### Honors Program in History (BA)

The history department strongly encourages all eligible history majors to pursue the honors track in history. The track culminates in the senior thesis, a yearlong, “capstone” research project completed under the direct supervision of an individual faculty advisor. Like all capstone projects, the senior thesis is intellectually challenging and its completion almost always brings with it a tremendous sense of accomplishment. It also hones the talented young historian’s capacity to sustain a cogent argument based on primary evidence in the long form essay. These skills and the completion of a sustained independent project are also important practical assets when seeking a job or a post-graduate education.

A general cumulative GPA of 3.25 and a cumulative GPA in history of 3.5 are prerequisites for undertaking the senior thesis, and to obtain honors students will normally be expected to complete the thesis with...
create a lively intellectual community in which graduate students quickly become contributing members. The combination of flexibility, independence, and scholarly collegiality offered by the Hopkins program gives it a distinctive character.

Students select four fields (one major and three minor) and make their own arrangements with professors for a study program leading to comprehensive examinations at the end of the second year. Those arrangements may include taking a seminar in the field. One, and exceptionally two, minor field may be taken outside the Department of History. Students have maximum flexibility in the construction of individual plans of study, as well as the opportunity to work closely with several professors.

Admission and Financial Aid

In judging applications, the department puts particularly heavy emphasis on the quality of the student's historical interests and prior research experience. Each applicant must submit a sample of written work. Applicants must also take the general aptitude portions of the Graduate Record Examination. Ordinarily no candidate for admission is accepted whose record does not indicate an ability to read at least one foreign language.

The department accepts only those students who plan to work in the specific fields of the faculty, and each student is admitted only with the approval of a particular professor. Applicants should indicate the proposed field of specialization at the time of application. With the concurrence of a new faculty advisor, students may, of course, later change their major professor.

The department normally provides full fellowship support for all admitted students including both tuition and a stipend. Students are encouraged to apply for external support if eligible.

Four-year B.A. - M.A. Program in History

The B.A. - M.A Program is an accelerated program that allows the undergraduate to complete a BA and an MA in history in four years. It is designed for students who demonstrate exceptional scholarly ability and assumes that the student will complete most other requirements for graduation by the end of the junior year. Minimum prerequisites for admission include a GPA of 3.8 or higher, completion of language requirements through the intermediate level by the end of the junior year, and the securing of a faculty sponsor in the department of history in advance of application. Students seeking admission into the BA-MA program shall submit a formal application to the regular graduate program in history. The application deadline is December 15 of the junior year.

The program of study during the senior year includes 6-7 credits of graduate reading and research seminars or independent study each semester, mastery of the scholarship in the student's area of research concentration as demonstrated by the successful completion of a graduate field examination in that area of concentration; and, in lieu of the senior thesis, the completion of a major scholarly research essay equivalent in quality to those completed by first year graduate students in the regular doctoral program. For questions and further details about the program, contact Megan Zeller, mzeller4@jhu.edu, Graduate Coordinator, Department of History, who can also provide details about application procedures.

Five-year Barcelona B.A. - M.A. Program

Hopkins Barcelona

5-year BA/MA in World History Program

This program provides a select group of undergraduates the opportunity to pursue an integrated, consecutive 5-year dual-degree BA/MA between JHU and Universitat Pompeu Fabra (UPF) in Barcelona that will lead to the MA in world history from UPF. JHU students will spend either the fall or spring of their junior year at UPF, earning credits toward their UPF MA requirements. They will receive their Hopkins BA at the end of four years, and then pursue the UPF MA degree in their fifth year of study.

Further information is available through the Office of Study Abroad.

Requirements for the Ph.D. Degree

Students are required to have a reading knowledge of those foreign languages that are necessary for the satisfactory completion of their program of graduate study. Students in European history must have a reading knowledge of at least two languages, and students in medieval history must also have a reading knowledge of Latin. Students of Chinese history are expected to have reading knowledge of modern and classical Chinese and in most cases should also have reading knowledge of Japanese and/or a European language. Students in the Latin American area must have a reading knowledge of two of the following, depending upon their particular specialties: French, Spanish, Portuguese, or Dutch. In African history, students must have a reading knowledge of three languages including English and French. Depending upon their fields of specialization, students in African history may have other language needs. Students are expected to pass a written examination in one language within a month after entering the department, and they are required to do so before the end of the first year.

Each student is required to take a seminar under his/her major professor and to participate in at least one departmental seminar each semester.

The student’s knowledge of four fields will be tested by written and oral examinations before the end of the second year of graduate study.

The student must write and defend a dissertation that is a major piece of historical research and interpretation based on primary sources and representing a contribution to historical knowledge. Its content, form, and style must be adequate to make it suitable for publication.

Normally, each student is required to perform some supervised teaching or research duties at some point during the graduate program, most often as a teaching fellow during the second and fourth years.

M.A. Degree

The master of arts degree is automatically awarded to each doctoral candidate following the passing of field examinations and the completion of the language requirements. In special circumstances, a student may be permitted to take an M.A. degree after one full year of graduate study. In such cases students will be required to demonstrate by examination an ability to read at least one foreign language, write a satisfactory research essay, and satisfy the director of their research that they have a mastery of the field of history that forms its background. The essay must be submitted to the Graduate Board.

Faculty

Chair
Michael A. Kwass
Department Chair: Early Modern France, French Revolution, French Atlantic, and globalization.

Professors
Jeffrey Brooks
Russian and Soviet history, with an emphasis on culture and society, the press, and popular culture.

Toby L. Ditz
Early American, Atlantic World, cultural history, and the history of women and gender.

Francois Furstenberg
United States, c. 18th and 19th centuries, and the French Atlantic.

Peter Jelavich
Cultural and intellectual history of Europe since the Enlightenment, with emphasis on Germany, popular culture, mass culture, and the media, and modern social and cultural theory.

Martha S. Jones
Society of Black Alumni Presidential Professor and Professor of History: Race and rights in the 19th century U.S. with an emphasis on slavery, law, gender, and visual culture.

Michael A. Kwass
Department Chair: Early Modern France, French Revolution, French Atlantic, and globalization.

Pier M. Larson
African history with specialization in East Africa, Madagascar, the Indian Ocean, and the history of slavery and the slave trade in the Atlantic world.

John Marshall
Leonard and Helen R. Stulman Professor of History: Early Modern British and Early Modern British Imperial History, Early Modern European Cultural and Intellectual History, and the History of Political Thought.

Tobie Meyer-Fong
East Asia, especially social and cultural history of China since 1600.

Philip D. Morgan
Harry C. Black Professor: Early Modern colonial British America and slavery.

Gabriel Paquette
Imperial, International and Intellectual History (Europe, Latin America).

William T. Rowe
John and Diane Cooke Professor of Chinese History: Modern East Asia, especially socioeconomic, and urban history.

Todd Shepard
Arthur O. Lovejoy Professor: Modern France and French empire, decolonization, and gender and sexuality

Gabrielle Spiegel
Krieger-Eisenhower Professor: Medieval history, with special interest in historiography and linguistic analysis.

Ronald G. Walters
Social and cultural history of the United States with special interest in radicalism, reform, race, and popular culture.

Associate Professors
Angus Burgin
Director of Graduate Studies: 20th-century United States, political history, intellectual history, and the history of capitalism.

Nathan Connolly
Herbert Baxter Adams Associate Professor of History: Twentieth-century America, racism, capitalism, urban and suburban history, and African diaspora.

Pawel Maciejko
Early modern history, Jewish history, intellectual history, and East-Central Europe.

Kenneth Moss
Felix Posen Chair in Modern Jewish History: Modern Jewish history, history of Israel, Russia, Poland, and Eastern Europe, Jewish political thought, Hebrew and Yiddish literature and culture, history and sociology of nationalism, theory and practice of cultural history, and the history of the cultural sphere.

Erin Rowe
Director of Undergraduate Studies: Early modern Spain, the Mediterranean, saints and sanctity, and women and gender.

Assistant Professors
Tamer el-Leithy
Social/cultural history of the medieval Middle East and Mediterranean, and history of religious difference.

Katie Hindmarch-Watson
Modern Britain and the British Empire, urban space, gender and sexuality, and labor and technology.

Jessica Marie Johnson
Women, gender, and sexuality in the African diaspora, histories of slavery and the slave trade, and digital history and new media.

Hayang "Yumi" Kim
19th- and 20th-century Japan and Korea, medicine and religion, folk culture, colonialism, and the history of women and gender.

Casey Lurtz
Modern Mexico and Latin America more broadly, rural and agricultural history, commodities, history of development, economic history, and Atlantic history.

Elizabeth Thornberry
History of gender, sexuality, empire, and law in Southern Africa and across the continent.

Senior Lecturers
Laura Mason
French Revolution, democracy and violence, cultural history and media, history and film, and French film.

Visiting Professors
Jean Hébrard

Professors Emeriti
Sara S. Berry
Robert Forster  
Louis Galambos  
Richard Goldthwaite  
Jack P. Greene  
Andrew W. Mellon Professor of the Humanities Emeritus.  
Jane Guyer  
Michael Johnson  
Richard L. Kagan  
Franklin W. Knight  
Leonard and Helen R. Stulman Professor of History.  
Ruth Leys  
Vernon Lidtke  
John G. A. Pocock  
Harry C. Black Professor Emeritus.  
Orest Ranum  
Willie Lee Rose  
Dorothy Ross  
Arthur O. Lovejoy Professor Emerita.  
Mary Ryan  
Nancy Struvever  
Mack Walker  
Judith Walkowitz

Courses

**AS.100.102. The Medieval World. 3.0 Credits.**
This course will explore selected topics in the political, economic, social, and intellectual history of Western Europe in the period between the fall of the Roman Empire and the thirteenth century. Special emphasis will be given to understanding the ways in which medieval society functioned as a pioneer civilization, compelled to reorganize itself after the almost total collapse of the ancient world, and to the interplay between material and cultural forces in the processes of social organization.
Instructor(s): G. Spiegel  
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.100.103. Early Modern Europe & the Wider World. 3.0 Credits.**
This course surveys the history of Europe and its interactions with Africa, the Americas, and Asia during the early modern period (c. 1400-1800). Topics include: the Renaissance, the Reformation, International Relations and Warfare, Colonialism, the Enlightenment, and the Age of Revolutions.
Instructor(s): E. Rowe  
Area: Humanities, Social and Behavioral Sciences.

**AS.100.104. Modern Europe and the Wider World. 3.0 Credits.**
European history since the French Revolution. Topics include: revolutions and democratization, industrialization, nationalism, imperialism, two World Wars, fascism, decolonization, Soviet communism, and formation of the European Union.
Instructor(s): P. Jelavich  
Area: Humanities, Social and Behavioral Sciences.

**AS.100.108. Making America: Black Freedom Struggles to 1896. 3.0 Credits.**
From slave revolts on the West African coast to national conventions and civil war, people of African descent have defined freedom and struggle in terms of kinship, diasporic connection, and fighting antiblack violence. This course explores the arc of that history and its role in the making of America.
Instructor(s): J. Johnson  
Area: Humanities, Social and Behavioral Sciences.

**AS.100.109. Making America: Slavery, Violence, and the Coming of the Civil War. 3.0 Credits.**
An examination of violence - primarily racial and political - in the decades between the American Revolution and Civil War (1789 to 1861).
Instructor(s): R. Walters  
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.100.110. Making America: Politics and Society since the Great Depression. 3.0 Credits.**
This course explores the interplay between economic growth and instability, diversity and conformity, war and protest, and liberalism and conservatism in modern American politics and society. Previously offered as AS.100.182, “The United States since 1929.”
Instructor(s): A. Burgin  
Area: Humanities, Social and Behavioral Sciences.

**AS.100.112. Making America: Mastery & Freedom, 1609-1789. 3.0 Credits.**
Early America from the arrival of Europeans to the US constitution. Covers transatlantic empires and their rivalries; formation of Anglo-American settler societies based on slavery and patriarchal households; conflict with Native Americans; the revolutionary era and its tensions between republican principles of freedom and independence and persisting, even deepening, gender and racial inequalities.
Instructor(s): T. Ditz  
Area: Humanities, Social and Behavioral Sciences.

**AS.100.113. Making America: Race, Radicalism, and Reform. 3.0 Credits.**
Beginning with the end of Reconstruction and continuing through the present day, this course will examine the complicated ways in which Americans attempted to come to terms with racial, ethnic, cultural, and other forms of diversity.
Instructor(s): R. Walters  
Area: Humanities, Social and Behavioral Sciences.

**AS.100.114. Making America: U.S. History in the Age of Atlantic Revolution. 3.0 Credits.**
Transnational approaches to U.S. history, c. 1760-1830, with a particular emphasis on the impact of the French and Haitian Revolutions.
Instructor(s): F. Furstenberg  
Area: Humanities, Social and Behavioral Sciences.
AS.100.115. Modern Latin America. 3.0 Credits.
Survey of Latin American history from Independence to the present. The course will look at the meaning of nations and citizenship through the lenses of international relations, development, and identity.
Instructor(s): C. Lurtz
Area: Humanities, Social and Behavioral Sciences.

AS.100.117. History of Brazil. 3.0 Credits.
Instructor(s): G. Paquette
Area: Humanities.

AS.100.122. Introduction to History of Africa (since 1880). 3.0 Credits.
Instructor(s): E. Thornberry
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.123. Introduction to African History: Diversity, Mobility, Innovation. 3.0 Credits.
An introduction to African history with emphasis on diversity, mobility, and innovation. Considers both early and modern times.
Instructor(s): P. Larson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.129. Introduction to Modern Jewish History. 3.0 Credits.
Jewish history 1750-present in Europe, the Near East, the US, Israel; the challenges of modernity and new forms of Jewish life and conflict from Enlightenment and emancipation, Hasidism, Reform and Orthodox Judaism to capitalism and socialism; empire, nationalism and Zionism; the Holocaust. Extensive attention to US Jewry and State of Israel.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences

AS.100.145. Modern Mexico from the Alamo to El Chapo. 3.0 Credits.
In this course we will use popular depictions of Mexico’s heroes and villains, tragedies and triumphs to delve into both the nation’s history and the importance of thinking historically.
Instructor(s): C. Lurtz
Area: Humanities, Social and Behavioral Sciences

AS.100.154. Modern Mexico from the Alamo to El Chapo. 3.0 Credits.
In this course we will use popular depictions of Mexico’s heroes and villains, tragedies and triumphs to delve into both the nation’s history and the importance of thinking historically.
Instructor(s): C. Lurtz
Area: Humanities, Social and Behavioral Sciences

AS.100.163. Online: Modern European History Through Film, 1789 to 1991. 3.0 Credits.
This course examines the history of Western Europe from the French Revolution through to the end of the Cold War. It examines such themes as revolutions and democratization, the origins of egalitarianism, the spread of secularism, the post-war reshaping and modernization of Western culture and political policies (European and otherwise), Europe’s role in the fall of the Ottoman Empire, and decolonization. Films depicting key periods and events will be used to complement readings.
Instructor(s): S. Stewart
Area: Humanities.

AS.100.193. Undergraduate Seminar in History. 3.0 Credits.
The first semester of the two-semester sequence required for majors, this course introduces students to the theory and practice of history. Following a survey of approaches to the study of the past and an introduction to research methods, students undertake original research and write an extended essay. Intended for history majors and prospective majors.
Instructor(s): F. Furstenberg; L. Mason
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.194. Undergraduate Seminar in History. 3.0 Credits.
The second semester of the two-semester sequence required for majors, this course further introduces students to the theory and practice of history. Students write an essay based on original research.
Prerequisites: AS.100.193
Instructor(s): K. Hindmarsh-Watson; W. Rowe
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.201. Freshman Seminar: Prostitution in a Global Perspective, 1750-2012. 3.0 Credits.
This course examines topics such as the ‘medical model’ of prostitution regulation, the rise of international anti-prostitution, and the responses of modern nationalists to sex work in a global context.
Instructor(s): S. Stewart
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.202. Conflict and Co-Existence: The Early Modern Mediterranean. 3.0 Credits.
This course explores the dynamic and fluid world of the early modern Mediterranean (1453-1650), where Christians, Jews, and Muslims met, fought, traded with, and enslaved each other.
Instructor(s): E. Rowe
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.203. Freshman Seminar: From Columbus to Calypso: The Caribbean and the Wider World. 3.0 Credits.
This course examines the history of the Caribbean and how five hundred years of colonization, slavery, piracy, rebellion, and revolution have shaped the politics and culture of the islands today.
Instructor(s): L. MacDonald
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.204. Freshman Seminar: Abraham Lincoln and his America. 3.0 Credits.
Freshman seminar that explores the life and times of Abraham Lincoln through contemporary sources and texts by historians.
Instructor(s): M. Johnson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.205. Freshman Seminar: Health, Healing, and Medicine in Africa. 3.0 Credits.
A freshman seminar introducing students to the history of health, healing, and forms of medical practice in Africa over the last two centuries.
Instructor(s): P. Larson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.206. Freshman Seminar: Law, Society, and Power in America, 1500-1877. 3.0 Credits.
This course examines the relationship between law, governance, and social structures in America between the start of European settlement and the era of the Civil War. Topics will include Native American and European land claims, the regulation of family life, economic and commercial disputes, and the legal regimes of race and slavery. Throughout, we will consider both the aims of governing officials and how ordinary men and women maneuvered within the legal system. Freshman only.
Instructor(s): S. Damiano
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.207. Freshman Seminar: Americans in Paris, 1787-1971. 3.0 Credits.
This freshman seminar focuses on the often life-changing experiences of American travelers and expatriates in Paris as a way of thinking about travel and what gives cities particular identities.
Instructor(s): R. Walters
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.209. Freshman Seminar: Mexico and the World from Cortés to Cartels. 3.0 Credits.
This introductory course examines Mexico’s political, economic, and cultural role in global history from the time of Spanish conquest until the twenty-first century.
Instructor(s): J. Clark
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.210. Freshman Seminar: Real Pirates of the Caribbean. 3.0 Credits.
This freshman seminar explores the rise of economic crimes, including piracy, smuggling, and counterfeiting, in the 17th- and 18th-century British North America and Caribbean, and their portrayal in popular culture. Freshmen Only.
Instructor(s): K. Smoak
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.211. Freshman Seminar: American Slavery. 3.0 Credits.
This seminar explores the history of American slavery, tracing developments over time and across space, probing the impact of this iniquitous and dynamic institution on societies and individuals, and examining a variety of sources that historians use to construct their narratives. Freshman only
Instructor(s): P. Morgan
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.212. Freshman Seminar: Jews in the Medieval Mediterranean: The Politics of Conquest under Crescent and Cross. 3.0 Credits.
How can Jewish history help us understand the politics of Islamic and Christian states in Sicily, Spain, and Palestine in the age of Crusade and holy war? Freshman only
Instructor(s): B. Goldman
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.213. Freshman Seminar: History of Gender and the Family in the United States. 3.0 Credits.
For Freshman Only. Discussion style. Introduces major themes since 1700: family sentiment and authority relations; gender and sexuality; family and work; dynamics of family and race. Readings emphasize interdisciplinary perspectives and interpretation of primary sources.
Instructor(s): T. Ditz
Area: Humanities, Social and Behavioral Sciences.

AS.100.214. Freshman Seminar: Russia and the West. 3.0 Credits.
Students will consider Russian political culture and the Russian cultural tradition from Pushkin to Putin.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.215. Freshman Seminar: US-USSR Cold War. 3.0 Credits.
Focus on Stalin, Khrushchev/Truman Ike period but includes Brezhnev. 2 sides of cold war; write 6-7 journals of 300 wds, 2 papers of 1200 words, 2 quizzes, no midterm or final.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.217. Freshman Seminar: Cities and Modern Life in Victorian Britain. 3.0 Credits.
Victorian Cities focuses on the politics of everyday life, space, consumption, and concepts of the self in Britain's major urban centers, including London, Manchester, and Dublin, from 1830 to 1914.
Instructor(s): K. Hindmarch-Watson
Area: Humanities, Social and Behavioral Sciences.

AS.100.218. Freshman Seminar: Russian History from Revolution to Cold War. 3.0 Credits.
Students will explore Russian politics and culture from 1905 to 1953.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.219. Chinese Cultural Revolution. 3.0 Credits.
The Cultural Revolution was Mao Zedong’s last attempt to transform Chinese society spiritually and structurally. The events of this period were marked by social upheaval, personal vendettas, violence, massive youth movements, and extreme ideological pressure. This course will explore the Cultural Revolution from a variety of perspectives, focusing on the relationship between events in China from 1966-1976, and their interpretation in China and the West during the Cultural Revolution decade and since.
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences.

AS.100.220. Freshman Seminar: Trade Wars: Commerce and Competition in the Early Modern World. 3.0 Credits.
In the Age of Exploration, European states engaged in fierce competition for valuable natural resources, trade routes, and markets. This course will explore the ways in which Britain, France, Spain, Portugal, and the Netherlands vied with each other by land and sea to increase their share of global trade. Freshman Only.
Instructor(s): C. Consolino
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.221. Freshman Seminar: The Medieval City. 3.0 Credits.
This course focuses on the development and growth of medieval cities in western Europe. Students will explore the various functions of cities, uses of urban space, and challenges they faced.
Instructor(s): N. Daniels
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.223. History of Modern Germany. 3.0 Credits.
There is more to Germany than beer, BMWs, and Bayern Munich. We will explore politics, culture, economics and society to understand Germany and its position within Europe and the world.
Instructor(s): Staff
Area: Humanities, Social and Behavioral Sciences.
AS.100.234. The Making of the Muslim Middle East, 600-1100 A.D.. 3.0 Credits.
A survey of the major historical transformations of the region we now call the 'Middle East' (from late antiquity through the 11th century) in relation to the formation and development of Islam and various Muslim empires. Cross-listed with Near Eastern Studies and the Program in Islamic Studies.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.235. Freshman Seminar: Politics, Society and Economics in the Renaissance. 3.0 Credits.
This course will focus on the long-distance trade of both foodstuffs and clothe in order to investigate urbanization and the development of national monarchies in western Europe from the outbreak of the Black Death (1347) to the eve of the Reformation (1517).
Instructor(s): H. Stein
Area: Humanities, Social and Behavioral Sciences.

AS.100.236. Chinese Cultural Revolution. 3.0 Credits.
The Cultural Revolution was Mao Zedong's last attempt to transform Chinese society spiritually and structurally. The events of this period were marked by social upheaval, personal vendettas, violence, massive youth movements, and extreme ideological pressure. This course will explore the Cultural Revolution from a variety of perspectives, focusing on the relationship between events in China from 1966-1976, and their interpretation in China and the West during the Cultural Revolution decade and since. Previously offered as AS.100.219.
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences.

AS.100.237. Freshman Seminar: Impeachments and Beyond: Law, Justice, and Politics in Latin America. 3.0 Credits.
This course is an introduction to legal ideas and institutions through the Latin American political experience. By the end of this course, students will be equipped with the fundamentals of Latin America's long political history (from colony to present) and will be able to identify how legal ideas and institutions change over time. Students will also gain insights on debates and conversations on the relationship between law, justice, and politics that go beyond Latin America's history.
Instructor(s): A. Caso Bello
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.241. American Revolution. 3.0 Credits.
This course provides an intensive introduction to the causes, character, and consequences of the American Revolution, the colonial rebellion that produced the first republic in the Americas, and set in motion an age of democratic revolutions in the Atlantic world. A remarkable epoch in world history, the revolutionary era was of momentous significance.
Instructor(s): P. Morgan
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.243. China: Neolithic to Song. 3.0 Credits.
This class offers a broad overview of changes in China from Neolithic times through the Song Dynasty (roughly from 5000 BCE through the 13th century CE) and will include discussion of art, material culture, and literature as well as politics and society. Close readings of primary sources in discussion sections and extensive use of visual material in lectures will help students gain firsthand perspective on the materials covered. Not open to students who have previously taken AS.100.208. Cross listed with East Asian Studies
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences.

AS.100.244. The Power and Politics of Clothing in American History. 3.0 Credits.
This course explores the power of clothing and the politicization of appearances at moments of deep political and social unrest in American history (18th-20th centuries).
Instructor(s): S. Templier
Area: Humanities, Social and Behavioral Sciences.

AS.100.245. Freshman Seminar: You are what you eat: Food and Farm Politics, Policy, and Culture in 20th Century America. 3.0 Credits.
This class will examine food production and consumption both in the classroom and outside of it to understand how high-stakes policy and grassroots culture meet to shape our nutritional reality. Freshman only
Instructor(s): R. Stoil
Area: Humanities, Social and Behavioral Sciences.

AS.100.246. Colonial Latin American History Survey. 3.0 Credits.
This course offers a general survey of Colonial Latin American history, covering both Spanish and Portuguese America, from European conquest to the revolutionary wars of independence. Emphasis will be placed in exploring the nature and effects of conquest, the making of new pluri-ethnic societies, and the eventual break of these societies from Spain and Portugal.
Instructor(s): G. Garcia Montufar
Area: Humanities, Social and Behavioral Sciences.

AS.100.248. Japan in the World. 3.0 Credits.
This course is an introduction to Japan's history from 1800 to the present with emphasis on the influences of an increasing global circulation of ideas and people. Topics include the emperor system, family and gender, imperialism, World War II, the postwar economy, and global J-pop.
Instructor(s): H. Kim
Area: Humanities, Social and Behavioral Sciences.

AS.100.249. Baltimore as Historical Site. 3.0 Credits.
The city of Baltimore will serve as a laboratory in which to study American History. We will explore the urban landscape on foot as well as through written sources.
Instructor(s): M. Ryan
Area: Humanities, Social and Behavioral Sciences.

AS.100.251. From Columbus to Calypso: The Caribbean and the Wider World. 3.0 Credits.
This course examines the history of the Caribbean and how five hundred years of colonization, slavery, piracy, rebellion, and revolution have shaped the politics and culture of the islands today.
Instructor(s): L. MacDonald
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.252. Invisible Borders: Exchanges and Migrations in the Modern Mediterranean. 3.0 Credits.
This course explores the patterns of movement formed and transgressed by empire, trade, sex tourism, cultural exchange, war, and nationalism, starting from the nineteenth century to the present-day refugee crisis.
Instructor(s): S. Rahnama
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.254. Modern Mexico from the Alamo to El Chapo. 3.0 Credits.
In this course we will use popular depictions of Mexico's heroes and villains, tragedies and triumphs to delve into both the nation's history and the importance of thinking historically.
Instructor(s): C. Lurtz
Area: Humanities, Social and Behavioral Sciences.
AS.100.255. The Haitian Revolution in World History. 3.0 Credits.
This introductory seminar examines the revolution that transformed the slave colony of Saint-Domingue into the first black republic and second independent nation in the Americas, and its repercussions around the world. Non-Majors welcome.
Instructor(s): N. Marvin
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.256. Prostitution in a Global Perspective, 1750-2012. 3.0 Credits.
This course examines topics such as the 'medical model' of prostitution regulation, the rise of international anti-prostitution, and the responses of modern nationalists to sex work in a global context.
Instructor(s): S. Stewart
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.257. From Voice to Parchment: Media and Communication before the Printing Press, 800-1440. 3.0 Credits.
Epic traditions, call to Crusade, public curses, music of the troubadours: this course examines oral tradition and music—the "viral media" of pre-modern Europe—while tracing the impact of new recording technologies: early musical notation, manuscripts, and book production.
Instructor(s): J. Phillips
Area: Humanities, Social and Behavioral Sciences.
AS.100.260. Boom, Bust, and the Rise of Financial Capitalism in America, 1700-1900. 3.0 Credits.
This course explores how legal, social, and political contestation shaped the development of American financial capitalism. The course also focuses on how financial crises precipitated change throughout American history.
Instructor(s): J. Wallace
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.265. The Medieval City. 3.0 Credits.
This course focuses on the development and growth of medieval cities in western Europe. Students will explore the various functions of cities, uses of urban space, and challenges they faced.
Instructor(s): N. Daniels
Area: Humanities, Social and Behavioral Sciences.
AS.100.266. Jewish and Christian mysticism in the Middle Ages and the Early Modern Period. 3.0 Credits.
This course will trace the historical development of Jewish and Christian mysticism between the 12th and the 17th centuries.
Instructor(s): P. Maciejko
Area: Humanities, Social and Behavioral Sciences.
AS.100.272. Online: Prostitution in a Global Perspective, 1750 to Present. 3.0 Credits.
This course examines topics such as the 'medical model' of prostitution regulation, the rise of international anti-prostitution, and the responses of modern nationalists to sex work in a global context.
Instructor(s): S. Stewart
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.279. Europe since 1945. 3.0 Credits.
This lecture course examines the political, social, and cultural history of postwar Europe with emphasis on the Cold War and the formation of the European Union.
Instructor(s): H. Balz
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.282. Race & Power in Modern South Africa. 3.0 Credits.
South African history from 1800 to the present, with focus on the rise and fall of the apartheid racial state
Instructor(s): E. Thornberry
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.291. Medicine in an Age of Empires, 1500-1800. 3.0 Credits.
How did medicine emerge as a distinctive body of knowledge and a profession in the early modern period? The answers lie in the histories of disease, empire, and global commerce.
Instructor(s): Z. Dorner
Area: Humanities, Social and Behavioral Sciences.
AS.100.295. American Intellectual History since the Civil War. 3.0 Credits.
Readings in American social thought since 1865, ranging across developments in philosophy, literature, law, economics, and political theory.
Instructor(s): A. Burgin
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.301. America after the Civil Rights Movement. 3.0 Credits.
This course explores the history of late twentieth-century America by examining the social, economic, and political legacies of 1960s civil rights protest for the 1970s, 1980s, and 1990s. Students will also participate on an archiving project capturing the experience of Hopkins employees who have recollections of the decades immediately following the civil rights legislations of the 1960s.
Instructor(s): N. Connolly
Area: Humanities
Writing Intensive.
AS.100.303. Old Regime and Revolutionary France. 3.0 Credits.
Examines the history of France from the reign of Louis XIV to the French Revolution, focusing on early modern society, popular culture, absolutism, the Enlightenment, overseas empire, and the French and Haitian Revolutions.
Instructor(s): M. Kwass
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.304. Myth and History in Medieval Europe. 3.0 Credits.
Can a myth be history? This class examines how medieval historians used myths to shape, debate, and even forge their past, and how they redefined history writing in the process.
Instructor(s): N. Weijer
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.306. America and the Great War, 1898-1920. 3.0 Credits.
This small, discussion-oriented course covers the period from the Spanish-American War through the end of WWI and the Red Scare that more or less ended in 1920.
Instructor(s): R. Walters
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.307. Latin American Independence. 3.0 Credits.
This seminar examines the breakdown of the Spanish and Portuguese empires and the emergence of new states in Latin America in the nineteenth century. Topics include: war, revolution, slavery, liberalism, and monarchism.
Instructor(s): G. Paquette
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.308. Introduction to the History of Jewish Mysticism. 3.0 Credits.
The course will familiarize the student with the history of the main phenomena of Jewish mysticism from the ancient times to the present.
Instructor(s): P. Maciejko
Area: Humanities, Social and Behavioral Sciences

AS.100.309. American Social Thought since 1865. 3.0 Credits.
This course explores the intellectual development of the modern United States through readings in philosophy, literature, law, economics, politics, and social theory.
Prerequisites: Cannot enroll if you have taken AS.100.400, same course.
Instructor(s): A. Burgin
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.310. The French Revolution. 3.0 Credits.
Political, social and cultural history of one of the great turning-points in European history. Previously offered as AS.100.204.
Instructor(s): L. Mason
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.311. National Pastimes: Sports, Culture, and American History. 3.0 Credits.
National Pastimes examines the development of sports in the United States over the course of the 20th century with a particular interest in the relationship between sports and politics as well as issues of race, gender, sexuality and class.
Instructor(s): A. Davis
Area: Humanities, Social and Behavioral Sciences.

AS.100.314. The Enlightenment. 3.0 Credits.
This course examines the Enlightenment, an intellectual movement that swept Europe in the eighteenth century to shape the modern world.
Instructor(s): M. Kwass
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.315. Jewish Political Thought and Social Imagination, 1880-1940. 3.0 Credits.
How a range of Jewish thinkers, activists, and creative writers grappled intellectually with the challenge of the nation-state, the rise and collapse of empires, antisemitism as a political phenomenon, the nature of politics and political action, the nature of modern societies, and the question of Jewish self-determination and sovereignty, 1880-1940. Readings by Herzl, Bernard Lazare, Freud, Kafka, Leshtshinsky, Arendt, Adorno, Michael Chabon, among others.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences.

AS.100.316. American Foreign Policy in the Age of Human Rights. 3.0 Credits.
American Foreign Policy in the Age of Human Rights examines competing narratives about the origins of modern international human rights, and explores how those narratives historically informed American foreign policy from the American Revolution up to the present, with an emphasis on the twentieth century.
Instructor(s): K. Sohasky
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.318. The Age of Revolutions. 3.0 Credits.
This seminar focuses on the political, social, and economic thought animating the revolutions which transformed Europe and the Americas, c. 1760 - 1850.
Instructor(s): G. Paquette
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.319. The Tudors: Reforming England 1485-1603. 3.0 Credits.
This course will examine Tudor England, including the reigns of Henry VIII, Edward VI, Mary I, and Elizabeth I, and the intellectual and cultural movements of the Reformation and the Renaissance.
Instructor(s): J. Walker
Area: Humanities, Social and Behavioral Sciences.

AS.100.321. From Ferguson to Cape Town: The Global Black Freedom Struggle since Slavery. 3.0 Credits.
This seminar underscores the global and historical dimensions of the black freedom struggle through a series of case studies spanning North America, Africa and Latin America. Major themes addresses include race, diaspora, and movement(s) from slavery to the present.
Instructor(s): N. Connolly
Writing Intensive.

AS.100.322. Dostoevsky’s Russia. 3.0 Credits.
Dostoevsky and the culture of his era but also echoes of his ideas of Russia, religion, ethnicity, freedom, authority, and gender from 1917 until today. Short papers, quizzes.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.325. Images of War in the 19th and 20th Centuries. 3.0 Credits.
This course examines the changing face of war in photographs, propaganda posters, comics, and film from the American Civil War to the "war on terror."
Instructor(s): H. Balz
Area: Humanities, Social and Behavioral Sciences.
AS.100.326. From Blood Feud to Black Death: European Society in the High Middle Ages, 1000-1400. 3.0 Credits.
Explores the development of society and institutions in the medieval west including kingship and law, religion and difference, gender and ideology. Looks closely at social responses to change and adversity.
Instructor(s): A. Lester
Area: Humanities, Social and Behavioral Sciences.

AS.100.327. Gender and Sexuality in Reformation and Counter-Reformation Europe. 3.0 Credits.
This course will discuss the centrality of gender, sexuality, and gendered rhetoric to the genesis and development of the Protestant Reformation and Catholic Counter-Reformation in Europe.
Instructor(s): J. Keene
Area: Humanities, Social and Behavioral Sciences.

Writing Intensive.

AS.100.328. Caged America: Policing, Confinement, and Criminality in the "Land of the Free". 3.0 Credits.
This course focuses on the evolution of law enforcement practices, the history of federal and state prison systems, and the ways in which Americans have understood and reacted to crime.
Instructor(s): M. Shahann
Area: Humanities, Social and Behavioral Sciences.

Writing Intensive.

AS.100.329. Russian Imagination in Three Revolutions. 3.0 Credits.
Russian Literature and the arts in Revolutions of 1905, 1917, and Stalin era to 1941. Req: 6 journals of 350 words, 2 papers 1250, 2 quizzes. No midterm or final.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences.

Writing Intensive.

AS.100.330. National Identity in 20th Century China & Japan. 3.0 Credits.
Using primary sources, including literature and film, we will explore the changing ways in which ideologues, intellectuals, and ordinary citizens defined national identity in 20th century China and Japan.
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences.

AS.100.331. Historical Performance in the Age of the Troubadours and Trouvères. 3.0 Credits.
We look at the context in which trouvère song was composed, performed, and transmitted in manuscript form. Students will also sing trouvère music, and while a knowledge of musical notation is not strictly necessary, it is helpful. The culmination of the course will be a concert and recording session. A final paper based on primary sources about an aspect of medieval performance is required.
Instructor(s): J. Phillips
Area: Humanities, Social and Behavioral Sciences.

AS.100.332. Persecution and Toleration in Early Modern Europe. 3.0 Credits.
Explores hostilities and fears provoked by religious diversity and deviance from orthodoxy in early modern Europe. Outlines theories, practices, and limits of early modern religious tolerance and intolerance.
Instructor(s): J. Fradkin
Area: Humanities, Social and Behavioral Sciences.

Writing Intensive.

AS.100.333. Billie Holiday and American Culture. 3.0 Credits.
A course examining introducing students to the life, times and music of Billie Holiday. We will read biographies, autobiographies, novels, and listen to music.
Instructor(s): L. Jackson
Area: Humanities, Social and Behavioral Sciences.

Writing Intensive.

AS.100.334. Billie Holiday and American Culture. 3.0 Credits.
Instructor(s): R. Walters
Area: Humanities, Social and Behavioral Sciences.

Writing Intensive.

AS.100.337. Historical Perspectives on Humans and Animals in the Atlantic World and the Early United States, 1500-1860. 3.0 Credits.
Relationships between humans and animals offer a fascinating window into the American past. Readings, written assignments, and discussions will explore environmental, cultural, and scientific approaches to the history of hunting, the domestication of animals and animal ethics in the Atlantic world and the early United States.
Instructor(s): C. Gherini
Area: Humanities, Social and Behavioral Sciences.

Writing Intensive.

AS.100.338. Displacement: A History of U.S. Cities from Urban Renewal to Gentrification. 3.0 Credits.
This course explores historical conflicts over urban planning and public health. Working with the Baltimore City Archives, we will piece together histories of Baltimore residents displaced by urban renewal and the social contexts in which they lived. Tours of Baltimore will consider whether recent strategies have addressed the legacies of racism and classism in urban development.
Instructor(s): M. Speller
Area: Humanities, Social and Behavioral Sciences.

Writing Intensive.

AS.100.340. Russian Imagination. 3.0 Credits.
Culture, Politics, and Society in Russia's great age of creativity, 1850s to 1950s.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences.

Writing Intensive.

AS.100.341. Historical Performance in the Age of the Troubadours and Trouvères. 3.0 Credits.
This seminar examines the practices of musical and theatrical performance in the era of the trouvères and troubadours, "the long thirteenth century." We look at the context in which trouvère song was composed, performed, and transmitted in manuscript form. Students will also sing trouvère music, and while a knowledge of musical notation is not strictly necessary, it is helpful. The culmination of the course will be a concert and recording session. A final paper based on primary sources about an aspect of medieval performance is required.
Instructor(s): J. Phillips
Area: Humanities, Social and Behavioral Sciences.

AS.100.342. Colonial Lives: Individuals in the Atlantic World, 1600-1850. 3.0 Credits.
This course traces the emergence of an Atlantic world, 1600-1850, through the lens of biography. Major themes include European colonization, cross-cultural encounters, slavery and trade, imperial warfare, and political revolutions. Prior experience in an introductory history course strongly recommended.
Instructor(s): W. Brown
Area: Humanities, Social and Behavioral Sciences.
AS.100.343. Diaspora, Nation, Race, and Politics. 3.0 Credits.
For millions of people across the globe, political fate in the 20th century was defined at the intersection of diaspora, race, and nation — and this may be true in the 21st century as well. This course, a collaborative effort involving a historian and a political scientist, explores the parallels and divergences in the deployment of these terms in nationalist and transnational mobilization, literature and aesthetics, and group identity formation in Eastern Europe, Africa, and the New World of the Americas. Set against the backdrop of the fall of significant empires in the late 19th and early 20th centuries, we will explore themes of migration, human rights, the nation-state system, and racism through history, political sociology, and political and social theory. We will pay particular attention to the theoretically exemplary Jewish and Black experiences of diaspora, race, and nation, engaging both with how those experiences were specially shaped by the imposition of national and racial logics and with Black and Jewish politics and thought in relation to those categories. Readings include Max Weber, W. E. B. Du Bois, Booker T. Washington, Theodor Herzl, Hannah Arendt, Benedict Anderson, Rogers Brubaker, Andrew Zimmerman, Michele Mitchell, David Scott.
Instructor(s): K. Moss; M. Hanchard
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.345. Religion, Secularity, and Nationhood in Modern Jewish Identity Politics. 3.0 Credits.
How have ethnonational, religious, and secular forms of self-definition played out in Jewish life over the past hundred years, and what sorts of relationships are taking shape between them now? Particular foci include: religious revival in Israel and the fate of Zionism's ostensibly secular nationalist project in comparative perspective (Ravitzky, Walzer, Friedland); the surprising flourishing of kabbalistic/mystical thought in contemporary Jewish life (Garb); varieties of secular and religious visions of Jewish collective identity (Ohana, Lustick); new and resurgent forms of Judaism in the US; religion and gender (Fader), among other topics. Time at end of semester for independent reading and research.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.346. Soviet-American Cold War. 3.0 Credits.
The focus will be on Soviet-American interactions, Cold-War Cultures, and the impact on both societies.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.347. Early Modern China. 3.0 Credits.
The history of China from the 16th to the late 19th centuries.
Instructor(s): W. Rowe
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.348. 20th-Century China. 3.0 Credits.
The history of China from the last years of the Qing Empire to the post-Mao reforms.
Instructor(s): W. Rowe
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.350. Capital before Capitalism: Economic Debates in the British Empire, 1600-1800. 3.0 Credits.
This course explores the events, ideas, and debates that shaped economic thought in early modern Britain and its empire before the advent of Capitalism.
Instructor(s): C. Consolino
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.352. Age of Pasternak. 3.0 Credits.
This course concerns Russian literature and the arts, including ballet, from the 1910s to the 1950s. Two short papers, journals, two quizzes, and no midterm or final.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.353. Youth and Youth Movements during 20th Century: Germany, Britain, and the U.S. 3.0 Credits.
Through texts, music, and films, this course examines the rise of “youth” as a social and cultural category in a variety of forms, ranging from spontaneous (such as Rock’n’Roll and Techno) to state-organized (Hitler Youth).
Instructor(s): H. Balz
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.355. Islam between History and Anthropology. 3.0 Credits.
Co-taught by an anthropologist and a historian, this course will explore recent scholarly debates about—and critiques of—the representations of Islam and Muslim societies.
Instructor(s): N. Khan; T. Shepard
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.356. W.E.B. Du Bois and the Problem of the Color-Line. 3.0 Credits.
This seminar will introduce students to the ideas and legacy of the renowned American scholar, journalist, and activist, W.E.B. Du Bois (1868-1963), asking students to locate Du Bois in his historical context and in our own. Through readings and discussions of his key works in various forms, we will assess Du Bois’s impact on major debates in American politics, African-American affairs, and academic disciplines like sociology and history. We will track changes in Du Bois’s thinking over time, including in his views of racism, class, gender, liberalism, radicalism, imperialism, and war. Finally, we will consider the ways in which Du Bois’s work continues to shape our understanding of these issues and debates in contemporary American society.
Instructor(s): A. Brann
Area: Humanities.

AS.100.357. Panic and Liberation: The Politics of Sex in 20th Century Europe. 3.0 Credits.
This course examines the 20th century history of sexual attitudes, desires, behaviors, identities, communities, and movements in Western Europe (most notably, Germany, France, and the United Kingdom).
Instructor(s): T. Shepard
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.358. Black Code Studies: Black History and Digital Media. 3.0 Credits.
This course explores doing histories of people of African descent in an age of digital and social media. The focus will be on African-descended communities in the United States, but content will range across time space. Examples include: West African digital art communities; the use of slave trade databases to write Caribbean history; the use of social media in social justice organizing from Paris to Baltimore. Students will explore questions of blackness, race, ethnicity, sex and sexuality, violence and justice while creating digital content using platforms like Wordpress, Omeka, Twitter, and Tumblr. Students will be evaluated on their acquisition of African American and Afro-Diasporic history; their knowledge of digital and social media platforms; and their ability to creatively and accurately relate the histories of blackness and black people to their representation and discussion online.
Instructor(s): J. Johnson
Area: Humanities, Social and Behavioral Sciences.

AS.100.359. Gender, Patriarchy, and the English Revolution. 3.0 Credits.
This course explores the varied experiences of gender and gender roles in seventeenth-century Britain and analyzes how these roles were challenged, changed, and sometimes upended during the English Revolution (1642-1660).
Instructor(s): C. Hinchliff
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.360. The Modern British World: Imperial Encounters, Regimes, and Resistance, from the American Revolution to the present. 3.0 Credits.
The Modern British World introduces some of the major themes and contestations tied to Britain's rise to global dominance and its ultimate decline as an imperial power.
Instructor(s): K. Hindmarch-Watson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.361. Age of Tolstoy. 3.0 Credits.
Tolstoy and his era, 1820s to 1910s. Topics include state and politics, empire, the Russian identity, and forms of cultural expression. Students consider “War and Peace” and other masterworks.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.362. Children and Childhood in the Middle Ages. 3.0 Credits.
Seminar on the history of childhood and ideas of childhood around the medieval Mediterranean; themes include child custody; medieval education and punishment; parent-child private letters; child mortality and the arts of bereavement/consolation. Cross-listed with the Program in Islamic Studies and Near Eastern Studies.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.363. The Development of the Sabbatian Movement. 3.0 Credits.
This course examines the development of Sabbatianism, the most important messianic movement in the history of Judaism. We shall discuss the messianic claims of Sabbatai Tsevi, the spread of religious fervor among the Jews of Middle East, Europe, and North Africa, rabbinic opposition to the movement, and shall compare it to similar phenomena in Islam and Christianity. Special attention will be paid to reading of primary Sabbatian sources in English translation.
Instructor(s): P. Maciejko
Area: Humanities, Social and Behavioral Sciences.

AS.100.364. Sacrilegious Jews: Accusations of Ritual Crime in Pre-Modern Europe. 3.0 Credits.
This course will examine the history of the accusations of the Jews of ritual crime (blood libel, host desecration etc.) in pre-modern Europe.
Instructor(s): P. Maciejko
Area: Humanities, Social and Behavioral Sciences.

AS.100.365. Culture & Society in the High Middle Ages. 3.0 Credits.
This course will treat the flourishing of culture and society in the High Middle Ages (11-14th centuries). Topics covered include the emergence of feudal society and literature, the economic, social and cultural revival of Europe in the 11th and 12th centuries, the Renaissance of the twelfth century and the growth of scholasticism and the University, and the development of feudal monarchies in England and France.
Instructor(s): G. Spiegel
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.366. History of Colombia 1800-present. 3.0 Credits.
This seminar examines the key moments in the history of Colombia from its independence in 1810 and the construction of a Liberal Republic. The course will concentrate on the crucial political events that have defined Colombia up until the present.
Instructor(s): E. Vargas
Area: Humanities, Social and Behavioral Sciences.

AS.100.369. Themes and Concepts in Jewish History. 3.0 Credits.
The course will introduce students to the main themes and debates in Jewish historiography.
Instructor(s): P. Maciejko
Area: Humanities, Social and Behavioral Sciences.

AS.100.371. Jewish History in the 20th Century. 3.0 Credits.
Jewish history, politics, and culture across a century of enormous transformations and transformative enormities in Europe, the US, and the Middle East. Topics include: impacts on Jewish life of World War I, the Russian Revolution, and the post-imperial reordering of the Eastern Europe and the Middle East; Zionism and other modes of Jewish contestatory politics; the consolidation of American Jewry; Nazism and the Holocaust in Europe; formation and development of the State of Israel; the global reordering of Jewish life amid cross-currents of the Cold War, conflict in the Middle East, and success in the US. Substantial attention to recent and contemporary history including the dramatic changes in Israeli society and polity over the past forty years and the ongoing Israeli-Palestinian conflict. Each week, professor will provide detailed background lecture during first session and second session will be devoted to in-depth discussion of key primary texts and historical monographs that capture Jewish responses to 20th century processes and events.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.372. The Victorians. 3.0 Credits.
This course focuses on the politics of everyday life, consumption, intimate relations, and concepts of the self in Britain and its empire in the long nineteenth century. We devote particular attention to visual culture, entertainment, and the built environment. Course themes include popular nationalism; class differences; gender and body politics; and imperial expansion and racial thought.
Instructor(s): L. Pepitone
Area: Humanities, Social and Behavioral Sciences.
AS.100.374. Conquest, Conversion, and Language Change in the Middle Ages. 3.0 Credits.
Examines cases of imperial conquest and attendant religious transformation (Christianization; Islamization) and language change in the medieval Mediterranean (Europe and Middle East), e.g. transition from Latin to vernacular languages in Europe; Arabization; translation movements.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.378. Race and Capitalism in the City. 3.0 Credits.
This course examines the intersections of race and capital in U.S. cities since 1800. In addition to classroom lectures and exercises involving various kinds of digital media, students will participate in walking tours exploring the particular conjunctures of race and economic development in Baltimore as manifested through the histories of slavery, segregation, and post-1960s urban growth. Students will also gain practice communicating their ideas through blog posts, policy briefings, and other modes of reporting.
Instructor(s): M. Speller
Area: Humanities.

AS.100.379. Age of Religious Wars: Reformation Europe, 1500-1650. 3.0 Credits.
Offers an in-depth examination of a volatile time in European history, when the rupture of unity in the Christian Church led to wide scale political upheaval, violence, rioting, and persecution.
Instructor(s): E. Rowe
Area: Humanities, Social and Behavioral Sciences.

