570.652
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Prerequisite: EN.570.443
Instructor(s): A. Stone
Area: Engineering, Natural Sciences
Writing Intensive.

EN.570.470. Applied Economics & Finance. 3.00 Credits.
This course focuses on company valuations, using the proprietary Hanke-Guttridge Discounted Free Cash Flow Model. Students use the model and primary data from financial statements filed with the Securities and Exchange Commission to calculate the value of publically-traded companies. Using Monte Carlo simulations, students also generate forecast scenarios, project likely share-price ranges and assess potential gains/losses. Stress is placed on using these simulations to diagnose the subjective market expectations contained in current objective market prices, and the robustness of these expectations. During the weekly seminar, students’ company valuations are reviewed and critiqued. A heavy emphasis is placed on research and writing. Work products are expected to be of publishable quality.
Prerequisites: EN.660.203 AND (EN.570.428 OR AS.360.528)
Instructor(s): S. Hanke
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
Writing Intensive.

EN.570.490. Solid Waste Engineering and Management. 3.00 Credits.
This course covers advanced engineering and scientific concepts and principles applied to the management of municipal solid waste (MSW) to protect human health and the environment and the conservation of limited resources through resource recovery and recycling of waste material.
Instructor(s): H. Alavi
Area: Engineering.

EN.570.491. Hazardous Waste Engineering and Management. 3.00 Credits.
This course addresses traditional and innovative technologies, concepts, and principles applied to the management of hazardous waste and site remediation to protect human health and the environment.
Instructor(s): H. Alavi
Area: Engineering.

EN.570.492. Wolman Seminar - Undergraduates. 1.00 Credit.
Undergraduates only with permission of instructor.
Instructor(s): K. Chen; S. Preheim.

EN.570.493. Economic Foundations for Environmental Engineering and Policy Design. 3.00 Credits.
This course includes an exposition of intermediate level price theory, combined with a survey of applications to the analysis of public sector decisions. Theoretical topics include demand, supply, the function and behavior of the market, and introductory welfare economics.
Recommended Course Background: AS.180.101-AS.180.102, AS.110.202 or equivalent.
Instructor(s): J. Boland
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

EN.570.495. Optimization Foundations for Environmental Engineering and Policy Design. 3.00 Credits.
A collection of systems analytic techniques which are frequently used in the study of public decision making is presented. Emphasis is on mathematical programming techniques. Primarily linear programming, integer and mixed-integer programming, and multiobjective programming.
Recommended Course Background: AS.110.106-AS.110.107/AS.110.109
Instructor(s): J. Ellis
Area: Engineering, Quantitative and Mathematical Sciences.
EN.570.496. Urban and Environmental Systems. 3.00 Credits.
The mathematical techniques learned in EN.570.305 and EN.570.495 are applied to realistic problems in urban and environmental planning and management. Examples of such problems include the siting of public-sector and emergency facilities; natural areas management, protection and restoration; solid waste collection, disposal, and recycling; public health; the planning and design of energy and transportation systems; and cost allocation in environmental infrastructure development.
Instructor(s): J. Williams
Area: Engineering, Quantitative and Mathematical Sciences.

EN.570.497. Risk and Decision Analysis. 3.00 Credits.
This class introduces the decision analysis approach to making decisions under risk and uncertainty. Topics covered include decision trees, Bayes law, value of information analysis, elicitation of subjective probabilities, multiattribute utility, and their applications to environmental and energy problems. Textbook: R.T. Clemen, Making Hard Decisions, 2014. Recommended Course Background: introductory statistics and probability.
Instructor(s): B. Hobbs
Area: Engineering, Quantitative and Mathematical Sciences.

EN.570.501. Undergraduate Research. 3.00 Credits.
Instructor(s): Staff.

EN.570.502. Undergraduate Research. 0.00 - 3.00 Credits.
Instructor(s): Staff.

EN.570.504. Financial Market Research. 3.00 Credits.
This course investigates the workings of financial, foreign exchange, and commodity futures markets. Research is focused on price behavior, speculation, and hedging in these markets. Extensive research and writing of publishable quality are required. Exceptional work may be suitable for publication through the Johns Hopkins Institute for Applied Economics, Global Health, and the Study of Business Enterprise. An approved research proposal is a pre-requisite.
Instructor(s): S. Hanke
Writing Intensive.

EN.570.505. Undergraduate Independent Study. 3.00 Credits.
Instructor(s): Staff.

EN.570.506. Maryland Department of the Environment Independent Study. 0.00 - 3.00 Credits.
This independent study within the MDE’s Water Management Administration (WMA) will engage students in scientific/policy literature and data research and management, field investigations, or evaluation of emerging issues and innovative approaches to surface and ground water protection and drinking water management, wastewater management, wetlands and non-point source pollution control. Each independent course will focus on a scientific, regulatory or policy topic designed to further the mission of the administration, which is to protect the public health and the aquatic environment. The student will be assigned to a WMA engineer, scientist or project manager to develop a course of study. Hours can be tailored to accommodate student’s schedule.
Instructor(s): E. Bouwer.

EN.570.507. Independent Study: Baltimore City Energy Office. 3.00 Credits.
This Independent Study within Baltimore City’s Energy Office will engage students in local energy policies, energy initiatives, data and City operations. Interns will have the chance to apply optimization and modeling skills to one of many projects. These projects can include: • Measurement and verification of performance contracts with energy service contractors • Collection of data from City operated co-generation and solar plants and developing operation models • Analyzing energy usage data from City buildings and making recommendations As part of an independent student project, students will be required to submit a final report and present their findings to the City. Hours can be tailored to accommodate student’s schedule but a minimum of 10 hours per week during the semester is required. Permission required.
Instructor(s): E. Bouwer.

EN.570.510. Internship-Geog/Envr Eng. 0.00 - 3.00 Credits.
Instructor(s): E. Bouwer.

EN.570.511. Group Undergraduate Research. 3.00 Credits.
This section has a weekly research group meeting that students are expected to attend.
Instructor(s): C. Harman.

EN.570.590. Internship-Summer. 1.00 Credit.
Instructor(s): E. Bouwer; G. Brush; K. Chen; S. Guikema.

EN.570.597. Undergraduate Research-Summer. 3.00 Credits.
Instructor(s): Staff.

EN.570.599. Interdisciplinary Research Practice in Sustainability and Health. 3.00 Credits.
Instructor(s): G. Brush.

EN.570.601. IGERT Water, Climate and Health Colloquium. 3.00 Credits.
Recommended Course Background: Microeconomics, Introductory Statistics, and Optimization.
Instructor(s): Staff.

EN.570.602. IGERT-Water, Climate & Health-Capstone. 3.00 - 20.00 Credits.
Instructor(s): G. Brush.

EN.570.605. Interdisciplinary Research Practice in Sustainability and Health. 3.00 Credits.
Through the application of interdisciplinary research methods and skills to case studies in environmental sustainability and health, the course will provide hands-on training in the management, coordination, and practice of interdisciplinary research. The goal is to enable doctoral students to work effectively on interdisciplinary research and prepare them for professional success in an increasingly interdisciplinary funding environment. This course will be in the format of a weekly seminar and laboratory and is open to all Johns Hopkins University doctoral students from any School. No prior knowledge of sustainability or public health is required.
Instructor(s): A. Monopolis; B. Hobbs.

EN.570.606. Statistical Computing. 1.00 Credit.
This course assumes a basic familiarity with programming in R. Some knowledge of probability and statistics will be a plus. The course introduces some key methods in implementing data-driven research. The course starts with a very brief review of programming in R and basics of probability and statistics and then spans into topics such as random variable generation, Monte Carlo integration, variance reduction techniques, uncertainty estimation, MCMC, probability density estimation and numerical methods. Recommend Course Background: EN.570.608 or equivalent.
Instructor(s): R. Nateghi.
EN.570.607. Energy Policy and Planning Models. 3.00 Credits.
Methods for optimizing operation and design of energy systems and for analyzing market impacts of energy and environmental policies are reviewed, emphasizing both theory and solution of actual models. Review of linear and nonlinear programming and complementarity methods for market simulation. Recommended Course Background: EN.570.493 and EN.570.495 or equivalent.
Instructor(s): S. Preheim

EN.570.611. Natural Resource Economics. 3.00 Credits.
Development of the economic theory of depletable and renewable private and common property natural resources, including those which may be recyclable or storable.
Instructor(s): J. Boland.

EN.570.612. Infrastructure Modeling, Simulation, and Analysis. 3.00 Credits.
This course will be a mix of seminar-style guided discussions and student presentations and lectures on specific topics based on the current research literature in the field. It will give an overview of the infrastructure systems that form the basis for health, security, and economic prosperity in the developed world and give an overview of some of the most pressing infrastructure challenges in the developing world. The focus will be on quantitative modeling of infrastructure performance, sustainability, and resilience for supporting infrastructure management and policy decision-making. Suggested: Microeconomics, Introductory Statistics, and Optimization.
Instructor(s): S. Guikema
Area: Engineering, Natural Sciences.

EN.570.614. Microbial Ecology. 3.00 Credits.
This course will highlight the latest methods in biotechnology revealing ecological principles determining the diversity and dynamics of microbial communities in a variety of ecosystems. We will explore advanced topics in ecology, such as niche theory, cooperation and speciation with examples from human health, engineering and environmental microbiology. Recommended Course Background: Ecology - EN.570.205 or Microbiology - AS.020.329
Instructor(s): S. Preheim
Area: Natural Sciences.

EN.570.615. Current Trends in Environmental Microbiology. 3.00 Credits.
This course will highlight recent discoveries and advances in environmental microbiology such as the identification of novel microbes, changing paradigms in nitrogen cycling, single-cell activity methods and novel methods in microbial community analysis. We will explore these topics by reading and discussing the current literature, supported by short lectures and in class activities related to the topics. Background in microbiology or microbial ecology is recommended. This course will meet with EN.570.415
Instructor(s): S. Preheim
Area: Engineering, Natural Sciences.

EN.570.616. Data Analytics in Environmental Health and Engineering.
Data analytics is a field of study involving computational statistics, data mining and machine learning, to explore data sets, explain phenomena and build predictive models. The course begins with an overview of some traditional analysis approaches including ordinary least squares regression and related topics, notably diagnostic testing, detection of outliers and methods to impute missing data. More recent developments are presented, including ridge regression. Generalized linear models follow, emphasizing logistic regression and including models for polytomous data. Variable subsetting is addressed through stepwise procedures and the LASSO. Supervised machine learning topics include the basic concepts of boosting and bagging and several techniques: Decision Trees, Classification and Regression Trees, Random Forests, Conditional Random Forests, Adaptive Boosting, Support Vector Machines and Neural Networks. Unsupervised machine learning approaches are addressed through applications using k-means Clustering, Partitioning Around Medoids and Association Rule Mining. Methods for assessing model predictive performance are introduced including Confusion Matrices, k-fold Cross-Validation and Receiver Operating Characteristic Curves. Public health and environmental applications are emphasized, with modeling techniques and analysis tools implemented in R. EN.570 616 meets with EN.570.416. Undergraduate (usually Senior) students should sign up for 416 with permission of instructor only.
Instructor(s): J. Ellis
Area: Engineering, Quantitative and Mathematical Sciences.

EN.570.618. Multiobjective Programming and Planning. 3.00 Credits.
Public sector problems are typically characterized by a multiplicity of objectives and decision makers. This course presents a relatively new area of systems analysis which is useful for such problems: multiobjective programming or vector optimization theory. The fundamental concepts are developed and various methods are presented, including multiattribute value and utility theory. Graduate level of EN.570.418. Recommended Course Background: EN.570.495 or Permission Required.
Instructor(s): J. Williams
Area: Engineering.

EN.570.619. Methods in Microbial Community Analysis. 3.00 Credits.
This graduate level course will provide a practical knowledge of molecular methods used to identify microorganisms present with a sample and gain insight into their function and dynamics. It will provide theoretical background into how to identify microorganisms and infer functional capabilities from genetic material, practical knowledge of common molecular methods and computational skills needed to analyze the resulting sequence data. No background in molecular biology, computation or microbiology is necessary. Course objectives include (1) understanding key aspects of microbial community composition from literature reports; (2) recognizing major microbial taxonomic groups and understanding phylogenetic relationships; (3) developing molecular biology lab skills required to create gene amplicon libraries from an aquatic samples; (4) working knowledge of statistical methods used to associate taxonomic and functional gene information with specific environmental conditions. Recommended Course Background: Microeconomics, Introductory Statistics, Optimization. Co-listed with EN.570.429
Instructor(s): S. Preheim.
EN.570.641. Environmental Inorganic Chemistry. 3.00 Credits.
Advanced undergraduate/graduate course that explores the chemical transformations of elements of the periodic table. Thermodynamic, kinetic, and mechanistic tools needed to address the multiple chemical species and interfaces that are present in natural waters and water-based technological processes are emphasized. Ligand exchange, metal ion exchange, adsorption/desorption, precipitation/dissolution, electron and group transfer reactions, and other concepts from coordination chemistry will be covered. Applications include elemental sources and sinks in ocean waters, reactive transport in porous media, weathering and soil genesis, nutrient and toxic element uptake by organisms, water treatment chemistry, and rational design of synthetic chemicals. Co-listed with EN.570.441
Instructor(s): A. Stone
Area: Natural Sciences.

EN.570.643. Aquatic and Biofluid Chemistry. 3.00 Credits.
Equilibrium speciation of natural waters, biofluids, and engineered systems. Topics include acids, bases, pH, and buffering; the precipitation and dissolution of solids; complexation and chelation; oxidation and reduction reactions; regulation and design. Intended for students from a variety of backgrounds. Recommended Course Background: One year of both Chemistry and Calculus. Meets with EN.570.443 (Aquatic and Biofluid Chemistry)
Instructor(s): A. Stone
Area: Engineering, Natural Sciences.

EN.570.645. Reaction Mechanisms in Environmental Organic Chemistry. 3.00 Credits.
Detailed investigation of mechanisms of abiotic and biochemical transformations of organic pollutants in natural and engineered environments. Recommended Course Background: EN.570.442.
Instructor(s): A. Roberts
Area: Engineering, Natural Sciences.

EN.570.646. Water Quality and Treatment: Global Issues and Solutions. 3.00 Credits.
This course involves extensive student participation and is intended for motivated graduate students from both engineering and non-engineering disciplines who are interested in understanding technological aspects water quality in the contexts of drinking water treatment, wastewater disposal, and sanitation for public health. The course involves extensive outside reading, in-class reflections on those readings, and a combination of instructor- and student-led in-class presentations. After this course, students should have improved understanding of: (1) Fundamental concepts of water quality and treatment as related to the application of engineering principles to the design and operation of unit operations for the removal of traditional and “emerging” contaminants; (2) Challenges to providing water of appropriate quality for drinking, sanitation, and environmental sustainability in the face of population growth and climate change; and (3) Alternative approaches for meeting those challenges, particularly as related to the design and application of technological interventions.
Instructor(s): W. Ball.

EN.570.647. Hydrologic Transport in the Environment. 3.00 Credits.
This course considers the transport of solutes and sediments by water through terrestrial landscapes, with an emphasis on the movement of nutrients and contaminants from the landscape into receiving water bodies like rivers, lakes and estuaries. The course will cover the theoretical approaches (advection-diffusion/dispersion, transit time distributions), the use of active and passive tracers to infer transport processes, analysis of water quality time series, runoff generation and flow pathways in watersheds, and the effect of climate variability on transport. Assessment is based on a semester project and in-class presentations. Seniors interested in joining the class must have Hydrology 570.353 and should contact the instructor.
Instructor(s): C. Harman
Area: Engineering, Natural Sciences.

EN.570.652. Experimental Methods in Environmental Engineering and Chemistry. 4.00 Credits.
An advanced laboratory covering principles of modern analytical techniques and their applications to problems in environmental sciences. Topics include electrochemistry, spectrometry, gas and liquid chromatography. The course is directed to graduate students and advanced undergraduates in engineering and natural sciences. Co-listed with EN.570.452
Prerequisites: EN.570.443
Instructor(s): A. Stone
Area: Engineering, Natural Sciences
Writing Intensive.

EN.570.657. Air Pollution. 3.00 Credits.
The course consists of an introduction to the fundamental concepts of air pollution. Major topics of concern are aspects of atmospheric motion near the earth's surface; basic thermodynamics of the atmosphere; atmospheric stability and turbulence; equations of mean motion in turbulent flow, mean flow in the surface boundary layer; mean flow, turbulence in the friction layer; diffusion in the atmosphere; statistical theory of turbulence; plume rise. Emphasis is place upon the role and utility of such topics in a systems analysis context, e.g., development of large and mesoscale air pollution abatement strategies. Comparisons of the fundamental concepts common to both air and water pollution are discussed.
Instructor(s): J. Ellis.

EN.570.676. Stochastic Programming. 3.00 Credits.
The course deals with computationally tractable methodologies for incorporating risk/uncertainty into mathematical programming (optimization) models. Focal topics include chance-constrained programming, stochastic linear programming, two-stage programming under uncertainty and stochastic dynamic programming. Some of these techniques may result in the creation of nonlinear models thus nonlinear/nonseparable optimization techniques are presented as well. Numerous applications are presented involving, for the most part, environmental (i.e., water and air resources) problems. Prerequisites: linear programming or equivalent, and introductory probability and statistics.
Instructor(s): J. Ellis.
EN.570.693. Economic Foundations for Environmental Engineering and Policy Design. 3.00 Credits.
This course includes an exposition of intermediate level price theory, combined with a survey of applications to the analysis of public sector decisions. Theoretical topics include demand, supply, the function and behavior of the market, and introductory welfare economics. Recommended Course Background: AS.180.101-AS.180.102, AS.110.202 or equivalent. This course runs concurrently with EN.570.493 (Undergrads may register by special request for EN.570.493 in order to take this course.)
Instructor(s): J. Boland
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

EN.570.800. Masters Independent Study. 1.00 - 3.00 Credits.
Instructor(s): Staff.

EN.570.801. Doctoral Research. 3.00 - 20.00 Credits.
Instructor(s): Staff
Area: Engineering, Natural Sciences.

EN.570.803. Master's Research. 3.00 - 10.00 Credits.
Instructor(s): Staff
Area: Engineering.

EN.570.805. Jensen Internship. 3.00 Credits.
Instructor(s): W. Ball.

EN.570.841. Wolman Seminar- Graduates. 1.00 Credit.
Instructor(s): K. Chen.

EN.570.850. Graduate Independent Study. 1.00 - 3.00 Credits.
Instructor(s): E. Bouwer; M. Hilpert; S. Guikema; S. Preheim; W. Ball.

EN.570.873. Environmental Science & Management Seminar. 1.00 Credit.
Instructor(s): B. Hobbs; D. Sheer.

EN.570.881. Environmental Engineering Seminar. 1.00 Credit.
Instructor(s): E. Bouwer.

Cross Listed Courses

Anthropology
AS.070.285. Understanding Aid: Anthropological Perspectives for Technology-Based Interventions. 3.00 Credits.
This course combines anthropological perspectives with the discussion and examination of technology-based interventions in the field of development and aid policies, with particular focus on activities related to water resources, sanitation, and hygiene. Readings and discussions analyze some of the theoretical, historically rooted, and practical issues that challenge those who hope to provide effective aid. A key aim of this course is to provide students with better understanding of cultural, social, environmental and economic issues relevant to technical intervention in developing countries.
Instructor(s): E. Cervone; W. Ball
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

Earth Planetary Sciences
AS.270.205. Introduction to Geographic Information Systems and Geospatial Analysis. 3.00 Credits.
The course provides a broad introduction to the principles and practice of Geographic Information Systems (GIS) and related tools of Geospatial Analysis. Topics will include history of GIS, GIS data structures, data acquisition and merging, database management, spatial analysis, and GIS applications. In addition, students will get hands-on experience working with GIS software.
Instructor(s): X. Chen
Area: Engineering, Natural Sciences.

Public Health Studies
AS.280.335. The Environment and Your Health. 3.00 Credits.
This course surveys the basic concepts underlying environmental health sciences (toxicology, exposure assessment, risk assessment), current public health issues (hazardous waste, water- and food-borne diseases), and emerging global health threats (global warming, built environment, ozone depletion, sustainability). Public Health Studies, Global Environmental Change and Stability, and Earth and Planetary Science majors have 1st priority for enrollment. Your enrollment may be withdrawn at the discretion of the instructor if you are not a GECS, PHS, or EPS major.
Instructor(s): J. Bressler; J. Yager; M. Latshaw
Area: Natural Sciences.

Interdepartmental
AS.360.147. Freshmen Seminar: Adam Smith and Karl Marx. 3.00 Credits.
This freshmen seminar examines the ideas of Smith, the greatest proponent of the free market, and Marx, his most radical critic. Freshmen only.
Instructor(s): E. Schoenberger, P. Jelavich
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.360.528. Problems in Applied Economics. 2.00 Credits.
This course focuses on a monetary approach to national income determination and the balance of payments. Money and banking, as well as commodity and financial markets, are dealt with under both central banking, as well as alternative monetary regimes. Particular emphasis is placed on currency board systems. Students learn how to properly conduct substantive economic research, utilizing primary data sources, statistical techniques and lessons from economic history. Findings are presented in the form of either memoranda or working papers of publishable quality. Exceptional work may be suitable for publication through the Johns Hopkins Institute for Applied Economics, Global Health, and the Study of Business Enterprise. Advanced excel programming skills are required and students are expected to be pre-screened for research at the Library of Congress in Washington, D.C.. Bloomberg certification is a requisite.
Prerequisites: EN.660.203
Instructor(s): S. Hanke
Writing Intensive.

Information Security Institute

http://isi.jhu.edu/

The Johns Hopkins University Information Security Institute (JHUISI) (isi.jhu.edu) is the University’s focal point for research and education in information security, assurance and privacy. Securing cyberspace...
and our national information infrastructure is more critical now than ever before, and it can be achieved only when the core technology, legal and policy issues are adequately addressed. JHUISI is committed to a comprehensive approach that includes input from academia, industry and government. The University, through JHUISI’s leadership, has thus been designated as a Center of Academic Excellence in Information Assurance Education and Research by the National Security Agency and the Department of Homeland Security, and leading experts in the field. Through our broad range of educational opportunities including a ground-breaking graduate program and leading edge research in foundational science and applied technologies, JHUISI is having a significant impact in the region and nationwide.

Our research in cryptography, networking, wireless, systems evaluation, medical privacy and electronic voting, among other areas is widely circulated among academics and policymakers. Moreover, JHUISI is instrumental in homeland security efforts across Hopkins, including emergency health preparedness, bio-terrorism and national defense.

The Johns Hopkins University Information Security Institute based in the Whiting School of Engineering provides a broad and holistic perspective to the information security and assurance field relative to both research and education. In addition to a comprehensive collection of programs related to information technology, a range of management, governance, and policy issues are integrated into the Information Security Institute agenda. The breadth of focus provided represents a strength and distinction of the Johns Hopkins University Information Security Institute. Through the involvement of the faculty and resources from the Whiting School of Engineering, the Krieger School of Arts and Sciences, the Bloomberg School of Public Health, the Carey Business School, and the Applied Physics Lab, a variety of innovative as well as international research and educational initiatives in information security and assurance are supported within the Information Security Institute.

Facilities

The computing facilities include a laboratory of shared servers and PC workstations, several customizable machines for student projects, and multiple high-speed laser printers. Various focused research laboratories have additional resources that provide greater specialization than the general lab. The facilities are connected to a secure high-speed network which allows access to specialized hardware in other departments and institutions. The Information Security Institute and Department of Computer Science cooperate in the use of some of these facilities.

M.S.S.I. Graduate Program

The flagship educational experience offered by Johns Hopkins University in the area of information security and assurance is represented by the Master of Science in Security Informatics (M.S.S.I.) degree. A wide range of courses is available in support of this unique and innovative graduate program.

The M.S.S.I. is a full-time day program offered on the Homewood Campus in North Baltimore. Most students complete the program in three full-time semesters though some graduate students may finish their degree part-time after completing the required two consecutive semesters of residency as a full-time student.

Application Requirements for the M.S.S.I. Degree

- Application to the M.S.S.I. degree is open to outstanding candidates who hold a bachelor’s degree with sufficient technical exposure to computer science that serves as preparation for the core technology
courses, including intermediate programming, data structure, discrete mathematics, and computer system fundamentals.
- All applicants are obligated to take and submit the results of the Aptitude Test of the Graduate Record Examination as one of the requirements for admission.
- International students are obligated to take either the TOEFL test or the IELTS test.

The preferred scores are as follows:

**GRE General Test**

<table>
<thead>
<tr>
<th>Category</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>Verbal</td>
<td>153 (62%)</td>
</tr>
<tr>
<td>Quantitative</td>
<td>160 (84%)</td>
</tr>
<tr>
<td>Analytical</td>
<td>3.5</td>
</tr>
<tr>
<td>TOEFL Internet based</td>
<td>79</td>
</tr>
<tr>
<td>IELTS</td>
<td>7.0</td>
</tr>
</tbody>
</table>

- The institution code for both the GRE and TOEFL is 5332.
- The department code for the GRE is 0404. The department code for TOEFL is 78.
- These scores in the above serve as general guidelines for admission. The Admissions Committee in making its final decisions will consider the combination of professional knowledge, academic excellence, letters of recommendation, and the statement of purpose, as well as GRE, TOEFL, and IELTS scores of the applicants.
- A student is required to apply online at [https://app.applyyourself.com/?id=jhu-grad](https://app.applyyourself.com/?id=jhu-grad).

Course Requirements for the M.S.S.I.

Upon admission to the Master of Science in Security Informatics, a student is assigned a graduate advisor from the Information Security Institute who must approve the courses to be applied to the M.S.S.I. degree.

The Master of Science in Security Informatics program has a course requirement of a minimum of 10 courses, plus a capstone project including a report and presentation. Students must choose one of two tracks – Technology & Research Track or Policy & Management Track.

All courses supporting the M.S.S.I. are categorized as one of four areas of Technology, Policy, Health, and Management. Each course is further classified into Core, Elective or Foundational category.

The Technology & Research Track program of study must satisfy the following course distribution requirements:

- Five Technology courses: at least four Core Technology courses including at least one Core Technology course in Cryptography.
- Three Core Policy/Management/Health courses: at least one Core Policy course and one Core Management course.
- Two additional courses from Core or Elective Technology categories; or when deemed appropriate relative to a student’s background, interests, and goals AND with the prior approval of the faculty advisor and the institute, from other course areas.

The Policy & Management Track program of study must satisfy the following course distribution requirements:

- Three Technology courses: at least two Core Technology courses including at least one Core Technology course in Cryptography.
Additional Course Requirements

- Five Core/Foundation Policy/Health/Management courses: at least one course from each of Core Policy/Management/Health categories and at least one Foundation Management course.
- Two additional courses from Core/Elective Technology or Core/Foundational Policy/Management/Health categories; or when deemed appropriate relative to a student’s background, interests, and goals AND with the prior approval of the faculty advisor and the institute, from other course areas.

Project Requirement

The students register for EN.650.736/EN.650.737/EN.650.738 for the capstone project. These courses are not counted toward the 10-course requirement.

In general, the M.S.S.I. Capstone Project will include both technology and non-technology components, and will be conducted within a team-structured environment comprised of students and faculty mentors (plus external mentors if appropriate). These projects will generally be sponsored by government/industry partners and affiliates of the Information Security Institute, and can also be related to faculty research programs supported by grants and contracts. They should relate to real-world problems and exhibit both theoretical and practical significance. The project must be documented by a report and presentation, as well as other applicable deliverables including but not limited to system prototypes, utility libraries, experimental demonstrations, conference or journal submissions, and so on. It should follow the best practice of software engineering.

Students should actively initiate the project while communicating with the potential faculty mentor for technical issues and the faculty advisor for project management. They are expected to develop a project plan at the end of the second semester. The project is expected to have a proposal approved at the start of the third semester and be finished by the end of the third semester. A presentation will be scheduled when the project concludes. The faculty mentor should approve each milestone of the project with the faculty advisor being informed. When the project is completed with all the deliverables, the faculty advisor assigns a score upon the recommendation of the faculty mentor.

Additional Course Requirements

- All courses toward the degree requirement must be 400-level or above. Other courses can be used with the approval of the Institute.
- Courses not found on the area-specific lists (http://engineering.jhu.edu/jhuisi/mssi-course-distribution) can be used to meet area requirements with prior approval from the student’s advisor and the Institute.
- At most two independent study courses can be counted toward the course requirements.
- No courses with grades of P may be counted with the exception of independent study courses.
- At most two courses may be transferred from other institutions. The student’s faculty advisor and the director of Information Security Institute must approve such transfer courses.
- The overall grade point average of the courses counted towards the coursework requirements must be 3.00 or higher.
- At most two courses with grade less than B- may be counted towards the course work requirements. No courses with grade less than C- may be counted.
- A grade of D or F results in probation. A second D or F is cause for being dropped from the program.

All courses supporting the M.S.S.I. are categorized as one of four areas of Technology, Policy, Health, and Management. Each course is further classified into Core, Elective or Foundational category.

- For seven-week course modules, e.g., several courses offered through the Whiting School of Engineering Center for Leadership Education (CLE) (http://eng.jhu.edu/wse/cle), two of them count as one course of 3 credit hours.
- Two quarter-based courses, e.g., several courses of course numbers starting with ME from the School of Medicine Division of Health Sciences Informatics (http://dhisi.med.jhmi.edu), are equivalent of one WSE course of 3 credit hours.

* For other elective options that fulfill this requirement refer to http://isi.jhu.edu/mssi/course_distribution

### Concurrent Bachelor’s/Master’s Degree Program in Conjunction with the M.S.S.I.

A concurrent bachelor’s/master’s degree program including the M.S.S.I. is also available to Johns Hopkins University students. In this program, by the conclusion of the undergraduate sophomore/junior academic year, a student can apply for concurrent admission into the M.S.S.I. program. If accepted, the student during each subsequent semester partitions her/his course load into courses that will count for the undergraduate degree and courses that will count for the M.S.S.I. degree. Usually with one additional year of study, the student can simultaneously satisfy both sets of degree requirements.

### Dual Master’s Program with the Department of Computer Science

Students interested in pursuing the above Dual Master’s Program (DMP) will have initially entered either the M.S.S.I. program or the M.S.E. program in Computer Science, and then apply for the DMP at a later point. A maximum of two courses (approved by the advisors) can be double counted toward each set of course requirements, thereby facilitating the feasibility of completing the DMP in two academic years plus the in-between summer. In such cases, the designation of the double counted courses would be done in conjunction with one advisor from each department and the Academic Program Administrator.

### Dual Master’s Program with the Department of Applied Math and Statistics in the WSE

A similar DMP has been initiated regarding the JHUISI M.S.S.I. and the master’s program in the Department of Applied Math and Statistics in the WSE. The details of this DMP are similar in principle to those for the M.S.S.I./M.S.E. in Computer Science, but there are some significant requirement/curricular differences. Each program should be contacted if a student is interested.

### Dual Master’s Program with the School of Public Health

A similar DMP has been initiated regarding the JHUISI M.S.S.I. and the Master of Health Sciences (M.H.S.) program in the Bloomberg School of Public Health (BSPH). The details of this M.S.S.I./M.H.S. DMP are similar in principle to those for the M.S.S.I./M.S.E. in Computer Science, but there are some significant differences. Each program should be contacted if a student is interested.

### Joint Program with the Certificate in National Security Studies of the School of Arts and Sciences

A joint M.S.S.I. Degree and the Certificate in National Security Studies (CNSS) (http://advanced.jhu.edu/academics/certificate-programs/national-security-studies/degree-requirements) in the Krieger School of Arts and Science is now being offered. The CNSS requires completion of five core courses. Two designated courses can be double counted for the MSSI and the CNSS. Each program should be contacted if a student is interested in completing this course of study.

For current faculty and contact information go to http://isi.jhu.edu/institute/people

### Faculty

**Executive Director**
Anton Dahbura
Information Security Institute.

**Program Director**
Xiangyang Li
Master of Science in Security Informatics.
Professor
Aviel Rubin
Computer Science: Technical Director of Information Security Institute: network and systems security, applied cryptography, cryptographic key distribution, anonymity and computer privacy, electronic commerce, fire-walls and network perimeter defenses, security issues in e-voting, applying security to applications such as medical information systems, intellectual property protection.

Professor Emeritus
Gerald Masson
Computer Science: reliable computing, computer networking, real-time monitoring of software operations, computer architecture, computer networking, security informatics relative to networks and software operations.

Associate Research Professor
Susan Hohenberger
Computer Science: theory, cryptography, computer security, algorithms, complexity theory, balancing privacy and accountability in information systems.

Assistant Professors
Matthew Green
Computer Science: applied cryptography, cryptographic protocol design, analysis of practical security systems, privacy-preserving storage and identification technologies.

Abhishek Jain
Computer Science: cryptography & security, theoretical computer science

Lecturers
William Agresti, Ph.D.
Professor, Carey Business School: system design and development, information systems architecture, and IT integration for business, software engineering, IT measurement and knowledge management.

Joel Coffman, Ph.D.
Senior Cyber Engineer, Applied Physics Laboratory: cloud computing, databases, software engineering, computer architecture

Michael Jacobs, J.D.
Computer ethics, digital rights management, intellectual property protection.

George E. Kalb
Embedded computer systems-vulnerabilities, intrusions and protection mechanisms, embedded systems security, software engineering.

Michael Kociemba
Information security, management, and infrastructure protection.

Timothy R. Leschke, Ph.D.
Computer forensics

Song Luo, Ph.D
Computer security and security analytics.

Seth Nielson, Ph.D.
Network security

Williams Sauers, J.D.
Digital rights management, intellectual property protection.

Lanier Watkins, Ph.D.

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

EN.650.401. Introduction to Information Security. 3.00 Credits.
This course exposes students to the cross-disciplinary and broad information security field. It surveys a range of fundamental topics of information security principles, architecture, policy and standard, risk management, cryptography, physical, operation, system and network security mechanisms, and law and ethics, among others. This course includes lectures, case studies, and homework. Students will also complete independent study class projects. Recommended Course Background: Basic knowledge of computer system and information technology.
Instructor(s): X. Li.

EN.650.414. Rights in Digital Age. 3.00 Credits.
This course will examine various legal and policy issues presented by the tremendous growth in computer technology, especially the Internet. The rights that various parties have with respect to creating, modifying, using, distributing, storing, and copying digital data will be explored. The concurrent responsibilities, and potential liabilities, of those parties will also be addressed. The course will focus on intellectual property issues, especially copyright law, and other legal and economic considerations related to the use and management of digital data. Copyright law and its role within the framework of intellectual property law will be presented in a historical context with an emphasis on its applicability to emerging-technology issues. Specifically, the treatment of various works, such as music, film, and photography that were traditionally, analog in nature will be analyzed with respect to their treatment in the digital domain; works that are by their nature digital, such as computer software, will also be analyzed. The current state of U.S. copyright law will be presented, as will relevant international treaties and foreign laws. The goal of the course is to provide those involved or interested in digital rights management with a general awareness of the rights and obligations associated with maintaining and distributing digital data. (This course will be taught in Washington, DC and video-cast on Homewood Campus.)
Instructor(s): M. Jacobs
Area: Social and Behavioral Sciences.

EN.650.424. Network Security. 3.00 Credits.
This course focuses on communication security in computer systems and networks. The course is intended to provide students with an introduction to the field of network security. The course covers network security services such as authentication and access control, integrity and confidentiality of data, firewalls and related technologies, Web security and privacy. Course work involves implementing various security techniques. A course project is required. [Systems] Co-listed with EN.600.424.
Prerequisites: 600.226 and (600.344 or 600.444) or permission; 600.120 (or equivalent) recommended.
Instructor(s): A. Mishra
Area: Engineering, Quantitative and Mathematical Sciences.
EN.650.431. Ethical Hacking. 3.00 Credits.
Cyber security affects every facet of industry and our government, and thus is now a threat to National Security. This course is designed to introduce students to the skills needed to defend computer network infrastructure by exposing them to the hands-on identification and exploitation of vulnerabilities in servers (i.e., Windows and Linux), wireless networks, websites, and cryptologic systems. These skills will be tested by having teams of students develop and participate in instructor lead capture-the-flag competitions. Also included are advanced topics such as shell coding, IDA Pro analysis, fuzzing, and writing or exploiting network-based applications or techniques such as web servers, spoofing, and denial of service.
Instructor(s): L. Watkins
Area: Engineering.

EN.650.433. Embedded Computer Systems. 3.00 Credits.
This course provides an understanding of differences in network-based computers, program mobility, current intrusion protection technologies and exploitation methods along with material relating to computer hacking and vulnerability assessment. Department Majors Only. Course taught On-line.
Instructor(s): G. Kalb
Area: Engineering.

EN.650.445. Practical Cryptographic Systems. 3.00 Credits.
This semester long course will teach skill of how cryptographic systems work and fail - as part of a complete hardware and software system. The skills will be taught by examples i.e., by studying and identifying flows in widely deployed crypto systems. We will place a particular emphasis on the failure of security by obscurity and the feasibility of reverse-engineering undocumented crypto systems. Co-listed with EN.600.454.
Instructor(s): M. Green.

EN.650.457. Computer Forensics. 3.00 Credits.
This course introduces students to the field of computer forensics and it will focus on the various contemporary policy issues and applied technologies. Topics to be covered include: legal and regulatory issues, investigation techniques, data analysis approaches, and incident response procedures for Windows and UNIX systems. Homework in this course will relate to laboratory assignments and research exercises. Students should also expect that a group project will be integrated into this course.
Instructor(s): T. Leschke
Area: Engineering.

EN.650.458. Introduction to Cryptography. 3.00 Credits.
Cryptography has a rich history as one of the foundations of information security. This course serves as the introduction to the working primitives, development and various techniques in this field. It emphasizes reasoning about the constraint and construction of cryptographic protocols that use shared secret key or public key. Students will also be exposed to some current open problems. Permission of instructor only.
Instructor(s): X. Li
Area: Engineering.

EN.650.460. Software Vulnerability Analysis. 3.00 Credits.
Competent execution of security assessments on modern software systems requires extensive knowledge in the reverse engineering and vulnerability analysis technical domains. This course examines software vulnerability analysis relevant theory and its application within security assessments in detail. Key topics include historical vulnerabilities, their corresponding exploits, and any associated preventative measures. Fundamental tools and techniques for performing software reverse engineering and vulnerability analysis are covered extensively. The format of this course includes lectures and hands-on assignments. Students will complete and demonstrate a project as part of the course.
Instructor(s): R. Johnston
Area: Engineering.

EN.650.461. Cloud Computing Security. 3.00 Credits.
Cloud computing promises significant cost savings via economies of scale that typically are not achievable by a single organization. This course examines cloud computing in detail and introduces the security concerns associated with cloud computing. Key topics include service models for cloud computing, virtualization, storage, management, and data processing. Fundamental security principles are introduced and applied to cloud computing environments. The format of this course includes lectures and hands-on assignments. Students will complete a project and present it as part of the course.
Instructor(s): J. Coffman
Area: Engineering, Natural Sciences.

EN.650.471. Cryptography & Coding. 4.00 Credits.
A first course in the mathematical theory of secure and reliable electronic communication. Cryptology is the study of secure communication. How can we ensure the privacy of messages? Coding theory studies how to make communication reliable: How can messages be sent over noisy lines? Topics include finite field arithmetic, error-detecting and error-correcting codes, data compressions, ciphers, one-time pads, the Enigma machine, one-way functions, discrete logarithm, primality testing, secret key exchange, public key cryptosystems, digital signatures, and key escrow. Students should have computing experience. Recommended Course Background: AS.110.201
Prerequisites: EN.550.171 or permission
Instructor(s): D. Fishkind
Area: Engineering, Quantitative and Mathematical Sciences.

EN.650.472. Security Analytics. 3.00 Credits.
Security analytics refers to information technology solutions that gather and analyze security events to bring situational awareness and enable IT staff to understand and analyze events that pose the greatest risk. Increasingly, detecting and preventing cyber attacks require sophisticated use of data analytics and machine learning tools. This course will cover fundamental theories and methods in data science, modern security analytical tools, and practical use cases of security analytics. Students of this course learn concepts, tasks, and methods of data science; and how to apply data science to cyber security problems. Students also learn how to use modern software in security analytics. Recommend Course Background: Basic knowledge of statistics; Either python or R programming skill (do not require both).
Instructor(s): S. Luo.
EN.650.621. Critical Infrastructure Protection. 3.00 Credits.
This course focuses on understanding the history, the vulnerability, and the need to protect our Critical Infrastructure and Key Resources (CIKR). We will start by briefly surveying the policies which define the issues surrounding CIKR and the strategies that have been identified to protect them. Most importantly, we will take a comprehensive approach to evaluating the technical vulnerabilities of the 18 identified sectors, and we will discuss the tactics that are necessary to mitigate the risks associated with each sector. These vulnerabilities will be discussed from the perspective of ACM, IEEE, or other technical journals/articles which detail recent and relevant network-level CIKR exploits. We will cover well known vulnerable systems such the Internet, SCADA or PLC and lesser known systems such as E911 and industrial robot. Also, a class project is required. Recommended Course Background: EN.650.424 or equivalent or permission by instructor.
Instructor(s): L. Watkins
Area: Engineering, Natural Sciences.

EN.650.624. Advanced Network Security. 3.00 Credits.
This course focuses on advanced security topics and research in computer networks. It builds on the basic overview of network security covered in previous security courses. Beyond the basics of developing security network communications and applications, this advanced course dives deeper into the theory and practice behind network attack, the growing reality of weaponized zero-day vulnerabilities, and the current state-of-the-art responses. Course work includes reviewing contemporary security research papers, hands-on experiments in defending/attacking networks, and writing analyses.
Prerequisites: EN.650.424 OR EN.600.424 or permission of the instructor.
Instructor(s): S. Nielson
Area: Engineering.

EN.650.640. Moral & Legal Foundations of Privacy. 3.00 Credits.
This course explores the ethical and legal underpinnings of the concept of privacy. It examines the nature and scope of the right to privacy by addressing fundamental questions such as: What is privacy? Why is privacy morally important? How is the right to privacy been articulated in constitutional law?
Instructor(s): V. Galluzzo; W. Sauers.

EN.650.652. Healthcare Security Management. 3.00 Credits.
The course will address information security in the public health and medical fields, with special emphasis on clinical care, research and the role of the academic medical center. In many respects, the course builds on EN.650.651 Health Information, Privacy, Law and Policy’s treatment of privacy and how such privacy is protected in the health and medical arena, including but not limited to HIPAA. Open to MSSI students or permission required.
Instructor(s): D. Lacey.

EN.650.653. Financial Issues in Managing a Secure Operation. 3.00 Credits.
This course addresses the risks (financial, reputation, business, and third party), costs, ROI, and other business issues concerned in planning and managing a secure operation. Topics include disaster recovery, outsourcing issues; service level agreements; evaluating external security service providers; assessing security total cost of ownership; audit procedures; financial integrity; cost/benefit analyses; back-up and recovery provisions; insurance protection; contingency and business continuity plans; qualitative and quantitative risk analysis; monitoring the security of the enterprise; information economics; performance reporting; automated metrics reporting; responses to threats; effects of security policies and practices on business and customers; preparing a business case for information security investments; and developing cost-effective solutions given constraints in money, assets, and personnel. Case studies and exercises will be used to illustrate financial planning and evaluation of security operations.
Instructor(s): M. Kociemba.

EN.650.654. Computer Intrusion Detection. 3.00 Credits.
Intrusion detection supports the on-line monitoring of computer system activities and the detection of attempts to compromise normal services. This course starts with an overview of intrusion detection tasks and activities. Detailed discussion introduces a traditional classification of intrusion detection models, applications in host-centered and distributed environments, and various intrusion detection techniques ranging from statistical analysis to biological computing. This course serves as a comprehensive introduction of recent research efforts in intrusion detection and the challenges facing modern intrusion detection systems. Students will also be able to pursue in-depth study of special topics of interest in course projects.
Instructor(s): X. Li
Area: Engineering, Natural Sciences.

EN.650.655. Implementing Effective Information Security Projects. 3.00 Credits.
This course focuses on the personnel, legal, regulatory and privacy issues that comprise the basic security management areas that must be considered when developing and implementing an effective information security program. Specific topics include security-related legislation, government and industry security frameworks, the identification and management of risk, security controls, defense in depth, critical infrastructure protection, development and implementation of an enterprise wide security strategy, and organizational roles and responsibilities.
Instructor(s): M. Kociemba.

EN.650.657. Advanced Computer Forensics. 3.00 Credits.
This course will analyze advanced topics and state of the art issues in the field of digital forensics. The course will be run in a research seminar format and students will be given both basic and applied research projects in such areas as: intrusion analysis, network forensics, memory forensics, mobile devices, and other emerging issues.
Instructor(s): T. Leschke.
EN.650.661. Human Factors in Information Security. 3.00 Credits.
The human factor is critical to any successful computer security solution since users are very often the weakest link in such systems. This course will examine a variety of human behaviors ranging from micro to macro cybernetic levels that are relevant to making the best case for information security. It is delivered through lectures on relevant findings in different disciplines of human computer interaction, human factors engineering, cognitive science, and product design; studies of useful user and security modeling frameworks and tools; and term research projects to explore security oriented topics in human machine systems. Its goal is to improve security informatics through informed decisions by the knowledge of the good and bad human characters in computer and cyber security.
Instructor(s): X. Li
Area: Engineering.

EN.650.668. Advanced Topics in Software Security. 3.00 Credits.
Topics vary but mainly focus on recent advances in exploitation techniques and defenses for software including software running on embedded systems software, browsers, and nontraditional devices such as microcontrollers in PCs. Recommended Course Background: EN.600.460 or EN.650.442 or permission of instructor
Instructor(s): S. Checkoway

EN.650.736. Information Security Projects. 1.00 Credit.
All MSSI programs must include a project involving a research and development oriented investigation focused on an approved topic addressing the field of information security and assurance from the perspective of relevant applications and/or theory. There must be project supervision and approval involving a JHUISI affiliated faculty member. A project can be conducted individually or within a team-structured environment comprised of MSSI students and an advisor. A successful project must result in an associated report suitable for on-line distribution. When appropriate, a project can also lead to the development of a so-called deliverable such as software or a prototype system. Projects can be sponsored by government/industry partners and affiliates of the Information Security Institute, and can also be related to faculty research programs supported by grants and Contracts. Required course for any full-time MSSI student. Open to MSSI students. Permission required for non-MSSI students.
Instructor(s): A. Dahbura; X. Li.

EN.650.737. Information Security Projects. 1.00 Credit.
Open to MSSI students Permission Required for non-MSSI students All MSSI programs must include a project involving a research and development oriented investigation focused on an approved topic addressing the field of information security and assurance from the perspective of relevant applications and/or theory. There must be project supervision and approval involving a JHUISI affiliated faculty member. A project can be conducted individually or within a team-structured environment comprised of MSSI students and an advisor. A successful project must result in an associated report suitable for on-line distribution. When appropriate, a project can also lead to the development of a so-called deliverable such as software or a prototype system. Projects can be sponsored by government/industry partners and affiliates of the Information Security Institute, and can also be related to faculty research programs supported by grants and Contracts. Required for MSSI students on full-time status.
Instructor(s): A. Dahbura; X. Li.

EN.650.738. Information Security Projects. 1.00 - 4.00 Credits.
Instructor(s): G. Masson.

EN.650.739. Special Network Security Projects. 1.00 - 4.00 Credits.
Instructor(s): Staff.

EN.650.642. Network Security. 3.00 Credits.
This course focuses on communication security in computer systems and networks. The course is intended to provide students with an introduction to the field of network security. The course covers network security services such as authentication and access control, integrity and confidentiality of data, firewalls and related technologies, Web security and privacy. Course work involves implementing various security techniques. A course project is required. [Systems] Recommended. Course Background: EN.600.120 (or equivalent)
Prerequisites: EN.600.226 AND (EN.600.344 OR EN.600.442) or permission
Instructor(s): S. Nielson
Area: Engineering.

EN.600.443. Computer Systems. 3.00 Credits.
Graduate version of 600.333. Students may receive credit for 600.333 or 600.433, but not both. [Systems] Recommended Course Background: EN.600.120
Instructor(s): P. Froehlich
Area: Engineering.

EN.600.442. Modern Cryptography. 3.00 Credits.
Modern Cryptography includes seemingly paradoxical notions such as communicating privately without a shared secret, proving things without leaking knowledge, and computing on encrypted data. In this challenging but rewarding course we will start from the basics of private and public key cryptography and go all the way up to advanced notions such as zero-knowledge proofs, functional encryption and program obfuscation. The class will focus on rigorous proofs and require mathematical maturity. [Analysis] Recommended Course Background: EN.600.363/463, EN.600.271/471 and EN.550.171 or equiv.
Instructor(s): A. Jain
Area: Engineering, Quantitative and Mathematical Sciences.

EN.600.444. Security & Privacy in Computing. 3.00 Credits.
Lecture topics will include computer security, network security, basic cryptography, system design methodology, and privacy. There will be a heavy work load, including written homework, programming assignments, exams and a comprehensive final. The class will also include a semester-long project that will be done in teams and will include a presentation by each group to the class. [Applications] Recommended Course Background: A basic course in operating systems and networking, or permission of instructor.
Instructor(s): A. Rubin
Area: Engineering.
EN.600.450. Network Embedded Systems & Sensor Networks. 3.00 Credits.
This course is an introduction to fundamental concepts of networked embedded systems and wireless sensor networks. It is intended for juniors, seniors and first year graduate students in Computer Science and other engineering majors with the prerequisite background. Covered topics include: embedded systems programming concepts, low power and power aware design, radio technologies, communication protocols for ubiquitous computing systems, and some of the mathematical foundation of sensor behavior. Laboratory work consists of a set of programming assignments that consider a set of the issues described in class. Recommended Course Background: EN.600.226, EN.600.120, and EN.600.344/EN.600.444
Instructor(s): M. Chang
Area: Engineering.

EN.600.451. Introduction to Bitcoin and Other Crypto-currencies. 3.00 Credits.
This course covers the basics of Bitcoin and the underlying technologies driving it. The course is intended for students interested in the cryptographic techniques devised to make digital currencies and payment systems secure. Topics include Bitcoin transactions, the blockchain, mining, and decentralized consensus. The course will include a brief introduction to public-key cryptography, digital signatures, hash functions, proof of work/space, multisignatures, and elliptic curve cryptography. The course concludes with an overview of the Bitcoin scripting language and Bitcoin 2.0 platforms. [Systems] Recommended Course Background: EN.600.344/444 (Computer Networks) and EN.550.171 (Discrete Math)
Prerequisites: EN.600.226
Instructor(s): G. Ateniese
Area: Engineering.

EN.600.460. Software Vulnerability Analysis. 3.00 Credits.
This course will examine vulnerabilities in C source, stack overflows, writing shell code, etc. Also, vulnerabilities in web applications: SQL Injection, cookies, as well as vulnerabilities in C binary fuzzing, and exploit development without source among other topics. Co-listed with EN.650.460
Instructor(s): S. Checkoway
Area: Engineering.

EN.600.463. Algorithms I. 3.00 Credits.
This course concentrates on the design of algorithms and the rigorous analysis of their efficiency. Topics include the basic definitions of algorithmic complexity (worst case, average case); basic tools such as dynamic programming, sorting, searching, and selection; advanced data structures and their applications (such as union-find); graph algorithms and searching techniques such as minimum spanning trees, depth-first search, shortest paths, design of online algorithms and competitive analysis. [Analysis] Students may receive credit for EN.600.363 or EN.600.463, but not both.
Instructor(s): V. Braverman
Area: Engineering, Quantitative and Mathematical Sciences.

EN.600.470. Theory of Computation. 3.00 Credits.
This is a graduate-level course studying the theoretical foundations of computer science. Topics covered will be models of computation from automata to Turing machines, computability, complexity theory, randomized algorithms, inapproximability, interactive proof systems and probabilistically checkable proofs. Students may not take both EN.600.271 and EN.600.471, unless one is for an undergrad degree and the other for grad. [Analysis] Recommended Course Background: EN.550.171 or instructor permission.
Instructor(s): X. Li
Area: Engineering, Quantitative and Mathematical Sciences.