AS.100.381. Religion, Medicine, and the Mind in Japan. 3.0 Credits.
This seminar explores the relationship between religion and medicine in treating disorders of the mind and soul throughout Japanese history. We will consider such topics as animal spirit possession, Buddhism, family-based care, psychotherapy, gender, and social withdrawal.
Instructor(s): H. Kim
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.382. Early Modern African Atlantic. 3.0 Credits.
This course examines the history of West and Central Africa and its diasporic people and cultures during the early modern period (c. 1400-1750) in disparate parts of the Atlantic world, including Europe, Latin America, the Caribbean, and Anglo-America. Themes include: West and Central African political and religious cultures; trans-Atlantic slavery; African Christianity; and the question of cultural survivals.
Instructor(s): E. Rowe
Area: Humanities, Social and Behavioral Sciences

AS.100.383. Conversion and Apostasy in the Middle Ages. 3.0 Credits.
Compares religious transformation in medieval Europe and the Middle East (ca. 600-1500), including conquest and conversion; conversion narratives; apostasy, martyrdom and other encounters between medieval Jews, Christians, and Muslims.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.385. Mobility and Encounter in the Medieval Indian Ocean. 3.0 Credits.
This seminar discusses forms of mobility and exchange—trade and travel, conquest and religious transformation, diasporas and migration, the spread of practices and technologies—across the Indian Ocean from the 8th to 16th centuries.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.387. Everyday Life in the Medieval Middle East. 3.0 Credits.
In this seminar, we explore the daily lives of non-elites in medieval Egypt (i.e. average folk, not kings in palaces)—including their food and cooking; clothes (and government edicts regulating fashion); the houses they inhabited; their marriage patterns, divorce rates, and child custody battles; and the burden of taxes on the working poor (e.g. urban craftsmen). We will examine and discuss artifacts and documents, including surviving hats (stuffed with recycled documents), private letters, marriage contracts (and the clauses women inserted into them), petitions for charity, and court records.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.389. History of Law and Social Justice. 3.0 Credits.
Cause lawyering aims to change the status quo. This course examines histories of this approach to social justice, from battles against the slave trade to contemporary campaigns for marriage equality.
Instructor(s): M. Jones
Area: Humanities, Social and Behavioral Sciences.

AS.100.397. U.S. Histories Male and Female. 3.0 Credits.
This seminar will be devoted to exploring gender differences as they have been expressed in a sequence of autobiographies and autobiographical fiction set in a shifting social and historical context.
Instructor(s): M. Ryan
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.398. Images of Postwar Japan. 3.0 Credits.
This seminar explores Japan's changing place in the world in the decades following World War II, with an emphasis on analyzing visual media such as photographs, films, advertisements, and comic books. Topics include relations with the U.S. and other countries in East Asia, particularly the two Koreas; the atomic bombings of Hiroshima and Nagasaki; and the global contexts for an expanding Japanese consumerism in the late 20th century.
Instructor(s): H. Kim.

AS.100.399. Decolonization and Citizenship in Africa, 1945-2015. 3.0 Credits.
Critically explores issues of decolonization and citizenship in Africa from WWII to the present. Emphasis on political inclusion and exclusion, and violence, fostered by nationalist movements and postcolonial African governments.
Instructor(s): P. Larson
Area: Humanities
Writing Intensive.

AS.100.403. Law & Custom in Colonial Africa. 3.0 Credits.
Examines how colonial rule transformed African legal systems, while Africans used European law for political resistance and personal gain. Research project based on colonial South African court records.
Instructor(s): E. Thornberry
Area: Humanities, Social and Behavioral Sciences.
AS.100.404. John Locke. 3.0 Credits.
Seminar style course in which John Locke’s major works will be read intensively, together with some of his contemporaries’ works, and select scholarly interpretations.
Instructor(s): J. Marshall
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.405. European Socialist Thought. 3.0 Credits.
Examination of socialist, social-democratic, communist, and anarchist theorists, including Proudhon, Marx, Engels, Bakunin, Bernstein, Lenin, Luxemburg, and Sorel.
Instructor(s): P. Jelavich
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.414. Love, Death, and the Afterlife in the Medieval West. 3.0 Credits.
Romantic love, it is often claimed, is an invention of the High Middle Ages. The vocabulary of sexual desire that is still current in the twenty-first century was authored in the twelfth and thirteenth, by troubadours, court poets, writers like Dante; even by crusaders returning from the eastern Mediterranean. How did this devout society come to elevate the experience of sensual love? This course draws on primary sources such as medieval songs, folktales, the “epic rap battles” of the thirteenth century, along with the writings of Boccaccio, Saint Augustine and others, to understand the unexpected connections between love, death, and the afterlife from late antiquity to the fourteenth century. Each week, we will use a literary or artistic work as an interpretive window into cultural attitudes towards love, death or the afterlife. These readings are analyzed in tandem with major historical developments, including the rise of Christianity, the emergence of feudal society and chivalric culture, the crusading movement, and the social breakdown of the fourteenth century.
Instructor(s): L. Galambos
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.411. Readings in the History of Public Health in the 20th and 21st Centuries. 3.0 Credits.
The students will read major and some minor works in the history of global public health and will each develop their own concept of how and why the major institutions, professions, and practices associated with public health have evolved over the past long century. To help the students focus on their ideas, they will write three essays on particular aspects of the history.
Instructor(s): L. Galambos
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.412. Jewish History in British Mandatory Palestine 1917-1947. 3.0 Credits.
Recent historical writing on Jewish politics, culture, and society in British Mandatory Palestine, 1917-1947. Significant attention will also be paid to work on Palestinian Arab society and politics and to Jewish-Arab-British relations.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.413. London 1580-1830: The History of Britain’s capital city. 3.0 Credits.
Seminar-style class analyzing the social, cultural, gender, religious, economic, and political history of London from Shakespeare’s time through revolutions, plague, fire, and commercial, colonial, and industrial expansion.
Instructor(s): J. Marshall
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.416. Urban Space and City People. 3.0 Credits.
Readings and research in urban history focused on the United States since the 18th century with special attention to gender and race.
Instructor(s): M. Ryan
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.417. Capitalism, Socialism, and Democracy. 3.0 Credits.
This course examines the ideas of Joseph A. Schumpeter, the father of entrepreneurial studies. Each student will develop a perspective on the history of capitalism and socialism.
Instructor(s): L. Galambos
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.418. Comparative Slavery: Haiti and Brazil. 3.0 Credits.
Haiti is born after a powerful slave insurrection (1804). Brazil was the last country to abolish slavery (1888). Why did these slave societies, which shared many common characteristics, have such different histories?
Instructor(s): J. Hebrard
Area: Humanities, Social and Behavioral Sciences.

AS.100.420. George Washington and his World. 3.0 Credits.
This research-intensive course explores eighteenth-century America through George Washington’s papers. Although Washington is not the most representative person, he is an exceptionally well-documented one; we use his papers to focus on life in Virginia, North America, and the Atlantic World. Workshop-style research and writing prepare students for the craft of history.
Instructor(s): F. Furstenberg
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.422. Society & Social Change in 18th Century China. 3.0 Credits.
What did Chinese local society look like under the Qing Empire, and how did it change over the early modern era?
Instructor(s): W. Rowe
Area: Humanities, Social and Behavioral Sciences.
AS.100.423. Multiethnic Japan. 3.0 Credits.
An advanced undergraduate seminar on the intertwined histories of race, ethnicity, and empire in Japan and its former colonies from the early twentieth century to the present.
Instructor(s): H. Kim
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.424. Women & Modern Chinese History. 3.0 Credits.
This course examines the experiences of Chinese women, and also how writers, scholars, and politicians (often male, sometimes foreign) have represented women’s experiences for their own political and social agendas. Cross listed with East Asian Studies.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.425. Getting Medieval? Public Violence in the Middle Ages. 3.0 Credits.
Traditional studies and popular culture often consider violence as a hallmark of medieval life and hence, present it as a fundamental difference between a ‘brutal and violent’ Middle Ages and a ‘civilized and humane’ (Western) modernity. To evaluate these claims and images, we will examine different forms of violence in medieval societies—European and Middle Eastern—especially (i) martyrdom, (ii) communal violence, and (iii) public punishment. After exploring the specific cultural meanings of these practices, we will re-examine those modern polemics that invoke ‘the medieval’ (often vis-à-vis non-Western traditions and societies).
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.426. Popular Culture in Early Modern Europe. 3.0 Credits.
Witchcraft, magic, carnivals, riots, folk tales, gender roles; fertility cults and violence especially in Britain, Germany, France, and Italy.
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.437. Late Imperial China: History and Fantasy. 3.0 Credits.
Students in this seminar will look at the ways in which Chinese and Western scholars, novelists, film-makers, and artists have represented China’s Late Imperial period. We will look at the way foreigners have imagined China, and the ways in which Chinese writers past and present have fancifully, nostalgically, and inventively rendered their personal and national pasts. The course will explore issues of historical, geographical, and literary imagination. Cross-listed with East Asian Studies
Instructor(s): J. Marshall
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.441. Migration and the Americas. 3.0 Credits.
From the Spanish Conquest to contemporary debates in the US, this course looks at the great diversity of migrations that have shaped life in the Americas.
Instructor(s): C. Lurtz
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.445. African Fiction as History. 3.0 Credits.
An exploration of Modern African history through the African historical novel.
Instructor(s): P. Larson
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.456. Getting Medieval? Public Violence in the Middle Ages. 3.0 Credits.
Traditional studies and popular culture often consider violence as a hallmark of medieval life and hence, present it as a fundamental difference between a ‘brutal and violent’ Middle Ages and a ‘civilized and humane’ (Western) modernity. To evaluate these claims and images, we will examine different forms of violence in medieval societies—European and Middle Eastern—especially (i) martyrdom, (ii) communal violence, and (iii) public punishment. After exploring the specific cultural meanings of these practices, we will re-examine those modern polemics that invoke ‘the medieval’ (often vis-à-vis non-Western traditions and societies).
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.482. Historiography Mod China. 3.0 Credits.
A survey of assumptions and approaches in the study of modern Chinese history, as written by Chinese, Japanese, and Western historians.
Instructor(s): W. Rowe
Area: Humanities, Social and Behavioral Sciences.

AS.100.486. Jim Crow in America. 3.0 Credits.
Explores the history of legalized racial segregation in the United States from the nineteenth and twentieth centuries.
Instructor(s): N. Connolly
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.488. The Caribbean World, 1450-1850. 3.0 Credits.
The Caribbean was the key focal point of overseas European expansion in the early modern world. This course traces developments in the region from the Tainos to Toussaint Louverture.
Instructor(s): P. Morgan
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.494. Senior Honors Seminar. 1.0 Credit.
A two-semester coordinating seminar for history majors writing senior honors theses. Admission is granted by instructor only after the student has selected a faculty thesis advisor. AS.100.494 is to be taken concurrently with AS.100.507 Senior Thesis.
Prerequisites: AS.100.494 is to be taken concurrently with AS.100.507 Senior Thesis.
Instructor(s): E. Rowe
Area: Humanities, Social and Behavioral Sciences

AS.100.495. Senior Honors Seminar. 1.0 Credit.
The Senior Honors Seminar is a coordinating seminar for senior history majors who are writing senior honors theses and wish to graduate with departmental honors. To be taken concurrently with AS.100.508, Senior Thesis.
Corequisites: Co-requisite: AS.100.508
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences

AS.100.497. Year of Revolt: 1968 in Europe. 3.0 Credits.
The shorthand “1968” stands for rebels and revolutions, but also for incremental changes throughout the 1960s that fundamentally changed the post-war order and the Cold War in East and West.
Instructor(s): Staff
Area: Humanities, Social and Behavioral Sciences.

AS.100.498. History of the Family & Gender in the United States. 3.0 Credits.
Topics include: history of emotions; politics of sexuality and marriage; impact of race, ethnicity, and class on family life; women and gender inequality. Primarily colonial era through the early twentieth century, with some attention to contemporary politics of family, gender, and sexuality.
Instructor(s): T. Ditz
Area: Humanities, Social and Behavioral Sciences

AS.100.507. Senior Honors Thesis.
Prerequisites: AS.100.494 is to be taken concurrently with AS.100.507 Senior Thesis. The student has selected a faculty thesis advisor. AS.100.494 is to be taken concurrently with AS.100.507 Senior Thesis. Admission is granted by instructor only after the student has selected a faculty thesis advisor. AS.100.494 is to be taken concurrently with AS.100.507 Senior Thesis.
Instructor(s): E. Rowe
Area: Humanities, Social and Behavioral Sciences

AS.100.508. Senior Honors Thesis.
Prerequisites: AS.100.494 is to be taken concurrently with AS.100.507 Senior Thesis. The student has selected a faculty thesis advisor. AS.100.494 is to be taken concurrently with AS.100.507 Senior Thesis. Admission is granted by instructor only after the student has selected a faculty thesis advisor. AS.100.494 is to be taken concurrently with AS.100.507 Senior Thesis.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences

AS.100.509. Senior Honors Thesis.
Prerequisites: AS.100.494 is to be taken concurrently with AS.100.507 Senior Thesis. The student has selected a faculty thesis advisor. AS.100.494 is to be taken concurrently with AS.100.507 Senior Thesis. Admission is granted by instructor only after the student has selected a faculty thesis advisor. AS.100.494 is to be taken concurrently with AS.100.507 Senior Thesis.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences
AS.100.499. Film and Propaganda in Nazi Germany. 3.0 Credits.
By examining a range of cinematic works—from explicitly ideological pseudo-documentaries to entertainment films—this course will explore the transmission of propaganda into the everyday culture of Nazi Germany.
Instructor(s): H. Balz
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.501. Internship. 1.0 Credit.
Instructor(s): J. Brooks; M. Johnson; T. Shepard.

AS.100.502. Internship. 1.0 Credit.
Instructor(s): Staff.

AS.100.507. Senior Thesis. 3.0 Credits.
Two semesters. Senior thesis writers will undertake research in primary materials that will explore a significant historical issue or problem. The DUS will confirm admission as soon as the student has selected a faculty thesis advisor: the outside deadline for confirmation is May 1. AS.100.507 is to be taken concurrently with AS.100.494 Senior Honors Seminar.
Instructor(s): E. Rowe
Writing Intensive.

AS.100.508. Senior Thesis. 3.0 Credits.
This seminar is required for senior history majors who are writing senior theses and wish to graduate with departmental honors.
Prerequisites: Pre-requisites: AS.100.507
Instructor(s): J. Brooks; S. Berry
Writing Intensive.

AS.100.535. Independent Study. 1.0 - 3.0 Credits.
Instructor(s): Staff.

AS.100.536. Independent Study. 1.0 - 3.0 Credits.
Instructor(s): Staff
Writing Intensive.

AS.100.594. Internship - Summer. 1.0 Credit.
Instructor(s): A. Burgin; E. Rowe; K. Moss; M. Ryan.

AS.100.599. Independent Study. 3.0 Credits.
Instructor(s): G. Paquette; H. Balz; K. Moss.

AS.100.602. The French Revolution.
Introduces graduate students to the rich historiography of the French Revolution. Topics include: revolutionary origins, political culture and radicalization, citizenship, violence, family & gender, the search for stability after the Terror, global revolution, Napoleon's Brumaire coup.
Instructor(s): L. Mason
Area: Humanities, Social and Behavioral Sciences.

Instructor(s): F. Furstenberg
Area: Humanities, Social and Behavioral Sciences.

AS.100.604. Readings in the Early U.S. Republic/Nineteenth Century.
Readings in the Early U.S. Republic/Nineteenth Century
Instructor(s): F. Furstenberg.

AS.100.605. Modern Britain & the British Empire.
This is a graduate reading seminar covering Modern Britain and the British Empire, with particular focus on urban space, labor, gender, and comparing political ideologies.
Instructor(s): K. Hindmarsh-Watson
Area: Humanities, Social and Behavioral Sciences.

AS.100.606. South African History and Historiography.
Reading seminar in the history and historiography of South Africa from the late precolonial period through the present.
Instructor(s): E. Thornberry
Area: Humanities, Social and Behavioral Sciences.

AS.100.607. Consumer Revolution in Global Perspective.
First semester of year-long seminar examining transformations in European consumption from 1650 to 1800. Topics include cultural theory; fashion, gender, and social identity; capitalism, retail, and credit; Enlightenment and the public sphere; political economy; overseas empire; globalization; and the Atlantic revolutions.
Instructor(s): M. Kwass
Area: Humanities, Social and Behavioral Sciences.

AS.100.608. The Consumer Revolution in Global Perspective.
Second semester of year-long seminar examining transformations in European consumption from 1650 to 1800. Topics include capitalism and consumption; political economy; fashion, gender, and identity; Enlightenment and the public sphere; globalization; empire and colonization; and the Atlantic revolutions.
Instructor(s): M. Kwass
Area: Humanities, Social and Behavioral Sciences.

AS.100.611. Kabbalah and the Enlightenment: Reading 'The Manuscript' Found in Saragossa.
The course will discuss the European Enlightenment’s attitude to the Jewish esoteric lore. As a lens to discuss this topic, we shall use Jan Potocki’s novel "The Manuscript Found in Saragossa".
Instructor(s): P. Maciejko
Area: Humanities, Social and Behavioral Sciences.

AS.100.612. Everyday Life in Medieval Cairo.
Introduction to sources and methods available to social historians of the medieval Middle East, including close readings of documents (private letters, legal deeds, etc.) and discussing their production and survival.
Grad Students only.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

A reading seminar on the interconnected histories and historiographies of Japan and Korea in the nineteenth and twentieth centuries.
Instructor(s): H. Kim
Area: Humanities, Social and Behavioral Sciences.

AS.100.614. Seminar in Modern Chinese History.
A seminar covering major milestones in research on late imperial and modern Chinese history, primarily in English. Open to undergraduates with the permission of the instructor.
Instructor(s): W. Rowe
Area: Humanities, Social and Behavioral Sciences.

AS.100.615. States, Scribes, and Archives: Medieval Arabic Documentary Cultures.
A historical survey of the bureaucratic practices of medieval Islamic states (in comparative perspective); includes close readings of primary official documents, e.g. petitions, edicts, fiscal receipts, and administrative reports.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.
AS.100.617. Space, Place, and History.
A workshop on the spatial dimension of modern history. Readings will include monographs, some theoretical readings, and student research, mostly focused on the Americas with some comparison with Western Europe. Open to undergraduate juniors and seniors.
Instructor(s): M. Ryan
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.618. Historiography of Law and Empire.
Reading seminar covering recent work on the history of law in the context of empire. Emphasis on colonial rule in Africa, with some attention to Asia and the Americas.
Instructor(s): E. Thornberry
Area: Humanities, Social and Behavioral Sciences.

AS.100.619. Early Modern France.
Second semester of year-long reading seminar on French history from Louis XIV to the French Revolution. Topics include: absolutism, the Enlightenment, gender and sociability, consumption and trade, the French empire, the French Atlantic, the French Revolution, and the Haitian Revolution.
Instructor(s): M. Kwass
Area: Humanities, Social and Behavioral Sciences.

AS.100.620. Early Modern France.
The first part of a two-semester sequence, this seminar examines the history of France and its empire from the seventeenth century to the French Revolution.
Instructor(s): M. Kwass
Area: Humanities, Social and Behavioral Sciences.

AS.100.625. The Right and the Far Right in Western Europe, 1870 to the Present.
We will explore both classic and new histories of right-wing and far-right political movements.
Instructor(s): T. Shepard
Area: Humanities, Social and Behavioral Sciences.

AS.100.627. Histories of Development.
Reading seminar on the history of development as both ideology and practice in the nineteenth and twentieth centuries.
Instructor(s): C. Lurtz
Area: Humanities, Social and Behavioral Sciences.

AS.100.630. Modern European Imperialism and the History of Sex and Sexuality.
This reading seminar will explore how the history of sexuality has shaped recent historiographies of European empires.
Instructor(s): T. Shepard.

AS.100.631. Ibero-Atlantic History.
A reading seminar on the history and historiography of the Portuguese and Spanish empires c. 1600-1900.
Instructor(s): G. Paquette
Area: Humanities.

AS.100.633. Spain and its Empire.
This graduate seminar will explore the historiography of Spain and its empire, 1480-1700.
Instructor(s): E. Rowe.

AS.100.634. Race, Law, History.
This graduate reading course covers key topics in European Imperial History, c. 1600-1900.
Instructor(s): G. Paquette
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.635. Topics in European Imperial History.
Advanced topics in the history and sociology of nationalism, with special attention to questions of childhood and education in the age of the nation-state; memory and memory-conflicts; nation and European overseas empire. Open to undergraduates with permission of instructor.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences.

AS.100.641. Marvels and Wonder in Medieval Arabic Culture.
Explores the concept of marvels in different genres of medieval Arabic culture: Qur’anic exegesis; travel literature; ‘ethnography’; cosmography and geography; marvels of the natural world (e.g. hermaphrodites); Muslim views of pre-Islamic (‘pagan’) monuments.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.643. Jewish Paths Through Modernity.
Intensive introduction to the key trends and trajectories in modern Jewish history and the major themes in Jewish historiography. Intended to serve both graduate students outside the Jewish history field and graduate students pursuing a field in modern Jewish history.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.644. Approaches to Brazilian History.
A reading seminar on the history and historiography of Brazil (colonial and national periods). Open to undergraduates with the permission of the instructor.
Instructor(s): G. Paquette
Area: Humanities, Social and Behavioral Sciences.

AS.100.645. Race, Law, History.
This seminar examines the relationship of law to the construction of race and inequality in US history, investigating the legal archive through the perspectives of critical race theory and critical legal history.
Instructor(s): M. Jones
Area: Humanities, Social and Behavioral Sciences.

AS.100.646. Marvels and Wonder in Medieval Arabic Culture.
Explores the concept of marvels in different genres of medieval Arabic culture: Qur’anic exegesis; travel literature; ‘ethnography’; cosmography and geography; marvels of the natural world (e.g. hermaphrodites); Muslim views of pre-Islamic (‘pagan’) monuments.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.648. Crown, Court, and Charter: Political Culture in the High Middle Ages.
Explores mechanisms of political power and the rise of the state in Europe during the High Middle Ages by analyzing royal ideology, administrative growth, legal change, and cultural production.
Instructor(s): A. Lester
Area: Humanities, Social and Behavioral Sciences.

AS.100.650. The American South.
Instructor(s): M. Johnson.
AS.100.651. Readings in Urban and Suburban America: The Twentieth Century.
Introduces students to intellectual trends shaping historical treatments of urban and suburban life in twentieth-century America.
Instructor(s): N. Connolly.

AS.100.656. Reading Koselleck.
The course will be devoted to close reading of the works of Reinhardt Koselleck.
Instructor(s): P. Maciejko
Area: Humanities, Social and Behavioral Sciences.

AS.100.657. Reading Koselleck.
The course will be devoted to close reading of the works of Reinhardt Koselleck.
Instructor(s): P. Maciejko
Area: Humanities, Social and Behavioral Sciences.

AS.100.661. Racial Literacy in the Archives.
This course explores how to use race as a historical category of analysis, and teaches students how to locate how historical actors deploy race and racism to make claims, organize labor and identities, and imagine political possibility.
Instructor(s): N. Connolly
Area: Humanities, Social and Behavioral Sciences.

AS.100.671. Play and Violence in Medieval France.
Since the work of Geertz, Huizinga, Bakhtin and Caillois, among others, the intersection of play and violence has been a focal point for historians, anthropologists, literary scholars, even psychologists. This seminar traces the twin themes of violence and play as instantiated by the fighting classes in the High Middle Ages, beginning with the emergence of the tournament and the crusading movement in the eleventh century. By examining sources in Old French and Latin, we will contextualize music, dances, comedies, and contests that accompanied the violent rituals around which French aristocratic life revolved. Course may not meet weekly.
Instructor(s): J. Phillips
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.680. Reading Seminar in Atlantic History 1600-1800.
This reading seminar will highlight some of the major new works and wide-ranging genres in this lively, stimulating field.
Instructor(s): P. Morgan.

AS.100.681. Research Seminar in Atlantic History, 1600-1800.
Continuation of AS.100.680
Instructor(s): F. Furstenberg
Area: Humanities, Social and Behavioral Sciences.

AS.100.684. Research Seminar in the Atlantic World, 1500-1810.
This seminar selectively explores the emergence and subsequent growth of the Atlantic basin as a site for exchange among and within the continents of Europe, Africa, and the Americas in the early modern era.
Instructor(s): P. Morgan.

AS.100.685. Reading Seminar in Atlantic History.
Instructor(s): P. Morgan
Area: Humanities, Social and Behavioral Sciences.

AS.100.692. Graduate Reading Seminar in Early American History.
A probing look at various genres and classics ranging from Native Americans to the Early Republic.
Instructor(s): P. Morgan
Area: Humanities, Social and Behavioral Sciences.

AS.100.695. Problems in U.S. Social & Cultural History.
This is a seminar reading widely in U.S. social and cultural history, ranging chronologically this semester from the mid-18th century to the late 19th century.
Instructor(s): R. Walters.

AS.100.696. Problems in American Society and Culture.
An intensive graduate seminar exploring various topics in US social and cultural history, focusing on the period from the late 19th century to the late 20th century.
Instructor(s): R. Walters.

AS.100.699. Neoliberalism.
Readings on the history, theory, and politics of neoliberalism, from midcentury to the present.
Instructor(s): A. Burgin
Area: Humanities, Social and Behavioral Sciences.

AS.100.700. American Intellectual History.
Readings in late nineteenth- and twentieth-century American social theory and historical works on related themes.
Instructor(s): A. Burgin.

AS.100.702. European Empires in the Indian Ocean.
A reading overview of Portuguese, Dutch, English and French empire in the Indian Ocean.
Instructor(s): P. Larson
Area: Humanities, Social and Behavioral Sciences.

AS.100.703. Nationhood and Nationalism: theory, historiography, sociologies.
Theories, historiographies, and sociologies of nationhood and nationalism. Nationhood as institutional form, practical category, and site of contestation. Nationalisms and nationalist movements, nation-states and nationalizing states, borderlands, memory struggles. The subjectivities generated by nationalism and national conflict, including forms of national minorityhood. Recent work on national indifference, nation and empire, nation and religion, and supranationalisms and internationalisms.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences.

AS.100.711. Approaches to International, Transnational and Global History.
Graduate students will read and analyze classic as well as recent works of International, Transnational and Global History.
Instructor(s): G. Paquette
Area: Humanities, Social and Behavioral Sciences.

AS.100.713. Black Womanhood.
What does a usable history of black womanhood (black queer and trans womanhood inclusive) look like? Black women’s history across time and space.
Instructor(s): J. Johnson; M. Jones
Area: Humanities, Social and Behavioral Sciences.

AS.100.716. Cultural Theory For Historians.
An examination of modern cultural theories, with emphasis on mass culture and consumerism. Authors include Simmel, Kracauer, Benjamin, Horkheimer, Adorno, Barthes, Debord, Bourdieu, and de Certeau.
Instructor(s): P. Jelavich.

AS.100.721. Topics In African History.
Critical readings on selected themes in African history and historiography.
Instructor(s): S. Berry.
AS.100.724. Sex and Slavery.
Research and methods in the field of sexuality and slavery studies.
Instructor(s): J. Johnson
Area: Humanities, Social and Behavioral Sciences.

AS.100.728. Historical Writing in the Middle Ages.
The course will begin with readings of literary and critical theory, as a preparation for the study of modes of historical writing in the Middle Ages. We will then read a sampling of medieval historiographical texts, beginning with Eusebius.
Instructor(s): G. Spiegel.

AS.100.729. Reading Seminar: British America and the Early United States in Atlantic Perspective.
Introduction to the history and historiography on British North America and the United States.
Instructor(s): F. Furstenberg.

AS.100.730. Reading Seminar: British America and the Early United States in Atlantic Perspective.
Instructor(s): F. Furstenberg.

A reading seminar in colonial African history; the focus may be on French African empire.
Instructor(s): P. Larson.

AS.100.732. Urban Space and City People.
Readings and research in urban history focused on the United States since the 18th century with special attention to gender and race.
Instructor(s): M. Ryan.

AS.100.733. Reading Qing Documents.
Open to advanced undergraduates with at least one semester of Classical Chinese. This course has several objectives. First and foremost, it is a hands on document reading class designed to familiarize students with the skills, sources, and reference materials necessary to conduct research in Qing history. To that end, we will spend much of our time reading documents. At the same time, we will engage in problem solving exercises designed to develop and enhance basic research skills. Finally, several important archive-based secondary works in the secondary literature are available on reserve for your reference. These works demonstrate the ways in which historians have recently applied archival skills (and materials).
Instructor(s): T. Meyer-Fong.

AS.100.735. Early Modern Britain.
Instructor(s): J. Marshall.

AS.100.736. Early Modern Britain.
Instructor(s): J. Marshall.

AS.100.744. Twentieth Century France and the French Empire.
We will explore major recent work in the history of France, with particular attention to transnational and imperial questions.
Instructor(s): T. Shepard.

AS.100.749. Social Theory for Historians.
An examination of the works of Marx, Durkheim, and Weber, as examples of the Hegelian, positivist, and hermeneutic traditions of social theory.
Instructor(s): P. Jelavich.

AS.100.750. Victorian Culture and Society.
This course covers major thematic and interpretive approaches to family formations, urban environment, popular nationalism, class cultures, feminism and body politics, Empire and racial thought, commercial culture, the media and concepts of the self.
Instructor(s): J. Walkowitz
Area: Humanities, Social and Behavioral Sciences.

AS.100.753. Twentieth Century Seminar.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in 20th century history. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.
Instructor(s): Staff
Area: Humanities, Social and Behavioral Sciences.

AS.100.755. Twentieth Century Seminar.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in 20th century history. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.
Instructor(s): Staff.

AS.100.756. Reading Seminar in Chinese History.
A seminar covering recent work on late imperial and modern Chinese history, primarily in English.
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences.

AS.100.760. The Cairo Geniza.
Documentary sources from the Cairo Geniza in Judaeo-Arabic, Arabic, and Hebrew (depending on student interest). Diplomatic, paleography, research methods, historiography, and history of the field. Arabic required, some Hebrew preferred.
Instructor(s): M. Rustow
Area: Humanities, Social and Behavioral Sciences.

AS.100.761. History of Capitalism.
Readings on the history of capitalism since the mid-nineteenth century, with an emphasis on the American context.
Instructor(s): A. Burgin.

AS.100.762. History and Historiography of 19th France in Europe and the World.
We will explore recent and classic studies of 19th-century French history, with particular attention to transnational and colonial questions.
Instructor(s): T. Shepard.

AS.100.765. Problems in Women and Gender Studies.
An exploration of recent work in women’s and gender history, focusing on some of the following: sexuality, cultural production, politics, family formation, work, religion, difference, and civic orders.
Instructor(s): E. Rowe; H. Kim.

AS.100.766. Problems in the History of Women & Gender.
An exploration of recent work in modern European and US women’s and gender history, focusing on some of the following: sexuality, cultural production, politics, family formation, work, religion, differences, and civic orders. A continuation of AS.100.765.
Instructor(s): T. Ditz
Area: Humanities, Social and Behavioral Sciences.
AS.100.769. Gender History Workshop.
Workshop for presentation of works-in-progress on the history of women, gender, and/or sexuality, including drafts of dissertation chapters, research papers, talks, and proposals. Students in disciplines other than history are welcome.
Instructor(s): E. Rowe; H. Kim.

AS.100.770. Gender History Workshop.
Workshop for presentation of works-in-progress on the history of women, gender, and/or sexuality, including drafts of dissertation chapters, research papers, talks, and proposals. Students in disciplines other than history are welcome. Graduate students only.
Instructor(s): K. Hindmarch-Watson; T. Ditz
Area: Humanities, Social and Behavioral Sciences.

AS.100.772. The Indian Ocean and European Empire.
A reading seminar on the history and historiography of European Empire in the Indian Ocean region.
Instructor(s): P. Larson.

AS.100.781. The Seminar.
This course features presentations from invited speakers. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.
Instructor(s): Staff.

AS.100.782. The Seminar.
This course features presentations from invited speakers. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.
Instructor(s): Staff.

AS.100.783. Seminar: Medieval Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Medieval European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.
Instructor(s): Staff.

AS.100.784. Seminar: Medieval Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Medieval European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.
Instructor(s): Staff.

AS.100.785. Seminar: Early Modern Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Early Modern European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.
Instructor(s): Staff.

AS.100.786. Seminar: Early Modern Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Early Modern European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.
Instructor(s): Staff.

AS.100.787. Seminar: Modern Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Modern European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.
Instructor(s): Staff.

AS.100.788. General Seminar: Modern Europe.
A graduate workshop in which graduate students, faculty, and invited speakers present their latest research results in Modern European History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.
Instructor(s): Staff.

AS.100.789. Seminar: American.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in American History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.
Instructor(s): Staff.

AS.100.790. General Seminar: America.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in American History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.
Instructor(s): Staff.

AS.100.791. Seminar: Latin American.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in Latin American History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly
Instructor(s): Staff.

AS.100.792. General Seminar: Latin America.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in Latin American History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly
Instructor(s): Staff.

AS.100.793. Seminar: African.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in African History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.
Instructor(s): Staff.

AS.100.794. General Seminar: Africa.
A seminar series in which graduate students, faculty, and invited speakers present their latest research results in African History. Q&A, with an emphasis on critical thinking, intellectual discussions, and written and oral presentations. Course may not meet weekly.
Instructor(s): Staff.

AS.100.797. First Year Graduate Workshop.
First year graduate workshop.
Instructor(s): A. Burgin
Area: Humanities, Social and Behavioral Sciences.

AS.100.798. First Year Graduate Workshop.
First year graduate workshop.
Instructor(s): A. Burgin
Area: Humanities, Social and Behavioral Sciences.
AS.100.801. Dissertation Research.  
Instructor(s): Staff.

AS.100.802. Dissertation Research.  
Instructor(s): Staff.

AS.100.803. Independent Study.  
Instructor(s): Staff.

AS.100.804. Independent Study.  
Instructor(s): A. Burgin; G. Paquette; H. Kim; S. Berry; W. Rowe.

AS.100.821. Fall Practicum.  
Instructor(s): W. Rowe.

AS.100.822. Spring Practicum.  
Instructor(s): Staff.

AS.100.890. Independent Study.  
Instructor(s): Staff.

AS.100.891. Summer Practicum.  
Instructor(s): Staff.

Cross Listed Courses

History of Art

AS.010.330. Art of the Caliphates: Visual Culture and Competition in the Medieval Islamic World. 3.0 Credits.  
Despite its modern-day association with a fringe extremist movement, the term “caliphate” was traditionally used to describe the Muslim world at large, the political and spiritual ruler of which bore the title of caliph. The original Islamic caliphate was established in the seventh century as a vast empire centered on the Middle East and extending deep into Africa, Asia, and Europe. It soon broke apart into a series of competing powers, until in the tenth century, three rival dynasties—the Baghdad-based Abbasids, the Spanish Umayyads, and the Fatimids of North Africa—each claimed to be the rightful caliphate. This course will examine how these fascinating political developments and conflicts played out in the realm of art and architecture between the seventh and thirteenth centuries. As well as palaces, mosques, and commemorative buildings, the course will look at media ranging from ceramics and metalwork to textiles and illustrated manuscripts, with many of the artifacts being viewed firsthand in local museum collections. These works will be considered in relation to such themes as patronage, audience, ceremony, and meaning. Particular attention will be paid to how the various caliphatoms—both in emulation of and competition with one another—used visual culture as a powerful tool to assert their legitimacy.  
Instructor(s): U. Rustem  
Area: Humanities.

As a major global power straddling three continents, the Ottoman Empire developed a rich and diversified ceremonial culture aimed at impressing local and international audiences alike. This seminar will explore the ways in which works of art and architecture provided settings and apparatus for, and were themselves shaped and enlivened by, the ceremonial acts in which they featured. Covering the period between the sixteenth and nineteenth centuries, we will address a range of case studies—including mosque inaugurations, royal processions, the reception of foreign ambassadors, and the exchange of diplomatic gifts—with regard to their sociopolitical, visual, material, and spatial contexts. A major concern of the seminar will be the question of how Ottoman ceremonies, together with their staging and attendant art forms, were adapted in response to changing conditions and audiences, particularly with the shift from the early modern to the modern period. While our focus will be on the Ottoman Empire and its interactions with the surrounding world, the course will also consider the ceremonial cultures of two other great Islamic polities, Iran and Mughal India, which provide telling points of contrast to the Ottoman case.  
Instructor(s): U. Rustem  
Area: Humanities.

AS.010.627. Patronage and Power: The Art of the Book in the Middle Ages.  
This research seminar surveys the rich history of manuscript painting in the Middle Ages through the lens of patronage. By focusing on elite patrons—i.e. Popes, Clerics, Holy Roman Emperors, Princes, Princesses, and other ruling figures—we will investigate how changes in style from the early Christian period through the fifteenth century reveal the fluid nature of politics and power during this volatile time period. We will visit local collections of manuscripts (e.g. the Walters Art Museum) and make use of the extensive holdings of medieval facsimiles in Special Collections.  
Instructor(s): C. Lakey  
Area: Humanities.

Classics

AS.040.601. Italian Renaissance Humanism and Modern Humanities.  
This course will reflect on certain key moments in the development of Latinate and Italian Renaissance humanism and will also include reading and discussion of certain recent landmark contributions to the history of the modern humanities.  
Instructor(s): C. Celenza.

AS.060.633. Biography and African American Subjects from the 19th and 20th Centuries.  
This course will read through contemporary biographical treatments of prominent 19th and 20th century African American writers to explore the prominent ideological predispositions as well as the structure of archival sourcing in the creation of life-writing on black subjects. Students will make research trips to the Library of Congress, the University of Delaware, Morgan State University and other local archives for instruction in research methodology and the collection of primary source materials. Student final projects will use primary archival sources to intervene in debates about the interpretation of historical subjects and historical events.  
Instructor(s): L. Jackson  
Area: Humanities  
Writing Intensive.
**Film and Media Studies**

**AS.061.396. Modern Paris on Film. 3.0 Credits.**
This course uses French film to examine the history of twentieth-century Paris. We will consider how filmmakers interpreted the social, political, and technological transformations that shaped Paris in the modern era, treating movies as expressions of change and means by which filmmakers comment on it. Taught in English. $50 lab fee.
Instructor(s): L. Mason
Area: Humanities.

**AS.061.397. French Masculinities. 3.0 Credits.**
Examines changing ideals of masculinity in France after 1960 as they found expression on film, rooting the work of iconic stars and directors in their cultural, political and historical contexts.
Instructor(s): L. Mason
Area: Humanities
Writing Intensive.

**AS.061.421. History and Film. 3.0 Credits.**
How do films inform, shape, or fundamentally alter our sense of the past? What are the strengths and limitations of cine-history? This course pairs traditional and avant-garde fiction films and documentaries with essays about history, historiography, memory and the political uses of the past to investigate fast-changing relationships between image and text, film and history. Lab fee: $50 Counts toward 300 or 400-level critical studies requirement.
Instructor(s): L. Mason
Area: Humanities
Writing Intensive.

**Anthropology**

**AS.070.290. Modern South Asia: Bangladesh/Pakistan. 3.0 Credits.**
Bangladesh and Pakistan, two major regional players in South Asia, originate in the 1947 Partition of India and shared nationhood between 1947 and 1971, ending with the War of Independence in 1971 in which Bangladesh separated from Pakistan. Since that time the two nation-states have been on different paths that have sometimes mirrored each other. This course brings together contemporary works of national histories, social movements and cultural production to consider the politics of self-differentiation and the points of convergences.
Instructor(s): N. Khan
Area: Humanities, Social and Behavioral Sciences.

**AS.070.318. The Atlantic World. 3.0 Credits.**
This seminar explores the formation of the South Atlantic through a reading of historical and ethnographic texts. We examine the making of history and culture as contentious fields of struggle.
Instructor(s): A. Angelini
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.070.352. Evolution, Ecology, Becoming. 3.0 Credits.**
The concept of evolution is central to social theory. Originating in the question of the species, it has moved into questions of human ecology, cultural forms and modes of thought. While it remains a deeply contested, often criticized concept, particularly in its neo-Darwinian manifestation, it orient anthropological thinking in ways that are as yet to be examined. Reaching into the archives of anthropology and other cognate disciplines, this course will examine the writings of Lyell, Darwin, Marx, Morgan, Boas, Steward, Bateson, Ingold among others. Co-listed with AS.070.610
Instructor(s): A. Goodfellow, N. Khan
Area: Humanities, Social and Behavioral Sciences.

**AS.070.605. Anthropology and the Everyday.**
Analysis of the everyday groans under the theoretical weight of concepts such “modernity,” “governmentality,” “capitalism,” “globalization” and more recently “security.” What might a sharper focus on the everyday yield in terms of its own analytical frameworks and empirical descriptions? We read some contemporary greats (Foucault, Derrida, Cavell, de Certeau, Lefebvre). Simultaneously we look at how each has been received within ethnography by reading anthropologists in engagement with them (Mahmood, Ivy, Das, Siegel, Harvey). We ask what critical stakes anthropology maintains in relation to the everyday.
Instructor(s): N. Khan
Area: Humanities, Social and Behavioral Sciences.

**Near Eastern Studies**

**AS.130.126. Gods and Monsters in Ancient Egypt. 3.0 Credits.**
To provide a basic introduction to Egyptian Religion, with a special focus on the nature of the gods and how humans interact with them. We will devote particular time to the Book of the Dead and to the “magical” aspects of religion designed for protective purposes.
Instructor(s): R. Jasnow
Area: Humanities.

**AS.130.243. Hammurabi in the Digital Age: Digital Humanities and the Ancient Middle East. 3.0 Credits.**
The world’s earliest poetry, cities, and empires all hail from the ancient Near East, but the remains of its remarkable cultures are under direct threat by the current conflicts in the Middle East. Digital technologies can help us to study, preserve, and recreate the artifacts that remain, and this class combines the use of such technologies with the study of the ancient world, offering students the chance to critically engage with modern scholarship methods and create their own digital resources, as well as gain familiarity with key themes and features of the ancient Near East, including urbanization, internationalism, and literature.
Instructor(s): M. Lewis
Area: Humanities.

**History of Science Technology**

**AS.140.105. History of Medicine. 3.0 Credits.**
Course provides an overview of the medical traditions of six ancient cultures; the development of Greek and Islamic traditions in Europe; and the reform and displacement of the Classical traditions during the Scientific Revolution.
Instructor(s): G. Pomata
Area: Humanities, Social and Behavioral Sciences.

**AS.140.146. History of Public Health in East Asia. 3.0 Credits.**
This course examines the history of disease, epidemics, and public health responses in East Asia from the 17th-20th centuries. This public health history emphasizes the interactions, connections, and comparisons among China, Japan, Korea, and Taiwan.
Instructor(s): M. Hanson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.140.313. Psychopolitics: Science, Mind, and Society. 3.0 Credits.
This course explores the history of psychiatry and the mind sciences as social and political institutions in the United States, from the country's founding to the present. Each class meeting will explore a set of "alternative facts" emerging in the setting of a landmark political dispute in US history. Students will read, discuss, and research claims made by competing scientific experts about who should participate in American society and to what extent. Overall, the course is geared toward students interested in making sense of the exchange between scientific knowledge and social politics.
Instructor(s): D. Todes
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.322. Follow the money: Science, technology, and the 'knowledge economy,' c.1800-present. 3.0 Credits.
This course examines the historical emergence of knowledge-driven economies, paying special attention to the funding, development, and use of science and technology for commercial purposes.
Instructor(s): J. Mercelis
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.381. History of Reproduction. 3.0 Credits.
This course investigates the history of reproduction in American medicine, science, politics, and culture. It explores changing ideas about reproductive bodies, sexuality, and the family as well as practices of contraception, conception, and childbirth.
Instructor(s): B. Gurtler
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.413. The White Plague: History of Tuberculosis. 3.0 Credits.
Examination of interrelated scientific, medical, social, and cultural dimensions of tuberculosis from early modernity to the present in various geographical and cultural settings. Extensive reading, research based on primary sources. Juniors and Seniors only. Instructor's permission for all others. Cross-listed with History and Anthropology.
Instructor(s): D. Todes
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.441. Metaphor in Science and Medicine. 3.0 Credits.
Science and medicine are permeated by metaphors. Generated by every domain of human experience, these metaphors embed scientific and medical thought in historically specific times, places, experiences, issues, attitudes and cultures. We will explore the dynamics of metaphorical thinking and examine such specific examples as “The Great Chain of Being,” Darwin’s “struggle for existence” and “natural selection,” the “reflex” from Descartes to Pavlov to cybernetics, body and mind as clock, factory and computer; illness as imbalance and invasion, and the metaphorical associations of tuberculosis and cancer.
Instructor(s): D. Todes
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.674. Science and Medicine in Early Modern Atlantic World Culture.
How were changes in scientific and medical ideas reflected in cultural products of the early modern Atlantic world? We will study these ideas as they appeared in literary genres such as poetry, utopias, natural histories and travel narratives. Likewise, we will examine the visual culture of the Atlantic space for clues about changing conceptions about the natural world. Our expedition will encompass Anglophone, French and Hispanic regions, and will pay careful attention to hybrid cultural products that reflect the interaction between indigenous cultures and the (changing) European understanding of the natural world.
Instructor(s): M. Portuondo.

Islamic Studies
AS.194.201. Jews, Muslims, and Christians in the Medieval World. 3.0 Credits.
The three most widespread monotheisms have much more in common than is generally portrayed: a common founding figure, a partly shared succession of prophets, closely comparable ethical concerns and religious practices, a history of coexistence and of cultural, religious, social and economic interaction. This course will focus on a number of key texts and historical events that have shaped the relationships between Jews, Muslims, and Christians during the Middle Ages and contributed to their reciprocal construction of the image of the “other.” The geographical center of the course will be the Mediterranean and the Near and Middle East, a true cradle of civilizations, religions, and exchange.
Instructor(s): G. Ferrario.

German Romance Languages Literatures
AS.211.202. Freshman Seminar: A Thousand Years of Jewish Culture. 3.0 Credits.
This course will introduce students to the history and culture of Ashkenazi Jews through their vernacular, Yiddish, from the settlement of Jews in German-speaking lands in medieval times to the present day. Particular emphasis will be placed on the responses of Yiddish-speaking Jews to the challenges posed by modernity to a traditional society. In addition to studying a wide range of texts—including fiction, poetry, memoir, song, and film—students will learn how to read the Yiddish alphabet, and will prepare a meal of traditional Ashkenazi dishes. No prior knowledge of Yiddish is necessary for this course.
Instructor(s): B. Lang
Area: Humanities.

AS.211.265. Panorama of German Thought. 3.0 Credits.
This course explores the rich terrain of German literature and philosophical thought, from Kant to today. At each meeting, we will investigate canonical texts of the German intellectual tradition, with an eye to discovering their unity as “German” philosophical and cultural artifacts and icons, as well as with an interest in establishing their well-deserved place in the wider, global discourses of world literature. In this way, we will learn to think critically in and with these important literary and philosophical texts from German-speaking lands as a means of viewing and appreciating the full panorama of German thought. Among authors read and discussed will be Kant, Goethe, Schiller, Hegel, Kleist, Heine, Fontane, Nietzsche, Freud, Kafka, Heidegger, Mann and Bernhard. Readings and discussion will be in English. German is appreciated but not required.
Instructor(s): M. Dornbach
Area: Humanities
Writing Intensive.
AS.211.328. Berlin Between the Wars: Literature, Art, Music, Film. 3.0 Credits.
Explore the diverse culture of Berlin during the heyday of modernism. During the Weimar Republic, Berlin became a center for theater, visual arts, film, music, and literature that would have an outsized impact on culture throughout the world and the twentieth century. The thinkers, artists, and writers drawn to interwar Berlin produced a body of work that encapsulates many of the issues of the period: the effect of the modern city on society; “the New Woman”; socialist revolutionary politics; the rise of the Nazis; and economic turmoil. While learning about interwar Berlin’s cultural diversity, we will take a special look at works by Jewish writers and artists that engage with the question of ethnic, religious, and national identity in the modern world, specifically in the context of Berlin’s rich Jewish history and the rise of anti-Semitism in the interwar period. All readings will be in translation.
Instructor(s): S. Spinner
Area: Humanities.

AS.211.341. Power and Resistance in French Political Thought. 3.0 Credits.
Even as a strong, divine-right monarchy emerged in France, following the Renaissance wars of religion, rebellious French thinkers never stopped questioning the foundations of power. They focused critically not only on the claims of authority issuing from the top, but also on the submissiveness of the governed and the reach of propaganda. This course examines how power shapes minds and bodies, from absolutism to the Revolution, to democratic laïcité. Readings include works by La Boétie, Montaigne, Bayle, Rousseau, Saint-Just, Maistre, Tocqueville, Foucault, Lefort, Rancière and the Assemblée Nationale. Readings and discussion in English.
Instructor(s): E. Russo
Area: Humanities.

AS.211.394. Brazilian Culture & Civilization. 3.0 Credits.
The course is taught in English. No knowledge of Portuguese is required. This course is intended as an introduction to the culture and civilization of Brazil. It is designed to provide students with basic information about Brazilian history, art, literature, popular culture, theater, cinema, and music. The course will focus on how indigenous Asian, African, and European cultural influences have interacted to create the new and unique civilization that is Brazil today. The course is taught in English, but ONE extra credit will be given to students who wish to do the course work in Portuguese. Those wishing to do the course work in English for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. The sections will be taught simultaneously. Section 01: 3 credits Section 02: 4 credits (instructor's permission required)
Instructor(s): F. De Azeredo Cerqueira
Area: Humanities
Writing Intensive.

AS.211.449. America Through French Eyes: French Travellers to America. 3.0 Credits.
From early colonial efforts in the sixteenth century through the time of the great political revolutions and down to the present, America has exercised a deep fascination on the French. This course will look at French representations of America in art, literature and political thought across the centuries. Through a range of materials including travel accounts, essays, novels, maps, paintings and film, we will investigate how French perceptions of America have shifted over time, often in response to changes in French society and culture. All texts will be read in translation. Course work will include visits to JHU’s Special Collections and the Walters Art Museum downtown
Instructor(s): S. Miglietti
Area: Humanities.

AS.211.479. Dante’s Journey through the Afterlife. 3.0 Credits.
Dante’s Divine Comedy presents a complete picture of the medieval world-view in all its aspects: physical (the structure of the cosmos), historical (the major actors from Adam to Dante himself) and moral (a complete system of right and wrong). Dante shows how the Christian religion portrayed itself, other religions, the nature of God, humans, angels and devils, and human society. We will explore these topics both from the viewpoint of Dante’s own time, and in terms of its relevance to our own societal and cultural concerns.
Instructor(s): W. Stephens
Area: Humanities
Writing Intensive.

AS.212.341. Power and Resistance: Approaches to French Political Thought.. 3.0 Credits.
Even as a coherent, rational conception of state power emerged in France in as early as the Renaissance, French thinkers never stopped challenging the ways by which power justified itself in order to foster obedience and consensus. In so doing, they focused critically as much on the claims of sovereignty issuing from the top as on the willingness of the governed to submit to them. The course will examine the dialectic between the legitimation and delegitimation of power, from the Renaissance wars of religion to the Revolution and beyond: the haunting fear of the corruption and death of the political body; the notion of permanent crisis; the right to revoke the social contract; the reach of power in shaping minds and bodies. Readings may include works by La Boétie, Bodin, Bayle, Rousseau, Sade, Saint-Just, Constant, Maistre, Tocqueville, Foucault, Lefort and Rancière. Readings and discussion in English.
Instructor(s): E. Russo; W. Anderson
Area: Humanities.

AS.212.699. Cultures of Criticism from the Classics to Foucault.
From fault-finding to the crossover of aesthetic and political judgment, criticism never loses sight of its medical cognates critical and crisis. This course examines the emergence and the transformations of critical judgment in the arts, culture and politics, from the early days of its collusion with French monarchical propaganda, to the critical genealogies of the Enlightenment, to the postrevolutionary critique of history, to Foucault’s critique of practices of veridiction. Works by Perrault, Bayle, Diderot, Rousseau, Tocqueville, Cassirer, Koselleck, Derrida, Barthes, Bourdieu, Foucault. Taught in English; most texts available in translation, but knowledge of French recommended.
Instructor(s): E. Russo
Area: Humanities.
AS.213.706. Literature, Museums, Mimesis.
Can museums be literary? Can literature be museal? Throughout the twentieth century and into the present, the museum has repeatedly challenged models of representation, none more so than mimesis, both as aesthetic theory and representational practice. This has been a role played by museums, both in their traditional guises as repositories of objects and — as André Malraux presciently had it — as "imaginary museums." This course will examine the larger disruption of mimesis, and more specifically literary realism, through the particular catalyzing effects of museums. We will deal with two primary museological phenomena: first, the introduction of the "primitive other" into European modernity via ethnographic museums; second, the museological commemoration and representation of trauma, specifically of the Holocaust. Special attention will be paid to discursive, formal, and rhetorical locations of overlap between the museal and the literary, including ekphrasis, linearity, volume, and collection. Readings will include fiction, poetry, and theoretical texts, as well as secondary sources examining particular museums and exhibitions. All texts in English.
Instructor(s): S. Spinner
Area: Humanities
Writing Intensive.

The course explores some aspects of the contradictory constitution of the modern subject as a subject that is split, opposed, in tension. Two archetypal figures of this split are the "bourgeois," as the social-economic subject, and the "citoyen" or "citizen," as the political subject. The bourgeois and the citoyen are defined by distinct and opposing conceptions of the "will," of education (Bildung), and of the relation between law and nature, normativity and facticity. In asking how to understand the conflictual relationship between these two basic figures of the modern subject, the course will focus especially on the paradoxes of "individual rights" (subjektive Rechte) as the fundamental mechanism of modern subject-formation. How do rights both empower subjects, while also contributing to forms of their disempowerment? To what extent do rights contain and organize the tensions between subjects understood as social or economic, and as political? CLASS BEGINS FEBRUARY 25 AND ENDS APRIL 1. Readings will include excerpts from (among others): Hegel, Marx, Nietzsche, Horkheimer and Adorno, Heidegger, Foucault, Balibar and Rancière.

Area: Humanities
Writing Intensive.

AS.214.437. The Intellectual World of the Italian Renaissance. 3.0 Credits.
This course is intended to familiarize students with the intellectual world of Renaissance Italy, or more specifically, the "lost" Italian Renaissance of the long fifteenth century, from the time when Petrarch (1304-74) was in full maturity to the 1520s. During this period, most Italian intellectuals wrote the majority of their work in Latin — not the Medieval Latin of the Church and the universities but in what they saw as a more authentic Latin, like that used in ancient Rome, in the time of Cicero, Virgil, Quintilian, and others. These Renaissance "humanists," inspiring by the example of Roman, and eventually Greek, antiquity, believed that they were carrying out a cultural revival. Who were these humanists? Why then did they choose Latin (and a reformed Latin at that) instead of their "native" tongue as the language in which to effect this renewal? What did this choice afford them in terms of literature and philosophy? Why was this phase of literary and philosophical history undervalued in the evolution of modern scholarship? By the end of this course, you should be able to formulate answers to those questions. Some of the works of these authors still await editions, lying in manuscript libraries or difficult-to-access early printed editions. Many have now had their Latin texts edited, and a number have recently been translated into English. Students therefore have the chance to explore work in a field that is new and growing. A separate Renaissance Latin reading group will accompany the course for those who have studied Latin.
Instructor(s): C. Celenza
Area: Humanities
Writing Intensive.

AS.214.390. Machiavelli: A Renaissance Master. 3.0 Credits.
Who was Niccolo Machiavelli? The author of the Italian Renaissance's most famous book, The Prince, he also wrote histories, commentaries, comedies, and letters. And he had a career as a prominent Florentine diplomat, which ended tragically but informed everything he wrote. This course is intended to offer students an introduction to Machiavelli's major works and to the intellectual, social, and political contexts that shaped his thinking.
Instructor(s): C. Celenza
Area: Humanities
Writing Intensive.

AS.214.477. Magic, Marvel, and Monstrosity in the Renaissance. 3.0 Credits.
Magic, Monstrosity, and Marvels or Wonders call into question what we see and experience: what is reality, what is illusion; what's natural and what's supernatural? What's human and what's more, or less, than human? During the Renaissance, ideas about the nature of reality were bound up with questions and issues very different from those of our time. With the exact sciences still being invented, the nature of the world was much less hard and fast for Renaissance people than it is for the modern educated person. The literary masterpieces of the Italian Renaissance provide vivid illustrations of the early modern sense of wonder. Foremost among these are the theatrical comedies which Italian authors revived in imitation of the ancients, and the romances, especially Ariosto's Orlando furioso (1532) and Tasso's Gerusalemme liberata (1581). These and other works influenced ideas about magical and marvelous phenomena across Europe for centuries to come. Works will be read and discussed in English. Italian majors and graduate students (who should enroll in section 2) will attend a weekly supplemental discussion in Italian and compose their written work in Italian.
Instructor(s): W. Stephens
Area: Humanities
Writing Intensive.
AS.214.479. Dante Visits the Afterlife: The Divine Comedy. 3.0 Credits.
Dante's Divina commedia is the greatest long poem of the Middle Ages; some say the greatest poem of all time. We will study the Commedia critically to find: (1) What it reveals about the worldview of late-medieval Europe; (2) how it works as poetry; (3) its relation to the intellectual cultures of pagan antiquity and Latin (Catholic) Christianity; (4) its presentation of political and social issues; (5) its influence on intellectual history, in Italy and elsewhere; (6) the challenges it presents to modern readers and translators; (7) what it reveals about Dante's understanding of cosmology, world history and culture. We will read and discuss the Commedia in English, but students will be expected to familiarize themselves with key Italian terms and concepts. Students taking section 02 (for 4 credits) will spend an additional hour working in Italian at a time to be mutually decided upon by students and professor.
Instructor(s): W. Stephens
Area: Humanities
Writing Intensive.

AS.215.305. Mexico: A cultural history from the Olmecs to the Mexican revolution of 1910. 3.0 Credits.
The offers a survey of Mexican culture from the formative years of the Olmecs (2000 B.C.) to the Mexican revolution of 1910. History of ideas, matrix social formations, art and literature are the focus of this historical overview.
Instructor(s): S. Castro-Klaren

Giambattista Vico's Principi di scienza nuova d'intorno alla comune natura delle nazioni (1725, 1730, 1744) was intended to found an "ideal" and "eternal" model of human development, valid for all societies. Vico considered his project both philology and philosophy, and tried to revolutionize thinking about human history as practiced between about 1550 and 1700, by exposing misconceptions behind attempts to square "sacred history" (the presumed historical accuracy of the Bible) with "profane" or non Judeo-Christian concepts of history, both ancient and modern. The culture shock underlying this "old science" stimulated Vico to base philosophical and historical knowledge of mythology on a conception of narration. Recommended Course background: Italian and Latin
Instructor(s): W. Stephens
Area: Humanities
Writing Intensive.

The readings bring into consideration the question of terror (of war) and displacement as experienced by migrants in novels by prize winning authors such as Arguedas, Vargas Llosa, Alarcón, Riesco, Roncaglio and Silva Passuni.

Area: Humanities
Writing Intensive.

AS.215.406. Novelist Intellectuals. 3.0 Credits.
What does a novelist's op-ed about economics have to do with her literary writing? In what ways does a fiction writer's essays on the environment inform how we read her novels? What happens when we find the political opinions of a writer objectionable? This undergraduate seminar will consider what the Spanish writer Francisco Ayala termed "novelist intellectuals," that is, literary writers who actively participate in a society's public sphere. Considering writers from Madrid to New York, from London to Buenos Aires, we will ask how one should hold a novelist's fictional and non-fictional writings in the balance and explore ways of reading that allow us to consider the public intellectual side and the aesthetic side of a novelist together.
Instructor(s): B. Seguin
Area: Humanities.

AS.215.413. Cuba y España. 3.0 Credits.
La frase “más se perdió en Cuba” alude al singular rango de la antigua Provincia de Ultramar en el mapa geopolítico del colonialismo hispánico. Hemos de estudiar la prolongada relación entre España y Cuba, desde 1492 al presente, a través de materiales literarios, crónicas, artes plásticas, música y medios sociales al corriente. Enseñado íntegramente en español.
Prerequisites: AS.210.311
Instructor(s): E. Gonzalez
Area: Humanities.

AS.215.452. Che Guevara and Magical Realism. 3.0 Credits.
His detractors often compare him to Hitler while many of his admirers see in him a saint and a martyr like Jesus Christ. Cuban school children are taught to be like him. Che was killed in 1967, the same year in which Gabriel García Márquez published Cien años de soledad (One Hundred Years of Solitude). We will study Guevara's life as a militant revolutionary through his own writings and the exorbitant style known as realismo mágico, crafted by García Márquez, one of Che's great admirers. Four movies will anchor our visual take on the myth and the man: Los diarios de motocicleta (Walter Salles, 2004), Che I and Che II (Steven Soderbergh, 2008), and Wall Street (Oliver Stone, 1987). The nineteen-eighties narcotraffic boom in Colombia and the cocaine-driven financial high times during the late Reagan years will frame our study. Taught in Spanish
Instructor(s): E. Gonzalez
Area: Humanities.
AS.215.490. Reading Ancient Mexico Today: Amoxtli, Tlacuilos and the Florentine Codex. 3.0 Credits.
This course offers an in depth study of "Mexican" writing systems before and after the Spanish Conquest in 1521. Special emphasis is placed on the role of the tlacuilos—nahuatl intellectuals— in the writing of the Florentine Codex (1584), the largest surviving compendium on pre-conquest Mexico.
Instructor(s): S. Castro-Klaren
Area: Humanities
Writing Intensive.

AS.215.646. The Narrative of Conquest in the Andes, 1530 - 1680.
Departing from narratology and the perspective of post-colonial studies, the course will analyze the narrative of conquest as developed by Cieza de Leon, Garcilaso de la Vega, Inca, Guaman Poma, Jose de Acosta and William Prescott.
Instructor(s): S. Castro-Klaren
Area: Humanities
Writing Intensive.

AS.215.650. Mexico and the Invention of America.
Departing from O'Gorman, the course will entail a reconsideration of the discursive invention of Mexico-America. Anonymous, Sahagun, Clavijero, Humboldt, Dussel and Alzandua will conform part of the readings. Taught in English
Instructor(s): S. Castro-Klaren
Area: Humanities
Writing Intensive.

Sociology
AS.230.166. Chinese Migration in Modern World History 1500's-2000's. 3.0 Credits.
This interdisciplinary course applies theories of economic sociology to examine the effects of Chinese overseas migration on modern world economy from the sixteenth century to the contemporary era. It examines the contribution of overseas Chinese to the development of capitalism in the following junctures: the East-West economic integration in the pre-modern era, China's modern transformation after the Opium War (1839-1842), the making of US national economy in the early twentieth century, as well as the postwar economic miracles in the Pacific Rim, among others. Special Note: Fulfills History requirement for GSCD track students.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences.

AS.230.377. Colonialism and Anti-Colonialism. 3.0 Credits.
This seminar examines the theories and historiography of colonialism and anti-colonial movements. It focuses on the establishment of the colonial division of labor, comparative colonialism, identity formation, and nationalism as well as anti-colonial movement.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences.

Comparative Thought and Literature
AS.300.139. Introduction to Intellectual History. 3.0 Credits.
This course offers a conceptual and historical introduction to Intellectual History. What makes the "history of ideas" different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call "ideas"? In what sense do they have a history? These are examples of the kind of questions addressed in the course.
Instructor(s): P. Marrati
Area: Humanities.

Humanities Center
AS.300.228. Brain and Society. 3.0 Credits.
On April 2, 2013, President Obama unveiled the Brain Activity Map Project, a 100 million dollar investment to map the single-celled neurons composing the human brain. Scientific in its aim, the project is culturally significant as well. Popular websites lumosity.com and neuronetlearning.com offer brain-exercises to boost intelligence, while the emergent academic fields neurophilosophy, neuroethics, and neurohistory borrow from the brain sciences. The interaction between the brain and society, however, is by no means new. In this course, we will investigate the origins of brain maps and trace their reception in nineteenth-century European and American literature, philosophy, and politics. Topics include phrenology, the nervous system, psychopathology, and brain localization, and these fields' resonance in German Idealism, Victorian literature, French anthropology, and American fiction. The course is reading intensive.
Instructor(s): L. McGrath
Area: Humanities, Social and Behavioral Sciences.

Comparative Thought and Literature
AS.300.311. Introduction to Intellectual History. 3.0 Credits.
This course offers a conceptual and historical introduction to intellectual History. What makes the "history of ideas" different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call "ideas"? In what sense do they have a history? These are examples of the kind of questions addressed in the course.
Instructor(s): H. Sirin; P. Marrati
Area: Humanities.

AS.300.383. History of Madness from the Bible to DSM-V. 3.0 Credits.
Madmen, lunatics or the insane, have seen an extraordinary variety of responses and attitudes across the centuries. Whether seen as a “true” phenomenon or as socially constructed “madness” was defined and treated, examined and controlled, diagnosed and “cured” according to the spirit of the time. This course will follow the varied social imageries of “madness” throughout Western history, from the Bible to the contemporary and controversial Diagnostic Statistical Manual (DSM) in its most recent 5th edition. Alongside primary texts by Hippocrates, Avicenna, Pinel, and Freud and secondary texts by Michel Foucault, Ian Hacking, Edward Shorter, and Elaine Showalter, among others, we will acquaint ourselves with first-person accounts of “madness” and its different forms of treatment, ranging from lunatic asylum, through electric-shock treatments and lobotomies to psychoanalysis. The course will explore the interaction between the historical and social, scientific and political as well as economical factors that have shaped the views of “madness” and its treatment.
Instructor(s): O. Ophir
Area: Humanities.
East Asian Studies

AS.310.106. Introduction to Korean History and Culture. 3.0 Credits.
This course offers a comprehensive overview of Korean history and culture from ancient times to the modern era. Through primary, secondary, and audio-visual sources, students will become familiar not only with the overall contours of the entirety of Korean history, but also with its cultural and religious legacy. The course combines lectures and class discussions.
Instructor(s): Staff
Area: Humanities.

AS.310.108. Introduction to Chinese Fiction and Drama. 3.0 Credits.
This course will introduce Chinese fiction and drama from the Tang dynasty (618-906) to the early Republican period (1911-1949), such as the romantic dramas of Tang Xianzu and the uncanny tales of Pu Songling. Students will draw connection between these vibrant literary genres and the cultural and socio-historical events that shaped imperial China. Key topics include story-telling, romance, urban culture, gender, reincarnation, and many more. Students will acquire skills in how to read, analyze and discuss the rich legacy of Chinese fiction and drama in translation and to think critically about these writings. Reading materials are all in English.
Instructor(s): F. Joo
Area: Humanities.

AS.310.201. Freshman Seminar: Korean History through Film and Literature. 3.0 Credits.
In this course, students will engage with select topics in Korean history from premodern and modern times and examine how the past has been represented through various forms of film and literature. This will be combined with readings of academic articles to allow students to gauge the distance between scholarship and cultural expressions of history. Through this, students will be introduced to the highly contested and often polarizing nature of Korean history and the competition surrounding historical memory.
Instructor(s): Staff
Area: Humanities.

AS.310.301. Documentary Photography in a Changing China. 3.0 Credits.
This course aims to inspire students to explore the impacts, meanings, and explanations of social transformation in contemporary China, via the lens of documentary photography. The photographic images of selective topics will include the products of photojournalism and documentary photography, and several documentary films, by both Chinese and non-Chinese photographers. While one picture is worth thousand words, one picture may also provoke countless interpretations. Students are strongly encouraged to read broadly about different aspects of social transformations in contemporary China, and to select and curate their own subjects of photo images. The spirit of comparative study of documentary photography of China and other parts of world will be strongly encouraged. Active class participation is imperative. A small exhibition on the campus will be organized by the Spring semester. The course is designed for upper division undergraduates. Cross-listed with Sociology and International Studies (CP).
Instructor(s): G. He
Area: Social and Behavioral Sciences.

AS.310.308. The Frontier in Late Imperial China. 3.0 Credits.
The tremendous expansion of Chinese frontiers during the late imperial period forced the state and those who lived within it to grapple with complex problems of governance, ethnicity, and the geographic extent of "China". Issues and concerns associated with the massive Chinese frontiers have extended into the present; hence, no one can appreciate the current problems plaguing China’s northwestern, southwestern, or coastal regions without an understanding of its historical antecedents. This seminar is designed to introduce major scholarly works and theoretical frameworks on the Chinese frontier.
Instructor(s): J. Bandy
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.310.402. Labor Politics in China. 3.0 Credits.
This course explores the transformation of labor relations in China over the past century. It will cover the origins of the labor movement, the changes brought about by the 1949 Revolution, the industrial battles of the Cultural Revolution, the traumatic restructuring of state-owned enterprises over the past two decades, the rise of private enterprise and export-oriented industry, the conditions faced by migrant workers today, and recent developments in industrial relations and labor conflict. The course is designed for upper division undergraduates and graduate students. Cross-listed with Sociology and International Studies (CP).
Instructor(s): G. He; J. Andreas
Area: Social and Behavioral Sciences
Writing Intensive.

Interdepartmental

AS.360.147. Freshmen Seminar: Adam Smith and Karl Marx. 3.0 Credits.
This course will compare the ideas of Adam Smith, the most famous proponent of free trade and free enterprise, with those of Karl Marx, the greatest critic of capitalism. For freshmen only.
Instructor(s): E. Schoenberger; P. Jelavich
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

Program in Latin American Studies

AS.361.130. Introduction to Latin American Studies. 3.0 Credits.
The goal of this course is to provide an overview of Latin America, analyzing political and cultural aspects, chronologically organized. We will begin studying the origins of the multi–ethnic societies, starting with the ancient civilizations and their transformation under colonization. It is important to understand the survival of cultural traits among indigenous peasants today in the countries that were the cradle of ancient civilizations: Mexico, Guatemala and the Andean countries. In the republican era the course will focus on the classical Caribbean dictators in the first half of the 20th century and their reflection in the literature, comparing the historical reality with the magic representation in the work of Garcia Marquez. The course will scrutinize the most important revolutions in the continent: the Mexican, Cuban and Bolivian revolutions and the geopolitics of USA in the Americas. Weekly lectures related to the assigned reading will focus on specific periods, topics and regions. After each lecture, we will review the material, connecting specific details from the readings with the more theoretical aspects provided in my lecture. The course has a website where the PowerPoint presentations will be posted. Students are encouraged to pose their questions, comments and suggestions on the web after their readings. Students will be given a study guide for each lecture, which will be the basis for the exams. Our perspective on Latin America will be enhanced by a selection of few films related to the topics.
Instructor(s): E. Cervone
Area: Humanities, Social and Behavioral Sciences.
AS.361.207. Afro-Latin American Biography. 3.0 Credits.
In this course, we will examine biographical accounts of men and women of African descent in Latin America and in the broader Black Atlantic. These individuals include conquistadors and slaves, saints and sinners, revolutionaries and ordinary people. In their life stories, we will not only examine questions of race, gender, and religiosity that were central to the construction of identity in the early modern Atlantic world, but also the nature of the sources that allow us to tell their stories.
Instructor(s): J. Clark
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.361.410. Colombia and Venezuela: Postcolonial History and the European Novel. 3.0 Credits.
The intertwined histories of Colombia, Venezuela, Panama, and the Caribbean studied in two novels: Joseph Conrad's Nostromo (1904) and Juan Javier Vázquez's The Secret History of Costaguana (2007). Other novelists include Rómulo Gallegos (Doña Bárbara, 1929); Alejo Carpentier (The Lost Steps, 1953), and Gabriel García Márquez (The General in his Labyrinth, 1989).
Instructor(s): E. Gonzalez
Area: Humanities.

Center for Africana Studies
AS.362.112. Introduction to Africana Studies. 3.0 Credits.
Introduction to the core concepts, theories, cultural and intellectual production across the black diaspora. Antiracist, queer, and insurgent black thought welcome here.
Instructor(s): J. Johnson
Area: Humanities, Social and Behavioral Sciences.

AS.362.122. History of Africa (since 1880). 3.0 Credits.
An introduction to the African past since 1880.
Prerequisites: Students are not allow to take both 100.122 and 362.122.
Instructor(s): K. Gallon
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.362.175. Freshman Seminar: Remembering the Black Power Movement. 3.0 Credits.
This course explores trends, developments, contradictions, and dilemmas related to the Black Power Movement. The objective of studying this historical movement is not to engage in nostalgia, but to think through and learn the lessons of this historic social movement. An active participant in the Black Power Movement as a university undergraduate and graduate student, I do not approach this subject merely as a set of interesting intellectual issues and dynamics that can be explored with complete dispassion and objectivity. Rather, I seek to examine critically some of the contradictions and dilemmas that I, too, was caught up in, seeking to come to grips with and clarify my own participation and activities. We study these historical events with the expectation of making a positive contribution to the future.
Instructor(s): F. Hayes
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.362.340. Power and Racism. 3.0 Credits.
This course investigates the impact of white supremacy and anti-black racism, as a global system of power, on the political development of the United States of America.
Instructor(s): F. Hayes
Area: Social and Behavioral Sciences
Writing Intensive.

AS.362.450. Critical Thinking in Africana Studies. 3.0 Credits.
This seminar examines various ideas, theories, and practices of thinkers, writers, and activists whose work and practices have constituted an Africana Studies intellectual tradition. The purpose of this seminar is to teach students to read, think, and write critically about questions relative to the formation and history of Africana thought and its intellectual tradition, in particular, and the genealogy of thought and intellectual traditions, in general. We will also think about various fields of knowledge that have shaped Africana Studies. The seminar therefore will work through the different meanings of intellectual work and critical thought and theory in Africana Studies.
Instructor(s): F. Hayes
Writing Intensive.

Study of Women, Gender, Sexuality
AS.363.201. Introduction to the Study of Women, Gender, and Sexuality. 3.0 Credits.
This course offers an introduction into the fields of Women's Studies, Gender Studies, and Sexuality Studies. It explores why we need these fields of inquiry, how they have emerged historically, what some of the major and most interesting contributions are and where we might go from here. The course is meant as a preparation for the other WGS core courses.
Instructor(s): K. Pahl
Area: Humanities, Social and Behavioral Sciences.

Program in Museums and Society
AS.389.201. Introduction to the Museum: Past and Present. 3.0 Credits.
This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends including the social movements of the 20th century. Anthropology, art, history, and science museums are considered. Cross-listed with History and History of Art.
Instructor(s): J. Kingsley
Area: Humanities, Social and Behavioral Sciences.

AS.389.275. Interpreting Sites & Collections: An Introduction to Museum Education. 3.0 Credits.
Part public history, part introduction to museum practices, this hands-on course explores how heritage areas and museums serve communities through interpretation. Each year, students partner with a community to develop research-based, visitor-centered interpretive material, in the 2015 Baltimore National Heritage Area. Field trips and community meetings will be a significant part of the course. Cross-listed with History and History of Science. M&S practicum course. Class usually meets 1:30 - 3:50 except for days with field trips.
Instructor(s): E. Maloney
Area: Humanities, Social and Behavioral Sciences.

AS.389.301. Curating Material Culture for the Digital Age. 4.0 Credits.
JHU pioneered the concept of the modern research university in the United States, but what does that mean for the everyday experiences of its students, faculty, staff and friends? Excavate the history of this place through the things collected, made and used here since the university's founding in 1876. Students research the material culture of Hopkins and present their findings on an interactive website: collectionsweb.jhu.edu. Course includes digital media labs. Cross-listed with History and History of Science. M&S practicum.
Instructor(s): J. Kingsley
Area: Humanities, Social and Behavioral Sciences.
AS.389.302. The Virtual Museum. 3.0 Credits.
Course draws on both classic readings in material culture and emerging theories of the digital to consider how the internet has changed objects and the institutions that collect, preserve, display and interpret them. Students will contribute to an established virtual museum and create their own.
Instructor(s): J. Kingsley
Area: Humanities.

In 1857 Baltimore’s historic George Peabody Library was born, one of America’s first public libraries. This course studies its history, rare book collections, and foundational role in Baltimore’s cultural history.
Instructor(s): E. Havens
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.389.356. Halls of Wonder: Art, Science, and Literature in the Age of the Marvelous, 1500-1800. 3.0 Credits.
Instructor(s): E. Havens
Area: Humanities.

AS.389.357. Heaven on Earth: Art, Culture and Wonder in the Vatican Museum and Library. 3.0 Credits.
This interdisciplinary course will explore the institutional, cultural, artistic and architectural history of St. Peter’s and the Vatican Museum and Library from Antiquity through the Renaissance, up to the present day. Class meets in the Dick Macksey Seminar Room of the Brody Learning Commons. Cross-listed with History.
Instructor(s): E. Havens
Area: Humanities.

AS.389.376. Enslaved at Homewood: Slavery in 19th Century Maryland. 3.0 Credits.
Students consider the representation of slavery in historic house museums of the late 20th century through the present, and use the university’s Homewood Museum as a laboratory for the development, production and mounting of an exhibit about the men, women and children who labored at Homewood in the nineteenth century. Museums and Society Practicum course.
Instructor(s): A. Schreiber
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.389.450. Readings in Material Culture. 3.0 Credits.
Objects, things, “stuff”- this seminar will pursue classic texts and emerging methodologies to explore the myriad ways materials and materiality have been theorized across disciplines. For graduate/advanced undergraduate students.
Instructor(s): E. Rodini; R. Brown
Area: Humanities.

AS.389.650. Readings in Material Culture.
Objects, things, “stuff”- this seminar will pursue classic texts and emerging methodologies to explore the myriad ways materials and materiality have been theorized across disciplines. For graduate/advanced undergraduate students.
Instructor(s): E. Rodini; R. Brown
Area: Humanities.

History of Art
http://arthist.jhu.edu/

Supporting a proud tradition of excellence in humanities scholarship and teaching, Johns Hopkins University offers students a diverse range of resources and opportunities for the study of art history. Courses are taught by an international faculty of respected research scholars, covering many aspects of the Classical and European tradition from the ancient world into the modern era, as well as selected aspects of Near Eastern, Asian, Ancient American, trans-Atlantic and contemporary arts. Participating in small classes with opportunities for informal excursions, students integrate their direct experience of works of art with the knowledge and critical perspective gained through historical research, discussion, and debate.

Programs leading to the B.A. and Ph.D. degrees, and a B.A./M.A. program, emphasize the value of investigating works of art in their historical, intellectual, and social contexts, and enable students to deepen their understanding of cultural history through courses in other departments.

Facilities and Opportunities
Located in a metropolitan region of unsurpassed museum collections and research institutions, Johns Hopkins is well situated for the study of art history. The Baltimore Museum of Art, with its rich holdings in modern and contemporary art, African Art, and the history of prints (just to name a few of its strengths), is directly adjacent to the Homewood campus. Downtown, and only a short shuttle ride away, is the renowned Walters Art Museum, which preserves rare collections of ancient and medieval art, Renaissance, Baroque, and 19th-century painting.

Also easily accessible from Baltimore is the National Gallery of Art in Washington, D.C., which houses a world-class collection of European painting, sculpture, and graphic arts from the Renaissance to the present day. Modern art is presented in the permanent collections and exhibitions of the Hirshhorn Museum, Smithsonian American Art Museum (SAAM), and the Phillips Collection. Unique exhibitions of Byzantine and pre-Columbian art are maintained at Dumbarton Oaks Research Library, and collections of Asian, Ancient Near Eastern, and African art are housed in the Freer|Sackler and the Museum of African Art.

Meanwhile, the Sheridan Libraries of Johns Hopkins maintains its own extensive art library on the Homewood Campus, and a Special Collections department which includes, among other treasures, the Fowler Collection of treatises on architecture. Research materials in numerous regional libraries and museums, and in affiliated institutions, including the Library of Congress, are readily accessible to art history students.

Undergraduate Program
(Also see Requirements for a Bachelor’s Degree (p. 7))

Because the department emphasizes the historical, cultural, and social context of art, art history is an excellent program for undergraduates interested in a broadly humanistic education as well as for those preparing for a career in the field. A departmental faculty advisor assigned to each undergraduate major helps plan individual courses of study. Undergraduates are encouraged to participate fully in all departmental activities.

Requirements for the History of Art Major
• Students must earn a “C-” or higher grade in all courses used to satisfy major requirements.
• Courses used to satisfy major requirements may not be taken satisfactory/unsatisfactory.

Three Introductory Courses, to comprise:

| AS.010.101 | Introduction to History of Western Art I |
| AS.010.102 | and Introduction to the History of Western Art II |

and one of the following:

| AS.010.105 | Art of the Ancient Americas |
| AS.010.110 | Art of the Islamic World |

Five Advanced Level Courses (010.2xx-4xx)

One course in ancient art history 3
One course in medieval art history 3
One course in renaissance/baroque art history 3
One course in modern art history 3
One course in non-western art history 3

Two 400-Level Courses, to comprise: 1

One 400-level course exploring art history's historical and conceptual bases and approaches. 2
One additional 400-level course 3

Three Additional Courses 9

Total Credits: 44-55

1 These courses are in addition to the five advanced subfield courses; they may not count toward fulfilling one of the subfields above.
2 Course should be taken within one year of declaring, ideally before senior year.
3 Those planning to continue to graduate school in the History of Art should discuss which language(s) to pursue with their adviser and/or the director of undergraduate studies.

Honors Program in History of Art

For graduation with honors, students must have a cumulative GPA of 3.7 or higher in History of Art and successfully complete an honors thesis.

Honors Thesis

• The honors thesis comprises a significant expansion and deepening of a paper in a 400-level seminar into a 20-25 page paper, with figures, bibliography, and any appendices constituting additional pages.
• Students pursuing honors must make a formal request to do so in conjunction with a proposed mentor via the Honors Thesis Form.
• While writing the thesis, students enroll in Honors Thesis credits (AS 010.521, 3 credits). These credits are in addition to the 13 courses of the normal major requirements and do not count as an elective or advanced course.

Requirements for the History of Art Minor

• Students must earn a "C-" or higher grade in all courses used to satisfy minor requirements.
• Courses used to satisfy minor requirements may not be taken satisfactory/unsatisfactory.

Introductory Courses

Two introductory courses chosen from the following:

| AS.010.101 | Introduction to History of Western Art I |
| AS.010.102 | Introduction to the History of Western Art II |
| AS.010.105 | Art of the Ancient Americas |
| AS.010.110 | Art of the Islamic World |

Five Advanced Level Courses (010.2xx-4xx) 15

Total Credits: 21-23

Graduate Program

The graduate program is designed to give students working toward the Ph.D. degree an encompassing knowledge of the history of art and a deep understanding of the theories and methodologies pertaining to art historical research. The program emphasizes collaborative working relationships among students and faculty in seminars. Each advanced
doctoral candidate benefits from supervision by two faculty members in his or her field.

The program also fosters a close familiarity with the outstanding art treasures in the Baltimore-Washington area relevant to the student's area of study. In addition to the rich holdings of the Sheridan Libraries of Johns Hopkins University (which include collections of rare books at Garrett Library, Special Collections at Eisenhower Library, and the George Peabody Library downtown) graduate students have access to such research facilities as the Center for Advanced Study in the Visual Arts (National Gallery) and the Dumbarton Oaks Research Library and Collection, both in Washington, D. C.

Admission and Financial Aid
Applicants to the Ph.D. program in History of Art should upload and submit all required application materials and supporting documents through the online application. For information about applying to the Ph.D. program in History of Art, please see the department's website (http://arthist.jhu.edu/graduate/admissions). Applications must be completed by December 15.

To foster close student-faculty relationships and provide for the greatest flexibility in developing each graduate student's individual curriculum, the department strictly limits the number of students it admits each year.

Financial support for admitted students is provided in the form of tuition grants, a multi-year fellowship stipend (contingent on continued progress), and health insurance coverage, with further opportunities for advanced research and travel funding available. Students in the program may also apply for grants from the Charles Singleton Center for the Study of Pre-Modern Europe, which supports travel, conference participation, and dissertation research in Europe.

Requirements for the Ph.D. Degree
Students may apply for admission to the Ph.D. program with either a B.A. or M.A. degree from another institution in hand. Acceptance requires the approval of the instructors in the areas chosen by the student as major and minor fields; in the case of transfer students, acceptance may be provisional. Students entering the program must pass reading competency examinations in two languages, as determined by field of study. Although no examinations are required in any additional languages needed for specialized research in particular areas, students are expected to master these as needed, as their studies develop. Students who are not native English speakers must submit TOEFL or IELTS scores with their application.

All students entering the program, regardless of the degree they hold, must complete four full semesters of coursework and pass the required language exams before being approved to take their qualifying exams (also known as the Ph.D. exams). The art history faculty encourages students to take full advantage of offerings in other departments, and students may, if they choose, develop a minor field in another discipline. In consultation with their advisers, students who have completed their coursework, have no outstanding incompletes, and have passed the required language exams prepare for qualifying exams. All qualifying exams, regardless of the fields in which they are taken, are comprised overall of two written exams (one major field and one minor field), followed by an oral defense before the advisers and other department faculty. Exams should take place during the third (3rd) year.

After the successful completion of qualifying exams, it is expected that students will be ready to begin work towards the dissertation by formulating a proposal. Completed proposals may be submitted at any time in the calendar year and not later than three (3) months after successful completion of the qualifying exams.

When the dissertation is complete, the student must successfully defend the dissertation before a Graduate Board Orals committee consisting of three internal (department) readers and two external readers. Although consultation between candidates and their faculty advisers regarding possible exam committee members is appropriate, selection of the committee is the department's responsibility and is not the candidate's responsibility or prerogative.

In addition to their own studies and research, students in the Ph.D. program gain valuable pedagogical experience by serving as Teaching Assistants under a variety of faculty mentors. Students are eligible for assignment as either a Teaching Assistant (TA) or a Research Assistant (RA), at the discretion of the department, in six of the ten semesters during which they receive funding.

Requirements for the in-process M.A. Degree
Students entering the Ph.D. program with a Bachelor's degree may qualify for the M.A. degree upon completion of two semesters of coursework (six graduate-level courses) and completion of the department's language requirements, but the department does not accept students for the terminal M.A. degree as such.

Art History Fields
Ancient Art
Long associated with the study of classical archaeology, the department affords students of ancient art the opportunity work with a faculty that includes experts in Greek, Roman and Ancient Near Eastern art. Students also benefit from the close and long-standing relationship with the Departments of Classics and Near Eastern Studies. Facilities of special relevance to students of ancient art include the Johns Hopkins Archaeological Museum, located on campus inside Gilman Hall, and the extraordinary holdings of the Walters Art Museum.

Medieval
Ever since its founding in 1947, the department has given special emphasis to the study of medieval art, and that tradition continues with a new generation of medievalists bringing expertise in Early Christian, Islamic, Byzantine, Mediterranean, and Italian Romanesque art and architecture to the program. Students avail themselves of local expertise through the departments of History, English, and German and Romance Languages and Literatures, and frequently consult with curators at the Walters Art Museum, several of whom participate as adjunct faculty. Hopkins students may take the seminars in Byzantine art offered each year at Dumbarton Oaks, and take advantage of the extensive research library there as well. The extraordinary collections at the Walters Art Museum and at Dumbarton Oaks are especially valuable for students interested in manuscript illumination and the minor arts.

Renaissance / Early Modern
Another signature strength of the History of Art Department is its program in Renaissance and Early Modern Europe, where a broad faculty expertise encompasses the art and culture of Italy, Spain, and the countries of northern Europe from the fourteenth to the seventeenth centuries. Graduate students in these areas participate in the programs of the Charles Singleton Center for the Study of Pre-Modern Europe, which sponsors collaborative research abroad and brings a steady stream of world-class lecturers to Baltimore. Students also benefit from the excellent collections of Italian and northern Renaissance art at the
Walters Art Museum, the National Gallery, and the Philadelphia Museum of Art.

Modern

At Hopkins a diverse and challenging curriculum in modern art and criticism is offered by a research faculty of international prominence, supplemented by occasional visiting scholars and museum curators. European art from the 18th to the 21st century, American modernism, and modern art in Asia are all among the department’s distinctive strengths. Students oriented toward the study of criticism and aesthetic theory can also broaden their perspective and develop their critical skills by taking courses offered through the Department of Comparative Thought and Literature and the Department of Philosophy. Distinctive collections at the Baltimore Museum of Art and at multiple places in Washington, D.C. (the Hirshhorn Museum, the Smithsonian American Art Museum (SAAM), the Freer|Sackler of the Smithsonian, the Phillips Collection, and others) provide unparalleled resources for students of modern art at all levels.

Non-Western

Relatively new in the department is the expansive field of study encompassing the art and architecture of the Ancient Near East, the Islamic world, early modern and modern South Asia, and the early modern trans-Atlantic world. Research and teaching expertise is concentrated in four faculty appointments affording students the opportunity to develop projects in specific areas of these non-Western fields, which are also well represented by the rich collections of the Walters Art Museum and the Johns Hopkins Archaeological Museum in Baltimore, the Freer|Sackler of the Smithsonian, and other museums in Washington, D.C., and Philadelphia.

Faculty

Professors

Stephen J. Campbell
Henry and Elizabeth Wiesenfeld Professor: Italian Renaissance art.

Marian Feldman
W.H. Collins Vickers Chair in Archaeology, Professor of History of Art and Near Eastern Studies: Ancient Near Eastern Art

Mitchell Merback
Professor. Northern Renaissance art.

Associate Professors

Rebecca M. Brown
Associate Professor: South Asian art

Nino Zchomelidse
Associate Professor: Medieval art

Assistant Professors

Aaron M. Hyman
Assistant Professor: Early Modern Art and Art of the Spanish Empire

Christopher Lakey
Assistant Professor: Medieval art.

Ünver Rüstem
Assistant Professor. Islamic Art and Architecture.

Assistant Professor: Greek and Roman Art

Molly Warnock
Assistant Professor: Modern art.

Faculty Emeriti

Michael Fried
Professor, Humanities Center. Modern Art.

Charles Dempsey
Professor Emeritus: Renaissance and Baroque art.

Herbert L. Kessler
Professor Emeritus: Early Christian and Medieval art.

Henry Maguire
Professor Emeritus: Byzantine and Medieval art.

Teaching Faculty

Lisa Deleonardis
Senior Lecturer and Austen-Stokes Visiting Associate Professor in the Art of the Ancient Americas

Joint Appointments

Emily S.K. Anderson
Assistant Professor, Classics: Ancient Aegean art.

Betsy M. Bryan
Professor (Near Eastern Studies): Egyptian art and archaeology, Egyptology.

Chair

Marian Feldman
W.H. Collins Vickers Chair in Archaeology, Professor and Chair of History of Art, Professor of Near Eastern Studies

Courses

AS.010.101. Introduction to History of Western Art I. 4.0 Credits.
A survey of painting, sculpture, and architecture from Egyptian, Greek, Roman, and medieval culture.
Instructor(s): J. Stager
Area: Humanities
Writing Intensive.

AS.010.102. Introduction to the History of Western Art II. 4.0 Credits.
A survey of painting, sculpture, and architecture from the Renaissance to the present.
Instructor(s): C. Lakey; M. Warnock
Area: Humanities
Writing Intensive.

AS.010.103. Introduction to the Art of Asia. 3.0 Credits.
A survey of the art and architecture of Asia, from the ancient world to the present and including the Indian subcontinent, China, Japan, Korea, and Southeast Asia.
Instructor(s): Staff
Area: Humanities.
AS.010.105. Art of the Ancient Americas. 3.0 Credits.
This course provides a basis for the study of ancient Americas art and architecture and a broad exposure to the issues relevant to its study. Select visual arts within the primary regions of Mexico and Central America will be emphasized. In conjunction with the Baltimore Museum of Art (BMA) and the JHU Archaeological Museum (JHAM), students will participate in on-site study of the collections.
Instructor(s): L. Deleonnardis
Area: Humanities.

AS.010.110. Art of the Islamic World. 3.0 Credits.
This course is an introduction to the art of the Islamic world, covering a geography that stretches from Spain to India and a chronology that extends from the seventh century into our own time. Within this rich and varied continuum, we will look at a range of art forms—including architecture, painting, sculpture, ceramics, and calligraphy—in relation to such themes as patronage, production, function, and audience. A number of the artworks will be viewed firsthand in local collections. We will also explore the intersection of Islamic art with today's political realities.
Instructor(s): U. Rustem
Area: Humanities.

AS.010.114. Freshman Seminar: Mapping the Middle Ages: Sites and Destinations. 3.0 Credits.
This course is about the visual representation of built environments and geographical locations during the Middle Ages: architectural sites, cities, regions of the world, and the world itself. It surveys the full range of medieval modes of mapping, including itineraria (road maps), T-O maps, mappaemundi, and portolan charts; and explores dynamic changes in the conventions for depicting cityscapes and urban topography, from Roman antiquity to ca. 1500. In investigating this material, we will pay special attention to scientific and allegorical representations of places foreign to the culture within which they were made—an illuminated depiction of Venice from late medieval Paris; the fresco with representations of six world rulers at Qasr Amra in Jordan. Students will consider in what ways these images help us to understand pre-modern conceptualizations of geographical space, distance, ethnicity, and otherness. And to what extent did these images help shape these notions? Texts from the period, especially guidebooks and accounts written by medieval travelers, will help guide our discussion. The geographical focus of the course is Europe and the Mediterranean basin, but will include comparisons with the art of East Asia, Persia, and sub-Saharan Africa. The course includes a group visit to the Walters Art Museum.
Instructor(s): Staff
Area: Humanities.

AS.010.203. Abstraction. 3.0 Credits.
This course will explore the elaboration and dissemination of major iterations of “abstract” art at key junctures throughout the twentieth century, with an emphasis primarily on developments in Europe and the Americas. Why abstraction? What were the formal, social, and philosophical stakes of divergent models and paradigms of abstract practice? And what difference do they make in the history and theory of artistic modernism? Class visits to the BMA and Special Collections.
Instructor(s): M. Warnock
Area: Humanities.

AS.010.204. Italian Art in the Middle Ages. 3.0 Credits.
This course explores key monuments of medieval art and architecture in Italy from c. 400 until 1350. We will concentrate on historical, functional, and aesthetical aspects that lead to the creation of single monuments and art works. Emphasis is given to the analysis of “sacred space” by means of architecture, painted, and sculptural decoration, as well as ritual performances. Another focus is laid on the emergence on the political dimension of art for the creation of civic identity as well as in the context of the late medieval courts. We raise questions about the importance of materiality and science for the creation of medieval art works.
Instructor(s): N. Zchomelidse
Area: Humanities.

AS.010.205. The Painted Worlds of Early Greece: Fantasy, Form and Action. 3.0 Credits.
This course explores the creation and role of early Aegean wall painting. Found primarily in palaces, villas and ritual spaces, these paintings interacted with architecture to create micro-worlds for social activities taking place in their midst. Their subjects range—from mythological to documentary, from ornamental to instructive. They depict dance and battle, fantastical beasts and daily life. We examine their complex relationship to lived reality as well as the activities that surrounded them, from their crafting, to performance of rituals, to their role in “international” relations.
Instructor(s): E. Anderson
Area: Humanities
Writing Intensive.

AS.010.207. Art, Architecture and Urban Life in Renaissance Italy. 3.0 Credits.
In recent years architectural and urban historians have begun to approach the built environment of the city not as a stage upon which an urban drama played out, but as the very medium that gave that drama form and shaped its meaning. This course aims to introduce students to the multifaceted features of the Italian Renaissance city by investigating the social and cultural history of urbanization as expressed in sculpture, painting, and architecture. We will explore a range of cities in central and northern Italy, including the major centers of Rome, Florence, Siena and Venice. A number of public works, monuments, and buildings will be discussed in a wide context informed by urban design and ritual life. Emphasis will be placed upon examining the role of works of art operating in conjunction with architecture in the shaping of public spaces and the creation of civic identities. The conditions of artistic production and the materials and techniques of painting, sculpture and architecture will also be discussed. A variety of texts will be read in conjunction with classroom analysis of visual materials in order to explore how urban spaces were lived and experienced. The course will be approached as a working seminar in which students will be expected to participate in discussions of the weekly readings, as well as conduct their own research culminating in the production of research papers.
Instructor(s): G. Wiens
Area: Humanities
Writing Intensive.

AS.010.209. Art Since 1945. 3.0 Credits.
Critical survey of artworks, texts, and debates primarily in Europe and the Americas since World War II. Visits to Special Collections, the BMA, and art on Homewood Campus.
Instructor(s): M. Warnock
Area: Humanities.
AS.010.211. Monuments of Asia. 3.0 Credits.
An examination of selected architectural monuments from across Asia, including the Indian subcontinent, Southeast Asia, China, Japan, and Korea. Ancient to contemporary.
Instructor(s): R. Brown
Area: Humanities.

AS.010.212. Mirror Mirror: Reflections in Art from Van Eyck to Velázquez. 3.0 Credits.
Explores the different ways Early Modern painters incorporated mirrors and reflective surfaces into their works for the sake of illusion and metaphor, deception and desire, reflectivity and truth-telling. By transgressing the boundaries of human vision and experience, embedded mirror images often made claims about the powers of art, and the superiority of painting in particular.
Instructor(s): M. Merback
Area: Humanities.

AS.010.214. Ancient Americas in Motion. 3.0 Credits.
This course critically examines the visual arts and their makers as portrayed in documentary, historical, and Hollywood films.
Instructor(s): L. Deleonardis
Area: Humanities.

AS.010.215. Transformations of an Empire: Power, Religion, and the Arts in Medieval Rome. 3.0 Credits.
This course investigates the impact of political, religious, and social change for the making of art and architecture in the city of Rome from Constantine the Great (ca. 274-337 CE) until 1308, when the papal court moved to Avignon. From being a thriving metropolis and the political center of an empire in a pagan, multi-ethnic society, Rome became a small town of a few thousand inhabitants dwelling in the ancient ruins under the spiritual leadership of a powerless Christian bishop and unprotected from the invasions of the migrating peoples from Eastern Europe and Central Asia. Later transformations concern the rise to political power of the popes, achieved by the military alliance with the Frankish dynasty of Charlemagne around 800, and the controversy over the superiority of power between the German emperors and the Roman popes. How did the transformation from worldly to religious power affect the architecture of public buildings in the city? What strategies were developed to visually promote the new religious leaders of the city, the popes, and the new Christian God? How did the new status of Rome as one of the most important Christian pilgrim sites with its countless bodies of Early Christian martyrs in the catacombs outside the city influence urban development? And finally, what impact did the economical ups and downs in these periods of transition have for the arts? As we try to reconstruct the 'image' and the appearance of medieval Rome, this course discusses ideas and concepts behind different forms of leadership, both political and religious, as they intersect with the power of the arts and the self-referential character of a city that is obsessed with its own past.
Instructor(s): N. Zchomelidse
Area: Humanities.

AS.010.218. Modern Art, 1880-1950. 3.0 Credits.
Introduction to major works and discourses of, and key debates surrounding, modernism in the visual arts of Europe and the United States. Visits to the BMA and Special Collections.
Instructor(s): M. Warnock
Area: Humanities.

AS.010.222. Representing Roman Power: Sculpture as Political Rhetoric from Republic to Empire. 3.0 Credits.
Rome created one of the world's most powerful empires that dominated the Mediterranean from the 3rd century BCE into the 4th century CE. As Rome expanded its borders, its cities saw a proliferation of sculptural monuments that produced a visual political rhetoric and expressed imperial ideologies. This class examines the close relationship between Roman sculpture and politics from the Republic through the Severan principate. Through close visual analysis of the ancient materials and critical readings of scholarship, this course will examine the role of sculpture in the formation, reproduction, and attenuation of imperial rule.
Instructor(s): A. Miranda
Area: Humanities.

AS.010.224. The Art of Bollywood. 3.0 Credits.
This course examines Hindi cinema produced in Mumbai since the 1950s, focusing on key examples from each decade, from early narratives of navigating the big city to song-and-dance extravaganzas incorporating Indian-Americans. We will look at art represented in film, from modernist sculpture to ancient architecture. The course will also explore the billboards, cinema cards, and other ephemera associated with Bollywood, alongside contemporary artists' appropriations of Hindi cinema. No knowledge of Hindi is required.
Instructor(s): R. Brown
Area: Humanities
Writing Intensive.

AS.010.226. Art, Medicine, and the Body: From Leonardo to Body Worlds. 3.0 Credits.
This course explores five centuries of fruitful collaboration between physicians and artists — those who observe the body in order to heal it, and those who do the same in order to picture it. From medieval medical manuscripts, where the body is portrayed as a microcosm of the created world, to the anatomical forays of Renaissance artists such as Leonardo da Vinci and Albrecht Dürer; from gruesome depictions of bodily pain, disease, and corruption in the art of Matthias Grünewald to the eloquent exposure of the body’s interior by anatomists such as Andreas Vesalius; from the spectacularization of the body in Enlightenment science to the rubberized cadavers of Gunther von Hagen’s Body Worlds project – these and other topics will bring into focus the complex intersections between the history of medicine and the history of art.
Instructor(s): M. Merback
Area: Humanities.