EN.600.642. Advanced Topics in Cryptography. 3.00 Credits.
This course will focus on advanced cryptographic topics with an emphasis on open research problems and student presentations.
Instructor(s): A. Jain.

EN.600.643. Advanced Topics in Computer Security. 3.00 Credits.
Topics will vary from year to year, but will focus mainly on network perimeter protection, host-level protection, authentication technologies, intellectual property protection, formal analysis techniques, intrusion detection and similarly advanced subjects. Emphasis in this course is on understanding how security issues impact real systems, while maintaining an appreciation for grounding the work in fundamental science. Students will study and present various advanced research papers to the class. There will be homework assignments and a course project.
Instructor(s): A. Rubin.

Materials Science and Engineering
http://materials.jhu.edu/

Materials are essential to the construction of any engineering structure, from the smallest integrated circuit to the largest bridge. In almost every technology, the performance, reliability, or cost is determined by the materials used. As a result, the drive to develop new materials and processes (or to improve existing ones) makes materials science and engineering one of the most important and dynamic engineering disciplines.

The central theme of materials science and engineering is that the relationships among the structures, properties, processing, and performance of materials are crucial to their function in engineering structures. Materials scientists seek to understand these fundamental relationships and use this understanding to synthesize new materials or develop new processes for producing existing ones. Materials engineers design or select materials for particular applications and develop improved processing techniques. Since materials scientist and engineers must understand the properties of materials as well as their applications, the field is inherently interdisciplinary and draws on aspects of almost every other engineering discipline as well as physics, chemistry, and, most recently, biology. Because the field encompasses so many different areas, it is often categorized according to types of materials (metals, ceramics, polymers, and semiconductors) or to their applications (biomaterials, electronic materials, magnetic materials, or structural materials).

The department prepares students for successful careers in materials science and engineering, for advanced study in science or engineering, and for professional education in other fields. The goal of the undergraduate program is to provide a rigorous and comprehensive curriculum in materials science and engineering as well as in mathematics, basic sciences, humanities, and social sciences. Our
The field of biomaterials is concerned with the science and engineering of materials in biology and medicine. Engineering materials are increasingly used in applications such as drug delivery and gene therapy, scaffolds for tissue engineering, replacement body parts, and biomedical and surgical devices. Biomaterials is an inherently interdisciplinary field that requires deep understanding of the properties of materials in general, and the interactions of materials with the biological environment. The Biomaterials concentration is designed to provide a firm grounding in the physics, chemistry, and biology of materials, as well as breadth in general engineering, mathematics, humanities, and social science. In addition, students are encouraged to gain hands-on experience in biomaterials research laboratories. The program seeks to educate students to reach the forefront of leadership in the field of biomaterials engineering. While the fundamental principles of materials science still apply, a complete understanding of biomaterials and their interactions with biological environments requires a greater degree of specialization than the standard undergraduate curriculum provides. In recognition of completion of the Biomaterials concentration, a student may elect to have his or her academic transcript annotated to indicate a specialty in biomaterials.

Nanotechnology advances the utilization of materials and devices with extremely small dimensions. Nanotechnology is a visionary field, as micro and nanostructured devices impact all fields of engineering, from microelectronics (smaller, faster computer chips) to mechanical engineering (micromotors and actuators) to civil engineering (“smart,” self-healing nanocomposite materials for buildings and bridges) to biomedical engineering (biosensors and tissue engineering). Materials science is central to nanotechnology because the properties of materials can change dramatically when things are made extremely small. This observation is not simply that we need to measure such properties or develop new processing tools to fabricate nanodevices. Rather, our vision is that the wide (and sometimes unexpected) variety of phenomena associated with nanostructured materials allow us to envision radically new devices and applications that can only be made with nanostructured materials. The Nanotechnology concentration encompasses a curriculum designed to train students in the fundamental interdisciplinary principles of materials science including physics and chemistry, and also to expose students to the forefront of nanomaterials research through elective classes as well as research laboratories. Students in the Nanotechnology concentration will be well-prepared for successful careers in materials engineering across a wide range of disciplines.

After completing the core curriculum, students pursuing master and Ph.D. degrees take advanced courses that will allow them to work at the forefront of knowledge in their chosen specialty. Those desiring to conduct original research and advance the frontiers of knowledge pursue a master’s essay and/or Ph.D. thesis. To this end, the department has an outstanding and wide-ranging research program, with particular emphasis on nanomaterials, thin films, metastable materials, biomaterials, computational materials science, and materials characterization.

### Facilities

The teaching and research facilities of the Department of Materials Science and Engineering are located in Maryland and Krieger halls on the Homewood campus. Our central facilities include the Surface Analytical Laboratory, with advanced tools for the chemical characterization of solid surfaces; the Scanning Electron Microscopy Laboratory; the X-Ray Diffraction Laboratory; the Laboratory for Thin Film Deposition; and facilities for sample preparation, optical microscopy, and mechanical testing. Individual research groups have established laboratories with advanced facilities for materials processing, nanotechnology, and materials characterization. Through collaboration with other departments and national laboratories, students and faculty also have access to a variety of other facilities necessary for world-class research.

### Mission Statement

Materials play a central role in the performance and reliability of virtually every technology and living organism. The central theme of materials science and engineering is that the relationships between the structure, properties, processing, and performance of materials are crucial to their function. Materials scientists seek to understand these fundamental relationships, synthesize new materials, develop improved processes for making materials, and understand the role of materials in the functioning of biological organisms. The wide range of problems addressed makes materials science one of the most highly interdisciplinary and dynamic engineering disciplines.

The Materials Science & Engineering faculty strives to maintain the Johns Hopkins University tradition of training a small number of students of the highest quality. We measure our success by the impact our graduates have on the scientific and engineering communities. Our program is designed to provide a solid foundation for future career development for students with diverse career aspirations.

### Program Objectives

Our current program educational objectives are stated as follows:

Graduates of the Materials Science and Engineering Program:

1. Pursue careers that include advanced graduate studies in materials science and engineering or careers in related areas of science and engineering or professional disciplines that benefit from an understanding of materials science and engineering such as medicine, business, or law.

2. Employ elements of the research process in their careers including the use of:
   - critical reasoning to identify fundamental issues and establish directions for investigation
   - creative processes to define specific plans for problem solution
• analytical thought to interpret results and place them within a broader context.

**Student Outcomes**

At completion of the degree program, students in Materials Science and Engineering will have:

1. an ability to apply knowledge of mathematics, science and engineering (to solve problems related to materials science and engineering)
2. an ability to design and conduct experiments, as well as to analyze and interpret data (using statistical, computational or mathematical methods)
3. an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability – the design process
4. an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability – recognition of constraints within design
5. an ability to function on multidisciplinary teams
6. an ability to identify, formulate and solve engineering problems
7. an understanding of professional and ethical responsibility
8. an ability to communicate effectively (writing)
9. an ability to communicate effectively (oral presentation)
10. the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental and societal context
11. a recognition of the need for and an ability to engage in life-long learning
12. a knowledge of contemporary issues
13. an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice
14. the ability to apply advanced science (such as chemistry and physics) and engineering principles to materials systems
15. the ability to integrate understanding of the scientific and engineering principles underlying the four major elements: structure, properties, processing, and performance related to material systems appropriate to the field
16. the ability to apply and integrate knowledge from each of the above four elements of the field to solve materials selection and design problems
17. the ability to utilize experimental, statistical and computational methods consistent with the program educational objectives

**Requirements for the B.S. Degree**

The Department of Materials Science and Engineering offers a program leading to the Bachelor of Science Degree. The B.S. for the Materials Science and Engineering degree program is accredited by the Engineering Accreditation Commission of ABET, www.abet.org (http://www.abet.org). The student must meet the general university requirements for the chosen degree as well as the departmental requirements, and must complete the program approved by the student’s advisor.

An anticipated individual program of study designed to meet the university and department requirements for the B.S. degree, as well as to reflect the student’s interest, should be filed as early as possible during the student’s residence. The faculty advisor’s signature is required on all course registration and course change forms. As changes are made in the program, it shall be the student’s responsibility to see that a revised program is filed with the advisor. Each student must have an approved program on file no later than the semester before he/she expects to graduate.

General university requirements include (see also General Requirements for Departmental Majors for more information):

- Complete program of study outlined by track or concentration (standard track, biomaterials concentration, or nanotechnology concentration).
- Fulfill the university writing requirement; two writing intensive courses, at least 3 credits each.
- Fulfill 75 credits earned in courses coded Engineering, Quantitative Studies, or Natural Science.
- At least 30 credits of this must be counted Natural Science (N) or Quantitative Studies (Q) with no course counted twice.
- At least 30 additional credits must be taken outside of Engineering (E) area, excluding prerequisites for the major.
- Fulfill 18 credits of courses coded (H) or (S)
- Take a minimum of 126 credits.

To meet the course requirements for the B.S. degree in Materials Science and Engineering, the student must complete a minimum of 126 credits, distributed as follows:

<table>
<thead>
<tr>
<th>Category</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Materials Science Core Classes *</td>
<td>30</td>
</tr>
<tr>
<td>Upper Level Materials Science Classes *</td>

<tr>
<td>Total Credits</td>
<td>126</td>
</tr>
</tbody>
</table>

* The 42 credits of materials science courses must be passed with a letter grade of C or higher.
** All courses must be passed with a letter grade of C- or higher
*** Three courses of 200-level or above in engineering, natural sciences or mathematics.
Letter grade of C- or higher required if taken for letter grade; S required if taken S/U
**** Letter grade of C- or higher required if taken for letter grade; S required if taken S/U
A student who has taken Foundations of MSE may count it toward one unrestricted elective.

In addition to the degree program in Materials Science and Engineering, students may elect to complete specialized concentrations in biomaterials or nanotechnology. Whether a student chooses to pursue studies following the standard track, the Biomaterials concentration or the Nanotechnology concentration, the course work specified for the degree will provide a firm grounding in the principles of materials science and engineering.
Three B.S. Degree Options are Offered by the Department of Materials Science and Engineering

Standard Track
The Standard Track is intended for those students with general materials science interests. It permits the student to tailor the degree program to specific interests by allowing a broad range of choices for upper-level science and engineering electives.

Biomaterials Concentration
Biomaterials is an exciting and rapidly developing field. Engineered materials are increasingly used in medical applications (such as drug delivery, gene therapy, scaffolds for tissue engineering, replacement body parts, and biomedical and surgical devices) while an understanding of structure-property relationships in natural biomaterials may lead to improved interventions for a wide variety of diseases and injuries. Because it is highly interdisciplinary (involving elements of materials science, engineering, biology, chemistry and medicine), biomaterials as a discipline requires a deep understanding of the properties of materials in general, and the interactions of materials with the biological environment in particular.

The biomaterials concentration is designed to provide a broad basis in the fundamentals of materials science and engineering, as well as a particular emphasis on the principles and applications of biomaterials. While the fundamental principles of materials science still apply, a complete understanding of biomaterials and their interactions with biological environments requires a greater degree of specialization than the standard undergraduate curriculum provides. The biomaterials curriculum includes topics such as biomimetic materials, natural biomaterials, host responses to biomaterials, biocompatibility, and applications of biomaterials, particularly in tissue engineering, drug delivery, and medical devices and implants. Our goal is to train students who can apply these principles to the development of novel materials that benefit human health.

To receive commendation for completion of the Biomaterials concentration, the student must complete three electives, whose subject matter is some aspect of Biomaterials, Molecules and Cells as a Science & Engineering elective, a biomaterials laboratory course, and complete a biomaterials-related senior design project. Approval of electives must be made by a student’s academic advisor prior to taking the courses, and approval of the senior design project must be pre-approved by the senior design instructor.

Nanotechnology Concentration
Nanotechnology advances the utilization of materials and devices with extremely small dimensions. Nanotechnology is a visionary field, as micro- and nano-structured devices impact all fields of engineering, including microelectronics (smaller, faster computer chips), mechanical engineering (micromotors and actuators), civil engineering (“smart”, self-healing nanocomposite materials for buildings and bridges), and biomedical engineering (biosensors and tissue engineering).

Materials science is central to nanotechnology because the properties of materials can change dramatically when things are made extremely small. This observation is not simply that we need to measure such properties or develop new processing tools to fabricate nanodevices. Rather, our vision is that the wide (and sometimes unexpected) variety of phenomena associated with nanostructured materials allow us to envision radically new devices and applications that can only be made with nanostructured materials. The nanotechnology concentration encompasses a curriculum designed to train students in the fundamental interdisciplinary principles of materials science, including physics and chemistry, and also to expose students to the forefront of nanomaterials research through elective classes and research laboratories. In recognition of completion of the Nanotechnology concentration, a student may elect to have his or her academic transcript annotated to indicate a concentration in nanotechnology.

To receive commendation for completion of the Nanotechnology concentration, the student must complete three electives, whose subject matter is some aspect of Nanotechnology, a nanomaterials laboratory course, and complete a nanotechnology-related senior design project. Approval of electives must be made by a student’s academic advisor prior to taking the courses, and approval of the senior design project must be pre-approved by the senior design instructor.

**Biomaterials Concentration:** 127 Credits

- Courses in other departments with an emphasis on the structure, properties, or processing of materials may be counted as materials science electives. A list of approved electives appears in the department’s Undergraduate Advising Manual (available from a student’s academic advisor). All 400-level or higher classes required in the Biomaterials and Nanotechnology concentrations will be counted toward satisfying the upper-level materials science electives requirement.

- **Students are encouraged to also take the 1-credit introductory 510.109 Materials Science & Engineering for the 21st Century.**

- **For the Biomaterials concentration, EN.580.221 Molecules and Cells must be passed with a grade of C or higher.**

- **A student who has taken both 030.101 and 030.102 may count one of them toward one unrestricted elective.**

**Total Credits Required for Graduation: 126**

Total Credits: 127
Information about scholarships and other sources of financial assistance for undergraduates is available from Student Financial Services (http://pages.jh.edu/~finaid). In addition, the faculty employs a number of undergraduates as laboratory assistants to help with various aspects of their individual research programs.

The Department of Materials Science and Engineering (DMSE) offers three graduate degrees: the Ph.D. (Doctor of Philosophy), the M.S.E. (Master of Science in Engineering), and the M.M.S.E. (Master of Materials Science and Engineering). The Ph.D. and the M.S.E. can be completed on either a full-time or part-time basis. Financial aid is available only for students admitted to the full-time Ph.D. program. The M.S.E. degree may be completed either with or without an essay, as described below.

Hopkins undergraduate students are encouraged to consider completing both the B.S. degree and the M.S.E. degree in a total of five years. This five-year, dual degree option offers additional preparation for the pursuit of Ph.D. programs and careers in materials science and engineering. Students are encouraged to consult their undergraduate advisors to gain information on M.S.E. programs at Hopkins, as well as third- and fourth-year course selections best suited to the pursuit of the M.S.E. degree.

The M.M.S.E. is a terminal master’s degree offered through Johns Hopkins Engineering for Professionals (EP) of the Whiting School of Engineering. The degree program consists of 10 courses offered primarily in the evening. Students interested in this program should apply through the EP Office, 410.516.2300 or www.ep.jhu.edu.

**Admission**

To be admitted to graduate study in the Department of Materials Science and Engineering, students must submit credentials sufficient to convince the faculty that they have the potential to successfully complete the program requirements. Under the new GRE test, applicants should take the General Test package containing the Mathematical Reasoning test.

Hopkins undergraduate students who plan to pursue a M.S.E. degree in their fifth year are encouraged to submit an application early in their fourth year of study.

A graduate student pursuing a Ph.D. degree with the Department of Materials Science and Engineering who is funded by the department as a teaching assistant or research assistant may not enroll simultaneously in a master’s program in another department, unless he or she receives written approval from his or her advisor, the DMSE Graduate Program Committee, and the department chairman.

**Advising and Review of Student Performance**

Each graduate student will normally have one or more faculty advisors. Students who are entering the M.S.E. program and plan to pursue a degree without an essay will be assigned an academic advisor. Students who are entering the M.S.E. program and plan to pursue a degree with an essay will be advised by their research advisor. Students who are entering the Ph.D. program will be advised by their research advisor. Students with a research advisor in another department will be assigned an academic advisor from among the full-time faculty in the department. Each graduate student will normally have one or more faculty advisors. Students who are entering the M.S.E. program and plan to pursue a degree without an essay will be assigned an academic advisor. Students who are entering the M.S.E. program and plan to pursue a degree with an essay will be advised by their research advisor. Students who are entering the Ph.D. program will be advised by their research advisor. Students with a research advisor in another department will be assigned an academic advisor from among the full-time faculty in the department.

Student progress will be assessed regularly by the faculty advisor(s) and an academic advisor from among the full-time faculty in the department. Each student's progress will be reviewed annually by the Graduate Program Committee. Students are expected to remain in regular communication with their faculty advisor(s).

Each student’s progress will be reviewed annually by the Graduate Program Committee, in consultation with the student’s advisor(s). To assist in this evaluation, students are required to submit a form (available from the academic program coordinator) detailing progress toward completion of the degree requirements. This form must be signed by the
The degree of Master of Science in Engineering (M.S.E.) with Essay is awarded subject to the recommendation of the student’s advisor and departmental approval, based on satisfactory completion of the following requirements:

### Requirements for the M.S.E. Degree with Essay

(8 courses)

The degree of Master of Science in Engineering (M.S.E.) with Essay is awarded subject to the recommendation of the student’s advisor and departmental approval, based on satisfactory completion of the following requirements:

**Four advanced (400 level or higher) elective courses in materials science and engineering or related fields.**

**A master's essay or journal publication is required**

*Elective courses in materials science and engineering or related fields, subject to the following rules:

- Up to two of the elective courses may be taken from within the Engineering for Professionals (EP) program.
- Up to two of the elective courses can be business courses.
- Any elective taken from outside the department (including EP courses) requires prior approval of the Graduate Program Committee.
- With approval of the Graduate Program Committee, the student can transfer up to two graduate courses from another institution. Students desiring such credit must make the request in writing to the Graduate Program Committee by the end of the first semester after matriculation. This request must include a description of the course, a course syllabus, and documentation of the grade received. Please note that transfer coursework grades do not count towards calculation of the GPA. With approval of the Graduate Program Committee, the student can transfer up to two graduate courses from another institution. Students desiring such credit must make the request in writing to the Graduate Program Committee by the end of the first semester after matriculation. This request must include a description of the course, a course syllabus, and documentation of the grade received. Please note that transfer coursework grades do not count towards calculation of the GPA.
- A grade of C or better must be achieved in each course to obtain credit.
- A overall GPA of 3.0 must be maintained, and a GPA of 3.0 is required to earn the degree at the end of the program.
- Attendance is required at the weekly Graduate Student Seminar and the Department of Materials Science and Engineering Seminar.
- Up to two of the elective courses may be Graduate Research in Materials Science (EN.510.807), which may be taken in any session

**Admission to the M.S.E. program is through the standard graduate admissions process. The typical duration of the program is 21 months. The student’s transcript will reflect a “Master of Science in Engineering with Essay.”**

### Requirements for the M.S.E. Degree without Essay

(10 courses)

The degree of Master of Science in Engineering (M.S.E.) is awarded subject to the recommendation of the student’s advisor and departmental approval, based on satisfactory completion of the following requirements:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN.510.601</td>
<td>Structure of Materials</td>
<td>3</td>

**Six advanced (400-level or higher elective courses in materials science and engineering or related fields.**

*Six advanced (400-level or higher elective courses in materials science and engineering or related fields, subject to the following rules:

- Up to two of the elective courses may be taken from within the Engineering for Professionals (EP) program.
- Up to two of the elective courses can be business courses.
- Any elective taken from outside the department (including EP courses) requires prior approval of the Graduate Program Committee.
- With approval of the Graduate Program Committee, the student can transfer up to two graduate courses from another institution. Students desiring such credit must make the request in writing to the Graduate Program Committee by the end of the first semester after matriculation. This request must include a description of the course, a course syllabus, and documentation of the grade received. Please note that transfer coursework grades do not count towards calculation of the GPA.
- All electives will need prior approval from the Graduate Program Committee.
- A grade of C or better must be achieved in each course to obtain credit.
- A overall GPA of 3.0 must be maintained, and a GPA of 3.0 is required to earn the degree at the end of the program.
- Attendance is required at the weekly Graduate Student Seminar and the Department of Materials Science and Engineering Seminar.
- Up to two of the elective courses may be Graduate Research in Materials Science (EN.510.807), which may be taken in any session.
Requirements for the Ph.D. degree

To receive the degree of Ph.D., the candidate must fulfill the requirements below. The department must be satisfied that all academic requirements have been satisfied by the candidate before a recommendation will be made to the University Graduate Board to confer the Ph.D. degree.

1. Successful completion of four required courses in materials science and engineering.

<table>
<thead>

<td>Physical Properties of Materials</td>
<td>3</td>
</tr>
</tbody>
</table>

Each of the four required courses must be passed with a letter grade of B- or higher. If a student receives a grade of C+ or lower in a required course, the student may re-take the course once to achieve a grade of B- or higher. Receipt of grades of C+ or lower in two or more required courses will ordinarily be cause for dismissal from the program without the opportunity to re-take those courses.

In addition, the student must maintain an overall GPA of 3.0 or better in the four required courses. If the student’s GPA falls below 3.0, the student must re-take one or more of the required courses and earn higher grade(s). Upon doing so the prior grade(s) in those course(s) are replaced and not counted toward the GPA.

The four required courses must be successfully completed (meeting the grade and GPA requirements above) no later than the start of the student’s third year after matriculation; failure to do so will result in dismissal from the program. Exception: A student who fails to meet the requirements above due to a low grade in a single required course, and who has not had an opportunity to re-take that course during the first two years, will be permitted to re-take that course in the third year.

Students who have completed prior graduate-level coursework similar to EN.510.601 Structure of Materials, EN.510.602 Thermodynamics of Materials or EN.510.603 Phase Transformations of Materials may petition the Graduate Program Committee to waive one of these required courses. Alternatively, students with undergraduate degrees in Materials Science may petition the Graduate Program Committee to waive the Physical Properties course. However, only one of the four required courses can be waived. If approved, the course that has been waived will not be counted toward calculation of the GPA as described above. Written requests for such waivers must be submitted to the Graduate Program Committee no later than the end of the first semester after matriculation. Please note that transfer coursework grades do not count towards calculation of the GPA.

2. Successful completion of three advanced (600-level or higher) elective courses in materials science and engineering or a related field.

Elective courses must be completed with a grade of C or higher, but there is no cumulative GPA requirement. A list of approved electives is available from the Academic Program Coordinator. Students wishing to use a course not on this list must submit a request to the Graduate Program Committee no later than the end of the first week of the semester in which the course is taken. Students who have completed prior graduate-level coursework may petition the Graduate Program Committee to waive one of the required elective courses.

Graduate research (EN.510.807-EN.510.808), part-time graduate courses (from Engineering for Professionals in WSE or Advanced Academic Programs in KSAS), and seminars (courses with less than three contact hours per week) will not be counted toward completion of PhD course requirements. Undergraduate courses (400-level or lower) will not be counted unless they are cross-listed as graduate level, 600 or higher. Independent study courses may be used with prior approval of the Graduate Program Committee.

Students who have completed prior graduate-level coursework may petition the Graduate Program Committee to waive one of the required elective courses. Written requests for such waivers must be submitted to the Graduate Program Committee no later than the end of the first semester after matriculation.

In some cases an advisor may require a student to complete additional coursework, beyond the four required courses and three electives described above.

3. Teaching Assistant Requirement.

Students in their second year in the department will be required to act as teaching assistant for two courses.

4. Successful completion of a comprehensive oral examination covering fundamentals of materials science and engineering. The comprehensive examination tests knowledge in each of the subjects listed below:

- Structure of materials
- Thermodynamics of materials
- Phase transformations in materials

In each of the three subject areas, students may be asked questions related to the properties of materials. The depth of required knowledge regarding properties of materials will match the level of knowledge presented in the Physical Properties of Materials class.

Successful completion of the comprehensive exam requires satisfactory performance on all areas tested; there are no partial or conditional passes.

The comprehensive exam is offered semiannually, usually immediately prior to the fall and spring semesters. A student who fails the exam on the first try may make a second attempt, but the exam must be successfully completed no later than the start of the third year following matriculation. Failure to do so will result in dismissal from the program.

5. An oral presentation of a proposal for a research project to form the basis of the candidate’s dissertation.

The dissertation proposal must be presented at a department seminar no later than the end of the third year following matriculation. A written version of the dissertation proposal must be submitted to a faculty committee consisting of the student’s faculty advisor and two other faculty members (to be selected in consultation with the advisor) no later than two weeks prior to the oral presentation. A brief closed session between the student and the committee shall follow the presentation, at which the committee...
members will ask questions about and provide comments on the proposed plan of research. Additional private discussions may be required by one or more committee members. The thesis proposal is also an examination, with the committee testing the candidate’s depth of knowledge in his or her area of specialization (and not simply on the specific proposed research).

6. Completion of an original research project, documented in a dissertation that is defended by the candidate in a public presentation.

Candidates must write a dissertation conforming to university requirements that describes their work and results in detail. A public defense of the dissertation is required, and will be followed by a closed examination session. The committee for the closed examination shall consist of five faculty members, approved by the Graduate Program Committee, with at least two members being from outside the department. The outcome of the closed examination will be decided by majority vote of the committee. Because the closed examination session fulfills the University Graduate Board Oral (GBO) examination requirement, all procedures pertaining to GBOs as established by the University Graduate Board must be followed.

The committee may impose certain conditions (e.g. changes to the dissertation) for the candidate to meet prior to final certification that he or she has passed the exam. For this reason, the thesis defense must be scheduled for a date at least two months prior to any personal or university deadline for graduation. A complete draft of the dissertation must be submitted to all committee members no later than two weeks prior to the defense.

The dissertation in its final form must be read and approved in writing by two members of the committee (the advisor and one other member to be chosen by the committee as a whole).

Financial Aid

Fellowships of various forms are available for full-time graduate students, including tuition remission fellowships, teaching fellowships, and additional stipend fellowships.

Research assistantships are available to support full-time graduate students who work with individual professors on their research contracts and grants.

For current faculty and contact information go to http://materials.jhu.edu/index.php/people/

Faculty

Chair
Jonah Erlebacher

Professor: Nanostructured materials, self-organization and pattern formation, computational materials science, kinetics of shape change, ultra-high vacuum processing, nanoporous metals, fuel cells and energy.

Professors

Robert C. Cammarata
Structure, properties, and processing of thin films and nanostructured materials, thermodynamics and mechanics of surfaces, mechanical behavior of materials, nanoindentation testing, stresses in thin films, novel electrochemical deposition methods, computer simulations, transport and assembly of nanowires in solution.

Michael Falk

Professor: Theoretical and computational research investigating materials processes far from equilibrium: deformation, failure and fracture in non-crystalline materials such as metallic glasses; reactive materials, interactions of stress and diffusion in energy storage materials; mixing processes that accompany frictional sliding and wear.

Kalina Hristova
Biomolecular materials, structure and function of cellular membranes, membrane proteins, self-assembly of biological amphiphiles, protein-lipid interactions, protein synthesis, X-ray diffraction, fluorescence.

Todd C. Hufnagel
Structure and properties of amorphous alloys; mechanical behavior of metals, polymers, and biomaterials; use of synchrotron radiation for in situ studies of deformation and phase transformations in materials; electron microscopy.

Howard E. Katz
Professor: organic, hybrid, nanostructured, and interfacial materials in electronic and photonic devices; organic materials synthesis, thin film fabrication and patterning; novel architectures for devices, sensors, and circuits; host-guest chemistry, material responses to high electric fields; organic nonlinear optics; nanoparticles in biosystems; materials for physical science education.

Evan Ma
Nonequilibrium processing and metastable materials, thermodynamics and kinetics of phase transformations, atomic level structures and polymorphs in metallic glasses and chalcogenide glasses, mechanical properties of amorphous and nanocrystalline metals, mechanics of small-volume materials, in situ TEM, phase-change alloys for data storage and memory applications.

Hai-Quan Mao
Professor: Nanomaterials, electrospinning, nanofibers, biomimetic matrix, stem cell expansion and differentiation, nerve regeneration, micellar nanoparticle, therapeutic delivery, biodegradable polymers.

Peter C. Searson
Biomaterials, nanomedicine.

James B. Spicer
Ultrafast phenomena, laser interactions with materials, nanostructured composite materials, sensor physics, laser-based materials processing, elastic and anelastic materials properties, intelligent materials processing, near-field optical and microwave techniques.

Timothy P. Weihs
The study of exothermic reactions in layered materials and their applications, processing and characterization of thin films, mechanical testing of metals and biological materials, nanoindentation studies.

Assistant Professors

Margarita Herrera-Alonso
Structure-property relationships of biodegradable polymers, polymer synthesis, graft copolymers, nanoparticles and nanomaterials, kinetics of self-assembly, delivery of drugs and imaging agents.

Tim Mueller
Computational materials discovery and design.

Martin Ulmschneider
Assistant Professor: Protein assembly and function in lipid bilayer membranes; Algorithm and parameter development for atomic detail
molecular simulation; Synthetic biology and the de novo design of membrane active peptides and proteins

**Professor Emeritus**
Robert E. Green Jr.
Materials science, nondestructive characterization, ultrasonics, acoustic emission, X-ray diffraction, radiography, topography and tomography, synchrotron radiation, electro-optical systems, light-sound interactions, mechanical properties, thermography, sensors, process control.

**Research Professor**
Theodore O. Poehler
Electronically conducting polymers, organic charge transfer compounds, materials for optical Information processing, and semiconductors.

**Associate Research Professor**
Patricia M. McGuigan
Adhesion, tribology, tribocharging, atomic force microscopy, interfacial phenomena, wetting, interferometry, polymer and ceramic materials.

**Assistant Research Professor**
John Baty
Paper conservation, heritage science.

**Lecturer**
Orla Wilson
Synthesis of nanostructured materials, specifically metallic and bimetallic nanoparticles in the 2-20 nm size range; electron, confocal and scanning-probe microscopies as characterization tools; applications of nano-structured materials as homogeneous and heterogeneous catalysts, novel optical security devices, and nanovectors for targeted drug delivery.

**Joint, Part-Time, and Visiting Appointments**
Kit Bowen
E. Emmet Reid Professor (Chemistry): experimental chemical physics-photoelectron spectroscopy of negative ions, structure and dynamics of gas phase, weakly bound molecular clusters.

Collin Broholm
Gerhard H. Dieke Professor (Director, Institute for Quantum Matter) Physics & Astronomy: experimental condensed matter physics

Chia-Ling Chien
Jacob L. Hain Professor of Physics (Physics & Astronomy): Fabrication of experimental studies of structural, electronic, magnetic, and superconducting properties of nanostructured solids; magneto-electronics, manipulation of small entities in low Reynolds number regime, biosensing.

Michael Ededin
Professor (Biology): membrane organization and dynamics, immunology studied with nanoparticles and advanced microscopy.

Jaafar El-Awady
Assistant Professor: Multiscale materials modeling, damage and fracture mechanisms of materials in mechanical design, material degradation in extreme environments, nano-materials and structures, impact dynamics and wave propagation.

Jennifer H. Elisseff
Professor (Biomedical Engineering): tissue engineering, biomaterials, cartilage regeneration.

D. Howard Fairbrother
Professor (Chemistry): surface chemistry, electron induced deposition of nanostructured materials, environmental health and safety of nanomaterials.

Sharon Gerecht
Associate Professor (Chemical and Biomolecular Engineering): biomaterials, stem cells, biomimetic hydrogels, vascular differentiation, angiogenesis, regenerative medicine, hypoxia, microfluidics.

Somnath Ghosh
Professor (Civil Engineering): computational mechanics with focus on materials analysis, characterization and processing, including simulation and design.

David Gracias
Professor (Chemical & Biomolecular Engineering): micro and nanotechnology, surface science, metamaterials, complex systems, nanoelectrics, nanomedicine, regenerative medicine, drug delivery and microfluidics.

Warren Grayson
Assistant Professor (Biomedical Engineering): Tissue engineering, stem cells, bioreactors, biomaterials, orthopaedics

Jordan Green
Assistant Professor (Biomedical Engineering): cellular engineering, nanobiotechnology, biomaterials, controlled drug delivery and gene delivery.

Kevin J. Hemker
Professor (Mechanical Engineering): mechanical behavior of materials, transmission on electron microscopy, high temperature alloys, thermal barrier coatings, nanocrystalline materials and materials for MEMS.

Robert Ivkov
Visiting Assistant Professor, Radiation Oncology (JHU School of Medicine): development, characterization, and use of nanomaterials to target cancer and to enhance the effectiveness of other therapies such as radiation. A specific area of research includes the study and development of selective heating with magnetic nanoparticles

Lynne Jones
Associate Professor (Orthopaedic Surgery, School of Medicine): biomaterials, osteonecrosis pathogenesis and treatment, total joint arthroplasty, bone graft materials

Rangaramanujam Kannan
Professor: Ophthalmology, JHU School of Medicine

Feilim MacGabhann
Assistant Professor: computational modeling of growth factor-receptor networks, personalized medicine; individualized medicine; experimental studies of interindividual variation, therapeutic cardiovascular remodeling, novel methods for data visualization and automated image analysis, computational models of virus-host interactions.

Tyrel McQueen
Assistant Professor (Chemistry): Solid State and Inorganic Chemistry/Condensed Matter Physics

Thao (Vicky) Nguyuen
Assistant Professor (Mechanical Engineering): Biomechanics: mechanical behavior, growth and remodeling of fibrous soft tissues. Constitutive Modeling: thermomechanics, viscoelasticity, viscoplasticity

K.T. Ramesh
Alonzo G. Decker Jr. Professor of Science and Engineering (Mechanical Engineering): Nanomaterials, planetary impact, dynamic failure mechanisms, shock, impact, and wave propagation, high-strain-rate behavior of materials, injury biomechanics, constitutive and failure modeling.

John D. Tovar
Professor (Chemistry): materials-oriented synthetic organic chemistry, electrochemistry, pi-conjugated and conducting polymers, supramolecular chemistry, organic electronics, biomimetic electronic materials.

Tza-Huei (Jeff) Wang
Professor (Mechanical Engineering): BioMEMS and microfluidics, single molecule manipulation and detection, nano/micro scale fabrication, conformational dynamics of biomolecules.

Denis Wirtz
Theophilus Halley Smoot Professor (Chemical and Biomolecular Engineering): cell adhesion and migration, cell mechanics, cysto-skeleton physics, receptor-ligand interactions, cancer bioengineering, progeria, particle tracking methods.

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

EN.510.101. Introduction to Materials Chemistry. 3.00 Credits.
Basic principles of chemistry and how they apply to the behavior of materials in the solid state. The relationship between electronic structure, chemical bonding, and crystal structure is developed. Attention is given to characterization of atomic and molecular arrangements in crystalline and amorphous solids: metals, ceramics, semiconductors and polymers (including proteins). Examples are drawn from industrial practice (including the environmental impact of chemical processes), from energy generation and storage (such as batteries and fuel cells), and from emerging technologies (such as biomaterials). Students may receive credit for AS.030.103 or EN.510.101, but not both.
Prerequisites: Students may receive credit for AS.030.103 or EN.510.101, but not both.
Instructor(s): P. Mcguiggen
Area: Natural Sciences.

EN.510.103. Foundations of Nanotechnology. 3.00 Credits.
This course will be a survey of the rapidly developing field of nanotechnology from an interdisciplinary point of view. Topics covered will include a general introduction to the nanoworld, fabrication, characterization and applications of hard and soft nanomaterials, as well as examining nanotechnology in terms of its societal, ethical, economic and environmental impact.
Instructor(s): O. Wilson
Area: Engineering, Natural Sciences.

EN.510.105. Chocolate: Intro to Materials Science. 1.00 Credit.
This course will introduce students to some basic concepts in materials science including phase diagrams, crystallization, and various characterization techniques, all through the close examination of chocolate. Students will have the opportunity to try some of their own experiments to see these processes in action. This course is directed toward freshman or sophomore engineering and natural science students with no background in these topics. Love of chocolate is a must.
Instructor(s): J. Dailey
Area: Natural Sciences.

EN.510.106. Foundations of Materials Science & Engineering. 3.00 Credits.
Basic principles of materials science and engineering and how they apply to the behavior of materials in the solid state. The relationship between electronic structure, chemical bonding, and crystal structure is developed. Attention is given to characterization of atomic and molecular arrangements in crystalline and amorphous solids: metals, ceramics, semiconductors and polymers (including proteins). The processing and synthesis of these different categories of materials. Basics about the phase diagrams of alloys and mass transport in phase transformations. Introduction to materials behavior including their mechanical, chemical, electronic, magnetic, optical and biological properties.
Instructor(s): E. Ma
Area: Engineering, Natural Sciences.

EN.510.107. Modern Alchemy. 3.00 Credits.
Can you really turn lead into gold? Converting common substances into useful materials that play important roles in today’s technologies is the goal of many modern scientists and engineers. In this course, we will survey selected topics related to modern materials, the processes that are used to make them as well as the inspiration that led to their development. Topics will include the saga of electronic paper, the sticky stuff of gecko feet and the stretchy truth of metal rubber.
Instructor(s): J. Spicer
Area: Engineering, Natural Sciences.

EN.510.109. Materials Science & Engineering for the 21st Century. 1.00 Credit.
Through this course, students are introduced to the basic tenants of the field of materials science and engineering and important aspects of career development. Discussions will cover the range of career options in the field, the opportunities to engage with cutting edge research and technology at JHU, the skills that practitioners require and the ethical conundrums that engineering professionals navigate. Only available to Materials Science & Engineering freshmen and engineering undecided freshmen.
Instructor(s): O. Wilson
Area: Engineering, Natural Sciences.

EN.510.136. MSE Design Team I. 3.00 Credits.
This course is the second half of a two-semester course sequence for freshmen majoring or double majoring in materials science and engineering (MSE). This course provides a broad exposure to various aspects of planning and conducting independent research in a team setting (3 to 6 students on each team). In this course, MSE freshmen working with a team leader and seniors on the team, apply their general knowledge in MSE to develop the solution to open-ended problems. Materials Science & Engineering Freshman Only. Recommended Course Background: EN.510.106, EN.510.109, or equivalent courses. *The team will meet 150 minutes per week at a time to be designated by the instructor.
Instructor(s): H. Mao; O. Wilson; P. Searson
Area: Engineering, Natural Sciences.
EN.510.201. Introductory Materials Science for Engineers. 3.00 Credits.
An introduction to the structure, properties, and processing of materials used in engineering applications. After beginning with the structure of materials on the atomic and microscopic scales, this course explores defects and their role in determining materials properties, the thermodynamics and kinetics of phase transformations, and ways in which structure and properties can be controlled through processing. Previously: Introduction to Engineering Materials.
Instructor(s): E. Ma
Area: Engineering, Natural Sciences.

EN.510.202. Computation and Programming for Materials Scientists and Engineers. 3.00 Credits.
This course will introduce students to the basics of programming in the MATLAB environment. Students will build skills in algorithmic problem solving by programming assignments regarding a range of biological and non-biological materials systems. Students will learn to write function definitions and deploy basic operations of selection and iteration as well as MATLAB specific vectorization methods and the construction of graphical user interfaces. Applications may include materials structure, phase equilibrium, propagating reactions, and other relevant scientific and engineering applications.
Instructor(s): M. Falk
Area: Engineering, Natural Sciences.

EN.510.236. MSE Design Team I. 3.00 Credits.
This course is the second half of a two-semester course sequence for sophomores majoring or double majoring in materials science and engineering (MSE). This course provides a broad exposure to various aspects of planning and conducting independent research in a team setting (3 to 6 students on each team). In this course, MSE freshmen working with a team leader and seniors on the team, apply their general knowledge in MSE to develop the solution to open-ended problems. Materials Science & Engineering Sophomores Only. Recommended Course Background: EN.510.106, EN.510.109, or equivalent courses. *The team will meet 150 minutes per week at a time to be designated by the instructor.
Instructor(s): H. Mao; O. Wilson; P. Searson
Area: Engineering, Natural Sciences.

EN.510.311. Structure of Materials. 3.00 Credits.
First of the Introduction to Materials Science series, this course seeks to develop an understanding of the structure of materials starting at the atomic scale and building up to macroscopic structures. Topics include bonding, crystal structures, crystalline defects, symmetry and crystallography, microstructure, liquids and amorphous solids, diffraction, molecular solids and polymers, liquid crystals, amphiphilic materials, and colloids. This course contains computational modules; some prior knowledge of computer programming is needed. Recommended Course Background: EN.510.202 (Computation and Programming for Materials Scientists and Engineers) or equivalent.
Prerequisites: ( ( AS.110.106 AND AS.110.107 ) OR ( AS.110.108 AND AS.110.109 ) ) AND ( ( EN.510.101 ) OR ( AS.030.101 AND AS.030.102 ) ) AND ( ( AS.171.101 OR AS.171.103 OR AS.171.107 ) AND ( AS.171.102 OR AS.171.104 OR AS.171.108 ) )
Instructor(s): T. Hufnagel
Area: Engineering, Natural Sciences.

EN.510.312. Thermodynamics/Materials. 3.00 Credits.
Second of the Introduction to Materials Science series, this course examines the principles of thermodynamics as they apply to materials. Topics include fundamental principles of thermodynamics, equilibrium in homogeneous and heterogeneous systems, thermodynamics of multicomponent systems, phase diagrams, thermodynamics of defects, and elementary statistical thermodynamics. This course contains computational modules; some prior knowledge of computer programming is needed. Recommended Course Background: EN.510.202 (Computation and Programming for Materials Scientists and Engineers) or equivalent.
Instructor(s): M. Ulmschneider
Area: Engineering, Natural Sciences.

EN.510.313. Mechanical Properties of Materials. 3.00 Credits.
Third of the Introduction to Materials Science series, this course is devoted to a study of the mechanical properties of materials. Lecture topics include elasticity, anelasticity, plasticity, and fracture. The concept of dislocations and their interaction with other lattice defects is introduced. This course contains computational modules; some prior knowledge of computer programming is needed. Recommended Course Background: EN.510.202 (Computation and Programming for Materials Scientists and Engineers) or equivalent.
Prerequisites: EN.510.311
Instructor(s): J. Spicer
Area: Engineering, Natural Sciences.

EN.510.314. Electronic Properties of Materials. 3.00 Credits.
Fourth of the Introduction to Materials Science series, this course is devoted to a study of the electronic, optical and magnetic properties of materials. Lecture topics include electrical and thermal conductivity, thermoelectricity, transport phenomena, dielectric effects, piezoelectricity, and magnetic phenomena. This course contains computational modules; some prior knowledge of computer programming is needed. Recommended Course Background: EN.510.202 (Computation and Programming for Materials Scientists and Engineers) or equivalent.
Prerequisites: EN.510.311
Instructor(s): P. Searson
Area: Engineering, Natural Sciences.

EN.510.315. Physical Chemistry of Materials II. 3.00 Credits.
Fifth of the Introduction to Materials Science series, this course covers diffusion and phase transformations in materials. Topics include Fick's laws of diffusion, atomic theory of diffusion, diffusion in multi-component systems, solidification, diffusional and diffusionless transformations, and interfacial phenomena. This course contains computational modules; some prior knowledge of computer programming is needed. Recommended Course Background: EN.510.202 (Computation and Programming for Materials Scientists and Engineers) or equivalent.
Prerequisites: EN.510.311 AND EN.510.312
Instructor(s): T. Mueller
Area: Engineering, Natural Sciences.
EN.510.316. Biomaterials I. 3.00 Credits.
Sixth of the Introduction to Materials Science series, this course offers an overview of principles and properties of biomedical materials. Topics include properties of materials used in medicine, synthesis and properties of polymeric materials, polymeric biomaterials, natural and recombinant biomaterials, biodegradable materials, hydrogels, stimuli-sensitive materials, and characterizations of biomaterials. This course contains computational modules; some prior knowledge of computer programming is needed. Recommended Course Background: EN.510.202 (Computation and Programming for Materials Scientists and Engineers) or equivalent.
Instructor(s): H. Mao
Area: Engineering, Natural Sciences.

EN.510.335. MSE Design Team I. 3.00 Credits.
This course is the first half of a two-semester course sequence for freshmen, sophomores, and juniors majoring or double majoring in materials science and engineering (MSE). This course provides a broad exposure to various aspects of planning and conducting independent research in a team setting (3 to 6 students on each team). In this course, MSE freshmen, sophomores, and juniors, working with a team leader and seniors on the team, apply their general knowledge in MSE to develop the solution to open-ended problems. *The team will meet 150 minutes per week at a time to be designated by the instructor. Recommended Course Background: EN.510.101, EN.510.109, or equivalent courses.
Instructor(s): H. Mao; O. Wilson; P. Searson
Area: Engineering, Natural Sciences.

EN.510.336. MSE Design Team II. 3.00 Credits.
This course is the second half of a two-semester course sequence for juniors majoring or double majoring in materials science and engineering (MSE). This course provides a broad exposure to various aspects of planning and conducting independent research in a team setting (3 to 6 students on each team). In this course, MSE juniors working with a team leader and seniors on the team, apply their general knowledge in MSE to develop the solution to open-ended problems. Materials Science & Engineering Freshman Only. Recommended Course Background: EN.510.106, EN.510.109, or equivalent courses. *The team will meet 150 minutes per week at a time to be designated by the instructor.
Prerequisites: EN.510.335
Instructor(s): H. Mao; J. Spicer; O. Wilson; P. Searson
Area: Engineering, Natural Sciences.

EN.510.403. Materials Characterization. 3.00 Credits.
This course will describe a variety of techniques used to characterize the structure and composition of engineering materials, including metals, ceramics, polymers, composites and semiconductors. The emphasis will be on microstructural characterization techniques, including optical and electron microscopy, X-ray diffraction, and thermal analysis and surface analytical techniques, including Auger electron spectroscopy, secondary ion mass spectroscopy, X-ray photoelectron spectroscopy, and atomic force microscopy. Working with the JHU museums, we will use the techniques learned in class to characterize historic artifacts.
Instructor(s): P. Mcguiggan
Area: Natural Sciences.

EN.510.405. Materials Science of Energy Technologies. 3.00 Credits.
This course examines the science and engineering of contemporary and cutting-edge energy technologies. Materials Science and Mechanical Engineering fundamentals in this area will be complemented by case studies that include fuel cells, solar cells, lighting, thermoelectrics, wind turbines, engines, nuclearpower, biofuels, and catalysis. Students will consider various alternative energy systems, and also to research and engineering of traditional energy technologies aimed at increased efficiency, conservation, and sustainability. Recommended Course Background: undergraduate course in thermodynamics.
Instructor(s): J. Erlebacher
Area: Engineering, Natural Sciences.

EN.510.407. Biomaterials II: Host response and biomaterials applications. 3.00 Credits.
This course focuses on the interaction of biomaterials with the biological system and applications of biomaterials. Topics include host reactions to biomaterials and their evaluation, cell-biomaterials interaction, biomaterials for tissue engineering applications, biomaterials for controlled drug and gene delivery, biomaterials for cardiovascular applications, biomaterials for orthopedic applications, and biomaterials for artificial organs. Also listed as EN.510.607.
Instructor(s): H. Mao
Area: Engineering, Natural Sciences.

EN.510.409. Melting, Smelting, Refining and Casting. 3.00 Credits.
This is a laboratory class on metal formation, an area that underlies almost all other technologies. We will examine extraction of metals from ore, refining of metals. The kinetics of melting and solidification will be explored in the context of casting and forming.
Prerequisites: EN.510.311 AND EN.510.312 AND EN.510.313 AND EN.510.315
Instructor(s): T. Hufnagel
Area: Engineering, Natural Sciences.

EN.510.412. Introduction to and Applications of Scanning Probe Microscopy. 3.00 Credits.
Scanning Probe Microscopy has emerged as one of the premier techniques to characterize surfaces. This course will give an overview of the family of SPM techniques including scanning tunneling microscopy (STM), atomic force microscopy (AFM), scanning near field optical microscopy (SNOM) and Kelvin probe microscopy. In each of these applications, the theory of operation, measurement and imaging techniques, and experimental limitations will be discussed. Also listed as 510.632.
Instructor(s): P. Mcguiggan
Area: Engineering, Natural Sciences.
EN.510.415. The Chemistry of Materials Synthesis. 3.00 Credits.
Many of the latest breakthroughs in materials science and engineering have been driven by new approaches to their synthesis, which has allowed the preparation of materials with fanciful structures and fascinating properties. This advanced course will explore synthetic approaches to multifunctional and nanostructured materials, ranging from opals to complex polymers to nanowires and quantum dots. Applications include electronics, energetics, and drug delivery. Participants will gain sufficient familiarity with synthesis options to be able to design research programs that rely on them. Emphasis will be placed on broad strategies that lead to material functionality, rather than detailed step-by-step sequences. Some topics will be selected “on the fly” from the most exciting current literature.
Instructor(s): H. Katz
Area: Engineering, Natural Sciences.

EN.510.418. Electronic and Photonic Processes and Devices. 3.00 Credits.
This course is intended for advanced undergraduates and graduate students and will cover the fundamentals and properties of electronic and optical materials and devices. Subject matter will include a detailed and comprehensive discussion of the physical processes underlying modern electronic and optical devices. Detailed descriptions of modern semiconductor devices such as lasers and detectors used in optical communications and information storage and processing will be presented. Also listed as EN.510.618/EN.510.418.
Instructor(s): T. Poehler
Area: Engineering, Natural Sciences.

EN.510.419. Physical Metallurgy. 3.00 Credits.
This course examines the relationship between microstructure and mechanical properties of metals and alloys. Starting from fundamentals (phase diagrams and phase transformation kinetics), we will explore how the structure of metals and alloys can be manipulated by thermomechanical processing to achieve desired properties. Detailed examples will be drawn from several alloy systems, including steels, aluminum, and titanium. A theme of the course will be the impact of materials processing and materials selection on the environment, including considerations of lightweight materials and processing techniques for minimizing energy consumption.
Instructor(s): E. Ma
Area: Engineering, Natural Sciences.

EN.510.420. Stealth Science & Engineering. 3.00 Credits.
The goal of stealth engineering is the creation of objects that are not easily detected using remote sensing techniques. To achieve this end, engineered systems of materials are arrayed to alter the signature of objects by reducing energy returned to remote observers. This course will provide an introduction to the general principles behind signature reduction by examining the mathematics and science behind basic electromagnetic and acoustic transport processes. Specific topics will include energy absorbing materials, anti-reflection coatings, wave guiding and scattering, metamaterials and adaptive screens. Co-listed with EN.510.640
Instructor(s): J. Spicer
Area: Engineering, Natural Sciences.

EN.510.421. Nanoparticles. 3.00 Credits.
Nanoparticles - one-dimensional materials with diameters of nearly atomic dimension - are one of the most important classes of nanostructured materials because their unusual properties that often differ significantly from bulk materials. This course will explore the synthesis, structure and properties of nanoparticles. Applications of nanoparticles in medicine, optics, sensing, and catalysis will be discussed, with an emphasis will be on metal nanoparticles and semiconductor quantum dots.
Instructor(s): O. Wilson
Area: Engineering, Natural Sciences.

EN.510.422. Micro and Nano Structured Materials & Devices. 3.00 Credits.
Almost every material’s property changes with scale. We will examine ways to make micro- and nano-structured materials and discuss their mechanical, electrical, and chemical properties. Topics include the physics and chemistry of physical vapor deposition, thin film patterning, and microstructural characterization. Particular attention will be paid to current technologies including computer chips and memory, thin film sensors, diffusion barriers, protective coatings, and microelectromechanical (MEMS) devices.
Instructor(s): E. Ma; H. Katz
Area: Engineering, Natural Sciences.