AS.010.228. Prophets, Kings, and Demons: The Art of Islamic Book Painting. 3.0 Credits.
Despite the widespread misconception that Islam forbids images of humans and animals, figural representation played a rich and varied role in the historical arts of the Muslim world, particularly in the form of book painting. This course explores the production and consumption of illustrated Islamic manuscripts and albums, situating the paintings in their wider artistic and social contexts. Extending in scope from the Near East to India and from the medieval to the early modern period, the course takes a thematic approach that will introduce some of the key genres of the tradition — including chronicles, fables, and religious works — and investigate broader questions of style, meaning, viewership, text-image relationships, and cross-cultural borrowing. Students will have the opportunity to look at examples of this art firsthand in local collections.
Instructor(s): U. Rustem
Area: Humanities.
AS.010.232. Medieval Art and Architecture of the Mediterranean World. 3.0 Credits.
This course explores the development of medieval painting, sculpture, and architecture in the Mediterranean region from ca. 250 to 1400. The class will focus especially on moments and sites of contact between Western European, Byzantine, and Islamic cultures and will examine the impact of cross-cultural exchange on artistic and architectural production.
Instructor(s): C. Lakey
Area: Humanities.

AS.010.236. Palaces, Temples and Tombs in Mesopotamia. 3.0 Credits.
Mesopotamia, the “land between the rivers,” is considered the cradle of civilization. Its earliest urban centers appeared by 3500 BCE in the region of modern-day Iraq, Iran, and Syria. Along with urbanism came the emergence of temples and palaces as scale institutions (along with written records). Their arts manifest some of the earliest complex representations and follow a vibrant course for several millennia. The first empires marshaled large armies and amassed fabulous riches. Complex religious and ritual ideologies were expressed in the art and architecture. All has been revealed by the archaeologist’s spade. This class explores the art and architecture of Mesopotamia (ancient Sumer, Babylonia and Assyria) from 3500 to 330 BCE. Emphasis is placed on the relationship between the arts and ancient society in order to enable students to acquire the skills for accessing and appreciating ancient civilizations.
Instructor(s): M. Feldman
Area: Humanities.

AS.010.251. Medieval Spaces: Site, Image, and Viewer in the Middle. 3.0 Credits.
This course serves as an introduction to medieval art by analyzing the relationships between architecture and images at holy sites from the 4th century CE through the 14th. The course will focus primarily on how those relationships structured viewers’ experiences of the divine by understanding how works functioned for specific audiences in a particular spatial context. In reviewing the origins and transformations of Christian visual culture we will investigate how site-specific image production in Western Europe and Byzantium informed social and political relations; how theological problems related to image worship affected the form and content of the visual arts; and how developments in public and private devotion altered the spaces for imagistic display.
Instructor(s): C. Lakey
Area: Humanities.

AS.010.301. Art and Interactions in the Eastern Mediterranean from 2000-500 BCE. 3.0 Credits.
The Mediterranean Sea has always acted as a connector for the many great civilizations that flourished around its shores. From 2000 to 500 BCE, these interactions were particularly dynamic, resulting in a diversity of arts including painting wall frescoes, precious jewelry, and elaborate furnishings and weaponry. This course examines the arts of the interactions among the Egyptians, Near Easterners, and Greeks, considering the role of artistic products in intercultural relations.
Instructor(s): M. Feldman
Area: Humanities.

AS.010.305. Global Modern Art: Africa, Asia, the Pacific and the Americas. 3.0 Credits.
Artists around the world grappled with the modern, working through local concerns and struggles but continually engaged with counterparts in Europe, North America, and across the “global South.” This course will introduce art, artists, movements, and institutions of modernism from approximately 1880 to the present and from outside of the northern Atlantic while critically examining the very notion of “global modernism.”
Instructor(s): R. Brown
Area: Humanities
Writing Intensive.

AS.010.307. Diplomats, Dealers, and Diggers: The Birth of Archaeology and the Rise of Collecting from the 19th c. to Today. 3.0 Credits.
The development of archaeology in the Middle East — its history of explorers, diplomats, missionaries and gentlemen-scholars — profoundly shaped the modern world, from the creation of new museums and the antiquities market to international relations and terrorism.
Instructor(s): M. Feldman
Area: Humanities.

AS.010.310. The ’Long Sixties’ in Europe. 3.0 Credits.
This seminar examines aspects of advanced artistic production that emerged in France, Italy, the Benelux, and German-speaking countries primarily in the years 1945-1972 as constituent elements of the “Long Sixties,” a period of extraordinary and often rapid social transformation. Among our questions: How was the work of art reimagined and repositioned in the wake of World War II and the horrors of the Holocaust, in the context of reconstruction and an emerging consumer society, and in light of the Cold War, decolonization, and other political tensions and cataclysms? How did artists conceive the claims of artistic tradition in a rapidly expanding field of aesthetic practices and possibilities? What were the relations among advanced artistic practices and the “cultural revolutions” generally taken to have come to a head ca. 1968? Integral to this course is a student-curated exhibition of avant-garde materials at the MSE Library, to open in November 2018.
Instructor(s): M. Warnock
Area: Humanities.

AS.010.315. Art of the Assyrian Empire, 1000-600 BCE. 3.0 Credits.
The Assyrian Empire dominated the ancient world from 1000-612 BCE, stretching from Iran to Egypt and laying the foundation for the later Persian and Macedonian empires. With imperial expansion came an explosion of artistic production ranging from palace wall reliefs to small-scale luxury objects. This course provides an integrated picture of the imperial arts of this first great empire, situating it within the broader social and political contexts of the first millennium BCE.
Instructor(s): M. Feldman
Area: Humanities.

AS.010.316. Venetian Art and the Mediterranean World: 1350-1550. 3.0 Credits.
This course is an investigation into the fashioning of Venetian identity in architecture and the visual arts, with a particular address to the encounter with Byzantine and Islamic traditions and exchanges with other centers of the Italian peninsula.
Instructor(s): S. Campbell
Area: Humanities.
AS.010.320. Art of Colonial Peru. 3.0 Credits.
Viewed within the dynamic historical context of colonial society, we consider the pictorial, sculptural, and architectural programs that ensued in viceregal Peru (1532-1825). We examine the role of religious orders, art schools, artisan guilds and cofradía, and consider the social and political implications of art patronage.
Instructor(s): L. Deleonardis
Area: Humanities.

AS.010.322. Knowledge, Holiness, and Pleasure: The Illustrated Book in the Medieval World. 3.0 Credits.
The book was the primary source for the collection of knowledge in the Middle Ages. It was also the medium for the preservation and proliferation of the texts that underlay the three monotheistic religions (Judaism, Christianity, Islam). Finally, the book served as a source for elite entertainment, perhaps most importantly in Late Antiquity and the later Middle Ages. This course investigates the role of the illustrated book within the political, religious, and artistic developments that took place after the rise of Christianity from the end of the Roman Empire until the early modern period in the medieval West and in Byzantium, permeating Jewish and Islamic traditions. We will examine how the different types of books, such as horizontal and vertical scrolls, large and miniature size codices influenced the placement, conception, and style of the illustrations. The course also addresses processes of manufacture, issues of materiality (i.e. precious multi-media book covers, papyrus, parchment, paper), and the relationship between text and image. A major aspect of the seminar focuses on the performative aspect of the book in its wide range of functions: secular and liturgical, public and private. Students will be able to work first hand with manuscripts and facsimiles from the rare book collection of Eisenhower Library and the Walters Art Museum.
Instructor(s): N. Zchomelidse.

AS.010.325. Arts of the Spanish Empire. 3.0 Credits.
From the sixteenth through the eighteenth centuries, visual forms and practices linked such disparate places as Mexico City and Naples, Manila and Lima, Cuzco and Antwerp, Quito and Madrid: all cities in the Spanish Empire. This course provides an overview of the visual strategies deployed by the Spanish Crown and the Catholic Church across these vast global geographies to consolidate political power and instill religious faith. Such regimes of visuality were reshaped by local conditions and concerns. Focusing on different cities in the Spanish Empire, this course will examine the entanglements between the global and universal ideals of empire and their local manifestations and contestations. Students will gain a broad understanding of the diversity of artistic production in the Spanish empire, exploring religious paintings and sculptures; maps used for imperial surveillance; luxury goods crafted from shimmering feathers, ceramics, ivory, and precious metals; urban design and architecture from the ports of Europe to the highland outposts of the Andes; ephemeral cityscapes for civic performance. Through an examination of such topics, this course offers an introduction to the art historical methods and theoretical concerns used to study objects within an imperial frame.
Instructor(s): A. Hyman
Area: Humanities.

AS.010.329. Building an Empire: Architecture of the Ottoman Capitals, c. 1300–1600. 3.0 Credits.
Centered on modern-day Turkey and encompassing vast territories in Asia, Africa, and Europe, the Ottoman Empire (1299 – 1923) was the longest lived and among the most powerful Islamic states in history, with an artistic tradition to match. This course explores the functional and symbolic role that architecture played during the empire’s formative centuries, when three successive capitals — Bursa, Edirne, and Istanbul — served to visualize the sultans’ growing claims to universal authority. With reference to mosques, palaces, tombs, and other categories of architecture, the course will examine the buildings in their artistic, social, and political contexts. Themes to be addressed include patronage and audience, architectural practice and the building trade, ceremonial and ritual, topography and urban planning, and the relationship of Ottoman architecture to other traditions.
Instructor(s): U. Rustem
Area: Humanities.

AS.010.330. Art of the Caliphates: Visual Culture and Competition in the Medieval Islamic World. 3.0 Credits.
Despite its modern-day association with a fringe extremist movement, the term “caliphate” was traditionally used to describe the Muslim world at large, the political and spiritual ruler of which bore the title of caliph. The original Islamic caliphate was established in the seventh century as a vast empire centered on the Middle East and extending deep into Africa, Asia, and Europe. It soon broke apart into a series of competing powers, until in the tenth century, three rival dynasties—the Baghdad-based Abbasids, the Spanish Umayyads, and the Fatimids of North Africa—each claimed to be the rightful caliphate. This course will examine how these fascinating political developments and conflicts played out in the realm of art and architecture between the seventh and thirteenth centuries. As well as palaces, mosques, and commemorative buildings, the course will look at media ranging from ceramics and metalwork to textiles and illustrated manuscripts, with many of the artifacts being viewed firsthand in local museum collections. These works will be considered in relation to such themes as patronage, audience, ceremony, and meaning. Particular attention will be paid to how the various caliphates—both in emulation of and competition with one another—used visual culture as a powerful tool to assert their legitimacy.
Instructor(s): U. Rustem
Area: Humanities.

AS.010.331. The Renaissance Body Exposed: Exhibiting the Nude in European Art 1400-1550. 3.0 Credits.
Explores the extraordinary currency of the naked human figure in pre-modern European visual culture, only inadequately accounted for by explanations such as the “rise of naturalism” or the “revival of antiquity.” Will also explore curatorial questions arising from an exhibition currently in preparation on the Renaissance nude. Assignment in the form of catalog texts and a “virtual exhibition.”
Instructor(s): S. Campbell
Area: Humanities
Writing Intensive.
AS.010.333. The Re-Making of Rome: from Michelangelo to Mussolini. 3.0 Credits.
The transformation of Rome from a medieval backwater into a world center with multiple, overlapping identities: the ruinous symbol of ephemeral glory, the spiritual destination of pilgrims and tourists, the seat of a priest/monarch claiming universal dominion, and, above all, the "theater of the world" where a cultural and ethnic heterogeneity unparalleled in any other European urban center was permanently on display.
Instructor(s): S. Campbell
Area: Humanities

AS.010.340. Renaissance Art in the Netherlands: Broederlam to Bosch. 3.0 Credits.
Explores the major painters working in the Low Countries during the fifteenth century. Melchior Broederlam, the Master of Flémalle, Jan van Eyck, Rogier van der Weyden; Hans Memling, Hugo van der Goes, Hieronymus Bosch, and others.
Instructor(s): M. Merback
Area: Humanities

AS.010.360. Medieval Art in Europe: Methodology, Historiography, Theory. 3.0 Credits.
The course explores the conceptual character of medieval European art from Late Antiquity to the end of the Middle Ages with an emphasis on methodological, historiographical, and theoretical issues. Using selected monuments and objects from a wide geographical range and dating from the 4th to the 14th centuries as case studies, students will also familiarize with the methodological developments of art historical research. The course will focus in particular on the "anthropological turn" of medieval art history and medieval image theory.
Instructor(s): N. Zchomelidse
Area: Humanities

AS.010.365. Art of the Ancient Andes. 3.0 Credits.
The ancient visual arts of Andean South America and their respective cultural contexts form the basis of this course. In conjunction with the Baltimore Museum of Art and the Johns Hopkins Archaeological Museum students will have access to collections for study.
Instructor(s): L. DeLeonardis
Area: Humanities

AS.010.366. Native American Art. 3.0 Credits.
The works of Native American artists are examined and discussed in their respective social and historical contexts. Such works include Hopewell stone sculpture, Mimbres pictorial painting, and Tlingit guardian figures. We examine the concept of sacred landscape through analysis of monumental earthworks and effigy mounds, Anasazi architecture, and rock art. In conjunction with the Baltimore Museum of Art (BMA), and Johns Hopkins Special Collections, students will have access to collections for study.
Instructor(s): L. DeLeonardis
Area: Humanities

AS.010.382. The Politics of Display in South Asia. 3.0 Credits.
Through examining collecting, patronage, colonial exhibitions, and museums, this course examines how South Asia has been constructed in practices of display. Themes: politics of representation, spectacle, ethnography, and economies of desire related to colonialism and the rise of modernity. Cross-list with Anthropology, Museums and Society and Political Science.
Instructor(s): R. Brown
Area: Humanities
Writing Intensive

AS.010.389. The Stone and the Thread. 3.0 Credits.
Inka architecture in its social, historical and cultural contexts forms the basis of this course. Shared forms and ideas implicit in the fiber arts offer comparative points for analysis and discussion.
Instructor(s): L. DeLeonardis
Area: Humanities
Writing Intensive.

AS.010.398. Tombs for the Living. 3.0 Credits.
Centering on the tomb as the unit of analysis, this course examines the cultural and material aspects of death and funerary ritual. Draws on case studies from North America, Mesoamerica, and the Andes. Collections study in museums.
Instructor(s): L. DeLeonardis
Area: Humanities

AS.010.400. Looking at Language: Vision and Textuality from Surrealism to the Present. 3.0 Credits.
Considers the emergence of the "written painting" and other uses of language in the visual arts. Among our case studies: Magritte, Twombly, Ruscha, Indiana, Holzer, Wool, Ligone, Darboven.
Instructor(s): M. Warnock
Area: Humanities

AS.010.403. Art and Science in the Middle Ages. 3.0 Credits.
This course investigates the intersections of art and science from the Carolingian period through the fourteenth century and the historical role images played in the pursuit of epistemic truths. Science – from the Latin scientia, or knowledge – in the Middle Ages included a broad range of intellectual pursuits into both the supernatural and natural worlds, and scholars have classified these pursuits in various ways (i.e. experimental or theoretical science, practical science, magic, and natural philosophy).
A particular focus of this seminar will be placed on the assimilation of Greek and Islamic scientific advances in cartography, cosmology, and optical theory into the Latin theological tradition.
Instructor(s): C. Lakey
Area: Humanities
Writing Intensive.

AS.010.404. The Cult Image in the Renaissance. 3.0 Credits.
This course discusses the role of cult images in the Renaissance period. While art historical scholarship has regarded images of cult as a medieval phenomenon, more recent studies (Holmes, Pon) address precisely the fact that image cults multiplied in line with the development of new aesthetic principles and theories of art in the context of the humanist circles in early modern Italy. The class challenges the idea of a division between the era of images and that of art as proposed by Hans Belting some 25 years ago. We investigate the emergence of a variety of new types of images made for public cults, such as wall paintings, prints, wooden sculpture, feathers, and their architectural and urban settings.
How did the medieval tradition of the icon merge with the scientific and humanistic achievements of the early modern period? Moreover, we will examine the proliferation of cult images from Italy to other parts of Europe and beyond, such as the Americas and Asia, where the conception of new such images drew heavily on indigenous artistic and religious practices. There will be a final paper. Course is co-listed with AS.010.616.
Instructor(s): N. Zchomelidse
Area: Humanities
Writing Intensive.
AS.010.407. Ancient Americas Metallurgy. 3.0 Credits.
Centering on a series of case studies, this course addresses the technology, aesthetics, and social significance of metals. We trace the development of metals from 1500 BCE in Chile and Peru, to the 16th century in Colombia and central Mexico, pausing to examine its forms and meanings in various cultural contexts, and the ideas that inform its value. In conjunction with the Baltimore Museum of Art (BMA), the Walters Art Museum (WAM), and the Johns Hopkins Archaeology Museum (JHUAM), students will have access to ancient metal works for study.
Instructor(s): L. DeLeonardis
Area: Humanities.

AS.010.410. The Epistemology of Photography. 3.0 Credits.
This seminar will ask how photography produces ways of knowing: how does photography’s reality-effect shape its dissemination and absorption? Is photography’s emergence during the colonial era coincidental or catalytic? How is memory (re)constituted in a photography-saturated world? What kinds of histories does photography encourage and discourage? Is a photograph an object? We will read across disciplines (literature, anthropology, history, history of art, political science, theory) to investigate the epistemology of photography and the photograph.
Instructor(s): R. Brown
Area: Humanities
Writing Intensive.

AS.010.413. Historical and Conceptual Bases of Art History. 3.0 Credits.
Critical readings in and of relevance to the intellectual foundations of the modern discipline of art history. Texts by Wölfflin, Riegl, Warburg, Panofsky, Baxandall, Alpers, Clark, Fried, and others. There will be two papers, no exams.
Instructor(s): S. Campbell
Area: Humanities
Writing Intensive.

AS.010.416. Medieval Art and Architecture in Southern Italy. 3.0 Credits.
This seminar discusses the exceptionally high standard and wide range of artistic and architectural creativity in medieval southern Italy. The specific historical situation of Italy’s southern regions and islands—which were exposed to a long sequence of military invasions, subjected to foreign rulers and centrally positioned within the Mediterranean—resulted in a fascinating, often interconnected, artistic and architectural landscape. We will address in particular the multiethnic and multi-religious environment of the region, the specific mobility of artists and patrons, questions of materiality of art works, and the intersection of art and science in the centers of learning (schools, monasteries, and courts). Those issues will be investigated by raising also larger theoretical and historiographic questions.
Instructor(s): N. Zchomelidse
Area: Humanities
Writing Intensive.

AS.010.418. The Icon in East and West. 3.0 Credits.
The chronologically structured seminar discusses the conception and reception of holy images in the Middle Ages from Late Antiquity until the beginning of the Renaissance. We will investigate their creation during the rise of Christianity and their affinities with Graeco-Roman portraits and cult images. Another focus is dedicated to the theological and political context of icons during the waves of early medieval iconoclasm, in particular in Byzantium. We will address icons made in the Holy Land during the crusades, which are often characterized by merging Frankish and Byzantine styles and motifs with Islamic art. We will discuss the emergence of new icons in Italy, and their pan-European distribution after 1100. Here we will focus on the influence of the papal court and the economic impact of icons in the later Middle Ages in the Italian commune.
Instructor(s): N. Zchomelidse
Area: Humanities
Writing Intensive.

AS.010.419. Passion Image, Passion Cult, Passion Drama: Narrative and Metaphor in the Middle Ages, Renaissance, and Beyond. 3.0 Credits.
A set of interdisciplinary explorations of the Passion of Christ narrative in Scripture, theology, visionary literature, cultic devotion, the visual and dramatic arts in Europe from the Central Middle Ages to the Reformation, with a special fast-forward to modern cinematic retellings of the Passion story.
Instructor(s): M. Merback
Area: Humanities
Writing Intensive.

AS.010.421. Creating Sacred Space in the Ancient and Medieval World. 3.0 Credits.
What makes a space sacred? How is it different from other spaces? This seminar explores the various means - visual, artifactual, architectural, and performative - of creating sacred space in the ancient and medieval worlds of the Near East and Mediterranean. Possible cases for study include early Sumerian temples, state-sponsored Assyrian temples, votive deposits, Greek sanctuaries, sanctuaries and landscape, early medieval Jewish, Christian, and Islamic cult buildings, cave sanctuaries, pilgrim sites, icons and sacred space.
Instructor(s): M. Feldman
Area: Humanities
Writing Intensive.

AS.010.425. Patronage and Power: The Art of the Book in the Middle Ages. 3.0 Credits.
This research seminar surveys the rich history of manuscript painting in the Middle Ages through the lens of patronage. By focusing on elite patrons – i.e. Popes, Clerics, Holy Roman Emperors, Princes, Princesses, and other ruling figures – we will investigate how changes in style from the early Christian period through the fifteenth century reveal the fluid nature of politics and power during this volatile time period. We will visit local collections of manuscripts (e.g. the Walters Art Museum) and make use of the extensive holdings of medieval facsimiles in Special Collections.
Instructor(s): C. Lakey
Area: Humanities.
AS.010.434. Italian Art, Politics, and Religion in the time of Dante, c. 1250-1400. 3.0 Credits.
This seminar will investigates the interrelationship between art, politics, and religion on the Italian peninsula during the later Middle Ages. We will focus on the major cities as patrons of the arts (visual and poetic), e.g. Florence, Siena, Padua, Milan, Naples, Venice, and Rome, in order to understand how the elite used art to further their political and religious agendas. Select topics include: the rise of the Mendicant orders; the importance of Dante’s Divine Comedy on manuscript production; artistic competition among communes; the rise of the individual artist; humanism and the arts.
Instructor(s): C. Lakey
Area: Humanities.

AS.010.435. Minimalism in Transnational Context. 3.0 Credits.
Critical examination of arguably the most important crux in post-WWII art, criticism, and theory, with attention to displacements and transformations of Minimalism outside the US. There will be a final paper.
Instructor(s): M. Warnock
Area: Humanities.

AS.010.436. Orientalism and Occidentalism: The Discourse of the Other in the Visual Arts. 3.0 Credits.
This course explores works of art and architecture that reveal or are informed by the long, complex, and often troubled relationship between the West and the Islamic world. Though extending in scope from the early modern period into our own time, the course focuses on the eighteenth and nineteenth centuries, when East-West artistic interactions were arguably at their liveliest and most charged. Topics to be addressed include Ottoman Baroque architecture, Orientalist painting of the nineteenth century, Qajar portraiture and photography, Islamicate architecture at Western world’s fairs, and the recent Danish cartoons of the Prophet Muhammad. Students will be encouraged to consider the differences as well as commonalities between these various modes of cross-cultural representation and engagement, and to think critically about the political, cultural, and artistic conditions that engendered and shaped them.
Instructor(s): U. Rustem
Area: Humanities
Writing Intensive.

AS.010.438. Word and Image in Renaissance Italy: Rethinking the "Art of Humanism". 3.0 Credits.
This course examines the intersection of intellectual and artistic milieux with case studies from Petrarch to Tasso.
Instructor(s): S. Campbell
Area: Humanities.

AS.010.470. Power and Politics in Assyrian Art. 3.0 Credits.
Assyria, centered in northern Iraq, created one of the world’s first great empires that dominated the ancient Near Eastern world from around 900 to 612 BCE. In concert with imperial expansion came an explosion of artistic production ranging from palace wall reliefs to small-scale luxury objects. This seminar examines the close relationship between the arts and politics in the Assyrian empire. Some themes that will be explored are: historical narrative, text and image, portable luxury arts and gender, politics and religion. The course will engage in close visual analysis of the ancient materials and readings of critical scholarship.
Instructor(s): M. Feldman
Area: Humanities
Writing Intensive.

AS.010.501. Independent Study. 0.0 - 3.0 Credits.
Instructor(s): Staff.

AS.010.502. Independent Study. 0.0 - 3.0 Credits.
Instructor(s): Staff.

AS.010.503. Reading Course in History of Art. 2.0 Credits.
Open to students by arrangement with a faculty advisor in the History of Art Department.
Instructor(s): M. Merback.

Instructor(s): C. Lakey.

AS.010.507. Internship. 1.0 Credit.
Instructor(s): S. Campbell.

AS.010.521. Honors Thesis. 0.0 - 3.0 Credits.
Open to students by arrangement with a faculty advisor in the History of Art Department. Interested students should review the program description available in the department office.
Instructor(s): Staff
Writing Intensive.

AS.010.522. Honors Thesis. 3.0 Credits.
Instructor(s): Staff
Writing Intensive.

AS.010.596. Internship-Summer. 1.0 Credit.
Instructor(s): Staff.

AS.010.597. Independent Study-Summer. 3.0 Credits.
Instructor(s): L. DeLeonardis; M. Koortbojian; R. Brown; S. Campbell.

AS.010.600. Looking at Language: Vision and Textuality from Surrealism to the Present.
Considers the emergence of the “written painting” and other uses of language in the visual arts. Among our case studies: Magritte, Twombly, Ruscha, Indiana, Holzer, Wool, Ligon, Darboven.
Instructor(s): M. Warnock
Area: Humanities.

AS.010.604. The Five Senses and Art in Pre-Modern Europe (1100-1500).
The course investigates the importance of sensation in the creation and perception of Medieval and Renaissance art. Starting from the premise that sensation is a cultural phenomenon, this seminar invites students to rethink the relationship of the visual and the textual to the non-visual and the non-textual. Open to advanced majors in History of Art by permission.
Instructor(s): M. Bagnoli; N. Zichomelidse.

AS.010.607. The Epistemology of Photography.
This seminar will ask how photography produces ways of knowing: how does photography’s reality-effect shape its dissemination and absorption? Is photography’s emergence during the colonial era coincidental or catalytic? How is memory (re)constituted in a photography-saturated world? What kinds of histories does photography encourage and discourage? Is a photograph an object? We will read across disciplines (literature, anthropology, history, history of art, political science, theory) to investigate the epistemology of photography and the photograph.
Instructor(s): R. Brown.

AS.010.608. The Picture as Object.
This seminar will explore cases of Italian pre-modern picture-making in various media (painting, metal, stone, textile, etc) that solicit tactile as well as sensory engagement, and that call into question the “Albertian” metaphor of pictura as window. Case studies will include mosaics, reliefs, pastiglia, medals, portable paintings, and works by Giotto, Carlo Crivelli, and Sebastiano del Piombo, among others.
Instructor(s): C. Lakey; S. Campbell.
AS.010.609. Art and Science in the Middle Ages.
This course investigates the intersections of art and science from the Carolingian period through the fourteenth century and the historical role images played in the pursuit of epistemic truths. Science – from the Latin scientia, or knowledge – in the Middle Ages included a broad range of intellectual pursuits into both the supernatural and natural worlds, and scholars have classified these pursuits in various ways (i.e. experimental or theoretical science, practical science, magic, and natural philosophy).
A particular focus of this seminar will be on the assimilation of Greek and Islamic scientific advances in cartography, cosmology, and optical theory into the Latin theological tradition.
Instructor(s): C. Lakey
Area: Humanities.

AS.010.610. Image, Theory, Matter in Medieval Visual Culture.
This seminar considers the relationship between foundational approaches to medieval art history and recent methodologies that focus on ‘thing-signification.’ Primary materials in local collections will be closely analyzed.
Instructor(s): C. Lakey.

Seals, artifacts associated with property, oversight, and control, were used in the ancient Near East as early as the 7th millennium BCE. These took the form of a single carved surface that could be impressed in a malleable substance such as clay to leave behind a physical mark. With the growth of large-scale urbanism and, most critical, the invention of cuneiform writing, a spool-shaped seal carved around its circumference appeared. This quintessentially Mesopotamian artifact – the cylinder seal – persisted until cuneiform writing died out around the beginning of the Common Era. The over-three-thousand-year span of the cylinder seal provides remarkably rich evidence for the ancient civilizations of the Near East.
Instructor(s): M. Feldman.

AS.010.612. Medieval Art and Architecture in Southern Italy.
This seminar discusses the exceptionally high standard and wide range of artistic and architectural creativity in medieval southern Italy. The specific historical situation of Italy’s southern regions and islands – which were exposed to a long sequence of military invasions, subjected to foreign rulers and centrally positioned within the Mediterranean – resulted in a fascinating, often interconnected, artistic and architectural landscape. We will address in particular the multiethnic and multi-religious environment of the region, the specific mobility of artists and patrons, questions of materiality of art works, and the intersection of art and science in the centers of learning (schools, monasteries, and courts). Those issues will be investigated by raising also larger theoretical and historiographic questions.
Instructor(s): N. Zchomelidse
Area: Humanities.

AS.010.613. Renaissance Italy: Questions of Artistic Geography.
The role of place in the art historiography of the Renaissance, with readings in geographical theory. The seminar will also consider the role in the art of Lorenzo Lotto, Gaudenzio Ferrari, Cesare da Sesto, Romanino, Moretto, Pordenone, Titian, and other artists active before the canon-formation enterprise of Giorgio Vasari definitively altered the map of Italian art after 1550.
Instructor(s): S. Campbell.

Critical exploration of the major models developed by art historians to describe the forms of attention mobilized by visual imagery, the role of the beholder in realizing meaning, the dynamics of response, and the reflexivity of works of art. Intersections with literary history and theory, phenomenology, and reception-aesthetics will be examined in tandem with art-historical case studies. Authors include Riegl, Benjamin, Gombrich, Baxandall, Kemp, Fried, Cray, Bryson, Melville, Husserl, Iser, Jauss, Merleau-Ponty, Foucault, Barthes, Deleuze and Guattari.
Instructor(s): M. Merback.

AS.010.615. The Reform of the Image in Catholic Europe 1500-1600.
Aspects of the reform of art in Italy and Spain, as manifested in official attempts to discipline artistic practice and through artistic initiatives; emphasis on primary sources and recent scholarly debates.
Instructor(s): F. Pereda; S. Campbell.

AS.010.616. The Cult Image in the Renaissance.
This course discusses the role of cult images in the Renaissance period. While art historical scholarship has regarded images of cult as a medieval phenomenon, more recent studies (Holmes, Pon) address precisely the fact that image cults multiplied in line with the development of new aesthetic principles and theories of art in the context of the humanist circles in early modern Italy. The class challenges the idea of a division between the era of images and that of art as proposed by Hans Belting some 25 years ago. We investigate the emergence of a variety of new types of images made for public cults, such as wall paintings, prints, wooden sculpture, feathers, and their architectural and urban settings. How did the medieval tradition of the icon merge with the scientific and humanistic achievements of the early modern period? Moreover, we will examine the proliferation of cult images from Italy to other parts of Europe and beyond, such as the Americas and Asia, where the conception of new such images drew heavily on indigenous artistic and religious practices. There will be a final paper. Co-listed with AS.010.404

Writing Intensive.

AS.010.619. Readings in Modern and Contemporary Asian Art.
Focusing on a range of art practices and movements in South, Southeast, and East Asia from the 20th and 21st centuries. Specific topics may include: performance art and the body, exhibitionary practices, nationalism and transnationalism, the role of the figural, modes of abstraction, art and the authoritarian state, Marxism and art practices, postcolonial politics and visual culture, artists’ travels to, from, and within Asia, spirituality and modernism, sexuality and gender. Undergraduates by special permission of the instructor.
Instructor(s): R. Brown
Area: Humanities.

AS.010.620. Re-thinking the Baroque: the Carracci to Poussin.
Instructor(s): S. Campbell
Area: Humanities.
AS.010.621. Topics in Early 20th Century Abstraction.
Critical examination of key works, texts, and topics in early 20th century abstraction, with an emphasis primarily on developments in Europe and the US.
Instructor(s): M. Warnock
Area: Humanities.

As a major global power straddling three continents, the Ottoman Empire developed a rich and diversified ceremonial culture aimed at impressing local and international audiences alike. This seminar will explore the ways in which works of art and architecture provided settings and apparatus for, and were themselves shaped and enlivened by, the ceremonial acts in which they featured. Covering the period between the sixteenth and nineteenth centuries, we will address a range of case studies—including mosque inaugurations, royal processions, the reception of foreign ambassadors, and the exchange of diplomatic gifts—with regard to their sociopolitical, visual, material, and spatial contexts. A major concern of the seminar will be the question of how Ottoman ceremonies, together with their staging and attendant art forms, were adapted in response to changing conditions and audiences, particularly with the shift from the early modern to the modern period. While our focus will be on the Ottoman Empire and its interactions with the surrounding world, the course will also consider the ceremonial cultures of two other great Islamic polities, Iran and Mughal India, which provide telling points of contrast to the Ottoman case.
Instructor(s): U. Rustem
Area: Humanities.

AS.010.623. The Icon in East and West.
The chronologically structured seminar discusses the conception and reception of holy images in the Middle Ages from Late Antiquity until the beginning of the Renaissance. We will investigate their creation during the rise of Christianity and their affinities with Graeco-Roman portraits and cult images. Another focus is dedicated to the theological and political context of icons during the waves of early medieval iconoclasm, in particular in Byzantium. We will address icons made in the Holy Land during the crusades, which are often characterized by merging Frankish and Byzantine styles and motifs with Islamic art. This course will discuss the emergence of new icons in Italy, and their pan-European distribution after 1100. Here we will focus on the influence of the papal court and the economic impact of icons in the later Middle Ages in the Italian commune.
Instructor(s): N. Zchomelidse
Writing Intensive.

The arts of the Near East, Aegean and Egypt are typically taught separately from one another. However, the Mediterranean Sea has always served as a connector, and the diverse cultures of these areas were in close contact with one another for much of their histories. During the Bronze Age (3000 to 1200 BCE), these interactions were particularly dynamic, resulting in a diversity of arts including wall frescoes, precious jewelry, and elaborate furnishings and weaponry. This course examines the arts of the interactions among Near Easterners, Greeks, Egyptians and others. It focuses special attention on the role of artistic products in intercultural relations, including trade, diplomacy, war and imperialism. Students are not expected to have extensive knowledge of all the areas, although some experience in at least one of them will be helpful. The course will interweave establishing a knowledge base necessary to tackle this topic with broader conceptual concerns and interdisciplinary approaches (art historical, archaeological, anthropological, and historical). There will be a final paper.
Instructor(s): E. Anderson; M. Feldman
Area: Humanities.

AS.010.626. Place, Space, and Art History’s “Global Turn”.
In 1995, the publication of Claire Farago’s edited volume “Reframing the Renaissance” ushered in a “global turn” for the history of art. In its wake, the profusion of scholarly literature that contests art history's fundamentally Eurocentric foundations and its traditional geographic delimitations of study—the nation chief amongst them—has grown dizzying. Studies of art in “cross-cultural,” “trans-national,” “imperial,” and “global” frames have quickly amounted to a daunting bibliography, one that extends far beyond art history. This seminar attempts to take stock of exactly where a global reorientation has taken art history and the methods already in use within, or that are being proposed for, the discipline. Particular emphasis will be placed on place, space, geography and context, concepts that are often only implicitly deployed in this growing literature; and we will attempt to tease out the new potentials, and attendant challenges, they pose for art historical investigation. In the process, students will gain a historiographic overview of “the global turn” and an introduction to the texts and methods from other disciplines that have proved critical to this geographic reorientation. While this course is focused on the early modern period, students will be encouraged to connect its broad theatics to their own subfields and to pursue research topics related to any period and geography; and while the seminar focuses on art history’s historiographic trajectory, students from other disciplines interested in its broader theoretical and terminological frameworks are most welcome.
Instructor(s): A. Hyman
Area: Humanities.

AS.010.627. Patronage and Power: The Art of the Book in the Middle Ages.
This research seminar surveys the rich history of manuscript painting in the Middle Ages through the lens of patronage. By focusing on elite patrons – i.e. Popes, Clerics, Holy Roman Emperors, Princes, Princesses, and other ruling figures – we will investigate how changes in style from the early Christian period through the fifteenth century reveal the fluid nature of politics and power during this volatile time period. We will visit local collections of manuscripts (e.g. the Walters Art Museum) and make use of the extensive holdings of medieval facsimiles in Special Collections.
Instructor(s): C. Lakey
Area: Humanities.
AS.010.628. Word and Image in Renaissance Italy: Rethinking the "Art of Humanism.
This course examines the intersection of intellectual and artistic milieux with case studies from Petrarch to Tasso. This is the graduate section of AS.010.438.
Instructor(s): S. Campbell
Area: Humanities.

AS.010.635. Minimalism in Transnational Context.
Critical examination of arguably the most important crux in post-WWII art, criticism, and theory, with attention to displacements and transformations of Minimalism outside the US. There will be a final paper.
Instructor(s): M. Warnock
Area: Humanities.

AS.010.636. Orientalism and Occidentalism: The Discourse of the Other in the Visual Arts.
This course explores works of art and architecture that reveal or are informed by the long, complex, and often troubled relationship between the West and the Islamic world. Though extending in scope from the early modern period into our own time, the course focuses on the eighteenth and nineteenth centuries, when East-West artistic interactions were arguably at their liveliest and most charged. Topics to be addressed include Ottoman Baroque architecture, Orientalist painting of the nineteenth century, Qajar portraiture and photography, Islamicate architecture at Western world's fairs, and the recent Danish cartoons of the Prophet Muhammad. Students will be encouraged to consider the differences as well as commonalities between these various modes of cross-cultural representation and engagement, and to think critically about the political, cultural, and artistic conditions that engendered and shaped them.
Instructor(s): U. Rustem
Area: Humanities.

AS.010.637. Ottoman Baroque and Beyond.
The eighteenth century saw the Ottoman capital of Istanbul transformed by the introduction of a brand-new style of architecture that scholars have dubbed the Ottoman Baroque. Informed, as its name suggests, by Western European models, this new manner of building heralded a permanent shift in late Ottoman visual culture that has been reductively discussed as decadent “Westernization.” This seminar will challenge the conventional wisdom and reconsider the Ottoman Baroque as a timely and sophisticated artistic statement by which the empire reaffirmed its global standing in terms that were both locally rooted and internationally resonant. Topics to be addressed include the semiotics of style; the roles and relationships of patrons, artists, and viewers; architecture as a locus of ceremonial and spectacular, and cross-cultural connections and networks. Although focusing on the architecture of eighteenth-century Istanbul, the seminar will extend into other regions and art forms that demonstrate the impact of the Ottoman Baroque, and it will also consider the style’s afterlife in the context of nineteenth-century Ottoman modernity.
Instructor(s): U. Rustem
Area: Humanities.

Instructor(s): S. Campbell
Area: Humanities
Writing Intensive.

This seminar examines the notion of the authentic in conjunction with medieval images. It investigates the construction, reception, and theoretical grounding of authenticity in regard to reliquaries, icons, and imprints on cloth or seals. These objects elucidate the shift from mimesis towards other artistic strategies (stylization, abstraction, bricolage) in the medieval period. Rather than studying different modes of representation, we will focus on the very validity of representation in the Middle Ages.
Instructor(s): N. Zchomelidse.

Acknowledging the central role art from around the globe played in the production of the modern, this seminar will engage with the emergent art historical, methodological, and theoretical literature shaping the history of modern art after the global turn. Particular case studies of regional art movements (in e.g. Cuba, Brazil, India, Japan, Iran, Nigeria) alongside discussion of key exhibitions and institutions. A special focus on the theoretical interlocutors for art movements and artists around the world, such as Fanon, Glissant, Bhabha, Chow, Spivak, Freire.
Instructor(s): R. Brown.

AS.010.654. Topics in Postwar Abstraction.
Emphasis on European and American case studies from Pollock to the present; figures may include: Newman, Still, Frankenthaler, Louis, Noland, Olitski, Stella, Ryman, Marden, Hantaï, Bishop, Jorn, Uecker, and Klein.
Instructor(s): M. Fried; M. Warnock.

AS.010.659. Passion Image, Passion Cult, Passion Drama: Narrative and Metaphor in the Middle Ages, Renaissance, and Beyond.
A set of interdisciplinary explorations of the Passion of Christ narrative in Scripture, theology, visionary literature, cultic devotion, the visual and dramatic arts in Europe from the Central Middle Ages to the Reformation, with a special fast-forward to modern cinematic retellings of the Passion story.
Instructor(s): M. Merback.

Assyria, centered in northern Iraq, created one of the world’s first great empires that dominated the near Eastern world from around 900 to 612 BCE. In concert with imperial expansion came an explosion of architectural and artistic production including entire cities and their ornamentation. This seminar examines the close relationship between the arts and politics in the Assyrian empire. The course will engage in close visual analysis of the ancient materials and critical readings of scholarship. There will be a final project.
Instructor(s): M. Feldman
Area: Humanities.

AS.010.689. Seeing Sculpture.
This course explores the art of sculpture in all of its historical forms, from the ancient world to contemporary art, and introduces students to the experiential and spatial challenges sculpture poses. Our focus will combine on-site studies of sculpture in local collections with the development of a critical vocabulary with which to write about those objects, one that draws on the rich history of responses to sculpture from the birth of modern art history to the present.
Instructor(s): C. Lakey
Area: Humanities.
AS.010.700. Subversive Mirrors of Medieval and Renaissance Art and Literature.
This seminar explores the various strategies of subversion employed by European painters, printmakers, and sculptors from c. 1300 to c. 1600: irony and satire, comic inversion and "serious play" (serio ludere), the grotesque and anti-classical formlessness, carnivalesque folly, inverted worlds, and impossible utopias will all be examined as phenomena of culture and in relation to their parallels and sources in literature. The seminar will culminate in a collaborative workshop with German counterparts from the Technische Universität Dresden, to take place on the Homewood Campus in early May. 
Instructor(s): M. Merback 
Area: Humanities.

AS.010.701. What is a Stifterbild?.
Critically examines classic and recent approaches to the study of donor portraits, votive images and gifts, embedded likenesses and "crypto-portraits" of patrons and rulers, with an emphasis on developments in Germany, France, and the Netherlands between 1250 and 1500. 
Instructor(s): M. Merback 
Area: Humanities.

AS.010.707. Therapies of Art and Literature in Early Modern Europe.
This seminar examines the myriad ways art and literature in Early Modern Europe addressed itself to its audiences as a form of therapy. Taking as our point of departure Petrarch’s neo-Stoic therapy of the passions, the revival of consolatio literature, and the development of new Christian "wisdom" genres aimed at ethical self-cultivation, we consider how artists participated in the care of the body, the soul, and the self, innovating therapies that were at once sacramental and philosophical, spiritual and ethical. Intersections with the history of medicine will prompt us to inquire into the transposition of physiological and psychological theories, practices, and metaphors into the arena of ethical-spiritual therapy. 
Instructor(s): M. Merback 
Area: Humanities.

This seminar examines Dürer’s project to transform the genres of late medieval devotional art in line with his self-image as a Christian humanist painter. Against the backdrop of new agendas for reform, we consider Dürer’s collaborations with Celtis, Chelidonius, and Pirckheimer; the therapeutic impulse behind his self-portraits, the works dedicated to friends, and his altarpieces; the Meisterstiche; and other works that thematized the Renaissance philosophical ideal, first found in Petrarch, of a life lived self-consciously and in service to others. 
Instructor(s): M. Merback 
Area: Humanities.

Cross Listed Courses

AS.040.137. Freshman Seminar: Archaeology at the Crossroads: The Ancient Eastern Mediterranean through Objects in the JHU Archaeological Museum. 3.0 Credits.
This seminar investigates the Eastern Mediterranean as a space of intense cultural interaction in the Late Bronze Age, exploring how people, ideas, and things not only came into contact but deeply influenced one another through maritime trade, art, politics, etc. In addition to class discussion, we will work hands-on with artifacts from the JHU Archaeological Museum, focusing on material from Cyprus. 
Instructor(s): E. Anderson 
Area: Humanities 
Writing Intensive.

AS.040.150. Island Archeology: Land and Sea in Ancient Crete, Cyprus and the Cyclades. 3.0 Credits.
Islands present highly distinctive contexts for social life. We examine three island worlds of the ancient eastern Mediterranean. These are places where water had a unique and powerful meaning and boat travel was part of daily life, where palaces flourished and contact with other societies implied voyages of great distance. Class combines close study of material and visual culture with consideration of island-specific interpretive paradigms; trips to Archaeological Museum. 
Instructor(s): E. Anderson 
Area: Humanities.

AS.040.218. Celebration and Performance in Early Greece. 3.0 Credits.
Surviving imagery suggests that persons in Minoan and Mycenaean societies engaged in various celebratory performances, including processions, feasts, and ecstatic dance. This course explores archaeological evidence of such celebrations, focusing on sociocultural roles, bodily experience, and interpretive challenges. 
Instructor(s): E. Anderson 
Area: Humanities.

AS.040.235. Past is Present: Cultural Heritage and Global Interactions. 3.0 Credits.
The uncovering, collection and valuation of the archaeological past is deeply embroiled in global interactions - diplomatic, economic, cultural. We examine the complex role of cultural heritage through consideration of case studies and analytic approaches. Frequent visits to area museums. 
Instructor(s): E. Anderson 
Area: Humanities.

AS.040.320. Myth In Classical Art. 3.0 Credits.
This course traces the representation of the principal gods and heroes of Greek myth in the visual arts (sculpture and vase-painting), as well as later reflections in Roman painting. 
Instructor(s): A. Shapiro 
Area: Humanities.

AS.040.363. Craft and Craftpersons of the Ancient World: Status, Creativity and Tradition. 3.0 Credits.
This course explores the dynamic work and social roles of craftpersons in early Greece, the eastern Mediterranean and Near East. Readings and discussion will query the identities and contributions of these people—travelers, captives, lauded masters, and even children—through topics including gender, class, and ethnicity. Special focus on late third-early first millennia BCE; local field trips. 
Instructor(s): E. Anderson 
Area: Humanities, Social and Behavioral Sciences 
Writing Intensive.
AS.040.366. The Archaeology of Ancient Cyprus: Investigating a Mediterranean Island World in the JHU Museum. 3.0 Credits.
This course explores the visual and material worlds of ancient Cyprus from the earliest human evidence through the Iron Age. Course topics will include the island's unique position between the Aegean and Near East and how this has impacted both Cyprus' ancient past and the way in which it has been conceived in the modern world. Class involves regular analysis of artifacts based in the Archaeological Museum.
Instructor(s): E. Anderson
Area: Humanities.

AS.040.373. Propaganda and the Art of Visual Politics during the Roman Empire. 3.0 Credits.
We will examine visual expressions of propaganda in the city of Rome, considering how emperors used public art to promote their political agendas and their ideological vision of power. Dean’s Teaching Fellowship course
Instructor(s): A. Tabeling
Area: Humanities.

AS.040.621. Proseminar to Classical Archaeology.
An introduction to research methods and current topics of discussion in the scholarship on Greek and Roman art and archaeology.
Instructor(s): A. Shapiro.

Anthropology
AS.070.300. The Global Artwork. 3.0 Credits.
This course is about art practice in a postcolonial context, where the techniques and pictorial concepts formed by a European history of art are confronted by different kinds of political struggles, and posed against the background of religious traditions other than that of Christianity. What problems of history, difference and the self arise in this context, and what forms of art practice emerge to address these problems? In what ways do these forms of art practice draw upon religious traditions, and how do we think about the displacement of religious traditions in modern art? In this course, we will explore these questions by examining the modern art of the Middle East, South Asia, and China, in conjunction with readings from anthropology, art history, comparative literature, philosophy and religious studies.
Instructor(s): S. Al-Bahloly
Area: Humanities, Social and Behavioral Sciences

AS.070.343. On Seeing: Between Religion and Art. 3.0 Credits.
This course reflects on what it is to see, by examining how different religious traditions have conceived of seeing, and then considering how seeing is organized by modern forms of art practice. Our inquiry will range across a variety of cases—from devotional practices in Christianity and Hinduism; to concepts of vision in the Islamic tradition; to the critique of images during the Protestant Reformation and the legacy of that critique in modernism; and to the development of new technologies like photography and film—and it will draw on readings from anthropology, art history, critical theory and religious studies.
Instructor(s): S. Al-Bahloly
Area: Humanities, Social and Behavioral Sciences

Near Eastern Studies
AS.130.213. Introduction to Ancient Egyptian Art. 3.0 Credits.
This class is a combination of illustrated lecture and discussion, punctuated with visits to museums with Egyptian collections. Participants must be able to join at least one overnight trip to New York and/or Boston (weekend) and be available for two half day visits to Philadelphia and Washington, D.C. or elsewhere (TBA as best for participants), in addition to visiting Baltimore institutions with the class as part of the course. Discussion of sculpture will take place in front of the objects, so attendance is important for the visits.
Instructor(s): B. Bryan
Area: Humanities.

AS.130.377. Creating an Egyptian Temple. 3.0 Credits.
This class will challenge every participant to plan a temple environment for a particular deity. The readings, lectures, and discussions will cover the mythology around specific gods and how it influenced temple architecture, location, ritual, and festivals. It will survey the history of temple building in Egypt, the role of architecture and art—particularly wall reliefs—in communicating the functions of particular parts of temples. The aim is to help students understand what requirements an Egyptian temple needed to fulfill. Then each student will plan a temple for a chosen deity and explain to peers how it meets the ancient requirements.
Instructor(s): B. Bryan
Area: Humanities.