EN.510.424. Physical Science of Paper. 3.00 Credits.
An exploration of paper’s past, present, and possible future from the physical science and engineering perspectives. Includes an in-depth analysis of the defining physical, chemical, and electronic properties of paper since its origins in China as early as 202 BCE and the periodic technological innovations that improved quality, lowered price, and expanded use. Applications include paper as a medium for historic and artistic works, packaging, transformer insulation, architectural elements, medical diagnostics, and printed sensors. Topics include technologies such as email and e-books which may disrupt traditional paper formats, environmental concerns of industrial manufacture, transferrable knowledge from pulping such as the manufacture of feeds and fuels from cellulosic biomass, and paper’s legacy as found in cultural heritage artifacts and their conservation. Recommended: AS.030.205 Organic Chemistry I
Prerequisites: EN.510.101 OR (AS.030.101 AND AS.030.102)
Instructor(s): J. Baty
Area: Engineering, Natural Sciences.

EN.510.426. Biomolecular Materials I - Soluble Proteins and Amphiphiles. 3.00 Credits.
This course will examine the fundamental structure, interactions, and function relationship for biological macromolecules. The course will emphasize experimental methods and experimental design, and the physics behind human disease. Topics will include micellization, protein folding and misfolding, and macromolecular interactions. Recommended Course Background: EN.580.221 Co-listed with EN.510.621
Instructor(s): K. Hristova; M. Herrera-Alonso
Area: Engineering, Natural Sciences.
EN.510.427. Chemistry of Nanomaterials. 3.00 Credits.
This course introduces the fundamental principles necessary to understand the behavior of materials at length scales larger than atoms or molecules with applications in chemistry and materials science. This course will explore topics such as nanoparticle synthesis and self-assembly, ordered porous materials, catalysis, nanostructured thin films, and solar energy conversion. Size dependent properties of nanomaterials will be discussed. Co-listed with EN.510.661.
Instructor(s): A. Hall
Area: Engineering, Natural Sciences.

EN.510.428. Material Science Laboratory I. 3.00 Credits.
This course focuses on characterizing the microstructure and mechanical properties of structural materials that are commonly used in modern technology. A group of Al alloys, Ti alloys, carbon and alloy steels, and composite materials that are found, for example, in actual bicycles will be selected for examination. Their microstructures will be studied using optical metallography, scanning electron microscopy, X-ray diffraction, and transmission electron microscopy. The mechanical properties of these same materials will be characterized using tension, compression, impact, and hardness tests. The critical ability to vary microstructure and therefore properties through mechanical and heat treatments will also be demonstrated and investigated in the above materials. Restricted to Materials Science & Engineering juniors only
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Prerequisites: EN.510.311 and EN.510.313
Instructor(s): O. Wilson
Area: Engineering, Natural Sciences
Writing Intensive.

EN.510.429. Materials Science Laboratory II. 3.00 Credits.
This laboratory concentrates on the experimental investigation of electronic properties of materials using basic measurement techniques. Topics include thermal conductivity of metal alloys, electrical conductivity of metals/metal alloys and semiconductors, electronic behavior at infrared wavelengths, magnetic behavior of materials, carrier mobility in semiconductors and the Hall effect in metals and semiconductors. Lab Assignment is by Professor. Recommended Course Background: EN.510.311 or Permission Required.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): O. Wilson
Area: Engineering, Natural Sciences
Writing Intensive.

EN.510.430. Biomaterials Lab. 3.00 Credits.
This laboratory course concentrates on synthesis, processing and characterization of materials for biomedical applications, and characterization of cell-materials interaction. Topics include synthesis of biodegradable polymers and degradation, electrospinning of polymer nanofibers, preparation of polymeric microspheres and drug release, preparation of plasmid DNA, polymer-mediated gene delivery, recombinant protein synthesis and purification, self-assembly of collagen fibril, surface functionalization of biomaterials, cell culture techniques, polymer substrates for cell culture, and mechanical properties of biological materials. Recommended Course Background: EN.510.407
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): K. Hristova
Area: Engineering, Natural Sciences
Writing Intensive.

EN.510.433. Senior Design Research. 3.00 Credits.
This course is the first half of a two-semester sequence required for seniors majoring or double majoring in materials science and engineering. It is intended to provide a broad exposure to many aspects of planning and conducting independent research. During this semester, students join ongoing graduate research projects for a typical 10-12 hours per week of hands-on research. Classroom activities include discussions, followed by writing of research pre-proposals (white papers), proposals, status reports and lecture critiques of the weekly departmental research seminar. Co-listed with EN.510.438 and EN.510.440
Prerequisites: Prereq: EN.510.311 and 510.312 and EN.510.428 and 510.429
Instructor(s): O. Wilson
Area: Engineering
Writing Intensive.

EN.510.434. Senior Design/Research II. 3.00 Credits.
This course is the second half of a two-semester sequence required for seniors majoring or double majoring in materials science and engineering. It is intended to provide a broad exposure to many aspects of planning and conducting independent research. Recommended Course Background: EN.510.311-EN.510.312, EN.510.428-EN.510.429, and EN.510.433 Meets with EN.510.439, EN.510.441, EN.510.446, and EN.510.448
Instructor(s): O. Wilson
Area: Engineering, Natural Sciences
Writing Intensive.

EN.510.435. Mechanical Properties of Biomaterials. 3.00 Credits.
This course will focus on the mechanical properties of biomaterials and the dependence of these properties on the microstructure of the materials. Organic and inorganic systems will be considered through a combination of lectures and readings and the material systems will range from cells to bones to artificial implants. Same course as 510.635.
Instructor(s): T. Weihs
Area: Engineering, Natural Sciences.

EN.510.437. Biosensor Materials and Mechanisms. 3.00 Credits.
Recent advances in biosensor technology are poised to revolutionize health care, enabling faster and more personalized diagnoses and recommendations. Biosensors are also increasingly important to public health, security, industry, and environmental science. This course will cover the materials, processes, and signaling mechanisms in use and anticipated for future developments in biosensors. Techniques such as electrochemistry, fluorescence, plasmonics, and enzymatic amplification will be discussed, and materials including nanowires, nanoparticles, organic semiconductors, and templated materials will be covered. Detection of nucleic acid sequences, proteins, carbohydrates, pharmaceuticals, and microorganisms will be emphasized. Same course as EN.510.637.
Instructor(s): H. Katz
Area: Engineering, Natural Sciences.
EN.510.438. Biomaterials Senior Design I. 3.00 Credits.
This course is the first half of a two-semester sequence required for seniors majoring in materials science and engineering with the Biomaterials Concentration. It is intended to provide a broad exposure to many aspects of planning and conducting independent research with a focus on biomaterials. During this semester, students join ongoing graduate research projects for a typical 10-12 hours per week of hands-on experiences in design and research. Classroom activities include discussions, followed by writing of research pre-proposals (white papers), proposals, status reports and lecture critiques of departmental research seminars. Co-listed with EN.510.440 and EN.510.433
Instructor(s): O. Wilson
Area: Engineering, Natural Sciences
Writing Intensive.

EN.510.439. Biomaterials Senior Design II. 3.00 Credits.
This course is the second half of a two-semester sequence required for seniors majoring in materials science and engineering with the Biomaterials Concentration. It is intended to provide a broad exposure to many aspects of planning and conducting independent research with a focus on biomaterials. During this semester, verbal reporting of project activities and status is emphasized, culminating in student talks presented to a special session of students and faculty. Students also prepare a poster and a written final report summarizing their design and research results. Recommended Course Background: EN.510.311-EN.510.312, EN.510.428-EN.510.429, and EN.510.433 or 510.438 or 510.440 Meets with EN.510.434, EN.510.441, EN.510.446, and EN.510.448
Instructor(s): O. Wilson
Area: Engineering, Natural Sciences
Writing Intensive.

EN.510.440. Nanomaterials Senior Design I. 3.00 Credits.
This course is the first half of a two-semester sequence required for seniors majoring in materials science and engineering with the Nanotechnology Concentration. It is intended to provide a broad exposure to many aspects of planning and conducting independent research with a focus on nanotechnology and nanomaterials. During this semester, students join ongoing graduate research projects for a typical 10-12 hours per week of hands-on experiences in design and research. Classroom activities include discussions, followed by writing of research pre-proposals (white papers), proposals, status reports and lecture critiques of departmental research seminars. Co-listed with EN.510.433 and EN.510.438
Instructor(s): O. Wilson
Area: Engineering, Natural Sciences
Writing Intensive.

EN.510.441. Nanomaterials Senior Design II. 3.00 Credits.
This course is the second half of a two-semester sequence required for seniors majoring in materials science and engineering with the Nanotechnology Concentration. It is intended to provide a broad exposure to many aspects of planning and conducting independent research with a focus on nanotechnology and nanomaterials. During this semester, verbal reporting of project activities and status is emphasized, culminating in student talks presented to a special session of students and faculty. Students also prepare a poster and a written final report summarizing their design and research results. Recommended Course Background: EN.510.311-EN.510.312, EN.510.428-EN.510.429, and EN.510.433 or 510.438 or 510.440 Meets with EN.510.434, EN.510.439, EN.510.446, and EN.510.448
Instructor(s): O. Wilson
Area: Engineering, Natural Sciences
Writing Intensive.

EN.510.442. Nanomaterials Lab. 3.00 Credits.
The objective of the laboratory course will be to give students hands on experience in nanotechnology based device fabrication through synthesis, patterning, and characterization of nanoscale materials. The students will use the knowledge gained from the specific synthesis, characterization and patterning labs to design and fabricate a working nanoscale/nanostructured device. The course will be augmented with comparisons to microscale materials and technologies. These comparisons will be key in understanding the unique phenomena that enable novel applications at the nanoscale. DMSE Seniors or permission of the instructor.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): E. Ma; J. Erlebacher; O. Wilson; P. Mcguiggan
Area: Engineering, Natural Sciences.

EN.510.443. Chemistry and Physics of Polymers. 3.00 Credits.
The course will describe and evaluate the synthetic routes, including condensation and addition polymerization, to macromolecules with varied constituents and properties. Factors that affect the efficiencies of the syntheses will be discussed. Properties of polymers that lead to technological applications will be covered, and the physical basis for these properties will be derived. Connections to mechanical, electronic, photonic, and biological applications will be made. Also listed as EN.510.643. Recommended Course Background: Organic Chemistry I and one semester of thermodynamics.
Instructor(s): H. Katz
Area: Engineering, Natural Sciences.

EN.510.445. MSE Design Team II. 3.00 Credits.
This course is the first half of a two-semester course sequence for senior students majoring or double majoring in MSE. This course provides a broad experience to various aspects of planning and conducting independent research in a team setting (3 to 6 students on each team). In this course, MSE seniors, working with a team leader and a group of freshmen, sophomores, and seniors, apply their knowledge in their track area to generate the solution to open-ended problems encountered in MSE. Recommended Course Background: EN.510.101, EN.510.311, EN.510.312, EN.510.428, EN 510.429.
Instructor(s): H. Mao; O. Wilson; P. Searson
Area: Engineering, Natural Sciences
Writing Intensive.
EN.510.446. MISE Design Team II. 3.00 Credits.
This course is the second half of a two-semester course sequence for senior students majoring or double majoring in MSE. This course provides a broad experience to various aspects of planning and conducting independent research in a team setting (3 to 6 students on each team). In this course, MSE seniors, working with a team leader and a group of freshmen, sophomores, and seniors, apply their knowledge in their track area to generate the solution to open-ended problems encountered in MSE. Materials Science & Engineering Seniors Only. Recommended Course Background: EN 510.101, EN 510.311, EN 510.312, EN 510.428, EN 510.429. Meets with EN.510.434, EN.510.439, EN.510.441 and EN.510.448.
Prerequisites: EN.510.445
Instructor(s): H. Mao; J. Spicer; O. Wilson; P. Searson
Area: Engineering, Natural Sciences.

EN.510.447. MISE Design Team Leader. 4.00 Credits.
This course is the first half of a two-semester course sequence for students majoring or double majoring in MSE. This course provides a leadership experience to various aspects of planning and conducting independent research in a team setting. In this course, MSE seniors assemble and lead a student team consisting of 3 to 6 students, apply their knowledge in their track area, and develop leadership skills to generate the solution to open-ended problems encountered in MSE. Recommended Course Background: EN 510.101, EN 510.311, EN 510.312, EN 510.428, EN 510.429.
Instructor(s): H. Mao; O. Wilson; P. Searson
Area: Engineering, Natural Sciences
Writing Intensive.

EN.510.448. MISE Design Team Leader. 4.00 Credits.
This course is the second half of a two-semester course sequence for students majoring or double majoring in MSE. This course provides a leadership experience to various aspects of planning and conducting independent research in a team setting. In this course, MSE seniors assemble and lead a student team consisting of 3 to 6 students, apply their knowledge in their track area, and develop leadership skills to generate the solution to open-ended problems encountered in MSE. Materials Science & Engineering Seniors Only. Recommended Course Background: EN 510.101, EN 510.311, EN 510.312, EN 510.428, EN 510.429. Meets with EN.510.434, EN.510.439, EN.510.441, and EN.510.446.
Prerequisites: EN.510.447
Instructor(s): H. Mao; J. Spicer; O. Wilson; P. Searson
Area: Engineering, Natural Sciences.

EN.510.456. Introduction to Surface Science. 3.00 Credits.
Introduction to the structure and properties of solid surfaces. Topics include Gibbsian and gradient thermodynamics of surfaces; crystallography and structure of free solid surfaces; characterization methods; surface mobility and phase transitions; gas-solid interactions; crystal growth; electronic structure; solid-solid surfaces; thin film epitaxy. Co-listed with EN.510.656. Recommended course background: EN 510.311, EN.510.312, EN.510.313, EN.510.314, EN.510.315 or instructor permission.
Instructor(s): R. Cammarata
Area: Engineering, Natural Sciences.

EN.510.457. Materials Science of Thin Films. 3.00 Credits.
The processing, structure, and properties of thin films are discussed emphasizing current areas of scientific and technological interest. Topics include elements of vacuum science and technology; chemical and physical vapor deposition processes; film growth and microstructure; chemical and microstructural characterization methods; epitaxy; mechanical properties such as internal stresses, adhesion, and strength; and technological applications such as superlattices, diffusion barriers, and protective coatings. Co-listed with EN.510.657
Instructor(s): T. Wehls
Area: Engineering, Natural Sciences.

EN.510.459. Physics & Properties of Low-Dimensional Nanomaterials. 3.00 Credits.
This course is intended for advanced undergraduates and graduate students and will cover the fundamentals and properties of low dimensional nanomaterials. Subject matter will include a detailed and comprehensive discussion of the physics and physical properties of solids confined in either one, two or three directions. Features examined for these low dimensional materials will include electronic structure, electrical transport, vibrational and thermal transport in low dimensional systems such as graphene, carbon nanotubes, quantum wires, semiconductor and metal nanoparticles. Co-listed with EN.510.659.
Instructor(s): T. Poehler
Area: Engineering, Natural Sciences.

EN.510.501. Undergraduate Research/Material. 3.00 Credits.
Student participation in ongoing research activities. Research is conducted under the supervision of a faculty member and often in conjunction with other members of the research group.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): Staff.

EN.510.502. Research in Materials Science. 0.00 - 3.00 Credits.
Student participation in ongoing research activities. Research is conducted under the supervision of a faculty member and often in conjunction with other members of the research group.
Instructor(s): Staff.

EN.510.503. Independent Study/Materials Science. 3.00 Credits.
Individual programs of study are worked out between students and the professor supervising their independent study project. Topics selected are those not formally listed as regular courses and include a considerable design component.
Instructor(s): O. Wilson; R. Cammarata.

EN.510.504. Independent Study. 0.00 - 3.00 Credits.
Individual programs of study are worked out between students and the professor supervising their independent study project. Topics selected are those not formally listed as regular courses and include a considerable design component.
Instructor(s): A. Hall; P. Searson; T. Hufnagel.

EN.510.511. Group Undergraduate Research/Material. 3.00 Credits.
Student participation in ongoing research activities. Research is conducted under the supervision of a faculty member and often in conjunction with other members of the research group. This section has a weekly research group meeting that students are expected to attend.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): Staff.

EN.510.597. Research-Summer. 3.00 Credits.
Instructor(s): Staff.
EN.510.601. Structure of Materials. 3.00 Credits.
An introduction to the structure of inorganic and polymeric materials. Topics include the atomic scale structure of metals, alloys, ceramics, and semiconductors; structure of polymers; crystal defects; elementary crystallography; tensor properties of crystals; and an introduction to the uses of diffraction techniques (including X-ray diffraction and electron microscopy) in studying the structure of materials. Recommended Course Background: undergraduate chemistry, physics, and calculus or permission of instructor.
Instructor(s): M. Herrera-Alonso.

EN.510.602. Thermodynamics of Materials. 3.00 Credits.
An introduction to the classical and statistical thermodynamics of materials. Topics include the zeroth law of thermodynamics; the first law (work, internal energy, heat, enthalpy, heat capacity); the second law (heat engines, Carnot cycle, Clausius inequality, entropy, absolute temperature); equilibrium of single component systems (free energy, thermodynamic potentials, virtual variations, chemical potential, phase changes); equilibrium of multicomponent systems and chemical thermodynamics; basics of statistical physics (single and multiple particle partition functions, configurational entropy, third law; statistical thermodynamics of solid solutions); and equilibrium composition-temperature phase diagrams. Recommended Course Background: undergraduate calculus, chemistry, and physics or permission of instructor.
Instructor(s): T. Hufnagel.

EN.510.603. Phase Transformations of Materials. 3.00 Credits.
This course presents a unified treatment of the thermodynamics and kinetics of phase transformations from phenomenological and atomistic viewpoints. Phase transformations in condensed metal and nonmetal systems are discussed. Recommended Course Background: EN.510.601 and EN.510.602
Instructor(s): J. Erlebacher.

EN.510.604. Mechanical Properties of Materials. 3.00 Credits.
An introduction to the properties and mechanisms that control the mechanical performance of materials. Topics include mechanical testing, tensor description of stress and strain, isotropic and anisotropic elasticity, plastic behavior of crystals, dislocation theory, mechanisms of microscopic plasticity, creep, fracture, and deformation and fracture of polymers. Recommended Course Background: EN.510.601
Instructor(s): E. Ma.

EN.510.605. Electrical, Optical and Magnetic Properties of Materials. 3.00 Credits.
An overview of electrical, optical and magnetic properties arising from the fundamental electronic and atomic structure of materials. Continuum materials properties are developed through examination of microscopic processes. Emphasis will be placed on both fundamental principles and applications in contemporary materials technologies. Recommended Course Background: EN.510.601
Instructor(s): J. Spicer.

EN.510.606. Polymer Chemistry & Biology. 3.00 Credits.
An introduction to the chemical and biological properties of organic and inorganic materials. Topics include an introduction to polymer science, polymer synthesis, chemical synthesis, and modification of inorganic materials, biomaterialization, biosynthesis, and properties of natural materials (proteins, DNA, and polysaccharides), structure-property relationships in polymeric materials (synthetic polymers and structural proteins), and materials for biomedical applications. Recommended Course Background: undergraduate chemistry and biology or permission of instructor.
Instructor(s): M. Herrera-Alonso.

EN.510.607. Biomaterials II: Host response and biomaterials applications. 3.00 Credits.
This course focuses on the interaction of biomaterials with the biological system and applications of biomaterials. Topics include host reactions to biomaterials and their evaluation, cell-biomaterials interaction, biomaterials for tissue engineering applications, biomaterials for controlled drug and gene delivery, biomaterials for cardiovascular applications, biomaterials for orthopedic applications, and biomaterials for artificial organs. Recommended Course Background: EN.510.606. Also listed as EN.510.407
Instructor(s): H. Mao.

EN.510.608. Electrochemistry. 3.00 Credits.
Thermodynamics of electrochemical interfaces, including electrochemical potential, the Nernst equation, ion-solvent interactions, and double layer theory. Charge transfer kinetics for activation and diffusion controlled processes. Analysis of kinetics at various electrodes, including redox reactions, metal-ion electrodes, and semiconductor electrodes. Electroanalytical techniques are discussed, including those related to bioelectrochemistry and semiconductor electrochemistry. Selected reactions of technological importance are evaluated, including the hydrogen evolution reaction, oxygen reduction, electrodeposition, and energy generation and storage. Recommended Course Background: introductory chemistry or permission of instructor.
Instructor(s): P. Searson.

EN.510.611. Solid State Physics. 3.00 Credits.
An introduction to solid state physics for advanced undergraduates and graduate students in physical science and engineering. Topics include crystal structure of solids; band theory; thermal, optical, and electronic properties; transport and magnetic properties of metals, semiconductors, and insulators. The concepts of solid state principles in modern electronic, optical, and structural materials are discussed. Cross-listed with Electrical and Computer Engineering.
Instructor(s): T. Poehler.

EN.510.612. Solid State Physics. 3.00 Credits.
Basic solid state physics principles applied to modern electronic, optical, and structural materials. Topics discussed will include magnetism, superconductivity, polymers, nano-structured materials, electronic effects, and surface physics. For advanced undergraduates and graduate students in physical science and engineering. Recommended Course Background: EN.510.611
Instructor(s): T. Poehler.

EN.510.615. Physical Properties of Materials. 3.00 Credits.
A detailed survey of the relationship between materials properties and underlying microstructure. Structure/property/processing relationships will be examined across a wide spectrum of materials including metals, ceramics, polymers and biomaterials, and properties including electrical, magnetic, optical, thermal, mechanical, chemical and biocompatibility.
Instructor(s): P. Mcguiggan
Area: Engineering, Natural Sciences.

EN.510.618. Electronic and Photonic Processes and Devices. 3.00 Credits.
This course is intended for advanced undergraduates and graduate students and will cover the fundamentals and properties of electronic and optical materials and devices. Subject matter will include a detailed and comprehensive discussion of the physical processes underlying modern electronic and optical devices. Detailed descriptions of modern semiconductor devices such as lasers and detectors used in optical communications and information storage and processing will be presented. Also listed as EN.510.618/EN.510.418.
Instructor(s): T. Poehler.
EN.510.621. Biomolecular Materials I - Soluble Proteins and Amphiphiles. 3.00 Credits.
Instructor(s): K. Hristova; M. Herrera-Alonso
Area: Engineering, Natural Sciences.

EN.510.624. X-Ray Scattering, Diffraction and Imaging. 3.00 Credits.
An introduction to the uses of X-rays for structural characterization of materials. Topics include: X-ray scattering by atoms; kinematic and dynamical theories of diffraction; Fourier series and transform methods; scattering by liquids and amorphous solids; coherent X-ray diffraction, scattering, and imaging; and modern X-ray sources (synchrotron radiation and X-ray free-electron lasers). Recommended Course Background: EN.510.601 or permission of the instructor.
Instructor(s): T. Hufnagel
Area: Engineering, Natural Sciences.

EN.510.630. Molecular Simulation of Materials. 3.00 Credits.
Learn the fundamentals necessary to design and implement computer simulations on the molecular level. This course focuses on two widely used techniques: molecular-dynamics and Monte Carlo simulation. Both are introduced in the context of a review of the basic theoretical background. This class will cover the specifics of handling molecular interactions using empirical potentials, applying proper boundary conditions and simulating various equilibrium ensembles and non-equilibrium systems. Lectures will address how to extract transport coefficients, atomic scale correlations and local stresses and strains from simulation data, and computational issues such as algorithmic complexity and efficiency. The final weeks of the course will focus on new and cutting-edge advances in these methods.
Instructor(s): M. Falk
Area: Engineering, Natural Sciences.

EN.510.632. Introduction to and Applications of Scanning Probe Microscopy. 3.00 Credits.
Scanning Probe Microscopy has emerged as one of the premier techniques to characterize surfaces. This course will give an overview of the family of SPM techniques including scanning tunneling microscopy (STM), atomic force microscopy (AFM), scanning near field optical microscopy (SNOM) and Kelvin probe microscopy. In each of these applications, the theory of operation, measurement and imaging techniques, and experimental limitations will be discussed. Also listed as EN.510.412
Instructor(s): P. Mcguiggan
Area: Engineering, Natural Sciences.

EN.510.633. Computational Materials Design. 3.00 Credits.
This course will cover the use of computational methods to discover and design materials for new technologies. Topics addressed will include structure prediction, materials informatics, and the calculation of material properties from first principles using methods such as density functional theory. Participants will gain hands-on experience with modern computational techniques.
Instructor(s): T. Mueller
Area: Engineering, Natural Sciences.

EN.510.634. Simulation of Biomolecules and Membranes. 3.00 Credits.
This class will provide an overview of methods for molecular simulation of biomolecules and membranes. We will study methods for atomic detail molecular dynamics and Monte Carlo simulations. After discussing basic algorithms such as integrators, thermostats, and barostats, we will study how biomolecules are chemically parameterized to accurately capture their conformational equilibria. This knowledge will then be used to build, simulate, and analyse a molecular model of a membrane protein embedded in a lipid bilayer. The simulation will be used to understand how these methods can be used to obtain insights into the molecular mechanisms of protein function.
Instructor(s): M. Ulmschneider
Area: Engineering, Natural Sciences.

EN.510.635. Mechanical Properties of Biomaterials. 3.00 Credits.
This course will focus on the mechanical properties of biomaterials and the dependence of these properties on the microstructure of the materials. Organic and inorganic systems will be considered through a combination of lectures and readings and the material systems will range from cells to bones to artificial implants. Same course as 510.435
Instructor(s): T. Wehls
Area: Engineering, Natural Sciences.

EN.510.637. Biosensor Materials and Mechanisms. 3.00 Credits.
Recent advances in biosensor technology are poised to revolutionize health care, enabling faster and more personalized diagnoses and recommendations. Biosensors are also increasingly important to public health, security, industry, and environmental science. This course will cover the materials, processes, and signaling mechanisms in use and anticipated for future developments in biosensors. Techniques such as electrochemistry, fluorescence, plasmonics, and enzymatic amplification will be discussed, and materials including nanowires, nanoparticles, organic semiconductors, and templated materials will be covered. Detection of nucleic acid sequences, proteins, carbohydrates, pharmaceuticals, and microorganisms will be emphasized. Same course as EN.510.437.
Instructor(s): H. Katz
Area: Engineering, Natural Sciences.
EN.510.640. Stealth Engineering. 3.00 Credits.
The goal of stealth engineering is the creation of objects that are not easily detected using remote sensing techniques. To achieve this end, engineered systems of materials are arrayed to alter the signature of objects by reducing energy returned to remote observers. This course will provide an introduction to the general principles behind signature reduction by examining the mathematics and science behind basic electromagnetic and acoustic transport processes. Specific topics will include energy absorbing materials, anti-reflection coatings, wave guiding and scattering, metamaterials and adaptive screens. Co-listed with EN.510.420.  
Instructor(s): J. Spicer  
Area: Engineering, Natural Sciences.

EN.510.643. Chemistry and Physics of Polymers. 3.00 Credits.  
The course will describe and evaluate the synthetic routes, including condensation and addition polymerization, to macromolecules with varied constituents and properties. Factors that affect the efficiencies of the syntheses will be discussed. Properties of polymers that lead to technological applications will be covered, and the physical basis for these properties will be derived. Connections to mechanical, electronic, photonic, and biological applications will be made. Also listed as EN.510.443. Recommended Course Background: Organic Chemistry I and one semester of thermodynamics.  
Instructor(s): H. Katz  
Area: Engineering, Natural Sciences.

EN.510.656. Introduction to Surface Science. 3.00 Credits.  
Introduction to the structure and properties of solid surfaces. Topics include Gibbsian and gradient thermodynamics of surfaces; crystallography and structure of free solid surfaces; characterization methods; surface mobility and phase transitions; gas-solid interactions; crystal growth; electronic structure; solid-solid surfaces; thin film epitaxy. Co-listed with EN.510.456. Recommended course background: EN.510.311, EN.510.312, EN.510.313, EN.510.314, EN.510.315 or instructor permission.  
Instructor(s): R. Cammarata.

EN.510.657. Materials Science of Thin Films. 3.00 Credits.  
The processing, structure, and properties of thin films are discussed emphasizing current areas of scientific and technological interest. Topics include elements of vacuum science and technology; chemical and physical vapor deposition processes; film growth and microstructure; chemical and microstructural characterization methods; epitaxy; mechanical properties such as internal stresses, adhesion, and strength; and technological applications such as superlattices, diffusion barriers, and protective coatings. Co-listed with EN.510.457.  
Instructor(s): T. Weih.

EN.510.659. Physics & Properties of Low-Dimensional Nanomaterials. 3.00 Credits.  
This course is intended for advanced undergraduates and graduate students and will cover the fundamentals and properties of low dimensional nanomaterials. Subject matter will include a detailed and comprehensive discussion of the physics and physical properties of solids confined in either one, two or three directions. Features examined for these low dimensional materials will include electronic structure, electrical transport, vibrational and thermal transport in low dimensional systems such as graphene, carbon nanotubes, quantum wires, semiconductor and metal nanoparticles. Co-listed with EN.510.459.  
Instructor(s): T. Poehler  
Area: Engineering, Natural Sciences.

EN.510.661. Chemistry of Nanomaterials. 3.00 Credits.  
This course introduces the fundamental principles necessary to understand the behavior of materials at length scales larger than atoms or molecules with applications in chemistry and materials science. This course will explore topics such as nanoparticle synthesis and self assembly, ordered porous materials, catalysis, nanostructured thin films, and solar energy conversion. Size dependent properties of nanomaterials will be discussed. Co-listed with EN.510.427  
Instructor(s): A. Hall  
Area: Engineering.

EN.510.801. Materials Research Seminar. 1.00 Credit.  
The Graduate Research Seminar in the Department of Materials Science and Engineering provides a forum for students to present their latest research results in a formal seminar setting. The course encourages discussion between students in varying disciplines in order to establish new collaborations and develop the shared vocabulary required for interdisciplinary materials science research. Permission Required.  
Instructor(s): J. Erlebacher.

EN.510.802. Materials Research Seminar. 1.00 Credit.  
EN.510.803. Materials Science Seminar. 1.00 Credit.  
The Materials Science Seminar exposes students to a wide array of internationally recognized speakers who discuss topics of cutting-edge Materials Science research. Speakers are selected both to overlap research interests within the department and to expose students to broader trends in contemporary Materials Science.  
Instructor(s): J. Erlebacher.

EN.510.804. Materials Science Seminar. 1.00 Credit.  
Meets with EN.510.434, EN.510.439, EN.510.441, EN.510.446, and EN.510.448.  
Instructor(s): J. Erlebacher.

EN.510.807. Graduate Research In Materials Science. 3.00 - 20.00 Credits.  
Individual programs of study are worked out between students and the professor supervising their independent study project. Topics selected are those not formally listed as regular courses and include a considerable design component.  
Instructor(s): J. Erlebacher.

EN.510.808. Graduate Research. 3.00 - 20.00 Credits.  
Instructor(s): J. Erlebacher.

Cross Listed Courses

Physics Astronomy  
AS.171.321. Introduction to Space, Science, and Technology. 3.00 Credits.  
Topics include space astronomy, remote observing of the earth, space physics, planetary exploration, human space flight, space environment, orbits, propulsion, spacecraft design, attitude control and communication. Crosslisted by Departments of Earth and Planetary Sciences, Materials Science and Engineering and Mechanical Engineering. Recommended Course Background: AS.171.101-AS.171.102 or similar; AS.110.108-AS.110.109.  
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.  
Instructor(s): J. MacKenty, S. McCandliss  
Area: Engineering, Natural Sciences.
Electrical Computer Engineering
EN.520.627. Photovoltaics and Energy Devices. 3.00 Credits.
This course provides an introduction to the science of photovoltaics and related energy devices. Topics covered include basic concepts in semiconductor device operation and carrier statistics; recombination mechanisms; p-n junctions; silicon, thin film, and third generation photovoltaic technologies; light trapping; and detailed balance limits of efficiency. Additionally, thermophotovoltaics and electrical energy storage technologies are introduced. A background in semiconductor device physics (EN.520.485, or similar) is recommended.
Instructor(s): S. Thon.

Institute for NanoBio Technology
EN.670.619. Fundamental Physics and Chemistry of Nanomaterials. 3.00 Credits.
This course will cover the physics and chemistry relevant to the design, synthesis, and characterization of nanoparticles. Topics include nanoparticle synthesis, functionalization, surface engineering, and applications in diagnostics and therapeutics. The properties of semiconductor quantum dots and magnetic nanoparticles will be reviewed along with techniques for nanoparticle manipulation, particle tracking, and bio-microrheology. Patterning tools including soft lithography, optical lithography, e-beam lithography, and template lithography will be discussed. Electron and scanning probe microscopy will be reviewed. Cross-listed with Materials Science & Engineering and Chemical & Biomolecular Engineering.
Instructor(s): Staff.

Mechanical Engineering
http://me.jhu.edu

The Department of Mechanical Engineering offers undergraduate and graduate programs of instruction and research. Undergraduate programs are offered in Mechanical Engineering and in Engineering Mechanics. The B.S. in the Mechanical Engineering and Engineering Mechanics degree programs are accredited by the Engineering Accreditation Commission of ABET, http://www.abet.org. Graduate programs are offered leading to the M.S.E. and the Ph.D. degrees. A five-year accelerated B.S./M.S.E. program is also available.

Mechanical Engineering is of great importance in most contemporary technologies. Examples include aerospace, power generation and conversion, fluid machinery, design and construction of mechanical systems, transportation, manufacturing, production, biomechanics, and others. This wide range of applications is reflected in the four main stems of the undergraduate curriculum-thermal and fluid systems, mechanics and materials, robotics and control systems, and biomechanics. Engineering Mechanics is a more flexible program that enables students to pursue particular interests while centering on a smaller core of courses. Students may use this flexibility to follow specific interests in physics, mathematics, economics, biology, and other disciplines while receiving an engineering degree.

Design is a major component of both undergraduate programs. In the two-semester Engineering Design Project course taken by undergraduates during their senior year, students work in teams of three or four to design, construct, and test a mechanical device or system for an industrial sponsor.

A major effort of the department is directed toward the creation of a stimulating intellectual environment in which both undergraduate and graduate students can develop to their maximum potential. Faculty members encourage undergraduate students to participate in both fundamental and applied research along with the graduate students. In most junior and senior undergraduate classes, and in graduate classes, small enrollments permit close contact with faculty members. Students have excellent opportunities to participate actively in the classroom and laboratories and to follow special interests within a subject area.

Facilities
Most teaching and research facilities of the department, as well as the departmental office, are located in Latrobe, Clark, Krieger, Wyman, Maryland, Malone, and Hackerman Halls. The undergraduate laboratories are equipped with sophisticated data acquisition and analysis systems. Students have access to a manual machine shop, which includes a wire EDM for the purpose of fabricating parts for special projects, a computer-controlled CO2 laser cutter, and 3-D printers. The Mechatronics laboratory allows students to design and build their own robots for a class competition. The Senior Design laboratories are used by seniors to construct and test their prototypes in the yearlong design project course. Computer facilities are readily available throughout the department and the Whiting School.

Research facilities include laboratories in several disciplines. The Laboratory for Impact Dynamics and Rheology includes facilities for the study of failure, instabilities, impact and dynamic phenomena. The Hopkins Extreme Materials Institute addresses fundamental science issues associated with materials under extreme conditions, such as dynamic environments, human tissues, and impacts on planets and asteroids. The Laboratory for Active Materials and Biomimetics contains facilities for the characterization of tissues, active materials and biomaterials. These, coupled with electron microscopy facilities, enable innovative research on the mechanical properties of materials.

The Microspecimen Testing Laboratory has special tensile test machines for specimens as thin as 60 nanometers. The Computational Solid Mechanics Laboratory uses state-of-the-art finite-element techniques to study the physics of impact, wear, and more generally, the behavior of materials under high deformation and high-deformation rates. The calculations are conducted at length scales ranging from the nanoscale up to the macroscale.

A large hydrodynamics laboratory is the home of laser-based flow simulation and analysis research, and the Corrsin Wind Tunnel is equipped with modern instrumentation for turbulence research. The heat transfer laboratory is equipped for research using holographic interferometry to study heat transfer in complex geometries with single- and two-phase flows.

The Photonics for Quantitative Biology and Medicine laboratory focuses diverse spectroscopic modalities that exploit intrinsic contrast in biological media to provide information on pathological conditions. In the BioMEMS and Single Molecule Dynamics Lab, engineering innovation in microfluidics, single molecule spectroscopy, and functional nanoparticles drive the development of biomarker-based diagnostics and monitoring of disease. The SXS Lab explores quantitative questions in cellular biomechanics to explain cell movement, cell division, and biological force generation.

The Laboratory for Computational Sensing and Robotics consists of numerous laboratories and collaborating research centers covering multiple domains. The robotics and mechatronics laboratory is fully equipped for the construction and testing of prototypes of novel robotic systems. The Dynamical Systems and Control laboratory is equipped for design, fabrication, and testing of advanced robotic arms and underwater
robots. Experimental equipment includes a test-bed remotely operated underwater vehicle. The Locomotion in Mechanical and Biological Systems (LIMBS) laboratory is equipped with an industrial six-axis manipulator, and as well as the facilities for the development of mobile and medical robots.

Financial Aid

Scholarships and other forms of financial assistance for undergraduates are described under Admissions and Finances (p. 9). In addition, selected undergraduates may be employed as laboratory assistants on research projects. Assistance in various forms is available for graduate students, including tuition fellowships, fellowships with stipend, research assistantships, and competitively-awarded hourly teaching assistant positions. Applications for graduate study must be received by October 15 for the Spring semester and December 15 for the Fall semester for consideration.

Research assistantships support graduate students who work with professors on their research contracts and grants.

The Department of Mechanical Engineering offers two undergraduate programs: the Bachelor of Science in Mechanical Engineering and the Bachelor of Science in Engineering Mechanics. Both programs are accredited by ABET, the Accreditation Board for Engineering and Technology. The department offers concentrations in biomechanical engineering and aerospace engineering. For additional information regarding both the mechanical engineering and engineering mechanics academic programs, please consult the undergraduate advising manuals which are available on the departmental website at http://me.jhu.edu/undergraduate-studies/academic-advising-undergraduate/. For details and an explanation of ABET requirements, visit www.abet.org.

Requirements for the Bachelor’s Degree

See also General Requirements for Departmental Majors (p. 10); Writing Requirement, and the department’s undergraduate advising manuals.

The Mechanical Engineering Program

The mission of the B.S. in mechanical engineering degree program is to provide a rigorous educational experience that prepares a select group of students for leadership positions in the profession and a lifetime of learning. The faculty is committed to maintaining a modern and flexible curriculum which, building on a foundation of basic sciences and mathematics, develops a solid education in the mechanical engineering sciences. The aim of the Mechanical Engineering program is to build competence in the design and development of thermal, fluid, and mechanical systems, to promote a broad knowledge of the contemporary social and economic context, and to develop the communication skills necessary to excel.

The program provides a basic background in thermal and mechanical systems. Laboratory instruction, as well as the senior design project, gives the student hands-on experience. Each student’s program of study is planned in consultation with his or her faculty advisor. Students are encouraged to develop depth in one or two areas of focus within mechanical engineering chosen from fluid mechanics, mechanics of solids and design, heat transfer and energy, robotics, and biomechanics. The choice of focus is decided in the junior year after consultation with the student’s faculty advisor.

The objectives for the B.S. in mechanical engineering degree program are designed to provide a high-quality educational experience that is tailored to the needs and interests of the student. The program will educate an exceptional group of engineers who, after graduation, will be:

- ...successful and on track to become leaders among their peers in industry, government laboratories and other organizations, and
- ...advanced students in the best graduate programs.

Students graduating from the B.S. in mechanical engineering will have demonstrated the ability to:

- (a) an ability to apply knowledge of mathematics, science and engineering
- (b) an ability to design and conduct experiments, as well as to analyze and interpret data
- (c) an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability and sustainability
- (d) an ability to function on multidisciplinary teams
- (e) an ability to identify, formulate, and solve engineering problems
- (f) an understanding of professional and ethical responsibility
- (g) an ability to communicate effectively
- (h) the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental and societal context
- (i) a recognition of the need for, and an ability to engage in life-long
- (j) a knowledge of contemporary issues
- (k) an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.

The Mechanical Engineering Curriculum is Structured as Follows

Mathematics (19 credits)

<table>
<thead>

Mechanical Engineering Electives (9 credits)
(Grades below C- are not accepted)

Three courses (300-level or higher) in mechanical engineering 9

Technical Electives (9 credits)
(Grades below C- are not accepted)

Three engineering, quantitative studies, or natural sciences courses at or above the 300-level, chosen from any combination of courses in engineering, basic sciences, or mathematics selected in consultation with the student’s advisor. **

Total Credits 126

* To obtain coherence and depth in these humanities and social science electives, at least six credits must be at the 300-level or higher. While a course grade of C- or higher is preferred, up to 10 credits with a D or D+ grade will be accepted. For examples of areas of concentration and more details, see the undergraduate academic advising manual at http://www.me.jhu.edu/advising.html.

** These courses are intended to complement the mechanical engineering electives. One of the three technical electives may be a computer language course taken at any level.

A program of not less than 126 credits must be completed to be eligible for the bachelor’s degree. All undergraduate students must follow a program approved by a faculty member in the department who is selected as the student’s advisor.

Aerospace Track
A student may specialize in aerospace engineering once a solid background in the fundamentals of mechanical engineering has been developed through the basic Mechanical Engineering courses. This track requires knowledge and background in several fields including advanced dynamics, flight mechanics, propulsion, aerospace materials and structures, signal processing, control systems, astrophysics and space systems. Students pursuing the Aerospace Engineering Track are required to take at least five of the following courses (which can be counted toward the Mechanical Engineering elective and Technical Elective requirements in the general Mechanical Engineering program):

<table>

</tbody>
</table>

Biomechanics Track
A student may specialize in biomechanics once a solid background in the fundamentals of mechanical engineering has been developed through the core Mechanical Engineering or Engineering Mechanics courses. The essence of mechanics is the interplay between forces and motion. In biology, mechanics is important at the macroscopic, cellular, and subcellular levels.

At the macroscopic length scale biomechanics of both soft and hard tissues plays an important role in computer-integrated surgical systems and technologies, e.g., medical robotics. At the cellular level, issues such as cell motility and chemotaxis can be modeled as mechanical phenomena. At the subcellular level, conformational transitions in biological macromolecules can be modeled using molecular dynamics simulation, which is nothing more than computational Newtonian mechanics; statistical mechanics, or using coarse-grained techniques that rely on principles from the mechanics of materials.
In addition, much of structural biology can be viewed from the perspective of Kinematics, e.g., finding spatial relationships in data from the Protein Data Bank.

Each student who pursues the Biomechanics track will, in consultation with his or her academic advisor, choose the set of technical and mechanical engineering course electives that best matches the student's interests. Upon completion of the track, notification of this achievement is placed on the student's academic record and transcript.

A student may specialize in biomechanics once a solid background in the fundamentals of mechanical engineering has been developed through the basic courses. Students pursuing the biomechanics concentration within mechanical engineering are required to take at least four of the following courses. Two among the four should be chosen from the biomechanics-oriented courses, indicated by an asterisk (*).

- EN.510.435 Mechanical Properties of Biomaterials 3
- EN.530.410 Biomechanics of the Cell * 3
- EN.530.426 Biofluid Mechanics * 3
- EN.530.445 Introduction to Biomechanics * 3
- EN.530.446 Experimental Methods in Biomechanics * 3
- EN.530.448 Biosolid Mechanics * 3
- EN.530/EN.580.452 Cell & Tissue Engineering Laboratory 3
- EN.530.485 Physics and Feedback in Living Systems 3
- EN.530.495 The Design of Biomolecular Systems 3
- EN.540.405/605 The Design of Biomolecular Systems 3
- EN.530.440 Micro/Nanotechnology: The Science and Engineering of Small Structures 3
- EN.580.221 Molecules and Cells x 4
- EN.580.421 Systems Bioengineering I xx 4
- EN.580.422 Systems Bioengineering II xx 4
- EN.580.423 Systems Bioengineering Lab I xx 2
- EN.580.424 Systems Bioengineering Lab xx 2
- EN.580.455 Introduction to Orthopaedic Biomechanics (Biomedical Engineering) * 3

Total Credits 56

x Prerequisite: AS.030.101 Introductory Chemistry I
xx Prerequisite: EN.580.221 Molecules and Cells, EN.580.222 Systems and Controls, and AS.110.302 Diff Equations/Applic

Students may not use the satisfactory/unsatisfactory option for required courses, including Humanities and Social Studies. Exceptions can be considered and approved by their faculty advisors. Further, the Department of Mechanical Engineering requires that grades of C- or better be obtained in all required engineering, mathematics, and science courses (i.e. grades of D, D+ or F will not be accepted). The department will accept D or D+ grades only up to a maximum of 10 credits for Humanities and Social Sciences courses.

The Engineering Mechanics Program

The mission of the B.S. in engineering mechanics degree program is to provide a rigorous educational experience that prepares a select group of students for leadership positions in the profession and a lifetime of learning. The faculty is committed to maintaining a modern and flexible curriculum which, building on a foundation of basic sciences and mathematics, develops a solid education in the mechanical engineering sciences. The aim of the Engineering Mechanics Program is to build competence in the analysis, design, and modeling of fluid and solid systems, to promote a broad knowledge of the contemporary social and economic context, and to develop the communication skills necessary to excel.

The educational objectives for the B.S. in engineering mechanics degree are designed to educate a select group of science-oriented engineers who, after graduation, will be successful and on track to become leaders among their peers:

- ...in the best graduate programs in engineering, science, medical schools, or law schools, and
- ...in industry, government laboratories, and other organizations.

Students graduating from the B.S. in Engineering Mechanics programs will have demonstrated the ability to

- (a) an ability to apply knowledge of mathematics, science and engineering
- (b) an ability to design and conduct experiments, as well as to analyze and interpret data

**Humanities (18 credits)**

### Six humanities and/or social science electives **

### Introductory Engineering and Computing

- **EN.530.101**
- **EN.530.102**

### Mechanical Engineering Freshman Laboratory I and Mechanical Engineering Freshman Laboratory II (provide the necessary engineering and computing instruction for freshmen and are strongly recommended.)

Alternate introductory courses are available. If EN.530.101-EN.530.102 and EN.530.105-EN.530.106 are not taken, students must take one course from each of the engineering and computing course lists below:

- **Computing:**
  - EN.500.200 Computing for Engineers and Scientists (recommended)
  - EN.510.202 Computation and Programming for Materials Scientists and Engineers
  - EN.560.220 Civil Engineering Analysis
  - EN.580.200 Introduction to Scientific Computing in BME using Python, Matlab, and R
  - EN.600.112 Introductory Programming for Scientists and Engineers
  - EN.600.107 Introductory Programming in Java

### Any other computing course approved by the faculty advisor.

- EN.600.107 should be taken as a last resort if none of the other computing options fits the student's schedule, as it is important to learn MATLAB and Intro to Java does not offer that program.

### Other Required Engineering Courses

- **EN.530.201** Statics and Mechanics of Materials
- **EN.530.231** Mechanical Engineering Thermodynamics
- **EN.530.327** Introduction to Fluid Mechanics
- **EN.530.405** Mechanics of Advanced Engineering Structures or **EN.530.215** Mechanics-Based Design
- **EN.560.202** Dynamics

---

**Capstone Design (8 credits)**

<table>

</tr>
</tbody>
</table>

---

**Engineering Science Electives (12 credits)**

- **EN.530.404**
- **EN.530.327**
- **EN.530.231**
- **EN.530.201**

(Grades below C- are not accepted)
Students may not use the satisfactory/unsatisfactory option for required courses, including Humanities and Social Sciences, unless approved by their faculty advisor. The department will accept D or D+ grades only up to a maximum of 10 credits except where indicated. All undergraduate students must follow a program approved by a faculty member in the department who is selected as the student's advisor.

**Biomechanics Track**

Engineering Mechanics (EM) is a highly flexible program offered by the Department of Mechanical Engineering, which is ideal for students who want to specialize in any area of mechanics, including biomechanics. The essence of mechanics is the interplay between forces and motion.

In biology, mechanics is important at the macroscopic, cellular, and subcellular levels. At the macroscopic level, biomechanics of both soft and hard tissues plays an important role in computer-integrated surgical systems and technologies (e.g., medical robotics). At the cellular level, issues such as cell motility and chemotaxis can be modeled as mechanical phenomena. At the subcellular level, conformational transitions in biological macromolecules can be modeled using molecular dynamics simulation (which is nothing more than computational Newtonian mechanics), statistical mechanics, or using coarse-grained techniques that rely on principles from the mechanics of materials. In addition, much of structural biology can be viewed from the perspective of Kinematics (e.g., finding spatial relationships in data from the Protein Data Bank).

Each student who pursues the biomechanics track within the EM major will, in consultation with his or her EM advisor, choose the set of technical and EM electives that best matches the student’s interests. Many electives from other departments are acceptable. The electives for the EM major are structured as follows:

**Engineering Science Electives (12 credits)**
- One course in solid mechanics
- One course in fluid mechanics
- One additional course in mechanics of either solids or fluids
- One course in either materials or dynamics

**Engineering Mechanics Electives (6 credits)**
- Two additional courses in the same area of mechanics (i.e., fluids, solids, or dynamics)

**Technical Electives (18 credits)**
Chosen from 300-level courses in engineering and the sciences in consultation with the student’s faculty advisor.

Examples of bio-oriented courses which can be applied to the above three categories include (but are not limited to):

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN.530.440</td>
<td>Micro/Nanotechnology: The Science and Engineering of Small Structures</td>
<td>3</td>
</tr>
<tr>
<td>EN.580.221</td>
<td>Molecules and Cells</td>
<td>4</td>
</tr>
<tr>
<td>EN.580.421</td>

<td>Rehabilitation Engineering Design Lab</td>
<td>3</td>
</tr>
<tr>
<td>EN.580.495</td>
<td>Microfabrication Lab</td>
<td>4</td>
</tr>
</tbody>
</table>

This is not a complete list of possible courses that can be taken, and not all of these courses must be taken. Rather, students who wish to pursue the biomechanics track will take at least five courses such as those listed above. These five should be concentrated either at the cellular/subcellular length scale or in macroscopic biomechanics. Note that given the flexibility of the EM program, it would be possible for students to satisfy both of these kinds of tracks simultaneously if they apply all 12 of their elective courses toward this end.

Note that given the flexibility of the EM program, it would be possible for students to satisfy both of these kinds of tracks simultaneously if they apply all 12 of their elective courses toward this end.
Admission and Advising

To be admitted to graduate study in the Department of Mechanical Engineering, applicants must submit credentials sufficient to convince the faculty that they will thrive in a program of advanced course work and/or research. No academic degree is required, but the applicant should have at least two years of relevant undergraduate training, or the equivalent, and should have achieved very high marks or have given other evidence of outstanding ability. Graduate Record Examination scores must be submitted.

Upon arrival, each graduate student is assigned to a faculty advisor to help map a tentative program for the first year and enter the intellectual life of the department. The student will remain in regular communication with the advisor. The advisor may use a variety of methods to assess the student’s progress, sometimes including special oral or written examinations. It is not necessary that a student have the same advisor in successive years. After serious research for a dissertation has begun, the research supervisor will automatically function as advisor. All Ph.D. students are required, and master’s students are strongly encouraged to attend the weekly Mechanical Engineering Graduate Seminars.

Requirements for the M.S.E. Degree

**Essay Option:** For the Master of Science in Engineering degree at least eight one-semester courses are required. At least half of them must be selected among those listed as graduate courses in this catalog. The remaining courses can be chosen from .300- and .400-level courses in this catalog, with the advisor’s approval. 50% of all substantive courses must be offered by Mechanical Engineering (EN.530.xxx), including at least two courses at the .600-level or .700-level. A completed piece of original research conducted under the guidance of a full-time faculty member of the department and reported as a master’s essay is required. All students must follow a course of study approved by their individual advisor.