AS.130.420. Seminar in Research Methods in Near Eastern Studies: (Auto)biography in the Ancient Near East. 3.0 Credits.
Just as in our time, the peoples of the ancient Near East were greatly interested in their own pasts. One of the most vibrant manifestations of this interest was the writing of biographies, in which ancient authors told the stories of individual lives. These biographies present an enormous challenge to contemporary historians. On the one hand, they offer a wealth of evidence—sometimes our only evidence—about some of the most famous persons of antiquity. On the other hand, the biographies were seldom written according to what we might consider “proper historical method.” How, as modern historians, do we approach these biographies in studying the ancient past? Using a variety of case studies, students will develop skills in specific research skills such as critical reading, analysis, and interpretation. AS.130.420 is required of NES Majors, but is also open to non-majors who have taken at least one 100-level and one 300-level Near Eastern Civilization course, or with the consent of the instructor.
Instructor(s): J. Launger
Area: Humanities

AS.133.657. Creating an Egyptian Temple.
This class will challenge every participant to plan a temple environment for a particular deity. The readings, lectures, and discussions will cover the mythology around specific gods and how it influenced temple architecture, location, ritual, and festivals. It will survey the history of temple building in Egypt, the role of architecture and art—particularly wall reliefs—in communicating the functions of particular parts of temples. The aim is to help students understand what requirements an Egyptian temple needed to fulfill. Then each student will plan a temple for a chosen deity and explain to peers how it meets the ancient requirements.
Instructor(s): B. Bryan
Area: Humanities.
German Romance Languages Literatures

**AS.213.369. Dada’s Ideologies: Literature, Art, & Politics. 3.0 Credits.**
This course will examine the literary and political theories implied in, and encountered by, Dadaist works and praxes. Particular attention will be paid to Dadaist confrontations with the growth of modern mass media, the politics of World War I, and consumerist capitalism in the wake of Taylorism and Fordism. Readings include major Dadaists as well as Althusser, Benjamin, Debord, Gramsci, Irigaray, Lukács, Marx, Saussure, among others.
Instructor(s): J. Kingsley
Area: Humanities.

**AS.213.616. The Aesthetic Discourse of Modernity.**
When, in 1985, Jürgen Habermas published his lectures on The Aesthetic Discourse of Modernity, he pursued a double aim. He offered a critique of French Theory while at the same time providing a foundation for a normative category of modernity in the tradition of Hegel. Curiously there is one subject he does not touch on, though it seems necessary for a sufficient understanding of modernity: the realm of art and literature. This course will develop a critique of Habermas’ normative notion of modernity through re-readings of texts by Nietzsche, Benjamin, Horkheimer/Adorno, Derrida, Bataille and Foucault to elaborate an alternative category of aesthetic modernity. Taught in English. Reading knowledge of German and French is not required, but recommended.
Instructor(s): A. Geisenhanslueke
Area: Humanities.

**AS.214.171. Freshman Seminar: Witchcraft and Demonology in Renaissance Europe. 3.0 Credits.**
Who were the witches? Why were they persecuted for hundreds of years? Why were women identified as the witches par excellence? How many witches were put to death? (Answer: 30-40,000, between about 1400 and 1800.) What traits did European witchcraft share with witch-mythologies in other societies? After the witch-hunts ended, how did “The Witch” go from being “monstrous” to being “admirable” and even “sexy”? Answers are found in history and anthropology, but also in literature, folklore, music, and the visual arts. After an introduction to ancient and medieval witchcraft, we will study European witch-persecution between 1400 and 1800. The second half of the course will concentrate on artistic representations of witches in media ranging from manuscripts to movies, concentrating on Italy, France, Spain, and Germany.
Instructor(s): W. Stephens
Area: Humanities
Writing Intensive.

**Program in Museums and Society**

**AS.389.201. Introduction to the Museum: Past and Present. 3.0 Credits.**
This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends including the social movements of the 20th century. Anthropology, art, history, and science museums are considered. Cross-listed with History and History of Art.
Instructor(s): J. Kingsley
Area: Humanities, Social and Behavioral Sciences.

**AS.389.205. Examining Archaeological Objects. 3.0 Credits.**
This course considers the role of materials in the production, study and interpretation of objects by examining artifacts from the Johns Hopkins Archaeological Museum. Students will consider materials such as ceramics, stone, metal, glass, wood and textiles, and visit artists’ studios to gain an understanding of historical manufacturing processes. M&S practicum course. Cross-listed with Archaeology, Near Eastern Studies, Classics, and History of Art.
Instructor(s): S. Balachandran
Area: Humanities.

**AS.389.303. World of Things. 3.0 Credits.**
This course introduces students to current approaches to objects, their materials, and materiality. Each class starts from a specific inspiration (body parts, fakes, the materiality of ISIS.....) and treats the museum as a site for investigating the relationship between people and things.
Instructor(s): J. Kingsley.

**AS.389.315. Ancient Color: The Technologies and Meanings of Color in Antiquity. 3.0 Credits.**
What role did the colorful surfaces of sculptures, vessels and textiles play in the ancient world? We examine historical texts and recent scholarly and scientific publications on the technologies and meanings of color in antiquity, and use imaging and analytical techniques to study polychromed objects from the Johns Hopkins Archaeological Museum.
Instructor(s): S. Balachandran
Area: Humanities, Social and Behavioral Sciences.

**AS.389.340. Critical Issues in Art Conservation. 3.0 Credits.**
The course examines recent controversies in the conservation of major global art works and sites, raising questions concerning the basic theoretical assumptions, practical methods and ethical implications of art conservation. Cross-Listed with History of Art and Anthropology.
Instructor(s): S. Balachandran
Area: Humanities.

**AS.389.356. Halls of Wonder: Art, Science, and Literature in the Age of the Marvelous, 1500-1800. 3.0 Credits.**
Instructor(s): E. Havens
Area: Humanities.

**AS.389.358. Collecting the Contemporary. 3.0 Credits.**
What does it mean to be a collector? Students will visit private collections of contemporary art in Baltimore, learning from collectors and their objects. This course alternates seminar meetings, focused on theories and practices of collecting, with field trips. Cross-listed with History of Art.
Instructor(s): V. Anderson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.389.377. Black Artists in American Art Museums: Correcting the Canon. 3.0 Credits.
Students are invited to examine critically the history of Black artists exhibiting within American museums. With the help of BMA staff, class will develop interpretation for an installation to accompany a major retrospective of artist Jack Whitten that considers the “canon” of art history as a site of ongoing negotiation between taste-makers, artists, dealers, and critics, as well as art institutions that include the market and the museum. Students will take advantage of archives at the BMA, the Library of Congress and Howard University. Students will help select the artworks and themes for the show; research individual participants in the social networks that facilitated the success of some artists over others; and research the biographies of individual artworks - some that have entered the canon and some that should. M&S Practicum. CBL Course. Cross-listed with Africana Studies.
Instructor(s): J. Kingsley
Area: Humanities, Social and Behavioral Sciences.

AS.389.384. Object Encounters at the Baltimore Museum of Art. 3.0 Credits.
Using the Baltimore Museum of Art as a laboratory, students examine canonical narratives in art museums and iterate new approaches to objects in museums that build equity, interrogate privilege, decolonise, revisualise and offer alternative stories. Class meets at the museum every other week.
Instructor(s): J. Kingsley
Area: Humanities, Social and Behavioral Sciences.

AS.389.386. Islamic Art in the 21st Century Museum. 3.0 Credits.
What narratives about Islam and Islamic art does the visitor encounter at the museum? Recent re-installations of Islamic art will be studied in the context of current issues, including Islamophobia, attacks on cultural heritage, and hesitation in addressing matters of faith in public institutions. Cross-listed with History of Art and Islamic Studies.
Instructor(s): A. Landau
Area: Humanities, Social and Behavioral Sciences.

AS.389.400. Who Owns Culture?. 3.0 Credits.
This seminar explores the complicated, often explosive concept of cultural property, including questions surrounding the ownership, preservation, and interpretation of artifacts, monuments, heritage sites, and living traditions. Cross-listed with Anthropology and History of Art.
Instructor(s): E. Rodini
Area: Humanities, Social and Behavioral Sciences.

AS.389.450. Readings in Material Culture. 3.0 Credits.
Objects, things, "stuff"- this seminar will pursue classic texts and emerging methodologies to explore the myriad ways materials and materiality have been theorized across disciplines. For graduate/advanced undergraduate students.
Instructor(s): E. Rodini; R. Brown
Area: Humanities.

AS.389.650. Readings in Material Culture.
Objects, things, "stuff"- this seminar will pursue classic texts and emerging methodologies to explore the myriad ways materials and materiality have been theorized across disciplines. For graduate/advanced undergraduate students.
Instructor(s): E. Rodini; R. Brown
Area: Humanities.

The Department of the History of Science and Technology offers an undergraduate program leading to the degree of Bachelor of Arts with a major in science, medicine, and technology, and a graduate program leading to the degree of Doctor of Philosophy.

Undergraduate Programs
The department offers a variety of courses that deal with the history of the conceptual and technical development of the sciences, as well as the cultural and social impact of science and technology on civilization. These courses are open to all undergraduates in the Schools of Arts and Sciences and Engineering. A few of the courses require some background in an appropriate science, but most are accessible to those with no specialized knowledge who want to understand the part science has played in shaping modern culture. Students who have concerns about their technical competence for a given course should consult the professor involved.

Major in History of Science, Medicine, and Technology
Offered in cooperation with the Institute of the History of Medicine, this major allows students to combine substantive work in science with study of the social and historical context of modern science, medicine, and technology. The aim of the program is to produce graduates who are scientifically literate and technically competent, and who at the same time understand science and medicine not as static, autonomous enterprises but rather as modes of thought that have developed in specific social contexts.

The major is appropriate for any student planning a career in medicine or other areas of the health care industry. It is also flexible enough to serve as a basis for a variety of careers where an informed knowledge of science and technology and their impact on society is important. Such careers include broad areas of business and industry, journalism, teaching, museum work, and specialized areas of law and public policy.

Requirements for the B.A. Degree
Also see Requirements for a Bachelor’s Degree. (p. 7)

- Sciences: Students are required to have a total of 30 credits in science, engineering, and mathematics courses coded (E, N, or Q), of which at least nine credits must be above the 100-level. Laboratory courses in science count toward this requirement. Calculus I is strongly recommended.
- History of Science, Medicine and Technology: A total of 24 credits of course work in the history of science, medicine and technology are required. These must include at least two survey courses and four additional courses above the 100-level.
- Students in their senior year may take graduate courses with permission.
- A minimum grade of C- is necessary in all courses applied toward the requirements of the major and requirements may not be taken satisfactory/unsatisfactory. Each course must be at least 3 credits.

Two Survey Courses (select from the following): 6

History of Science and Technology
http://host.jhu.edu/
Students who demonstrate excellence in course work are eligible to write an honors thesis (AS.140.411 Senior Research Seminar and AS.140.412 Research Seminar) in their final year for additional credits. Students must have outstanding recommendations from two department members to be eligible for the thesis. Departmental honors are conferred if a student has a GPA of 3.5 or better in major requirements and receives a grade of A- or better on the thesis.

**Minor in the History of Science, Medicine and Technology**

The department offers a minor which may be combined with other science, social science, or humanities majors. To complete the requirements for the minor, students must have a total of 18 credits in the history of science, medicine, or technology, including at least one survey course. A minimum grade of C- is necessary in all courses applied toward the requirements of the major and requirements may not be taken satisfactory/unsatisfactory. Each course must be at least 3 credits.

**Additional History of Science, Medicine & Technology Courses**

Four 200-400 level history of science, medicine & technology courses

Two history of science, medicine & technology courses at any level

A minimum grade of C- is necessary in all courses applied toward the requirements of the major and requirements may not be taken satisfactory/unsatisfactory. Each course must be at least 3 credits.

**Graduate Program**

**Ph.D. in the History of Science and Technology**

The graduate program in the history of science and technology leads to the Ph.D. degree. Although an M.A. degree is granted, candidates who seek only that degree are not ordinarily admitted. The object of the Ph.D. program is to provide the rigorous training necessary for a scholarly career in teaching and research; consequently, the focus of the student’s activity will be the research seminars of the department. Faculty from the Institute of the History of Medicine in the School of Medicine also participate in the program.

**Admission**

Application deadline is January 15. All official supplemental materials (official transcripts, official GRE scores, and, when applicable, official TOEFL scores) should be sent directly to the Graduate Admissions Office at:

Johns Hopkins University
Full-time Graduate Studies in Arts, Sciences, and Engineering
Graduate Admissions Office
Shriver Hall 28
3400 North Charles Street
Baltimore, Maryland 21218

Requirements for the Ph.D. Degree

Before candidates begin full-time research on their dissertations, they must prepare themselves adequately in the appropriate fields of knowledge, become skilled in the techniques of historical research, and be able to carry out a sustained piece of historical analysis and writing.

In the first year of the program students are introduced to the methods and techniques of research and complete a year-long survey course in the history of science or the history of medicine. Students in their second year of study present a research paper to the department. In the second and third years of study, students complete three “fields” or concentrations. One field should be within the Program, one in a historical discipline outside the Program, and the third is negotiable depending on student interests and needs. Our students have also done historical fields with curators or research historians at the Smithsonian Institution. The third field can extend beyond historical subjects and may involve a scientific subject, for example. A field is intended to demonstrate a student’s mastery of a specific body of knowledge, both for the student’s own scholarly work and as a preparation for teaching. The fields are individually arranged and satisfied. Before being admitted for formal candidacy for the degree, the student must also demonstrate a reading knowledge of two foreign languages. The final requirement for the Ph.D. degree is the completion of a dissertation that is an original contribution to historical knowledge and of a standard suitable for publication.

The History of Science and Technology is by its nature interdisciplinary, and students are encouraged to undertake study in related areas such as history, philosophy, and the natural and medical sciences.

Facilities

The Eisenhower Library and the Welch Medical Library contain about two million volumes, including the special collections of the Institute of the History of Medicine in Baltimore. These research facilities are supplemented by the rare book holdings at Evergreen House, the Pratt Library, and the Peabody Library.

Other important research collections are available to students. In Philadelphia, collections include the Chemical Heritage Foundation, the American Philosophical Society, and the Academy of Natural Sciences. The Hagley Museum and Library’s collections in the history of American science and technology are within easy distance of campus, as are the incomparable holdings of the Smithsonian Institution, the Library of Congress, the National Library of Medicine, and other governmental agencies in Washington, D.C.

Financial Aid

The department has several graduate fellowships and teaching assistantships. Students may also be eligible for federal financial support through the National Science Foundation. Information on these and other fellowships can be obtained through the fellowship advisor at the student’s college, or from the Fellowship Office of the National Academy of Sciences, National Research Council, Washington, D.C. 20025. In the recent past, doctoral candidates have also won support for their research in the United States and abroad through such sources as the Smithsonian Fellowships, the Fulbright-Hays grants, the Spencer Foundation, and the Deutscher Akademischer Austauschdienst (DAAD) Fellowship.

For current faculty and contact information go to http://host.jhu.edu/people/
Professor Emeritus: history of Russian medicine and science, social relations of scientific thought, history of biomedical sciences.

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

**AS.140.105. History of Medicine. 3.0 Credits.**
Course provides an overview of the medical traditions of six ancient cultures; the development of Greek and Islamic traditions in Europe; and the reform and displacement of the Classical traditions during the Scientific Revolution.
Instructor(s): G. Pomata
Area: Humanities, Social and Behavioral Sciences

**AS.140.106. History of Modern Medicine. 3.0 Credits.**
The history of Western medicine from the Enlightenment to the present, with emphasis on ideas, science, practices, practitioners, and institutions, and the relationship of these to the broad social context.
Instructor(s): G. Mooney; J. Greene; R. Packard
Area: Humanities, Social and Behavioral Sciences

**AS.140.115. Freshman Seminar: Artificial Humans. 3.0 Credits.**
Looking at the history of attempts to augment or construct human beings, the course will explore the role of technology in molding human existence and shaping the definition of humanity.
Instructor(s): Y. Frumer
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.140.117. Freshman Seminar: Writing about Science and Medicine. 3.0 Credits.**
"Scientific literature" is not an oxymoron. Doctors and scientists write, sometimes beautifully. How? Why? We will both dissect and emulate classics of this genre and discuss how literary skill can inform both patient care and laboratory practice, and how it can shape the role of science in society. Freshmen Only.
Instructor(s): N. Comfort
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.140.129. Freshman Seminar: Johns Hopkins Medicine. 3.0 Credits.**
Johns Hopkins medicine has set the standards since the late 19th c. Learn how Hopkins reinvented medical education, public health, and hospital care and meet the people behind the famous names.
Instructor(s): S. Leslie
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.140.137. Freshman Seminar: Campus Life, Now and Then. 3.0 Credits.**
What was it that the Hopkins undergraduates of old did all day? Before the AMRs appeared on campus, where did they live? Who played lacrosse or football? Where did they study without the D-Level? What passed for campus social life in those days before women joined the student body? Were fraternity antics all just good clean fun? Any campus pranks achieve truly epic status? Join us for a look at Hopkins history through the eyes of your predecessors. Explore the university archives and work together on an on-line exhibit for Alumni Weekend on campus life through the ages at Johns Hopkins.
Instructor(s): S. Leslie
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.140.144. Freshmen Seminar: Culture, Communication and Technology. 3.0 Credits.**
This seminar traces the evolution and impact of oral transmission, writing, print, photography, film, and electric and electronic media.
Instructor(s): R. Kargon
Area: Humanities, Social and Behavioral Sciences.

**AS.140.146. History of Public Health in East Asia. 3.0 Credits.**
This course examines the history of disease, epidemics, and public health responses in East Asia from the 17th-20th centuries. This public health history emphasizes the interactions, connections, and comparisons among China, Japan, Korea, and Taiwan.
Instructor(s): M. Hanson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.140.147. Chinese Medicine: Tradition and Modernity. 3.0 Credits.**
Examine Chinese Medicine’s practical application as a therapy of increasing global popularity. While also examining its theoretical frameworks from antiquity to the present, healing methods such as acupuncture and herbal medicine are highlighted.
Instructor(s): J. Flowers
Area: Humanities, Social and Behavioral Sciences.

**AS.140.148. From Materia Medica to Mobile Phones: The History of Global Health Technologies, 16th Century to the Present. 3.0 Credits.**
This course explores case studies of technologies used in different iterations of ‘global health’ to understand their relationship to medical knowledge and broader historical and geographic context.
Instructor(s): K. Moore-Sheeley
Area: Humanities, Social and Behavioral Sciences.

**AS.140.154. Freshman Seminar: Picture This: A Photographic History of Johns Hopkins University. 3.0 Credits.**
Every picture tells a story, if you know how to read it. This freshman seminar will explore the history of Hopkins through images, creating interactive timelines of important themes in the university’s history.
Instructor(s): S. Leslie
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**AS.140.156. Harm City? Public Health in Baltimore, 1797 to the present. 3.0 Credits.**
Explores the history of public health in urban America using Baltimore as example. Examines topics such as infectious diseases, mental health, sanitation, rodent control, primary care, substance abuse, and STDs using frameworks of racism, classism, poverty and inequality.
Instructor(s): G. Mooney
Area: Humanities, Social and Behavioral Sciences.

**AS.140.163. Jungle Doctors: Medical Missions in Africa from David Livingstone to Paul Farmer. 3.0 Credits.**
Freshman seminar using a variety of primary and secondary sources, students will explore the motivations and activities of expatriates practicing medicine in Africa from the 19th century to the present.
Instructor(s): J. Cummiskey
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.140.165. Enlightenment Science Through Brilliant Books. 3.0 Credits.
Course explores the brilliant scientific and philosophic achievements of the 18th-century intellectual movement known as the Enlightenment through the reading of a selection of key authors (Voltaire, Franklin, the great Encyclopedists...). Includes introduction to research method and writing in the humanities.
Instructor(s): J. Richard
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.167. Technology and Global Health: A History from the 19th century to the Present. 3.0 Credits.
This course explores the intersection of technology and health through three historical periods: colonial medicine (19th. c.), international health (post-War era), and global health (late 20th century to present).
Instructor(s): H. Morefield
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.176. Public Health in East Asia Through Films & Documentaries. 1.0 Credit.
This course uses contemporary films and documentaries to address issues in public health in East Asia, past & present. Topics covered include medicine in turn-of-the-twentieth century Japan and China, revolutionary medicine, STDs, mental illness, HIV/AIDS in China, industrial pollution, the politics of universal health care insurance, and pandemics in East Asia.
Instructor(s): M. Hanson
Area: Humanities, Social and Behavioral Sciences

AS.140.213. Topics in Biomedicine. 3.0 Credits.
What are some of the main issues and fields that defined medical research and practice after 1945? What were the new physical, technological, and conceptual tools that defined the postwar era of medicine? How did new technologies and research endeavors configure new ways of diagnosing disease, monitoring patients, and delivering medical care and therapies? As students consider the rise of genetics and genetic therapy and organ transplantation as well as the broad implementation of electronics and digital computers after 1945, they will also consider the cultural, social, ethical, and policy-related implications of these various innovations that make up the rise of biomedicine. One main goal of the course is to give students an historical understanding—at least from the last eighty years—of why medical care and therapeutic possibilities are what they are today.
Instructor(s): N. Anderson
Area: Humanities, Social and Behavioral Sciences.

AS.140.226. Aviation in America. 3.0 Credits.
This course surveys manned flight in America, with particular emphasis on how technological changes and sociocultural events have influenced one another in the development of aircraft.
Instructor(s): L. Karafantis
Area: Humanities, Social and Behavioral Sciences

AS.140.301. History of Science: Antiquity To Renaissance. 3.0 Credits.
The first part of a three-part survey of the history of science. This course deals with the origins, practice, ideas, and cultural role of scientific thought in Graeco-Roman, Arabic/Islamic, and Medieval Latin/Christian societies. Interactions across cultures and among science, art, technology, and theology are highlighted.
Instructor(s): G. Ferrario, L. Principe
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.302. Rise Of Modern Science. 3.0 Credits.
Survey of important achievements in modern science from Newton to the Hubble Space Telescope, with topics drawn from physics, chemistry, biology, astronomy, and geology. Examines how science has shaped the modern world.
Instructor(s): J. Mercelis, S. Kingsland
Area: Humanities, Social and Behavioral Sciences.

AS.140.305. From the Compass to Androids: History of Science, Technology, and Medicine in Asia. 3.0 Credits.
The course explores the history and cultural context of science, medicine, and technology in East Asia, from the ancient Chinese science to the latest scientific and technological developments in Japan.
Instructor(s): Y. Frumer
Area: Humanities, Social and Behavioral Sciences.

AS.140.311. Ecology, Health, and the Environment. 3.0 Credits.
Explores diverse problems linking ecological, environmental and public health themes, with focus on Chesapeake region. Students’ research projects can be outside Chesapeake region.
Instructor(s): S. Kingsland
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.313. Psychopolitics: Science, Mind, and Society. 3.0 Credits.
This course explores the history of psychiatry and the mind sciences as social and political institutions in the United States, from the country’s founding to the present. Each class meeting will explore a set of “alternative facts” emerging in the setting of a landmark political dispute in US history. Students will read, discuss, and research claims made by competing scientific experts about who should participate in American society and to what extent. Overall, the course is geared toward students interested in making sense of the exchange between scientific knowledge and social politics.
Instructor(s): S. Scharff
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.320. Modernity on Display: Technology and Ideology at World’s Fairs. 3.0 Credits.
Seminar focuses on ideological at World’s Fairs over technological modernity with special emphasis upon World War II and the Cold War.
Instructor(s): A. Molella, R. Kargon
Area: Humanities, Social and Behavioral Sciences.

AS.140.321. Scientific Revolution. 3.0 Credits.
Explore how the Western understanding of nature changed between 1500 and 1720 through the works of astronomers and astrologers, naturalists and magi, natural philosophers and experimentalists, doctors and alchemists & others.
Instructor(s): M. Portuondo
Area: Humanities, Social and Behavioral Sciences.

AS.140.322. Follow the money: Science, technology, and the ‘knowledge economy’, c. 1800-present. 3.0 Credits.
This course examines the historical emergence of knowledge-driven economies, paying special attention to the funding, development, and use of science and technology for commercial purposes.
Instructor(s): J. Mercelis
Area: Humanities, Social and Behavioral Sciences Writing Intensive.
AS.140.324. Commercializing Science: Academic Entrepreneurs from Kelvin to Venter. 3.0 Credits.
From the nineteenth-century physicist William Thomson (Lord Kelvin) to contemporary geneticists such as Walter Gilbert and Craig Venter, academic scientists and engineers across a broad range of disciplines have created their own companies. This course examines the motives behind these entrepreneurial ventures, the strategies employed, and the factors influencing their success.
Instructor(s): J. Mercelis
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.326. Debating Evolution: From Darwin to Sociobiology. 3.0 Credits.
Charles Darwin's theory of evolution transformed the field of biology and raised profound moral and spiritual questions. We examine how Darwin's ideas permeated not only science, but also literature, religion, the social sciences, and politics during the 19th and 20th centuries. We also explore debates about eugenics and sociobiology.
Instructor(s): E. Raymer
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.327. Science and Utopia. 3.0 Credits.
Seminar examines the changing role of science in planning the ideal community from the 17th century to the present. Readings include works by Campanella, Bellamy, H.G. Wells, Orwell, B.F. Skinner and Walt Disney.
Instructor(s): R. Kargon
Area: Humanities, Social and Behavioral Sciences.

AS.140.328. Science and Technology in Slave Regimes. 3.0 Credits.
What does science and technology look like in slave regimes? This seminar explores this question from a trans-national perspective by comparing cases in the Antebellum US, Cuba, Brazil and other countries.
Instructor(s): M. Portuondo; R. Kargon
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.331. Mind, Body and Society: The History of Psychology. 3.0 Credits.
We will explore various modern approaches to the relationship of mind, body and society; to the nature of scientific psychology and its relationship to human values.
Instructor(s): D. Todes
Area: Humanities, Social and Behavioral Sciences.

AS.140.334. What it Means to be Human: Perspectives in the History of Anthropology, 1860-1995. 3.0 Credits.
This course explores the changing scientific, social, and cultural ideas that shaped how anthropologists and other scholars approached the study of human beings from the mid-nineteenth through the twentieth centuries.
Instructor(s): A. Link
Area: Humanities, Social and Behavioral Sciences.

AS.140.344. Rejected Knowledge? Alchemy and Astrology in Early Modern European Science and Medicine. 3.0 Credits.
This course surveys the rise and fall of alchemy and astrology in early modern Europe. Topics include chemical and astrological medicine, prognostication, and the quest for the Philosopher's Stone.
Instructor(s): J. Rivest
Area: Humanities, Social and Behavioral Sciences.

AS.140.345. Animal Minds: Beyond the Black Box. 3.0 Credits.
How do migratory birds and fish find their way home? Do honeybees communicate using a "dance language"? Do chimpanzees have mental lives akin to those of human beings? How do scientists attempt to answer such questions, and why was the "animal mind" a taboo for over 50 years in American science? Focusing on ethology and psychology from Darwin to the present, this course examines the history of the study of animal cognition and behavior. A major emphasis throughout the course will be on the question of animal consciousness from the late-19th through the 20th century.
Instructor(s): R. Nash
Area: Humanities, Social and Behavioral Sciences.

AS.140.346. History of Chinese Medicine. 3.0 Credits.
Students will study the most recent anthropological, philosophical, and historical scholarship on medicine in traditional and modern Chinese society. They will approach the topic from several angles including medical pluralism, the range of healers, domestic and literate medicine, gender, emergence of new disciplines, public health and the history of disease. The course relies on secondary sources and primary sources in English translation. Cross-listed with East Asian Studies.
Instructor(s): M. Hanson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.347. History Of Genetics. 3.0 Credits.
Intellectual and social history of the gene concept, including Mendelism, eugenics, medical genetics, DNA, genomics, and personalized medicine.
Instructor(s): N. Comfort
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.350. Disability in 20th century America: Rights, Restrictions, Reproduction. 3.0 Credits.
Is disability a biological fact or determined by culture? This class discusses different ideas of difference in the context of disability rights, professional power, reproductive technology and bioethics. Cross-listed with Studies of Women, Gender, and Sexuality.
Instructor(s): M. Schmidt
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.351. Seminar in the History of Life Sciences. 3.0 Credits.
Students do research projects with faculty supervision, on topics of their choice in the history of biological or biomedical sciences. Projects are presented to class at end of semester.
Instructor(s): S. Kingsland
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.352. Who Wants to be a Billionaire?: High Tech & the American University. 3.0 Credits.
Long before Facebook, faculty and students were creating startups on campus. This course examines college entrepreneurship from its 19th-century origins to today: the potential perils, profits, and promise for entrepreneurs and universities alike.
Instructor(s): S. Morris
Area: Humanities, Social and Behavioral Sciences.
AS.140.353. Women, Health, and Medicine in Modern America. 3.0 Credits.
This course explores women’s interactions with science, medicine, and health in the late-19th and 20th century United States. It is framed by an interest in medicalization, sex/gender, and feminism. Cross-listed with Studies of Women, Gender, and Sexuality.
Instructor(s): D. Stillwell
Area: Humanities, Social and Behavioral Sciences.

AS.140.355. History of Modern Astronomy: Expanding Universes and Space Telescopes. 3.0 Credits.
Astronomy today, in its tools, techniques, practices and tempers, bears little resemblance to astronomy in 1900. This course will cover how scientists expanded the universe in the past century and how the universe of astronomical practice expanded as well: as a profession, as an avocation, and as a cultural resource.
Instructor(s): D. DeVorkin
Area: Humanities, Social and Behavioral Sciences.

AS.140.356. Man vs. Machine: Resistance to New Technology since the Industrial Revolution. 3.0 Credits.
This course analyzes different episodes of “luddism” in the history of science and technology, from the destruction of textile machinery in the early 1800s up to recent controversies about biotechnology and ICT.
Instructor(s): J. Mercelis
Area: Humanities, Social and Behavioral Sciences.

AS.140.357. Science Fiction Movies in the East and West. 3.0 Credits.
What is a science fiction (SF) movie? How did SF movies and developments in science and technology influence each other during the twentieth century? What is the use of SF movies for societies? And why are SF movies much more popular in some countries than in others? By watching and analyzing classic and contemporary SF movies from the US, the Soviet Union, Japan, China, and other countries, we will search for answers to these questions. Special emphasis will be given to analyzing how historical, political, and cultural environments in different countries have influenced the production and acceptance of SF movies.
Instructor(s): D. Kim
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.362. The Communications Revolution. 3.0 Credits.
Investigates the nature and impact of technological changes in transportation and communication since the 19th-century, including iconic developments such as the Panama Canal, Brooklyn Bridge, airplanes, automobiles, television, wireless communication and the internet.
Instructor(s): S. Morris
Area: Humanities, Social and Behavioral Sciences.

AS.140.368. Technological Transformations. 3.0 Credits.
Course explores the historical development of revolutionary technologies and their transformations of the individual and society. Focus on computing, biotech, consumer goods, warfare, manufacturing, agriculture, imaging, energy, transportation, and sustainability.
Instructor(s): M. Portuondo
Area: Humanities, Social and Behavioral Sciences.

AS.140.370. History of Mental Illness and Psychiatry in Modern West. 3.0 Credits.
This course will be an introduction to the history of “madness” in modern Europe and America. In particular, it will examine the ideas that have shaped perceptions of madness, insanity, and mental illness; the changing experiences of those afflicted; the development of those professions designed to look after those deemed mad, insane, and mentally ill; and the social and cultural assumptions behind treatments, policies, and public opinions.
Instructor(s): J. Ballenger
Area: Humanities, Social and Behavioral Sciences.

AS.140.371. The History of Forensic Medicine: Medicine and the Law in Western Society, 1500-2000. 3.0 Credits.
This course explores the history of forensic medicine from some of its earliest roots to the present day, investigating everything from witchcraft trials to DNA profiling.
Instructor(s): S. LeJacq
Area: Humanities, Social and Behavioral Sciences.

AS.140.379. Health and the City: Urban Public Health In Historical Perspective. 3.0 Credits.
This course examines the history of cities as spaces of public health concern since the nineteenth century, and seeks to understand how social, political, and economic contexts have shaped urban public health interventions.
Instructor(s): E. Anders
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.381. History of Reproduction. 3.0 Credits.
This course investigates the history of reproduction in American medicine, science, politics, and culture. It explores changing ideas about reproductive bodies, sexuality, and the family as well as practices of contraception, conception, and childbirth.
Instructor(s): B. Gurtler
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.140.382. Plagues and Societies in World History. 3.0 Credits.
This course examines some of the most notable epidemics in world history from the Black Death to Ebola in 2014. Topics include the origins of epidemic diseases; the relations between epidemics and warfare, empires, and trade; and the sociocultural underpinnings of disease response.
Instructor(s): K. Arner
Area: Humanities, Social and Behavioral Sciences.

AS.140.390. Science and Technology in Latin America. 3.0 Credits.
The course surveys the development of western science and technology in Hispanic America (1492 to the present). We begin studying the hybridization of scientific practices between European and Native American cultures during the early colonial era and end with the transfer of technologies and industrialization of the 20th century. We emphasize the role on science and technology in state formation, the acculturation of foreign ideas in colonial and postcolonial societies, and the role of intellectual elites in modernization programs.
Instructor(s): M. Portuondo
Area: Humanities, Social and Behavioral Sciences.
AS.140.398. Godzilla and Fukushima: Japanese Environment in History and Films. 3.0 Credits.
Juxtaposing Japanese environmental history and its reflection in popular media, the course will explore the intersection between technology, environment, and culture. The course will be accompanied by relevant movie screenings.
Instructor(s): Y. Frumer
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.411. Senior Research Seminar. 2.0 Credits.
Instructor(s): J. Mercelis; M. Portuondo
Area: Humanities, Social and Behavioral Sciences.

AS.140.412. Research Seminar. 2.0 Credits.
Departmental Majors Writing a Senior Thesis Only
Instructor(s): R. Kargon; Y. Frumer
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.413. The White Plague: History of Tuberculosis. 3.0 Credits.
Examination of interrelated scientific, medical, social, and cultural dimensions of tuberculosis from early modernity to the present in various geographical and cultural settings. Extensive reading, research based on primary sources. Juniors and Seniors only. Instructor's permission for all others. Cross-listed with History and Anthropology.
Instructor(s): D. Todes
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.415. Thinking Through Things and Thinking Things Through. 3.0 Credits.
Combining hands-on experience of using historical instruments with primary sources analysis, the students will reconstruct the ways in which artifacts channeled human perception of their environment.
Instructor(s): Y. Frumer
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.441. Metaphor in Science and Medicine. 3.0 Credits.
Science and medicine are permeated by metaphors. Generated by every domain of human experience, these metaphors embed scientific and medical thought in historically specific times, places, experiences, issues, attitudes and cultures. We will explore the dynamics of metaphorical thinking and examine such specific examples as "The Great Chain of Being," Darwin's "struggle for existence" and "natural selection," the "reflex" from Descartes to Pavlov to cybernetics, body and mind as clock, factory and computer; illness as imbalance and invasion, and the metaphorical associations of tuberculosis and cancer.
Instructor(s): D. Todes
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.447. Science and the City. 3.0 Credits.
This seminar explores the nature and growth of urban scientific communities from Victorian Manchester, through geographic growth clusters such as Silicon Valley and Route 128, to new eco-cities in China and Abu Dhabi.
Instructor(s): J. Mercelis; R. Kargon; S. Leslie
Area: Humanities, Social and Behavioral Sciences.

AS.140.461. Scripta Manent: Manuscript Cultures East and West. 3.0 Credits.
This seminar looks at manuscripts both as physical objects and as cultural products, through an analysis of their ways of production, material features, and uses in different cultures and contexts. Meetings will be devoted to the codicology, paleography, and philology of manuscripts with a particular focus on the Greek, Latin, Arabic, and Judaeo-Arabic traditions. Indian, Chinese and Japanese contexts will complement the focus of the seminar and provide elements of comparison and wider framing. The seminar will also address recently developed digital tools for the study of manuscripts and provide students with a set of skills and tools for approaching and using manuscript material effectively. The seminar will include hands-on sessions, with viewing of original manuscripts from the rich collections of the Sheridan Libraries and the Walters Art Museum.
Instructor(s): G. Ferrario
Area: Humanities, Social and Behavioral Sciences.

AS.140.501. Independent Study. 3.0 Credits.
Instructor(s): J. Mercelis; S. Kingsland.

AS.140.502. Independent Study. 0.0 - 3.0 Credits.
Instructor(s): G. Mooney; M. Fissell; S. Leslie; Y. Frumer.

AS.140.597. Research - Summer. 3.0 Credits.
Instructor(s): Staff.

AS.140.598. Summer Internship. 1.0 Credit.
Instructor(s): S. Leslie.

AS.140.599. Independent Study-Summer. 3.0 Credits.
Instructor(s): M. Portuondo; S. Leslie.

An introductory course at the graduate level to the interpretation of historical evidence, analysis of historical data; and to contemporary methods in the history of science, medicine, and technology.
Instructor(s): S. Kingsland.

AS.140.618. Seminar in the History of Life Sciences.
For graduate students preparing fields in history of science.
Instructor(s): S. Kingsland.

AS.140.641. Departmental Colloquium.
Reports by staff members, students, and invited speakers.
Instructor(s): J. Mercelis.

AS.140.642. Colloquium.
Reports by faculty, students, and invited speakers.
Instructor(s): J. Mercelis.

AS.140.655. Early Modern Science in France.
This seminar examines 17th- and 18th-century French science and medicine and their social, political, and institutional contexts. Participants will write a paper or dissertation chapters for discussion. Reading knowledge of French required.
Instructor(s): L. Principe.

AS.140.659. Looking Back at Science of Tomorrow.
The course will look at the history of science through the lens of science fiction, and explore the role of scientific imagination in the development of sciences.
Instructor(s): Y. Frumer.
AS.140.661. Scripta Manent: Manuscript Cultures East and West.
This seminar looks at manuscripts both as physical objects and as cultural products, through an analysis of their ways of production, material features, and uses in different cultures and contexts. Meetings will be devoted to the codicology, paleography, and philology of manuscripts with a particular focus on the Greek, Latin, Arabic, Hebrew and Judaeo-Arabic traditions. Indian, Chinese and Japanese contexts will complement the focus of the seminar and provide elements of comparison and wider framing. The seminar will also address recently developed digital tools for the study of manuscripts and provide students with a set of skills and tools for approaching and using manuscript material effectively. The seminar will include hands-on sessions, with viewing of original manuscripts from the rich collections of the Sheridan Libraries and the Walters Art Museum.
Instructor(s): G. Ferrario.

AS.140.662. Research Seminar in the History of Science: The Laboratory in Theory and Practice since the 17th century.
This seminar traces the evolution and impact of the laboratory in the natural and social science 1600-2000.
Instructor(s): L. Principe; R. Kargon.

AS.140.663. Crossing Boundaries: Studies in Comparative History.
Course takes a comparative look at how scientific ideas, practices, methods, technologies are translated across disciplinary, institutional, and national borders.
Instructor(s): R. Kargon; S. Kingsland.

AS.140.665. History of Science and Technology in Asia.
Graduate level discussion of major historiography of science and technology in East Asia.
Instructor(s): Y. Frumer.

AS.140.666. Special Topics in the History of Physics.
This seminar will focus upon the history of electromagnetism, heat and energy, mechanics and the transition to modern physics, 1800-1920.
Readings, discussion, papers.
Instructor(s): R. Kargon.

AS.140.668. Technology in Context.
The course will explore topics in the history of technology focusing on a variety of methodologies pertinent to the subject.
Instructor(s): J. Greene; Y. Frumer.

AS.140.669. Special Topics in the History of the Physical Sciences.
This seminar will focus upon the history of the physical sciences.
Readings, discussion, papers.
Instructor(s): R. Kargon.

AS.140.670. Special Topics in the History of Physics in Higher Education.
This seminar will focus upon the history of the establishment of physics in US higher education 1870-1940.
Readings, discussion, papers
Instructor(s): R. Kargon.

AS.140.673. The Modern Synthesis in Historical Perspective.
Research seminar in history of evolutionary biology
Instructor(s): S. Kingsland.

AS.140.674. Science and Medicine in Early Modern Atlantic World Culture.
How were changes in scientific and medical ideas reflected in cultural products of the early modern Atlantic world? We will study these ideas as they appeared in literary genres such as poetry, utopias, natural histories and travel narratives. Likewise, we will examine the visual culture of the Atlantic space for clues about changing conceptions about the natural world. Our expedition will encompass Anglophone, French and Hispanic regions, and will pay careful attention to hybrid cultural products that reflect the interaction between indigenous cultures and the (changing) European understanding of the natural world.
Instructor(s): M. Portuondo.

Seminar will examine the development of an industrial culture in the early 20th century. Topics will include the role of science in the second Industrial Revolution, culture and industrial spirit, the impact of technology and science on the arts and representations of science and technology in museums and popular culture.
Instructor(s): R. Kargon.

AS.140.676. Environmental Engineering in Historical Perspective.
Restricted to graduate students in History of Science and Technology who are completing fields.
Instructor(s): S. Kingsland.

AS.140.677. Practical History of Science.
History of science often engages with technical and practical material. Although there are multiple ways of dealing with sources, one crucial one--sometimes neglected in more recent work--is understanding these aspects in a critical way, thinking or practicing with historical actors. This graduate seminar explores reasons and methods for doing so, includes in-depth readings of technical material from various periods and experimental reconstructions, and reviews how such an approach can deepen our historical understanding.
Instructor(s): L. Principe.

AS.140.705. History of Science: Antiquity To Renaissance.
The first part of a three-part survey of the history of science. This course deals with the concepts, practice, and the cultural roles of scientific thought from classical antiquity to the time of Copernicus. Topics include the pre-Socratics, the systems of Plato and Aristotle and their continuing influence, Islamic science, Latin medieval scholasticism and the universities, and Renaissance hermeticism/natural magic. Interactions across science, art, technology, and theology are highlighted.
Lecture meets with AS.140.301
Instructor(s): L. Principe.

Survey of history of science, 18th-20th c. Students are encouraged to attend lectures for 140.302, but seminar may be taken without attending those lectures.
Instructor(s): S. Kingsland.

AS.140.710. Scientific Revolution.
Reading intensive seminar that studies the events and ideas that transformed western science from Medieval natural philosophy to the experimental sciences (1500-1720s). Lecture meets with AS.140.321.
Instructor(s): M. Portuondo.

Instructor(s): R. Kargon.

AS.140.802. Directed Readings & Diss.
Instructor(s): R. Kargon.
AS.140.803. Independent Study-Summer.
Instructor(s): S. Kingsland.

Instructor(s): S. Kingsland.

AS.140.812. Directed Readings & Diss.
Instructor(s): S. Kingsland.

Instructor(s): S. Leslie.

AS.140.832. Directed Readings & Diss.
Instructor(s): S. Leslie.

Instructor(s): L. Principe.

AS.140.836. Directed Readings & Diss.
Instructor(s): L. Principe.

Instructor(s): M. Portuondo.

AS.140.842. Directed Readings & Diss.
Instructor(s): M. Portuondo.

AS.140.843. Directed Reading & Dissertation.
Instructor(s): Y. Frumer.

AS.140.844. Directed Reading & Dissertation.
Instructor(s): Y. Frumer.

AS.140.845. Directed Readings and Dissertation.
Instructor(s): J. Mercelis.

Instructor(s): J. Mercelis.

Instructor(s): L. Principe.

AS.140.854. Directed Readings & Diss.
Instructor(s): L. Principe.

Instructor(s): D. Todes.

AS.140.892. Dir Rdg & Dissertation.
Instructor(s): D. Todes.

Instructor(s): M. Fissell.

AS.140.894. Directed Readings & Diss.
Instructor(s): M. Fissell.

Instructor(s): G. Mooney.

AS.140.896. Directed Readings & Diss.
Instructor(s): G. Mooney.

Cross Listed Courses

History of Art
AS.010.707. Therapies of Art and Literature in Early Modern Europe.
This seminar examines the myriad ways art and literature in Early Modern Europe addressed itself to its audiences as a form of therapy. Taking as our point of departure Petrarch's neo-Stoic therapy of the passions, the revival of consolatio literature, and the development of new Christian "wisdom" genres aimed at ethical self-cultivation, we consider how artists participated in the care of the body, the soul, and the self, innovating therapies that were at once sacramental and philosophical, spiritual and ethical. Intersections with the history of medicine will prompt us to inquire into the transposition of physiological and psychological theories, practices, and metaphors into the arena of ethical-spiritual therapy.
Instructor(s): M. Merback.

Anthropology
AS.070.352. Evolution, Ecology, Becoming. 3.0 Credits.
The concept of evolution is central to social theory. Originating in the question of the species, it has moved into questions of human ecology, cultural forms and modes of thought. While it remains a deeply contested, often criticized concept, particularly in its neo-Darwinian manifestation, it orients anthropological thinking in ways that are as yet to be examined. Reaching into the archives of anthropology and other cognate disciplines, this course will examine the writings of Lyell, Darwin, Marx, Morgan, Boas, Steward, Bateson, Ingold among others. Co-listed with AS.070.610
Instructor(s): A. Goodfellow; N. Khan
Area: Humanities, Social and Behavioral Sciences.

Near Eastern Studies
AS.130.259. Ancient Science. 3.0 Credits.
A survey of scientific practices and technological innovations in the ancient world, including astronomy, medicine, law, and divination. Special attention will be devoted to the relationship between magic and science during the periods covered.
Instructor(s): P. Delnero
Area: Humanities, Social and Behavioral Sciences.

Political Science
AS.190.471. The University and Society. 3.0 Credits.
In the 20th century, American universities became the envy of the world, leading in most categories of scholarly productivity and attracting students from every nation. In recent years, though, American higher education has come to face a number of challenges including rapidly rising costs, administrative bloat, corporatization and moocification. We will examine the problems and promises of American higher education, the political struggles within the university and the place of the university in the larger society. Upper classes and Grad Students only.
Instructor(s): B. Ginsberg; R. Kargon
Area: Social and Behavioral Sciences.
German Romance Languages Literatures

What is personal memory? This course offers both an in-depth journey through Proust’s Recherche and a way of tracing major scientific questions about the formation of memory in connection with autobiography and medical history. The process of human remembering -- with its counterpart, forgetting -- has emerged over the last thirty years as an extraordinarily rich field of investigation as well as of creative endeavors in the arts. Poised between literature and science, this course offers both an in-depth introduction to Proust’s ground breaking modern work on human time, A la recherche du temps perdu, and an investigation into a modern history of memory (a history that unfolds in the nineteenth and early twentieth century, and has made a surprising return in our contemporary understanding of remembrance). That Proust’s petite madeleine should have turned, in recent years, into the magical token of autobiographical recollection and provided, at the same time, an immensely productive clinical and neuro-scientific model of how memory works serves as our point of departure. That human memory is an experience and not merely a biological function -- its existence depending on language -- will be our running thread. Proust’s book, filled with immensely learned and complex descriptions of mnemonic processes, serves as our case-study. Proust’s investigations into remembering reveal fascinating aspects of the 19th century advances into the psychology and nosography of memory. These will in turn prompt us to read his work in light of present controversies in scientific research, as for example on the construction of memory, on “body-memory,” the interface between cognition and emotion, and the mind/brain debate. As it prompts many questions on the relation between fiction and experience, this journey through major themes of Proust’s quest for memory will invite a broader reflection on the relation between literary and philosophical investigations. Requirements: Short oral presentation and final research paper. Taught in English, reading knowledge of French desirable but not required. Most readings are available in English. Required for this course are vol. I, V, VI of In Search of Lost Time in the 2003 Modern Library edition (ISBN 978-0-375-75154 – 1 and 4 and 7). For a copy of the syllabus, with a list of main recommended readings, available in mid-June, please write to e.ender@jhu.edu

Instructor(s): E. Ender

Area: Humanities.

Humanities Center

AS.300.228. Brain and Society. 3.0 Credits.

On April 2, 2013, President Obama unveiled the Brain Activity Map Project, a 100 million dollar investment to map the single-celled neurons composing the human brain. Scientific in its aim, the project is culturally significant as well. Popular websites lumosity.com and neuronetlearning.com offer brain-exercises to boost intelligence, is culturally significant as well. Popular websites lumosity.com and neuronetlearning.com offer brain-exercises to boost intelligence, while the emergent academic fields neurophilosophy, neuroethics, and neurohistory borrow from the brain sciences. The interaction between the brain and society, however, is by no means new. In this course, we will investigate the origins of brain maps and trace their reception in nineteenth-century European and American literature, philosophy, politics. Topics include phrenology, the nervous system, psychopathology, and brain localization, and these fields’ resonance in German Idealism, Victorian literature, French anthropology, and American fiction. The course is reading intensive.

Instructor(s): J. Maloney

Area: Humanities, Social and Behavioral Sciences.

Program in Museums and Society

AS.389.275. Interpreting Sites & Collections: An Introduction to Museum Education. 3.0 Credits.

Part public history, part introduction to museum practices, this hands-on course explores how heritage areas and museums serve communities through interpretation. Each year, students partner with a community to develop research-based, visitor-centered interpretive material, in the 2015 Baltimore National Heritage Area. Field trips and community meetings will be a significant part of the course. Cross-listed with History and History of Science. M&S practicum course. Class usually meets 1:30 - 3:50 except for days with field trips.

Instructor(s): E. Maloney

Area: Humanities, Social and Behavioral Sciences.

AS.389.450. Readings in Material Culture. 3.0 Credits.

Objects, things, "stuff"- this seminar will pursue classic texts and emerging methodologies to explore the myriad ways materials and materiality have been theorized across disciplines. For graduate/advanced undergraduate students.

Instructor(s): E. Rodini; R. Brown

Area: Humanities.

AS.389.650. Readings in Material Culture.

Objects, things, "stuff"- this seminar will pursue classic texts and emerging methodologies to explore the myriad ways materials and materiality have been theorized across disciplines. For graduate/advanced undergraduate students.

Instructor(s): E. Rodini; R. Brown

Area: Humanities.

Interdisciplinary Studies

The undergraduate major in interdisciplinary studies allows students to combine disciplines in Krieger School of Arts and Sciences to develop a major focused on a particular topic or intellectual theme. Therefore, courses proposed for this interdisciplinary major must have coherence and build toward a rich exploration of a clear set of principles or questions.

Requirements for a B.A. Degree with a Major in Interdisciplinary Studies

Also see Requirements for a Bachelor’s Degree (p. 7).

Students in the humanities and social sciences who wish to design their own major, or who wish to divide their studies between departments, may create their own program in Interdisciplinary Studies. This interdisciplinary major may straddle several traditional disciplines but must maintain a substantive theme or focus. For example, a student interested in the American Revolutionary period may construct a curriculum including courses from History, English, History of Art, and Sociology. Another may wish to focus on children in poverty, drawing...
from Anthropology and Economics. Proposals for the interdisciplinary major should be submitted at the end of the sophomore year.

This major requires the support of a faculty advisor and the approval of the Arts and Sciences Curriculum Committee. A student wishing to complete this major must work with a full-time faculty member from the Homewood campus to construct a curricular plan that includes courses representing 45 to 60 credits. These courses can include all related prerequisites and related courses, such as language study. Independent study, research, and internships may be included. Twenty-one credits must be earned at the 300-level or higher. Courses from the School of Engineering are not permitted, except by petition.

The proposal should explain how each of these courses provides insight on the given topic, concept, issue, time period, etc. There is no need to defend the principle of interdisciplinary study, as that is a given, but the student must explain how the courses from two or more departments represent a conceptual whole.

After receiving approval from a sponsoring faculty advisor, the student then works with the Office of Academic Advising to finalize the proposal and to present it to the Curriculum Committee, consisting of faculty and undergraduates, who must approve the proposal by majority vote. After approval, the student continues to work with the faculty advisor and Academic Advising to oversee completion of requirements.

Rules:

- Students pursuing this major must still meet all other requirements for a bachelor's degree (p. 7) in the Krieger School of Arts and Sciences.
- All courses for the major must be taken for a letter grade and students must earn a C- or better in courses completing major requirements.
- Students must earn 45-60 credits in the completion of the major.
- At least 21 credits must be completed at the 300-level or higher and may not be counted toward another major or minor.
- Courses offered by the School of Engineering may not be included in major requirements. (Some minor exceptions may be permissible.)

International Studies

http://krieger.jhu.edu/internationalstudies

The International Studies major is an interdisciplinary program drawn from the departments of political science, history, economics, languages, sociology, and anthropology. There are three programs in International Studies: a regular undergraduate major leading to the B.A. degree in five years, and two accelerated programs leading to a B.A. and M.A. degree in five years. One of the accelerated programs is in partnership with the Johns Hopkins School of Advanced International Studies in Washington, D.C. and the other is with political science institute Sciences Po in Paris. The three programs, and all other aspects of the International Studies Program, are described on the International Studies website.

Requirements for the B.A. Degree

Also see Requirements for a Bachelor's Degree. (p. 7)

Students considering a major in International Studies should begin introductory courses required of the major early in their college careers. Choices may include an introductory history course at the 100-level, AS.180.101 Elements of Macroeconomics-AS.180.102 Elements of Microeconomics, and one of the core political science courses.

Major Requirements

The international studies major is comprised of three main components:

- Foreign language study
- Core courses in history, political science, and economics
- A focus area of the student’s choosing

In addition, students must earn a grade of C- or better in all courses applied towards major requirements and courses may not be taken satisfactory/unsatisfactory. Students must also complete at least 5 courses of major requirements at the 300 level or higher within the history, political science, and/or economics components of the major. This excludes courses used to fulfill the language requirement and focal area.

Foreign Language

Language proficiency through the second semester of the advanced/third-year level is required. If students have proficiency above the advanced/third-year level, they must take either Option (A), two semesters of an upper level literature or culture course offered by the language departments and taught in the language of proficiency, or Option (B), take two semesters of another language. Students entering with native proficiency in a foreign language (as determined by the Center for Language Education or the Department of German and Romance Languages and Literatures) are required to complete Option B. Waivers indicating advanced level/third-year language proficiency must be documented in the student’s official academic record in order for a student to be eligible to complete Option A or B. To receive these waivers, students must contact the Center for Language Education or the Department of German and Romance Languages & Literatures to complete a proficiency exam on campus.

Core Courses

Courses fulfilling the specific requirements below are listed on the International Studies website (http://krieger.jhu.edu/internationalstudies/courses).

- Five courses in history, including one introductory course at the 100-level from the History Department at Johns Hopkins University. Four out of the five courses must be Global history (identified by the POS-Tag INST-GLOBAL on the course description in the schedule of classes).
- One Gateway course: AS.190.111 Introduction to Global Studies, AS.190.209 Contemporary International Politics, or AS.230.150 Issues in International Development
- One course in international relations (POS-Tag INST-IR)
- One course in American politics (POS-Tag INST-AP)
- Two courses in comparative politics (POS-Tag INST-CP)
- One course in political theory (POS-Tag INST-PT)
- Four courses in economics. One must be an internationally-oriented course identified by the POS-Tag INST-ECON on the course description in the schedule of classes. Two courses must be AS.180.101 Elements of Macroeconomics and AS.180.102 Elements of Microeconomics. The final course may be of the students’ choosing from courses offered in the Economics Department at Johns Hopkins University.
**Focus Area Specialization**

Every major in International Studies selects a specialization area, which consists of four semester courses within a coherent field of interest. Specialization fields may be organized in terms of area (e.g., Latin America, East Asia), theme (e.g., security studies, international economics), or language (e.g., Mandarin, Arabic). These courses may not overlap with other requirements of the major.

**Major Requirements:**

**Foreign Language Study**

Two courses beyond the intermediate level or, if proficient based on exam, two additional language courses

**Double-Major and Major-Minor Programs**

Students may pursue one of International Studies’ unique double-major or major-minor programs. These are offered in conjunction with affiliated departments and allow students to concentrate their course of study within a specific department or program while simultaneously benefiting from the interdisciplinary training offered by the International Studies major.

Students pursuing a double-major program will receive a major in International Studies as well as a major in the affiliated department or program. For example, students pursuing the Global Social Change and Development track will receive a double major in International Studies and Sociology. The student’s faculty adviser will be a faculty member from the affiliated department or program.

Students pursuing a major-minor program will receive a major in International Studies and a minor in the affiliated department or program (e.g., students pursuing the Global Modernity and the Jewish Experience minor will receive a minor in Jewish Studies) and benefit from a faculty adviser in the affiliated department or program.

Successful completion of an approved double-major or major-minor program will satisfy the International Studies major’s focus area requirement.
Senior Thesis and Honors in the Major

International studies majors also have the opportunity to write a senior research thesis. A senior thesis is an extended original research project written under the supervision of a faculty adviser during the student's senior year. Thesis projects are best suited for students who have an interest in exploring a specific question and/or a field of knowledge beyond their previous course work. Students may complete a senior thesis regardless of GPA; however, those students with a 3.7 GPA (or above) in their International Studies major coursework, and who complete a senior thesis, will be eligible for honors in International Studies. Theses completed for any of the major's affiliated departments may be used to earn honors both in that departmental major and in International Studies.

Study Abroad

Studying abroad is especially valuable for International Studies majors. JHU encourages all IS majors to spend one or both semesters of their junior year abroad. International Studies sponsors a number of study abroad programs designed for IS majors and administers them in collaboration with the Office of Study Abroad.

The Junior Year or Semester Abroad at SAIS Europe, offered through the Bologna, Italy campus of the Paul H. Nitze School of Advanced International Studies (SAIS), allows motivated International Studies majors to spend all or part of their junior year taking graduate level classes. Students who spend their junior year or a semester in Bologna and subsequently apply for graduate studies at SAIS will receive advanced credit at SAIS for part of their work.

A similar exchange program with the French political science institute Sciences Po allows students to spend a semester or a year studying at one of Sciences Po's seven regional campuses: Paris, Menton, Reims, Poitiers, Le Havre, Nancy, or Dijon. Courses are offered in English as well as French and thus are open to students regardless of their knowledge of French. One of Europe's most prestigious universities, Sciences Po has a strong international focus and allows students to develop a cross-cultural and transatlantic perspective, while simultaneously offering unique access to the field of international affairs.

Additionally, the Office of Study Abroad offers a wide range of study abroad opportunities across the globe tailored to students' specific interests.

Five-Year Accelerated B.A./M.A. Program with the Paul H. Nitze School of Advanced International Studies (SAIS)

For students wishing to pursue a master's degree after graduation from Hopkins, the university offers an accelerated and competitive International Studies B.A./M.A. Program drawing upon its resources at SAIS, located in Washington, D.C. Combining a liberal arts curriculum with a strong specialization in international studies, the program allows those enrolled to receive the B.A. and M.A. degrees in five years instead of the usual six.

Approximately eight sophomores are selected for the program each year. Admission is limited to those majoring in International Studies, Political Science or East Asian Studies (Nanjing, China campus only) and who are highly motivated toward careers for which a background in international studies is essential: research, teaching, or practice in international affairs. Financial assistance is available to those admitted based on need and on academic achievement. For more information go to http://krieger.jhu.edu/internationalstudies/directory/.

Students admitted to SAIS through the Direct Matriculation Program (DMP) may be subject to additional requirements. https://apply.jhu.edu/apply/direct-matriculation-programs/

Five-Year Accelerated B.A./M.A. Program with Sciences Po

Students may also apply to participate in a five-year accelerated B.A./M.A. program with Sciences Po, one of Europe's finest schools of political science. The B.A./M.A. Program is aimed principally at students who are interested in international affairs and who would like to develop their intellectual and professional capabilities from an international and multidisciplinary perspective. After the junior year, students spend two years at Sciences Po’s Paris campus completing graduate-level coursework at the Paris School of International Affairs (PSIA), which houses the majority of Sciences Po’s internationally-oriented master's programs. PSIA is a bilingual institution, thus students may choose to pursue either an English or French track. Students may also elect to pursue a master’s degree at the School of Journalism, School of Communication, or School of Law. Students interested in an academic career may also choose to pursue a research master’s with the Doctoral Program at Sciences Po. Students who are not proficient in French will also pursue French language training during their course of study.

Applicants follow an application and review process similar to the one for the SAIS program. Approximately three to four sophomores are selected each year for the Sciences Po program. Students pay tuition to Johns Hopkins for the first year in Paris and to Sciences Po for the second. Financial aid from Johns Hopkins continues only through the end of a student's fourth year.

Progress toward the B.A./M.A. Degrees

Students in both programs described above spend their first three years at the Homewood campus and the last two at either SAIS or Sciences Po. Students receive the B.A. degree at the end of their first year at either SAIS or Sciences Po and the M.A. at the end of their second year.

Students selected for either of the accelerated programs may not study abroad during their Homewood years, with the exception of summer or intersession programs.

For current faculty and contact information go to http://krieger.jhu.edu/internationalstudies/directory/

AS.192.110. Special Opportunities in Undergraduate Learning: Library Research & Proposal Writing Skills for International Studies Students. 1.0 Credit.

This course offers training to undergraduate students in International Studies (and related majors) on the fundamentals of library research and research/grant proposal writing. The course will introduce students to the major research resources in global studies in the humanities and social sciences, strategies and techniques to conduct effective research, and how to use library research to enhance research and grant proposal writing. This course aims to help students learn the basics of research and grant proposal writing and develop research skills for use in their major coursework and major-related research projects.

Instructor(s): Y. Ye.

Are you planning to do a research project for your independent study class, or preparing for a grant application, or working on a big research project for a research intensive class or graduation thesis, or just wishing to improve your research skills? If so, this course is for you! Through weekly two hour sessions over ten weeks, you will receive systematic training on major research tools, resources and techniques useful for any research project in international studies, political science, and other social science subjects. By the end of the course, you will be able to come up with a viable research topic, and complete a research statement that includes an abstract, problem statement and literature review based on in-depth research utilizing tools and techniques covered in the course. The skills you learn through the course will prepare you for any future research projects and advanced studies.

Instructor(s): Y. Ye.

AS.192.310. Program Abroad: Populism in Comparative Perspective. 3.0 Credits.

International Studies elective offered on the JHU Summer Program Abroad in Bologna. Open to students on the JHU Bologna Summer Program only. Permission required.

Instructor(s): S. Karatasli; S. Morgan

Area: Social and Behavioral Sciences.

AS.192.320. Colonialism and Foreign intervention in the Middle East and Africa. 3.0 Credits.

How did colonial rule and post-colonial foreign intervention shape the history and politics of states in the Middle East and Africa? The first part of this course focuses on the colonial period, examining the era of conquest, considering how and whether colonial rule differed from other types of ruling arrangements, and studying how people in colonized territories reacted to conquest and foreign rule. Part Two focuses on post-colonial foreign military interventions. Part Three considers the potential long-term consequences of colonialism and foreign intervention. The course focuses on British, French, and American imperialism.

Instructor(s): A. Lawrence

Area: Social and Behavioral Sciences

Writing Intensive.

AS.192.401. Political Violence. 2.0 Credits.

This class will function predominantly as a discussion seminar that uses the case of the Lebanese Civil War to examine the causes, duration, and dynamics of civil war as well as the debates surrounding foreign intervention and peacebuilding. Themes include: ethnic violence; economic explanations for civil war; civilian targeting; intra-rebellion dynamics; sexual and gender-based violence; election violence; occupation; peacekeeping; and the Responsibility to Protect.

Instructor(s): S. Parkinson

Area: Social and Behavioral Sciences.

AS.192.402. Military Organizations in the Middle East and North Africa. 2.0 Credits.

This course will examine the diverse roles state and non-state military organizations play in MENA politics, economics, and society. Each week will use an organizational case study as a window into core themes such as military involvement in state economies, militia politics, or combatant discipline in war.

Instructor(s): S. Parkinson

Area: Social and Behavioral Sciences.

AS.192.403. Qualitative Research. 3.0 Credits.

This class is designed to introduce students to qualitative methodology. Practically, students will gain first hand experience with qualitative research methods via research design, ethics review, in-depth interviewing, participant observation, and archival/primary source research. They will learn to deploy analytical techniques such as discourse analysis and process tracing. Students will also be asked to consider the merits of qualitative approaches more generally, and discuss the relative advantages of qualitative, experimental, and quantitative approaches. Questions that we will discuss include: What place should qualitative research have in a research design? Can qualitative research test hypotheses, or only generate them? Can qualitative research explain social phenomena, or only interpret them? What are the disadvantages and advantages of qualitative approaches compared to quantitative approaches? For what kinds of research questions are ethnographic techniques best suited? Is replicability possible for ethnographic field research? What criteria of evidence and analytical rigor apply on this terrain?

Instructor(s): A. Lawrence; S. Parkinson.
AS.192.501. Internship- International Studies. 1.0 Credit.
Instructor(s): S. Morgan.

AS.192.551. Program Abroad: International Studies - Leadership Seminar. 1.0 Credit.
The International Studies Leadership Seminar builds core leadership skills and introduces students to critical social, political and economic policies in their local and international contexts. The seminar takes place in different countries each year and builds upon global partnerships that exist between the International Studies Program, Johns Hopkins University, and academic institutions worldwide. Global partners include Waseda University, SAIS Europe, and Sciences Po, among others. Students engage in joint projects, panel presentations and other assignments designed to develop skills in critical analysis and public speaking. Seminar may be taken multiple times.
Instructor(s): S. Morgan.

AS.192.591. Research- International Studies. 1.0 Credit.
Instructor(s): S. Morgan.

AS.192.598. Independent Study. 3.0 Credits.
Approval Required.
Instructor(s): S. Morgan.

AS.192.599. Independent Study. 3.0 Credits.
Approval Required.
Instructor(s): S. Morgan.

Cross Listed Courses
Anthropology
AS.070.143. Anthropology of Markets and Capitalism. 3.0 Credits.
Capitalism is built on social and cultural processes. In this course, we explore the culture of capitalism across diverse settings – a fish market in Tokyo, an investment bank in Wall Street, and the organ donation economy in China, among many others. We ask what motivates the makers of markets today, as well as their critics.
Instructor(s): Staff
Area: Humanities, Social and Behavioral Sciences.

AS.070.249. Latin American Cities: Public Spaces and Private Lives. 3.0 Credits.
This course will explore the relationship between public space and forms of political expression as well as the cultural implications of various senses of privacy and domesticity in contemporary Latin American cities. Drawing on recent anthropological and historical texts, we will study the formation of urban public space in the region, as well as its use and representation by different social, political and ethnic groups.
Instructor(s): V. Procupez
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.267. Culture, Religion and Politics in Iran. 3.0 Credits.
This is an introductory course for those interested in gaining basic knowledge about contemporary Iran. The focus will be on culture and religion and the ways in which they become interwoven into different kinds of political stakks.
Instructor(s): N. Haeri
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.285. Understanding Aid: Anthropological Perspectives for Technology-Based Interventions. 3.0 Credits.
This course combines anthropological perspectives with the discussion and examination of technology-based interventions in the field of development and aid policies, with particular focus on activities related to water resources, sanitation, and hygiene. Readings and discussions analyze some of the theoretical, historically rooted, and practical issues that challenge those who hope to provide effective aid. A key aim of this course is to provide students with better understanding of cultural, social, environmental and economic issues relevant to technical intervention in developing countries.
Instructor(s): E. Cervone; W. Ball
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.295. Conflict and Security in a Global World. 3.0 Credits.
Students will be introduced to problems of global governance in the context of transnational conflicts, changing nature of war, new epidemics and pandemics, and the threats of planetary extinction. What are the ways security is imagined and what kinds of political passions are mobilized for security of people versus security of states.
Instructor(s): V. Das
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.296. Introduction to Migration Studies. 3.0 Credits.
How can we understand the city from positions of marginality and risk? What challenges does urban living pose to its most vulnerable residents? We will examine these questions, and methodological and conceptual issues they raise, with anthropological research from five cities: Johannesburg, São Paulo, Ibadan, New York, Kuala Lumpur. We will explore each city from the perspective of particular residents and the specific struggles they face, including crime and security, economic uncertainty, and sexual discrimination.
Instructor(s): J. Richlin
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.302. Crisis and Futurity: New Ethnographies of Africa. 3.0 Credits.
"Africa Rising" or "The Hopeless Continent?" Within the span of a decade, The Economist magazine famously declared each to be true. In this class we turn to the genre of ethnography, with its focus on lived experience and critical nuance, to make sense of this seeming contradiction. We explore the themes of crisis and futurity through new works by Mbembe, De Boeck, Obarrío, and others.
Instructor(s): M. Degani
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.314. Activism and Assembly, Local and Global Connections. 3.0 Credits.
This course offers an anthropological perspective on political mobilization and struggles for social change and citizenship rights in several regions of the world. It charts collective action among the urban poor, indigenous peoples, queer rights activists, feminists, environmentalists and grassroots groups in various cultural and political contexts, to examine methodologies, representations, and local and global networks.
Instructor(s): V. Procupez
Area: Humanities, Social and Behavioral Sciences.
AS.070.318. The Atlantic World. 3.0 Credits.
This seminar explores the formation of the South Atlantic through a reading of historical and ethnographic texts. We examine the making of history and culture as contentious fields of struggle.
Instructor(s): A. Angelini
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.333. Theologies of Political Life. 3.0 Credits.
This course explores the relationship between modern political forms and theological traditions. Looking at developments both in the West and the postcolonial world, we will examine the multiple ways in which theological traditions have continued to inform how political life is conceived and pursued. In particular, we will focus on the relation between liberalism and the Christian tradition; the turn to messianism in critical theory; the transformation of the shari?a into a legal form; and its imbrication in anti-colonial politics.
Instructor(s): S. Al-Bahloly
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.359. Korean War. 3.0 Credits.
This course takes the Korean War as a site to both explore: 1) contemporary historical and political transformations in East Asia and globally and 2) the ways in which violence, catastrophic loss, and separation are woven into everyday life. It will explore the Korean War through film, fiction, historiography, and draw on comparative materials in anthropology.
Instructor(s): C. Han
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.380. Slumworld: Life in informal Settlements. 3.0 Credits.
One quarter of the planet’s urban population lives today in slums, shantytowns, favelas, chawls, colonias and other forms of rudimentary settlements (according to UN Habitat). Despite their prevalence throughout the world, these places are still depicted as spaces of informality and abjection, rather than as sites of emergence of innovative -even if disadvantaged-, makeshift ways of producing the city. This course will combine ethnographic and geographical literature, as well as works of fiction and film to explore the lives of squatters and slum-dwellers in many regions of the world and examine in what way their practices, forms of dwelling, sociality, conflict and cooperation are constitutive of the urban experience.
Instructor(s): V. Procupez
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.417. Political Spirituality. 3.0 Credits.
This course explores forms of political action that have emerged at the interface of modern revolutions with religious traditions. It focuses on the Middle East during the twentieth century and the civil rights struggle in the American south. We will attempt to trace the genealogy of these forms of action in the Islamic and Christian traditions, as well as examine their influence on the political thought of our own time.
Instructor(s): S. Al-Bahloly
Area: Humanities, Social and Behavioral Sciences.

AS.070.473. Readings of Foucault. 3.0 Credits.
We will do a close reading of selected texts of Foucault to track the concepts of power, subjectivity, government, and care of the self.
Instructor(s): V. Das
Area: Humanities, Social and Behavioral Sciences.

History

AS.100.102. The Medieval World. 3.0 Credits.
This course will explore selected topics in the political, economic, social, and intellectual history of Western Europe in the period between the fall of the Roman Empire and the thirteenth century. Special emphasis will be given to understanding the ways in which medieval society functioned as a pioneer civilization, compelled to reorganize itself after the almost total collapse of the ancient world, and to the interplay between material and cultural forces in the processes of social organization.
Instructor(s): G. Spiegel
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.103. Early Modern Europe & the Wider World. 3.0 Credits.
This course surveys the history of Europe and its interactions with Africa, the Americas, and Asia during the early modern period (c. 1400-1800). Topics include: the Renaissance, the Reformation, International Relations and Warfare, Colonialism, the Enlightenment, and the Age of Revolutions.
Instructor(s): E. Rowe
Area: Humanities, Social and Behavioral Sciences.

AS.100.104. Modern Europe and the Wider World. 3.0 Credits.
European history since the French Revolution. Topics include: revolutions and democratization, industrialization, nationalism, imperialism, two World Wars, fascism, decolonization, Soviet communism, and formation of the European Union.
Instructor(s): P. Jelavich
Area: Humanities, Social and Behavioral Sciences.

AS.100.113. Making America: Race, Radicalism, and Reform. 3.0 Credits.
Beginning with the end of Reconstruction and continuing through the present day, this course will examine the complicated ways in which Americans attempted to come to terms with racial, ethnic, cultural, and other forms of diversity.
Instructor(s): R. Walters
Area: Humanities, Social and Behavioral Sciences.

AS.100.115. Modern Latin America. 3.0 Credits.
Survey of Latin American history from Independence to the present. The course will look at the meaning of nations and citizenship through the lenses of international relations, development, and identity.
Instructor(s): C. Lurtz
Area: Humanities, Social and Behavioral Sciences.

AS.100.117. History of Brazil. 3.0 Credits.
Instructor(s): G. Paquette
Area: Humanities.

AS.100.122. Introduction to History of Africa (since 1880). 3.0 Credits.
Instructor(s): E. Thornberry
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.123. Introduction to African History: Diversity, Mobility, Innovation. 3.0 Credits.
An introduction to African history with emphasis on diversity, mobility, and innovation. Considers both early and modern times.
Instructor(s): P. Larson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.129. Introduction to Modern Jewish History. 3.0 Credits.
Jewish history 1750-present in Europe, the Near East, the US, Israel; the challenges of modernity and new forms of Jewish life and conflict from Enlightenment and emancipation, Hasidism, Reform and Orthodox Judaism to capitalism and socialism; empire, nationalism and Zionism; the Holocaust. Extensive attention to US Jewry and State of Israel. Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences.

AS.100.154. Modern Mexico from the Alamo to El Chapo. 3.0 Credits.
In this course we will use popular depictions of Mexico’s heroes and villains, tragedies and triumphs to delve into both the nation’s history and the importance of thinking historically.
Instructor(s): C. Lurtz
Area: Humanities, Social and Behavioral Sciences.

AS.100.201. Freshman Seminar: Prostitution in a Global Perspective, 1750-2012. 3.0 Credits.
This course examines topics such as the ‘medical model’ of prostitution regulation, the rise of international anti-prostitution, and the responses of modern nationalists to sex work in a global context.
Instructor(s): S. Stewart
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.203. Freshman Seminar: From Columbus to Calypso: The Caribbean and the Wider World. 3.0 Credits.
This course examines the history of the Caribbean and how five hundred years of colonization, slavery, piracy, rebellion, and revolution have shaped the politics and culture of the islands today.
Instructor(s): L. MacDonald
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.205. Freshman Seminar: Health, Healing, and Medicine in Africa. 3.0 Credits.
A freshman seminar introducing students to the history of health, healing, and forms of medical practice in Africa over the last two centuries.
Instructor(s): P. Larson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.209. Fresh Sem:Mexico and the World from Cortés to Cartels. 3.0 Credits.
This introductory course examines Mexico’s political, economic, and cultural role in global history from the time of Spanish conquest until the twenty-first century.
Instructor(s): J. Clark
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.212. Freshman Seminar: Jews in the Medieval Mediterranean: The Politics of Conquest under Crescent and Cross. 3.0 Credits.
How can Jewish history help us understand the politics of Islamic and Christian states in Sicily, Spain, and Palestine in the age of Crusade and holy war? Freshman only
Instructor(s): B. Goldman
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.214. Freshman Seminar: Russia and the West. 3.0 Credits.
Students will consider Russian political culture and the Russian cultural tradition from Pushkin to Putin.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.215. Freshman Seminar: US-USSR Cold War. 3.0 Credits.
Focus on Stalin, Khrushchev/Truman Ike period but includes Brezhnev. 2 sides of cold war, write 6-7 journals of 300 wds, 2 papers of 1200 words, 2 quizzes, no midterm or final.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.219. Chinese Cultural Revolution. 3.0 Credits.
The Cultural Revolution was Mao Zedong’s last attempt to transform Chinese society spiritually and structurally. The events of this period were marked by social upheaval, personal vendettas, violence, massive youth movements, and extreme ideological pressure. This course will explore the Cultural Revolution from a variety of perspectives, focusing on the relationship between events in China from 1966-1976, and their interpretation in China and the West during the Cultural Revolution decade and since.
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences.

AS.100.233. History of Modern Germany. 3.0 Credits.
There is more to Germany than beer, BMWs, and Bayern Munich. We will explore politics, culture, economics and society to understand Germany and its position within Europe and the world.
Instructor(s): Staff
Area: Humanities, Social and Behavioral Sciences.

AS.100.234. The Making of the Muslim Middle East, 600-1100 A.D.. 3.0 Credits.
A survey of the major historical transformations of the region we now call the ‘Middle East’ (from late antiquity through the 11th century) in relation to the formation and development of Islam and various Muslim empires. Cross-listed with Near Eastern Studies and the Program in Islamic Studies.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.236. Chinese Cultural Revolution. 3.0 Credits.
The Cultural Revolution was Mao Zedong’s last attempt to transform Chinese society spiritually and structurally. The events of this period were marked by social upheaval, personal vendettas, violence, massive youth movements, and extreme ideological pressure. This course will explore the Cultural Revolution from a variety of perspectives, focusing on the relationship between events in China from 1966-1976, and their interpretation in China and the West during the Cultural Revolution decade and since. Previously offered as AS.100.219.
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences.

AS.100.237. Freshman Seminar: Impeachments and Beyond: Law, Justice, and Politics in Latin America. 3.0 Credits.
This course is an introduction to legal ideas and institutions through the Latin American political experience. By the end of this course, students will be equipped with the fundamentals of Latin America’s long political history (from colony to present) and will be able to identify how legal ideas and institutions change over time. Students will also gain insights on debates and conversations on the relationship between law, justice, and politics that go beyond Latin America’s history.
Instructor(s): A. Caso Bello
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.241. American Revolution. 3.0 Credits.
This course provides an intensive introduction to the causes, character, and consequences of the American Revolution, the colonial rebellion that produced the first republic in the Americas, and set in motion an age of democratic revolutions in the Atlantic world. A remarkable epoch in world history, the revolutionary era was of momentous significance.
Instructor(s): P. Morgan
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.243. China: Neolithic to Song. 3.0 Credits.
This class offers a broad overview of changes in China from Neolithic times through the Song Dynasty (roughly from 5000 BCE through the 13th century CE) and will include discussion of art, material culture, and literature as well as politics and society. Close readings of primary sources in discussion sections and extensive use of visual material in lectures will help students gain firsthand perspective on the materials covered. Not open to students who have previously taken AS.100.208.
Cross listed with East Asian Studies
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences.

AS.100.246. Colonial Latin American History Survey. 3.0 Credits.
This course offers a general survey of Colonial Latin American history, covering both Spanish and Portuguese America, from European conquest to the revolutionary wars of independence. Emphasis will be placed in exploring the nature and effects of conquest, the making of new plurithnic societies, and the eventual break of these societies from Spain and Portugal.
Instructor(s): G. Garcia Montufar
Area: Humanities, Social and Behavioral Sciences.

AS.100.248. Japan in the World. 3.0 Credits.
This course is an introduction to Japan's history from 1800 to the present with emphasis on the influences of an increasing global circulation of ideas and people. Topics include the emperor system, family and gender, imperialism, World War II, the postwar economy, and global J-pop.
Instructor(s): H. Kim
Area: Humanities, Social and Behavioral Sciences.

AS.100.252. Invisible Borders: Exchanges and Migrations in the Modern Mediterranean. 3.0 Credits.
This course explores the patterns of movement formed and transgressed by empire, trade, sex tourism, cultural exchange, war, and nationalism, starting from the nineteenth century to the present-day refugee crisis.
Instructor(s): S. Rahnama
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.254. Modern Mexico from the Alamo to El Chapo. 3.0 Credits.
In this course we will use popular depictions of Mexico's heroes and villains, tragedies and triumphs to delve into both the nation's history and the importance of thinking historically.
Instructor(s): C. Lurtz
Area: Humanities, Social and Behavioral Sciences.

AS.100.255. The Haitian Revolution in World History. 3.0 Credits.
This introductory seminar examines the revolution that transformed the slave colony of Saint-Domingue into the first black republic and second independent nation in the Americas, and its repercussions around the world. Non-Majors welcome.
Instructor(s): N. Marvin
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.256. Prostitution in a Global Perspective, 1750-2012. 3.0 Credits.
This course examines topics such as the 'medical model' of prostitution regulation, the rise of international anti-prostitution, and the responses of modern nationalists to sex work in a global context.
Instructor(s): S. Stewart
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.265. The Medieval City. 3.0 Credits.
This course focuses on the development and growth of medieval cities in western Europe. Students will explore the various functions of cities, uses of urban space, and challenges they faced.
Instructor(s): N. Daniels
Area: Humanities, Social and Behavioral Sciences.

AS.100.268. Jewish and Christian Mysticism in the Middle Ages and the Early Modern Period. 3.0 Credits.
This course will trace the historical development of Jewish and Christian mysticism between the 12th and the 17th centuries.
Instructor(s): P. Maciejko
Area: Humanities, Social and Behavioral Sciences.

AS.100.279. Europe since 1945. 3.0 Credits.
This lecture course examines the political, social, and cultural history of postwar Europe with emphasis on the Cold War and the formation of the European Union.
Instructor(s): H. Balz
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.282. Race & Power in Modern South Africa. 3.0 Credits.
South African history from 1800 to the present, with focus on the rise and fall of the apartheid racial state
Instructor(s): E. Thornberry
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.303. Old Regime and Revolutionary France. 3.0 Credits.
Examines the history of France from the reign of Louis XIV to the French Revolution, focusing on early modern society, popular culture, absolutism, the Enlightenment, overseas empire, and the French and Haitian Revolutions.
Instructor(s): M. Kwass
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.308. Introduction to the History of Jewish Mysticism. 3.0 Credits.
The course will familiarize the student with the history of the main phenomena of Jewish mysticism from the ancient times to the present.
Instructor(s): P. Maciejko
Area: Humanities, Social and Behavioral Sciences.

AS.100.310. The French Revolution. 3.0 Credits.
Political, social and cultural history of one of the great turning points in European history. Previously offered as AS.100.204.
Instructor(s): L. Mason
Area: Humanities, Social and Behavioral Sciences.

AS.100.320. Writing U.S. Empire. 3.0 Credits.
Attends to the composition and interpretive problems raised by studying the history of American imperialism, 1880s-1930s.
Instructor(s): N. Connolly Writing Intensive.
AS.100.324. Dostoevsky's Russia. 3.0 Credits.
Dostoevsky and the culture of his era but also echoes of his ideas of
Russia, religion, ethnicity, freedom, authority, and gender from 1917 until
today. Short papers, quizzes.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.329. Russian Imagination in Three Revolutions. 3.0 Credits.
Russian literature and the arts in Revolutions of 1905, 1917, and Stalin
time to 1941. Req: 6 journals of 350 words, 2 papers 1250, 2 quizzes. No
midterm or final.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.330. National Identity in 20th Century China & Japan. 3.0 Credits.
Using primary sources, including literature and film, we will explore the
changing ways in which ideologues, intellectuals, and ordinary citizens
defined national identity in 20th century China and Japan.
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences.

AS.100.332. Persecution and Toleration in Early Modern Europe. 3.0
Credits.
Explores hostilities and fears provoked by religious diversity and deviance
from orthodoxy in early modern Europe. Outlines theories, practices, and
limits of early modern religious tolerance and intolerance.
Instructor(s): J. Fradkin
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

3.0 Credits.
This course traces the emergence of an Atlantic world, 1600-1850,
through the lens of biography. Major themes include European
colonization, cross-cultural encounters, slavery and trade, imperial
warfare, and political revolutions. Prior experience in an introductory
history course strongly recommended.
Instructor(s): W. Brown
Area: Humanities, Social and Behavioral Sciences.

AS.100.343. Diaspora, Nation, Race, and Politics. 3.0 Credits.
For millions of people across the globe, political fate in the 20th century
was defined at the intersection of diaspora, race, and nation — and this
may be true in the 21st century as well. This course, a collaborative
effort involving a historian and a political scientist, explores the parallels
and divergences in the deployment of these terms in nationalist and
transnational mobilization, literature and aesthetics, and group identity
formation in Eastern Europe, Africa and the New World of the Americas.
Set against the backdrop of the fall of significant empires in the late 19th
and early 20th centuries, we will explore themes of migration, human
rights, the nation-state system, and racism through history, political
sociology, and political and social theory. We will pay particular attention

AS.100.346. Soviet-American Cold War. 3.0 Credits.
The focus will be on Soviet-American interactions, Cold-War Cultures, and
the impact on both societies.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.347. Early Modern China. 3.0 Credits.
The history of China from the 16th to the late 19th centuries.
Instructor(s): W. Rowe
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.348. 20th-Century China. 3.0 Credits.
The history of China from the last years of the Qing Empire to the post-
Mao reforms.
Instructor(s): W. Rowe
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.352. Age Of Pasternak. 3.0 Credits.
This course concerns Russian literature and the arts, including ballet,
from the 1910s to the 1950s. Two short papers, journals, two quizzes, and
no midterm or final.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.353. Youth and Youth Movements during 20th Century: Germany,
Britain, and the U.S. 3.0 Credits.
Through texts, music, and films, this course examines the rise of "youth"
as a social and cultural category in a variety of forms, ranging from
spontaneous (such as Rock'n'Roll and Techno) to state-organized (Hitler
Youth).
Instructor(s): B. Balz
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.355. Islam between History and Anthropology. 3.0 Credits.
Co-taught by an anthropologist and a historian, this course will explore
recent scholarly debates about --and critiques of--the representations of
Islam and Muslim societies.
Instructor(s): N. Khan; T. Shepard
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.357. Panic and Liberation: The Politics of Sex in 20th Century
Europe. 3.0 Credits.
This course examines the 20th century history of sexual attitudes,
desires, behaviors, identities, communities, and movements in Western
Europe (most notably, Germany, France, and the United Kingdom).
Instructor(s): T. Shepard
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.358. Black Code Studies: Black History and Digital Media. 3.0 Credits.
This course explores doing histories of people of African descent in an age of digital and social media. The focus will be on African-descended communities in the United States, but content will range across time space. Examples include: West African digital art communities; the use of slave trade databases to write Caribbean history; their use of social media in social justice organizing from Paris to Baltimore. Students will explore questions of blackness, race, ethnicity, sex and sexuality, violence and justice while creating digital content using platforms like Wordpress, Omeka, Twitter, and Tumblr. Students will be evaluated on their acquisition of African American and Afro-Diasporic history; their knowledge of digital and social media platforms; and their ability to creatively and accurately relate the histories of blackness and black people to their representation and discussion online.
Instructor(s): J. Johnson
Area: Humanities, Social and Behavioral Sciences.

AS.100.359. Gender, Patriarchy, and the English Revolution. 3.0 Credits.
This course explores the varied experiences of gender and gender roles in seventeenth-century Britain and analyzes how these roles were challenged, changed, and sometimes upended during the English Revolution (1642-1660).
Instructor(s): C. Hinchliff
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.360. The Modern British World: Imperial Encounters, Regimes, and Resistance, from the American Revolution to the present. 3.0 Credits.
The Modern British World introduces some of the major themes and contestations tied to Britain's rise to global dominance and its ultimate decline as an imperial power.
Instructor(s): K. Hindmarch-Watson
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.361. Age of Tolstoy. 3.0 Credits.
Tolstoy and his era, 1820s to 1910s. Topics include state and politics, empire, the Russian identity, and forms of cultural expression. Students consider "War and Peace" and other masterworks.
Instructor(s): J. Brooks
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.369. Themes and Concepts in Jewish History. 3.0 Credits.
The course will introduce students to the main themes and debates in Jewish historiography.
Instructor(s): P. Maciejko
Area: Humanities, Social and Behavioral Sciences.

AS.100.374. Conquest, Conversion, and Language Change in the Middle Ages. 3.0 Credits.
Examines cases of imperial conquest and attendant religious transformation (Christianization; Islamization) and language change in the medieval Mediterranean (Europe and Middle East), e.g. transition from Latin to vernacular languages in Europe; Arabization; translation movements.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.382. Early Modern African Atlantic. 3.0 Credits.
This course examines the history of West and Central Africa and its diasporic people and cultures during the early modern period (c. 1400-1750) in disparate parts of the Atlantic world, including Europe, Latin America, the Caribbean, and Anglo-America. Themes include: West and Central African political and religious cultures; trans-Atlantic slavery; African Christianity; and the question of cultural survivals.
Instructor(s): E. Rowe
Area: Humanities, Social and Behavioral Sciences.

AS.100.387. Everyday Life in the Medieval Middle East. 3.0 Credits.
In this seminar, students will explore the daily lives of non-elites in medieval Egypt (i.e. average folk, not kings in palaces)—including their food and cooking; clothes (and government edicts regulating fashion); the houses they inhabited; their marriage patterns, divorce rates, and child custody battles; and the burden of taxes on the working poor (e.g. urban craftsmen). We will examine and discuss artifacts and documents, including surviving hats (stuffed with recycled documents), private letters, marriage contracts (and the clauses women inserted into them), petitions for charity, and court records.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.398. Images of Postwar Japan. 3.0 Credits.
This seminar explores Japan's changing place in the world in the decades following World War II, with an emphasis on analyzing visual media such as photographs, films, advertisements, and comic books. Topics include relations with the U.S. and other countries in East Asia, particularly the two Koreas; the atomic bombings of Hiroshima and Nagasaki; and the global contexts for an expanding Japanese consumerism in the late 20th century.
Instructor(s): H. Kim.

AS.100.399. Decolonization and Citizenship in Africa, 1945-2015. 3.0 Credits.
Critically explores issues of decolonization and citizenship in Africa from WWII to the present. Emphasis on political inclusion and exclusion, and violence, fostered by nationalist movements and postcolonial African governments.
Instructor(s): P. Larson
Area: Humanities Writing Intensive.

AS.100.403. Law & Custom in Colonial Africa. 3.0 Credits.
Examines how colonial rule transformed African legal systems, while Africans used European law for political resistance and personal gain. Research project based on colonial South African court records.
Instructor(s): E. Thornberry
Area: Humanities, Social and Behavioral Sciences.

AS.100.412. Jewish History in British Mandatory Palestine 1917-1947. 3.0 Credits.
Recent historical writing on Jewish politics, culture, and society in British Mandatory Palestine, 1917-1947. Significant attention will also be paid to work on Palestinian Arab society and politics and to Jewish-Arab-British relations.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences Writing Intensive.
AS.100.413. London 1580-1830: The History of Britain's capital city. 3.0 Credits.
Seminar-style class analyzing the social, cultural, gender, religious, economic, and political history of London from Shakespeare's time through revolutions, plague, fire, and commercial, colonial, and industrial expansion.
Instructor(s): J. Marshall
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.418. Comparative Slavery: Haiti and Brazil. 3.0 Credits.
Haiti is born after a powerful slave insurrection (1804). Brazil was the last country to abolish slavery (1888). Why did these slave societies, which shared many common characteristics, have such different histories?
Instructor(s): J. Hebrard
Area: Humanities, Social and Behavioral Sciences.

AS.100.422. Society & Social Change in 18th Century China. 3.0 Credits.
What did Chinese local society look like under the Qing Empire, and how did it change over the early modern era?
Instructor(s): W. Rowe
Area: Humanities, Social and Behavioral Sciences.

AS.100.423. Multiethnic Japan. 3.0 Credits.
An advanced undergraduate seminar on the intertwined histories of race, ethnicity, and empire in Japan and its former colonies from the early twentieth century to the present.
Instructor(s): H. Kim
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.424. Women & Modern Chinese History. 3.0 Credits.
This course examines the experience of Chinese women, and also how writers, scholars, and politicians (often male, sometimes foreign) have represented women's experiences for their own political and social agendas. Cross listed with East Asian Studies.
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.426. Popular Culture in Early Modern Europe. 3.0 Credits.
Witchcraft, magic, carnivals, riots, folk tales, gender roles; fertility cults and violence especially in Britain, Germany, France, and Italy.
Instructor(s): J. Marshall
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.441. Migration and the Americas. 3.0 Credits.
From the Spanish Conquest to contemporary debates in the US, this course looks at the great diversity of migrations that have shaped life in the Americas.
Instructor(s): C. Lurtz
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.445. African Fiction as History. 3.0 Credits.
An exploration of Modern African history through the African historical novel.
Instructor(s): P. Larson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.456. Getting Medieval? Public Violence in the Middle Ages. 3.0 Credits.
Traditional studies and popular culture often consider violence as a hallmark of medieval life and hence, present it as a fundamental difference between a 'brutal and violent' Middle Ages and a 'civilized and humane' (Western) modernity. To evaluate these claims and images, we will examine different forms of violence in medieval societies—European and Middle Eastern—especially (i) martyrdom, (ii) communal violence, and (iii) public punishment. After exploring the specific cultural meanings of these practices, we will re-examine those modern polemics that invoke 'the medieval' (often vis-à-vis non-Western traditions and societies).
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.482. Historiography Mod China. 3.0 Credits.
A survey of assumptions and approaches in the study of modern Chinese history, as written by Chinese, Japanese, and Western historians.
Instructor(s): W. Rowe
Area: Humanities, Social and Behavioral Sciences.

AS.100.488. The Caribbean World, 1450-1850. 3.0 Credits.
The Caribbean was the key focal point of overseas European expansion in the early modern world. This course traces developments in the region from the Tainos to Toussaint Louverture.
Instructor(s): P. Morgan
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.497. Year of Revolt: 1968 in Europe. 3.0 Credits.
The shorthand “1968” stands for rebels and revolutions, but also for incremental changes throughout the 1960s that fundamentally changed the post-war order and the Cold War in East and West.
Instructor(s): Staff
Area: Humanities, Social and Behavioral Sciences.

AS.100.499. Film and Propaganda in Nazi Germany. 3.0 Credits.
By examining a range of cinematic works—from explicitly ideological pseudo-documentaries to entertainment films—this course will explore the transmission of propaganda into the everyday culture of Nazi Germany.
Instructor(s): H. Balz
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

Near Eastern Studies
AS.130.170. Diplomacy and Conflict in the Ancient Middle East. 3.0 Credits.
The Middle East is home to the invention of agriculture, cities, and writing. It is also in the Middle East that we find evidence of humanity's earliest diplomatic activity in, for instance, the actual letters sent by ancient kings to one another, the treaties drawn up after their conflicts, and the inscriptions that commemorate their conquests. In this course, we examine texts such as these to explore questions such as: How do we characterize the international system of the ancient Middle East? Does this system change over the approximately two millennia for which we have documentation? Is it better to approach ancient diplomacy through present-day eyes or in the context of ancient world-views? Is an understanding of diplomacy in the ancient Middle East relevant to our understanding of modern international relations? All texts read in translation.
Instructor(s): J. Lauinger
Area: Humanities.
AS.130.216. History of the Jews in Modern Times, from the Middle Ages to 1917. 3.0 Credits.
A broad survey of the significant political and cultural dynamics of Jewish history in the Medieval, Early-Modern, and Modern Eras.
Instructor(s): D. Katz
Area: Humanities.

History of Science Technology
AS.140.146. History of Public Health in East Asia. 3.0 Credits.
This course examines the history of disease, epidemics, and public health responses in East Asia from the 17th-20th centuries. This public health history emphasizes the interactions, connections, and comparisons among China, Japan, Korea, and Taiwan.
Instructor(s): M. Hanson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.328. Science and Technology in Slave Regimes. 3.0 Credits.
What does science and technology look like in slave regimes? This seminar explores this question from a trans-national perspective by comparing cases in the Antebellum US, Cuba, Brazil and other countries.
Instructor(s): M. Portuondo; R. Kargon
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.398. Godzilla and Fukushima: Japanese Environment in History and Films. 3.0 Credits.
Juxtaposing Japanese environmental history and its reflection in popular media, the course will explore the intersection between technology, environment, and culture. The course will be accompanied by relevant movie screenings.
Instructor(s): Y. Frumer
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

Philosophy
AS.150.205. Introduction to the History of Modern Philosophy. 3.0 Credits.
An overview of philosophical thought in the seventeenth and eighteenth centuries. We shall focus on fundamental questions in epistemology (knowledge, how we acquire it, its scope and limits), metaphysics (the ultimate nature of reality, the relation of mind and body, free will), and theology (the existence and nature of God, God's relation to the world, whether knowledge of such things is possible): all questions that arose in dramatic ways as a result of the rise of modern science. The principal philosophers to be discussed are Descartes, Locke, Hume and Kant, though we shall also make the acquaintance of Spinoza, Leibniz and Berkeley.
Instructor(s): Y. Melamed
Area: Humanities.

AS.150.237. Foundations of Modern Political Philosophy. 3.0 Credits.
This course is an introduction to modern political philosophy through an intensive study of the classic texts. The focus will be on the nature and limits of political authority under modern social conditions. Authors included are Machiavelli, Hobbes, Locke, Rousseau and Mill.
Instructor(s): D. Moyar
Area: Humanities.

AS.150.240. Intro-Political Philosop. 3.0 Credits.
Instructor(s): C. Lebron
Area: Humanities
Writing Intensive.

AS.150.320. Marx: Critique of Political Economy. 3.0 Credits.
A close reading of Marx's Capital: Volume One. Specific attention will be given to clarification of Marx's methodology, the foundational categories of his critique of political economy, the systematic unity of his theory, and the underlying normative concepts which inform his work. No previous course in philosophy or social sciences is required.
Instructor(s): A. Abazari
Area: Humanities, Social and Behavioral Sciences.

AS.150.355. Philosophy of Law. 3.0 Credits.
In this course we will examine major issues in the philosophy of law, including the relation of law to moral theory, the role of the Constitution in legal decisions, and the justification of punishment. No previous knowledge of law or philosophy is required.
Instructor(s): D. Moyar
Area: Humanities.

AS.150.408. The Ethics of Climate Change. 3.0 Credits.
In this course we consider ethical issues related to climate change and climate change policy. These include issues about how we ought to distribute the burden of mitigation and adaptation, what we owe to future generations and to the non-human world, and about our responsibilities as individuals (with respect, for example, to our diets). We briefly consider geoengineering and issues related to the widespread reliance on cost-benefit analyses in climate policy.
Instructor(s): J. McBee
Area: Humanities.

AS.150.411. Arabic-Islamic Philosophy. 3.0 Credits.
Introduction to major philosophers of the Arabic-Islamic tradition, including Avicenna, al-Ghazali, and Averroes. Topics addressed include the existence of God, metaphysics (e.g., causality), human freedom and knowledge, revelation and reason.
Instructor(s): S. Ogden
Area: Humanities.

AS.150.428. Spinoza's Theological Political Treatise. 3.0 Credits.
The course is an in-depth study of Spinoza's Theological-Political Treatise. Among the topics to be discussed are: Spinoza's Bible criticism, the nature of religion, philosophy and faith, the nature of the ancient Hebrew State, Spinoza's theory of the State, the role of religion in Spinoza's political theory, the freedom to philosophize, the metaphysics of Spinoza's Theological-Political Treatise, and finally, the reception of the TTP.
Instructor(s): Y. Melamed.

AS.150.440. The Making of Black Lives Matter. 3.0 Credits.
This course explores the history of black thought that informs the ethics of the contemporary movement for black lives.
Instructor(s): C. Lebron
Area: Humanities
Writing Intensive.

Economics
AS.180.101. Elements of Macroeconomics. 3.0 Credits.
An introduction to the economic system and economic analysis, with emphasis on total national income and output, employment, the price level and inflation, money, the government budget, the national debt, and interest rates. The role of public policy. Applications of economic analysis to government and personal decisions. Prerequisite: basic facility with graphs and algebra.
Instructor(s): R. Barbera
Area: Social and Behavioral Sciences.
AS.180.102. Elements of Microeconomics. 3.0 Credits.
An introduction to the economic system and economic analysis with emphasis on demand and supply, relative prices, the allocation of resources, and the distribution of goods and services, theory of consumer behavior, theory of the firm, and competition and monopoly, including the application of microeconomic analysis to contemporary problems. Instructor(s): B. Hamilton
Area: Social and Behavioral Sciences.

AS.180.214. The Economic Experience of the BRIC Countries. 3.0 Credits.
In 2001, Jim O’Neill, the Chief Economist at Goldman Sachs, coined the acronym BRIC to identify the four large emerging economies, Brazil, Russia, India and China. These economies have since had an amazing run, and have emerged as the biggest and fastest growing emerging markets. In this course, we look at the economic experiences of the BRIC countries for the past 50 years. We discuss the reasons that have contributed to their exceptional growth rates, with particular emphasis on their transformation into market economies. We also analyze the challenges that these countries continue to face in their development process.
Prerequisites: AS.180.101 AND AS.180.102
Instructor(s): S. Dasgupta
Area: Social and Behavioral Sciences.