**Non-Essay Option:** The student must successfully complete a coordinated sequence of ten courses, which requires one year of full-time resident graduate study. At least six of the ten courses must be selected amongst the graduate courses of this catalog. 50% of all substantive courses must be offered by Mechanical Engineering (EN.530.xxx), including at least two courses at the .600-level or .700-level. The intent of this program is to provide the student with an intensive exposure to fundamental and advanced topics within mechanical engineering and engineering mechanics. Students must follow a course of study approved by their individual advisor.

Details on grade requirements and other departmental academic policy for the M.S.E. degree can be found on the Mechanical Engineering Graduate Advising page at http://me.jhu.edu/graduate-studies/academic-advising-graduate/.

Requirements for the Ph.D. Degree

As soon as the student is prepared to do so, he/she should fulfill the requirements for candidacy. In addition to general university requirements, the student must pass two exams. The first is an oral Departmental Qualifying Exam based on core courses. This exam is usually taken after the third semester. The second is a preliminary Graduate Board Oral examination satisfying the Graduate Board requirements. This is a comprehensive examination in which students must demonstrate proficiency at the graduate level in their field of specialization.

The Combined Five-Year Bachelor’s / Master’s Program

The Mechanical Engineering Department offers a concurrent five-year bachelor’s/master’s program for mechanical engineering and engineering mechanics majors. Applications to the B.S./M.S.E. program should be submitted by December 15 for consideration of spring admission and June 15 for possible fall admission, during applicant’s junior (third) year.

To apply for admission, students must submit an application, plus a statement of purpose, college transcript, and three letters of recommendation, two of which should be from Mechanical Engineering faculty.

Upon acceptance into the program, students will be asked to develop an outline of their proposed academic program with their advisor.
Although there are no formal course requirements, students are presumed to be prepared by studies equal to six 600-level courses in their field of specialization and six courses in related fields. All candidates for the doctorate must complete two semesters as a teaching assistant as part of their training. All students are required to follow a course of study approved by their individual advisor.

The final and principal requirement for the doctorate is a piece of original research worthy of publication. Candidates must write a dissertation describing their work in detail and successfully defend it in a final oral presentation and examination.

Additional details on Ph.D. requirements and departmental academic policy for the Ph.D. degree can be found on the Mechanical Engineering Graduate Advising page at http://me.jhu.edu/graduate-studies/academic-advising-graduate/

For current faculty and contact information go to http://www.me.jhu.edu/faculty.html

**Faculty**

**Chair**
Louis L. Whitcomb
Professor: Control Systems: adaptive and model-based control of linear and nonlinear systems, observers, nonlinear systems analysis, with focus on problems arising in mechanical systems, robots, and robotic vehicles. Underwater Robotics: dynamics, control, instrumention, and navigation of underwater vehicles and inhabited submersibles—with focus on deep submergence oceanographic vehicles. Industrial and Medical Robotics: dynamics, control, instrumentation, and operation of precision robotics for novel medical and industrial applications.

**Full Time Professors**

Ishan Barman
Assistant Professor: elucidation of morphological and chemical information of different patho-physiological states through an interdisciplinary approach featuring novel optical, spectroscopic and microfluidic measurements, mechanistic modeling and advanced numerical methods for analysis and interpretation of the acquired data.

Yun Chen
Assistant Professor: cell mechanics, biophysical properties of cancer microenvironment, mechanosignaling pathways, drug delivery, bioenergetics in mitochondria.

Gregory S. Chirikjian
Professor: computational structural biology (in particular, computational mechanics of large proteins), conformational statistics of biological macromolecules, developed theory for ‘hyper-redundant’ (snakelike) robot motion planning, designs and builds hyper-redundant robotic manipulator arms, applied mathematics (applications of group theory in engineering), self-replicating robotic systems.

Noah J. Cowan
Associate Professor: robot dynamics, animal biomechanics, and sensorimotor control; theory and application of control systems and system identification techniques for closed-loop systems (especially biological systems); biological motor control and systems neuromechanics; medical robotics.

Andrew S. Douglas
Professor (Vice Dean for Academic Affairs, Whiting School of Engineering): nonlinear mechanics of solids, mechanical response of compliant biological tissues, finite deformation elasticity, Static and dynamic fracture of ductile materials.

Jaafar El-Awady
Assistant Professor: multiscale materials modeling, damage and fracture mechanisms of materials in mechanical design, material degradation in extreme environments, nano-materials and structures, impact dynamics and wave propagation.

Dennice Gayme
Assistant Professor: Dynamics and control of nonlinear, networked and spatially distributed systems such as the electric power grid, and wind farms. Modeling of turbulence and transition to turbulence in wall bounded shear flows and wind farms. Grid integration of renewable energy sources.

Kevin J. Hemker
Professor, Alonzo G. Decker, Jr. Chair in Mechanical Engineering:
Professor Hemker and his students seek to identify the underlying atomic-scale processes that govern the mechanical behavior of advanced material systems. They are making key observations and discoveries that define the way the mechanics and materials community thinks about and understands the properties of: nanocrystalline materials, MEMS and micro-lattice materials, thermal barrier coatings, armor ceramics, and high temperature structural materials.

Cila Herman
Professor: experimental heat transfer and fluid mechanics, optical measurement techniques, image processing. Thermoacoustic refrigeration, influence of electric fields on boiling in terrestrial conditions and microgravity, heat exchangers, heat transfer in boiling, optical tomography, holographic interferometry, cooling of electronic equipment, digital image processing, heat transfer augmentation.

Sung Hoon Kang
Assistant Professor: Complex behaviors of material systems and structures with novel properties based on inspiration from nature; rational design followed by rapid prototyping using a 3D printer; designing experimental model systems and/or using computational models to identify key design parameters of systems to make desired structures and properties by tailoring behaviors of systems.

Joseph M. Katz
Professor, Whiting School Mechanical Engineering Chaired Professor, Gilman Scholar: cavitation phenomena, attached partial cavitation, cavitation in turbulent shear flows, jets and wakes. Multiphase flows: interaction between bubbles and flow structure, mixing mechanisms and droplet formation in water-fuel stratified shear flows, transport of microscopic particles and droplets in turbulent flows. Development of optical flow diagnostics techniques, including Particle Image Velocimetry (PIV) and Holographic Particle Image Velocimetry (HPIV). Applications of PIV and HPIV for measuring the characteristics of turbulence and addressing turbulence modeling issues. Complex flow structure and turbulence within turbo-machines: Wake-wake and blade-wake interactions in multistage axial turbomachines, flow and rotating stall in centrifugal pumps, development of optical diagnostics techniques for measurements in turbomachines. Oceanography: flow structure and turbulence in the bottom boundary layer of the coastal ocean; measurement of spatial distributions of plankton, particles and bubbles in the ocean; development of optical instrumen-tation, including submersible holography and PIV systems. Prevention of nozzle wear in abrasive water suspension jets (AWSJ) using porous lubricated nozzles.
Flow-induced vibrations and noise, mechanisms of noise generation in turbulent separated flows and in turbomachines.

Marin Koblarov
Assistant Professor: developing intelligent robotic vehicles that can perceive, navigate, and accomplish challenging tasks in uncertain, dynamic, and highly constrained environments. Performing research in analytical and computational methods for mechanics, control, motion planning, and reasoning under uncertainty, and in the design and integration of novel mechanisms and embedded systems. Application areas include mobile robots, aerial vehicles, and nanosatellites.

Chen Li
Assistant Professor: Terrodynamics, locomotion, biomechanics, bio-inspired robotics, physics of living systems

Charles Meneveau
Professor, Louis M. Sardella Chair in Mechanical Engineering, Director of the Center for Environmental and Applied Fluid Mechanics: theoretical, experimental, and numerical studies in turbulence, large-eddy-simulation, turbulence modeling, fractals and scaling in complex systems, small-scale structure of turbulence and velocity gradient dynamics, applications of LES to environmental flows, wind energy, development of data-intensive science tools to study turbulence.

Rajat Mittal
Professor: computational fluid dynamics, low Reynolds number aerodynamics, biomedical flows, active flow control, LES/DNS, immersed boundary methods, fluid dynamics of locomotion (swimming and flying), biomimetics and bioinspired engineering, turbomachinery flows.

K. T. Ramesh
Professor, Alonzo G. Decker, Jr. Professor of Science and Engineering, Director of the Center for Advanced Metallic and Ceramic Systems (CAMCS) and the Hopkins Extreme Materials Institute (HEMI): Nanomaterials, planetary impact, dynamic failure mechanisms, shock, impact, and wave propagation, high-strain-rate behavior of materials, injury biomechanics, constitutive and failure modeling.

Sean Sun
Vice Chair, Professor: mechanobiology of the cell, molecular biomechanics and biophysics, molecular motors and muscle, statistical mechanics and nonlinear phenomena.

Jeff Tza-Huei Wang
Professor: bioMEMS and microfluidics, single molecule manipulation and detection, nano/micro scale fabrication, conformational dynamics of biomolecules.

Tamer Zaki
Associate Professor: Transitional and turbulent shear flows: receptivity, linear and non-linear instability waves, secondary instability, breakdown to turbulence, direct numerical simulations, transition modelling. Two-fluid shear flows: linear and non-linear instability methods, interface tracking, the interaction of vortical disturbances with interfaces, direct numerical simulations, laminar-to-turbulence transition. Turbulence: boundary layer turbulence, separation, stratification, drag reduction, turbulence structures, direct numerical simulations, large-scale high-performance computing.

Secondary Faculty Appointments
Stephen Belkoff

Joint, Part-Time, and Research Appointments: Associate Professor (Orthopedic Surgery): biomechanics, orthopaedic implants, fracture fixation in osteoporotic bone, mechanism of injury, vertebroplasty.

Robert C. Cammarata
Joint, Part-Time, and Research Appointments: Professor (Materials Science and Engineering): structure, properties, and processing of thin films and nanostructured materials, thermodynamics and mechanics of surfaces, mechanical behavior of materials, noninodentation testing, stresses in thin films, novel electrochemical deposition methods, computer simulations.

Gregory L. Eyink

Lori Graham-Brady
Professor, Civil Engineering: stochastic finite element methods, probabilistic mechanics, stochastic simulation of material properties, micromechanics.

Daniel Naiman

Mark Robbins
Joint, Part-Time, and Research Appointments: Professor (Physics and Astronomy): Connecting and contrasting atomistic and macroscopic descriptions of non-equilibrium processes including friction, adhesion, large-strain mechanical deformation, fracture, heat flow, fluid flow, and boundary conditions at interfaces between different materials. Techniques include molecular simulations, continuum calculations and multiscale modeling approaches that bridge the two.

Dan Stoianovici
Joint, Part-Time, and Research Appointments: Professor (Brady Urological Institute): urology, medical robotics.

Russell H. Taylor
Joint, Part-Time, and Research Appointments: Professor (Computer Science): medical robotics, computer-assisted surgery.

Nitish V. Thakor
Joint, Part-Time, and Research Appointments: Professor (Biomedical Engineering): medical instrumentation and medical micro and nanotechnologies, neurological instrumentation, signal processing, computer applications.

Rene Vidal
Joint, Part-Time, and Research Appointments: Associate Professor (Biomedical Engineering): biomedical image analysis, computer vision, machine learning, dynamical systems, signal processing.

Timothy Wehls
Joint, Part-Time, and Research Appointments: Professor (Materials Science and Engineering), Director of the Center for Leadership Education: self-propagating exothermic reaction and joining with reactive multilayer foils, processing and characterization of thin films, layered materials, and thin film reactions, mechanical testing of metals and biological materials.
**Associate Teaching Professor**
David Kraemer
Associate Teaching Professor: Fluid-structure interaction; dynamic systems; ocean wave energy conversion, engineering pedagogy.

Steven Marra
Associate Teaching Professor: Soft and hard tissue biomechanics, nonlinear mechanics of solids, mechanics of tissue damage.

**Senior Lecturer**
Nathan Scott
Senior Lecturer: Principles and practice of engineering design education.

**Professor emeritus**
William N. Sharpe Jr.
Professor Emeritus: experimental solid mechanics; microelectromechanical systems (MEMS), microsample testing.

**Associate Research Professor**
Mehran Armand
Associate Research Professor (Applied Physics Laboratory).

Juan I. Arvelo Jr.
Assistant Research Professor (Applied Physics Laboratory).

Lester Su
Associate Research Professor: (Stanford University).

Liming Voo
Associate Research Professor (Applied Physics Laboratory).

**Research Scientist**
Alan Brandt

**Research Professor**
Ilene Busch-Vishniac
Research Professor (University of Saskatchewan).

Shiyi Chen
Research Professor (Peking University).

Allison Okamura
Research Professor (Stanford University).

Alexander Spector
Research Professor, Biomedical Engineering: biosolid mechanics, cell mechanics and biophysics, molecular motors, mathematical and computational modeling.

Pazhayannur Swaminathan
Research Professor (Applied Physics Laboratory).

David Van Wie
Research Professor (Applied Physics Laboratory).

**Assistant Research Professor**
Nitin Daphalapurkar
Assistant Research Professor.

Iulian Iordachita
Assistant Research Professor: robotics, medical robotics and instrumentation, mechanisms and mechanical transmissions for robots, advance electro-mechanical design, biologically-inspired mechanisms.

John Thomas
Assistant Research Professor (Applied Physics Laboratory).

**Adjunct Associate Professor**
Thomas Dragone
Adjunct Associate Professor: aerospace structures and materials, airframe structure design and development, materials science.

**Adjunct Assistant Professors**
Ryan Eustice
Adjunct Assistant Professor (Department of Naval Architecture and Marine Engineering, University of Michigan).

Jian Sheng
Adjunct Assistant Professor (University of Minnesota).

**Adjunct Professor**
Gabor Fichtinger
Adjunct Professor, Computer Science and Radiology: Director of Computer Integrated Surgical Systems and Technology (CISST).

**Associate Research Scientist**
Tihomir Hristov
Associate Research Scientist.

Xiaofeng Liu
Assistant Research Scientist.

**Adjunct Associate Research Scientist**
Edwin Malkiel
Adjunct Associate Research Scientist.

**Adjunct Research Professor**
Thomas Wright
Adjunct Research Professor: theoretical solid mechanics, wave propagation, dynamic failure, adiabatic shear localization, instabilities.

**Lecturer**
Yury Ronzhes
Joint, Part-Time, and Research Appointments: Lecturer.

**Homewood Professor of Engineering**
Andrea Prosperetti
Homewood Professor of Engineering: Multiphase flow; theoretical and computational fluid mechanics and acoustics; gas and vapor bubbles.

For current course information and registration go to [https://sis.jhu.edu/classes/](https://sis.jhu.edu/classes/)

**Courses**

EN.530.101. Freshman Experiences in Mechanical Engineering. 2.00 Credits.
An overview of the field of mechanical engineering along with topics that will be important throughout the mechanical engineering program. This one-year course includes applications of mechanics, elementary numerical analysis, programming in Matlab, use of computer in data acquisition, analysis, design, and visualization, technical drawing, the design process and creativity, report preparation, teamwork, and engineering ethics. Corequisites: EN.530.103 and EN.530.105.

Instructor(s): S. Marra
Area: Engineering.
EN.530.102. Freshman Experiences in Mechanical Engineering. 2.00 Credits.
An overview of the field of mechanical engineering along with topics that will be important throughout the mechanical engineering program. This is the second half of a one-year course that includes applications of mechanics, elementary numerical analysis, programming in Matlab, use of computer data acquisition, analysis, design, and visualization; technical drawing, the design process and creativity, report preparation, teamwork, and engineering ethics.
Prerequisites: EN.530.101
Instructor(s): S. Belkoff
Area: Engineering.

EN.530.103. Introduction to Mechanics I. 2.00 Credits.
This is the first half of a one-year course offering in-depth study of elements of mechanics, including linear statics and dynamics, rotational statics and dynamics, thermodynamics, fluids, continuum mechanics, transport, oscillations, and waves. This is an alternate to AS.171.101, designed specifically for Mechanical Engineering and Engineering Mechanics students taking EN.530.101 concurrently. Restricted to Mechanical Engineering, Engineering Mechanics, Civil Engineering, Undecided Engineering Majors, or permission of instructor.
Instructor(s): A. Okamura; J. Thomas
Area: Engineering, Natural Sciences.

EN.530.104. Introduction to Mechanics II. 2.00 Credits.
This is the second half of a one-year course offering in-depth study of elements of mechanics, including linear statics and dynamics, rotational statics and dynamics, thermodynamics, fluids, continuum mechanics, transport, oscillations, and waves. This is an alternate to AS.171.101, designed specifically for Mechanical Engineering and Engineering Mechanics students taking EN.530.102 concurrently.
Prerequisites: EN.530.103 or permission of instructor
Instructor(s): J. Thomas
Area: Engineering, Natural Sciences.

EN.530.105. Mechanical Engineering Freshman Laboratory I. 1.00 Credit.
Hands on laboratory complementing EN.530.101 and EN.530.103, including experiments, mechanical dissections, and design experiences distributed throughout the year. Experiments are designed to give students background in experimental techniques as well as to reinforce physical principles. Mechanical dissections connect physical principles to practical engineering applications. Design projects allow students to synthesize working systems by combining mechanics knowledge and practical engineering skills. Corequisites: EN.530.101 and EN.530.103.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): S. Marra
Area: Engineering.

EN.530.106. Mechanical Engineering Freshman Laboratory II. 1.00 Credit.
Hands-on laboratory complementing EN.530.102 and EN.530.104, including experiments, mechanical dissections, and design experiences distributed throughout the year. Experiments are designed to give student background in experimental techniques as well as to reinforce physical principles. Mechanical dissections connect physical principles to practical engineering applications. Design projects allow students to synthesize working systems by combining mechanics knowledge and practical engineering skills.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class, or permission of instructor.;EN.530.105
Instructor(s): S. Belkoff
Area: Engineering.

EN.530.150. Engineering Design Graphics, Visualization, and Fundamentals of CAD. 3.00 Credits.
This course will serve as an introduction to the foundational representational techniques for design, and help students to develop design literacy and three-dimensional visualization skills. Students will explore the range of tools utilized in design practice, beginning with the skills of hand-drawing, exploring ways to articulate visual ideas, and concluding with the standards of presentation and CAD tools typical in professional practice. This class will enable students to better develop, express and communicate their ideas as engineers.
Instructor(s): C. Phinney; S. Marra
Area: Engineering.

EN.530.201. Statics and Mechanics of Materials. 4.00 Credits.
Equilibrium of rigid bodies, free-body diagrams, design of trusses. One-dimensional stress and strain, Hooke's law. Properties of areas. Stress, strain, and deflection of components subjected to uniaxial tension, simple torsion, and bending. Co-listed with EN.530.104. Recommended Course Background: AS.171.101 or EN.530.103 and EN.530.104 or Permission Only.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): R. Sangree
Area: Engineering.

EN.530.202. Mechanical Engineering Dynamics. 4.00 Credits.
Basic principles of classical mechanics applied to the motion of particles, system of particles and rigid bodies. Kinematics, analytical description of motion; rectilinear and curvilinear motions of particles; rigid body motion. Kinetics: force, mass, and acceleration; energy and momentum principles. Introduction to vibration. Includes laboratory experience.
Prerequisites: ( EN.530.201 or EN.560.201 ) AND ( AS.171.101 or AS.171.107 or AS.171.105 or ( EN.530.103 AND EN.530.104 ) ) AND AS.110.109;
Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): D. Kraemer; S. Marra
Area: Engineering.

EN.530.215. Mechanics-Based Design. 3.00 Credits.
Prerequisites: EN.530.201 OR EN.560.201
Instructor(s): K. Ramesh; R. Mittal; T. Nguyen
Area: Engineering.

EN.530.216. Mechanics Based Design Laboratory. 1.00 Credit.
This is the laboratory that supports EN.530.215 Mechanics Based Design.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Corequisites : EN.530.215
Instructor(s): S. Marra
Area: Engineering.

EN.530.231. Mechanical Engineering Thermodynamics. 3.00 Credits.
Prerequisites: Co-requisites: (AS.171.102 or AS.171.108) and EN.530.232;AS.110.109
Instructor(s): J. Katz
Area: Engineering.
EN.530.232. Mechanical Engineering Thermodynamics Laboratory. 1.00 Credit.
This course is the complementary laboratory course and a required corequisite for EN.530.231. Corequisite: EN.530.231 There will be four lab sessions, days and times TBA.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): S. Marra
Area: Engineering, Natural Sciences.

EN.530.241. Electronics & Instrumentation. 4.00 Credits.
Introduction to basic analog electronics and instrumentation with emphasis on basic electronic devices and techniques relevant to mechanical engineering. Topics include basic circuit analysis, laboratory instruments, discrete components, transistors, filters, op-amps, amplifiers, differential amplifiers, power amplification, power regulators, AC and DC power conversion, system design considerations (noise, precision, accuracy, power, efficiency), and applications to engineering instrumentation.
Prerequisites: AS.171.102 or AS.171.108 or AS.171.106; Students must have completed Lab Safety training prior to registering for this class. Co or Pre-requisites: EN.530.291 OR (AS.110.201 AND AS.110.302) OR (AS.110.212 AND AS.110.302)
Instructor(s): D. Kraemer
Area: Engineering.

EN.530.327. Introduction to Fluid Mechanics. 3.00 Credits.
This course introduces the fundamental mathematical tools and physical insight necessary to approach realistic fluid flow problems in engineering systems. The topics covered include: fluid properties, fluid statics, control volumes and surfaces, kinematics of fluids, conservation of mass, linear momentum, Bernoulli's equation and applications, dimensional analysis, the Navier-Stokes equations, laminar and turbulent viscous flows, internal and external flows, and lift and drag. The emphasis is on mathematical formulation, engineering applications and problem solving.
Prerequisites: Co-requisite: EN.530.329; Prerequisites: EN.530/560.202 and either AS.110.302 or EN.550.291 or AS.110.306
Instructor(s): D. Kraemer
Area: Engineering.

EN.530.328. Fluid Mechanics II. 3.00 Credits.
Instructor(s): C. Meneveau
Area: Engineering.

EN.530.329. Introduction to Fluid Mechanics Laboratory. 1.00 Credit.
This course is the complementary laboratory course and a required corequisite for EN.530.327. Corequisite: EN.530.327 There will be four lab sessions, days and times TBA.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): S. Marra
Area: Engineering.

EN.530.334. Heat Transfer. 3.00 Credits.
Prerequisites: EN.530.231 AND EN.530.237
Instructor(s): A. Prosperetti; C. Meneveau; R. Mittal
Area: Engineering.

EN.530.335. Heat Transfer Laboratory. 1.00 Credit.
This is the laboratory that supports EN.530.334 Heat Transfer.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Corequisites: EN.530.334
Instructor(s): S. Marra
Area: Engineering.

EN.530.343. Design and Analysis of Dynamical Systems. 3.00 Credits.
Modeling and analysis of damped and undamped, forced and free vibrations in single and multiple degree-of-freedom linear dynamical systems. Introduction to stability and control of linear dynamical systems.
Prerequisites: Prereq: (110.108 and 110.109 and (110.202 or 110.211) and ((550.291) or (110.201 and 110.302) or (110.201 and 110.306)), and C- or better or concurrent enrollment in 530.202 or 560.202. MechE Majors must also have taken 530.241; Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): N. Cowan; S. Marra
Area: Engineering.

EN.530.344. Design and Analysis of Dynamical Systems Laboratory. 1.00 Credit.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Corequisites: EN.530.343
Instructor(s): S. Marra
Area: Engineering.

EN.530.352. Materials Selection. 4.00 Credits.
An introduction to the properties and applications of a wide variety of materials: metals, polymers, ceramics, and composites. Considerations include availability and cost, formability, rigidity, strength, and toughness. This course is designed to facilitate sensible materials choices so as to avoid catastrophic failures leading to the loss of life and property.
Prerequisites: Prereq: EN.530.215 or permission of instructor
Instructor(s): K. Hemker
Area: Engineering.

EN.530.354. Manufacturing Engineering. 3.00 Credits.
An introduction to the various manufacturing processes used to produce metal and nonmetal components. Topics include casting, forming and shaping, and the various processes for material removal including computer-controlled machining. Simple joining processes and surface preparation are discussed. Economic and production aspects are considered throughout. Special Notes: Labs and field trips will be scheduled with class separately. Mechanical Engineering and Engineering Mechanics Sophomores and Juniors only.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): Y. Ronzhes
Area: Engineering.
EN.530.366. Spacecraft Instrumentation Project. 3.00 Credits.
Investigation into the content relevant to an ongoing spacecraft instrumentation project. An interdisciplinary team will enhance the skills and knowledge of science and engineering students. Topics include mission background, planetary science, sensor design, spacecraft systems, and mission planning, and sensor fabrication, calibration, integration, and testing, data analysis and interpretation, scientific/technical writing and publication.
Instructor(s): D. Kraemer; S. Horst
Area: Engineering, Natural Sciences.

EN.530.371. Quantitative Applications in Mechanical Engineering. 3.00 Credits.
Solution of practical mechanical engineering problems with differential equations and linear algebra using numerical tools. Applications include topics like ballistics with viscous drag, fluid flow, solid mechanics, and kinematics. Numerical exercises with Matlab and other tools are used to reinforce concepts. Laboratory sessions will be scheduled in place of lectures a few times during the semester.
Prerequisites: EN.550.291 OR ( AS.110.201 AND AS.110.302)
Instructor(s): D. Kraemer
Area: Engineering, Quantitative and Mathematical Sciences.

EN.530.381. Engineering Design Process. 3.00 Credits.
This course is to get you into the world of Senior Design, which means into our spaces, into the machine shop and into the mind set of doing design-build-test work. You will be assigned to be an assistant to one of our Senior Design teams. In industrial design practice this is absolutely typical and project teams grow or shrink as the need demands. It is also a good way for younger engineers to learn the ropes. You will have your own portfolio of design work to do, but it will be in the context of a large project where there has already been a lot of progress. You will have to fit in with that larger context – as usual for engineers – while also making your own contributions. There will be a lecture series which will introduce some key ideas and tools of the engineering designer. Rapid sketching of design ideas; more careful hand drawings that are like fast technical drawings; how to generate ideas and then develop the ideas into workable, feasible, affordable, desirable solutions; how to identify prototypes that will show the way forward, and then actually make them; how to work with a team and negotiate about time, deliverables and design detail; how to find parts from commercial suppliers, size them, order them and get them delivered; how to document design work in a fast and effective way. Some of the lectures will be in the form of case studies of excellent design work, and will be student-driven i.e. you will prepare a case study to present to the class which we then discuss.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): N. Scott; S. Bailey
Area: Engineering.

EN.530.403. MechE Senior Design Project I. 4.00 Credits.
This senior year “capstone design” course is intended to give some practice and experience in the art of engineering design. Students working in teams of two to four will select a small-scale, industry-suggested design problem in the area of small production equipment, light machinery products, or manufacturing systems and methods. A solution to the problem is devised and constructed by the student group within limited time and cost boundaries. Preliminary oral reports of the proposed solution are presented at the end of the first semester. A final device, product, system, or method is presented orally and in writing at the end of the second semester. Facilities of the Engineering Design Laboratory (including machine shop time) and a specified amount of money are allocated to each student design team for purchases of parts, supplies, and machine shop time where needed. Recommended Course Background: ME Majors: EN.530.215, EN.530.327; EM & BME Majors: EN.530.215 or EN.530.405, and EN.530.327.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): N. Scott; S. Bailey
Area: Engineering.

EN.530.404. MechE Senior Design Project II. 4.00 Credits.
The Senior Design Project, a unique two-semester course, is the capstone of Johns Hopkins’s Mechanical Engineering Program. In the class, students working in small teams tackle specific design challenges presented by industry, government, and nonprofit organizations. The sponsors provide each team with a budget, access to world-class resources, and technical contacts. Ultimately, each team conceptualizes a novel solution to the sponsor’s problem and then designs, constructs, and tests a real-world prototype before presenting the finished product and specifications to the sponsor. The course requires students to draw upon the four years of knowledge and experience they’ve gained in their engineering studies and put it to practical use. Throughout the year, they produce progress reports as they design, build, and test the device they are developing. Combining engineering theory, budget and time management, and interactions with real clients, the senior design project is critical to students’ preparation for the transition from school to the workplace.
Prerequisites: EN.530.403
Instructor(s): N. Scott
Area: Engineering
Writing Intensive.

EN.530.405. Mechanics of Advanced Engineering Structures. 3.00 Credits.
This course provides an introduction to the mathematical and theoretical foundations of the mechanics of solids and structures. We will begin with the mathematical preliminaries used in continuum mechanics: vector and tensor calculus, then introduce kinematics and strain measures, descriptions of stress in a body, frame indifference, conservation laws: mass, momentum, energy balance, and entropy. These concepts will be applied to develop the constitutive equations for solids and fluids, methods for solving boundary values problems that occur in engineering structures, energy methods and foundations of the finite element method.
Instructor(s): J. El-Awady
Area: Engineering, Natural Sciences.
EN.530.410. Biomechanics of the Cell. 3.00 Credits.
Mechanical aspects of the cell are introduced using the concepts in continuum mechanics. Discussion of the role of proteins, membranes and cytoskeleton in cellular function and how to describe them using simple mathematical models.
Instructor(s): S. Kang
Area: Engineering, Natural Sciences.

EN.530.414. Computer-Aided Design. 3.00 Credits.
The course outlines a modern design platform for 3D modeling, analysis, simulation, and manufacturing of mechanical systems using the "Pro/E" package by PTC. The package includes the following components: • Pro/ENGINEER: is the kernel of the design process, spanning the entire product development, from creative concept through detailed product definition to serviceability. • Pro/MECHANICA: is the main analysis and simulation component for kinematic, dynamic, structural, thermal and durability performance. • Pro/NC: is a numeric-control manufacturing package. This component provides NC programming capabilities and tool libraries. It creates programs for a large variety of CNC machine tools.
Instructor(s): D. Stoianovici
Area: Engineering.

EN.530.417. Fabricatology - Advanced Materials Processing. 3.00 Credits.
The "Fabricatology" is a course that students can learn how to make desired shapes, structures, and surfaces across various length scales. It will introduce rich scientific and engineering knowledge related to fabrication at multiple length scales and the generated materials and mechanical systems can be utilized for studying diverse topics including energy harvesting, metamaterials, wetting, and information storage. From this course, students can learn principles and technologies to control shapes at various length scales and processes to control internal structures or surface properties for desired properties/functions. They will be also introduced to exciting recent development in the field so that they can have a comprehensive knowledge about the subject.
Recommended Course Background: coursework in introduction to materials chemistry or engineering materials.
Instructor(s): S. Kang
Area: Engineering.

EN.530.418. Aerospace Structures & Materials. 3.00 Credits.
An introduction to the design of aircraft and spacecraft structures and components. This course will build on skills learned in EN.530.215 and EN.530.352. Recommended Course Background: EN.530.352 or instructor permission.
Instructor(s): T. Dragone
Area: Engineering.

EN.530.420. Robot Sensors/Actuators. 4.00 Credits.
Introduction to modeling and use of actuators and sensors in mechatronic design. Topics include electric motors, solenoids, micro-actuators, position sensors, and proximity sensors.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.;Prerequisites: ([171.101 and 171.102] or [171.107 and 171.108] or ([530.103 and 530.104]), and (110.106 or 110.108) and 110.109, and (110.202 or 110.211), and (EN.550.291 or AS.110.302) and (EN.530.241 or EN.520.345)
Instructor(s): D. Kraemer; N. Cowan
Area: Engineering.

EN.530.421. Mechatronics. 3.00 Credits.
Students from various engineering disciplines are divided into groups of two to three students. These groups each develop a microprocessor-controlled electromechanical device, such as a mobile robot. The devices compete against each other in a final design competition. Topics for competition vary from year to year. Class instruction includes fundamentals of mechanism kinematics, creativity in the design process, an overview of motors and sensors, and interfacing and programming microprocessors.
Prerequisites: EN.530.420 or EN.520.240 or permission of instructor;Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): C. Rizk
Area: Engineering.

EN.530.424. Dynamics of Robots and Spacecraft. 3.00 Credits.
An introduction to Lagrangian mechanics with application to robot and spacecraft dynamics and control. Topics include rigid body kinematics, efficient formulation of equations of motion, stability theory, and Hamilton's principle.
Instructor(s): G. Chirikjian; J. Kim
Area: Engineering.

EN.530.425. Mechanics of Flight. 3.00 Credits.
Instructor(s): K. Phillips
Area: Engineering.

EN.530.426. Biofluid Mechanics. 3.00 Credits.
Course will cover selected topics from physiological fluid dynamics, including respiratory flow patterns, blood flow and pulse propagation, aerodynamics of phonation and speech, rheology of blood flow in the microcirculation, aquatic animal propulsion, and animal flight.
Instructor(s): R. Mittal
Area: Engineering.

EN.530.430. Applied Finite Element Analysis. 3.00 Credits.
This course will introduce finite element methods for analysis of solids, structures and heat transfer problems. Following topics will be considered. Procedure to defining a mechanics problem: governing equations, constitutive equations, boundary and initial value problems. Theory and implementation of the finite element methods for static analysis using linear elasticity. Finite element analysis (FEA) using ABAQUS software. Verification and validation, understanding uncertainty. Introduction to other FEA topics: structural elements, dynamic analysis, heat transfer and thermodynamics using ABAQUS. The course will include assignments and a term project. The term project is mandatory for graduate students and will involve applying FEA to an engineering problem or a research problem, interpretation of results and documenting a term paper.
Prerequisites: Prerequisite: EN.550.291 OR AS.110.302, and matrix analysis / algebra and programming recommended.
Instructor(s): N. Daphalapurkar
Area: Engineering.
EN.530.432. Jet & Rocket Propulsion. 3.00 Credits.
The course covers associated aircraft and spacecraft and power generation. The first part reviews the relevant thermodynamics and fluid mechanics, including isentropic compressible flow, Rayleigh and Fanno lines, shock and expansion waves. Subsequently, the performance of various forms of aviation gas turbines, including turbo-jet, turbo-fan, turbo-prop and ram-jet engines are discussed, followed by component analyses, including inlet nozzles, compressors, combustion chambers, turbines and afterburners. Axial and centrifugal turbomachines are discussed on detail, including applications in aviation, power generation and liquid transport. The section on foundations of combustion covers fuels, thermodynamics of combustion, and energy balance. The last part focuses on rockets, including classification, required power for space flight, chemical rocket components, and combustion involving liquid and solid fuels.

Prerequisites: Prereqs: EN.530.231 AND EN.530.327
Instructor(s): J. Katz
Area: Engineering.

EN.530.435. Guidance and Control of Flight Vehicles. 3.00 Credits.
This course introduces the fundamental concepts of guidance and control of rockets and will highlight methodologies often employed in industry. The topics covered include: aerodynamic control, review of flight control principles (transfer functions, block diagram reduction, root locus, frequency domain methods), nonlinear representation of an airframe, linearization of an airframe, flight control design of a rocket, three-loop autopilot design, and fundamentals of tactical guidance (proportional navigation guidance theory, zero effort miss). Co-listed with EN.530.635

Prerequisites: EN.530.343
Instructor(s): K. Phillips
Area: Engineering.

EN.530.436. Bioinspired Science and Technology. 3.00 Credits.
Nature has been a source of inspiration for scientists and engineers, and it receives particular attention recently to address many challenges the human society encounter. The course will study novel natural materials/structures with unique properties, the underlying principles, and the recent development of the bio-inspired materials and systems. From this course, students can learn about ingenious and sustainable strategies of organisms, open eyes about various phenomena in nature, and get inspiration for opening new directions of science and technology.

Instructor(s): N. Cowan; S. Kang
Area: Engineering, Natural Sciences.

EN.530.437. Energy and the Environment. 3.00 Credits.
This course focuses on topics of current and developing energy sources and their impact on the environment. It is an upper-level multidisciplinary course that draws on science and engineering topics from the core curriculum related to dynamics, thermodynamics, fluid mechanics and heat transfer, electrical and environmental engineering, and requires integration of understanding achieved in core studies. After the general introduction, the course will begin with a review of energy, energy conversion and thermodynamics related topics to provide a framework for the understanding of current and modern future technologies. After the discussion of fossil fuels and related energy and environmental topics, special attention will be devoted to modern trends in nuclear energy generation (generation IV nuclear reactors), renewable energy with emphasis on solar energy and hydrogen as energy carrier. Topics of sustainability and the environmental impact of energy consumption will be addressed.

Instructor(s): C. Herman
Area: Engineering, Natural Sciences.

EN.530.441. Introduction to Biophotonics. 3.00 Credits.
The primary aim for this course is to explore the unique and diverse properties of light that makes it suited for diagnosis, imaging, manipulation and control of biological structure and function from the nanoscale to the tissue level. The course will focus on different optical spectroscopic and microscopic modalities that provide biochemical and morphological information, while introducing new ideas on analysis and interpretation of the acquired data. We will also discuss manipulation methods, including optical tweezers and laser scissors, and low-level light therapy. In all of these areas, the idea is to develop a basic understanding of the subject and to use it for finding solutions to real-world problems in healthcare. Discussions and open exchanges of ideas will be strongly emphasized.

Instructor(s): I. Barman
Area: Engineering.

EN.530.444. Computer-Aided Fluid Mechanics and Heat Transfer. 3.00 Credits.
Computer simulation has become an essential part of science and engineering and this course introduces the student to the use of computer simulation in the disciplines of heat transfer and fluid mechanics. The commercial software COMSOL is used a wide variety of problems, ranging from simple models for which analytical solutions are available, to complex, unsteady, multiphysics real-life problems. Problems will be solved by identifying proper governing equations and boundary conditions first, and then implementing these in the COMSOL environment. Applications will include heat conduction, convection and radiation, internal and external flows, with applications ranging from mechanical to biomedical and aerospace engineering.

Instructor(s): C. Herman
Area: Engineering.

EN.530.445. Introduction to Biomechanics. 3.00 Credits.
An introduction to the mechanics of biological materials and systems. Both soft tissue such as muscle and hard tissue such as bone will be studied as will the way they interact in physiological functions. Special emphasis will be given to orthopedic biomechanics. Recommended Course Background: EN.530.215/EN.530.216 and Lab or equivalent. If you have not taken this course or an equivalent, please contact the instructor before registering to ensure you have the appropriate background knowledge to succeed in this course.

Instructor(s): S. Belkoff
Area: Engineering.

EN.530.446. Experimental Methods in Biomechanics. 3.00 Credits.
An introduction to experimental methods used in biomedical research. Standard experimental techniques will be applied to biological tissues, where applicable and novel techniques will be introduced. Topics include strain gauges, extensometers, load transducers, optical kinematic tracking, digital image correlation, proper experimental design, calibration and error analysis. Of particular emphasis will be maintaining native tissue temperature and hydration. Laboratory will include “hands-on” testing.

Instructor(s): S. Belkoff
Area: Engineering, Natural Sciences.
EN.530.448. Biosolid Mechanics. 3.00 Credits.
This class will introduce fundamental concepts of statics and solid mechanics and apply them to study the mechanical behavior of bones, vessels, and connective tissues such as tendon and skin. Topics to be covered include concepts of small and large deformation, stress, constitutive relationships that relate the two, including elasticity, anisotropy, and viscoelasticity, and experimental methods. Recommended Course Background: AS.110.201 and AS.110.302, as well as a course in statics and mechanics.
Instructor(s): L. Voo
Area: Engineering.

EN.530.451. Cell & Tissue Engineering Laboratory. 2.00 Credits.
Cell and tissue engineering is a field that relies heavily on experimental techniques. This laboratory course will consist of three six experiments that will provide students with valuable hands-on experience in cell and tissue engineering. Students will learn basic cell culture procedures and specialized techniques related to faculty expertise in cell engineering, microfluidics, gene therapy, microfabrication and cell encapsulation. Experiments include the basics of cell culture techniques, gene transfection and metabolic engineering, basics of cell-substrate interactions I, cell-substrate interactions II, and cell encapsulation and gel contraction. Co-listed with EN.580.451. Senior and Graduate students only; others Permission Required. Lab Fee: $100
Instructor(s): E. Haase; J. Wang.

EN.530.452. Cell & Tissue Engineering Laboratory. 3.00 Credits.
This laboratory course will consist of three experiments that will provide students with valuable hands-on experience in cell and tissue engineering. Experiments include the basics of cell culture techniques, gene transfection and metabolic engineering, basics of cell-substrate interactions I, cell-substrate interactions II, and cell encapsulation and gel contraction. $100 lab fee will be charged. Co-listed with EN.580.452.
Instructor(s): E. Haase; J. Wang.
Area: Engineering.

EN.530.454. Manufacturing Engineering. 3.00 Credits.
An introduction to the various manufacturing processes used to produce metal and nonmetal components. Topics include casting, forming and shaping, and the various processes for material removal including computer-controlled machining. Simple joining processes and surface preparation are discussed. Economic and production aspects are considered throughout. Open only to seniors in Mechanical Engineering and Engineering Mechanics and other majors at all levels.
Instructor(s): Y. Ronzhes
Area: Engineering.

EN.530.464. Energy Systems Analysis. 3.00 Credits.
This course discusses the grid integration of renewable energy systems. The main emphasis is on grid level effects of renewable energy, particularly wind power systems. It begins with an introduction to basic power system concepts along with power flow analysis (and optimization). Then, important concepts for wind power systems are discussed. Following that, integration issues for wind power at the transmission level and solar cell integration at the distribution level are introduced. The last part of the course will focus on current research in these areas. Students will choose a system to research and present a project or literature review at the end of the term. Prior knowledge of optimization is helpful, but not required. Co-listed with ENS30.664.
Instructor(s): D. Gayme
Area: Engineering.

EN.530.467. Thermal Design Issues for Aerospace Systems. 3.00 Credits.
This course deals with processes, systems, instruments, and equipment for aerospace systems. Issue of energy conversion and thermal design are emphasized. Topics include thermodynamic concepts and heat transfer processes for aerospace systems (with emphasis on radiation), the space environment, influence of gravity on heat transfer, power generation for space systems (energy sources, solar cell arrays, energy storage), thermal control (analysis techniques, design procedures, active versus passive design, heating and refrigeration), environmental effects.
Instructor(s): C. Herman
Area: Engineering.

EN.530.476. Locomotion in Mechanical and Biological Systems. 3.00 Credits.
This is a course on the mechanics of locomotion in animals and machines (particularly bio-inspired and biomimetic robots). It will introduce you to the breadth of diverse topics within the field of animal and robot locomotion. We will discuss why animals move amazingly well in all kinds of environments, how they have inspired some highly successful machines, and yet why the majority of robots still struggle in environments that are only modestly complex. Terrestrial, aerial, and aquatic locomotion will be discussed, with numerous examples. General principles and integration of knowledge from engineering, biology, and physics will be emphasized. Students from ME and other departments are welcome. Please visit http://li.me.jhu.edu/teaching for updated information.
Instructor(s): C. Li
Area: Engineering.

EN.530.473. Molecular Spectroscopy and Imaging. 3.00 Credits.
The overarching objective of this course is to understand, employ and innovate molecular spectroscopy and optical imaging tools. The emphasis will be to bridge the domain between molecular spectroscopy, which provides exquisite chemical information, and the imaging capabilities of microscopy to seamlessly traverse between structural and biochemical spaces. The course will build on the foundational principles of light-matter interactions and an understanding of light sources, geometrical and wave optics, and detectors. Using vibrational and fluorescence spectroscopy as the tools of choice, we will discuss the design and fabrication of molecular reporters that offer unprecedented sensitivity, specificity and multiplexing capabilities in imaging of live biological sample. Finally, we will learn about spectral and image-processing algorithms that have fundamentally changed the nature and quantity of useful information and have directly led to breakthroughs in super-resolution imaging and multi-modal image fusion. All through the course, the focus will be on the underlying concepts and physical insights as we navigate through a diverse array of biophotonics applications.
Instructor(s): T. McGee
Area: Engineering.
EN.530.485. Physics and Feedback in Living Systems. 3.00 Credits.
The complex mechanisms of living systems cannot be reduced to a set of base pairs: genes are only one part of mystery of life. Rather, organisms must develop, move, interact, and function in their natural environment, and thus are constrained by the laws of physics. For example, during locomotion an animal must accelerate according to Newton's laws by applying forces between itself and the environment. Beyond physical principles alone, biological systems extensively use feedback to enhance stability and facilitate adaptation in the presence of a changing world. This course examines the critical roles that physical principles and feedback mechanisms play in life, with special emphasis on animal locomotion and its control. Juniors and Seniors only.
Instructor(s): N. Cowan
Area: Engineering.

EN.530.486. Mechanics of Locomotion. 3.00 Credits.
This is a course on the mechanics of locomotion in animals and machines (particularly bio-inspired and biomimetic robots). It will introduce you to the breadth of diverse topics within the field of animal and robot locomotion. We will discuss why animals move amazingly well in all kinds of environments, how they have inspired some highly successful machines, and yet why the majority of robots still struggle in environments that are only modestly complex. Terrestrial, aerial, and aquatic locomotion will be discussed, with numerous examples. General principles and integration of knowledge from engineering, biology, and physics will be emphasized. Students from ME and other departments are welcome. Please visit http://li.me.jhu.edu/teaching for updated information. Co-listed with EN.530.686
Instructor(s): C. Li
Area: Engineering, Quantitative and Mathematical Sciences.

EN.530.495. Microfabrication Laboratory. 4.00 Credits.
This laboratory course is an introduction to the principles of microfabrication for microelectronics, sensors, MEMS, and other synthetic microsystems that have applications in medicine and biology. Course comprised of laboratory work and accompanying lectures that cover silicon oxidation, aluminum evaporation, photoresist deposition, photolithography, plating, etching, packaging, design and analysis CAD tools, and foundry services. Seniors only or Permission Required.
Instructor(s): A. Andreou; J. Wang
Area: Engineering, Natural Sciences.

EN.530.501. Undergraduate Research. 1.00 - 3.00 Credits.
Students pursue research problems individually or in pairs. Although the research is under the direct supervision of a faculty member, students are encouraged to pursue the research as independently as possible.
Instructor(s): Staff.

EN.530.511. Group Undergraduate Research. 1.00 - 3.00 Credits.
Students pursue research problems individually or in pairs. Although the research is under the direct supervision of a faculty member, students are encouraged to pursue the research as independently as possible. The professor and students will meet weekly in required meetings.
Instructor(s): Staff.

EN.530.525. Independent Research. 1.00 - 3.00 Credits.
Students pursue research problems individually or in pairs. Although the research is under the direct supervision of a faculty member, students are encouraged to pursue the research as independently as possible. (Note, this course number will no longer be used after Spring 2016. Please see EN.530.501 and EN.530.511 for Independent Research choices.)
Instructor(s): Staff.

EN.530.526. Undergrad Independent Study. 1.00 - 3.00 Credits.
Students pursue research problems individually or in pairs. Although the research is under the direct supervision of a faculty member, students are encouraged to pursue the research as independently as possible.
Instructor(s): Staff.

EN.530.527. Independent Study. 1.00 - 3.00 Credits.
Students pursue research problems individually or in pairs. Although the research is under the direct supervision of a faculty member, students are encouraged to pursue the research as independently as possible.
Instructor(s): Staff.

EN.530.597. Research-Summer. 1.00 - 3.00 Credits.
Instructor(s): Staff.

EN.530.599. Independent Study. 1.00 - 4.00 Credits.
Instructor(s): Staff.

EN.530.600. MSE Graduate Research. 3.00 - 10.00 Credits.
Instructor(s): Staff.

EN.530.602. Master's Thesis Research and Writing. 3.00 - 10.00 Credits.
This course will be taken by Mechanical Engineering students when doing research and/or writing for the Master's Thesis or Essay.
Instructor(s): Staff.

EN.530.603. Applied Optimal Control. 3.00 Credits.
The course focuses on the optimal control of dynamical systems subject to constraints and uncertainty by studying analytical and computational methods leading to practical algorithms. Topics include calculus of variations, nonlinear local optimization, global stochastic search, dynamic programming, linear quadratic (gaussian) control, numerical trajectory optimization, model-predictive control. Advanced topics include approximate dynamic programming and optimal control on manifolds. The methods and algorithms will be illustrated through implementation of various simulated examples. Recommended Course Background: AS.110.201 and AS.110.302; experience with control systems; programming in MATLAB.
Instructor(s): M. Kobilarov.

EN.530.605. Mechanics of Solids and Materials. 3.00 Credits.
This course provides an introduction to the mathematical and theoretical foundations of the mechanics of solids and materials. We will begin with the mathematical preliminaries of continuum mechanics: vectors and tensors calculus, then introduce the kinematics of deformation and descriptions of stress in a continuum: Eulerian and Lagrangian descriptions, followed by conservation laws: mass, momentum, and energy balance, and entropy. These concepts will be applied to develop the concepts of constitutive relations: frame invariance, material symmetry, and dissipation. The second half of the class will be devoted to elasticity, both classical and finite elasticity, and solution methods for boundary value problems.
Instructor(s): T. Nguyen.
EN.530.606. Mechanics of Solids and Materials II. 3.00 Credits.
An overview of the area of the mechanics of solids and materials, with
the intent of providing the foundation for graduate students interested
in research that involves these disciplines. The course is based on
the principles of continuum mechanics, and covers the fundamental
concepts of elasticity, plasticity, and fracture as applied to materials.
One objective is to get graduate students to the point that they can
understand significant fractions of research seminars and papers
in this area. This mathematically rigorous course emphasizes the
setup and solution of boundary value problems in mechanics, and
attempts to integrate the primary behaviors with deformation and failure
mechanisms in materials. Special topics covered may include (depending
on the interests of the student body) wave propagation, viscoelasticity,
geomechanics or biomechanics.
Instructor(s): J. El-Awady
Area: Engineering.

EN.530.610. Statistical Mechanics in Biological Systems. 3.00 Credits.
Application of equilibrium and nonequilibrium concepts in statistical
mechanics to biology is presented in some detail. Topics include many-
body dynamics and equilibrium ensembles, thermodynamics and phase
transitions, free energy functional, computer simulations of biological
systems, nonequilibrium model such as the Langevin equation and the
Fokker-Planck equation, kinetic models of biochemical networks, Markov
models of stochastic systems and pattern formation in nonequilibrium
systems. Emphasis will be on quantitative understanding of biological
problems.
Instructor(s): S. Sun.

EN.530.612. Computational Solid Mechanics. 3.00 Credits.
This course teaches in-depth and hands-on understanding of numerical
methods for solid mechanics problems. The course begins with a review
of the fundamental concepts of the finite element method for linear
boundary value problems (BVP) and initial boundary value problems
(IBVP) in solid mechanics. Then more advance methods for nonlinear
BVPs are presented and applied to problems of material inelasticity and
finite elasticity. Topics covered include the strong and weak statements
of the BVP, weighted residual methods, time integration, Newton-type
methods for nonlinear problems, and error estimation and convergence.
Instructor(s): T. Nguyen.

EN.530.615. Experimental Solid Mech.
Prerequisites: EN.520.414 OR EN.520.614.

EN.530.618. Fabricatology - Advanced Materials Processing. 3.00
Credits.
The “Fabricatology” is a course that students can learn how to make
desired shapes, structures, and surfaces across various length scales.
It will introduce rich scientific and engineering knowledge related to
fabrication at multiple length scales and the generated materials and
mechanical systems can be utilized for studying diverse topics including
energy harvesting, metamaterials, wetting, and information storage.
From this course, students can learn principles and technologies to
control shapes at various length scales and processes to control internal
structures or surface properties for desired properties/functions. They
will be also introduced to exciting recent development in the field so
that they can have a comprehensive knowledge about the subject.
Recommended Course Background: coursework in introduction to
materials chemistry or engineering materials.
Instructor(s): S. Kang.

EN.530.621. Fluid Dynamics I. 3.00 Credits.
Kinematics. Stress. Conservation of mass, momentum, and energy.
Newtonian fluids. The Navier-Stokes equations. Inviscid flows. Laminar
flows. Compressible flows. Introduction to non-Newtonian fluids.
Instructor(s): T. Zaki.