AS.180.217. Game Theory in Social Sciences. 3.0 Credits.
Game Theory is the study of multiple person decision problems in which the well-being of a decision maker depends not only on his own actions but also on those of others. Such problems arise frequently in economics, political science, business, military science and many other areas. In this course, we will learn how to model different social situations as games and how to use solution concepts to understand players' behavior. We will consider various examples from different fields and will play several games in class. The emphasis of the class is on the conceptual analysis and applications and we will keep the level of mathematical technicalities at the minimum – high school algebra and one term of calculus will be sufficient. Students who took AS.180.117 are not eligible to take AS.180.217.
Prerequisites: Students may not have previously taken AS.180.117, AS.180.102 or instructor permission
Instructor(s): Y. Chen
Area: Social and Behavioral Sciences.

AS.180.228. Economic Development. 3.0 Credits.
A comprehensive survey of economic behavior by households, farms and firms in poor countries and the role of and for governments. Discussions include measurement of income levels, economy-wide equilibrium, sources of growth, agriculture and industry, international trade and investment, savings, population, fertility, education, health, income distribution and public finances. Applies economic theory rigorously to interpret and evaluate the economic experience of poor countries. Diagnostic test on Elements of Economics is required in the second week. Grading based on 3 exams and one paper.
Prerequisites: AS.180.101 AND AS.180.102
Instructor(s): M. Gersovitz
Area: Social and Behavioral Sciences.

AS.180.240. JHU Bologna: History of Banking. 3.0 Credits.
Economics course offered on the JHU Summer Program in Bologna. Permission required. Must be taken for a letter grade. Open to students on the JHU/Bologna summer program only.
Instructor(s): J. Faust, R. Barbera
Area: Social and Behavioral Sciences.

AS.180.241. International Trade. 3.0 Credits.
Theory of comparative advantage and the international division of labor: the determinants and pattern of trade, factor price equalization, factor mobility, gains from trade and distribution of income, and theory and practice of tariffs and other trade restrictions. Recommended Course Background: AS.180.101.
Prerequisites: AS.180.101 AND AS.180.102
Instructor(s): S. Dasgupta
Area: Social and Behavioral Sciences.

AS.180.242. International Monetary Economics. 3.0 Credits.
This course presents International Monetary Economics theory and applies it towards gaining an understanding of recent events and current policy issues. The theory presented in this course covers a broad range of topics including exchange rate determination, monetary and fiscal policy in an open economy, balance of payments crises, the choice of exchange rate systems, and international debt. The insights provided by these theoretical frameworks will enable us to discuss topics such as the current global financial crisis, global financial imbalances, the Chinese exchange rate regime, and proposed changes in the international financial architecture.
Prerequisites: AS.180.101 AND AS.180.102
Instructor(s): S. Dasgupta
Area: Social and Behavioral Sciences.

AS.180.261. Monetary Analysis. 3.0 Credits.
This course analyzes the financial and monetary system of the U.S. economy and the design and implementation of U.S. monetary policy. Among other topics, we will examine the role of banks in the economy, the term structure of interest rates, the stock market, the supply of money, the role of the Federal Reserve in the economy, the objectives of monetary policy in the United States and current monetary policy practice.
Prerequisites: AS.180.101 and AS.180.102
Instructor(s): L. Poliakova
Area: Social and Behavioral Sciences.

AS.180.266. Financial Markets and Institutions. 3.0 Credits.
Understanding design and functioning of financial markets and institutions, connecting theoretical foundations and real-world applications and cases. Basic principles of asymmetric information problems, management of risk. Money, bond, and equity markets; investment banking, security brokers, and venture capital firms; structure, competition, and regulation of commercial banks. Importance of electronic technology on financial systems.
Prerequisites: AS.180.101 AND AS.180.102
Instructor(s): J. Wright
Area: Social and Behavioral Sciences.

AS.180.289. Economics Of Health. 3.0 Credits.
Application of economic concepts and analysis to the health services system. Review of empirical studies of demand for health services, behavior of providers, and relationship of health services to population health levels. Discussion of current policy issues relating to financing and resource allocation.
Prerequisites: AS.180.102
Instructor(s): D. Bishai
Area: Social and Behavioral Sciences.
AS.180.303. Topics in International Macroeconomics and Finance. 3.0 Credits.
The course will review selected topics in international macroeconomics and finance. The topics for the Fall of 2015 include: financial globalization; international portfolio diversification; the problems posed by “sudden stops” in capital flows to emerging markets; global imbalances and global demand rebalancing; how different exchange rate regimes have fared in the global financial crisis; sovereign default in the light of the Argentine experience; and the ongoing Russian currency and financial crisis. The course involves mathematical modeling as well as data analysis.
Prerequisites: Pre-reqs: AS.180.101 AND AS.180.102 AND AS.180.302
Instructor(s): O. Jeanne
Area: Social and Behavioral Sciences.

AS.180.301. Labor Economics. 3.0 Credits.
The course discusses various issues in labor markets from the perspective of economic theory. We first study the major forces at work that shape labor market behavior; firms’ labor demand and workers’ labor supply. Then we discuss the equilibrium behavior of employment and wages. Using these tools, we also cover various applied topics in labor economics, such as minimum wage regulations, male-female wage differentials, human capital investment, worker mobility, and unemployment.
Prerequisites: AS.180.301
Instructor(s): M. Husain
Area: Social and Behavioral Sciences.

AS.180.355. Economics of Poverty/Inequality. 3.0 Credits.
This course focuses on the economics of poverty and inequality. It covers the measurement of poverty and inequality, facts and trends over time, the causes of poverty and inequality with a focus on those related to earnings and the labor market, and public policy toward poverty and inequality, covering both taxation and government expenditure and programs. By the nature of the material, the course is fairly statistical and quantitative. Students should have an intermediate understanding of microeconomic concepts. Basic knowledge of regression analysis is also helpful.
Prerequisites: AS.180.301
Instructor(s): R. Moffitt
Area: Social and Behavioral Sciences.

AS.180.361. Rich Countries, Poor Countries. 3.0 Credits.
Why are some countries rich while some other countries poor? Why does a country's income per person generally grow over time? We try to analyze these questions using the theoretical and empirical growth literature. We will study seminal growth models, and also try to explain cross-country income differences in terms of factors like geography, institutions and global integration. Knowledge of regression analysis (including instrumental variables estimation) is required.
Prerequisites: AS.180.302 AND (AS.180.334 OR AS.180.434)
Instructor(s): S. Dasgupta
Area: Social and Behavioral Sciences.

AS.180.389. Social Policy Implications of Behavioral Economics. 3.0 Credits.
Economists increasingly incorporate insights from psychology into models of rational decision-making. Known as “behavioral economics”, this line of research considers how, for example, emotions, rules-of-thumb, biased beliefs and time-inconsistent preferences influence how we make choices. Behavioral economics increasingly pervades policy discussions on topics as diverse as: obesity, the role of media, subprime mortgages and voting patterns. Behavioral models are certainly novel, but do they help us to design superior social policies? With the goal of preparing students to address this question, this course (1) provides a thorough overview of the main contributions of behavioral economics, highlighting departures from more traditional economic models and (2) emphasizes how behavioral economic models might (or might not) improve how we think about social policy.
Prerequisites: AS.180.301 OR AS.180.401; AS.180.334 OR AS.180.434 can be taken concurrently.
Instructor(s): N. Papageorge
Area: Social and Behavioral Sciences.

AS.180.390. Health Economics & Developing Countries. 3.0 Credits.
Prerequisites: AS.180.301 or AS.180.401; Students may not take AS.180.390 if they took AS.180.391.
Instructor(s): M. Gersovitz
Area: Social and Behavioral Sciences Writing Intensive.

AS.180.391. Economics of China. 3.0 Credits.
Discussion of the economic experience of Post-War China, primarily emphasizing topics rather than historical narrative: agriculture, industry including corporate governance and public enterprises, international trade, population, migration, education, health, public finances among other topics.
Prerequisites: AS.180.301 OR AS.180.401; Students may not take AS.180.390 if they took AS.180.391.
Instructor(s): M. Gersovitz
Writing Intensive.

Political Science

AS.190.101. Introduction to American Politics. 3.0 Credits.
This course examines the ideals and operation of the American political system. It seeks to understand how our institutions and politics work, why they work as they do, and what the consequences are for representative government in the United States. Emphasis is placed on the federal government and its electoral, legislative, and executive structures and processes. As useful and appropriate, attention is also given to the federal courts and to the role of the states. The purpose of the course is to understand and confront the character and problems of modern government in the United States in a highly polarized and plebiscitary era.
Instructor(s): R. Lieberman
Area: Social and Behavioral Sciences.
**AS.190.102. Introduction To Comparative Politics. 3.0 Credits.**
To understand politics, the sound bites of the modern media take us only so far. In this course, we will take a step back and implement an intellectually rigorous method. Scholars of comparative politics use the method of comparison in order to illuminate important political phenomena of our times. Following this method, we will embark on a scholarly tour of the world and compare the politics of various countries. We will also trace these politics back to their historical sources. We will work from the assumption that there is something to be gained from such comparisons across space and time.
Instructor(s): N. Jabko
Area: Social and Behavioral Sciences.

**AS.190.103. Ancient Political Thought. 3.0 Credits.**
The premise of this course is that a political perspective is tied up with a (meta)physical one, that is to say, with ideas about the nature of Nature and of the status of the human and nonhuman elements within it. How is the universe ordered? Who or what is responsible for it? What place do or should humans occupy within it? How ought we to relate to nonhuman beings and forces? We will read three different responses to such questions and show how they are linked to a particular vision of political life. In the first, the world into which human are born is ordered by gods whose actions often appear inexplicable: Prometheus Bound by Aeschyulus, Oedipus the King by Sophocles, and Hippolytus by Euripides will represent this tragic vision of the cosmos. In the second, Plato, in Republic and in Phaedrus, the forces of reason and eros play central and powerful roles. In the third, Augustine of Hippo presents a world designed by a benevolent, omnipotent God who nevertheless has allowed humans a share in their own fate. We end the course with Nietzsche’s Birth of Tragedy, which offers a perspective on these three visions of the world – the tragic, the rational, and the faithful – which will help us evaluate them in the light of contemporary political and ecological concerns.
Instructor(s): J. Bennett
Area: Humanities, Social and Behavioral Sciences.

**AS.190.104. Contemporary International Politics. 3.0 Credits.**
An introduction to international politics. Emphasis will be on continuity and change in international politics and the causes of war and peace. The first half of the course will focus on events prior to the end of the Cold War, including the Peloponnesian War, the European balance of power, imperialism, the origins and consequences of WWI and WWII, and the Cold War. The second half will focus on international politics since 1990, including globalization, whether democracies produce peace, the impact of weapons of mass destruction, terrorism, and the prospects for peace in the 21st century. Theories of realism and liberalism will also be considered.
Instructor(s): S. Schmidt
Area: Social and Behavioral Sciences.

**AS.190.105. Introduction to Global Studies. 3.0 Credits.**
This course surveys scholarly approaches to processes, relations, institutions, and social structures that cross, subvert, or transcend national borders. The course will also introduce students to research tools for global studies. Students who have taken Contemporary International Politics 190.209 or International Politics 190.104 may not register.
Instructor(s): R. Marin-Bennett
Area: Social and Behavioral Sciences.

**AS.190.106. Freshmen Seminar: The Human Condition. 3.0 Credits.**
This freshman seminar will focus on reading just one book, The Human Condition, by Hannah Arendt. Such a narrow focus is justified by the breadth of topics the book itself discusses and the influence these various discussions have had on modern political thought. Among the various topics that will be studied and talked about are the meaning of the distinctions Arendt makes between “public,” “private,” and “social,” as well as between “work,” “labor,” “action.” In the course of their studies, students will be challenged to think about the relation of philosophy to politics, the significance of the scientific revolution for public life, the character of contemporary society, and what it means to be “free.” Also, by focusing on just one book, students will have the opportunity to learn how to do the kind of close reading and textual analysis success in college requires. In addition to reading assignments, students will be required to write four short papers.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences
Writing Intensive.

**AS.190.107. Politics of East Asia. 3.0 Credits.**
This course examines some of the central ideas and institutions that have transformed politics in the contemporary world through the lens of East Asia, focusing on Japan, South Korea, Taiwan, and China. We analyze two enduring themes of classic and contemporary scholarship in comparative politics: development and democracy. The purpose is to introduce students to the various schools of thought within comparative politics as well as to the central debates concerning East Asian politics.
Instructor(s): E. Chung
Area: Social and Behavioral Sciences.

**AS.190.108. Introduction to International Relations Theory. 3.0 Credits.**
This course is a broad introduction to international relations theory in a format that encompasses lecture and discussion. We will explore mainstream theoretical perspectives and critiques of those perspectives, as well as more recent developments in the field.
Instructor(s): S. Schmidt
Area: Social and Behavioral Sciences.

**AS.190.109. Global Security Politics. 3.0 Credits.**
Contemporary and emerging technologies of nuclear (weapons, terrorism, energy) outer space (missiles, missile defense, asteroids), biosecurity (bioweapons, pandemics, terrorism) and cyber (war, spying, surveillance) and implications for security, international politics, arms control, and political freedom.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.
AS.190.226. Global Governance. 3.0 Credits.
Global problems like poverty, financial instability, human rights abuses, and climate change threaten both international order and human well-being. In the absence of a world state, these problems must be addressed by an increasingly complex, transnational network of organizations and social groups. First, we will aim to understand and explain how global problems are governed through detailed case studies of International Organizations and Non-Governmental Organizations such as the United Nations, World Bank, Intergovernmental Panel on Climate Change, Amnesty International and more. Second, we will critically evaluate the successes and failures of these organizations and explore the possibilities for improving democratic governance at the global level.
Instructor(s): B. Allan
Area: Social and Behavioral Sciences.

AS.190.227. U.S. Foreign Policy. 3.0 Credits.
This course will provide and analysis of US foreign policy with a focus on the interests, institutions, and ideas underpinning its development. While the course will offer a broader survey, the emphasis will be on important developments during the Cold War, such as the articulation of containment strategies and nuclear deterrence, and the analysis of contemporary foreign policy questions, including the problems of terrorism and failed states. In addition to security issues, attention will also be paid to significant developments in international trade policy.
Instructor(s): S. Schmidt
Area: Social and Behavioral Sciences.

AS.190.265. Comparative Political Behavior. 3.0 Credits.
An introduction to the study of political behavior, emphasizing electoral behavior in democratic countries.
Instructor(s): R. Katz
Area: Social and Behavioral Sciences.

AS.190.280. Political Persuasion. 3.0 Credits.
An introduction to Euro-American political thought, with a focus on the role of language, rhetoric, and Eros within politics. Texts by Plato, Machiavelli, Hobbes, Walt Whitman, and Emma Goldman.
Instructor(s): J. Bennett
Area: Social and Behavioral Sciences.

AS.190.281. Virtue, Labor, and Power (Classics of Political Thought II). 3.0 Credits.
This is not a class in the history of political thought. Instead, it is an opportunity for a selective, circumscribed, but very focused engagement with some of the most powerful and provocative texts in that history. We will read selections from six thinkers (Socrates, Machiavelli, Locke, Marx, Nietzsche, and Foucault), focusing on three themes (Virtue, Labor, and Power). These texts have all profoundly shaped the way we think about politics, and they are texts that resonate with our own political problematics today.
Instructor(s): S. Chambers
Area: Social and Behavioral Sciences.

AS.190.282. Authority and Liberty. 3.0 Credits.
Beginning with Plato, and using Nietzsche’s history of metaphysics as a guide, this course serves as an introduction to Euro-American political thought by analyzing the philosophical foundations of political authority. In addition to works by Plato and Nietzsche, readings will include works by Kant, Mill, Hart, and Foucault.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.283. The Politics of Memory (Classics of Political Thought IV). 3.0 Credits.
Was George Orwell right that those who control the past control the future—and those who control the present control the past? This is a course on the politics of memory: how political power shapes what is available to be remembered, the timing, spaces, and occasions of commemoration, and who is permitted to invoke (or disavow) the past. We will engage a range of highly contested works of ancient, modern and contemporary political theory to investigate how the past might haunt present day politics through memories that are conscious and unconscious. The themes we will take up include: the correspondence between memory and freedom; whether we ever be free given that we are creatures endowed with memory, whether it is sometimes politically necessary (or even possible) for people to forget, and what politics of memory emboldens, or threatens, democracy. There are no prerequisites for this course.
Instructor(s): P. Brendese
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.284. Classics of Political Theory: Political Freedom. 3.0 Credits.
This course investigates core questions of what constitutes political freedom, what limits on freedom (if any) should be imposed by authority, and the relationship between freedom, responsibility and political judgment. Spanning texts ancient, modern and contemporary, we shall investigate how power inhabits and invigorates practices of freedom and consent. Among the questions we will consider: Can we always tell the difference between consent and coercion? Are morality and freedom incompatible? Is freedom from the past possible? By wrestling with slavery (freedom’s opposite) we will confront the terrifying possibility that slavery can be both embodied and psychic. If our minds can be held captive by power, can we ever be certain that we are truly free? The political stakes of these problems will be brought to light through a consideration of issues of religion, gender, sexuality, civil liberties, class and race.
Instructor(s): P. Brendese
Area: Social and Behavioral Sciences.

AS.190.301. Global Political Economy. 3.0 Credits.
Examines the intersection of politics and economics in global affairs. Focuses on theoretical approaches to global political economy, institutions of governance of the global political economy, flows of goods, services, capital, and information; and transborder problems. Recommended Course Background: AS.190.209
Prerequisites: Not open if you have previously taken AS.190.216.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.307. Race, Politics and Literature. 3.0 Credits.
Instructor(s): P. Brendese
Area: Social and Behavioral Sciences
Writing Intensive.
In this class, we will ask questions about the relationship between equality, law, and society. We will investigate how people have used law in their movements for greater equality, and ask whether law has served equality, law, and society. We will investigate how people have used law for greater equality, and ask whether law has served equality, law, and society.

Instructor(s): E. Zackin.

Area: Social and Behavioral Sciences.

AS.190.308. Democracy and Dictatorship: Theory and Cases. 3.0 Credits.
The course will cover three topics: 1) The conceptualization of political regime, democracy and authoritarianism. We will also consider neighboring concepts of other macro-political structures—government, state, and administration—in order to be able to demarcate what is distinctive about the study of political regimes. 2) The characterization of political regimes in most Western and some non-Western countries, in history and today. We will centrally focus on the so called “Waves of Democratization,” but we will also consider stories with less happy outcomes, that is, processes that led to the breakdown of democracies and the installation of repressive dictatorships. 3) The explanation(s) of the stability and change of political regimes around the world. Theoretical accounts of regime change come in many flavors—emphasis on economic versus political causes, focus on agents and choices versus structures and constraints, international versus domestic factors, among others. We will consider most of them.

Instructor(s): E. Zackin

Area: Social and Behavioral Sciences.

AS.190.311. Disposable People: Race, Immigration and Biopolitics. 3.0 Credits.
This course will explore theories and practices of race and immigration in order to illuminate the proliferation of populations regarded as disposable in contemporary politics. We will pay special attention to the contestable criteria used to determine eligibility for membership in the human race. We shall also examine how political power influences the relays between citizenship status and those whose lives are worthy of protection, and those who should be allowed to die.

Instructor(s): P. Brendese

Area: Social and Behavioral Sciences.

AS.190.314. Struggles for Democracy: from the French Revolution to the Arab Spring. 3.0 Credits.
This course is a systematic introduction to theories of regime change, which includes episodes of democratic transitions (gradual or revolutionary) and breakdowns, as well as trajectories of regime stability, like the persistence of various types of authoritarian rule and democratic politics. Two thirds of the course will cover theories, which in comparative politics are mostly inductive constructions from historical experiences. The remaining third will be case studies of exemplary events and processes, for instance, the differentiation of political regimes in post-WWII Europe in terms of liberal, fascist, and social-democratic regimes, the convergence towards democracy in Western Europe and Latin America between 1950 and 1990, and the fragility of democracy in Tropical Africa and the Middle East.

Instructor(s): S. Mazzuca

Area: Social and Behavioral Sciences.

AS.190.320. Politics Of East Asia. 3.0 Credits.
Examines some of the central ideas and institutions that have transformed politics in the contemporary world through the lens of East Asia, focusing on Japan, South Korea, Taiwan, and China. Topics include state-society relations, late development, nationalism, democratization, political culture, social movements, and globalization.

Instructor(s): E. Chung

Area: Social and Behavioral Sciences.

AS.190.325. Finding Equality in Law and Society. 3.0 Credits.
In this class, we will ask questions about the relationship between equality, law, and society. We will investigate how people have used law in their movements for greater equality, and ask whether law has served these movements well and how it has worked. We will pay particular attention to movements based on race, gender, and economic class.

Instructor(s): E. Zackin.

Area: Social and Behavioral Sciences.

AS.190.326. Democracy And Elections. 3.0 Credits.
An examination of most aspects of democratic elections with the exception of the behavior of voters. Topics include the impact of various electoral systems and administrative reforms on the outcome of elections, standards for evaluations of electoral systems, and the impact of the Arrow problem on normative theories of democratic elections.

Instructor(s): R. Katz

Area: Social and Behavioral Sciences.

AS.190.327. Politics of Information. 3.0 Credits.
Considers global and comparative politics of information, information technologies, and the Internet. Examines governance of information (ownership of information, rights to information, privacy) and governance of information technologies (domain names, social media websites, etc.). Students who previously took AS.190.327 Politics of Information may not take this course.

Instructor(s): R. Marlin-Bennett

Area: Social and Behavioral Sciences.

AS.190.329. National Security-Nuclear Age. 3.0 Credits.
This course examines the impact of weapons of mass destruction on international politics with an emphasis on security issues. The first half of the course focuses on the history of nuclear weapons development during the Cold War and theories of deterrence. The second half of the class considers contemporary issues including terrorism, chemical and biological weapons, ballistic missile defense and proliferation. Requirements include a midterm, final and a ten page paper.

Instructor(s): S. David

Area: Social and Behavioral Sciences.

AS.190.330. Japanese Politics. 3.0 Credits.
This course introduces students to the major debates and issues of postwar Japanese politics. Topics include nationalism, electoral politics, civil society, and immigration.

Instructor(s): E. Chung

Area: Social and Behavioral Sciences

AS.190.333. American Constitutional Law. 3.0 Credits.
The second semester of a two semester course. Topics include executive and emergency power, racial and gender equality, and selected free speech and religious freedom issues.

Prerequisites: AS.190.333

Instructor(s): E. Zackin

Area: Social and Behavioral Sciences.

AS.190.334. Constitutional Law. 3.0 Credits.
The second semester of a two semester course. Topics include executive and emergency power, racial and gender equality, and selected free speech and religious freedom issues.

Prerequisites: AS.190.333

Instructor(s): E. Zackin

Area: Social and Behavioral Sciences.

AS.190.335. Imagining Borders. 3.0 Credits.
What is a border and why do borders matter in global politics? What do borders mean under conditions of globalization? An examination of the politics of borders, transborder flows, and networks within and across borders. The readings which come from political science and other disciplines, will include theoretical and case-specific works.

Instructor(s): R. Marlin-Bennett

Area: Social and Behavioral Sciences.
AS.190.339. American Racial Politics. 3.0 Credits.
Recommended Course Background: AS.190.214
Instructor(s): L. Spence
Area: Social and Behavioral Sciences.

AS.190.340. Black Politics I. 3.0 Credits.
This course is a survey of the bases and substance of politics among black Americans and the relation of black politics to the American political system up to the end of Jim Crow. The intention is both to provide a general sense of pertinent issues and relations over this period as a way of helping to make sense of the present and to develop criteria for evaluating political scientists’ and others’ claims regarding the status and characteristics of black American political activity.
Instructor(s): L. Spence
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.341. Korean Politics. 3.0 Credits.
This course introduces students to the historical and institutional foundations of modern South Korean politics. Topics include nationalism, political economic development, civil society, globalization, and ROK-DPRK relations. (CP)
Instructor(s): E. Chung
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.342. Black Politics II. 3.0 Credits.
Recommended Course Background: AS.190.340.
Instructor(s): L. Spence
Area: Social and Behavioral Sciences

AS.190.343. Research Seminar on Political Parties. 3.0 Credits.
This seminar has two basic objectives: both theoretical and empirical study of selected topics in the comparative literature on political parties, and the ultimate production of a publishable-quality (or conference-presentable-quality) paper. Topics will include (but not be limited to) the place of parties in political theory and the nature of party systems, party organization, and party behavior in the United States and other countries.
Instructor(s): R. Katz
Writing Intensive.

AS.190.344. Seminar In Anti-Semitism. 3.0 Credits.
Jews exercise a good deal of power in contemporary America. They are prominent in a number of key industries, play important roles in the political process, and hold many major national offices. For example, though Jews constitute barely two percent of America’s citizens, about one-third of the nation’s wealthiest 400 individuals are Jewish and more than ten percent of the seats in the U.S. Congress are held by Jews. One recent book declared that, “From the Vatican to the Kremlin, from the White House to Capitol Hill, the world’s movers and shakers view American Jewry as a force to be reckoned with.” Of course, Jews have risen to power in many times and places ranging from the medieval Muslim world and early modern Spain through Germany and the Soviet Union in the 20th century. In nearly every prior instance, though, Jewish power proved to be evanescent. No sooner had the Jews become “a force to be reckoned with” than they found themselves banished to the political margins, forced into exile or worse. Though it may rise to a great height, the power of the Jews seems ultimately to rest on a rather insecure foundation.
Cross-listed with Jewish Studies. Course is open to juniors and seniors.
Instructor(s): B. Ginsberg
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.352. The Politics of Global Development. 3.0 Credits.
Development is often assumed to be an economic issue. In this course we examine the politics of development on a global scale: We begin by looking at the colonial and Cold War histories of development. We then use these histories to contextualise contemporary development issues that directly affect international relations such as aid and debt, humanitarianism, food security, land “grabs”, migration and indigenous rights. The course also seeks to understand the ways in which the issues underlying global development have always connected and continue to connect the peoples and polities of the Global North and Global South.
Instructor(s): R. Shilliam

AS.190.368. Pluralism. 3.0 Credits.
This seminar will explore the theory and politics of pluralism: from European debates over religious tolerance to American debates over constitutional founding; from liberal political philosophy to radical democracy. Authors may include Bentley, Dahl, Locke, Madison, Ranciere, Rawls, Young. Recommended Course Background: Previous course in political theory or permission of instructor.
Instructor(s): S. Chambers
Area: Social and Behavioral Sciences

AS.190.373. The Politics of Public Policy. 3.0 Credits.
This course is an introduction to the political structure and process of making public policy in the United States. Public policymaking is, above all, an arena in which policy professionals try to bring systematic evidence and scientific knowledge to bear to diagnose, understand, and solve social problems. At the same time, policymaking also takes place in a political environment, in which strategic and purposive actors contend for power and seek to advance their own goals and realize their own visions about how the world ought to be changed for the better. The goals that participants in the policymaking process pursue may take a variety of forms: substantive policy outcomes, of course, but also power, political advancement, or material advantage. The actors who populate the process, moreover, may disagree about the goals they seek and making policy — especially in democratic political systems — requires some means of resolving these disagreements. Actors also differ in the resources they have at their disposal to seek their goals — power, money, organization, for example, but also knowledge and expertise. Finally, policymakers cannot do anything they want in pursuit of their goals. They are constrained by the rules and structures that make up the policymaking system. These factors — actors, goals, resources, knowledge, and rules — shape the politics of policymaking and frame the strategic options available to policymakers.
Instructor(s): B. Mikulski; R. Lieberman

AS.190.379. Nationalism and the Politics of Identity. 3.0 Credits.
Nationalism ties powerful organizations to political mobilization, territory, and individual loyalty. Yet nationalism is typically studied in isolation from other social formations that depend upon organizational — individual linkages. Alternative types of identity category sometimes depend similarly upon organizations that collect and deploy resources, mobilize individuals, erect boundaries, and promote strong emotional connections among individuals as well as between individuals and institutions. In this class, we study classic and contemporary works on nationalism, drawn from multiple disciplinary and analytic traditions, in the comparative context of alternative forms of identity. The focus of the class will be primarily theoretical, with no regional or temporal limitations.
Instructor(s): M. Kocher.
AS.190.380. The American Welfare State. 3.0 Credits.
This course analyzes the distinctive US welfare state in historical and comparative perspective. We begin with a survey of the policy context, an historical overview from the poorhouses through the Great Society, and a tour of welfare states across the rich democracies. We then survey developments – and explain the actual workings of policy – across jobs, education, welfare, pensions, and health care. We explore the institutional and political factors behind their divergent trajectories through conservative revival and the age of Obama. Students will write a seminar paper exploring policy development over time in a program or area of their choosing. Enrollment restricted to Social Policy minors only. Prerequisites: Students may take AS.190.380 or AS.360.380, but not both.
Instructor(s): D. Schlozman
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.381. Global Environmental Politics. 3.0 Credits.
Instructor(s): B. Allan
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.382. Democracy and Development: Theory and Cases. 3.0 Credits.
Most wealthy countries are democracies. But not all democracies are wealthy—India, Costa Rica, and Mongolia are prominent examples of poor countries with democratic regimes. The course will examine the relation between economic development and political democratization under three big questions. (a) Under what conditions, and through which mechanisms, does economic development promote democracy? (b) If economic development is not possible in the foreseeable future, how do countries achieve stable democratization? (c) Under what conditions, and through which mechanisms, does democracy foster economic development?
Instructor(s): S. Mazzuca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.385. Urban Politics and Policy. 3.0 Credits.
An analysis of public policy and policy-making for American Cities. Special attention will be given to the subject of urban crime and law enforcement, poverty and welfare, and intergovernmental relations. Cross listed with Africana Studies.
Instructor(s): L. Spence
Area: Social and Behavioral Sciences.

AS.190.391. Time to Kill: Race, Punishment, Death and Desire. 3.0 Credits.
This course examines the role of race in determining who deserves to be punished, the timing and occasions of punitive action and how long punishment should endure. Key to our inquiry is how racialized presumptions about human desire might justify punitive logics of power. The class explores inequalities in the distribution of punishment and death in order to illuminate how race shapes questions of whose time is more valuable, who lives and who dies, and ultimately whose lives count as human.
Instructor(s): P. Brendese
Area: Social and Behavioral Sciences.

AS.190.393. Theories of Constitutional Interpretation. 3.0 Credits.
In this course, we will read and discuss a variety of arguments about how best to interpret constitutional texts, with particular attention to debates about the U.S. Constitution. The course will also cover debates about the role of ordinary people, legislatures, and judges in determining the content of constitutional law.
Instructor(s): E. Zackin
Area: Social and Behavioral Sciences.

AS.190.394. Comparative Politics of the Middle East and North Africa. 3.0 Credits.
This course examines the domestic, regional, and transnational politics of the Middle East and North Africa. The class is organized into three units. The first examines major armed conflicts—anti-colonial, intra-state, and inter-state—from 1948 through the 1990s. It uses these historical moments as windows onto key issues in Middle Eastern and North African political issues such as external intervention/occupation, human rights, sectarianism, social movements, and memory politics. Unit Two focuses on policy relevant issues such as democratization, minority populations, religion and politics, and gender. In Unit Three, students will explore the politics of the Arab Uprisings through critical reading and discussion of new (post-2011) scholarship on MENA states, organizations, and populations. Enrollment limited to Political Science and International Studies majors.
Instructor(s): S. Parkinson
Area: Social and Behavioral Sciences.

AS.190.396. Capitalism and Ecology. 3.0 Credits.
Capitalism and Ecology focuses on the relations between capitalism and climate during the era of the Anthropocene. How do capitalist processes of fossil extraction, consumption, production and governance contribute to the pace of climate warming, glacier flows, the ocean conveyor system, species loss and other phenomena? What are the effects and the possible modes of political response? How do the nonhuman, self-organizing processes such as glaciers, oceans and climate change on their own as they also amplify the effects of capitalist emissions? The course combines texts on capitalism and activism with those by geoscientists on how the nonhuman systems work. Books by authors in the fields of political theory, geology, anthropology, economics, philosophy and ethnology will be drawn upon. Authors such as Michael Benton, Brian Fagan, Hayek, Naomi Klein, Fred Hirsch, Fred Pearce, van Dooren and Connolly are apt to be read to engage these issues. A previous course in political theory is recommended. The class is organized around student presentations on assigned readings. Two papers, 10-12 pages in length. Extensive class discussion.
Instructor(s): W. Connolly
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive.
AS.190.398. Politics Of Good & Evil. 3.0 Credits.
The Politics of Good and Evil places a set of classic myths into conversation with recent philosophical and political work on existential questions. The myths include the Book of Job, Genesis (J version), two dramas by Sophocles, a selection from Augustine, and Voltaire's Candide. Texts by Nietzsche (Thus Spoke Zarathustra), William James, (A Pluralistic Universe) and Connolly are then placed into conversation with both each other and these classic stories. Kohlberg's The Sixth Extinction closes the class, encouraging us to think again about the relations between mythic orientations to responsibility, tragic possibility, nature/culture imbrications and the shape of contemporary life during the Anthropocene. Previous work in political theory is recommended. The course is devoted to "elemental theory", in which diverse existential stories jostle each other and periodically disturb us, challenging us to explore new thoughts in a new world. One class presentation, two 10-12 page papers, and extensive class discussion.
Instructor(s): W. Connolly
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.402. Environmental Racism. 3.0 Credits.
This is an undergraduate political theory seminar that addresses the disproportionate impact of environmental destruction on racially stigmatized populations. We shall examine the logics of power whereby the natural world is subjected to exploitation and domination, in tandem with the subordination of racial subjects historically identified as closer to nature. Likewise, we will explore political and theoretical challenges to environmental racism, such as those posed by Indigenous communities, decolonial theory, and political movements contesting the intersection of racial inequalities and ecological crises.
Instructor(s): P. Brendese
Writing Intensive.

AS.190.404. Race and Debt: Living on Borrowed Time. 3.0 Credits.
This is an advanced undergraduate seminar that explores how racial stigma functions as a marker of being always already in debt. In view of the legacies of settler-colonialism, imperialism and chattel slavery, how is it that those from whom so much has been taken are nevertheless regarded as perpetually in debt? We shall examine the moral, economic and racialized logics of power through which a range of political subjects come to be regarded as ungrateful "takers" as opposed to "makers," and owing a debt to society. In so doing, we will investigate how temporality functions as a tool of power by considering how the indebted are made vulnerable to precarity, discipline, and disposability—in effect, forced to live life on borrowed time.
Instructor(s): P. Brendese
Writing Intensive.

AS.190.407. Geopolitics, Nuclear Weapons and World Order. 3.0 Credits.
Intensive examination of unresolved debates about the implications of nuclear weapons for world order, focusing on deterrence, strategy, arms control, multipolarity, proliferation, terrorism, and abolition, as well as roles of liberal, democratic, and constitutional political forms and popular public involvement. Readings from classic and contemporary sources.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

AS.190.408. Sovereignty: Historical Perspectives and Contemporary Issues. 3.0 Credits.
This seminar provides an in-depth exploration of the concept of sovereignty by examining its historical development and its use in international relations scholarship. Our discussion will also be informed by works in political theory and the international law literature. The course is open to advanced undergraduate students and graduate students.
Instructor(s): S. Schmidt
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.412. The Use and Misuse of Force. 3.0 Credits.
An examination of the ways in which violence has been used to secure political ends. Topics include terrorism, assassination, genocide, coups, rebellions and war itself. Students examine what makes types of political violence unique and what unites them. (Formerly AS.190.372)
Instructor(s): S. David
Area: Social and Behavioral Sciences.

AS.190.425. The New Deal and American Politics. 3.0 Credits.
This seminar explores how the New Deal, the fundamental moment in the post-Civil War United States, has structured politics and government across a variety of domains ever since. Topics include presidential leadership, executive power, political parties, labor, race, and the welfare state.
Instructor(s): D. Schlozman
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.426. Science and Expertise in Global Politics. 3.0 Credits.
An in-depth examination of complex global problems that demand the effective use of scientific and expert knowledge in global governance. We will begin with a theoretical overview covering different perspectives on the role of knowledge and technology in global politics before looking in more detail at case studies drawn from environmental politics, nuclear management, colonial history, international political economy, UN peacekeeping, and more.
Instructor(s): B. Allan
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.429. The Political Bases of the Market Economy. 3.0 Credits.
Although "the market" is conventionally understood as separate from "politics", the modern market economy did not arise in a political vacuum. In fact, the very separation between the economy and politics is itself the product of a politically potent set of ideas. This course is an upper-division reading seminar on the origins and evolution of the modern market economy. Readings will include Smith, Marx, Weber, Polanyi, Keynes, Hayek, Friedman, Becker, and Foucault. Recommended course background: Introduction to comparative politics OR any college-level course in social or political theory.
Instructor(s): N. Jabko
Area: Social and Behavioral Sciences.
AS.190.430. Time and Punishment. 3.0 Credits.
"If you can’t do the time, don’t do the crime." According to ask.com, this common expression was made popular in the 1970s by the theme song for the television show “Beretta.” Aside from amusing us with the irony that the star of “Beretta” was Robert Blake who was later charged with the murder of Bunny Lee Bakely, the expression raises a profound issue: What is the relationship between punishment and time? This course will explore that question. Topics to be discussed include different philosophical understandings and experiences of time, views of mortality and fate, theories of punishment, specific punishments in the U.S. (including sentences of juveniles, life, death, and LWOP), as well as punishments that are not specifically meted out but are known to be the consequences of political, social, and economic circumstance. Students will read texts in criminology, political theory, philosophy, and jurisprudence, as well as a selection of Supreme Court cases, novels, and short stories. This writing intensive course is limited to undergraduates who have taken at least one “Classics of Political Thought” course (190.280, 190.281, 190.282, or 190.283).
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences.

AS.190.431. Global Climate Governance. 3.0 Credits.
This course will offer an in-depth study of the history and politics of global climate governance. It will examine the central actors, agreements, and policy proposals that shape climate governance.
Instructor(s): B. Allan
Area: Social and Behavioral Sciences.

AS.190.434. Does Israel Have a Future?. 3.0 Credits.
Israel is one of the only countries whose existence is openly challenged. This class will examine the future of Israel focusing on international and domestic threats to its continued existence as a Jewish democracy. Outside threats to be considered include nuclear attack and the growing international movement to delegitimize Israel. Domestic challenges include demographic changes, the role of religion in governance, and doubts as to whether one can be a Jewish state and still be a democracy. Lessons from the destruction of the ancient Israelite kingdoms and from contemporary state deaths will be included. The course will conclude by considering efforts that Israel can undertake to meet the threats it faces.
Instructor(s): S. David
Area: Social and Behavioral Sciences.

AS.190.436. Republican Orders and Sustainability. 3.0 Credits.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

AS.190.438. Violence and Politics. 3.0 Credits.
This seminar will address the role of violence—both domestic and international—in political life. Though most claim to abhor violence, since the advent of recorded history, violence and politics have been intimately related. States practice violence against internal and external foes. Political dissidents engage in violence against states. Competing political forces inflict violence upon one another. Writing in 1924, Winston Churchill declared—and not without reason—that, “The story of the human race is war.” Indeed, violence and the threat of violence are the most potent forces in political life. It is, to be sure, often averred that problems can never truly be solved by the use of force. Violence, the saying goes, is not the answer. This adage certainly appeals to our moral sensibilities. But whether or not violence is the answer presumably depends upon the question being asked. For better or worse, it is violence that usually provides the most definitive answers to three of the major questions of political life—statehood, territoriality and power. Violent struggle, in the form of war, revolution, civil war, terrorism and the like, more than any other immediate factor, determines what states will exist and their relative power, what territories they will occupy, and which groups will and will not exercise power within them. Course is open to juniors and seniors.
Instructor(s): B. Ginsberg
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.439. Advanced Topics in Global Politics: Learning Through Research. 3.0 Credits.
Join a research team. In this course, students will explore topics in global politics and methods for the conduct of inquiry in the Johns Hopkins tradition of learning through research. Under the guidance of the professor, students will learn about a topic from existing primary and secondary sources, collect new empirical evidence, analyze the evidence, and contribute to research products. Recommended for students planning to write a thesis. Junior or Senior standing in Political Science or International Studies or permission of instructor.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.440. European Politics in Comparative Perspective. 3.0 Credits.
Europe has been in a sense the first testing ground for theories of comparative politics, but many outsiders now see Europe as a pacified and somewhat boring place. This course will question conventional wisdom through an examination of European politics in historical and cross-national perspective. We will apply the comparative method to the study of European politics today, and conversely we will ask what Europe tells us more generally about politics. We will see that Europe is still a locus of intense conflict as well as remarkably diverse experimentation. Topics will include: political, legal, and economic governance; the evolution of democracy and fundamental rights, the welfare state, class stratification, immigration and race, the role of religion; European integration and globalization. Juniors and seniors only.
Instructor(s): N. Jabko
Area: Social and Behavioral Sciences.
AS.190.441. Comparative European Politics. 3.0 Credits.
In comparison with other regions of the world, Europe can easily appear as a pacified and somewhat boring place. This course will question this stereotype through an examination of European politics in historical and cross-national perspective. From a historical perspective, Europe has been the crucible of modern politics. And to this day, Europe remains a locus of intense conflict as well as remarkably diverse experimentation. We will read seminal scholarly works as well as recent comparative politics literature on European politics. The goal is to understand and discuss central concepts that comparative politics scholars mobilize in the study of European politics across time and space. Topics will include: political, legal, and economic governance; the evolution of democracy, the welfare state, partisan politics, immigration, race, and religion; European integration and globalization.
Instructor(s): N. Jabko
Area: Social and Behavioral Sciences.

AS.190.442. Civil Society. 3.0 Credits.
This course explores classic and contemporary debates on the concept of civil society and critically examines its analytical value in light of recent developments. Topics include the relationship between civil society, the state, and markets, the role of civil society in development and democratization, social capital, and global civil society. This course is open to graduate students from any discipline. Advanced undergraduate students must obtain permission from the instructor and are expected to keep up with graduate students during class discussions.
Instructor(s): E. Chung
Writing Intensive.

AS.190.443. Politics of Outer Space. 3.0 Credits.
Intensive examination of the political aspects of human activities in outer space, past, present and future, with focus on militarization, earth-remote sensing, surveillance, navigation, resource exploitation, the Outer Space Treaty, and colonization.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.444. Causes of Peace. 3.0 Credits.
Since 1945, the great powers have enjoyed their longest period of peace in history. Interstate conflict between lesser powers is also at an all time low. What accounts for this "long peace?" This course will look at various explanations including the spread of democracy, the proliferation of nuclear weapons, globalization, American hegemony, and fundamental changes in attitudes regarding the use of force. Students will present draft versions of their research papers during the last weeks of the course. Co-listed with AS.190.619
Instructor(s): S. David
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.445. Power and Wealth: Sources, Dynamics and Linkages. 3.0 Credits.
This seminar explores theoretical approaches to the multiple relations between political power and economic power, including pluralism, Marxism, and historical institutionalism. Major empirical transformations will provide the motivation: the rise of modern states, capitalism and social classes in Early Modern Europe, the creation of highly unequal societies in post-colonial Latin America and Africa, the varieties of Welfare State in the golden age of advanced capitalism (1950-75), and the powerful rebirth of inequality in advanced economies for the last 25 years. Theories of sources and interactions of political and economic power will be coupled with accounts of the effects of power and wealth on macroscopic change, especially democratization and economic development. Open to juniors, seniors, and graduate students.
Instructor(s): S. Mazzucca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.445. Comparative Racial Politics. 3.0 Credits.
This upper-level seminar surveys the major trends and approaches to the comparative study of race in political science and critically examines the link between race and politics. Topics include race and state formation, citizenship and national membership, immigration, racial regimes, and the political economy of race. Recommended background: Courses in comparative politics, political economy, immigration, and racial politics
Instructor(s): E. Chung
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.451. Geopolitics. 3.0 Credits.
Intensive exploration of theories of how geography, ecology, and technology shape political orders. Case studies of ancient, early modern, global, and contemporary topics, including European ascent, industrial revolution, tropics and North South divide, climate change, geo-engineering and global commons (oceans, atmosphere and orbital space
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.455. Comparative Racial Politics. 3.0 Credits.
Examination of politics of human biological and cybernetic augmentation, and replacement with focus on stratification, weaponization, collectivization, extinction and irregulation.
Instructor(s): D. Deudney
Writing Intensive.

AS.190.471. The University and Society. 3.0 Credits.
In the 20th century, American universities became the envy of the world, leading in most categories of scholarly productivity and attracting students from every nation. In recent years, though, American higher education has come to face a number of challenges including rapidly rising costs, administrative bloat, corporatization and moocification. We will examine the problems and promises of American higher education, the political struggles within the university and the place of the university in the larger society. Upper classes and Grad Students only.
Instructor(s): B. Ginsberg; R. Kargon
Area: Social and Behavioral Sciences.
AS.190.479. Imag(in)ing Cities. 3.0 Credits.
Cities exert a substantial degree of control over American life. Throughout the 20th and early years of the 21st Century they have been centers of industry, of social change, of political change. And in part because of their status, scholars have begun to theorize about cities. The purpose of this class is to interrogate these theories through a filmic lens. Students will be exposed to readings and then in the second half of the semester, to films about cities that implicitly and explicitly speak to and about these theories. Some coursework in urban studies preferred, though not necessary.
Instructor(s): L. Spence
Area: Social and Behavioral Sciences.

AS.190.480. Planetary Interdependence and World Governments. 3.0 Credits.
Intensive exploration of alternative global political architectures for high levels of security, ecological and internet interdependence
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.481. Conservatism and Crime. 3.0 Credits.
This course will examine the evolution of conservative thought on crime and criminal justice from the 1960s to the present. We will focus in particular on how the subject of crime illuminates different strains of conservatism, reveals tensions between its values of liberty, authority and anti-statism, and shows the changing approach that conservative intellectuals have had to race.
Instructor(s): S. Teles
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.491. Game Theory in the Social Sciences. 3.0 Credits.
Strategic thinking is a fundamental component of many political and economic phenomena, from international wars and national elections to wage bargains and monopoly power. Game Theory is a set of ideas and techniques for analyzing strategic interactions and making predictions about its outcomes. This course provides an introduction to Game Theory and its main applications to relevant political and social outcomes.
Juniors and Seniors Only.
Prerequisites: AS.110.106 or AS.110.108
Instructor(s): M. Mazzuca
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.190.678. Law and Politics.
As a field, Law and Politics has evolved from the study of constitutional law and judicial politics to the political behavior of judges and their associates to the study of law and society, the operation of law and courts “on the ground” in the international arena as well as in the United States, historical institutionalism, and the carceral state. In this graduate course, we will review some of the classic texts in the field, with a focus on the tension between legal institutions and democratic politics. In particular, we will examine how that tension is manifest in the foundations of the American political system and in critical reflection on contemporary practices of American democracy. Students will turn in response papers every week on the reading. In addition, there will be two 10-20 page papers due during the semester. Graduate Students Only.
Instructor(s): E. Zackin; J. Culbert
Area: Social and Behavioral Sciences.

AS.191.313. Why We Punish. 3.0 Credits.
A multidisciplinary exploration of the justifications and problems associated with punishment broadly defined, including prison sentences, personal acts of revenge, and military reprisals. Course texts will include international court cases, philosophical texts, and classic legal thinkers, in addition to fiction and news articles. Particular attention will be paid to when punishment is (or is not) cruel, deserved, or proportionate; when restraint should be shown; and whether it is desirable to abolish it altogether. Case studies will include the practice of solitary confinement, cycles of retaliatory violence in communal conflicts, the death penalty, and International Criminal Court efforts to punish perpetrators of war crimes and crimes against humanity. Writing intensive.
Instructor(s): J. White
Writing Intensive.

AS.191.315. The Domestic Politics of Israel. 3.0 Credits.
Israel’s politics and history are complex, involving multiple military conflicts, domestic struggles and dynamic international relationships. This course will focus on Israel’s domestic politics by tracing the story of the development of its party system and the parties that compose it. A parliamentary democracy with a proportional representation electoral system, Israel’s party system includes multiple parties who represent the various segments of Israeli society. What are the origins of this party system and the parties that compose it? What changes have they experienced and what are the factors that influence those changes? Who are the important actors and what might be motivating them? These questions and others will serve as our guide on a journey to a better understanding of Israel’s domestic politics.
Instructor(s): A. Dolinsky
Writing Intensive.

AS.191.326. International Politics from the Global South. 3.0 Credits.
This course focuses on the interests and preferences of developing countries in international politics. The formal and informal rules of international politics tend to favor the interests and preferences of powerful countries: richer states, with better technologies and superior military capabilities. Sometimes, however, the interests and preferences of great powers do not align with what the rest of the countries want, especially with states in the Global South. We will analyze what developing countries do to restrain the leeway of powerful countries, particularly when their interests and preferences conflict. The course is divided into four main sections: a review of the structure of international politics and the Global South, hierarchies of authority, tools to restrain great powers, and actors that try to constrain the leeway of these countries. Given the nature of the material that will be discussed, a previous course on either Global Security Politics or Contemporary International Politics is recommended.
Instructor(s): J. Rodriguez Aquino.
Questions of violence are as old as questions of politics itself. Are politics and violence essentially the same or is politics fundamentally non-violent? Is violence the only way to achieve political change? Has the state been a force for eliminating violence and securing freedom or has it only created more conflict? Who gets to define what counts as violent, and for what purposes? This course engages such questions through a theoretical lens, often focusing on political actors and activists responding on the ground to these pertinent questions. It asks students to reconsider what they normally think violence, non-violence, and politics are. We will particularly investigate this angle through the lens of race and colonialism—reading such figures as Michel Foucault, Franz Fanon, Mao Zedong, Gandhi, Martin Luther King Jr., Malcolm X, Angela Davis, and Ida B. Wells—as well as focusing on histories of state formation and state violence.

Instructor(s): Q. Lester
Area: Social and Behavioral Sciences
Writing Intensive.