EN.530.622. Fluid Dynamics II. 3.00 Credits.
Kinematics. Stress. Conservation of mass, momentum, and energy.
Newtonian fluids. The Navier-Stokes equations. Inviscid flows. Laminar
flows. Compressible flows. Introduction to non-Newtonian fluids.
Instructor(s): J. Katz.

EN.530.624. Dynamics of Robots and Spacecraft (Graduate). 3.00
Credits.
An introduction to Lagrangian mechanics with application to robot and
spacecraft dynamics and control. Topics include rigid body kinematics,
efficient formulation of equations of motion, stability theory, and
Hamilton’s principle.
Instructor(s): J. Kim.

EN.530.625. Turbulence. 3.00 Credits.
Fundamental equations of fluid mechanics, Reynolds averaging, and the
closure problem. Scaling and self-preservation in boundary-free and wall-
bounded shear flows. Isotropic turbulence and spectral theories. Vorticity
dynamics, intermittency, and cascade models. Turbulence modeling:
one- and two-equation models, Reynolds stress modeling, and large-eddy
simulations.
Instructor(s): C. Meneveau.

EN.530.626. Statistical Mechanics and Extreme Value Distributions. 3.00
Credits.
The course will explore a collection of statistical mechanics minimal
models and approaches that are been used in several topics of materials
science and engineering. An introduction to the basics of statistical
mechanics will be followed by focus on specific models, one each week
or so. While lectures will focus on the basic theory and applications of
the model, the homework sets will guide the students to develop a code of
the model in Python or Matlab, test its accuracy, and investigate specific
aspects of the model's predictions. Through the study of these models,
statistical properties and distributions will be explored in situ, as well as
their connections to extreme value statistics. In the span of the semester,
it is expected to investigate models of thermodynamic phase transitions,
fracture of brittle, disordered solids, crystal plasticity, amorphous solid
plasticity, percolation, rigidity percolation, jamming of repulsive spheres,
crowd dynamics.
Instructor(s): S. Papanikolaou.

EN.530.628. Nonlinear Dynamical Systems - Mechanics and Biology. 3.00
Credits.
Nonlinear dynamical systems theory are discussed in the context of
mechanics, engineering and biological problems. Concepts such as
stability, bifurcations, limit cycles and chaos are illustrated using simple
analytic theories as well as practical examples. Emphasis are placed on
developing intuition using analytic approaches and simple numerical
calculations. The course is appropriate for graduate students with
foundational knowledge of solid and fluid mechanics, and some notions
of statistical mechanics and biological concepts.
Instructor(s): D. Gayme; S. Sun.
EN.530.630. Applied Finite Element Analysis. 3.00 Credits.
This course will introduce finite element methods for analysis of solids, structures and heat transfer problems. Following topics will be considered. Procedure to defining a mechanics problem: governing equations, constitutive equations, boundary and initial value problems. Theory and implementation of the finite element methods for static analysis using linear elasticity. Finite element analysis (FEA) using ABAQUS software. Verification and validation, understanding uncertainty. Introduction to other FEA topics: structural elements, dynamic analysis, heat transfer and thermodynamics using ABAQUS. The course will include assignments and a term project. The term project is mandatory for graduate students and will involve applying FEA to an engineering problem or a research problem, interpretation of results and documenting a term paper. Recommended Course Background: Course(s) in Linear Algebra, Differential Equations required; matrix analysis / algebra and programming.
Instructor(s): N. Daphalapurkar.

EN.530.632. Convection. 3.00 Credits.
This course begins with a review of the phenomenological basis of the constitutive models for energy and mass flux. Then, using the transport theorem, general conservation and balance laws are developed for mass, species, energy, and entropy. Scaling analysis is used to determine when simplifications are justified, and simplified cases are solved analytically. Experimental results and correlations are given for more complex situations. Free, mixed, and forced internal and external convection are studied, and convection with a phase change is also explored.
Instructor(s): C. Meneveau.

EN.530.633. Mechanics of the Biological Systems and Biophysical Methodologies. 3.00 Credits.
Introduction to the following topics and tools used in these subfields: 1. The hierarchical structure of biological systems. 2. The dynamical nature of the biological systems. 3. Quantitative characterization of biological behaviors. 4. The modern tools used to measure biophysical parameters
Recommended Course Background: Introductory Physics, Calculus, and Linear Algebra
Instructor(s): Y. Chen.

EN.530.635. Guidance and Control of Flight Vehicles. 3.00 Credits.
This course introduces the fundamental concepts of guidance and control of rockets and will highlight methodologies often employed in industry. The topics covered include: aerodynamic control, review of flight control principles (transfer functions, block diagram reduction, root locus, frequency domain methods), nonlinear representation of an airframe, linearization of an airframe, flight control design of a rocket, three-loop autopilot design, and fundamentals of tactical guidance (proportional navigation guidance theory, zero effort miss). Recommended Course Background: EN.530.343: Design and Analysis of Dynamic Systems or equivalent knowledge if the course was not previously taken. Co-listed with EN.530.436
Instructor(s): K. Phillips.

EN.530.636. Bioinspired Science and Technology. 3.00 Credits.
Nature has been a source of inspiration for scientists and engineers and it receives particular attention recently to address many challenges the human society encounter. The course will study novel natural materials/structures with unique properties, the underlying principles, and the recent development of the bio-inspired materials and systems. From this course, students can learn about ingenious and sustainable strategies of organisms, open eyes about various phenomena in nature, and get inspiration for opening new directions of science and technology.
Instructor(s): N. Cowan; S. Kang.

EN.530.637. Energy and the Environment. 3.00 Credits.
This course focuses on advanced topics related to energy and thermodynamics. The objective of this course is to provide a thorough understanding of the environmental impacts related to energy conversion systems. The use of the second law of thermodynamics is introduced to quantify the performance of energy conversion systems. Topics such as global warming, alternative energy sources (solar, wind power, geothermal, tides, etc.) and new technology (fuel cells and hydrogen economy) and resources and sustainable development are addressed. A section of the course is devoted to current trends in nuclear energy generation and environmental issues associated with it.
Instructor(s): C. Herman.

EN.530.642. Plasticity. 3.00 Credits.
Instructor(s): S. Papanikolaou.

EN.530.645. Kinematics. 3.00 Credits.
A theoretical treatment of the kinematics of mechanisms, machines, and robotic manipulators intended for (though not restricted to) graduate students. Topics include parameterizations of spherical motion - Euler angles, Rodrigues parameters, unit quaternions, the matrix exponential; analysis of planar and spatial linkages; robot kinematics - forward and inverse kinematics, singularities, elementary topological issues; theory of wrenches and twists; research issues in robot kinematics - redundancy resolution, grasping and rolling contact, steering of nonholonomic systems. Other advanced topics will be covered as time permits. Recommended Course Background: Undergraduate linear algebra and multivariable calculus.
Instructor(s): G. Chirikjian.

EN.530.646. Robot Devices, Kinematics, Dynamics, and Control. 3.00 Credits.
Graduate-level introduction to the mechanics of robotic systems with emphasis on the mathematical tools for kinematics and dynamics of robot arms and mobile robots. Topics include the geometry and mathematical representation of rigid body motion, forward and inverse kinematics of articulated mechanical arms, trajectory generation, manipulator dynamics, actuation, and design issues, manipulator control, and additional special topics. Recommended course background: multivariable integral and differential calculus, classical physics, linear algebra, ordinary differential equations. Programming: Knowledge of the Matlab programming language including data input/output, 1-D and 2-D arrays, and user-defined function calls. Students with experience with these language elements in other programming languages (C, C++, Python, Java, etc.) should be able to self-tutor themselves in the Matlab language as part of the programming exercises.
Instructor(s): N. Cowan.
EN.530.647. Adaptive Systems. 3.00 Credits.
Graduate-level introduction to adaptive identification and control.
Emphasis on applications to mechanical systems possessing unknown
parameters (e.g., mass, inertia, friction). Topics include stability of linear
and nonlinear dynamical systems, Lyapunov stability, input-output
stability, adaptive identification, and direct and indirect adaptive control.
Recommended Course Background: AS.110.106, AS.110.107/AS.110.109,
AS.110.202; Physics II, II; AS.110.201, AS.110.302, Equations, linear
control theory, and Matlab.
Instructor(s): L. Whitcomb.

EN.530.649. System Identification. 3.00 Credits.
This course will cover several fundamental approaches system
identification, including spectral, prediction error, subspace, and online
(adaptive) identification methods. The emphasis will be on LTI systems,
but some time will be devoted to system identification for classes of
nonlinear dynamical systems, such as those that are linear in parameters.
Instructor(s): N. Cowan.

EN.530.653. Advanced Systems Modeling. 3.00 Credits.
This course covers the following topics at an advanced level: Newton’s
laws and kinematics of systems of particles and rigid bodies; Lagrange’s
equations for single- and multi-degree-of-freedom systems composed of
point masses; normal mode analysis and forced linear systems with
damping, the matrix exponential and stability theory for linear systems;
nonlinear equations of motion: structure, passivity, PD control, noise
models and stochastic equations of motion; manipulator dynamics:
Newton-Euler formulation, Langrange, Kane's formulation of dynamics,
computing torques with O(n) recursive manipulator dynamics: Luh-
Walker-Paul, Hollerbach, O(n) dynamic simulation: Rodrigues-Jain-
Kreutz, Saha, Fixman. There is also an individual course project that each
student must do which related topics of this course to his or her
research.
Instructor(s): G. Chirikjian.

EN.530.654. Advanced Systems Modeling II. 3.00 Credits.
A continuation of EN.530.653, this course covers the following topics at
an advanced level: Newton’s laws of kinematics of systems of particles
and rigid bodies; Lagrange’s equations for single- and multi-degree-of-
freedom systems composed of point masses; normal mode analysis and
forced linear systems with damping, the matrix exponential and stability
theory for linear systems; nonlinear equations of motion;
structure, passivity, PD control, noise models and stochastic equations
of motion; manipulator dynamics: Newton-Euler formulation, Langrange,
Kane's formulation of dynamics, computing torques with O(n) recursive
manipulator dynamics: Luh-Walker-Paul, Hollerbach, O(n) dynamic simulation: Rodrigues-Jain-
Kreutz, Saha, Fixman. There is also an individual course project that each
student must do which related topics of this course to his or her
research.
Instructor(s): G. Chirikjian.

EN.530.655. Deformation Mechanisms. 3.00 Credits.
An advanced course on the microscopic mechanisms that control
the mechanical behavior of materials. Methods and techniques for
measuring, understanding, and modeling: plasticity, creep, shear banding,
and fracture will be addressed. Subjects to be covered include dislocation
theory and strengthening mechanisms, high temperature diffusion and
grain boundary sliding, shear localization, void formation, ductile rupture,
and brittle fracture.
Instructor(s): K. Hemker.

EN.530.658. Thermally Activated Processes in Solids. 3.00 Credits.
An advanced course on the theoretical treatment and modeling of
the mechanisms of deformation in solids at intermediate and high
temperatures. Topics include diffusion of point defects; vacancy
migration; diffusion of solutes; cooperative and diffusion-less
transformations; dislocation obstacle interactions; dislocation climb and
cross-slip; friction forces in metals, alloys and covalent crystals.
Instructor(s): J. El-Awady.

EN.530.661. Applied Mathematics for Engineering. 3.00 Credits.
This course presents a broad survey of the basic mathematical methods
used in the solution of ordinary and partial differential equations: linear
algebra, vector calculus, power series, Fourier series, separation of
variables, integral transforms.
Instructor(s): M. Hilpert.

EN.530.664. Energy Systems Analysis (graduate). 3.00 Credits.
This course discusses the grid integration of renewable energy systems.
The main emphasis is on grid level effects of renewable energy,
particularly wind power systems. It begins with an introduction to
basic power system concepts along with power flow analysis (and
optimization). Then, important concepts for wind power systems are
discussed. Following that, integration issues for wind power at the
transmission level and solar cell integration at the distribution level are
introduced. The last part of the course will focus on current research
in these areas. Students will choose a system to research and present
a project or literature review at the end of the term. Prior knowledge of
optimization is helpful, but not required. Co-listed with EN.530.464.
Instructor(s): D. Gayme.

EN.530.672. Biosensing & BioMEMS. 3.00 Credits.
The course discusses the principles of biosensing and introduces
micro- and nano-scale devices for fluidic control and molecular/cellular
manipulation, measurements of biological phenomena, and clinical
applications.
Instructor(s): J. Wang.

EN.530.676. Locomotion in Mechanical and Biological Systems. 3.00
Credits.
This is a course on the mechanics of locomotion in animals and
machines (particularly bio-inspired and biomimetic robots). It will
introduce you to the breadth of diverse topics within the field of animal
and robot locomotion. We will discuss why animals move amazingly
well in all kinds of environments, how they have inspired some highly
successful machines, and yet why the majority of robots still struggle
in environments that are only modestly complex. Terrestrial, aerial, and
aquatic locomotion will be discussed, with numerous examples. General
principles and integration of knowledge from engineering, biology, and
physics will be emphasized. Students from ME and other departments
are welcome. Please visit http://fi.me.jhu.edu/teaching for updated
information.
Instructor(s): N. Cowan.

EN.530.678. Nonlinear Control and Planning in Robotics. 3.00 Credits.
The course covers selected topics related to model-based trajectory planning
and feedback control. Focus is on applications to autonomous robotic
vehicles modeled as underactuated mechanical systems subject to
constraints such as obstacles in the environment. Topics include:
nonlinear stability, stabilization and tracking, systems with symmetries,
differential flatness, backstepping, probabilistic roadmaps, stochastic
optimization. Recommended Course Background: multi-variable/
differential calculus, AS.110.302, AS.110.201, undergraduate linear
control, basic probability theory.
Instructor(s): M. Kobilarov.
EN.530.681. TEM: Practice and Applications. 3.00 Credits.
A lab and lecture course covering the practical aspects of transmission electron microscopy. Electron diffraction, image formation, and analytical techniques are explained, and students are given an opportunity to gain hands-on microscopy experience.
Instructor(s): K. Hemker.

EN.530.682. Haptic Applications. 4.00 Credits.
An introduction to the required theoretical and practical background in the design and development of haptic applications. Haptic technology enables users to touch and/or manipulate virtual or remote objects in simulated environments or tele-operation systems. This course aims to cover the basics of haptics through lectures, lab assignments, a term project, and readings on current topics in haptics. Through lab assignments, students learn to create haptic-enabled virtual environments using software development toolkits and a haptic device. Students will be required to complete a project with approval of the instructor. Recommended course background: ME, CS, and ECE graduate and senior undergraduate students who are being enthusiastic to learn about haptics and knowledgeable in basic C++ programming. Students with experience with other programming languages (Python, Java, etc.) should be able to self-tutor themselves to complete lab assignments.
Instructor(s): K. Zadeh.

EN.530.684. Orientation Mapping of Crystalline Materials. 3.00 Credits.
Recent advances in instrumental capabilities are fast making it routine to acquire large 2D and 3D datasets and maps of crystalline materials. SEM-based orientation imaging microscopy (OIM) and transmission Kikuchi diffraction (TKD) and TEM-based precession-assisted crystal orientation mapping (PACOM) provide the means to characterize intra- and intergranular details such as grain: orientation, size, shape, neighborhoods and GND distributions. This course will cover the science that underpins these technologies and provide practical experience in gathering, filtering, quantifying and displaying such information. It is motivated by the fact that emergent advances based on the practice of Integrated Materials Science and Engineering (ICMSE) and the Materials Genome Initiative (MGI) are predicated on the availability of physics-based, multi-scale models that are based on such detailed quantitative experimental observations of polycrystalline materials.
Instructor(s): K. Hemker.

EN.530.686. Mechanics of Locomotion. 3.00 Credits.
This is a course on the mechanics of locomotion in animals and machines (particularly bio-inspired and biomimetic robots). It will introduce you to the breadth of diverse topics within the field of animal and robot locomotion. We will discuss why animals move amazingly well in all kinds of environments, how they have inspired some highly successful machines, and yet why the majority of robots still struggle in environments that are only modestly complex. Terrestrial, aerial, and aquatic locomotion will be discussed, with numerous examples. General principles and integration of knowledge from engineering, biology, and physics will be emphasized. Students from ME and other departments are welcome. Please visit http://li.me.jhu.edu/teaching for updated information. Co-listed with EN.530.486
Instructor(s): C. Li.

EN.530.707. Robot System Programming. 3.00 Credits.
This course seeks to introduce students to open-source software tools that are available today for building complex experimental and fieldable robotic systems. The course is grouped into sections, each of which building on the previous in increasing complexity and specificity: tools and frameworks supporting robotics research, robotics-specific software frameworks, integrating complete robotic systems, and culminates with an independent project of the student's own design using small mobile robots or other robots in the lab. Students will need to provide a computer or a virtual-box (with at least a few GB of memory and a several tens of GB of disc space) running Ubuntu (https://www.ubuntu.com or one of its variants such as Xubuntu) and ROS (http://ros.org/). Students should have an understanding of intermediate programming in C/C++ (including data structures and dynamic memory allocation) Familiarity with Linux programming. Familiarity with software version control systems (e.g. subversion, mercurial, git), linear algebra. Recommended Course Background: EN.530.646 Robot Devices, Kinematics, Dynamics, and Control and EN.600.636 Algorithms for Sensor Based Robotics. Students should see the 2016 course homepage http://dscl.lcsr.jhu.edu/ ME530707_2016 for more information and to get started with the course. Recommended Course Background: EN.530.646 and EN.600.436.
Instructor(s): L. Whitcomb.

EN.530.710. Optical Measurement Techniques. 3.00 Credits.
Optic-based techniques are being utilized as measurement and data transmission tools in a growing number of applications. The objective of this course is to introduce graduate students with limited background in optics (but with background in graduate-level mathematics) to the fundamentals of optics and their implementation. Topics covered include reflection, refraction, fluorescence, phosphorescence and diffraction of light; review of geometric optics, lenses, lens systems (microscope, telescope), mirrors, prisms; aberrations, astigmatism, coma, and methods to correct them; light as an electromagnetic wave; Fourier optics; spectral analysis of optical systems; coherent and incoherent imaging, holography, interferometry, diffraction grating; lasers, polarization, light detectors; elements of non-liner optics, birefringence; optical fibers, data transmission, and networking.
Instructor(s): J. Katz.

EN.530.726. Hydrodynamic Stability. 3.00 Credits.
Hydrodynamic linear stability theory is developed and applied to a variety of flow problems using analytical techniques and numerical methods. Necessary and sufficient conditions for flow stability are derived. Canonical examples are used to introduce various concepts including, e.g. temporal and spatial analyses, asymptotic and transient flow response, convective and absolute instability, global methods, and direct stability analysis.
Instructor(s): T. Zaki.

EN.530.730. Finite Element Methods. 3.00 Credits.
Variational methods and mathematical foundations, Direct and Iterative solvers, 1-D Problems formulation and boundary conditions, Trusses, 2-D/ 3D Problems, Triangular elements, QUAD4 elements, Higher Order Elements, Element Pathology, Improving Element Convergence, Dynamic Problems.
Instructor(s): S. Ghosh.
EN.530.732. Fracture of Materials. 3.00 Credits.
An advanced examination of fracture mechanisms in ductile and brittle materials. Both the mechanics and the materials aspects are covered with importance placed on the synthesis of the two approaches. Topics include linear elastic fracture mechanics, ductile fracture, the J-integral, atomistic aspects of fracture in polycrystalline materials, fracture in ceramics and polymers, influence of the material microstructure on fracture toughness and ductility in FCC and BCC materials.
Instructor(s): K. Ramesh.

EN.530.748. Stress Waves, Impacts and Shockwaves. 3.00 Credits.
Instructor(s): K. Ramesh.

EN.530.761. Mathematical Methods of Engineering I. 3.00 Credits.
This course is a fast-paced overview of some fundamental topics in applied mathematics: analytic functions, matrix theory, vector analysis, ordinary differential equations, Bessel functions, fundamental properties of the delta distribution, elements of partial differential equations, two-sided and one-sided Fourier transforms, Laplace transform. Mechanical Engineering graduate students only.
Instructor(s): D. Gayme.

EN.530.762. Advanced Math Methods for Engineers. 3.00 Credits.
Instructor(s): A. Prosperetti.

EN.530.766. Numerical Methods. 3.00 Credits.
Elementary introduction to numerical methods for the solution of fundamental problems in engineering. Computer assignments requiring programming.
Instructor(s): J. Seo.

EN.530.767. Computational Fluid Dynamics. 3.00 Credits.
Advanced introduction to finite-difference and finite-volume approaches to modeling incompressible flows. Computer project requiring programming.
Instructor(s): R. Mittal.

EN.530.772. Non-Linear Finite Elements. 3.00 Credits.
This course will discuss state of the art theoretical developments and modeling techniques in nonlinear computational mechanics, for problems with geometric and material nonlinearities. Large deformation of elastic-plastic and visco-plastic materials, contact-friction and other heterogeneous materials like composites and porous materials will be considered. A wide variety of applications in different disciplines, e.g. metal forming, composite materials, polycrystalline materials will be considered. Co-listed with EN.560.772.
Instructor(s): S. Ghosh.

EN.530.773. Topics in Applied Mathematics Engineering. 3.00 Credits.
Instructor(s): A. Prosperetti.

EN.530.777. Multiphase Flow. 3.00 Credits.
Instructor(s): A. Prosperetti.

EN.530.790. Advanced Finite Element Methods and Multi-Scale Methods. 3.00 Credits.
Instructor(s): S. Ghosh.
EN.500.745. Seminar in Computational Sensing and Robotics. 1.00 Credit.
Seminar series in robotics. Topics include: Medical robotics, including computer-integrated surgical systems and image-guided intervention. Sensor based robotics, including computer vision and biomedical image analysis. Algorithmic robotics, robot control and machine learning. Autonomous robotics for monitoring, exploration and manipulation with applications in home, environmental (land, sea, space), and defense areas. Biobotics and neuromechanics, including devices, algorithms and approaches to robotics inspired by principles in biomechanics and neuroscience. Human-machine systems, including haptic and visual feedback, human perception, cognition and decision making, and human-machine collaborative systems. Cross-listed Mechanical Engineering, Computer Science, Electrical and Computer Engineering, and Biomedical Engineering.
Instructor(s): L. Whitcomb; N. Cowan; P. Kazanzides; R. Etienne Cummings; R. Vidal.

Electrical Computer Engineering
EN.520.353. Control Systems. 3.00 Credits.
Modeling, analysis, and an introduction to design for feedback control systems. Topics include state equation and transfer function representations, stability, performance measures, root locus methods, and frequency response methods (Nyquist, Bode).
Prerequisites: Prereqs: EN.530.343 AND EN.520.214
Instructor(s): E. Mallada Garcia
Area: Engineering.

EN.520.495. Microfabrication Laboratory. 4.00 Credits.
This laboratory course is an introduction to the principles of microfabrication for microelectronics, sensors, MEMS, and other synthetic microsystems that have applications in medicine and biology. Course comprises of laboratory work and accompanying lectures that cover silicon oxidation, aluminum evaporation, photoresist deposition, photolithography, plating, etching, packaging, design and analysis CAD tools, and foundry services. Seniors only or Perm. Req’d. Co-listed as EN.580.495 & EN.530.495
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): A. Andreou; J. Wang
Area: Engineering, Natural Sciences.

EN.520.773. Advanced Topics In Microsystem Fabrication. 1.00 Credit.
Graduate-level course on topics that relate to microsystem integration of complex functional units across different physical scales from nano to micro and macro. Topics will include emerging fabrication technologies, micro-electromechanical systems, nanolithography, nanotechnology, soft lithography, self-assembly, and soft materials. Discussion will also include biological systems as models of microsystem integration and functional complexity. Perm. Req’d.
Instructor(s): A. Andreou.

Civil Engineering
EN.560.201. Statics & Mechanics of Materials. 4.00 Credits.
Basic principles of classical mechanics applied to the equilibrium of particles and rigid bodies at rest, under the influence of various force systems. In addition, the following topics are studied: free body concept, analysis of simple structures, friction, centroids and centers of gravity, and moments of inertia. Includes laboratory experience. Co-listed with EN.530.201. Recommended Course Background: AS.171.101, or EN.530.103/EN.530.104 or instructor permission.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): R. Sangree
Area: Engineering.

Biomedical Engineering
EN.580.451. Cell and Tissue Engineering Lab. 3.00 Credits.
Cell and tissue engineering is a field that relies heavily on experimental techniques. This laboratory course will consist of three six experiments that will provide students with valuable hands-on experience in cell and tissue engineering. Students will learn basic cell culture procedures and specialized techniques related to faculty expertise in cell engineering, microfluidics, gene therapy, microfabrication and cell encapsulation. Experiments include the basics of cell culture techniques, gene transfection and metabolic engineering, basics of cell-substrate interactions I, cell-substrate interactions II, and cell encapsulation and gel contraction. Co-listed with EN.530.451. Senior and Graduate students only; others, instructor permission required. Fall semester only. Lab Fee: $100
Instructor(s): E. Haase
Area: Engineering, Natural Sciences.

Entrepreneurship and Management
EN.660.361. Engineering Business and Management. 3.00 Credits.
An introduction to the business and management aspects of the engineering profession, project management, prioritization of resource allocation, intellectual property protection, management of technical projects, and product/production management. Preference will be given to Mechanical Engineering students. No audits. Recommended Course Background: EN.560.105
Instructor(s): Staff
Area: Engineering, Natural Sciences.

EN.660.461. Engineering Business and Management. 3.00 Credits.
An introduction to the business and management aspects of the engineering profession, project management, prioritization of resource allocation, intellectual property protection, management of technical projects, and product/production management. Preference will be given to Mechanical Engineering students. No audits. Recommended Course Background: EN.660.105
Instructor(s): I. Izenberg; M. Agronin
Area: Engineering.

NanoBio Technology
http://inbt.jhu.edu

The Institute for NanoBioTechnology (INBT) is a Johns Hopkins University center for integrated nanobiotechnology research, education, and outreach. Launched in May 2006 with funding from NASA, the National Science Foundation, and the Howard Hughes Medical Institute, INBT aims to revolutionize healthcare and medicine by bringing together internationally renowned faculty expertise, students, and world-class research facilities in engineering, the physical sciences, medicine, and public health to create groundbreaking technologies. Supportive funding
also has been provided by the Johns Hopkins School of Medicine, Whiting School of Engineering, Krieger School of Arts and Sciences, and Bloomberg School of Public Health. INBT collaborates with industry through its Corporate Partnership Program, which is open to companies involved in all aspects of nanobiotechnology. INBT headquarters are located in 100 Croft Hall on the Homewood campus. Laboratory facilities and faculty are located at several Johns Hopkins locations. Examples of INBT research include the development of new tools and techniques to probe biological systems at the molecular, cellular, and tissue levels, that will provide new insight into the mechanisms of disease, and the development of new diagnostic and therapeutic platforms for improved diagnosis, prevention, and treatment of disease.

Education programs at INBT are designed to foster the next wave of nanobiotechnology innovation. Goals include training a new generation of scientists and engineers who are better able to work between physical sciences/engineering fields and life sciences/medical fields and creating an entrepreneurial environment for students. INBT facilitates a Nano-Bio predoctoral training program that offers a Certificate of Advanced Study in Nanobiotechnology for students who complete 13 lecture/tutorial/laboratory courses along with at least eight semesters of research from their home department. The Cancer Engineering Predoctoral program trains students to study and model cancer motility and the biophysical forces involved in metastasis. Additional nanobiotechnology research opportunities exist through INBT’s summer Research Experience for Undergraduates (REU) and International Research Experience for Students (IRES), both funded by NSF. Students from any major may learn the techniques of science writing or animation for nanotechnology and medicine through independent study.

The Nano-Bio Graduate Training program is recognized by the National Institutes of Health and the National Science Foundation as an innovative new approach to multidisciplinary training, integrating research and education. It combines traditional disciplinary coursework and laboratory training with peer-to-peer teaching, co-advising and professional development.

- earn an accredited Certificate of Advanced Study in Nanobiotechnology (for students who complete 13 lecture/tutorial/laboratory courses along with at least eight semesters of research from their home department)
- obtain a PhD from participating departments such as Biomedical Engineering, Materials Science and Engineering, and Physics. All Science and Engineering students are encouraged to apply.
- be co-advised by faculty experts from outside as well as inside your specialty
- work in a variety of lab setting and build collaborative skills

Program Requirements
Nano-Bio graduate training students take two core courses and one lab course. They learn alongside other INBT-sponsored students in cross-disciplinary journal clubs. To enhance their graduate experience, they attend professional development seminars and present research at the annual Nano-Bio Symposium. Students are given the opportunity to participate in research collaborations with industry partners.

Course Requirements. Students must complete the Nanobiotechnology graduate training program course requirements.

PhD Thesis Research. A student’s PhD thesis research combines nanosciences and biology/medicine. Students must submit a thesis proposal to the INBT Educational Administrator at the start their thesis research. The thesis proposal must be approved. Since student are encouraged to have two faculty research advisors with complimentary expertise in physical sciences/engineering and biology/medicine, it is likely that the student will have desk space in both research groups.

Other Program Requirements. Students are expected to present their research at the annual INBT research symposium.

Home Department Requirements. Students must complete the PhD requirements in their home departments.

Eligibility / How to Apply
Prospective students must apply to and be accepted by a participating department before pursuing this predoctoral program. For additional information, contact Camille Mathis at cbryant@jhu.edu or (410)516-6572. Women and minorities are encouraged to apply.

For current course information and registration go to https://sis.jhu.edu/classes/

Courses
EN.670.495. Animation in Nanotechnology & Medicine. 3.00 Credits.
Instructor(s): M. Rietveld; P. Searson
Area: Engineering, Natural Sciences.
EN.670.497. Animation in Nanotechnology & Medicine. 3.00 Credits.
This course involves the use of animation to visualize scientific processes in nanotechnology and medicine. Animation is becoming an increasingly important tool in both research and education, especially in fields such as nanobiotechnology that involve complex processes and occur at multiple length scales. Understanding of the subject matter is gained through interaction with faculty and graduate students in research groups in the Institute for NanoBioTechnology at Hopkins. The course follows the basic animation pipeline from concept to post production.
Instructor(s): M. Rietveld.
EN.670.502. INBT Undergraduate Research. 3.00 Credits.
Student participation in ongoing research activities. Research is conducted under the supervision of a faculty member and often in conjunction with other members of the research group.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): D. Wirtz; H. Mao; P. Searson; S. Gerecht.
EN.670.609. Communication for Scientists and Engineers: Video News Releases. 1.00 Credit.
Using digital video and recording equipment, students learn to communicate science and engineering research news to non-technical audiences, such as the mass media. Lectures focus on rationale behind best practices for effective communication and include guest presentations by media professionals. Students learn methods of presenting scientific research to a variety of audiences and how to prepare themselves for interviews with journalists. Students will work in groups to write, film, and edit a video news release on a scientific or engineering topic aimed at a general audience.
Instructor(s): M. Spiro.

EN.670.615. Introduction to NanoBio Tutorial. 1.00 Credit.
Students in the INBT training grant programs study and present topics in nanobiotechnology applied to biology from the scientific literature.
Instructor(s): P. Searson.

EN.670.616. Introduction to NanoBio Tutorials II. 1.00 Credit.
Ph.D. students and postdoctoral fellows in the HHMI/IGERT/PSOC/CCNE/CNCT training programs study and present topics in nanobiotechnology for biology and medicine.
Instructor(s): P. Searson.

EN.670.618. Nanobio Tutorials. 1.00 Credit.
As a follow-up to Intro to NanoBio Tutorials, INBT training grant students will conduct extensive article reviews on topics related to the research being conducted in their labs (i.e., nanoparticles synthesis, quantum dots, cancer, etc.). Topics will also be related to nanotechnology applied to biology from scientific literature. Students will present literary reviews, discussions, and formal presentations on articles as they relate to research or projects they wish to partake in. Recommended Course Background: EN.670.615/EN.670.616
Instructor(s): P. Searson.

EN.670.619. Fundamental Physics and Chemistry of Nanomaterials. 3.00 Credits.
This course will cover the physics and chemistry relevant to the design, synthesis, and characterization of nanoparticles. Topics include nanoparticle synthesis, functionalization, surface engineering, and applications in diagnostics and therapeutics. The properties of semiconductor quantum dots and magnetic nanoparticles will be reviewed along with techniques for nanoparticle manipulation, particle tracking, and bio-microchemistry. Patterning tools including soft lithography, optical lithography, e-beam lithography, and template lithography will be discussed. Electron and scanning probe microscopy will be reviewed. Cross-listed with Materials Science & Engineering and Chemical & Biomolecular Engineering.
Instructor(s): Staff.

EN.670.621. NanoBio Laboratory. 3.00 Credits.
This course introduces students to concepts and laboratory techniques in nanobiotechnology. The focus of the laboratory is on nanoparticle carriers for drug delivery and markers for imaging. The laboratory involves the synthesis of nanoparticles using solution phase techniques and characterization by optical techniques such as dynamic light scattering and absorbance spectroscopy. Strategies for functionalization of nanoparticles are covered with focus on methods for attaching biomolecules. The basic aspects of cell culture and optical microscopy techniques will be covered. Nanoparticles functionalized with a drug or gene will be used to perform transfection experiments and compared to standard techniques.
Instructor(s): P. Searson.

EN.670.622. Advanced NanoBio Tutorials. 1.00 Credit.
As a follow-up to NanoBio Tutorials, INBT training grant students will present scientific articles and reviews related to their current research project. Topics will also be related to nanotechnology applied to biology from scientific literature. At this time all students should be assigned a project and be able to engage participating students in their field of study. Recommended Course Background: EN.670.615, EN.670.616, EN.670.618, EN.670.619, and Introduction to NanoBio Tutorials and NanoBio Tutorials.
Instructor(s): P. Searson
Area: Engineering, Natural Sciences.

EN.670.623. Advanced NanoBio Tutorials II. 1.00 Credit.
INBT training grant students only. Recommended Course Background: EN.670.615, EN.670.616, EN.670.618, and EN.670.619
Instructor(s): P. Searson
Area: Engineering, Natural Sciences.

EN.670.624. NanoBio Tutorials: Special Topics I. 1.00 Credit.
This course is to allow students pursuing a certificate in nanobiotechnology the opportunity each week to review and present on special research topics. The papers and discussions will cover the latest developments in various researches. Recommended Course Background: EN.670.615, EN.670.616, EN.670.618, EN.670.619, EN.670.622, and EN.670.623.
Certificate of Advanced Studies in Nanobiotechnology only.
Instructor(s): P. Searson
Area: Engineering, Natural Sciences.

EN.670.625. NanoBio Tutorials: Special Topics II. 1.00 Credit.
This course is to allow INBT training grant fellows the opportunity each week to review and present on special research topics. The papers and discussions will cover the latest developments in various researches. INBT training grant students only. Recommended Course Background: EN.670.615, EN.670.616, EN.670.618, EN.670.619, EN.670.622, and EN.670.623.
Instructor(s): P. Searson
Area: Engineering, Natural Sciences.

EN.670.628. NanoBio Tutorials II. 1.00 Credit.
As a follow-up to Intro to NanoBio Tutorials, INBT training grant students will conduct extensive article reviews on topics related to the research being conducted in their labs (i.e., nanoparticles synthesis, quantum dots, cancer, etc.). Topics will also be related to nanotechnology applied to biology from scientific literature. Students will present literary reviews, discussions, and formal presentations on articles as they relate to research or projects they wish to partake in. Recommended Course Background: EN.670.615/EN.500.615 and EN.670.616/EN.500.616
Instructor(s): P. Searson.
EN.670.642. Lab Course in Nanobiotechnology. 3.00 Credits.
This lab course is a cornerstone of the training that all NTCR fellows acquire. The main objective of the lab course is to reveal the basics of biological systems to engineers in the physical sciences and of physical systems to biologists. This lab course takes place in new state-of-the-art facilities that have been equipped with funding from the HHMI and the NSF. Lab skills learned include: (i) physical and chemical tools to characterize and manipulate the properties of surfaces and nanoparticles; (ii) synthesis, ligand-functionalization, characterization, and targeted cell intake of multi-functional nanoparticles (nanowires and quantum dots); and (iii) atomic force microscopy and quantitative fluorescence microscopy for biological and materials applications.

For fellows coming with a physics/engineering background, they learn basics of mammalian cell culture, molecular biology, cell transfection/transformation, and blotting techniques. The course captain is Denis Wirtz (Depts. Chemical and Biomolecular Engineering, Oncology, Pathology and Director of the previously NCI-funded NTCR program and PSOC center). Recommended Course Background: EN.670.620 or EN.670.400
Instructor(s): D. Wirtz
Area: Engineering, Natural Sciences.

EN.670.643. Nanotechnology for Cancer Research Tutorial. 1.00 Credit.
Students in the NTCR training grant program study and present topics in nanotechnology applied to biology from the scientific literature. For NTCR Fellows only.
Instructor(s): D. Wirtz
Area: Engineering, Natural Sciences.

EN.670.695. Animation in Nanotechnology & Medicine. 3.00 Credits.
This course involves the use of animation to visualize scientific processes in nanotechnology and medicine. Animation is becoming an increasingly important tool in both research and education, especially in fields such as nanobiotechnology that involve complex processes and occur at multiple length scales. Understanding of the subject matter is gained through interaction with faculty and graduate students in research groups in the Institute for NanoBioTechnology at Hopkins. The course follows the basic animation pipeline from concept to post production.
Instructor(s): M. Rietveld; P. Searson
Area: Engineering, Natural Sciences.

EN.670.697. Animation in Nanotechnology & Medicine. 3.00 Credits.
This independent design course presents students with engineering needs in developing countries. Teams of students will work together to design solutions for the proposed needs that are defined in part with our global partners. Students will have to rigorously research the local community and cultural context of the proposed problems to design solutions. Prototypes will be built and some teams may test prototypes in the local community to optimize solution. Permission of Instructor.
Instructor(s): J. Elisseeff
Area: Engineering.

Robotics and Computational Sensing
https://www.lcsr.jhu.edu/Main_Page

Laboratory for Computational Sensing and Robotics
The Laboratory for Computational Sensing and Robotics (LCSR) is one of the most technologically advanced robotics research centers worldwide, and is an international leader in the areas of medical robotics, autonomous systems, and bio-inspiration. Within Johns Hopkins, a premiere research university, the LCSR is a hub for innovative and interdisciplinary robotics engineering, research, and development. The LCSR brings a core group of scholars and students from the Whiting School of Engineering together with researchers from the Johns Hopkins School of Medicine, the Bloomberg School of Public Health, the Krieger School of Arts and Sciences, the Johns Hopkins University Applied Physics Laboratory and the Kennedy Krieger Institute to focus on the common purpose of creating knowledge and fostering innovation.

Minor in Robotics
The field of robotics integrates sensing, information processing, and movement to accomplish specific tasks in the physical world. As such, it encompasses several topics, including mechanics and dynamics, kinematics, sensing, signal processing, control systems, planning, and artificial intelligence. Applications of these concepts appear in many areas including medicine, manufacturing, space exploration, disaster recovery, ordinance disposal, deep-sea navigation, home care, and home automation.

The faculty of the Laboratory for Computational Sensing and Robotics (LCSR), in collaboration with the academic departments and centers of the Whiting School of Engineering, offers a robotics minor in order to provide a structure in which undergraduate students at Johns Hopkins University can advance their knowledge in robotics while receiving recognition on their transcript for this pursuit. The minor is not "owned" by any one department, but rather it is managed by the LCSR itself. Any student from any department within the university can work toward the minor.

Robotics is fundamentally integrative and multidisciplinary. Therefore, any candidate for the robotics minor must develop a set of core skills that cut across these disciplines, as well as obtain advanced supplementary skills.

Core Skills Include the Following
- Robot kinematics and dynamics (R)
- Systems theory, signal processing and control (S)
- Computation and sensing (C)

Supplementary advanced skills may be obtained in specialized applications, such as space, medicine, or marine systems; or in one of the three core areas listed above.

The full minor course listing, provided below and available at https://www.lcsr.jhu.edu/Robotics_Minor, specifies which courses fulfill these requirements. Note that ALL core areas must be covered, but that ANY advanced/supplementary courses can be chosen from the list. This allows students to strike a balance between breadth and depth.

Requirements
An undergraduate qualifies for the minor provided he or she has taken at least 18 credits (at the 300-level or above, with a C- or above) from an approved list of courses available below and at https://www.lcsr.jhu.edu/Robotics_Minor with the following requirements and restrictions:
• Between 6 and 12 credits chosen to cover the three core skills (R, S, C).
• At most 6 credits chosen from advanced supplementary skills (Sup).
• At least 3 credits of the 18 must be a laboratory course (Lab) (at least 15 hours of laboratory time that includes working with physical hardware and/or real data).

At most 3 credits of the 18 can be an independent research or individual study with a faculty member on the list of approved faculty advisers.

• At least 6 credits must be primarily listed in a department other than the student’s home department (it is acceptable if such a course is cross-listed in the student’s home department).
• At most one course up to 3 credits (including independent research or individual study) may be taken S/U, but all other courses must be taken for a letter grade.

Undergraduates interested in completing the minor must be assigned a minor adviser. The adviser is responsible for helping the student choose courses and helps to ensure all requirements for the minor are met. The minor advisers are listed on the Robotics Minor website (https://www.lcsr.jhu.edu/Robotics_Minor).

MINOR GOVERNANCE

The minor is continually monitored by a standing governance/oversight committee, currently comprised of the following faculty:

• Noah Cowan, Program Coordinator
• Greg Chirikjian, Program Committee Member
• Ralph Etienne-Cummings, Program Committee Member
• Gregory D. Hager, Program Committee Member
• Russ Taylor, Program Committee Member

The oversight of this minor, including curricular updates, falls to this committee. The minor is managed by the [faculty of the] Laboratory for
Computational Sensing and Robotics (LCSR) [in collaboration with the academic departments and centers of the Whiting School of Engineering]

The minor is managed by faculty of the LCSR in collaboration with academic departments and centers of the Whiting School of Engineering. If you have suggestions / questions regarding the minor, please direct them to Prof. Noah Cowan.

**Minor in Computer Integrated Surgery**

The Whiting School of Engineering offers a minor in Computer Integrated Surgery (CIS) for full-time, undergraduate students at Johns Hopkins. The minor is particularly well suited for students interested in computer integrated surgery issues who are majoring in a variety of disciplines including biomedical engineering, computer science, computer engineering, electrical engineering, and mechanical engineering. The minor provides formal recognition of the depth and strength of a student's knowledge of the concepts fundamental to CIS beyond the minimal requirements of his/her major.

In order to minor in CIS, a student will require a minor adviser from the Engineering Research Center in Computer Integrated Surgical Systems and Technology (CISST ERC) in the Laboratory for Computational Sensing and Robotics. Current faculty members available as advisers include Professors Russell Taylor (CS), Greg Hager (CS), Jerry Prince (ECE), Ralph Etienne-Cummings (ECE), Louis Whitcomb (ME), Noah Cowan (ME), Marin Kobilarov (ME), Peter Kazanzides (CS), Iulian Iordachita (ME), and Emad Boctor (Radiology).

To satisfy the requirements for the minor in CIS, a student must have a fundamental background in computer programming and computer science, sufficient mathematical background, and also take a minimum of six courses (with a total of at least 18 credits, earning at least a C in each course) directly related to the concepts relevant to CIS. These six CIS courses must include two fundamental CIS core courses, which provide the student with the fundamental basis for CIS, and four approved upper-level courses (300-level or above) to allow the student to pursue an advanced CIS topic in depth. The additional four upper-level courses must include at least one course designated as an "imaging" course or one course designated as a "robotics" course, as discussed below.

**Required Fundamental Computer Science Courses**

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN.600.107</td>
<td>Introductory Programming in Java</td>
<td>3</td>
</tr>
<tr>
<td>EN.600.226</td>
<td>Data Structures</td>
<td>4</td>
</tr>
</tbody>
</table>

Or equivalent experience determined by your CIS minor adviser.

**Required Fundamental Mathematics Courses**

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>AS.110.108</td>
<td>Calculus I</td>
<td>4</td>

<tr>
<td>or AS.110.212</td>
<td>Honors Linear Algebra</td>
<td>4</td>
</tr>
</tbody>
</table>

Each math requirement listed above may be satisfied by one of the specific courses listed, or by an equivalent course as determined by CIS advisor.

**Required Fundamental Computer Integrated Surgery Courses**

- EN.600.445 Computer Integrated Surgery I
- A design course in CIS. Either EN.600.446 Computer Integrated Surgery II or a design course in biomedical engineering, electrical and computer engineering, or mechanical engineering with substantial CIS content approved by the student’s faculty adviser in the CIS minor.

**Required Four Other Courses Related to CIS**

Students must also complete at least four other courses related to CIS. Of these, AT LEAST ONE must be in EITHER the Imaging Subgroup or the Robotics Subgroup.

**Imaging**

**Robotics M.S.E. Program**

For complete M.S.E. information, visit https://www.lcsr.jhu.edu/MSE

The Master of Science in Engineering in Robotics (Robotics M.S.E) program at Johns Hopkins University is designed to advance interdisciplinary robotics knowledge in students coming from a wide variety of engineering, scientific, and mathematical backgrounds.

Johns Hopkins University recognizes the growing need in industry for engineers with the broad multi-disciplinary training and fundamental knowledge needed to develop and deploy advanced robotics systems that function effectively in the real world.

Johns Hopkins University’s broad interdisciplinary approach to robotics research makes it uniquely sitauted to offer such a comprehensive program. The Laboratory for Computational Sensing and Robotics (LCSR), with its reputation as one of the top robotics research sites in the
world, particularly in the area of medical robotics, is pleased to offer this M.S.E. in Robotics.

Program Goals
- To provide students with multi-disciplinary engineering education and training that will enable them to develop and deploy innovative advanced robotics systems that function effectively in real-world applications.
- To develop students’ ability to relate individual technical and design elements to the functioning of complete engineered robotic systems.
- To develop students’ ability to work effectively within and to lead multi-disciplinary teams.
- To provide students with a basis for life-long learning and professional growth.

Application Requirements for the M.S.E. in Robotics degree
- Bachelor’s degree in engineering, science, or math. (Or demonstrated knowledge or accomplishment in these fields)
- Statement of Purpose – in your statement of purpose please take a couple of sentences to explain/answer the following:
  - Why are you interested in doing an M.S.E in Robotics? No need to over-think this: it is fine if it is as simple as wanting to get a job in this field!
  - Are you interested in a specific Robotics Track? See the Robotics MSE website for more information on tracks.
- Transcript
- Graduate Record Examination (GRE). Current JHU students may request that this requirement be waived. Such requests will be judged on a case-by-case basis.
- IELTS or TOEFL for international applicants.
- Three letters of reference
- $75.00 Application fee
- The Office of Graduate Admissions and Enrollment strongly recommends you submit a professional evaluation from one of the required resources here.

In making its final decisions, the Admissions Committee will consider the combination of professional knowledge, academic excellence, letters of reference, and the statement of purpose, as well as GRE, TOEFL, and IELTS scores of the applicants.

M.S.E. Program Prerequisites
Math and Physics Proficiency Prerequisites
Proficiency in undergraduate mathematics and physics is expected for all M.S.E. students in the robotics program.

This includes proficiency in:
- Multivariable integral and differential calculus;
- Linear algebra;
- Ordinary differential equations;
- Physics – undergraduate calculus-based mechanics, electricity, and magnetism;
- Probability and statistics.

Proficiency will be assumed in the prerequisites for the core courses.

Computing Proficiency Prerequisites
Proficiency in computer programming is expected for all M.S.E. students in the robotics program.

This includes proficiency in:
- Basic numerical methods using existing programming environments;
- The ability to write well-structured and documented programs in a standard programming language such as C++, Java, or MATLAB.

M.S.E. Degree Requirements
All incoming M.S.E. students will be assigned an M.S.E. Academic Advisor.
- Course Requirements:
  - Course Option: 10 credit-bearing courses that total at least 30 credit-hours.
  - Essay Option: 8 credit-bearing courses that total at least 24 credit-hours and a Master’s Essay supervised by a WSE faculty member who has been approved by the Robotics M.S.E. Curriculum Committee to serve as a faculty advisor.

No more than 2 of these courses may be at the undergraduate level as defined by the offering department/center. All courses counted toward the M.S.E. degree requirements must be at the 300-level or above. Non-credit and one-credit courses such as the weekly seminar courses offered by LCSR and Departments may not count toward this course requirement.

- Foundation Course Requirements: Two core courses, weekly seminar course, and systems/implementation requirement.
- Track Course Requirement: Four courses fulfilling one of the following track requirements:
  - Medical Robotics and Computer Integrated Surgical Systems (has special track requirements, please see website)
  - Perception and Cognitive Systems
  - Automation Science and Engineering
  - Control and Dynamical Systems
  - BioRobotics
  - General Robotics

Courses counted toward the track requirement may not be used to satisfy the elective requirement.

- Elective Course Requirement: Four courses, or two courses and a M.S.E. Essay, fulfilling the elective requirement. Courses may be any engineering or quantitative (designated E or Q in the course catalog) course, subject to the degree requirement limitations, as approved by the student’s M.S.E. academic adviser. Courses counted toward the elective requirement may not be used to satisfy the track requirements.
- Academic Ethics: online tutorial required for all incoming M.S.E. students.
- AS.360.625 Responsible Conduct of Research (online): Online tutorial required for all incoming MSE students.
Courses

AS.110.107. Calculus II (For Biological and Social Science). 4.00 Credits.
Differential and integral Calculus. Includes analytic geometry, functions, limits, integrals and derivatives, introduction to differential equations, functions of several variables, linear systems, applications for systems of linear differential equations, probability distributions. Applications to the biological and social sciences will be discussed, and the courses are designed to meet the needs of students in these disciplines.
Instructor(s): S. Vigogna; V. Lorman
Area: Quantitative and Mathematical Sciences.

AS.110.108. Calculus I. 4.00 Credits.
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, polar coordinates, parametric equations, Taylor’s theorem and applications, infinite sequences and series. Some applications to the physical sciences and engineering will be discussed, and the courses are designed to meet the needs of students in these disciplines.
Instructor(s): H. Xu
Area: Quantitative and Mathematical Sciences.

AS.110.109. Calculus II (For Physical Sciences and Engineering). 4.00 Credits.
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, polar coordinates, parametric equations, Taylor’s theorem and applications, infinite sequences and series. Some applications to the physical sciences and engineering will be discussed, and the courses are designed to meet the needs of students in these disciplines.
Instructor(s): M. Arap; X. Zheng
Area: Quantitative and Mathematical Sciences.

AS.110.202. Calculus III. 4.00 Credits.
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, polar coordinates, parametric equations, Taylor’s theorem and applications, infinite sequences and series. Some applications to the physical sciences and engineering will be discussed, and the courses are designed to meet the needs of students in these disciplines.
Instructor(s): G. Di Matteo; V. Pingali
Area: Quantitative and Mathematical Sciences.

AS.110.211. Honors Multivariable Calculus. 4.00 Credits.
This course includes the material in AS.110.202 with some additional applications and theory. Recommended for mathematically able students majoring in physical science, engineering, or especially mathematics.
Instructor(s): Y. Zhang
Area: Quantitative and Mathematical Sciences.

AS.110.212. Honors Linear Algebra. 4.00 Credits.
This course includes the material in AS.110.201 with some additional applications and theory. Recommended for mathematically able students majoring in physical science, engineering, or mathematics.
Instructor(s): S. Vigogna
Area: Quantitative and Mathematical Sciences.
EN.500.745. Seminar in Computational Sensing and Robotics. 1.00 Credit.
Seminars series in robotics. Topics include: Medical robotics, including computer-integrated surgical systems and image-guided intervention. Sensor based robotics, including computer vision and biomedical image analysis. Algorithmic robotics, robot control and machine learning. Autonomous robotics for monitoring, exploration and manipulation with applications in home, environmental (land, sea, space), and defense areas. Biорobotics and neuroneurophysiology, including devices, algorithms and approaches to robotics inspired by principles in biomechanics and neuroscience. Human-machine systems, including haptic and visual feedback, human perception, cognition and decision making, and human-machine collaborative systems. Cross-listed Mechanical Engineering, Computer Science, Electrical and Computer Engineering, and Biomedical Engineering.
Instructor(s): L. Whitcomb; N. Cowan; P. Kazanzides; R. Etienne Cummings; R. Vidal.

EN.520.353. Control Systems. 3.00 Credits.
Modeling, analysis, and an introduction to design for feedback control systems. Topics include state equation and transfer function representations, stability, performance measures, root locus methods, and frequency response methods (Nyquist, Bode).
Prerequisites: Prereqs: EN.530.343 AND EN.520.214
Instructor(s): E. Mallada Garcia
Area: Engineering.

EN.520.414. Image Processing & Analysis. 3.00 Credits.
The course covers fundamental methods for the processing and analysis of images and describes standard and modern techniques for the understanding of images by humans and computers. Topics include elements of visual perception, sampling and quantization, image transforms, image enhancement, color image processing, image restoration, image segmentation, and multiresolution image representation. Laboratory exercises demonstrate key aspects of the course.
Prerequisites: EN.520.214; Students may earn credit for EN.520.614 or EN.520.414, but not both.
Instructor(s): J. Goutsias
Area: Engineering.

EN.520.415. Image Process & Analysis II. 3.00 Credits.
This course covers fundamental methods for the processing and analysis of images and describes standard and modern techniques for the understanding of images by morphological image processing and analysis, image representation and description, image recognition and interpretation.
Prerequisites: Students may earn credit for EN.520.615 or EN.520.415, but not both; EN.520.414
Instructor(s): J. Goutsias
Area: Engineering.

EN.520.427. Product Design Lab. 3.00 Credits.
This project-based course is designed to help students learn how to turn their ideas into commercial products. In the first half of the course, emphasis will be placed on the product development process: student teams will gradually build up a complete contract book including a mission statement, competitive analysis, patent review, product specifications, system schematics, economic analysis, development schedule, etc. In the second half of the course, each team will be expected to implement its design and demonstrate a prototype of their product’s core functionality. At the end of the semester, a final written report will be submitted in the form of a utility patent. Students are encouraged to take this course in conjunction with Electronic Design Lab (ECE 520.448) in the Spring semester and leverage the groundwork developed here to enable production of a fully functional and marketable prototype by the end of the academic year.
Instructor(s): P. Pouliquen
Area: Engineering.

EN.520.432. Medical Imaging Systems. 3.00 Credits.
An introduction to the physics, instrumentation, and signal processing methods used in general radiography, X-ray computed tomography, ultrasound imaging, magnetic resonance imaging, and nuclear medicine. The primary focus is on the methods required to reconstruct images within each modality, with emphasis on the resolution, contrast, and signal-to-noise ratio of the resulting images. Co-listed as EN.580.472
Prerequisites: Student may earn credit for EN.520.632 or EN.520.432, but not both; EN.580.222 OR EN.520.214
Instructor(s): J. Prince
Area: Engineering.

EN.520.433. Medical Image Analysis. 3.00 Credits.
This course covers the principles and algorithms used in the processing and analysis of medical images. Topics include, interpolation, registration, enhancement, feature extraction, classification, segmentation, quantification, shape analysis, motion estimation, and visualization. Analysis of both anatomical and functional images will be studied and images from the most common medical imaging modalities will be used. Projects and assignments will provide students experience working with actual medical imaging data.
Prerequisites: EN.520.432 OR EN.580.472 OR EN.550.310 OR EN.550.311
Instructor(s): J. Prince
Area: Engineering.

EN.520.435. Digital Signal Processing. 3.00 Credits.
Methods for processing discrete-time signals. Topics include signal and system representations, z-transforms, sampling, discrete Fourier transforms, fast Fourier transforms, digital filters.
Prerequisites: EN.520.214; Students may earn credit for EN.520.435 or EN.520.635, but not both.
Instructor(s): H. Weinert
Area: Engineering.

EN.520.453. Medical Image Analysis. 3.00 Credits.
This course covers the principles and algorithms used in the processing and analysis of medical images. Topics include, interpolation, registration, enhancement, feature extraction, classification, segmentation, quantification, shape analysis, motion estimation, and visualization. Analysis of both anatomical and functional images will be studied and images from the most common medical imaging modalities will be used. Projects and assignments will provide students experience working with actual medical imaging data.
Prerequisites: EN.520.432 OR EN.580.472 OR EN.550.310 OR EN.550.311
Instructor(s): J. Prince
Area: Engineering.

EN.520.454. Control Systems Design. 3.00 Credits.
Classical and modern control systems design methods. Topics include formulation of design specifications, classical design of compensators, state variable and observer based feedback. Computers are used extensively for design, and laboratory experiments are included.
Prerequisites: Students may earn credit for EN.520.654 or EN.520.454, but not both.
Instructor(s): P. Iglesias
Area: Engineering.
EN.520.448. Electronics Design Lab. 3.00 Credits.
An advanced laboratory course in which teams of students design, build, test and document application specific information processing microsystems. Semester long projects range from sensors/actuators, mixed signal electronics, embedded microcomputers, algorithms and robotics systems design. Demonstration and documentation of projects are important aspects of the evaluation process. Recommended: EN.600.333, EN.600.334, EN.520.349, EN.520.372, EN.520.490 or EN.520.491.
Prerequisites: EN.520.345 or equivalent Recommended: 600.333, 600.334, 520.216, 520.349, 520.372, 520.490 or 520.491; Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): P. Julian; R. Etienne Cummings

EN.520.454. Control Systems Design. 3.00 Credits.
Classical and modern control systems design methods. Topics include formulation of design specifications, classical design of compensators, state variable and observer based feedback. Computers are used extensively for design, and laboratory experiments are included.
Prerequisites: Students may earn credit for EN.520.654 or EN.520.454, but not both.
Instructor(s): P. Iglesias
Area: Engineering.

EN.520.483. Bio-Photonics Laboratory. 3.00 Credits.
This laboratory course involves designing a set of basic optical experiments to characterize and understand the optical properties of biological materials. The course is designed to introduce students to the basic optical techniques used in medicine, biology, chemistry and material sciences.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): J. Kang; S. Ramesh

EN.520.491. CAD Design of Digital VLSI Systems I (Juniors/Seniors). 3.00 Credits.
Juniors and Seniors Only.
Prerequisites: Student may take EN.520.491 or EN.520.691, but not both.
Instructor(s): R. Etienne Cummings
Area: Engineering.

EN.530.343. Design and Analysis of Dynamical Systems. 3.00 Credits.
Modeling and analysis of damped and undamped, forced and free vibrations in single and multiple degree-of-freedom linear dynamical systems. Introduction to stability and control of linear dynamical systems.
Prerequisites: Prereq: (110.108 and 110.109 and (110.202 or 110.211) and ((550.291) or (110.201 and 110.302) or (110.201 and 110.306)), and C- or better or concurrent enrollment in 530.202 or 560.202. MechE Majors must also have taken 530.241; Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): N. Cowan; S. Marra
Area: Engineering.

EN.530.414. Computer-Aided Design. 3.00 Credits.
The course outlines a modern design platform for 3D modeling, analysis, simulation, and manufacturing of mechanical systems using the “Pro/E” package by PTC. The package includes the following components: • Pro/ENGINEER: is the kernel of the design process, spanning the entire product development, from creative concept through detailed product definition to serviceability. • Pro/MECHANICA: is the main analysis and simulation component for kinematic, dynamic, structural, thermal and durability performance. • Pro/NC: is a numeric-control manufacturing package. This component provides NC programming capabilities and tool libraries. It creates programs for a large variety of CNC machine tools.
Instructor(s): D. Stoianovici
Area: Engineering.

EN.530.420. Robot Sensors/Actuators. 4.00 Credits.
Introduction to modeling and use of actuators and sensors in mechatronic design. Topics include electric motors, solenoids, micro-actuators, position sensors, and proximity sensors.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class; Prerequisites: ((171.101 and 171.102) or (171.107 and 171.108) or (530.103 and 530.104)), and (110.106 or 110.108) and 110.109, and (110.202 or 110.211), and (EN.550.291 or AS.110.302) and (EN.530.241 or EN.520.345)
Instructor(s): D. Kraemer; N. Cowan
Area: Engineering.

EN.530.424. Dynamics of Robots and Spacecraft. 3.00 Credits.
An introduction to Lagrangian mechanics with application to robot and spacecraft dynamics and control. Topics include rigid body kinematics, efficient formulation of equations of motion, stability theory, and Hamilton’s principle.
Instructor(s): G. Chirikjian; J. Kim
Area: Engineering.

EN.530.420. Robot Sensors/Actuators. 4.00 Credits.
Introduction to modeling and use of actuators and sensors in mechatronic design. Topics include electric motors, solenoids, micro-actuators, position sensors, and proximity sensors.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class, Prerequisites: ((171.101 and 171.102) or (171.107 and 171.108) or (530.103 and 530.104)), and (110.106 or 110.108) and 110.109, and (110.202 or 110.211), and (EN.550.291 or AS.110.302) and (EN.530.241 or EN.520.345)
Instructor(s): D. Kraemer; N. Cowan
Area: Engineering.
EN.530.454. Manufacturing Engineering. 3.00 Credits.
An introduction to the various manufacturing processes used to produce metal and nonmetal components. Topics include casting, forming and shaping, and the various processes for material removal including computer-controlled machining. Simple joining processes and surface preparation are discussed. Economic and production aspects are considered throughout. Open only to seniors in Mechanical Engineering and Engineering Mechanics and other majors at all levels.
Instructor(s): Y. Ronzhes
Area: Engineering.

EN.530.495. Microfabrication Laboratory. 4.00 Credits.
This laboratory course is an introduction to the principles of microfabrication for microelectronics, sensors, MEMS, and other synthetic microsystems that have applications in medicine and biology. Course comprised of laboratory work and accompanying lectures that cover silicon oxidation, aluminum evaporation, photoresist deposition, photolithography, plating, etching, packaging, design and analysis CAD tools, and foundry services. Seniors only or Permission Required.
Instructor(s): A. Andreou; J. Wang
Area: Engineering, Natural Sciences.

EN.530.646. Robot Devices, Kinematics, Dynamics, and Control. 3.00 Credits.
Graduate-level introduction to the mechanics of robotic systems with emphasis on the mathematical tools for kinematics and dynamics of robot arms and mobile robots. Topics include the geometry and mathematical representation of rigid body motion, forward and inverse kinematics of articulated mechanical arms, trajectory generation, manipulator dynam-ics, actuation, and design issues, manipulator control, and additional special topics. Recommended course background: multivariable integral and differential calculus, classical physics, linear algebra, ordinary differential equations. Programming: Knowledge of the Matlab programming language including data input/output, 1-D and 2-D arrays, and user-defined function calls. Students with experience with these language elements in other programming languages (C, C++, Python, Java, etc.) should be able to self-tutor themselves in the Matlab language part as of the programming exercises.
Instructor(s): N. Cowan.

EN.530.653. Advanced Systems Modeling. 3.00 Credits.
This course covers the following topics at an advanced level: Newton’s laws and kinematics of systems of particles and rigid bodies; Lagrange’s equations for single- and multi-degree-of-freedom systems composed of point masses; normal mode analysis and forced linear systems with damping, the matrix exponential and stability theory for linear systems; nonlinear equations of motion: structure, passivity, PD control, noise models and stochastic equations of motion; manipulator dynamics: Newton-Euler formulation, Langrange, Kane’s formulation of dynamics, computing torques with O(n) recursive manipulator dynamics: Luh-Walker-Paul, Hollerbach, O(n) dynamic simulation: Rodrigues-Jain-Kreutz, Saha, Fixman. There is also an individual course project that each student must do which related the topics of this course to his or her research.
Instructor(s): G. Chirikjian.

EN.530.661. Applied Mathematics for Engineering. 3.00 Credits.
This course presents a broad survey of the basic mathematical methods used in the solution of ordinary and partial differential equations: linear algebra, vector calculus, power series, Fourier series, separation of variables, integral transforms.
Instructor(s): M. Hilpert.

EN.530.676. Locomotion in Mechanical and Biological Systems. 3.00 Credits.
This is a course on the mechanics of locomotion in animals and machines (particularly bio-inspired and biomimetic robots). It will introduce you to the breadth of diverse topics within the field of animal and robot locomotion. We will discuss why animals move amazingly well in all kinds of environments, how they have inspired some highly successful machines, and yet why the majority of robots still struggle in environments that are only modestly complex. Terrestrial, aerial, and aquatic locomotion will be discussed, with numerous examples. General principles and integration of knowledge from engineering, biology, and physics will be emphasized. Students from ME and other departments are welcome. Please visit http://li.me.jhu.edu/teaching for updated information.
Instructor(s): N. Cowan.

EN.550.291. Linear Algebra and Differential Equations. 4.00 Credits.
An introduction to the basic concepts of linear algebra, matrix theory, and differential equations that are used widely in modern engineering and science. Intended for engineering and science majors whose program does not permit taking both AS.110.201 and AS.110.302.
Prerequisites: [( AS.110.106 OR AS.110.108 ) AND ( AS.110.107 OR AS.110.109 )] OR AS.110.113
Instructor(s): B. Castello
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.457. Topics in Operations Research. 1.50 Credits.
Study in depth of a special mathematical or computational area of operations research, or a particular application area. Recent topics: decision theory, mathematical finance, optimization software.
Instructor(s): B. Castello
Area: Engineering, Quantitative and Mathematical Sciences.

EN.550.493. Mathematical Image Analysis. 3.00 Credits.
This course gives an overview of various mathematical methods related to several problems encountered in image processing and analysis, and presents numerical schemes to address them. It will focus on problems like image denoising and deblurring, contrast enhancement, segmentation and registration. The different mathematical concepts shall be introduced during the course; they include in particular functional spaces such as Sobolev and BV, Fourier and wavelet transforms, as well as some notions from convex optimization and numerical analysis. Most of such methods will be illustrated with algorithms and simulations on discrete images, using MATLAB. Prerequisites : linear algebra, multivariate calculus, basic programming in MATLAB. Recommended Course Background: Real analysis
Prerequisites: ( AS.110.202 OR AS.110.211 ) AND (EN.550.291 OR AS.110.201 OR AS.110.212)
Instructor(s): N. Charon
Area: Engineering, Quantitative and Mathematical Sciences.
EN.550.662. Optimization Algorithms. 3.00 Credits.
This course considers algorithms for solving various nonlinear constrained optimization problems and, in parallel, develops the supporting theory. Topics include: necessary and sufficient optimality conditions for constrained optimization; projected-gradient and two-phase accelerated subspace methods for bound-constrained optimization; simplex, interior-point, Bender’s decomposition, and the Dantzig-Wolfe decomposition methods for linear programming; duality theory; penalty, augmented Lagrangian, sequential quadratic programming, and interior-point methods for general nonlinear programming. In addition, we will consider the Alternating Direction Method of Multipliers (ADMM), which is applicable to a huge range of problems including sparse inverse covariance estimation, consensus, and compressed sensing.
Instructor(s): T. Lebair

EN.580.471. Principles of Design of BME Instrumentation. 4.00 Credits.
This core design course will cover lectures and hands-on labs. The material covered will include fundamentals of biomedical sensors and instrumentation, FDA regulations, designing with electronics, biopotentials and ECG amplifier design, recording from heart, muscle, brain, etc., diagnostic and therapeutic devices (including pacemakers and defibrillators), applications in prosthetics and rehabilitation, and safety. The course includes extensive laboratory work involving circuits, electronics, sensor design and interface, and building complete biomedical instrumentation. The students will also carry out design challenge projects, individually or in teams (examples include “smart cane for blind,” “computer interface for quadriplegic”). Students satisfying the design requirement must also register for EN.580.571. Lab Fee: $150. Recommended Course Background: EN.520.345
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): N. Thakor
Area: Engineering, Natural Sciences.

EN.580.472. Medical Imaging Systems. 3.00 Credits.
An introduction to the physics, instrumentation, and signal processing methods used in general radiography, X-ray computed tomography, ultrasound imaging, magnetic resonance imaging, and nuclear medicine. The primary focus is on the methods required to reconstruct images within each modality, with emphasis on the resolution, contrast, and signal-to-noise ratio of the resulting images. Cross-listed with Neuroscience and Electrical and Computer Engineering (EN.520.432).
Prerequisites: EN.580.222 OR EN.520.214
Instructor(s): J. Prince
Area: Engineering.

EN.600.120. Intermediate Programming. 4.00 Credits.
This course teaches intermediate to advanced programming, using C and C++. (Prior knowledge of these languages is not expected.) We will cover low-level programming techniques, as well as object-oriented class design, and the use of class libraries. Specific topics include pointers, dynamic memory allocation, polymorphism, overloading, inheritance, templates, collections, exceptions, and others as time permits. Students are expected to learn syntax and some language specific features independently. Course work involves significant programming projects in both languages. Recommended Course Background: AP CS, EN.600.107, EN.600.111, EN.600.112 or equivalent.
Instructor(s): M. Kazhdan; S. More
Area: Engineering.

EN.600.226. Data Structures. 4.00 Credits.
This course covers the design and implementation of data structures including arrays, stacks, queues, linked lists, binary trees, heaps, balanced trees (e.g. 2-3 trees, AVL-trees) and graphs. Other topics include sorting, hashing, memory allocation, and garbage collection. Course work involves both written homework and Java programming assignments.
Prerequisites: EN.600.107 or EN.600.120 or permission of instructor.
Instructor(s): J. Selinski; P. Froehlich; S. More
Area: Engineering, Quantitative and Mathematical Sciences.

EN.600.435. Artificial Intelligence. 3.00 Credits.
The course situates the study of Artificial Intelligence (AI) first in the broader context of Philosophy of Mind and Cognitive Psychology and then treats in-depth methods for automated reasoning, automatic problem solvers and planners, knowledge representation mechanisms, game playing, machine learning, and statistical pattern recognition. The class is recommended for all scientists and engineers with a genuine curiosity about the fundamental obstacles to getting machines to perform tasks such as deduction, learning, and planning and navigation. Strong programming skills and a good grasp of the English language are expected; students will be asked to complete both programming assignments and writing assignments. The course will include a brief introduction to scientific writing and experimental design, including assignments to apply these concepts. [Applications] Prereq: 600.226; Recommended: linear algebra, prob/stat. Students can only receive credit for 600.335 or 600.435, not both.
Prerequisites: Have not taken EN.600.335;EN.600.226
Instructor(s): P. Koehn
Area: Engineering.

EN.600.436. Algorithms for Sensor-Based Robotics. 3.00 Credits.
This course surveys the development of robotic systems for navigating in an environment from an algorithmic perspective. It will cover basic kinematics, configuration space concepts, motion planning, and localization and mapping. It will describe these concepts in the context of the ROS software system, and will present examples relevant to mobile platforms, manipulation, robotics surgery, and human-machine systems.
Prerequisites: EN.600.226 and Linear Algebra and Probability; Students may receive credit for only one of EN.600.336, EN.600.436 and EN.600.636.
Prerequisites: EN.600.226 and Linear Algebra and Probability; Students may receive credit for only one of EN.600.336, EN.600.436 and EN.600.636.
Instructor(s): S. Leonard
Area: Engineering.

EN.600.445. Computer Integrated Surgery I. 4.00 Credits.
This course focuses on computer-based techniques, systems, and applications exploiting quantitative information from medical images and sensors to assist clinicians in all phases of treatment from diagnosis to preoperative planning, execution, and follow-up. It emphasizes the relationship between problem definition, computer-based technology, and clinical application and includes a number of guest lectures given by surgeons and other experts on requirements and opportunities in particular clinical areas. Required Course Background: AS.110.201 or permission of instructor. Recommended Course Background: EN.600.120, EN.600.457, EN.600.461, image processing.
Prerequisites: Students may receive credit for 600.445 or 600.645, but not both; EN.600.226
Instructor(s): R. Taylor
Area: Engineering.
EN.600.446. Computer Integrated Surgery II. 3.00 Credits.
This weekly lecture/seminar course addresses similar material to EN.600.445, but covers selected topics in greater depth. In addition to material covered in lectures/seminars by the instructor and other faculty, students are expected to read and provide critical analysis/presentations of selected papers in recitation sessions. Students taking this course are required to undertake and report on a significant term project under the supervision of the instructor and clinical end users. Typically, this project is an extension of the term project from EN.600.445, although it does not have to be. Grades are based both on the project and on classroom recitations. Students wishing to attend the weekly lectures as a 1-credit seminar should sign up for EN.600.452. Students may also take this course as EN.600.646. The only difference between EN.600.446 and EN.600.646 is the level of project undertaken. Typically, EN.600.646 projects require a greater degree of mathematical, image processing, or modeling background. Prospective students should consult with the instructor as to which course number is appropriate. [Applications] Prerequisites: You may receive credit for EN.600.446 or EN.600.646, but not both.
Prerequisites: Prereq for EN.600.446: EN.600.445 or EN.600.645 or permission
Instructor(s): R. Taylor
Area: Engineering.

EN.600.461. Computer Vision. 3.00 Credits.
This course gives an overview of fundamental methods in computer vision from a computational perspective. Methods studied include: camera systems and their modelling, computation of 3-D geometry from binocular stereo, motion, and photometric stereo; and object recognition. Edge detection and color perception are covered as well. Elements of machine vision and biological vision are also included. Students may receive credit for at most one of EN.600.361 or EN.600.461 or EN.600.661. [Applications] Prerequisites (soft): Intro programming, linear algebra, and prob/stat.
Prerequisites: If you have completed EN.600.361 OR EN.600.661 you cannot enroll in EN.600.461.
Instructor(s): A. Reiter
Area: Engineering, Quantitative and Mathematical Sciences.

EN.600.475. Machine Learning. 3.00 Credits.
Machine learning is a subfield of computer science and artificial intelligence, whose goal is to develop computational systems, methods, and algorithms that can learn from data to improve their performance. This course introduces the foundational concepts of modern Machine Learning, including core principles, popular algorithms and modeling platforms. This will include both supervised learning, which includes popular algorithms like SVMs, logistic regression, boosting and deep learning, as well as unsupervised learning frameworks, which include Expectation Maximization and graphical models. Homework assignments include a heavy programming component, requiring students to implement several machine learning algorithms in a common learning framework. Additionally, analytical homework questions will explore various machine learning concepts, building on the pre-requisites that include probability, linear algebra, multi-variate calculus and basic optimization. Students in the course will develop a learning system for a final project. [Analysis or Applications]
Instructor(s): R. Arora
Area: Engineering.

EN.600.636. Algorithms for Sensor-Based Robotics. 3.00 Credits.
Graduate level version of EN.600.436 (see description above). Formerly EN.600.436. Students may receive credit for only one of EN.600.336, EN.600.436 or EN.600.636. Recommended Course Background: EN.600.226, AS.110.106, and Prob/Stat.
Prerequisites: Students may receive credit for only one of EN.600.336, EN.600.436 and EN.600.636.
Instructor(s): S. Leonard.

EN.600.646. Computer Integrated Surgery II. 3.00 Credits.
Students may receive credit for EN.600.446 or EN.600.646, but not both. Advanced version of EN.600.446. [Applications]
Prerequisites: EN.600.445 OR EN.600.645 OR PERMISSION OF INSTRUCTOR
Instructor(s): R. Taylor.

EN.600.660. FFT in Graphics & Vision. 3.00 Credits.
In this course, we will study the Fourier Transform from the perspective of representation theory. We will begin by considering the standard transform defined by the commutative group of rotations in 2D and translations in two- and three-dimensions, and will proceed to the Fourier Transform of the non-commutative group of 3D rotations. Subjects covered will include correlation of images, shape matching, computation of invariances, and symmetry detection. Recommended Course Background: AS.110.201 and comfort with mathematical derivations.
Instructor(s): M. Kazhdan.

EN.600.661. Computer Vision. 3.00 Credits.
Graduate version of EN.600.461. Students may receive credit for at most one of EN.600.361 or EN.600.461 or EN.600.661. [Applications]
Prerequisites (soft): Intro programming, linear algebra, and prob/stat.
Prerequisites: If you have completed EN.600.361 OR EN.600.461 you cannot enroll for EN.600.661.
Instructor(s): A. Reiter.

Faculty
Professors
Gregory Chirikjian

Ralph Etienne-Cummings
Professor (Electrical and Computer Engineering): Neuromorphic Computational Sensing and Integrated Microsystems; Courses: CAD Design of Digital VLSI Systems, Electronics Design Laboratory, Seminar on Large Scale Analog Computation.

Gregory Hager
Professor (Computer Science): Computer Vision, Human-Machine Systems, Medical Applications; Courses: Data Structures.

Jin Kang
Professor (Electrical and Computer Engineering): Biophotonics, Optical sensing and Imaging, Fiber Optic Devices and Systems; Courses: Advanced Topics in Optical Medical Imaging, Bio-Photonics Laboratory, Light, Image and Vision.

Nassir Navab
Multi-School Programs of Study

At Johns Hopkins University, some programs are offered through a partnership between two or more of the University's nine schools.

Space Science and Engineering

This minor is open to all students in the Whiting School of Engineering and the Krieger School of Arts and Sciences who have the prerequisites for the required courses. The objective of the Minor is to prepare students for a career in Space Science and Space Engineering, either directly as an entering professional in industry, government laboratories and other organizations or as a student in a graduate program. The educational goal of the Minor is to enable students to:

- Apply their understanding and mastery of the fundamental scientific, engineering, and mathematical principles obtained through their major subject of study to space science and space engineering.
- Develop an understanding and capacity for interdisciplinary approaches to technical activities.
- Improve their ability to work in multidisciplinary teams, which are typical in space and other complex technical activities, through interdisciplinary education and internship(s) or equivalent experience(s).

Minor in Space Science and Engineering

Requirements for the Minor:

- A Proposal and Course Plan, which must be approved by your adviser (hereafter referred to as the “Adviser”). The proposal must discuss a theme that unites the individual elements of the program (courses and internship(s)) into an intellectual whole.
Five courses in Science and Engineering. One course is specified (AS.171.321 Introduction to Space, Science, and Technology) and the remaining four are chosen through your Proposal and Course Plan, which must be approved prior to taking the courses by the Adviser. All courses must be taken for a grade rather than satisfactory/unsatisfactory. A grade of C- or better is required. Courses that are named as requirements for the student’s major may not be used. However, courses that are not named, but satisfy an elective requirement for the major, may be used.

An internship or equivalent experience in the field of space science and engineering is required. This must have prior approval from the Adviser.

A brief report on the internship or equivalent experience to the Adviser.

For a detailed explanation of the minor and its requirements, including sample programs of study, please visit the Student Handbook for the Minor in Space Science and Engineering (http://krieger.jhu.edu/pa-intranet/academic-resources/student-handbook-for-the-minor-in-space-science-and-engineering).

Business

The Business minor was approved by the Homewood Academic Council during the summer of 2016 and is still under development. The minor is a combined effort between the Whiting School Center for Leadership Education, Krieger's Economics Department and the Carey Business School. The target for students to able to declare the minor is Spring semester, 2017. Stay up to date by visiting the Center for Leadership Education's website (http://engineering.jhu.edu/cle).

The Business Minor is a joint program offered by The Whiting School of Engineering, through the Center for Leadership and Education, the Carey Business School and the Krieger School of Arts and Sciences, through the Center of Financial Economics, to Johns Hopkins undergraduates in the KSAS, WSE and Peabody Institute. The minor offers Johns Hopkins Arts & Sciences, Engineering, and Peabody students a focused, quantitative minor that will prepare them more effectively for careers in small companies, major corporations, and consultancies as well as acceptance into graduate programs in accountancy and business.

The primary objective for the minor is to help students position themselves as leaders among their peers in the private sector, government, the non-profit sector, and the world of social enterprises. At the conclusion of their program, successful students will be able to:

• Five courses in Science and Engineering. One course is specified (AS.171.321 Introduction to Space, Science, and Technology) and the remaining four are chosen through your Proposal and Course Plan, which must be approved prior to taking the courses by the Adviser. All courses must be taken for a grade rather than satisfactory/unsatisfactory. A grade of C- or better is required. Courses that are named as requirements for the student’s major may not be used. However, courses that are not named, but satisfy an elective requirement for the major, may be used.

• An internship or equivalent experience in the field of space science and engineering is required. This must have prior approval from the Adviser.

• A brief report on the internship or equivalent experience to the Adviser.

For a detailed explanation of the minor and its requirements, including sample programs of study, please visit the Student Handbook for the Minor in Space Science and Engineering (http://krieger.jhu.edu/pa-intranet/academic-resources/student-handbook-for-the-minor-in-space-science-and-engineering).

The joint program plans to achieve its goal of training future leaders by offering an instructional program that combines critical analysis and theoretical grounding in a broad set of core and required courses, some depth through a relevant elective chosen from a list of courses in specialized topics, and hands-on experience through internships, community-based learning, and experiential programs.

See the Undergraduate tab above for specific requirements for the minor.

As the Business Minor is under construction, courses are still being developed. Courses offered by the Center for Leadership Education and Economics Department are courses that have been previously offered in other programs; courses from Carey Business School will be decided upon at a later date. The target date for students to declare is Spring 2017 but could be later. Stay up to date by visiting the Center for Leadership Education's website (http://e-catalog.jhu.edu/departments-program-requirements-and-courses/multi-school-programs/business/engineering.jhu.edu/cle).

To receive the Business minor, students must complete:

• Two foundational courses
• Five core courses
• One elective

Foundational Courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN.661.380</td>
<td>Business Analytics (*Statistics)</td>
<td>3.00</td>
</tr>
<tr>
<td>EN.660.105</td>
<td>Introduction to Business</td>
<td>3-4</td>
</tr>
<tr>
<td>or AS.180.102</td>
<td>Elements of Microeconomics</td>
<td></td>
</tr>
</tbody>
</table>

*Students are encouraged to fulfill the Business Analytics requirement but will be allowed to substitute statistics course(s) by choosing one of the two options listed below. Students can substitute AP Statistics for Stat I but not Stat II

**Students cannot substitute AP Economics for Microeconomics

Option 1:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN.550.111</td>
<td>Statistical Analysis I</td>
<td>4-4.5</td>
</tr>
<tr>
<td>or AS.230.205</td>
<td>Introduction to Social Statistics</td>
<td></td>
</tr>
<tr>
<td>or AS.280.345</td>
<td>Public Health Biostatistics</td>
<td></td>
</tr>
<tr>
<td>or EN.550.113</td>
<td>Statistics Through Case Study</td>
<td></td>
</tr>
</tbody>
</table>

Option 2:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN.540.305</td>
<td>Modeling and Statistical Analysis of Data for Chemical and Biomolecular Engineers</td>
<td>3-4</td>
</tr>
<tr>
<td>or EN.550.211</td>
<td>Probability and Statistics for the Life Sciences</td>
<td></td>
</tr>
<tr>
<td>or EN.550.310</td>
<td>Probability &amp; Statistics for the Physical and Information Sciences &amp; Engineering</td>
<td></td>
</tr>
<tr>
<td>or EN.550.430</td>
<td>Introduction to Statistics</td>
<td></td>
</tr>
<tr>
<td>or EN.560.348</td>
<td>Probability &amp; Statistics for Engineers</td>
<td></td>
</tr>
</tbody>
</table>

Required Core Courses:

<table>
<thead>
<tr>
<th>Course</th>
<th>Title</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>EN.660.250</td>
<td>Principles of Marketing</td>
<td>3.00</td>
</tr>
<tr>
<td>EN.600.XXX</td>
<td>Operations Management</td>
<td></td>
</tr>
<tr>
<td>EN.660.XXX</td>
<td>Principles of Finance</td>
<td></td>
</tr>
<tr>
<td>EN.660.340</td>
<td>Principles of Management</td>
<td>3.00</td>
</tr>
<tr>
<td>EN.660.203</td>
<td>Financial Accounting</td>
<td>3.00</td>
</tr>
</tbody>
</table>
Electives:
As the Business Minor is under construction, electives are still being developed. Electives offered by the Center for Leadership Education and Economics Department are courses that have been previously offered in other programs; courses from Carey Business School will be decided upon at a later date. Stay up to date by visiting the Center for Leadership Education’s website (http://e-catalog.jhu.edu/departments-program-requirements-and-courses/multi-school-programs/business/engineering.jhu.edu/cle).

Course and Grade Rules and Limitations
The Business minor requires a minimum of 24 credits.
A maximum of 6 credits of courses taken from outside WSE and KSAS (including transfer course & study abroad) may be applied to the Business minor.
A maximum of 3 credits may be taken on an S/U basis, after freshman Fall semester.
All courses applied to the Business minor must be completed with a grade of C- or above.
FACULTY LISTINGS

Select the school faculty tab to view a listing of Johns Hopkins University faculty on the Homewood campus in the Schools of Arts and Sciences and Engineering.

For the most current listing of faculty, please visit individual department pages.

In listing the members of the teaching staff of the School of Arts and Sciences, the date in parentheses indicates the year of original appointment. Joint appointments or directorships are listed last.

Assistant Professor, Mathematics  
B.A. 2005, University of Michigan  
Ph.D. 2009 Massachusetts Institute of Technology  
Trent Bertrand (2012)  
Adjunct Professor, Economics  
Sara S. Berry (2012)  
Academy Professor  
B.A. 1961, Radcliffe  
M.A. 1965, University of Michigan, Ph.D. 1967  
Richard Bett (1991)  
Professor, Philosophy, Classics  
B.A. 1980, Oxford  
Ph.D. 1986, University of California  
Luciana Bianchi (2006)  
Research Professor, Physics and Astronomy  
Wayne Biddle (1999)  
Visiting Associate Professor, The Writing Seminars  
William Blair (12/1993)  
Research Professor, Physics and Astronomy  
Barry Blumenfeld (1981)  
Professor, Physics and Astronomy  
M.Phil. 1973, Ph.D. 1974  
Hilary Bok (2000)  
Associate Professor, Philosophy  
Henry R. Luce Professor of Bioethics and Moral and Political Theory  
John Boland (2005)
Research Professor, Earth and Planetary Sciences
Doreen Bolger (3/1998)
Adjunct Professor, History of Art
Alex Bortvin (2004)
Adjunct Assistant Professor, Biology
Kit H. Bowen (1980)
Professor, Chemistry
E. Emmet Reid Professor of Chemistry
B.S. 1970, University of Mississippi
Ph.D. 1978, Harvard
Gregory Bowman (2005)
Assistant Professor, Biophysics; Biology
B.S. 1994, University of North Carolina
Ph.D. 2001, Princeton University
Arthur Bragg (2010)
Assistant Professor, Chemistry
B.A. 1999, Albion College
Ph.D. 2004, University of California, Berkeley
Ludwig Brand (2012)
Academy Professor
A.B. 1955, Harvard; Ph.D. 1960, Indiana University
Philip Brendese (2013)
Assistant Professor, Political Science
B.A. 1998, Siena College
M.A. 2000, University of Albany
Ph.D. 2005, Duke University
Collin Broholm (1990)
Professor, Physics and Astronomy
Gerhard H. Dieke Professor of Physics and Astronomy
M.Sc. 1985, University of Copenhagen, Ph.D. 1986
Jeffrey P. Brooks (1990)
Professor, History
B.A. 1965, Antioch; Ph.D. 1972, Stanford
Donald D. Brown (1969)
Adjunct Professor, Biology; Carnegie Institution
Rebecca Brown (2008)
Associate Professor, History of Art
B.A. 1993, Pomona College; M.A. 1995, University of Minnesota; Ph.D. 1999
Betsy Bryan (1986)
Professor, Near Eastern Studies; History of Art
Alexander Badawy Professor of Egyptian Art and Archaeology
B.A. 1971, Mary Washington College
M.A. 1975, Yale, M.Phil. 1976, Ph.D. 1980
Tamas Budavari (2011)
Associate Research Professor, Physics and Astronomy
Julia Burdick-Will (2014)
Assistant Professor, Sociology
Angus Burgin (2010)
Assistant Professor, History
B.A. 2002; Ph.D. 2009, Cambridge University
Ryan Calder (2014)
Assistant Professor, Sociology
B.A. 2001, Harvard University; M.A 2008, University of California, Berkeley,
Ph.D. 2014
Sharon Cameron (1978)
Professor, English
William R. Kenan Jr. Professor of English
B.A. 1968, Bennington College
M.A. 1969, Brandeis, Ph.D. 1973
Stephen Campbell (2002)
Professor and Chair, History of Art
Henry M. and Elizabeth P. Wiesenfeld Professor
B.A. 1985, Trinity College
M.A. 1988, University of North Carolina
Ph.D. 1993, Johns Hopkins University
Marc Caplan (2006)
Assistant Professor, German and Romance Languages and Literatures
Zelda and Myer Tandetnik Professor in Yiddish Language, Literature and
Culture
M.A. 1997 New York University, Ph.D. 2003
Adjunct Assistant Professor, Physics and Astronomy
Christopher Carroll (1995)
Professor, Economics
Victoria Cass (2010)
Visiting Associate Professor, Humanities Center
Sara Castro-Klarén (1/1987)
Professor, German and Romance Languages and Literatures
B.A. 1962, UCLA, M.A. 1965, Ph.D. 1968
Thomas Cebula (2008)
Visiting Professor, Biology
Christopher Celenza (2005)
Professor and Chair, German and Romance Languages and
Literature's,Classics; History; Humanities Center
Charles Homer Haskins Professor of History
B.A. 1998, SUNY; M.A. 1989
Ph.D. 1995, Duke University
D.Phil 2001, University of Hamburg
Emma Cervone (2007)
Assistant Professor, Anthropology
Associate Director Program in Latin American Studies
A.B. 1987 Instituto Universitario Orientale
M.A. 1990 University of St. Andrews, Ph.D. 1997
Samuel Chambers (2008)
Associate Professor, Political Science
B.A. 1993 Pomona College
M.A. 1994 Vanderbilt University
Ph.D. 1998 University of Minnesota
Xin Chen (2008)
Assistant Professor, Biology
B.S. 1996 University of Science and Technology, Hefei, China
Ph.D. 2002 University of Texas

Andrew J. Cherlin (1976)
Professor and Chair, Sociology; Institute for Policy Studies
Public Policy Program
Benjamin H. Griswold Ill Professor of Public Policy
B.S. 1970, Yale; M.S. 1974, UCLA, Ph.D. 1976

Chia-Ling Chien (1976)
Professor, Physics and Astronomy
Jacob L. Hain Professor in Arts and Sciences
B.S. 1965, Tunghai University, M.S., 1968
Ph.D. 1973, Carnegie Mellon

Chenghao Chu (2008)
J.J. Sylvester Assistant Professor, Mathematics
M.S. 2003, B.S. 2000, University of Science and Technology of China
Ph.D. 2008, Northwestern University

Associate Professor, Political Science, Director of East Asian Studies and Co-Director of Racism, Immigration and Citizenship Program
B.A. 1991, University of California; M.A. 1994, University of Washington;
Ph.D. 2003, Northwestern University

Orna Cohen-Fix (2012)
Adjunct Professor, Biology

James Coleman (2010)
Visiting Assistant Professor, German and Romance Languages and Literatures

Richard A. Cone (1969)
Professor, Biophysics; Biology

Nathan Connolly (2008)
Assistant Professor, History; Co-Director of the Racism, Immigration and Citizenship Program
B.A. 1999 Thomas University
M.A. 2000, University of Chicago
M.A. 2004, University of Michigan, Ph.D. 2008

William E. Connolly (1985)
Professor, Political Science
Krieger-Eisenhower Professor
B.A. 1960, University of Michigan, Flint
M.A. 1962, University of Michigan, Ann Arbor
Ph.D. 1965

Caterina Consani (2005)
Professor, Mathematics
B.S. 1986, University of Genoa
Ph.D. 1993, Universities of Genoa-Turin
Ph.D. 1996, University of Chicago

Joseph Cooper (2012)
Academy Professor

Victor Corces (2009)
Adjunct Professor, Biology

Susan Courtney (1/1999)

Professor, Psychological and Brain Sciences
B.A. 1988, Williams, M.S. 1990
Ph.D. 1993, University of Pennsylvania

Matthew Crenson (1969)
Professor, part-time, Political Science
B.A. 1963, Johns Hopkins University
M.A. 1965, University of Chicago, Ph.D. 1969

Jennifer Culbert (2001)
Associate Professor, Political Science
B.S. 1986, Georgetown
M.S. 1987, London School of Economics and Political Science

Kyle Cunningham (8/1994)
Professor, Biology
B.A. 1984, Johns Hopkins University
Ph.D. 1989, UCLA

Annalisa Czeczulin, M.A.
Adjunct Assistant Professor, Center for Language Education-Russian

Paul Dagdigian (1974)
Professor, Chemistry

Arthur D. Chambers Professor of Chemistry
B.A. 1967, Haverford
Ph.D. 1972, University of Chicago

Andrew Daniel (2007)
Associate Professor, English
A.B. 1993, University of California, Berkeley
A.B. 1995, Oxford University
Ph.D. 2006, University of California, Berkeley

Ronald Daniels (3/2009)
Professor, Political Science
President, Johns Hopkins University

Veena Das (2000)
Professor, Anthropology, Humanities Center
Krieger-Eisenhower Professor
B.A. 1964, University of Delhi, M.A. 1966, Ph.D. 1970

Steven R. David (1981)
Professor, Political Science
Vice Dean for Undergraduate Education-8/2010, Zanvyl Krieger School of Arts and Sciences
B.A. 1972, Union College; M.A. 1975, Stanford

Carlos Del Castillo (2008)
Associate Research Professor, Earth and Planetary Sciences

Lisa DeLeonardis (2001)
Visiting Associate Professor, History of Art
Austen-Stokes Professor in the Art of the Ancient Americas

Paul Delnero (2008)
Assistant Professor, Near Eastern Studies
B.A. 1994, Purdue University
Ph.D. 2006, University of Pennsylvania

Stefanie DeLuca (2002)
Associate Professor, Sociology
B.A. 1997, University of Chicago
Ph.D. 2002, Northwestern
Daniel Deudney (1998)
Associate Professor, Political Science
Ph.D. 1989, Princeton
Hent de Vries (2003)
Professor, Humanities Center; Philosophy (2004)
Russ Family Professor of the Humanities
M.A. 1983, University of Leiden, Ph.D. 1989
Jocelyne DiRuggiero (2008)
Associate Research Professor, Biology, Earth and Planetary Sciences (11/2011)
Toby Ditz (1982)
Professor, History
B.A. 1972, Northwestern; M.A. 1975, Columbia
M.Phil. 1976, Ph.D. 1982
Thomas Dolby (2014)
Homewood Professor of the Arts and Artistic Director of the Program in Sound on Film, Film and Media Studies
Gabor Domokos (1968)
Professor, part-time, Physics and Astronomy
M.A. 1956, Eotvos Lorand University (Budapest)
Doctor of Physical and Mathematical Sciences 1963, Joint Institute of Nuclear Research, Dubna, Russia
David Draper (1980)
Professor, Chemistry, Biophysics; Biology
Vernon K. Krieble Professor of Chemistry
B.A. 1971, UC Berkeley
Ph.D. 1977, University of Oregon
Stephen Drigotas, Ph.D.
Teaching Professor (2010), Psychological and Brain Sciences
Gregory Duffee (2008)
Professor, Economics
Carl Christ Professor of Economics
B.A. 1983, Macalester College
Ph.D. 1990, Harvard University
Michael Edidin (1966)
Professor, Biology
B.S. 1960, University of Chicago
Ph.D. 1963, University of London
Kathryn Edin (2014)
Bloomberg Distinguished Professor, Sociology and Bloomberg School of Public Health
Ph.D. 1991
Howard Egeth (1965)
Professor, Psychological and Brain Sciences, Cognitive Science
A.B. 1961, Rutgers
Ph.D. 1966, University of Michigan
William Egginton (2006)
Professor and Chair, German and Romance Languages and Literatures
Andrew W. Mellon Professor of the Humanities
A.B. 1991, Dartmouth University
M.A. 1994, University of Michigan
A.M. 1996, Stanford University, Ph.D. 1999
Doris Entwisle (1/2003)
Research Professor, Sociology
Joyce Epstein (1975)
Research Professor, Sociology
Hülya Eraslan (2008)
Associate Professor, Economics
B.S. 1991, Bilkent University
M.A. 1994, State University of New York
Ph.D. 2001, University of Minnesota
D. Howard Fairbrother (1997)
Professor, Chemistry
B.A. 1989, Brasenose College, Oxford
Ph.D. 1994, Northwestern
S. Michael Fall (1/2002)
Adjunct Professor, Physics and Astronomy
Christopher Falzone (2007)
Teaching Professor, Chemistry; Biophysics
Chen-Ming Fan (1997)
Adjunct Professor, Biology
Steven Farber (2004)
Adjunct Assistant Professor, Biology
Jon Faust (1/2006)
Professor, Economics
Louis J. Maccini Professor
B.S. 1981, University of Iowa
M. Phil. 1985, Oxford University
Ph.D. 1988, University of California, Berkeley
Lisa Feigenson (2003)
Associate Professor, Psychological and Brain Sciences; Cognitive Science
B.A. 1997, Cornell University
Ph.D. 2003, New York University
Paul D. Feldman (1967)
Research Professor, Physics and Astronomy
A.B. 1960, Columbia College
Ph.D. 1964, Columbia University
Henry Ferguson (2002)
Adjunct Professor, Physics and Astronomy
Research Professor, Earth and Planetary Sciences
B.S. 1971, Stanford, M.S. 1971
Ph.D. 1975, Harvard
Ann Finkbeiner (1999)
Visiting Associate Professor, part-time, The Writing Seminars
Michael Finkenthal (2003)
Research Professor, Physics and Astronomy
Karen Fleming (2000)
Johns Hopkins University - 2016-2017

Associate Professor, Biophysics; Biology
B.A. 1987, University of Notre Dame
Ph.D. 1993, Georgetown

Jonathan Flombaum (2008)
Assistant Professor, Psychological and Brain Sciences
A.B. 2002, Harvard
M.S. 2004, M. Phil. 2005
Ph.D. 2008, Yale University

Caroline Fohlin (2004)
Research Professor, Economics

Holland Ford (1988)
Research Professor, Physics and Astronomy
B.S. 1962, University of Oklahoma
Ph.D. 1970, University of Wisconsin

Pier Massimo Forni (1985)
Professor, German and Romance Languages and Literatures
B.A. 1974, University of Pavia
M.A. 1977, Catholic University, Milan
Ph.D. 1981, UCLA

Eckart Förster (2001)
Professor, Philosophy
Humanities Center, German and Romance Languages and Literatures
B.Phil 1979, Oxford, D.Phil. 1982

Caroline Fowler (2014)
Visiting Assistant Professor, History of Art
B.A. 2005, New York University; Ph.D. 2012, Princeton University
Ernesto Freire (1986)
Professor, Biology, Biophysics

Henry A. Walters Professor in Biology
B.S. 1972, University Pervana Cayetano Heredia
Medical School, M.S. 1973
Ph.D. 1977, University of Virginia

Michael Fried (1975)
Professor, Humanities Center; History of Art
James R. Herbert Boone Professor of Humanities
B.A. 1959, Princeton; Ph.D. 1969, Harvard

Yulia Frumer (2012)
Assistant Professor, History of Science and Technology
Bo Jung and Soon Young Kim Professor of East Asian Science and Technology
B.A. 2002, Tel Aviv University
M.A. 2004; Ph.D. 2012, Princeton

Francois Furstenberg (2014)
Associate Professor, History
B.A. 1994 Columbia University; Ph.D. 2003 Johns Hopkins University
Louis P. Galambos (1971)
Professor, History; Editor of the Eisenhower Papers
B.A. 1955, Indiana University
M.A. 1957, Yale, Ph.D. 1960

Joseph G. Gall (1983)
Adjunct Professor, Biology; Carnegie Institution

Michela Gallagher (1996)
Professor, Psychological and Brain Sciences

Krieger-Eisenhower Professor
B.A. 1969, Colgate
Ph.D. 1977, University of Vermont

Bertrand Garcia-Moreno E. (1992)
Professor and Chair of Biophysics; Biology
A.B. 1981, Bowdoin; Ph.D. 1986, Indiana University

Mark Gersovitz (1994)
Professor, Economics
B.A. 1971, McGill
M.A. 1972, Yale, M.Phil. 1973, Ph.D. 1975

Riccardo Giacconi (1982)
University Professor, Physics and Astronomy

Benjamin Ginsberg (1992)
Professor, Political Science

David H. Bernstein Professor of Political Science
B.A. 1968, University of Chicago, M.A. 1970
Ph.D. 1973

Oliver Gjoneski (2011)
J. J. Sylvester Assistant Professor, Mathematics

Anand Gnanadesikan (2011)
Associate Professor, Earth and Planetary Sciences
A.B. 1988, Princeton University
Ph.D. 1994, Massachusetts Institute of Technology

Patrick Godon (2010)
Visiting Assistant Research Professor, Physics and Astronomy

David Goldberg (1998)
Professor, Chemistry
B.A. 1989, Williams
Ph.D. 1995, M.I.T

Eduardo González (1982)
Professor, German and Romance Languages and Literatures
B.A. 1965, University of South Florida, M.A. 1967
Ph.D. 1975, Indiana University

Linda Gorman, Ph.D.
Teaching Professor (2010), Psychological and Brain Sciences

Marc Greenberg (2002)
Professor, Chemistry
B.S. 1982, New York University; B.E. 1982
The Cooper Union School of Engineering
Ph.D. 1988, Yale University

Carol Greider (2014)
Bloomberg Distinguished Professor, Biology
B.A. 1983, University of California, Santa Barbara; PhD. 1987, University of California, Berkeley

Meredith Greif (2014)
Assistant Professor, Sociology

Andrei Gritsan (2005)
Associate Professor, Physics and Astronomy
B.S. 1994, Novosibirsk State University, Russia
M.S. 1996
Ph.D. 2000, University of Colorado
Steven Gross (2006)
Associate Professor, Philosophy
Cognitive Science; PBS-(2012)
A.B. 1987, Harvard University, Ph.D. 1998

Siba Grovogui (1995)
Professor, Political Science
M.A. 1984, University of Wisconsin, Ph.D. 1988

Jane Guyer
Professor, Anthropology; History
B.A. 1965, London School of Economics and Political Science
Ph.D. 1972, University of Rochester

Niloofar Haeri (1990)
Professor and Chair, Anthropology

Thomas Haine (1999)
Professor and Chair, Earth and Planetary Sciences
Morton K. Blaustein Professor and Chair of Earth and Planetary Sciences
B.A. 1988, St. Catharines College, University of Cambridge
Ph.D. 1992, University of Southampton

Justin Halberda (2003)
Associate Professor, Psychological and Brain Sciences, Cognitive Science
College of Charleston
Ph.D. 2001, New York University

Bruce Hall (2012)
Assistant Professor, History
B.A. 1994, University of Toronto
M.A. 1995, Queens University-Canada
Ph.D. 2005, University of Illinois

Marnie Halpem (1994)
Adjunct Professor, Biology

Bruce Hamilton (1973)
Professor part-time, Economics
B.A. 1968 Grinnell College
Ph.D. 1972, Princeton University

Clara Han (2007)
Assistant Professor, Anthropology
B.A. 1997, Princeton University
M.D. 2007, Harvard University, Ph.D. 2007

Michael Hanchard (2006)
Professor, Political Science
Society of Black Alumni Presidential Professor
A.B. 1981, Tufts University
M.A. 1985, New School for Social Research
Ph.D. 1991, Princeton University

Lingxin Hao (1996)
Professor, Sociology
B.A. 1982, South China Teachers University
M.A. 1985, Zhongshan University
Ph.D. 1990, University of Chicago

Michel Harrower (2010)
Assistant Professor, Near Eastern Studies
Earth and Planetary Sciences-(2011)
B.A. 1998, Simon Frazier University
M.A. 2001; Ph.D. 2000, Ohio State University

Samer Hattar (2004)
Associate Professor, Biology
B.S. 1991, Yarmouk University
M.S. 1993, American University of Beirut
Ph.D. 2000, University of Houston

Michael Hauser (1/1997)
Adjunct Professor, Physics and Astronomy

Timothy Heckman (1/1989)
Professor, Physics and Astronomy

A. Hermann Pfund Professor
B.A. 1973, Harvard
Ph.D. 1978, University of Washington

Edward M. Hedgecock (1988)
Professor, Biology
B.S. 1974, California Institute of Technology
Ph.D. 1976, UC Santa Cruz

Richard C. Henry (1968)
Academy Professor (2012)
Research Professor, Physics and Astronomy
B.Sc. 1961, University of Toronto, M.A. 1962
Ph.D. 1967, Princeton

Jared Hickman (2008)
Assistant Professor, English
B.A. 2001, Bowdoin College
Ph.D. 2008, Harvard University

Vincent Hilser (2010)
Professor and Chair, Biology; Biophysics
B.S. 1987, St. Johns University
M.S. 1991, Manhattan College
Ph.D. 1995, Johns Hopkins University

Linda Hinnov (2004)
Research Professor, Earth and Planetary Sciences

Paul Hofer (1988)
Adjunct Assistant Professor, Psychological and Brain Sciences

Peter Holland (2001)
Professor, Psychological and Brain Sciences
Krieger-Eisenhower Professor
B.S. 1972, Michigan State University
Ph.D. 1976, Yale

Mark Holzer (2014)
Visiting Associate Professor, Earth and Planetary Sciences
B.Sc. 1984, Simon Fraser University; Ph.D. 1990

Sarah Horst (2014)
Assistant Professor, Earth and Planetary Sciences
B.S. 2004, California Institute of Technology; Ph.D. 2011, The University of Arizona
M. Andrew Hoyt (1/1988)
Johns Hopkins University - 2016-2017

Professor, Biology
B.S. 1977, State University of New York at Stony Brook
Ph.D. 1983, UC Berkeley

Yingyao Hu (2011)
Associate Professor, Economics
B.E. 1994, Tsinghua University, Beijing
M.A. 1997, Fudan University, Shanghai
M.S.E., M.A. 2001, Johns Hopkins University, Ph.D. 2003

Ru-Chih Huang (1965)
William David McElroy Research Professor, Biology
B.S. 1953, National Taiwan University
M.S. 1956, VPI; Ph.D. 1960, Ohio State University

Ho-Fung Hung (2011)
Associate Professor, Sociology
B.Soc.Sc. 1995, Chinese University of Hong Kong
M.Phil. 1998
M.A. 1999, State University of New York
Ph.D. 2004 Johns Hopkins University

Nicholas Ingolia (2010)
Adjunct Assistant Professor, Biology

John T. Irwin (1977)
Professor, The Writing Seminars; English
The Decker Professor in the Humanities
B.A. 1962, University of St. Thomas
M.A. 1970, Rice University, Ph.D. 1970

Jeanne-Marie Jackson (2014)
Assistant Professor, English
B.A. 2006, Drew University; M.Phil 2010, Yale University; M.A. 2010, Ph.D. 2012

Nicolas Jabko (2011)
Associate Professor, Political Science
M.A. 1994; Ph.D. 2001, University of California, Berkley

Richard Jasnow (1995)
Professor, Near Eastern Studies
B.A. 1977, University of Wisconsin
M.A. 1986, University of Chicago, Ph.D. 1988

Olivier Jeanne (2008)
Professor, Economics
1987, Graduate, Ecole Nationale des Ponts et Chaussée, Paris
Ms.C 1991, London School of Economics
Ph.D. 1996, Ecole des Hautes Etudes en Sciences Sociales

Peter Jelavich (2001)
Professor, History
B.A. 1975, Amherst
M.A. 1977, Princeton, Ph.D. 1982

Margaret Johnson (2012)
Assistant Professor, Biophysics
B.S. 2004, Columbia University
Ph.D. 2009, University of California-Berkeley

Michael Johnson (1994)
Professor, History
A.B. 1963, Knox College

M.A. 1967, Stanford, Ph.D. 1973
Mayumi (Yuki) Johnson (2010)
Teaching Professor and Director, Center for Language Education
B.A. 1979, Seijo University
M.A. 1989, University of Michigan
Ph.D. 1994, University of Minnesota

Richard Kagan (1972)
Professor, History; German and Romance Languages and Literatures
Arthur O. Lovejoy Professor of History
B.A. 1965, Columbia
Ph.D. 1968, Cambridge University

Patricia Kain (2004)
Teaching Professor, English
Director, Expository Writing Program (EWP)

Marc Kamilowska (2011)
Professor, Physics and Astronomy
B.A. 1987, Washington University;
Ph.D. 1991, University of Chicago

David Kaplan (2002)
Professor, Physics and Astronomy
B.A. 1991, University of California, M.S. 1996
Ph.D. 1999, University of Washington

Jared Kaplan (2012)
Assistant Professor, Physics and Astronomy
B.S. 2005, Stanford University;
Ph.D. 2009, Harvard University

Robert Kargon (1965)
Professor, History of Science and Technology
Willis K. Shepard Professor of History of Science
B.S. 1959, Duke; M.S. 1960, Yale
Ph.D. 1964, Cornell

Kenneth Karlin (1989)
Professor, Chemistry
Ira Remsen Professor of Chemistry
B.S. 1970, Stanford; Ph.D. 1975, Columbia University

Edi Kami (1981)
Professor, Economics
Scott and Barbara Black Professor of Economics
B.A. 1965, The Hebrew University, M.A. 1970
M.A. 1971, University of Chicago, Ph.D. 1971

David Katz (2006)
Visiting Assistant Professor, Near Eastern Studies

Richard S. Katz (1976)
Professor and Chair, Political Science
A.B. 1969, University of Michigan
M.Phil. 1971, Yale, Ph.D. 1974

Margaret Keck (1995)
Professor, Political Science; German and Romance Languages and Literatures

Professor, Economics
Abram G. Hutzler Professor of Political Economy
B.S. 1969, London School of Economics
M.Phil. 1972, Yale, Ph.D. 1973

Naveeda Khan (2006)
Assistant Professor, Anthropology
B.A. 1992, Vassar College
M.A. 1995, New School for Social Research
Ph.D. 2003, Columbia University

Dong-Won Kim (1999)
Visiting Professor, History of Science and Technology

Sharon Kingsland (1981)
Professor, History of Science and Technology
B.S. 1973, University of Toronto, M.A. 1977, Ph.D. 1981

Nitya Kitchloo (2010)
Professor, Mathematics
B.S. 1993, California Institute of Technology
Ph.D. 1998, Massachusetts Institute of Technology

Matthew Klam (2009)
Assistant Professor, The Writing Seminars
B.A. 1986, Hollins College
M.A. 1992, University of New Hampshire

James Knierim (2/2009)
Associate Research Professor, Psychological and Brain Sciences

Melvin L. Kohn (2012)
Academy Professor
B.A. 1948, Cornell, Ph.D. 1952

Douglas Kosland (1987)
Adjunct Professor, Biology, Carnegie Institution

Susan Kövesi-Domokos (1974)
Professor, part-time, Physics and Astronomy
Ph.D. 1963, Eotvos Lorand University (Budapest)

Sharon Krag (2005)
Adjunct Professor, Biology

Jonathan Kramnick (1/2013)
Professor, English
B.A. 1989, Cornell University
M.A. 1992, Johns Hopkins University; Ph.D. 1995

Elena Krasnokutskaya (2010)
Assistant Professor, Economics
B.A. 1993, Fudan University, B.Ed. 1990
M.A. 1995, University of Virginia
Ph.D. 2000, University of Pennsylvania

Andrea Krauss (2011)
Assistant Professor, German and Romance Languages and Literatures
Ph.D. 2001, Freie Universitat Berlin

Professor, Physics and Astronomy
S.B. 1971, M.I.T.
Ph.D. 1977, University of California

Reji Kuruvilla (2005)
Associate Professor, Biology
B.Sc. 1987, Calcutta University, B.Ed. 1990

Ph.D. 1998, University of Houston

Michael Kwass (2011)
Associate Professor, History
B.A. 1986, University of Pennsylvania
M.A. 1989, University of Michigan; Ph.D 1994

Christopher Lacey (2013)
Assistant Professor, History of Art
B.A. 1996, Baylor University; M.A. 1999 University of Toronto; Ph.D. 2009, University of California, Berkeley

Barbara Landau (1/2000)
Professor, Cognitive Science, Psychological and Brain Sciences
Dick and Lydia Todd Faculty Development Professor of Cognitive Science
Vice Provost for Faculty Affairs (2011)
B.A. 1970, University of Pennsylvania
Ed.M. 1977, Rutgers
Ph.D. 1982, University of Pennsylvania

Pier Larson (1998)
Professor, History
B.A. 1985, University of Minnesota
M.A. 1987, University of Wisconsin, Ph.D. 1992

Jacob Lauinger (2010)
Assistant Professor, Near Eastern Studies
B.A. 1999, Princeton University
M.A. 2001; Ph.D. 2007, University of Chicago

Thomas Leckta (6/1994)
Professor, Chemistry
Jean and Norman Scowe Professor of Chemistry
B.A. 1985, Oberlin; Ph.D. 1991, Cornell

Juliette Lecomte (2007)
Professor, Biophysics; Biology
B.S. 1977, Université de Liège, Belgium
M.S. 1979, Carnegie Mellon University, Ph.D. 1982

Yuan Chuan Lee (1965)
Research Professor, Biology McCollum—Pratt Institute
B.S. 1955, National Taiwan University, M.S. 1957
Ph.D. 1962, Iowa State University

Young-Sam Lee (2010)
Assistant Professor, Biology
B.S. 1995; M.S. 1997, Seoul National University, Korea
M.S. 2000, Indiana University
Ph.D. 2005, University of Chicago

Geraldine Legendre (1995)
Professor, Cognitive Science
B.A. 1971, Lycée d’Etat Marguerite de Navarre, Bourges, France
Ph.D. 1987, UC San Diego

Robert Leheny (2000)
Associate Professor, Physics and Astronomy
A.B. 1989, Princeton
Ph.D. 1997, University of Chicago

Brad Leithauser (2007)
Professor, The Writing Seminars
B.A. 1975 Harvard University
J.D. 1980, Harvard University
Lori Leonard (2007)
Adjunct Associate Professor, Anthropology

Stuart W. Leslie (1984)
Professor and Chair, History of Science and Technology History (2004)
B.A. 1974, Carleton
M.A. 1976, University of Delaware, Ph.D. 1980

Michael Levien (2013)
Assistant Professor, Sociology
B.A. 2001, Williams College
M.A. 2007, University of California-Berkeley
Ph.D. May 2013

Naomi Levin (2009)
Assistant Professor, Earth and Planetary Sciences
B.A. 2000, B.S. 2000, Stanford University
M.S. 2002, University of Arizona
Ph.D. 2008, University of Utah

Kevin Lewis (2014)
Assistant Professor, Earth and Planetary Sciences
B.S. 2003, Tufts University; Ph.D. 2009, California Institute of Technology
Theodore Lewis (2002)
Professor, Near Eastern Studies
Blum-Iwry Professor of Near Eastern Studies
B.A. 1978, University of Wisconsin, M.A. 1979
Ph.D. 1986, Harvard

Ruth Leys (1980)
Professor, Humanities Center; History
Henry M. and Elizabeth P. Wiesenfeld Professor
B.A. 1961, Oxford University

Michael Joseph Lichten (2012)
Adjunct Professor, Biology

John Lind (2011)
J.J. Sylvester Assistant Professor, Mathematics

Hans Lindblad (1/2011)
Professor, Mathematics
M.S. 1985, Lund Institute of Technology; Ph.D. 1989

Leonardo Lisi (2008)
Associate Professor, Humanities Center
B.A. 2002, University of York
M.Phil. 2004, M.A. 2004, Ph.D. 2008; Yale University

Morris Low (1/2007)
Adjunct Associate Professor, History of Science and Technology
B.S. 1982, Griffith University, B.S. 1984
Ph.D. 1993, University of Sydney

Richard Macksey (1958)
Professor, part-time, Humanities Center, The Writing Seminars

Petar Maksimovic (1/2001)
Professor, Physics and Astronomy
B.S. 1992, University of Belgrade
Ph.D. 1997, M.I.T.

Dora Malech (2014)
Assistant Professor, The Writing Seminars

BA 2003, University of Iowa Writers’ Workshop; M.F.A. 2005, Yale University

Douglas Mao (2007)
Professor, English
B.A. 1987, Harvard University
Ph.D. 1993, Yale University

Nina Markovic (2002)
Associate Professor, Physics and Astronomy
B.S. 1993, University of Zagreb, Croatia
Ph.D. 1998, University of Minnesota

Renee Marlin-Bennett (2007)
Professor, Political Science
B.A. 1981, Pomona College
S.M. 1983, M.I.T., Ph.D. 1987

Paola Marrati (2003)
Professor, Humanities Center; Philosophy (2004)
M.A. 1988, Université degli studi di Pisa
D.E.A. 1989, École des Hautes Études en Sciences Sociales
Ph.D. 1995 Université Marc Bloch, Strasbourg

Tobias Marriage (2010)
Assistant Professor, Physics and Astronomy
A.B. 2000; Ph.D. 2006, Princeton University
C.A.S.M. 2001, University of Cambridge

Bruce Marsh (1974)
Academy Professor, Earth and Planetary Sciences
B.S. 1969, Michigan State University
M.S. 1971, University of Arizona
Ph.D. 1974, UC Berkeley

Professor and Chair, History
B.A. 1983, Cambridge University
M.A. 1985, Johns Hopkins University; Ph.D. 1990

Sebastian Mazzuca (2015)
Assistant Professor, Political Science

J. Michael McCaffery (2006)
Research Professor, Biology

Stephan McCandliss (1999)
Research Professor, Physics and Astronomy

P. Kyle McCarter Jr. (1985)
Professor, Near Eastern Studies
William Foxwell Albright Professor of Biblical and Ancient Near Eastern Studies
B.A. 1967, University of Oklahoma
M.Div. 1970, McCormic Theological Seminary
Ph.D. 1974, Harvard

Susan McCarter (2000)
Adjunct Assistant Professor, Near Eastern Studies

Richard McCarty (1990)
Professor, part-time, Biology
William D. Gill Professor of Biology
A.B. 1960; Ph.D. 1964, Johns Hopkins University
Michael McCloskey (1978)
Professor, Cognitive Science; Psychological and Brain Sciences
B.A. 1975, Emory; M.A. 1977, Princeton, Ph.D. 1978

Peter McCullough (2012)
Adjunct Associate Professor, Physics and Astronomy

Alice McDermott (1999)
Professor, The Writing Seminars
The Richard A. Macksey Professor for Distinguished Teaching in the Humanities
B.A. 1975, State University of New York
M.A. 1978, University of New Hampshire

Katrina Bell McDonald (1994)
Associate Professor, Sociology
Associate Dean for Multicultural Affairs – 9/15/2008
B.A. 1983, Mills College; M.A. 1984, Stanford
M.A. 1990, UC Davis, Ph.D. 1995

Jean McGarry (1988)
Professor and Co-Chair, The Writing Seminars
A.B. 1970, Harvard
M.A. 1983, Johns Hopkins University

James McPartland (1975)
Research Professor, Sociology
Director of the Center for the Study of Social Organization of Schools

Tyrel McQueen (2009)
Assistant Professor, Chemistry; Physics and Astronomy
B.S. 2004, Harvey Mudd College
M.A. 2006; Ph.D. 2009, Princeton University

Yitzhak Melamed (2008)
Associate Professor, Philosophy, Humanities Center
B.A./M.A. 1995, M.A. 1996, Tel Aviv University
M.Phil. 2000, Yale University, Ph.D. 2005

Kirill Melnikov (2008)
Associate Professor, Physics and Astronomy
M.Sc 1991, Novosibirsk State University, Russia
Ph.D. 1996 Johannes Gutenberg University, Germany

Brice Menard (2010)
Assistant Professor, Physics and Astronomy
Ph.D. 2002, Max Planck Institute

Mitchell Merback (2008)
Professor, History of Art
B.A. 1985 Alfred University
M.A. 1989, University of Chicago, Ph.D. 1995

Mona Merling (2014)

Chikako Mese (2004)
Professor and Chair, Mathematics
B.S. 1991, University of Dayton
M.S. 1994, Stanford University
Ph.D. 1996, Stanford University

Gerald J. Meyer (1991)
Professor and Chair, Chemistry Bernard N. Baker Professor in Chemistry
B.S. 1985, SUNY at Albany
Ph.D. 1989, University of Wisconsin

James Meyer (2012)
Adjunct Professor, History of Art

Tobie Meyer-Fong (2000)
Professor, History
B.A. 1989, Yale

Deborah Mifflin (1999)
Associate Teaching Professor, German and Romance Languages and Literatures
Coordinator, German Language Program

Charles D. Miller Professor
B.A. 1991, University of California
M.A. 1994, University of Washington
Ph.D. 2003, Northwestern University

William P. Minicozzi II (1994)
Professor, Mathematics
Krieger-Eisenhower Professor
B.A. 1990, Princeton
Ph.D. 1994, Stanford

Sidney Mintz (2004)
Research Professor, Anthropology

Michele Miozzo (2005)
Assistant Research Professor, Cognitive Science

Robert A. Moffitt (1995)
Professor and Chair, Economics; Institute for Policy Studies Public Policy Program
Krieger-Eisenhower Professor
B.A. 1970, Rice
M.A. 1972, Brown, Ph.D. 1975

Silvia Montiglio (2010)
Professor, Classics
Gildersleeve Professor of Classics
Laurea 1984, University of Pavia

H. Warren Moos (1964)
Research Professor, Physics and Astronomy

Gerhard H. Dieke Professor of Physics and Astronomy
Sc.B. 1957, Brown, M.A. 1959
Ph.D. 1961, University of Michigan

Jack Morava (1980)
Professor, Mathematics; Physics and Astronomy
Ph.D. 1969, Rice University

Philip Morgan (2000)
Professor, History
Harry C. Black Professor of History
B.A. 1971, Cambridge University
Ph.D. 1977, University College London

Stephen Morgan (2014)
Bloomberg Distinguished Professor, Sociology and School of Education
B.A. 1993, Harvard University; M.Phil 1995, Oxford University; M.A. 1997, Harvard University; Ph.D. 2000

Anne Eakin Moss (2012)
Assistant Professor, Humanities Center
B.A. 1995, Harvard
M.A. 1998, Stanford; Ph.D. 2005

Kenneth Moss (2002)
Associate Professor, History
Felix Posen Professor of Modern Jewish History
B.A. 1996, Rutgers University
Evangelos N. Moudrianakis (1965)
Professor, Biology, Biophysics
B.S. 1959, University of Athens
M.A. 1963, Johns Hopkins University, Ph.D. 1964
Charles Mountain (2005)
Professor, part-time, Physics and Astronomy

Dean Moyar (2002)
Associate Professor, Philosophy
B.S. 1994, Duke University
M.A. 1998, University of Chicago, Ph.D. 2002

Stephen Murray (2009)
Research Professor, Physics and Astronomy

Christopher Nealon (2008)
Professor, English
B.A. 1989, Williams College
M.F.A. 1993, Warren William College
Ph.D. 1997, Cornell University

Jacques Neefs (2006)
Professor, German and Romance Languages and Literatures
James M. Beall Professor of French Literature
Maitrise 1968, Ecole Normale Superieure (Ulm)
Ph.D. 1987, Universite de Paris VIII

David Neufeld (1989)
Professor, Physics and Astronomy
B.A. 1981, Cambridge University
M.Sc. 1983, University of Sussex
Ph.D. 1987, Harvard

Katherine Newman (9/2010)
Professor, Sociology

James B. Knapp Dean (9/2010)
Zanvyl Krieger School of Arts and Sciences
B.A. 1975, University of California, San Diego
Ph.D. 1979, University of California, Berkeley

Stephen Nichols (2010)
Research Professor, German and Romance Languages and Literatures

Predrag Nikolic (2009)
Adjunct Assistant Professor, Physics and Astronomy

Adjunct Professor, History of Art

Aaron Noonberg (1989)
Adjunct Assistant Professor, Psychological and Brain Sciences

Colin Norman (12/1983)
Professor, Physics and Astronomy
B.E. 1969, University of Melbourne

D.Phil. 1973, Oxford
Juan Obarrio (2009)
Assistant Professor, Anthropology
Licenciado 1996, University of Buenos Aires
M. Phil. 2001, Ph.D. 2006, Columbia University

Kate Okikiolu (1/2011)
Professor, Mathematics
B.A. 1986, Cambridge University
Ph.D. 1991, UCLA

Peter Lee Olson (1977)
Professor, Earth and Planetary Sciences
B.A. 1972, University of Colorado
M.A. 1974, UC Berkeley, Ph.D. 1977

Akira Omaki (2011)
Assistant Professor, Cognitive Science
B.A. 2002, University of Hawaii
M.A. 2005, Sofia University
Ph.D. 2010, University of Maryland

Yi-Ping Ong (2010)
Assistant Professor, Humanities Center
B.A. 2001, Oxford University
M.A. 2004, Ph.D. 2009; Harvard University

Katrin Pahl (8/2005)
Associate Professor, German and Romance Languages and Literatures
Maitrise 1992, Universite de Paris, IV, Sorbonne
Ph.D. 2001, University of California, Berkeley

Anand Pandian (2007)
Associate Professor, Anthropology
B.A. 1994, Amherst University
Ph.D. 2004, University of California, Berkeley

Nick Papageorge (2012)
Assistant Professor, Economics
B.A. 2000, University of Chicago
M.A. 2005, Die Humboldt University
Ph.D. 2012 Washington University

Gabriel Paquette (2011)
Professor, History
B.A. 1999, Wesleyan University
M.A. 2001, National University of Island
M.Phil. 2002; Ph.D. 2006, University of Cambridge

Soojin Park (2011)
Assistant Professor, Cognitive Science
B.A. 2004, Yonsei University, Korea
M.S. 2005; M.Phil. 2006; Ph.D. 2008, Yale University

Benjamin Passey (2009)
Assistant Professor, Earth and Planetary Sciences
B.S. 2001, M.S. 2004, Ph.D. 2007, University of Utah

Felipe Pereda (2011)
Professor, History of Art
Nancy H. and Robert E. Hall Professor of the Humanities
B.A. 1991, Universidad Complutense de Madrid
B.A. 1994, Universidad Nacional de Educacion Distancia
Herbert Petri (1992)
Adjunct Professor, Psychological and Brain Sciences

Cedomir Petrovic (2007)
Adjunct Professor, Physics and Astronomy

Stephen Plank (1997)
Associate Professor, Sociology
B.A. 1990, Northwestern
M.A. 1992, University of Chicago, Ph.D. 1995

Douglas Poland (1969)
Professor, Chemistry
B.A. 1961, Cornell, Ph.D. 1966

Deborah Poole (2002)
Professor, Anthropology
B.A. 1974, University of Michigan
Ph.D. 1984, University of Illinois

Maria Portuondo (2008)
Associate Professor, History of Science and Technology
B.S.E.E. 1984, University of Miami
Ph.D. 2005, Johns Hopkins University

Gary H. Posner (1969)
Research Professor, Chemistry
Jean and Norman Scowe Professor of Chemistry
B.A. 1964, Brandeis
Ph.D. 1968, Harvard

Lawrence Principe (1997)
Professor, History of Science and Technology
Chemistry; Philosophy (2004)
Drew Family Professor in the Humanities
B.A. and B.S. 1983, University of Delaware
Ph.D. 1988, Indiana University
Ph.D. 1996, Johns Hopkins University

Peter Privalov (1991)
Research Professor, Biology; Biophysics
Faculty of Physics 1956, Tbilisi University, Georgia USSR
Ph.D. 1964

Lawrence Raifman (1992)
Adjunct Assistant Professor, Psychological and Brain Sciences

Brenda Rapp (1994)
Professor and Chair, Cognitive Science
Psychological and Brain Sciences
B.S. 1979, University of Maryland
M.A. 1987, Johns Hopkins University, Ph.D. 1991

Peter Rapp (2008)
Adjunct Professor, Psychological and Brain Sciences

Kyle Rawlins (2010)
Assistant Professor, Cognitive Science
B.A. 2003; B.S. 2003, University of Massachusetts M.A. 2006
Ph.D. 2008, University of California, Santa Cruz

Eugenio Refini (2014)
Assistant Professor, German and Romance Languages and Literatures

Gary H. Posner (1969)
Professor, Chemistry
B.A. 1961, Cornell, Ph.D. 1966

Deborah Poole (2002)
Professor, Anthropology
B.A. 1974, University of Michigan
Ph.D. 1984, University of Illinois

Maria Portuondo (2008)
Associate Professor, History of Science and Technology
B.S.E.E. 1984, University of Miami
Ph.D. 2005, Johns Hopkins University

Gary H. Posner (1969)
Research Professor, Chemistry
Jean and Norman Scowe Professor of Chemistry
B.A. 1964, Brandeis
Ph.D. 1968, Harvard

Lawrence Principe (1997)
Professor, History of Science and Technology
Chemistry; Philosophy (2004)
Drew Family Professor in the Humanities
B.A. and B.S. 1983, University of Delaware
Ph.D. 1988, Indiana University
Ph.D. 1996, Johns Hopkins University

Peter Privalov (1991)
Research Professor, Biology; Biophysics
Faculty of Physics 1956, Tbilisi University, Georgia USSR
Ph.D. 1964

Lawrence Raifman (1992)
Adjunct Assistant Professor, Psychological and Brain Sciences

Brenda Rapp (1994)
Professor and Chair, Cognitive Science
Psychological and Brain Sciences
B.S. 1979, University of Maryland
M.A. 1987, Johns Hopkins University, Ph.D. 1991

Peter Rapp (2008)
Adjunct Professor, Psychological and Brain Sciences

Kyle Rawlins (2010)
Assistant Professor, Cognitive Science
B.A. 2003; B.S. 2003, University of Massachusetts M.A. 2006
Ph.D. 2008, University of California, Santa Cruz

Eugenio Refini (2014)
Assistant Professor, German and Romance Languages and Literatures

B.A. 2005, University of Pisa and Scuola Normale Superiore; M.A. 2007, Ph.D. 2010

Daniel Reich (1990)
Professor and Chair, Physics and Astronomy
Ph.D. 1988, University of Chicago

Brian Reilly (2010)
Visiting Assistant Professor, German and Romance Languages and Literatures

Sharlyn Rhee (2005)
Visiting Assistant Professor, Humanities Center

Adam Riess (1/2006)
Professor, Physics and Astronomy
Thomas J. Barber Professor of Physics and Astronomy
B.S. 1992, M.I.T.
A.M. 1994, Harvard University
Ph.D. 1996, Harvard University

Mark O. Robbins (1/1986)
Professor, Physics and Astronomy
B.A. 1977, Harvard; M.A. 1977
Ph.D. 1983, University of California

Elijah Roberts (2012)
Assistant Professor, Biophysics
B.S. 1996, Ohio University;
Ph.D. 2010, University of Illinois

James Roberts (2010)
Assistant Research Professor, Earth and Planetary Sciences

Elizabeth Rodini (2004)
Teaching Professor/Director of Museums and Society
B.A. 1986, University of Wisconsin
M.A. 1989, University of Michigan
Ph.D. 1995, University of Chicago

Steven Rokita (2012)
Professor, Chemistry
B.S. 1979, University of California-Berkeley
Ph.D. 1983, MIT

Matthew Roller (1994)
Professor, Classics
B.A. 1988, Stanford
M.A. 1990, UC Berkeley, Ph.D. 1994

George Rose (2002)
Professor, Biophysics, Krieger-Eisenhower Professor
B.S. 1963, Bard College
M.S. 1972, Oregon State University, Ph.D. 1976

Jesse Rosenthal (2010)
Assistant Professor, English
B.A. 1998, Swarthmore College
M.A. 2003; M.Phil. 2005
Ph.D. 2009, Columbia University

Justine Roth (2003)
Associate Professor, Chemistry
B.S. 1994, University of Florida
Ph.D. 2000, University of Washington

Erin Rowe (2012)
Assistant Professor, History
Ph.D. 2005, Johns Hopkins University

William Rowe (1982)
Professor, History
John and Diane Cooke Professor of Chinese History
A.B. 1967, Wesleyan
M.A. 1976, Columbia University, Ph.D. 1980

Catherine Royer (2005)
Visiting Professor, Biophysics

Elena Russo (2000)
Professor, German and Romance Languages and Literatures
Baccalaurat 1977, Lycée Chateaubriand
Licence ès Lettres 1982, Université de Genève
Ph.D. 1988, Princeton

Marina Rustow (2010)
Associate Professor, History
Charlotte Bloomberg Professor in the Humanities
M.A. 1998; M.Phil 1999
Ph.D. 2004, Columbia University

Mary Ryan (2002)
Professor, History
John Martin Vincent Professor in History
B.A. 1967, University of Wisconsin, M.A. 1968
Ph.D. 1971, University of California

Robert Rynasiewicz (1986)
Professor, Philosophy
Sc.B. 1974, Brow
Ph.D. 1981, University of Minnesota

Lester M. Salamon (1986)
Professor, Political Science
B.A. 1964, Princeton; Ph.D. 1971, Harvard

Mary Jo Salter (2007)
Professor and Co-Chair, The Writing Seminars
B.A. 1976, Harvard University
M.A. 1978, University of Cambridge

Olya Samilenko (1992)
Adjunct Associate Professor, Center for Language Education-Russia

Yuya Sasaki (2012)
Assistant Professor, Economics
B.S. 2002, Utah State University
M.S. 2007; Ph.D. 2012, Brown University

George Scangos (1/1992)
Adjunct Professor, Biology

Joel Schildbach (1996)
Professor and Vice Dean, Biology
B.A. 1986, Oregon State University
Ph.D. 1992, Harvard

Robert Schleif (1989)
Professor, Biology, Biophysics

B.S. 1963, Tufts; Ph.D. 1967, UC Berkeley

Daniel Schlozman (2012)
Assistant Professor, Political Science
A.B. 2003 Harvard University, Ph.D. 2011

Trina Schroer (1/1990)
Professor, Biology
B.S. 1980, Stanford; Ph.D. 1986, UC San Francisco

Regine Schulz (2008)
Adjunct Professor, Near Eastern Studies

Glenn Schwartz (1996)
Professor and Chair, Near Eastern Studies
Whiting Professor of Archaeology
B.A. 1976, Yale, M.Phil. 1980, Ph.D. 1982

Loreto Sánchez Serrano (1999)
Associate Teaching Professor (2010), German and Romance Languages and Literates

Alan Shapiro (1997)
Professor, Classics; History of Art
W. H. Collins Vickers Professor of Archaeology
B.A. 1971, Swarthmore
M.A. 1972, UC Berkeley; Ph.D. 1977, Princeton

Adam Sheingate (2000)
Associate Professor, Political Science
B.S. 1991, University of Wisconsin, M.A. 1993
Ph.D. 1998, Yale

Amy Shelton (1/2002)
Associate Professor, Psychological and Brain Sciences
B.S. 1993, Illinois State University
Ph.D. 1999, Vanderbilt

Alexandra Shepard (2015)
John Hinkley Visiting Professor, History
B.A. 1991, Clare College; M.Phil 1994, Yale University; Ph.D. 1998, University of Cambridge
Todd Shepard (2008)
Associate Professor, History; German and Romance Languages and Literatures
B.A. 1991, Wesleyan University
Ph.D. 2002 Rutgers University

Bernard Shiffman (1973)
Professor and Chair, Mathematics
B.S. 1964, M.I.T.; Ph.D. 1968, University of California

Vyacheslav Shokurov (1991)
Professor, Mathematics
D.Sc. 1976, Steklov Institute
Ph.D. 1976, Moscow State University

Stephen Shore (2007)
Assistant Professor, Economics
A.B. 1998, Princeton University
M.A. 2001, Harvard University, Ph.D. 2003

Harry Siever (1967)
Professor, German and Romance Languages and Literatures
History B.A. 1963, Baylor
Ph.D. 1967, Duke University
Joseph Silk (2010)
Homewood Professor, Physics and Astronomy
Beverly J. Silver (1992)
Professor, Sociology
B.A. 1980, Barnard
Ph.D. 1992, SUNY, Binghamton
Harris J. Silverstone (1/1965)
Professor, Chemistry
A.B. 1960, Harvard
Ph.D. 1964, California Institute of Technology
David Smith (1/2003)
Professor, The Writing Seminars
Elliott Coleman Professor
B.A. 1965, University of Virginia
M.A. 1969, Southern Illinois University
Ph.D. 1976, Ohio University
Wayne Smith (2000)
Adjunct Professor, Political Science
Brian Smithling (2012)
Assistant Professor, Mathematics
S.B. 2001, MIT
M.S. 2003, University of Chicago; Ph.D. 2007
Paul Smolensky (1994)
Professor, Cognitive Science
Krieger-Eisenhower Professor
A.B. 1976, Harvard
M.S. 1977, Indiana University, Ph.D. 1981
Christopher Sogge (1996)
Professor, Mathematics
J.J. Sylvester Professor
B.A. 1982, University of Chicago
Ph.D. 1985, Princeton
Santiago Solis (2014)
Visiting Assistant Professor, German and Romance Languages and Literatures
Rachel Somerville (11/1/2008)
Associate Professor, Physics and Astronomy
Research Professor, Economics
Lester Spence (2005)
Associate Professor, Political Science
B.A. 1991, University of Michigan, Ph.D. 2001
Gabrielle Spiegel (1993)
Professor, History
Krieger-Eisenhower Professor
B.A. 1964, Bryn Mawr; M.A.T. 1965, Harvard
M.A. 1970, Johns Hopkins University, Ph.D. 1974
Allan Spradling (1980)
Adjunct Professor, Biology; Carnegie Institution
Joel Spruck (1992)
Professor, Mathematics
J.J. Sylvester Professor of Mathematics
B.S. 1967, Columbia University
M.S. 1969, Stanford, Ph.D. 1971
Neta Stahl (2008)
Assistant Professor, Humanities Center
B.A. 1996, Tel Aviv University, M.A. 1998, Ph.D. 2005
Walter Stephens (1999)
Professor, German and Romance Languages and Literatures
Charles S. Singleton Professor of Italian Studies
B.A. 1972, Yale, M.A. 1976; Ph.D. 1979, Cornell
Mark Stiles (2004)
Adjunct Professor, Physics and Astronomy
Richard Stolarski (2010)
Research Professor, Earth and Planetary Sciences
Maureen Stone (1996)
Adjunct Professor, Cognitive Science
Carl Strehlke (1998)
Adjunct Professor, History of Art
Darrell F. Strobel (1984)
Professor, Earth and Planetary Sciences; Physics and Astronomy
B.S. 1964, North Dakota State University
A.M. 1965, Harvard, Ph.D. 1969
Elisabeth Strowick (1/2008)
Professor, German and Romance Languages and Literatures
Diploma 1994, Ph.D. 1998, University of Hamburg
Associate Professor, Psychological and Brain Sciences; Mind/Brain Institute
Robert G. Merrick Jr. Research Chairholder
B.S. 1993, Ph.D. 1998, Ruhr-Universitat Bochum, Germany
Hirotaka Sugawara (2008)
Visiting Professor, Physics and Astronomy
Michael Sullivan (2007)
Visiting Assistant Professor, Classics
Eric Sundquist (2010)
Professor and Chair, English
Andrew W. Mellon Professor of the Humanities
B.A. 1974, University of Kansas
M.A. 1976; Ph.D. 1978, Johns Hopkins University
Raman Sundrum (2000)
Professor, Physics and Astronomy
Alumni Centennial Professor
B.Sc. 1984, University of Sydney; Ph.D. 1990, Yale
Dimitri A. Sverjensky (1984)
Professor, Earth and Planetary Sciences
B.S. 1974, University of Sydney
M.Phil. 1977, Yale, Ph.D. 1980
Morris Swartz (1998)
Johns Hopkins University - 2016-2017

Professor, Physics and Astronomy
B.S. 1976, Worcester Polytechnic Institute
Ph.D. 1983, University of Chicago

Alexander Szalay (1989)
Professor, Physics and Astronomy
Alumni Centennial Professor
B.Sc. 1969, Kossuth University
M.Sc. 1972, Eotvos University, Ph.D. 1975

Katalin Szlavecz (1998)
Associate Research Professor, Earth and Planetary Sciences

James Taylor (2014)
Associate Professor, Biology
B.S. 2000, The University of Vermont; Ph.D. 2006, The Pennsylvania State University

Oleg Tchernyshyov (2002)
Associate Professor, Physics and Astronomy
Engineer-physicist 1990, Moscow Institute of Physics and Technology
Ph.D. 1998, Columbia University

Mark Teaford (2003)
Adjunct Professor, Biology

Steven Teles (2008)
Associate Professor, Political Science and Site Director for the Social Policy Program
B.A. 1989, George Washington University
Ph.D. 1995, University of Virginia

L. Nandi Theunissen (2012)
Assistant Professor, Philosophy
Duane L. Peterson Professor of Ethics
B.A. 2002, University of Western Australia
B.A. 2003 University of Sydney, M.A. 2006
Ph.D. 2012, Columbia

Mark Thompson (2010)
Associate Professor, English
B.A. 1993, University of Virginia
M.A. 1998; Ph.D. 2001, New York University

Rochelle Tobias (1996)
Professor, German and Romance Languages and Literatures

Mihai Tohaneanu (2011)
J.J. Sylvester Assistant Professor, Mathematics

Joel Tolman (2002)
Associate Professor, Chemistry
B.A. 1990, Rutgers
Ph.D. 1997, Yale

John Toscano (1995)
Professor and Chair, Chemistry
B.A. 1987, Princeton
Ph.D. 1993, Yale

John Tovar (2005)
Associate Professor, Chemistry
B.S. 1997 UCLA.; Ph.D. 2002, M.I.T.

Craig Townsend (1976)
Professor, Chemistry, Biology, Biophysics
Alsyn H. Corwin Professor of Chemistry
B.A. 1969, Williams; Ph.D. 1974, Yale

Kellee Tsai (2000)
Professor, Political Science
Vice Dean for Humanities and Social Sciences (2010)
B.A. 1989, Barnard
M.Phil. 1996, Columbia University, Ph.D. 1999

Pier Luigi Tucci (2010)
Assistant Professor, History of Art
Ph.D. 2001, University of Rome

Kathryn Tuma (2005)
Assistant Professor, History of Art
Second Decade Society Career Development
Assistant Professor
A.B. 1991, Harvard University
M.A. 1993 UC Berkeley, Ph.D. 2000

Herica Valladares (2005)
Assistant Professor, Classic
B.A. 1995 Oberlin College
M.A. 1999, Columbia University, M.Phil 2000, Ph.D. 2005

Roeland Van der Marel (2002)
Adjunct Professor, Physics and Astronomy

Mark Van Doren (1999)
Professor, Biology
B.A. 1987, Cornell
Ph.D. 1994, UC San Diego

Curtis Ventriss (2008)
Adjunct Professor, Institute for Policy Studies-Public Policy Program

Ceres Gomes Victorla (2010)
Visiting Associate Professor, Anthropology

Gary Vikan (1984)
Adjunct Professor, History of Art

Ben Vinson (2006)
Professor, History

Herbert Baxter Adams Professor of History
Vice Dean for Centers Graduate Programs and Interdepartmental Programs (1/2011)
A.B. 1992, Dartmouth University
M.Phil, M.A. 1992, Columbia University, Ph.D. 1998

Judith Walkowitz (1989)
Professor, History
A.B. 1967, University of Rochester, M.A. 1968, Ph.D. 1974

Ronald Walters (1970)
Professor, Histor
A.B. 1963, Stanford
M.A. 1965, UC Berkeley, Ph.D. 1971

Darryn W. Waugh (1997)
Professor, Earth and Planetary Sciences
B.S. 1985, University of Waikato; M.S. 1987
Ph.D. 1991, University of Cambridge

Hal Weaver (2006)

Other Faculty Appointments

Lecturers

Fadel Abdallah, M.S.
Center for Language Education-Arabic 2007

Muhammed Alan, Ph.D.
Mathematics 2009

Bruce Anderson Alan, Ph.D.
Senior Lecturer
German and Romance Languages and Literatures 2010

Austin Allen, M.F.A
Lecturer
The Writing Seminars 2014
Emily Anderson, Ph.D.
Classics 2010

Catherine R. Arthur, M.A.
History 2008

Flavia Azeredo Cerqueira, Ph.D.
Lecturer
German and Romance Languages and Literatures 2014

Sanchita Balachandran, M.A.
Senior Lecturer, Near Eastern Studies
Curator JH Archaeological Museum

Carl Bausch, J.D.
Earth and Planetary Sciences

Turgay Bayraktar, Ph.D.
Mathematics 2011

Donald Berger, M.A.
Lecturer
Expository Writing Program in the Department of English
Glenn Blake, M.A.
Senior Lecturer
The Writing Seminars 2006; 2008

Anne Elizabeth Brodsky, Ph.D.
English (EWP) 2007

Richard Brown, Ph.D.
Senior Lecturer
Mathematics 2009

Lucy Bucknell, M.A.
Senior Lecturer
The Writing Seminars 2000; 2008

Jerry Burgess, Ph.D.
Lecturer
Earth and Planetary Sciences 2014
Beatrice Caplan, Ph.D.
German and Romance Languages and Literatures 2006

Amanda Charrier, PhD
Lecturer
Earth and Planetary Sciences 2014
Aiguo Chen, M.A.
Center for Language Education-Chinese 2008

Xin Chen, Ph.D.

Joan Chen-Main, Ph.D.
Cognitive Science 2012

Clay Cogswell, M.F.A.
The Writing Seminars 2010

Zri Y. Cohen, Ph.D.
Center for Language Education-Hebrew 2011

Kristin Cook-Gailloud, Ph.D.
Senior Lecturer
German and Romance Languages and Literatures 2009

Tristan Davies, M.A.
Senior Lecturer
The Writing Seminars 1987; 1997

Lisa DeLeonardis, Ph.D.
Senior Lecturer, History of Art 2004

Linda DeLibero, M.A.
Senior Lecturer, Writing Seminars 2001
Director, Film and Media Studies

Margaret Denithorne
The Writing Seminars
(Program in Theater Arts and Studies) 2007

Larissa D'Souza, Ph.D.
Senior Lecturer, Chemistry 2012

William Evans, M.F.A., M.A.
Senior Lecturer, English 2005

Emily Fisher, Ph.D.
Biology 2008

Carolyn Fitch, Ph.D.
Senior Lecturer, Biophysics 2012

Patrick Fleming, Ph.D.
Senior Lecturer
Biophysics 2004; 2007

Robert Ford, M.A.
Lecturer
Political Science 2014
Heather Roberts Fox, Ph.D.
Psychological and Brain Sciences 2011

Robert Freedman, Ph.D.
Adjunct Professor
Political Science 2006
Paula Gefaell-Borras
German and Romance Languages and Literatures 2008

James Glossman
The Writing Seminars
(Program in Theater Arts and Studies) 2004

Aaron Goodfellow, Ph.D.
Senior Lecturer, Anthropology 2012

Aaron Goodfellow, Ph.D.
Senior Lecturer, Anthropology 2010
James D. Goodyear, Ph.D.

Senior Lecturer
Associate Director, Public Health Studies Program 2000
John Grasser, M.F.A.
Lecturer
The Writing Seminars 2014
Stuart Gray, Ph.D.
Lecturer
Political Science 2014
Jane Greco, Ph.D.
Senior Lecturer, Chemistry 2006
Nishanth Gudapati, Ph.D.
Visiting Lecturer, Mathematics 2014
Claude Guillemard, D.E.A.
Senior Lecturer
German and Romance Languages and Literatures 1991
Stephen Harris, J.D.
Sociology 1/1993 (part-time)
Floyd Hayes, Ph.D.
Senior Lecturer
Center for Africana Studies 2004
Coordinator, Programs in Africana Studies
Julia Heney, M.F.A.
Lecturer
The Writing Seminars, 2014
Robert Horner, Ph.D.
Senior Lecturer
Biology 1989
Audrey Huang, Ph.D.
Biology 2005
Aranzazu M. Hubbard, M.A.
German and Romance Languages and Literatures 2010
Ann Jarema, M.S.
Psychological and Brain Sciences 2007
Veronika Jicinska, Ph.D.
German and Romance Languages and Literatures 2010
Fumiko Joo, Ph.D.
Lecturer
East Asian Studies Program 2014
Gregory Kane
Lecturer
The Writing Seminars 2008 (part-time)
Choonwon Kang, Ph.D.
Center for Language Education-Korean 1999
Satoko Katagiri, M.A.
Center for Language Education-Japanese 2003
Kjerstin Kauffman, M.F.A.
Lecturer
The Writing Seminars 2014
Jian Kong, Ph.D.
Senior Lecturer
Mathematics 2004
Chris Kraft, Ph.D.
Psychological and Brain Sciences 2002
Huei-ying Kup, Ph.D.
Senior Lecturer, Sociology 2011
Senior Lecturer, The Writing Seminars
Lu Li, M.A.
Center for Language Education-Chinese 2010
Zhan Li, Ph.D.
Visiting Lecturer, Mathematics 2014
Liman Lievens, B.A.
Center for Language Education-Chinese 1996
Farrah Madison, Ph.D.
Psychological and Brain Sciences 2011
Sarah Manekin, B.A.
English 2008
John Mann, Ed.D.
Senior Lecturer
The Writing Seminars 2004; 2008
Joseph H. Martin, Ph.D.
The Writing Seminars
(Program in Theater Arts and Studies) 2007
Naiara Martinez-Velez, M.A.
German and Romance Languages and Literatures 2011
Laura Mason, Ph.D.
Senior Lecturer
History 2011
Don Mathis, Ph.D.
Cognitive Science 2012
Nathan McNamara, M.F.A.
Lecturer
The Writing Seminars 2014
David McNeal, M.A.
Center for Language Education-Chinese 2011
Robert Mintz, Ph.D.
Program in Museums and Society 2010
Arthur Molella, Ph.D.
Senior Lecturer
History of Science and Technology 2014
Alexios Monopolis, Ph.D.
Earth and Planetary Sciences 2012
Barbara Morgan, Ph.D.
Senior Lecturer
Economics 2006
Susan Morris, Ph.D.
Lecturer
History of Science and Technology 2014
Matthew Morton, M.F.A
Lecturer
The Writing Seminars 2014
Anne-Elizabeth Murdy Brodsky, Ph.D.
English 2007

Makiko Nakao, M.A.
Center for Language Education-Japanese 1994

Carolyn Norris, Ph.D
Senior Lecturer
Biology 2000

Marie Theresa O'Connor, Ph.D.
English 2010

Sakiko Olsen, Ph.D.
Senior Lecturer
Earth and Planetary Sciences 1996

George Oppel, Ph.D.
English 2010

Louise Pasternack, Ph.D.
Senior Lecturer
Chemistry 2001

Rebecca Pearlman, Ph.D.
Senior Lecturer
Biology 2001

Sergio Ruiz Perez, M.A.
German and Romance Languages and Literatures 2011

Martin Perschler, Ph.D.
History of Art 2009

Matthew Porterfield
The Writing Seminars (Film and Media Studies) 2008

Maria del Rosario Ramos, Ph.D.
German and Romance Languages and Literatures 2008

Ellen Robbins, Ph.D.
Near Eastern Studies 1992

Christov Roberson, Ph.D.
Biology 2012

Shannon Robinson, Ph.D.
Lecturer
The Writing Seminars 2014
Jimmy J. Roche, M.F.A.
The Writing Seminars-Film and Media Studies 2010

William Roche
The Writing Seminars (Program in Theater Arts and Studies) 2004

Mark Rom, Ph.D.
Political Science 2010

Sara Romero, M.A.
German and Romance Languages and Literatures 2012

Suzanne Roos, Ph.D.
Senior Lecturer
German and Romance Languages and Literatures 1993

Uma Saini, M.A.
Senior Lecturer
Center for Language Education-Hindi 2000

Steve Scafidi, M.F.A.
The Writing Seminars 2008

Scott Schmidt, M.P.P.
Lecturer
Political Sciences 2014
Richard Shingles, Ph.D.
Biology, 2005

Joanne Simpson
The Writing Seminars 1999

Daniel Stintzi, M.F.A.
Lecturer
The Writing Seminars 2014
Khalil Tahrawi, Ph.D.
Center for Language Education-Arabic 2004

Alexandra Tan, Ph.D.
Biophysics 2012

Elizabeth Thompson, M.F.A
Lecturer
The Writing Seminars 2014
Kathryn Tifft, Ph.D.
Biology 2012

Michelle Tracy, M.A.
German and Romance Languages and Literatures 2007

Jason Trageser, Ph.D.
Psychological and Brain Sciences 2011

Tina Trapani, Ph.D.
Senior Lecturer
Chemistry 1999

Jason Tyler, B.A.
The Writing Seminars (Film and Media Studies) 2011

Sydney Van Morgan, Ph.D.
Senior Lecturer
Sociology 2014
Magda von der Heydt, Ph.D.
Senior Lecturer
Sociology 2006

Christine Waddail, M.A.
Center for Language Education 2007

Kathryn Wagner, Ph.D.
Senior Lecturer
Political Science 2010
Program Coordinator Aitchison Program

Meredith Ward, M.A.
The Writing Seminars (Film and Media Studies) 2008

Sue Waterman, M.L.S.
German and Romance Languages and Literatures 2003
Aliza Watters, Ph.D.
Lecturer
Expository Writing Program in the Department of English
Barry Weingarten, Ph.D.
Senior Lecturer
German and Romance Languages and Literatures 1999
Heidi Wheeler, M.A.
Senior Lecturer
German and Romance Languages and Literatures 1999
Greg Williamson, M.A.
Senior Lecturer
The Writing Seminars 1989
April Wuensch, Ph.D.
Senior Lecturer
German and Romance Languages and Literatures 2004
Coordinator, French Elements
Julia Yarmolinskaya, Ph.D.
Cognitive Science 2011
Center for Language Education 2007
Nan Zhao, M.Ed.
Center for Language Education 2012

Military Science
Michael Gorreck
Lieutenant Colonel
Director
Russell Buckhalt
Major
Assistant Professor
David Normand
Major
Assistant Professor
David Yi
Captain
Assistant Professor
Erik Mineo
Captain, Director for Scholarship and Enrollment
Rodney Graves
Master Sergeant
Senior Military Instructor
Bart Sime
Sergeant First Class
Military Instructor
Tim O'Neil
Recruiting Officer

Joint Appointments
Marilyn Albert, Ph.D.
Professor (Medicine)
Psychological and Brain Sciences 2005

Mariam Alexander, M.D., M.P.H.
Assistant Professor (Public Health)
Public Health Studies Program 2010

Richard Allen, Ph.D.
Assistant Professor (Medicine)
Psychological and Brain Sciences 1997

Nan Marie Astone, Ph.D.
Associate Professor (Public Health)
Sociology 1989

Jay Baraban, Ph.D.
Professor (Medicine)
Psychological and Brain Sciences 2007

Stanley Becker, Ph.D.
Professor (Public Health)
Public Health Studies Program 2008

David Bishai, Ph.D.
Associate Professor (Public Health)
Economics 2006
Public Health Studies Program 2008

Amanda Blackford, Sc.M.
Biostatistician (Medicine)
Public Health Studies Program 2010

Dana F. Boatman
Associate Professor (Medicine)
Cognitive Science 5/1993

Lee Bone, M.P.H., R.N.
Associate Professor (Public Health)
Public Health Studies Program 2010

Lynda Burton, Sc.D.
Adjunct Associate Professor (Public Health)
Public Health Studies Program 2010

Shiyi Chen, Ph.D.
Professor (Engineering)
Physics and Astronomy 4/2006

Lawrence Cheskin, M.D.
Associate Professor (Public Health)
Public Health Studies Program 2011

Nathaniel Comfort, Ph.D.
Associate Professor (Medicine)
History of Science and Technology 2004

Charles Edward Connor, Ph.D.
Professor (Medicine)
Director, Krieger Mind/Brain Institute
Psychological and Brain Sciences 2006

Leslie Cope, Ph.D., M.S.E.
Assistant Professor (Medicine)
Public Health Studies Program 2010

Robert Dalrymple, Ph.D.
Professor (Engineering)
Earth and Planetary Sciences 1/2002
John Desmond, Ph.D.
Associate Professor (Medicine)
Cognitive Science 2007

William Eaton, Ph.D.
Professor (Public Health)
Sociology 1989

David Edwin, Ph.D.
Associate Professor (Medicine)
Psychological and Brain Sciences 1990; 1999

Jason Eisner, Ph.D.
Associate Professor (Engineering)
Cognitive Science 2002

Margaret Ensminger, Ph.D.
Professor (Public Health)
Sociology 1992

Joshua Epstein, Ph.D.
Professor (Medicine)
Economics 2010

Greg Eyink, Ph.D.
Professor (Engineering)
Mathematics 2004
Physics and Astronomy 4/2006

Ruth Faden, Ph.D.
Professor (Public Health)
Policies Studies Program, Institute for Policy Studies
Arts and Sciences 9/1992

Michael Falk, Ph.D.
Professor (Engineering)
Physics and Astronomy 2009

Mary Fissell, Ph.D.
Professor (Medicine)
History 1/2007
History of Science and Technology 1/1992

Carolyn Furr-Holden, Ph.D.
Assistant Professor (Public Health)
Public Health Studies Program 2011

Kelly Gebo, M.D., M.P.H.
Associate Professor (Medicine)
Sociology 2008
Director, Public Health Studies Program, KSAS

Barry Gordon, M.D.
Professor (Medicine)
Cognitive Science 1992

Seth Guikema, Ph.D.
Assistant Professor (Engineering)
Earth and Planetary Sciences 2011

Steve Hanke, Ph.D.
Professor (Engineering)
Economics 1971

Marta Hanson, Ph.D.
Assistant Professor (Medicine)

History of Science and Technology 2005

Ciaran Harman, Ph.D.
Assistant Professor (Engineering)
Earth and Planetary Sciences 2014

Kevin Hemker, Ph.D.
Professor (Engineering)

Stewart Hendry, Ph.D.
Professor (Medicine)
Krieger Mind/Brain Institute
Psychological and Brain Sciences 1/2002

Argye Hillis-Trupe, Ph.D.
Professor (Medicine)
Cognitive Science 1999

Markus Hilpert, Ph.D.
Associate Research Scientist (Public Health)
Earth and Planetary Sciences 2014

Pien-Chien Huang, Ph.D.
Professor (Public Health)
Biophysics 2004

Takeru Igusa, Ph.D.
Professor (Engineering)
Earth and Planetary Sciences 2011

Scott Kahan, M.D., M.P.H.
Instructor (Public Health)
Public Health Studies Program 2010

Alfredo Kirkwood, Ph.D.
Associate Professor (Medicine)
Krieger Mind/Brain Institute
Psychological and Brain Sciences 1/2002

Pravin Krishna, Ph.D.
Professor (SAIS)
Economics 2004

Thomas LaVeist, Ph.D.
Professor (Public Health)
Sociology 1992
Public Health Studies Program 2008

Philip Leaf, Ph.D.
Professor (Public Health)
Public Health Studies Program 2010

Lori Leonard, Ph.D.
Associate Professor (Public Health)
Sociology 2011

Harry Marks, Ph.D.
Associate Professor (Medicine)
Anthropology 2005
History 1/2007
History of Science and Technology 5/1989

Guy McKhann, M.D.
Professor (Medicine)
Krieger Mind/Brain Institute Cognitive Science
Psychological and Brain Sciences 1/2002
Graham Mooney, Ph.D.  
Assistant Professor (Medicine)  
History of Science and Technology 2004

Vicente Navarro, Ph.D.  
Professor (Public Health)  
Sociology 1989  
Policy Studies Program, Institute for Policy Studies  
Arts and Sciences 9/1992

Sandra Newman, Ph.D.  
Professor (Institute for Policy Studies, Director)  
Sociology 2000

Jian Ni, Ph.D.  
Assistant Professor (Business)  
Economics 2011

Ernst Niebur, Ph.D.  
Professor (Medicine)  
Krieger Mind/Brain Institute  
Psychological and Brain Sciences 1/2002

Mitsukuni Nishida, Ph.D.  
Assistant Professor (Business)  
Economics 2010

Catherine Norman, Ph.D.  
Assistant Professor (Engineering)  
Economics 2010

Randall Packard, Ph.D.  
Professor (Medicine)  
History 2003  
History of Science and Technology 1/2002

Cindy Parker, M.D., M.P.H.  
Assistant Professor (Public Health)  
Earth and Planetary Sciences 2010

Elizabeth Patton  
Senior Lecturer  
Humanities Center 1999; 2014

Darcy Phelan, Ph.D.  
Assistant Scientist (Public Health)  
Public Health Studies Program 2011

Paula Pitha-Rowe, Ph.D.  
Professor (Medicine)  
Biology 2007

Gianna Pomata, Ph.D.  
Professor (Medicine)  
German and Romance Languages and Literatures 2010  
History of Science and Technology 2008

Kenneth Rose, Ph.D.  
Professor (Medicine)  
Earth and Planetary Sciences 2011

Erica J. Schoenberger, Ph.D.  
Professor (Engineering)  
Anthropology 1989

Peter Sease, Ph.D.  
Professor (Engineering)  
Physics and Astronomy 2006

Robert Siliciano, M.D., Ph.D.  
Professor (Medicine)  
Biology 2007

Katherine Smith, Ph.D.  
Associate Professor (Public Health)  
Sociology 2005

Marc Stein, Ph.D.  
Assistant Professor (Education)  
Sociology 2012

Donald Steinwachs, Ph.D.  
Professor (Public Health)  
Public Health Studies Program 2010

Veit Stuphorn, Ph.D.  
Professor (Medicine)  
Psychological and Brain Sciences 2014

James Tielsch, Ph.D.  
Professor (Public Health)  
Public Health Studies Program 2010

Daniel Todes, Ph.D.  
Professor (Medicine)  
History of Science and Technology 1984

Michael Trush, M.P.H.  
Professor (Public Health)  
Public Health Studies Program 2010

Amy Ong Tsui, Ph.D.  
Professor (Public Health)  
Sociology 2002

Rudiger von der Heydt, Ph.D.  
Professor (Medicine)  
Krieger Mind/Brain Institute  
Psychological and Brain Sciences 1/2002

David Weishample  
Professor (Medicine)  
Earth and Planetary Sciences 2012

Susan Weiss, Ph.D.  
Chair/Faculty (Peabody)  
German and Romance Languages and Literatures 2002

Peter Wilcock, Ph.D.  
Professor (Engineering)  
Earth and Planetary Sciences 2011

Michael Yu, Ph.D.  
Associate Professor (Engineering)  
Chemistry 2001

Scott Zeger, Ph.D.  
Professor (Public Health)  
Public Health Studies Program 2011

Barry Zirkin, M.P.H.  
Professor (Public Health)
In listing the members of the teaching staff of the School of Engineering, the date in parentheses indicates the year of original appointment. Any joint appointments or directorships are listed last.

Professors Emeriti

John Boland, Ph.D.
Geography and Environmental Engineering

Robert (Tony) Dalrymple, Ph.D.
Civil Engineering

Frederic Davidson, Ph.D.
Electrical and Computer Engineering

Moise H. Goldstein Jr., D.Sc.
Electrical and Computer Engineering

Willis Gore
Electrical and Computer Engineering

Robert Green, Ph.D.
Materials Science and Engineering

Richard I. Joseph, Ph.D.
Electrical and Computer Engineering

Alexander Kaplan, Ph.D.
Electrical and Computer Engineering

Joseph L. Katz, Ph.D.
Chemical and Biomolecular Engineering

Jerome Kruger, Ph.D.
Materials Science and Engineering

C. Harvey Palmer Jr., Ph.D.
Electrical and Computer Engineering

Wilson J. Rugh, Ph.D.
Electrical and Computer Engineering

William Sharpe, PhD.
Mechanical Engineering

Eugene D. Shchukin, Ph.D.; Dr.Sc.
Research Professor Emeritus, Geography and Environmental Engineering

Charles (Roger) Westgate, Ph.D.
Electrical and Computer Engineering

Professors

Soumyadipta Acharya (2010)
Assistant Research Professor, Biomedical Engineering

Nathan Adelgren (2016)
Assistant Research Professor, Applied Mathematics

Yanif Ahmad (2010)
Assistant Professor, Computer Science
B.E. 2001, Imperial College of Science, Technology and Medicine
M.S., 2004, Brown University, Ph.D. 2009

Hedy Alavi (1997)
Associate Teaching Professor and Assistant Dean for International Programs
Geography and Environmental Engineering
B.S. 1972, Jundi Shapour University
M.B.A. 2006, The Johns Hopkins University; M.S. 1980, Ohio State University; Ph.D. 1983

Yair Amir (1995)
Professor, Computer Science
B.S. 1985, Technion, Haifa, M.S. 1990
Ph.D. 1995, Hebrew University of Jerusalem

Andreas Andreou (1987)
Professor, Electrical and Computer Engineering
B.S. 1978, Higher Technical Institute, Cyprus
M.S. 1982, Johns Hopkins University, Ph.D. 1986

Raman Arora (2014)
Assistant Professor, Computer Science
B.S. 2001, Netaji Subhas Institute of Technology
M.S. 2005, University of Wisconsin, Madison, Ph.D. 2009
Athreyaa Avanti (2011)
Assistant Research Professor, Applied Mathematics and Statistics

Joel Bader (2003)
Professor, Biomedical Engineering
Computer Science
B.S. 1986, Lehigh University
Ph.D. 1989, UC Berkeley

William P. Ball (1992)
Professor, Geography and Environmental Engineering; Civil Engineering
B.S. 1976, University of Virginia
M.S. 1977, Stanford; Ph.D. 1990

Ishan Barman (2014)
Assistant Professor, Mechanical Engineering

Amitabh Basu (2013)
Assistant Professor, Applied Mathematics and Statistics
B.S. 2004, Indian Institute of Technology
M.S. 2007, Massachusetts Institute of Technology, Ph.D. 2011

Alexis Battle (2014)
Assistant Professor, Computer Science
B.S. 2003, Stanford University, Ph.D. 2013

Muyinatu A. Lediju Bell (2016)
Assistant Professor, Electrical and Computer Engineering
B.S. 2006 Massachusetts Institute of Technology
Ph.D. 2012, Duke University

Michael J. Betenbaugh (1988)
Professor, Chemical and Biomolecular Engineering
B.S. 1981, University of Virginia
Ph.D. 1988, University of Delaware

Michael Bevan (2008)
Professor, Chemical and Biomolecular Engineering
B.S. 1994, Lehigh University
Ph.D. 1999, Carnegie Mellon University

Maxim Bichuch (2015)
Faculty Listings

Assistant Professor, Applied Mathematics and Statistics
B.S. 2001, Tel-Aviv University
M.S. 2003, New York University
Ph.D. 2010, Carnegie Mellon University

Edward J. Bouwer (1985)
Abel Wolman Professor and Chair, Geography and Environmental
Engineering; Civil Engineering
B.S. 1977, Arizona State University
M.S. 1978, Stanford, Ph.D. 1982

Patrick Boyle (2015)
Assistant Research Professor, Biomedical Engineering

Vladimir Braverman (2011)
B.S. 1998; M.S. 2004, Ben-Gurion University at Negev
Ph.D. 2011, University of California, Los Angeles

Grace S. Brush (1978)
Professor, Geography and Environmental Engineering
B.S. 1949, St. Francis Xavier University
M.S. 1951, University of Illinois
Ph.D. 1956, Harvard

Tamas Budavari (2014)
Assistant Professor, Applied Mathematics and Statistics
M.S. 1997, Eotvos Lorand University, Budapest; Ph.D. 2001

Randal Burns (2001)
Professor, Computer Science
B.S. 1993, Stanford
M.S. 1997, UC Santa Cruz, Ph.D. 2000

Nicholas Charon (2015)
Assistant Professor, Applied Mathematics and Statistics

Kai Loon Chen (2008)
Assistant Professor, Geography and Environmental Engineering
B.S. 2001, University of Singapore; M.S. 2003, National University of Singapore
M.S. 2004, Yale University; Ph.D. 2008, Yale University.

Yun Chen (2015)
Assistant Professor, Mechanical Engineering
B.S. 1998, National Taiwan University, M.S. 2000
Ph.D. 2007, University of North Carolina

Ralph R. Etienne-Cummings (1998)
Professor and Chair, Electrical and Computer Engineering
B.S. 1998, Al Akhawayn University
M.S. 2003, University of Maryland; Ph.D. 2004

Ralph R. Etienne-Cummings (1998)
Professor and Chair, Electrical and Computer Engineering
B.S. 1991, Yale; Ph.D. 1999, Harvard

Honggang Cui (2010)
Assistant Professor, Chemical & Biomolecular Engineering
B.S. 1999 Beijing University of Chemical Technology
M.S. 2002, Tsinghua University
Ph.D. 2007, University of Delaware

Nitin Daphalapurkar (2012)
Assistant Professor, Mechanical Engineering

Najim Dehak (2016)
Assistant Professor, Electrical and Computer Engineering
B.Eng. 2003, University of Sciences and Technology d’Oran
S.M. 2004, Pierre and Marie Curie University
Ph.D. 2009, Ecole de Technologie

Andrew S. Douglas (1983)
Professor, Mechanical Engineering; Biomedical Engineering
Vice Dean for Faculty, Whiting School of Engineering (2007)
B.S. 1975, University of Cape Town, M.S. 1977
Ph.D. 1982, Brown University

Nicholas Durr (2016)
Assistant Professor, Biomedical Engineering
B.S. 2003, University of California, Berkeley; M.S. 2007
Ph.D. 2010, University of Texas, Austin

Jason Eisner (2000)
Professor, Computer Science
B.S. 1990, Harvard; M.S. 1993, Cambridge University
Ph.D. 2001, University of Pennsylvania

Jafaar El-Awady (2010)
Assistant Professor, Mechanical Engineering
B.S. 2001 Cairo University M.S. 2003
Ph.D. 2008, University of California, Los Angeles

Mounya Elhilali (2008)
Associate Professor, Electrical and Computer Engineering
B.S. 1998, Al Akhawayn University
M.S. 2003, University of Maryland; Ph.D. 2004

J. Hugh Ellis (1984)
Professor, Geography and Environmental Engineering; Chair, Civil
Engineering
B.S. 1979, University of Waterloo, M.S. 1981, Ph.D. 1984

Jonah Erlebacher (2000)
Professor and Chair, Materials Science and Engineering
Chemical and Biomolecular Engineering
B.S. 1991, Yale; Ph.D. 1999, Harvard

Noah Cowan (2003)
Associate Professor, Mechanical Engineering;
Computer Science
B.S. 1995, Ohio State, M.S., 1997
Ph.D. 2001 University of Michigan

Gregory S. Chirikjian (1992)
Professor, Mechanical Engineering; Computer Science; Electrical and
Computer Engineering;
Applied Mathematics and Statistics
B.S. 1988, Johns Hopkins University; M.S. 1988
Ph.D. 1992, California Institute of Technology

Honggang Cui (2010)
Johns Hopkins University - 2016-2017

Associate Director of Education and Outreach Programs in the Engineering Research Center for Computer-Integrated Surgical Systems and Technology.
B.S. 1988, Lincoln University
Ph.D. 1995, University of Pennsylvania

Gregory Eyink (2002)
Professor, Applied Mathematics and Statistics; Mechanical Engineering; Mathematics (A&S)
B.S. 1981, Ohio State, Ph.D. 1987

Michael Falk (2008)
Professor, Materials Science and Engineering
B.A. 1990, Johns Hopkins University; M.S.E. 1991
Ph.D. 1998, University of California

Andrew Feinberg (2015)
Bloomberg Distinguished Professor; Biomedical Engineering
Inaugural Daniel Coit Gilman Scholar, Johns Hopkins University
King Fahd Professor of Medicine, Oncology, and Molecular Biology & Genetics, Johns Hopkins University School of Medicine
Professor of Biostatistics, Johns Hopkins Bloomberg School of Public Health
Director, Center for Epigenetics, Johns Hopkins Institute for Basic Biomedical Sciences
Chief, Division of Molecular Medicine, Department of Medicine
B.A. 1973, Johns Hopkins University School of Medicine; M.D. 1976; M.P.H. 1981

Paul Ferrero (2015)
Bloomberg Distinguished Professor, Geography and Environmental Engineering
Bloomberg Distinguished Professor Carey School of Business
B.A. 1990, Duke University; M.S. 1994
Ph.D. 2001, Cornell University

James A. Fill (1988)
Professor, Applied Mathematics and Statistics
Computer Science
B.S. 1976, University of Illinois; M.S. 1979, University of Chicago, Ph.D. 1980

Donniell Fishkind (2001)
Associate Research Professor, Applied Mathematics and Statistics

Amy Foster (2010)
Assistant Professor, Electrical and Computer Engineering
B.S.2003, State University of New York at Buffalo
M.S. 2007, Cornell University, Ph.D. 2009

Mark Foster (2010)
Assistant Professor, Electrical and Computer Engineering

Joëlle Fréchette (2006)
Associate Professor, Chemical and Biomolecular Engineering
B.E. 1998, Ecole Polytechnique de Montréal
M.A. 2000, Princeton University, Ph.D. 2003

Zachary Gagnon (2011)
Assistant Professor, Chemical and Biomolecular Engineering
B.S. 2003, University of Massachusetts
M.S. 2005, Notre Dame; Ph.D. 2009

Stavros Gaitanaros (2015)
Assistant Professor, Civil Engineering
M.Sc. 2007, University of Thessaly, Greece
Ph.D. 2014, University of Texas at Austin

Dennice Gayme (2012)
Assistant Professor, Mechanical Engineering
B.S. 1997, McMaster University
M.S. 1998, UC Berkeley
Pd.D. 2010, California Institute of Technology

Donald Geman (2001)
Professor, Applied Mathematics and Statistics
Electrical and Computer Engineering
B.S. 1965, University of Illinois
Ph.D. 1970, Northwestern

Helyette Geman (2011)
Research Professor, Applied Mathematics and Statistics

Sharon Gerecht (2007)
Associate Professor, Chemical and Biomolecular Engineering
B.A. 1994, Technion – Israel Institute of Technology;
M.Sc. 1999, Tel Aviv University; Ph.D. 2004, Technion-Israel Institute of Technology

Somnath Ghosh (2011)
The Michael G. Callas Professor, Civil Engineering
B.S. 1980, Indian Institute of Technology
M.S. 1983, Cornell University
Ph.D. 1988, University of Michigan, Ann Arbor

John I. Goutsias (1986)
Professor, Electrical and Computer Engineering; Applied Mathematics and Statistics
B.S. 1981, National Technical University of Athens; M.S. 1982, University of Southern California, Ph.D. 1986

David Gracias (2003)
Professor, Chemical and Biomolecular Engineering
M.S. 1986, Indian Institute of Technology
Ph.D. 1999, UC Berkeley

Lori Graham-Brady (2000)
Professor and Chair, Civil Engineering

Jeffrey Gray (2002)
Professor, Chemical and Biomolecular Engineering
B.S.E. 1994, University of Michigan
Ph.D. 2000, University of Texas

Matthew Green (2011)
Assistant Professor, Computer Science
B.A. 1998, Oberlin College
M.S. 2005, Johns Hopkins University; Ph.D. 2008

Mengyang Gu (2016)
Assistant Research Professor, Applied Mathematics and Statistics

James K. Guest (2005)
Associate Professor, Civil Engineering
B.S.E. 1998, University of Pennsylvania
M.S.E. 2001; M.A. 2003 Princeton University
Ph.D. 2005, Princeton University
Taekjip (T.J.) Ha (2016)  
Bloomberg Distinguished Professor, Biomedical Engineering  
Bloomberg Distinguished Professor, Biostatics and Biophysical Chemistry, Johns Hopkins School of Medicine  
Bloomberg Distinguished Professor, Biostatics Krieger Achool of Arts and Sciences  
Ph.D. 1996, University of California at Berkeley

Gregory D. Hager (1999)  
Mandell Bellmore Professor, Computer Science; Electrical and Computer Engineering  
B.S. 1983, Luther College  
M.S. 1985, University of Pennsylvania, Ph.D. 1988

A. Shoji Hall (2016)  
Assistant Professor, Materials Science and Engineering  
B.S. 2010, University of California, Los Angeles  
Ph.D. 2014, Pennsylvania State University

Steve H. Hanke (1969)  
Professor, Geography and Environmental Engineering; Economics  
B.S. 1964, University of Colorado, Ph.D. 1969

Kevin J. Hemker (1993)  
Professor, Mechanical Engineering  
B.S. 1982, University of Novi Sad, Yugoslavia  
M.S. 1988, Ph.D. 1992, University of Hanover, Germany

Hynek Hermansky (2008)  
Julian S. Smith Professor, Electrical and Computer Engineering  
M.S. 1972, Technical University Brno  
D. Eng. 1983, University of Tokyo  
M.S. 1997, Facultad de Quimica, M.S. 1999  
M.S. 2004, University of Massachusetts, Ph.D. 2004

Benjamin F. Hobbs (1996)  
Theodore M. & Kay W. Schad Professor, Geography and Environmental Engineering  
Applied Mathematics and Statistics  
B.S. 1976, South Dakota State University  
M.S. 1978, SUNY, Syracuse; Ph.D. 1983, Cornell

Susan Hohenberger-Waters (2007)  
Associate Professor, Computer Science  
B.S. 2000, Ohio State University  
M.S. 2003, MIT; Ph.D. 2006, MIT

Kalina Hristova (2001)  
Professor, Materials Science and Engineering  
B.S. 1987, University of Sofia, M.S. 1988  
Ph.D. 1994, Duke

Todd Hufnagel (1996)  
Professor, Materials Science and Engineering  
B.S. 1989, Michigan Technological University  
M.S. 1991, Stanford, Ph.D. 1995

Pablo Iglesias (1991)  
Edward J. Schaefer Professor, Electrical and Computer Engineering  
Applied Mathematics and Statistics  
Biomedical Engineering  
B.S. 1987, University of Toronto  
Ph.D. 1991, Cambridge University

Takeru Igusa (1999)  
Professor, Civil Engineering  
Applied Mathematics and Statistics  
B.S. 1977, Harvard; M.S. 1979, UC Berkeley, Ph.D. 1983

Iulian Iorachita (2010)  
Associate Research Professor, Mechanical Engineering

Abhishek Jain (2014)  
Assistant Professor, Computer Science  
B.Tech 2006, Indian Institute of Technology  
M.S. 2009, University of California, Los Angeles; Ph.D. 2012

Jin Ung Kang (1999)  
Jacob Suter Jammer Professor in Electrical Engineering, Electrical and Computer Engineering  
B.S. 1992, Western Washington University  
M.S. 1993, University of Central Florida, Ph.D. 1996

Rachel Karchin (2006)  
Associate Professor, Biomedical Engineering  
B.S. 1998, University of California, Santa Cruz  
M.S. 2000, University of California, Santa Cruz  
Ph.D. 2003, University of California, Santa Cruz

Professor, Materials Science and Engineering  
B.S. 1978, Massachusetts Institute of Technology  
Ph.D. 1982, University of California, Los Angeles

Joseph Katz (1987)  
William F. Ward Distinguished Professor, Mechanical Engineering  
Geography and Environmental Engineering  
B.S. 1977, Tel Aviv University; M.S. 1978, California Institute of Technology, Ph.D. 1982

Peter Kazanzides (2003)  
Research Professor, Computer Science

Associate Professor, Computer Science  
B.A. 1997, Harvard  

Sanjeev Khudanpur (2001)  
Associate Professor, Electrical and Computer Engineering  
Computer Science  
B.S. 1988, Indian Institute of Technology  
Ph.D. 1997, University of Maryland
Jacob Khurgin (1988)
Professor, Electrical and Computer Engineering
M.S. 1979, Leningrad Institute of Optics
Ph.D. 1987, Polytechnic University of New York

Jin Seob Kim (2014)
Assistant Research Professor, Mechanical Engineering

Marin Kobilarov (2012)
Assistant Professor, Mechanical Engineering
B.Sc. 2003, Trinity College
Ph.D. 2008, University of Southern California, Los Angeles

Philipp Koehn (2014)
Professor, Computer Science
M.S. 1994, University of Tennessee, Knoxville
Ph.D. 2003, University of Southern California

Konstantinos Konstantopoulos (1997)
Professor and Chair, Chemical and Biomolecular Engineering; Biomedical Engineering
B.S. 1989, National Technology University of Athens; Ph.D. 1995, Rice University

Edward J. Schaefer Professor, Computer Science
Applied Mathematics and Statistics
B.S. 1964, Andhra University
M.S. 1966, Indian Institute of Technology
Ph.D. 1969, University of Pennsylvania

David Kraemer (2014)
Associate Teaching Professor, Mechanical Engineering
B.S. 1991, University of Notre Dame; M.S. 1994, University of Michigan; Ph.D. 2001

Benjamine Langmead (2016)
Assistant Professor, Computer Science
B.S. 2003, Columbia University
M.Sc. 2009, University of Maryland-College Park; Ph.D. 2012

Teresa Lebair (2016)
Assistant Research Professor, Applied Mathematics and Statistics

Chen Li (2016)
Assistant Professor, Mechanical Engineering
B.S. 2005, Peking University
Ph.D. 2011, Georgia Institute of Technology

Rong Li (2015)
Bloomberg Distinguished Professor, Chemical and Biomolecular Engineering
Bloomberg Distinguished Professor, Department of Cell Biology, Johns Hopkins School of Medicine
B.S. and M.S. (combined) 1988, Yale University
Ph.D. 1992, University of California, SanFrancisco

Xin Li (2013)
Assistant Professor, Computer Science
B.S. 2002, Tsinghua University; M.S. 2005; Ph.D. 2011, University of Texas at Austin

En (Evan) Ma (1998)
Professor, Materials Science and Engineering
B.S. 1982, Tsinghua University, China, M.S. 1985

Ph.D. 1989, California Institute of Technology

Feilim Mac Gabhann (2009)
Associate Professor, Biomedical Engineering
Institute for Computational Medicine
B.E. 1997, University College, Dublin
Ph.D. 2006, Johns Hopkins University

Enrique Mallada (2016)
Assistant Professor, Electrical and Computer Engineering
B.S. 2005, Universidad Uruguay; Ph.D. 2013, Cornell University

Hai-Quan Mao (2002)
Professor, Materials Science and Engineering
B.S. 1988, Wuhan University, Ph.D. 1993

Steven Marra (2015)
Associate Teaching Professor, Mechanical Engineering
B.S. 1993, University of Pittsburgh; M.S. 1997, Johns Hopkins University; Ph.D. 2001

David Masica (2013)
Assistant Research Professor, Biomedical Engineering

Patricia McGuiggan (2006)
Associate Research Professor, Materials Science and Engineering

Charles V. Meneveau (1990)
Herschel and Ruth Seder Professor, Biomedical Engineering
Director, Center for Imaging Science
Electrical and Computer Engineering
Applied Mathematics and Statistics; Computer Science
B.S. 1976, SUNY; M.S. 1978, Johns Hopkins University, Ph.D. 1983

Judith Mitrani-Reiser (2010)
Assistant Professor, Civil Engineering
B.S. 2000, University of Florida
M.S. 2001, University of California, Berkely
Ph.D. 2007, California Institute of Technology

Rajat Mittal (2009)
Professor, Mechanical Engineering
B.E. 1989, Indian Institute of Technology
M.S. 1991, University of Florida
Ph.D. 1995, University of Illinois at U.C.

Sara Miner More (2014)
Associate Teaching Professor, Computer Science
B.S. 1996, University of Dayton; M.S. 1998, University of California, San Diego; Ph.D. 2003

Timothy Mueller (2012)
Assistant Professor, Materials Science and Engineering
A.B. 1998, Harvard University
Ph.D. 2007, Massachusetts Institute of Technology
Professor, Applied Mathematics and Statistics
B.S. 1977, Cornell; M.S. 1979, University of Illinois, Ph.D. 1982

Nassir Navab (2013)
Research Professor, Computer Science

Thao (Vicky) Nguyen (2007)
Associate Professor, Mechanical Engineering
B.S., 1998 Massachusetts Institute of Technology
M.S., 2000 Stanford University, Ph.D. 2004

Marc Ostermeier (2000)
Professor, Chemical and Biomolecular Engineering
B.S. 1990, University of Wisconsin
Ph.D. 1996, University of Texas, Austin

Stefanos Papanikolau (2014)
Assistant Research Professor, Mechanical Engineering

Philippe Pouliquen (2014)
Assistant Research Professor, Electrical and Computer Engineering

Sara Preheim (2015)
Assistant Professor, Geography and Environmental Engineering
B.S. 1997, Carnegie Mellon University
Ph.D. 2010, Massachusetts Institute of Technology

Carey S. Priebe (1994)
Professor, Applied Mathematics and Statistics
Computer Science
B.S. 1984, Purdue
M.S. 1988, San Diego State University
Ph.D. 1993, George Mason University

Jerry L. Prince (1989)
William B. Kouwenhoven Professor and Associate Director for Research in Engineering Research Center for Computer-Integrated Surgical Systems and Technology, Electrical and Computer Engineering; Computer Science; Applied Mathematics and Statistics
B.S. 1979, University of Connecticut
M.S. 1982, M.I.T., Ph.D. 1988

Kaliat T. Ramesh (1988)
Elonzo G. Decker Jr. Professor in Science and Engineering, Mechanical Engineering
Materials Science and Engineering
B.S. 1982, Bangalore University, India
M.S. 1987, Brown, Ph.D. 1987

Tilak (John) Ratnamather (1998)
Associate Research Professor, Biomedical Engineering, Center for Imaging Science

Austin Reiter (2014)
Assistant Research Professor, Computer Science

A. Lynn Roberts (1993)
Professor, Geography and Environmental Engineering
B.S. 1977, Pomona College
M.S. 1984, University of Waterloo
Ph.D. 1993, M.I.T.

Daniel Robinson (2011)
Assistant Professor, Applied Mathematics and Statistics
B.A. 2001, James Madison University
M.A. 2003, University of California-San Diego, Ph.D. 2007

Aviel Rubin (2003)
Professor, Computer Science

Steven Salzberg (2014)
Bloomberg Distinguished Professor Computer Science
Bloomberg Distinguished Professor Biomedical Engineering, Johns Hopkins University School of Medicine,
Bloomberg Distinguished Professor Biostatistics, Bloomberg School of Public Health
B.A. 1980, Yale University, M. Phil. 1984, M.S. 1982
Ph.D. 1989, Harvard University

Suchi Saria (2012)
Assistant Professor, Computer Science
B.A. 2004, Mount Holyoke College
Ph.D. 2011, Stanford University

Sridevi Sarma (2009)
Associate Professor, Biomedical Engineering
Institute for Computational Medicine
B.S. 1994, Cornell University

Benjamin Schafer (2000)
Professor, Civil Engineering
B.S. 1993, University of Iowa; M.S. 1995, Cornell, Ph.D. 1997

Michael Schatz (2016)
Bloomberg Distinguished Associate Professor, Computer Science
Bloomberg Distinguished Associate Professor, Biology, Krieger School of Arts and Sciences
B.S. 2000, Carnegie Mellon University
M.S. 2008, University of Maryland, College Park; Ph.D. 2010

Vice Dean for Education, Whiting School of Engineering (2008)
Professor, Applied Mathematics and Statistics; Computer Science

Erica J. Schoenberger (1984)
Professor, Geography and Environmental Engineering
B.S. 1974, Stanford; M.S. 1979, UC Berkeley, Ph.D. 1984

Rebecca Schulman (2011)
Assistant Professor, Chemical and Biomolecular Engineering
B.S. 1999, Massachusetts Institute of Technology
Ph.D. 2007, California Institute of Technology

Peter C. Searson (1990)
Joseph R. Reynolds Professor, Materials Science and Engineering
Chemical and Biomolecular Engineering
B.S. 1978, University of Manchester, M.S. 1980, Ph.D. 1982

Joanna Selinski (1996)
Associate Teaching Professor, Computer Science
B.S. 1984, Chestnut Hill College;
M.S.E. 1986, The Johns Hopkins University; Ph.D. 1996

Jung-Hee Seo (2016)
Associate Research Professor, Mechanical Engineering
Michael Shields (2013)  
Assistant Professor, Civil Engineering  
B.S. 2006, Loyola University  
M.S. 2007, Columbia University; Ph.D. 2010

Ilya Shpitser (2015)  
John C. Malone Assistant Professor, Computer Science  
B.A. 1999, University of California, Berkeley  
M.S. 2004, University of California, Los Angeles; Ph.D. 2008

Sauleh Siddiqui (2012)  
Assistant Professor, Civil Engineering; Applied Mathematics and Statistics  
B.A. 2007, Franklin and Marshall College  
Pd.D. 2011 University of Maryland, College Park

Scott F. Smith (1988)  
Professor, Computer Science  
B.S. 1983, Purdue University  
Ph.D. 1989, Cornell University

James B. Spicer (1993)  
Professor, Materials Science and Engineering  
B.S. 1985, Southern Methodist University  
Ph.D. 1991, Johns Hopkins University

Alan Stone (1983)  
Professor, Geography and Environmental Engineering; Civil Engineering  
B.S. 1978, University of Maryland  
M.S. 1981, California Institute of Technology, Ph.D. 1983

Sean Sun (2003)  
Professor, Mechanical Engineering  
B.S. 1994, Pennsylvania State University  
Ph.D. 1998, UC Berkeley

Alexander Szalay (2015)  
Bloomberg Distinguished Professor, Computer Science  
Bloomberg Distinguished Professor, Physics and Astronomy, Krieger School of Arts and Sciences  
B.Sc. 1969, Kossuth University, Hungary  
M.Sc. 1972, Eötvös University, Budapest; Ph.D. 1975

Minh Tang (2014)  
Assistant Research Professor, Applied Mathematics and Statistics

John C. Malone Professor, Computer Science  
Mechanical Engineering  
Director, Center for Computer Integrated Surgical Systems and Technology  
B.S. 1970, Johns Hopkins University  
Ph.D. 1976, Stanford University

Howard L. Weinert (1974)  
Professor, Electrical and Computer Engineering  
B.S. 1967, Rice; M.S. 1968, Stanford, Ph.D. 1972

James West (2003)  
Professor, Electrical and Computer Engineering

Louis L. Whitcomb (1994)  
Professor, Mechanical Engineering  
Computer Science

Winston Timp (2013)  
Assistant Professor, Biomedical Engineering  
B.S. 2001, University of Illinois at Urbana-Champaign  
M.S. 2005, Massachusetts Institute of Technology; Ph.D. 2007

Trac Duy Tran (1998)  
Professor, Electrical and Computer Engineering  
B.S. 1994, M.I.T., M.S. 1994  
Ph.D. 1998, University of Wisconsin

Natalia Trayanova (2006)  
Murray B. Sachs Professor, Biomedical Engineering, Institute for Computational Medicine  
M.S. 1982, Sofia University, Bulgaria  
Ph.D. 1986, Bulgarian Academy of Sciences

Martin Ulmschneider (2013)  
Assistant Professor, Materials Science and Engineering  

Benjamin van Durme (2016)  
Assistant Professor, Computer Science  
B.A. and B.S. 2001, University of Rochester  
M.S. 2004 and 2006, Carnegie Mellon University  
Ph.D. 2009, University of Rochester

Archana Venkataraman (2016)  
Assistant Professor, Electrical and Computer Engineering  
S.B. 2006, Massachusetts Institute of Technology  
M.Eng. 2007; Ph.D. 2012

Professor, Biomedical Engineering  
Computer Science; Mechanical Engineering  
B.A. 1995, Catholic University  
M.S. 2000, UC Berkeley, Ph.D. 2003

Joshua Vogelstein (2014)  
Assistant Professor, Biomedical Engineering  
B.S. 2002, Washington University, St. Louis  
M.S. 2009, The Johns Hopkins University  
Ph.D. 2009, Johns Hopkins School of Medicine

Xiaohu Wan (2015)  
Assistant Research Professor, Chemical and Biomolecular Engineering

Chao Wang (2012)  
Assistant Professor, Chemical and Biomolecular Engineering  
B.S. 2004, University of Science and Technology of China  
M.S. 2005, Brown University; Ph.D. 2008

Professor, Mechanical Engineering  
B.S. 1995, University of Patras; M.S. 1997, UCLA

Timothy P. Weihs (1995)  
Professor, Materials Science and Engineering  
Mechanical Engineering  
B.S. 1983, Dartmouth; M.S. 1985  
Ph.D. 1990, Stanford University

James West (2003)  
Professor, Electrical and Computer Engineering

Louis L. Whitcomb (1994)  
Professor, Mechanical Engineering  
Computer Science
B.S. 1984, Yale University  
M.S. 1988, Ph.D. 1992

John C. Wierman (1981)  
Professor, Applied Mathematics and Statistics  
B.S. 1971, University of Washington, Ph.D. 1976

Denis Wirtz (1994)  
Theophilus Halley Smoot Professor, Chemical and Biomolecular Engineering  
Materials Science and Engineering  
B.S. 1998, University of Belgium  
M.S. 1990, Stanford, Ph.D. 1993

Yanxun Xu (2015)  
Assistant Professor, Applied Mathematics and Statistics  
B.S. 2007, Beijing University of Aeronautics  
M.S. 2010, Texas Tech University  
Ph.D. 2013, Rice University/University of Texas Joint Program

David Yarowsky (1996)  
Professor, Computer Science  
B.S. 1987, Harvard University  
M.S. 1993, University of Pennsylvania, Ph.D. 1996

Laurent Younes (2003)  
Professor and Chair, Applied Mathematics and Statistic  
M.S. 1985, University Paris Sud, Ph.D. 1988

Alan Yuille (2016)  
Bloomberg Distinguished Professor Computer Science  
Bloomberg Distinguished Professor Cognitive Science, Krieger School of Arts and Sciences  
B.A. 1976, Cambridge University; PhD 1981

Tamer Zaki (2013)  
Associate Professor, Mechanical Engineering  
B.S. 1998, Pennsylvania State University  
M.S. 2001, Stanford University, Ph.D. 2005

Other Faculty Appointments

Lecturers  
William Agresti  
Lecturer, JHU Information Security Institute, 2012

Michael Agronin, M.S.  
Lecturer, Center for Leadership Education, 2012

Robert Allen Ph.D.  
Lecturer, Biomedical Engineering, 2013

Lawrence Aronhime, M.B.A.  
Senior Lecturer, Center for Leadership Education, 2001

Prashant Athavale, Ph.D.  
Lecturer, Applied Mathematics and Statistics, 2015

David Audley, Ph.D.  
Senior Lecturer, Applied Mathematics and Statistics, 1997

Soraya Bailey, M.Sc.  
Lecturer, Mechanical Engineering, 2016

Jenny Bernstein, M.P.H.  
Lecturer, Center for Leadership Education, 2014

Beryl Castello, Ph.D.  
Senior Lecturer, Applied Mathematics and Statistics, 2004

Xin Chen, Ph.D.  
Lecturer, Civil Engineering, 2012

Joel Coffman, Ph.D  
Lecturer, Information Security Institute

Lise Dahuron, Ph.D.  
Lecturer, Chemical and Biomolecular Engineering, 2007

Laura Davis, M.A.  
Lecturer, Center for Leadership Education, 2011

Lucas deMelo, Ph.D.  
Lecturer, Civil Engineering, 2012

Marci De Vries, M.A.  
Lecturer, Center for Leadership Education, 2011

Kevin Dungey, Ph.D.  
Senior Lecturer, Center for Leadership Education, 1998

David Fisher, J.D.  
Lecturer, Center for Leadership Education, 2001

Mark Franceschini  
Senior Lecturer, Center for Leadership Education, 2000

Peter Fröhlich, Ph.D.  
Senior Lecturer, Computer Science, 2005

Sean Furlong, M.A.  
Lecturer, Center for Leadership Education, 2013

Mary Furst, M.S.  
Lecturer, Center for Leadership Education

Robert E. Glaser, Ph.D.  
Lecturer, Electrical and Computer Engineering, 1987

An Goffin, Ph.D.  
Lecturer, Chemical and Biomolecular Engineering, 2008

Jeremy Gorelick, M.S.  
Lecturer, Center for Leadership Education

Robert Graham, M.S.  
Lecturer, Center for Leadership Education, 2014

Christine Grillo, M.S.  
Lecturer, Center for Leadership Education

Eileen Haase, Ph.D.  
Senior Lecturer, Biomedical Engineering, 2003

Jason Heiserman, Ph.D.  
Lecturer, Center for Leadership Education, 2009

Illysa Izenberg, MBA  
Lecturer, Center for Leadership Education, 2010

Michael Jacobs  
Lecturer, Computer Science, 1999
Christopher Jeffers, Ph.D.
Lecturer, Center for Leadership Education

Nicole Jerr, M.A
Lecturer, Center for Leadership Education

Theresa Jones, M.B.A.
Lecturer, Center for Leadership Education, 2010

George Kalb, M.S.
Lecturer, Computer Science, 2000

Michael Karweit, Ph.D.
Senior Lecturer, Geography and Environmental Engineering

Leslie Kendrick, M.B.A.
Senior Lecturer, W.P. Center for Leadership Education, 2000

Mark Kennedy, M.S.
Lecturer, Center for Leadership Education

Michael Kociemba, M.S.
Lecturer, JHU Information Security Institute, 2012

Sheela Kosaraju, J.D.
Lecturer, Computer Science, 2008

Andrew F. Kulanko, M.S.
Senior Lecturer, Center for Leadership Education, 2001

Andreas Lares, M.A.
Lecturer, Center for Leadership Education

Harold Lehmann, M.D., Ph.D.
Lecturer, Computer Science, 1993

Seth LeJacq, Ph.D.
Lecturer, Center for Leadership Education

Annette Leps, M.B.A.
Senior Lecturer, Center for Leadership Education, 2006

Xiangyang Li, Ph.D.
Senior Lecturer, JHU Information Security Institute, 2012

Denise Link-Farajali, Ed.M.
Lecturer, Center for Leadership Education, 2011

Elizabeth Logsdon, Ph.D.
Lecturer, Engineering for Professionals

David Mahoney, M.S.
Lecturer, Center for Leadership Education

John Matteo, M.S.E.
Lecturer, Civil Engineering, 2008

Michael Mattia, M.S.
Lecturer, Center for Leadership Education

Anil Maybhate, Ph.D.
Lecturer, Engineering for Professionals

Timothy McGee, Ph.D.
Lecturer, Mechanical Engineering, 2011

Edmund Meade, M.A.

Lecturer, Civil Engineering, 2015

John Miller, Ph.D.
Lecturer, Applied Mathematics and Statistics, 2015

Lindsay Monti, J.D.
Lecturer, Center for Leadership Education

Charlotte O'Donnell, M.F.A.
Lecturer, Center for Leadership Education, 2009

Martin Ozimek, Ph.D.
Lecturer, Mechanical Engineering, 2011

Heather Parker, Ph.D.
Lecturer, Center for Leadership Education

Kerri Phillips, Ph.D.
Lecturer, Mechanical Engineering, 2015

Luc Phinney,
Lecturer, Mechanical Engineering, 2015

Marco Priolo, M.S.
Lecturer, Center for Leadership Education, 2014

Keith Quesenberry, M.S.
Senior Lecturer, Center for Leadership Education, 2012

Brian Rakes, J.D.
Lecturer, Center for Leadership Education, 2012

Julie Reiser, Ph.D.
Senior Lecturer, Center for Leadership Education, 2007

Joshua Reiter, Ed.D.
Senior Lecturer, Center for Leadership Education, 2000

Eric Rice, Ph.D.
Senior Lecturer, Center for Leadership Education, 2006

Elaine Richman, Ph.D.
Lecturer, Center for Leadership Education

Yury Ronzhes, Ph.D.
Lecturer, Mechanical Engineering, 2008

Tiffany Sanchez, M.S.
Lecturer, Center for Leadership Education

Douglas S. Sandhaus, J.D.
Senior Lecturer, Center for Leadership Education, 2002

Rachel Sangree, Ph.D.
Lecturer, Civil Engineering, 2009

William Sauers, J.D.
Lecturer, JHU Information Security Institute, 2012

Gary Schultz, Ph.D.
Lecturer, Applied Mathematics and Statistics, 2013

Nathan Scott, Ph.D.
Senior Lecturer, Mechanical Engineering, 2011

Somnath Sengupta, Ph.D.
Lecturer, Center for Leadership Education, 2016
Faculty Listings

Pamela Sheff, Ph.D.
Senior Lecturer, Center for Leadership Education, 2006

William Smedick, Ed.D.
Senior Lecturer, Center for Leadership Education, 2007

Justin Spivey, M.S.
Lecturer, Civil Engineering, 2015

Dennis Sullivan, M.S.
Lecturer, Center for Leadership Education

Monica Sweidel, M.A.
Lecturer, Center for Leadership Education

Jay Thompson, M.S.
Lecturer, Center for Leadership Education, 2013

Federico Torcaso, Ph.D.
Senior Lecturer, Applied Mathematics and Statistics, 2002

Adam Treiser, J.D.
Lecturer, Center for Leadership Education, 2016

Tamara Warren-Chinyani, Ph.D.
Lecturer, Center for Leadership Education

Peter Wayner, Ph.D.
Lecturer, Computer Science

Caroline Wilkins, Ph.D.
Lecturer, Center for Leadership Education, 2012

Justin Williams, Ph.D.
Senior Lecturer, Geography and Environmental Engineering, 1999

Olya Wilson, Ph.D.
Senior Lecturer, Materials Science and Engineering, 2008

Joint Appointments

Steven An, Ph.D.
Associate Professor, School of Public Health
Chemical and Biomolecular Engineering, 2014

Stephen Belkoff, Ph.D.
Associate Professor, Orthopedic Surgery (Medicine)
Mechanical Engineering 2001

Emad Doct, Ph.D.
Assistant Professor, Radiology and Radiological Sciences (Medicine)
Computer Science, 2009
Electrical and Computer Engineering, 2013

Paul Bottomly, Ph.D.
Professor, Radiology (Medicine)
Electrical and Computer Engineering 2000

Kit Bowen, Ph.D.
Professor, Chemistry; Materials Science and Engineering, 2014

Patrick Breysse, Ph.D.
Professor, Environmental Health (Public Health)
Chemical and Biomolecular Engineering

Chia-Ling Chien, Ph.D.
Professor, Physics and Astronomy; Materials Science and Engineering

Michael Choti, Ph.D.
Associate Professor, Surgery, School of Medicine

Michael Edidin, Ph.D.
Professor, Biology (Arts and Sciences)
Materials Science and Engineering, 2005

Jennifer Elisseiff, Ph.D.
Professor, Biomedical Engineering (Medicine)
Chemical and Biomolecular Engineering, 2012
Materials Science and Engineering, 2014

Laura Ensign-Hodges, Ph.D.
Assistant Professor, Ophthalmology-Nanomedicine, School of Medicine, 2016

Joshua Epstein, M.D.
Professor, Emergency Medicine;
Applied Mathematics and Statistics, 2011
Civil Engineering, 2016

Howard Fairbrother, Ph.D.
Professor, Chemistry, Materials Science and Engineering, 2014

Liliana Florea, Ph.D.
Assistant Professor, General Internal Medicine (Medicine)
Computer Science, 2013

Eric Frey, Ph.D.
Professor, Radiology (Medicine)
Electrical and Computer Engineering, 2010

Peter Geilbach, Ph.D.
Ophthalmology, School of Medicine
Electrical and Computer Engineering, 2014

Daniele Gilkes, Ph.D.
Onchology, Chemical and Biomolecular Engineering, 2015

Warren Grayson, M.D.
Assistant Professor, Biomedical Engineering, (Medicine);
Materials Science and Engineering, 2014

Jordan Green, M.D.
Associate Professor, Biomedical Engineering, (Medicine);
Materials Science and Engineering, 2014

John Isaacs, Ph.D.
Professor, Chemical Therapeutics (Medicine)
Chemical and Biomolecular Engineering, 2007

Robert Ivkov, M.D.
Assistant Professor, Oncology (Medicine);
Materials Science and Engineering, 2014

Lynn Jones, M.D.
Associate Professor, Orthopaedic Surgery, School of Medicine
Materials Science and Engineering, 2015

Rangaramar Kannan, Ph.D.
Professor, Center for Nanomedicine (Medicine)
Materials Science and Engineering, 2011
Thomas Kirsch, M.D
Associate Professor, Emergency Medicine, School of Medicine
Civil Engineering, 2014

Albert Lardo, M.D
Associate Professor, Department of Medicine;
Mechanical Engineering, 2013

Seulki Lee, M.D.
Assistant Professor, Radiology, School of Medicine
Materials Science and Engineering, 2015

Stuart W. Leslie, Ph.D.
Professor, History of Science and Technology (Arts and Sciences)
Geography and Environmental Engineering 1997

Scott Levin, M.D.
Associate Professor, Emergency Medicine, School of Medicine
Civil Engineering, 2014

Xingde Li, M.D.
Professor, Biomedical Engineering, School of Medicine
Electrical and Computer Engineering, 2014

Jonathan Links, M.D.
Professor, Toxicological Sciences, Bloomberg School of Public Health
Civil Engineering

Elliot McVeigh, Ph.D.
Professor, Biomedical Engineering (Medicine)
Electrical and Computer Engineering, 2007; Computer Science, 2013

Mihaela Pertea, M.D.
Assistant Professor, Department of Medicine, School of Medicine
Computer Science, 2015

Kenneth Pienta, M.D.
Professor, Urology, School of Medicine
Chemical and Biomolecular Engineering, 2014

Aleksander S. Popel, Ph.D.
Professor, Biomedical Engineering (Medicine)
Mechanical Engineering 1986
Chemical and Biomolecular Engineering

Arman Rahmim, Ph.D.
Assistant Professor, Radiology (Medicine)
Electrical and Computer Science 2010

Kannan Rangeramanujam, M.D.
Professor, Department of Ophthalmology (Medicine);
Materials Science and Engineering, 2014

Mark Robbins, Ph.D.
Professor, Physics and Astronomy (Arts and Sciences)
Mechanical Engineering 2001

Douglas Robinson, M.D.
Professor, School of Medicine
Chemical and Biomolecular Engineering, 2005

Steven Salzberg, Ph.D.
Professor, Internal Medicine (Medicine)
Computer Science, 2011

Jeffrey Siewerdsen, Ph.D.
Biomedical Engineering (Medicine);
Computer Science, 2010

J. Webster Stayman, Ph.D.
Assistant Professor, Biomedical Engineering, School of Medicine
Electrical and Computer Engineering, 2015

Dan Stoianovici, Ph.D.
Professor, Urology (Medicine)
Mechanical Engineering, 2005

Alexander Szalay, Ph.D.
Professor, Physics and Astronomy (Arts and Sciences)
Computer Science 2001

James Taylor, Ph.D.
Associate Professor, Biology
Computer Science 2014

Nitish Thakor, Ph.D.
Professor, Biomedical Engineering (Medicine)
Electrical and Computer Engineering, 2007

John Tovar, Ph.D.
Associate Professor, Chemistry;
Materials Science and Engineering, 2014

Benjamin Tsui, Ph.D.
Professor, Radiology (Medicine)
Electrical and Computer Engineering 2006

Raimond L. Winslow, Ph.D.
Professor, Biomedical Engineering (Medicine)
Director, Center for Cardiovascular Bioinformatics and Modeling,
Computer Science 1991; Electrical and Computer Engineering, 2003

Thomas Woolf
Professor, Department of Physiology
Computer Science, 2013

Benjamin Zaitchik, Ph.D.
Assistant Professor, Earth and Planetary Sciences, KSAS
Geography and Environmental Engineering, 2015

Jin Zhang, M.D.
Professor, Pharmacology and Molecular Sciences, School of Medicine
Chemical and Biomolecular Engineering, 2015