The course will focus on the origin and development of the Arab-Israeli conflict from its beginnings when Palestine was controlled by the Ottoman Empire, through World War I, The British Mandate over Palestine, and the first Arab-Israeli war (1947-1949). It will then examine the period of the Arab-Israeli wars of 1956, 1967, 1973, and 1982, the Palestinian Intifadas (1987-1993 and 2000-2005); and the development of the Arab-Israeli peace process from its beginnings with the Egyptian-Israeli treaty of 1979, the Oslo I and Oslo II agreements of 1993 and 1995, Israel's peace treaty with Jordan of 1994, the Road Map of 2003; and the periodic peace talks between Israel and Syria. The conflict will be analyzed against the background of great power intervention in the Middle East, the rise of political Islam and the dynamics of Intra-Arab politics, and will consider the impact of the Arab Spring.

Instructor(s): R. Freedman
Area: Social and Behavioral Sciences

This course explores debates in contemporary environmental political thought concerning humanity's relationship to nature in the Anthropocene. The Anthropocene refers to the era in which "human" activity becomes a force of "nature"—when the impact of human activity on natural processes manifests itself in the stuff of the Earth. For many of us, these planetary transformations are hardly noticeable in day-to-day life, but they are dramatic: we are living through the Earth's sixth mass extinction. What is our relationship to these transformations? Do we have the power to stop them, or at least to minimize their harmful effects? Course readings and films introduce multiple visions of the human/nature relationship and examine the responses they recommend to these and other questions. The political stakes of these visions are brought to light as we consider: How do visions of the human/nature relationship shape and texture core political concepts like freedom, agency, responsibility, and progress? What do they suggest about the strategies most likely to motivate action amid the uncertainty of the Anthropocene? How do these visions subtly (and not so subtly) relegate some to the realm of "nature" so that others can be classified as "human"?

Instructor(s): S. Erev
Writing Intensive.

This course will explore the evolution of Russian Foreign Policy from Czarist times to the present. The main theme will be the question of continuity and change, as the course will seek to determine to what degree current Russian Foreign Policy is rooted in the Czarist (1613-1917) and Soviet (1917-1991) periods, and to what degree it has operated since 1991 on a new basis. The main emphasis of the course will be on Russia's relations with the United States and Europe, China, the Middle East and the countries of the former Soviet Union--especially Ukraine, the Baltic States, Transcaucasia and Central Asia. The course will conclude with an analysis of the Russian reaction to the Arab Spring and its impact both on Russian domestic politics and on Russian foreign policy.

Instructor(s): R. Freedman
Area: Social and Behavioral Sciences

This course is designed to introduce students to the study of civil liberties as protected by the Constitution of the United States. The emphasis will be upon those rights incorporated into the Bill of Rights and made applicable to the states through the Fourteenth Amendment. Specifically, the course will examine freedom of speech and freedom of the press— as well as freedom of freedom of thought, belief, and association. In addition, the course will address the right to privacy, the rights of those accused of crimes, and the rights and protections secured under the two clauses of the First Amendment relating to religious liberty—the Establishment Clause and the Free Exercise Clause.

Instructor(s): S. Snell
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.389. The Politics of Race and Ethnicity in the Postcolonial Society. 3.0 Credits.

The postcolonial society offers a unique terrain for the study of comparative racial politics, providing a setting for which racial and ethnic politics often take place between predominately non-white groups. In this course, students will examine both modern understandings of the concepts of race and ethnicity and how they are deployed politically in the postcolonial society, enabling students to make deeper explanations about the relationship between race, ethnicity and national inclusion as global phenomena that are the persistent and widespread legacies of colonialism, nationalism and white supremacy. Specifically, students will become familiar with the processes of colonization and decolonization— as well as postcolonial theories of resistance— that structure group politics today, drawing upon theoretical sources from Africa, Asia and the Caribbean. The course will introduce theoretical tools to the study of racial and ethnic politics across a range of postcolonial cases, including Indonesia, Mauritius, Fiji, Trinidad, Colombia and Brazil.

Instructor(s): E. Thornton
Writing Intensive.

AS.191.402. Numbers, Pictures, Politics. 3.0 Credits.

Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

Islamic Studies

AS.194.101. Introduction to Islam. 3.0 Credits.

Study of Islam, its beliefs and practices in their historical development, from the preaching of Muhammad to the end of the Middle Ages, providing a historically-grounded understanding of Islam.

Instructor(s): G. Ferrario
Area: Humanities.
**German Romance Languages Literatures**

**AS.211.202. Freshman Seminar: A Thousand Years of Jewish Culture. 3.0 Credits.**

This course will introduce students to the history and culture of Ashkenazi Jews through their vernacular, Yiddish, from the settlement of Jews in German-speaking lands in medieval times to the present day. Particular emphasis will be placed on the responses of Yiddish-speaking Jews to the challenges posed by modernity to a traditional society. In addition to studying a wide range of texts—including fiction, poetry, memoir, song, and film—students will learn how to read the Yiddish alphabet, and will prepare a meal of traditional Ashkenazi dishes. No prior knowledge of Yiddish is necessary for this course.

Instructor(s): B. Lang
Area: Humanities.

**AS.211.222. Italian Cinema: The classics, the Forgotten and the Emergent. 3.0 Credits.**

This course traces the history of Italian cinema from the silent era to the new millennium, highlighting its main trends and genres, and reflecting on the major transformations modern and contemporary Italian society experienced over the twentieth and twenty-first centuries. We shall examine iconic films such as Vittorio De Sica's Bicycle Thieves, Federico Fellini's La Dolce Vita, Michelangelo Antonioni's L'Avventura, and Pier Paolo Pasolini's Mamma Roma, that received international recognition and influenced other national, cinematic productions. We shall also look at the work of less famous, or independent filmmakers who received less critical attention. While this class takes an historical approach, it also includes a theoretical component and introduces students to the specificity of the cinematic language, examining films in relation to the mise-en-scène, frame composition, camera movements, editing, and sound. This class is taught in English.

Instructor(s): L. Di Bianco
Area: Humanities.

**AS.211.265. Panorama of German Thought. 3.0 Credits.**

This course explores the rich terrain of German literature and philosophical thought, from Kant to today. At each meeting, we will investigate canonical texts of the German intellectual tradition, with an eye to discovering their unity as "German" philosophical and cultural artifacts and icons, as well as with an interest in establishing their well-deserved place in the wider, global discourses of world literature. In this way, we will learn to think critically in and with these important literary and philosophical texts from German-speaking lands as a means of viewing and appreciating the full panorama of German thought. Among authors read and discussed will be Kant, Goethe, Schiller, Hegel, Kleist, Heine, Fontane, Nietzsche, Freud, Kafka, Heidegger, Mann and Bernhard.

Readings and discussion will be in English. German is appreciated but not required.

Instructor(s): M. Dornbach
Area: Humanities
Writing Intensive.

**AS.211.300. Baptism by Fire. 3.0 Credits.**

This course will examine the history of Muslims in Spain who lived under political and cultural pressure at times even the threat of bodily violence-to convert to Christianity and renounce the Arabic Language during Spain's so called 'Golden Age'. By analyzing key historical and literary texts, "Baptism by Fire" will afford particular attention to the early modern history of baptism and Arabic book burnings, historical and fictional alike, which intricately shaped the politics of language, religion, and identity in Spain. Course readings include period selections written by key religious figures such as Cardinal Francisco Jiménez de Cisneros, prominent historians including Miguel de Luna, and renowned authors like Miguel de Cervantes, among others. Class discussions will furnish students with continual opportunities to refine their interpretative, analytical, and linguistic skills by engaging a variety of discursive genres that provide the tools to challenge traditional visions of Islam's role in the history of Europe and one of its most powerful early modern kingdoms.

**AS.211.316. Brazilian Cinema and Topics in Contemporary Brazilian Society. 3.0 Credits.**

Course is taught in ENGLISH - This course is an introduction to the academic study of cinema as a communicative art and to Brazilian film. The films selected focuses on films from the late 1950s to the present and highlight import episodes and challenges in the advancement of the Brazilian society as well as its cinematic production with a special view to the film aesthetics through analysis from a number of critical perspectives, including class, race, gender as well as ethnicity, nationalism or national identity, colonialism, social changes, and the politics of representation. In this sense, the films and documentaries that we will be watching and studying encompass the period from the rise of New Cinema (Cinema Novo) up to films exploring the most recent trends, including movies launched up to 2016. Students wishing to do the course work in English, for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. THERE IS NO FINAL EXAM. May not be taken on a Satisfactory / Unsatisfactory basis.

Writing Intensive.

**AS.211.328. Berlin Between the Wars: Literature, Art, Music, Film. 3.0 Credits.**

Explore the diverse culture of Berlin during the heyday of modernism. During the Weimar Republic, Berlin became a center for theater, visual arts, film, music, and literature that would have an outsize impact on culture throughout the world and the twentieth century. The thinkers, artists, and writers drawn to interwar Berlin produced a body of work that encapsulates many of the issues of the period: the effect of the modern city on society; “the New Woman”; socialist revolutionary politics; the rise of the Nazis; and economic turmoil. While learning about interwar Berlin’s cultural diversity, we will take a special look at works by Jewish writers and artists that engage with the question of ethnic, religious, and national identity in the modern world, specifically in the context of Berlin’s rich Jewish history and the rise of anti-Semitism in the interwar period. All readings will be in translation.

Instructor(s): S. Spinner
Area: Humanities.
AS.211.331. Vagabonds and Ramblers: Space & Place in Women’s Cinema. 3.0 Credits.
In recent times in Italy, a new generation of women filmmakers has found its own space in the traditionally male-dominated film industry. This “counter cinema” abounds with female city walkers, migrants, vagabonds and other types of urban nomads, whose movement through space signifies a quest for freedom, gestures of protest and rebellion, and a search for place. We start by looking at the work of a pioneer filmmakers such as Elvira Notari, the first woman director in Italy, and then discuss the issue of gender and space in contemporary films by directors Francesca Comencini, Alice Rohrwacher, and Eleonora Danco. To enrich the analysis, we shall also examine films directed by non-Italians who deal with the theme of women’s mobility and their centrality/marginality from different socio-geographic contexts. Other directors included will be Agnès Varda (France), Chantal Akerman (Belgium), Haifa al-Mansour (Saudi Arabia), and Xiaolu Guo (China). Readings will include essays by Laura Mulvey, Ann E. Kaplan, Linda Williams, and Patricia White.
Instructor(s): L. Di Bianco
Area: Humanities.

AS.211.333. The Holocaust in Film and Literature. 3.0 Credits.
How has the Holocaust been represented in literature and film? Are there special challenges posed by genocide to the traditions of visual and literary representation? Where does the Holocaust fit in to the array of concerns that the visual arts and literature express? And where do art and literature fit in to the commemoration of communal tragedy and the working through of individual trauma entailed by thinking about and representing the Holocaust? These questions will guide our consideration of a range of texts — nonfiction, novels, poetry — in Yiddish, German, English, French and other languages (including works by Primo Levi and Isaac Bashevis Singer), as well as films from French documentaries to Hollywood blockbusters (including films by Alain Resnais, Claude Lanzmann, and Steven Spielberg). All readings in English.
Prerequisites: Cannot be taken by anyone who previously took AS.213.361
Instructor(s): S. Spinner
Area: Humanities.

AS.211.341. Power and Resistance in French Political Thought. 3.0 Credits.
Even as a strong, divine-right monarchy emerged in France, following the Renaissance wars of religion, rebellious French thinkers never stopped questioning the foundations of power. They focused critically not only on the claims of authority issuing from the top, but also on the submissiveness of the governed and the reach of propaganda. This course examines how power shapes minds and bodies, from absolutism to the Revolution, to democratic laïcité. Readings include works by La Boétie, Montaigne, Loyseau, Bayle, Rousseau, Saint-Just, Maistre, Tocqueville, Foucault, Lefort, Rancière and the Assemblée Nationale. Readings and discussion in English.
Instructor(s): E. Russo
Area: Humanities.

AS.211.349. JHU Bologna Program: Food for Thought: Gastronomy, Politics & Identity. 3.0 Credits.
Italian Culture course offered on the JHU Summer Program in Bologna. Permission required. Must be taken for a letter grade. Open to students admitted to the JHU Summer Program in Bologna only.
Instructor(s): L. Di Bianco
Area: Humanities.

AS.211.361. Narratives of Dissent in Israeli Society and Culture. 3.0 Credits.
In this course we will study and analyze the notion of dissent in Israeli society and culture on its various literary and artistic forms. We will examine the emergence and the formation of various political and social protest movements, such as the Israeli Black Panthers, Israeli feminism and the 2011 Social Justice protest. We will discuss at length the history and the nature of dissent in the military and in relation to Israeli wars and will track changes in these relations. Significant portion of the course will be dedicated to the literary, cinematic and artistic aspects of Israeli dissent and their influence on Israeli discourse. We will explore the nature and role of specific genres and media such as the Israeli satire, Israeli television, newspaper op-ed and the recent emergence of social media. Students wishing to work in English exclusively for 3 credits should enroll in section one. Students who are fluent in Hebrew and are wishing to attend an additional hour-long Hebrew discussion session per week with Professor Cohen (time TBD in consultation with enrolled students) for 4 credits should enroll in section two.
Instructor(s): N. Stahl; Z. Cohen
Area: Humanities.

AS.211.380. Modern Latin American Culture. 3.0 Credits.
Taught in Spanish. This course will explore the fundamental aspects of Latin-American culture from the formation of independent states through the present—in light of the social, political, and economic histories of the region. The course will offer a general survey of history of Latin-America, and will discuss texts, movies, songs, pictures, and paintings, in relation to their social, political, and cultural contexts. May not be taken satisfactory/unsatisfactory.
Prerequisites: AS.210.312
Area: Humanities.

AS.211.394. Brazilian Culture & Civilization. 3.0 Credits.
The course is taught in English. No knowledge of Portuguese is required. This course is intended as an introduction to the culture and civilization of Brazil. It is designed to provide students with basic information about Brazilian history, art, literature, popular culture, theater, cinema, and music. The course will focus on how indigenous Asian, African, and European cultural influences have interacted to create the new and unique civilization that is Brazil today. The course is taught in English, but ONE extra credit will be given to students who wish to do the course work in Portuguese. Those wishing to do the course work in English for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. The sections will be taught simultaneously. Section 01: 3 credits Section 02: 4 credits (instructor’s permission required)
Instructor(s): F. De Azeredo Cerqueira
Area: Humanities
Writing Intensive.

AS.211.401. La France Contemporaine. 3.0 Credits.
Students will explore contemporary French society and culture through a wide variety of media: fiction and non-fiction readings (graphic novels, news periodicals, popular magazines), films, music, art, websites, and podcasts. A diverse range of hands-on activities in addition to guided readings will help students develop cultural awareness as we discuss topics such as education, politics, humor, sports, cuisine, immigration, slang, and national identity, as well as the historical factors that have influenced these facets of French and francophone culture. Recommended Course Background: AS.210.301 or AS.210.302 or permission of instructor.
Instructor(s): A. Wuensch
Area: Humanities.
AS.212.341. Power and Resistance: Approaches to French Political Thought.. 3.0 Credits.
Even as a coherent, rational conception of state power emerged in France in as early as the Renaissance, French thinkers never stopped challenging the ways by which power justified itself in order to foster obedience and consensus. In so doing, they focused critically as much on the claims of sovereignty issuing from the top as on the willingness of the governed to submit to them. The course will examine the dialectic between the legitimation and delegitimation of power, from the Renaissance wars of religion to the Revolution and beyond: the haunting fear of the corruption and death of the political body; the notion of permanent crisis; the right to revoke the social contract; the reach of power in shaping minds and bodies. Readings may include works by La Boétie, Bodin, Bayle, Rousseau, Sade, Saint-Just, Constant, Maistre, Tocqueville, Foucault, Lefort and Rancière. Readings and discussion in English.
Instructor(s): E. Russo; W. Anderson
Area: Humanities.

AS.212.353. La France Contemporaine. 3.0 Credits.
Students will explore contemporary French society and culture through a wide variety of media: fiction and non-fiction readings (graphic novels, news periodicals, popular magazines), films, music, art, websites, and podcasts. A diverse range of hands-on activities in addition to guided readings will help students develop cultural awareness as we discuss topics such as education, politics, humor, sports, cuisine, immigration, slang, and national identity, as well as the historical factors that have influenced these facets of French and francophone culture. Recommended Course Background: AS.210.301 or AS.210.302 or permission of instructor.
Prerequisites: Students may not have taken AS.211.401.
Instructor(s): A. Wuensch
Area: Humanities.

AS.212.431. Style, Gender and Politics from Marie-Antoinette to the Burqini. 3.0 Credits.
From effeminate kings, to slutty queens, to post-revolutionary dandies, to the manifest invisibility adopted by some French citizens today, debates on the gendering and styling of political bodies have always been central to power struggles in France. Students will read from sociology, history and literature in order to understand the complex interplay among fashion, gender and political identity. Taught in English, but French minor/major credit possible by completing written work in French and by attending a weekly discussion section conducted in French. Students interested in the 4-credit French option should enroll in section 2. All others should enroll in section 1. Special Notes: This course is meant to be a small class experience. Enrollment limits will be strictly enforced.
Instructor(s): E. Russo
Area: Humanities.

AS.213.104. Freshman Seminar: Weimar on the Pacific: German Exile Culture in the United States. 3.0 Credits.
Freshmen seminar. After Hitler’s seizure of power in 1933, the number of artists and intellectuals who fled the Nazi regime soon rose into the thousands. Many of these German expatriates ultimately settled in the United States (e.g. Los Angeles, New York), where, simultaneously attracted and alienated by their new surroundings, they made a significant impact on American culture. The seminar will explore German Exile Culture in the U.S. in its broad variety spanning a spectrum from film to architecture, literature, and philosophy. Based on the aesthetic and conceptual specificities of the artifacts, class discussions will focus on the relations between art and politics, modernist and mass culture, art and capitalism, culture and democracy. The seminar will close with a look at postwar America and the McCarthy era, when European emigrants became the target of suspicion as left-wing intellectuals.
Instructor(s): A. Krauss
Area: Humanities.

AS.213.265. Panorama of German Thought. 3.0 Credits.
German thought is a broad intellectual tradition that encompasses works in an astonishing number of fields including philosophy, aesthetics, sociology, epistemology, psychology, anthropology, history, religious studies, and cultural analysis. The most prominent representatives of this tradition include Luther, Leibniz, Kant, Hegel, Nietzsche, Marx, Adorno, Arendt, Heidegger, and Luhmann. Indeed, current approaches to understanding cultural, historical, and social phenomena as well as literary and artistic forms would not have been possible without the German intellectual tradition which, beginning with the Enlightenment, emphasized the role of the subject in constituting objects of knowledge and experience. This survey course will highlight important topics in German Thought, which may include the subject, consciousness and unconsciousness, Bildung and the idea of the university, the sublime and the uncanny, irony, hermeneutics and translation, the desire for knowledge, tragedy and repetition, civilization, symbolic forms and medial reproduction, memory, and authority in a historical scope. Taught in English.
Instructor(s): R. Tobias
Area: Humanities.

AS.213.270. Die Erfindung der Moderne. 3.0 Credits.
Taught in German. An introduction to key conceptions of modernity elaborated in the German-language cultural context. We consider the rise of historical awareness and the question of whether history has a purpose, modernity’s difference from ancient and medieval times, secularization and the crisis of meaning, the role of intellectual reflection and subjectivity, the relation between cultural production, political power, and economic processes. Excerpts in the original German from works by Kant, Schiller, Novalis, Hegel, Heine, Marx, Nietzsche, Weber, Benjamin, Heidegger
Prerequisites: AS.210.362 or placement exam.
Instructor(s): M. Dornbach
Area: Humanities.
International Studies

AS.213.305. Contemporary German Film. 3.0 Credits.
After almost a quarter century of neglect, German cinema is on the map again. The many awards German films have been granted over the last 15 years speak to the renaissance of German Cinema since 2000. Among these movies are Florian Henckel von Donnersmarcks The Lives of Others (Academy Award for Best Foreign Language Film, 2006), Caroline Link’s Nowhere in Africa (Academy Award for Best Foreign Language Film, 2002), Fatih Akin’s Head-On (Golden Bear at the Berlin International Film Festival, 2004; European Film Award 2004), Oliver Hirschbiegel’s Downfall (nominated for Academy Award for Best Foreign Language Film, 2004) or Wolfgang Becker’s Goodbye, Lenin! (European Film Award, 2003). Nazi Germany, the Stasi, or the Reunification are prominent topics of this internationally acclaimed Contemporary German Cinema. Parallel to these mainstream productions, an aesthetically far more adventurous cinema has developed known as “Berlin School” or “Nouvelle Vague Allemande”. Directors associated with the Berlin School are Christian Petzold, Angela Schanelec, Christoph Hochhäusler or Valeska Grisebach.
Dissecting the everyday reality of post-wall Germany, this ‘counter-cinema’ draws on the New German Cinema of the 1970s (among others) to develop radical notions of realism and challenge narrative conventions. This course will give a survey on German Film since 2000 – discussing the historical and cultural context of selected movies as well as analyzing aesthetic strategies and concepts of realism in Contemporary German Cinema. Taught in German.
Instructor(s): E. Strowick
Area: Humanities.

AS.213.322. Museums and Jews, Jews in Museums. 3.0 Credits.
This course will examine the presence of Jews in museums. We will consider the history of the exhibition and collection of Jewish material culture in museums from the 19th century to the present day. Our main task will be to identify the various museological traditions that engage Jewish identity, including the collection of art and antiquities, ethnographic exhibitions, history museums, and Holocaust museums. Some of the questions we will ask include: how do museums shape identity? what is the relationship between the scholarly premises of many museums and their popular reception? and, centrally, what is the relationship between Jewish museums and museums of the Holocaust?
Instructor(s): S. Spinner
Area: Humanities.

AS.213.387. Major City, Minor Literature? Berlin in German-Jewish and Yiddish Literature. 3.0 Credits.
Between the two World Wars, a period of intense artistic and intellectual vitality, Berlin was an international center for theater, visual arts, and literature. Many important Yiddish-language writers were drawn to Berlin and, together with their German-language counterparts, produced a body of literature that explores issues of modernity and identity. By comparing works in Yiddish and German, we will learn about inter-War Berlin’s cultural diversity and richness, while also gaining insight into the particular issues of writing about Jewish identity in the 1920s, and the implications of writing in a minor language (Yiddish). We will read works by authors including Joseph Roth and Alfred Döblin in German, and Moyshe Kulbak and David Bergelson in Yiddish. All texts will be in translation. Some questions we will explore include: • What is a minority/minor language or literature? • How did German and Yiddish interact in cultural and social spheres? • Can texts in different languages comprise a single body of literature? • What did it mean to be German and what did it mean to be Jewish? • Are assimilation and hybridity useful concepts? • Is there such a thing as Jewish modernism? • How did literature of the period respond to the rise of the Nazi party and the intensification of antisemitism?
Instructor(s): S. Spinner
Area: Humanities.

AS.214.321. The Prince and the Demagogue: Machiavelli to House of Cards. 3.0 Credits.
Niccolò Machiavelli’s The Prince is undoubtedly one of the most influential political works in the history of western culture. Read and discussed in many ways, the early-sixteenth-century booklet has been the object of controversial interpretations, which have fueled its myth. Who is Machiavelli’s prince? Is he a tyrant, a good ruler, or a demagogue? How does Machiavelli’s prince move between ethics, politics, and rhetoric? Often evoked in contemporary political discourse and popular culture, Machiavelli’s prince embodies a flexible idea of power that is most difficult to pin down. Moving from a close reading of the text within its original context, this course will consider not only the classical sources that inform The Prince, but also the presence of Machiavelli in today’s political culture and fiction. Special attention will be given to the contribution of Italian philosopher Antonio Gramsci, whose interpretation of Machiavelli’s thought is one of gateways to the reception of The Prince in the 20th and 21st centuries. The course is taught in English. Italian Majors and Minors should register for section 02.
Instructor(s): E. Refini
Area: Humanities
Writing Intensive.
Our online shopping habits and political Facebook posts are being monitored by Google's administration as well as by governments across the globe. If we think this is harmless, it is because we assume that the era of the first Apple Watch is different from the era of the first Gutenberg press. But is this really the case? In this course, we will explore this issue by focusing on the emergence of the first institutionalized censorship during a foundational period of modern times – the Renaissance. After addressing the reasons that motivated the creation of the first Index of Prohibited Books (1559), we will closely examine some of the most controversial works by Renaissance authors who were persecuted and banned for their religious, political, or scientific ideas (Erasmus of Rotterdam, Niccolò Machiavelli, Torquato Tasso, Galileo Galilei). The analysis of these texts will allow us to gain an understanding of both the dynamics of censorship and self-censorship in the Renaissance, and the logic behind power's obsession with cultural control – in those times like nowadays.

AS.214.362. Italian Journeys: Medieval and Early Modern. 3.0 Credits.
Italy's history as a unified country is fairly recent, but the very idea of "Italy" is a very old one. Indeed, many "Italies" have existed throughout the centuries, thus contributing - not without conflicts - to one of the richest cultures in the world. By exploring texts and topics from the Middle Ages to modernity, this course will address the cultural history and geography of Italy, focusing on both its centers (Rome, Florence, Venice, etc.) and its peripheries. A veritable journey through Italy, the course will address authors that were fundamental to the development of the Western European tradition (e.g. Dante, Petrarch, Boccaccio, Machiavelli, Ariosto, Tasso). The course will also explore the relationship between these works and other forms of culture, such as painting, music, cinema. The course is taught in English with section 02 available for Italian for Italian Majors and Minors so that the course will count towards their requirements.
Area: Humanities
Writing Intensive.

AS.215.315. Literature of the Great Recession. 3.0 Credits.
The Great Recession—sometimes called the financial crisis or the economic crisis of 2008—brought financial markets to a halt and created significant political turmoil across the North Atlantic. But its impact on culture, and literature especially, has often been ignored. This seminar will travel across Europe, from Dublin to Madrid, from London to Reykjavik in order to examine how literature has registered this most recent economic crisis. We will focus on how crisis is narrated and the ways in which literary works have managed to provide a voice for marginalized social, economic, and political demands.
Instructor(s): B. Seguin
Area: Humanities.

The readings bring into consideration the question of terror (of war) and displacement as experienced by migrants in novels by prize winning authors such as Arguedas, Vargas Llosa, Alarcon, Riesco, Roncagio and Silva Passuni.

AS.215.380. Modern Latin American Culture. 3.0 Credits.
Taught in Spanish. This course will explore the fundamental aspects of Latin America culture from the formation of independent states through the present—in light of the social, political, and economic histories of the region. The course will offer a general survey of history of Latin America, and will discuss texts, movies, songs, pictures, and paintings, in relation to their social, political, and cultural contexts. May not be taken satisfactory/unsatisfactory.
Prerequisites: AS.210.312; Students may earn credit for AS.211.380 or AS.215.380, but not both.
Area: Humanities.

AS.215.404. Cuba Between Heresy and Revolution. 3.0 Credits.
We will examine the Stalinist and Leninist refashioned doctrines of Fidel Castro and Ernesto Che Guevara; Cuba's Devil's Pact with Obama; the decline to near breakdown of Cuba-Venezuela Alba dual nation Chavismo; and the startling implications that all of it poses to the rise of sham populism in America. We will press hard into the fabric of Cuba's battered daily lives, mostly in greater Havana, but also in Miami. Among others, the work of filmmaker Fernándo Pérez, the fiction of Leonardo Padura, and Mariel exodus artists will inform our discussions. Our shared hypothesis: that post-revolutionary national sovereignty, coupled with Cuban exile irredentism, may have engendered the island's dual nation status, tied to Miami's so-called Cuban enclave. As a result, a theologico-political confessional crisis continues into infinity in terms of plural and bipolar heresies supported by US electoral mapping and lobbying, and in some minds having Cuba become the Fifty-First US state.
Instructor(s): E. Gonzalez
Area: Humanities.

AS.215.412. Populism. 3.0 Credits.
What do Hugo Chávez, Marine Le Pen, and Donald Trump have in common? According to many from across the political spectrum, they are all populists. But what is populism, exactly, and how can it describe such disparate phenomena as left-wing social movements, xenophobic anti-immigrant policies, and economic redistribution? This advanced seminar will examine the history, culture, and political theory of populism. We will pay special attention to the resurgence of populism after the Great Recession and examine a number of cases from Latin America, Europe, and the United States.
Instructor(s): B. Seguin.

AS.215.646. The Narrative of Conquest in the Andes, 1530 - 1680.
Departing form narratology and the perspective of post-colonial studies, the course will analyze the narrative of conquest as developed by Cieza de Leon, Garcilaso de la Vega, Inca, Guaman Poma, Jose de Acosta and William Prescott.
Instructor(s): S. Castro-Klaren.
AS.216.307. Reflective Mirrors: Israeli and Palestinian Cinema. 3.0 Credits.
Palestinian and Israeli cinemas have emerged side by side, each depicting its Other as a deceiving mirror of its own self. This course will analyze the different images of these Others in both cinemas.
Instructor(s): N. Stahl; Z. Cohen
Area: Humanities
Writing Intensive.

AS.216.342. The Holocaust in Israeli Society and Culture. 3.0 Credits.
This course examines the role of the Holocaust in Israeli society and culture. We will study the emergence of the discourse of the Holocaust in Israel and its development throughout the years. Through focusing on literary, artistic and cinematic responses to the Holocaust, we will analyze the impact of its memory on the nation, its politics and its self-perception.
Instructor(s): N. Stahl
Area: Humanities
Writing Intensive.

AS.216.370. Israel Through Prose. 3.0 Credits.
This course examines representations of various aspects of Israeli society and culture in contemporary Israeli prose. The course will follow both a thematic and chronological path in order to study the ways in which Israeli prose reflects political, ideological, social and cultural aspects of contemporary Israel. In this context, we will read works by several major authors such as: Agnon, Shabtai, Kahanah-Carmon, Oz, Kenaz, Yehoshua, Grossman, Castel-Bloom, Matalon, Laor, Kashua and Hoffmann. Students who sign up for section 2 will work an additional hour in Hebrew with Professor Cohen at a time mutually agreed upon by the professor and the students enrolled.-Carmon, Oz, Kenaz, Yehoshua, Grossman, Castel-Bloom, Matalon, Laor, Kashua and Hoffmann.
Instructor(s): N. Stahl; Z. Cohen
Area: Humanities
Writing Intensive.

AS.216.373. War in Israeli Arts and Culture. 3.0 Credits.
In this course we will study the various representations of what functions as one of Israel's most unifying and yet dividing forces: war. By analyzing literary and cinematic works as well as visual art and popular culture we will attempt to understand the role of war in shaping Israeli society, culture and politics. Topics such as commemoration and mourning, heroism, dissent and protest, trauma and memory and the changing image of the soldier will stand at the center of the course.
Instructor(s): N. Stahl; Z. Cohen
Area: Humanities.

AS.230.143. Global Migration: Refugees, Economic Migrants, and Borders. 3.0 Credits.
This course introduces students to the different forms, catalysts, and consequences of global migration. Even as the plight of migrants and refugees has elicited the sympathy of millions worldwide, the majority of them still encounter closed borders and draconian immigration regimes on the fringes of more "desirable" destinations in Europe, Australia, and the United States, and many others remain in limbo in their countries of origin or in transit states. Are these border restrictions new? Or are they consistent with states' long-standing ways of regulating who is and is not worthy of being admitted through their borders? Throughout the course, we will trace the divergent factors that prompt refugees and economic migrants to migrate, juxtaposing these with the responses of states, international treaties, and humanitarian organizations to their movement and arrival in host countries. Using a variety of written and verbal assignments, we will question the fundamental categories of migration: What is an economic migrant? What is a refugee? How are they different or similar? Whose interests do such categories serve, and how have they been used to justify governmental practices of inclusion and exclusion over time?
Instructor(s): I. Naveh Benjamin
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.147. Introduction to Islam Since 1800. 3.0 Credits.
This course is an introduction to contemporary Islam and Muslim societies from approximately 1800 to the present. Key themes will include the colonial encounter, state formation and reform, revolution, Islamic revival, and globalization. Reflecting Islam's status as a world religion, the course will touch on developments around the Muslim-majority world and in the West.
Instructor(s): R. Calder
Area: Social and Behavioral Sciences.

AS.230.150. Issues in International Development. 3.0 Credits.
Why do billions of people continue to live in poverty? What obstacles stand in the way of secure and dignified lives for all? Who is most likely to bring about change, what strategies should they follow, and what kinds of institutions should they put in place? This course will introduce the main theoretical perspectives, debates, and themes in the field of international development since the mid-20th century. It has three sections. The first section focuses on debates over the optimal conditions and strategies for generating economic growth and on the relationship between growth, human welfare, and inequality. The second section presents critical assessments of development interventions from various perspectives. The third section considers the role of social movements in shaping development and social change in the 21st century.
Instructor(s): M. Levien
Area: Social and Behavioral Sciences.
AS.230.166. Chinese Migration in Modern World History 1500's-2000's. 3.0 Credits.
This interdisciplinary course applies theories of economic sociology to examine the effects of Chinese overseas migration on modern world economy from the sixteenth century to the contemporary era. It examines the contribution of overseas Chinese to the development of capitalism in the following junctures: the East-West economic integration in the pre-modern era, China's modern transformation after the Opium War (1839-1842), the making of US national economy in the early twentieth century, as well as the postwar economic miracles in the Pacific Rim, among others. Special Note: Fulfills History requirement for GSCD track students.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences

AS.230.175. Chinese Revolutions. 3.0 Credits.
This course introduces the origins, operation and impacts of five major revolutions in modern China between 1850 and 1950. These include the Taiping Rebellion, the republican revolutions, federalist and southern automatic movements, labor strikes as well as peasant rebellions. It draws on the existing historiography that examines China's transition from an empire to a republic, impacts of western and Japanese influences to China, as well as the continuity and change of Chinese social organizations. Cross list with International Studies and East Asian Studies. Fulfills IS History requirement.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences

AS.230.213. Social Theory. 3.0 Credits.
This course will focus on three classical theorists whose ideas have greatly influenced the ways we study and understand society: Karl Marx, Max Weber, and Emile Durkheim. The course is devoted to understanding how each theorist understood the origin, structure and historical dynamics of modern societies. In addition to comparing their theories, we will apply them to current social issues.
Instructor(s): J. Andreas
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.221. Global Social Change. 3.0 Credits.
This course introduces students to issues of global social change, with a particular focus on the challenges of international development and the contemporary globalization process. Specific themes include world income inequality and global poverty, the rise of supranational organizations (e.g. WTO and EU) and their relations with sovereign states, anti-globalization activism, the rise of China and India in the global economy, and the origins as well as consequences of the current global economic crisis, among others. Lectures will be aided by documentary films and other multi-media materials. Special Note: Fulfills Economics requirement for IS GSCD track students only. Formerly offered as AS 230.353. Students who took AS.230.353 cannot take AS.230.221.
Instructor(s): H. Hung
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.222. Land, Labor, Environmental Rights and Struggles in Contemporary Africa. 3.0 Credits.
The course examines the new wave of social protest and popular uprisings in contemporary Africa through the interconnected themes of land, labor and environmental struggles. Attention will be placed on the early 21st century.
Instructor(s): R. Jacobs
Area: Social and Behavioral Sciences

AS.230.223. Housing and Homelessness in the United States. 3.0 Credits.
This course will examine the role of housing, or the absence thereof, in shaping quality of life. It will explore the consequences of the places in which we live and how we are housed. Consideration will be given to overcrowding, affordability, accessibility, and past and existing housing policies and their influence on society. Special attention will be given to the problem of homelessness.
Instructor(s): M. Greif
Area: Social and Behavioral Sciences

AS.230.228. Colonialism in Asia and Its Contested Legacies. 3.0 Credits.
This course surveys the impacts of colonialism in East and Southeast Asia. Special attention will be paid to the social and economic development in British Singapore and Hong Kong as well as Japanese Korea and Taiwan. Topics include free-trade imperialism, colonial modernity, anticolonial movements, pan-Asianism, and post-war U.S. hegemony.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.244. Race and Ethnicity in American Society. 3.0 Credits.
Race and ethnicity have played a prominent role in American society and continue to do so, as demonstrated by interracial and interethnic gaps in economic and educational achievement, residence, political power, family structure, crime, and health. Using a sociological framework, we will explore the historical significance of race and its development as a social construction, assess the causes and consequences of intergroup inequalities and explore potential solutions.
Instructor(s): M. Greif
Area: Social and Behavioral Sciences

AS.230.255. Men and Women in Society. 3.0 Credits.
This course will explore the historical significance of race and its development as a social construction, assess the causes and consequences of intergroup inequalities and explore potential solutions.
Instructor(s): M. Greif
Area: Social and Behavioral Sciences

AS.230.265. Research Tools for Global Sociology and Development. 3.0 Credits.
This course will introduce students to a range of software programs that are critical for conducting social scientific research in the 21st century. Students will develop competency in the use of computer programs for statistical analysis, database management, the creation of maps and timelines, and the presentation of research reports. The course uses examples from ongoing social science faculty research projects at Johns Hopkins on global inequality and international development. Required for GSCD track students. Course previously titled "Research Tools and Technologies for the Social Sciences"
Instructor(s): M. Kang
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.
AS.230.275. Revolution, Reform and Social Inequality in China. 3.0 Credits.
This course explores various aspects of social inequality in China during the Mao Zedong and the post-Mao reform eras. We will examine inequality within villages, the rural/urban divide, urban inequality, education and health policies, and gender and ethnic inequality. Each of these issue areas will be tackled analytically, but the aim is also to understand what it was/is like to live in China during and after the Mao era. Formerly offered as AS.230.321.
Instructor(s): J. Andreas
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.285. Maritime East Asia. 3.0 Credits.
This course examines the transnational connections among merchants and migrants in the waters of East and Southeast Asia from a historical and comparative perspective. We will explore how diplomatic ties, long-distance trade and migration contributed to the making of cosmopolitan cities such as Quanzhou (Zayton), Malacca, Fort Zeelandia (Formosa), Batavia, Manila, Singapore and Hong Kong in the region from the tenth century onwards. The course will close with an examination of how the transnational connections are relevant to understand interstate competition in Asia’s long twentieth century. Key subjects to be introduced include tribute trade system, trading diasporas, Euro-Chinese co-colonialism, pan-Asianism, as well as history and historiography of maritime silk road.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.316. African American Family. 3.0 Credits.
This course is an examination of sociological theories and studies of African-American families and an overview of the major issues confronting African-American family life. The contemporary conditions of black families are explored, as well as the historical events that have influenced the family patterns we currently observe. Special attention will be given to social policies that have evolved as a result of the prominence of any one perspective at a given point in time.
Instructor(s): K. McDonald
Area: Social and Behavioral Sciences

AS.230.324. Gender and International Development. 3.0 Credits.
This course employs a comparative perspective to examine the gendered impact of international development theories and policies. Students will discuss the historical evolution of how the concept of gender has been constructed, conceptualized, and integrated into international development theory and practice. The course will also examine how greater international development. In particular, we will examine structural theories of poverty reduction, individual theories of power and processes of stratification at the household and family level. Specific issue areas will include the globalization, class and work political participation and social movements. Cross-listed with International Studies (CR IR). Fulfills Economics requirement for IS GSCD track students only.
Instructor(s): R. Agarwala
Area: Social and Behavioral Sciences.

AS.230.325. Global Social Change and Development Practicum. 3.0 Credits.
This course provides "hands on" research experience in the field of global social change and development. Students will participate in a collaborative research project analyzing the causes and consequences of the recent upsurge of protest around the world in comparison with previous historical waves of social unrest. The course fulfills the "research practicum" requirement for Sociology majors and is required for the GSCD track.
Prerequisites: AS.230.265 or permission of instructor.
Instructor(s): B. Silver; S. Karatasli
Area: Social and Behavioral Sciences.

AS.230.332. Race, Racism & Racial Privilege. 3.0 Credits.
This course will examine the concepts of race, racism, racial privilege in contemporary America, and the West in general. Examples from other countries will be integrated as well. Historical contexts such as the colonialism, the Civil War and Reconstruction, the Civil Rights movement, and the post Civil Rights era will help to provide an understanding of the social, political, economic, and cultural forces processes that have constructed and shaped the concepts of race and the racialized subject over time.
Instructor(s): K. McDonald
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.335. Medical Humanitarianism. 3.0 Credits.
Humanitarian organizations play life-preserving roles in global conflicts, and have front-row views of disasters ranging from the 2010 Haiti earthquake to the 2011 Fukushima tsunami in Japan. Yet even while they provide vital assistance to millions of people in crisis, such organizations are beset by important paradoxes that hinder their capacity to create sustainable interventions. They work to fill long-lasting needs, but are prone to moving quickly from one site to the next in search of the latest emergency. They strive to be apolitical, yet are invariably influenced by the geopolitical agendas of global powers. How do such contradictions arise, and what is their impact upon millions of aid recipients around the world? Drawing on case studies from South Sudan to Haiti, this course addresses these contradictions by exploring how and why medical aid organizations attempt, and sometimes fail, to reconcile short-term goals, such as immediate life-saving, with long-term missions, such as public health programs and conflict resolution initiatives.
Instructor(s): I. Naveh Benjamin
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.336. Family, Gender and Sexuality in China. 3.0 Credits.
This course examines social changes in China since the beginning of the People's Republic (1949) through the lenses of family, gender and sexuality. The first half of the course focuses on understanding family institutions, women's status, gender relations and sexualities in connection with major historical transitions between 1949 and the present. The second half includes readings and discussions around several thematic topics regarding family, gender and sexuality in contemporary China in the broader context of politics, economy, and social norms.
Instructor(s): Y. Dong
Area: Social and Behavioral Sciences
Writing Intensive.
AS.230.343. Political Sociology of Latin America. 3.0 Credits.
This course provides an overview of Latin America through its historical, economic, social, and political dimensions. Emphasis will be given to the analysis of social structures: class, race and ethnicity, and the contemporary social movements. The course begins with an overview of the pre-Columbian civilizations and colonial legacies that gave rise to the multiethnic societies and the ethnic conflicts which characterize contemporary Latin America. Cross-listed with Program in Latin American Studies and International Studies (CP)
Instructor(s): M. von der Heydt-Coca
Area: Social and Behavioral Sciences.

AS.230.346. Economic Sociology of Latin America. 3.0 Credits.
This course will offer an overview of Latin America's economic reality as an intertwined process of economic and political domestic factors within the constraints of the world economy. Latin American development will be analyzed from a historical perspective. The first half of the semester the course will focus on the analysis of the economic developmental patterns starting in the middle of the 19th century to the populist era in the middle of the 20th century. In the second half of the semester, we will analyze in depth the contemporary neoliberal approach to development. Globalization is the force that drives economic, social and political processes in Latin America. The course will include case studies as well as the social conflicts generated by the increasing polarization of the society. Students will be exposed to important sociological theories.
Instructor(s): M. von der Heydt-Coca
Area: Social and Behavioral Sciences.

AS.230.351. Capitalism, Development and Resistance in South Korea. 3.0 Credits.
This course examines the trajectory of capitalist development in South Korea (hereafter, Korea) in the twentieth and the early twenty-first centuries. We will examine debates around the political economy of development in Korea as well as class formation and social and labor protest. This course is designed to help students explore the dynamics of capitalist development and workers' movements in Korea as a case of late development in the global South. The course also draws on theoretical perspectives and methodological tools from comparative and world-historical sociology to better understand the Korean case.
Instructor(s): M. Kang
Area: Social and Behavioral Sciences.

AS.230.352. Chinese Diaspora: Networks and Identity. 3.0 Credits.
This course combines lecture and class discussion. It examines the history and historiography of Chinese overseas migration. Major issues include overseas Chinese as "merchants without empire," Chinese exclusion acts in the age of mass migration, the "Chinese question" in postcolonial Southeast Asia, as well as the making and unmaking of Chinese identity in the current wave of globalization.
Prerequisites: Students may not have completed AS.230.217 previously.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences.

AS.230.353. Political Sociology of Latin America. 3.0 Credits.
This course provides an overview of Latin America through its historical, economic, social, and political dimensions. Emphasis will be given to the analysis of social structures: class, race and ethnicity, and the contemporary social movements. The course begins with an overview of the pre-Columbian civilizations and colonial legacies that gave rise to the multiethnic societies and the ethnic conflicts which characterize contemporary Latin America. Cross-listed with Program in Latin American Studies and International Studies (CP)
Instructor(s): M. von der Heydt-Coca
Area: Social and Behavioral Sciences.

AS.230.361. Class and Culture. 3.0 Credits.
This course examines the intersection of social class and culture—both the popular culture of movies, TV, music, etc, and "culture" in the anthropological sense as the shared way of life of a people. The course is divided into three main sections: 1) concepts of class, culture and the ways in which they interact; 2) cultures of each major class within American society, beginning with the "Old" and "New Money" classes, the "New Class" of intelligentsia, the much-invoked Middle Classes, the shrinking Working Class, and continuing through the poverty-stricken Lower Classes; 3) issues of cultural consumption and production and their role in reproducing the class structure.
Instructor(s): T. Nelson
Area: Social and Behavioral Sciences.

AS.230.362. Migration & Development. 3.0 Credits.
This course focuses on the relationship between international migration and development. The course first introduces theories of international migration, immigrant integration, and international development. Building on this foundation, we then examine how immigrants interact with their homeland and how sending country governments tap their diaspora to improve development outcomes. Cross-listed with International Studies (CP, IR).
Instructor(s): L. Hao; R. Agarwala
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.363. Sociology of Dispossession. 3.0 Credits.
The "grabbing" of land and natural resources has, in recent years, generated widespread political conflict across the world and put dispossession on the agenda of academics and policy-makers. Nevertheless, compared to other social relations of power, land dispossession has not been central to scholarly or public understandings of capitalism, the state, development, or politics. In this class, we will collectively explore the nascent field that we might call the sociology of dispossession. We will examine existing theories of dispossession, and proceed to challenge, reconstruct or supplant those theories as we consider a wide range of historical examples of dispossession from the English Enclosures and colonial plunder to contemporary urban redevelopment and rural land grabs. This is a reading- and writing-intensive seminar.
Instructor(s): M. Levien
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.364. Ethnic Violence in Comparative and Global Perspective. 3.0 Credits.
This course provides a framework for understanding and analyzing different forms of ethnic violence including ethnic riots, ethnic wars, and genocides around the world. Beginning with foundational texts on defining ethnic groups, we will examine causes and dynamics of ethnic mobilization and violence from different disciplines and perspectives. Throughout the course, we will explore texts that treat key themes in studies of ethnic violence including globalization, economic development, inequality, dismantling of the developmental state, migration, state formation and failure, conflict resolution, and democratization; focusing on various cases of ethnic violence in different regions including Eastern Europe, Basque Region, Turkey, Sudan, India, Sri Lanka, China, and historical cases like Northern Ireland. Fulfills Non-Western History (NWHIST) requirement for IS GSCD track students only.
Instructor(s): S. Kumral
Area: Social and Behavioral Sciences.
AS.230.367. Islamic Finance. 3.0 Credits.
Today, Islamic finance is a global industry comprising nearly $2 trillion in assets, with hubs from Kuala Lumpur to Dubai to London. But half a century ago, nothing called “Islamic finance” existed. So where did Islamic finance come from? Why is it growing so fast? And what does it mean for finance to be Islamic? We discuss the ban on riba in the Quran and hadith, finance in early and medieval Islamic societies, petrodollars and the birth of Islamic banking in the 1970s, the rise of Islamic capital markets since 2000, contemporary shariah-compliant financial structures, and the constitution of piety through financial practice.
Instructor(s): R. Kuo
Area: Social and Behavioral Sciences.

AS.230.369. Sociology in Economic Life. 3.0 Credits.
This course discusses how geopolitics, technology as well as social differentiation (such as race, class and gender) shape the structure of economic actions. Special attention will be paid to patterns of state-business relationship, labor processes, migrant economy, globalization and international division of labor.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences.

AS.230.370. Housing and Homelessness in the United States. 3.0 Credits.
This course will examine the role of housing, or the absence thereof, in shaping quality of life. It will explore the consequences of the places in which we live and how we are housed. Consideration will be given to overcrowding, affordability, accessibility, and past and existing housing policies and their influence on society. Special attention will be given to the problem of homelessness.
Prerequisites: Students may not have previously taken AS.230.223.
Instructor(s): M. Greif
Area: Social and Behavioral Sciences.

AS.230.375. Nations, States, and Boundaries. 3.0 Credits.
This course explores the historical origins and development of the modern global political order based on sovereign nation-states, the crisis of this order through the twentieth century, as well as the unraveling of this order at the turn of the twenty-first century. We will focus on how dominant political organizations in the changing world order (such as states, political parties, and transnational governing bodies) have been shaped by different social forces (such as classes and ethnic groups) and vice versa. Topics covered include rise and fall of modern nationalism, formation of regional and global governing structures, “civilizational” turn of global politics, waves of separatism and redrawing of nation’s boundaries after the Cold War, politics of immigration and citizenship, among others.
Instructor(s): H. Hung
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.377. Colonialism and Anti-Colonialism. 3.0 Credits.
This seminar examines the theories and historiography of colonialism and anti-colonial movements. It focuses on the establishment of the colonial division of labor, comparative colonialism, identity formation, and nationalism as well as anti-colonial movement.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences.

AS.230.378. Refugees, Human Rights, and Sovereignty. 3.0 Credits.
What is a refugee? Since World War II, states that have pledged to offer protection to refugees have frequently been drawn instead to the dictates of nationalism and communitarianism, which prioritize concern for their own citizens, rather than to the needs of forced migrants. As a result, even those migrants that have been formally recognized as refugees according to the 1951 UN Refugee Convention have not been assured of protection, and other migrants have been even less assured. In this course, we will locate the reasons for this reality in the legal, political, and historical underpinnings of political asylum. What is the difference between an asylum seeker and a refugee? How has the refugee category been redefined and contested by international bodies since 1951? How are the ambiguities of real-life violence and persecution simplified in asylum adjudication interviews that require clear, factual narratives? What kinds of protections are offered to asylum seekers, whether by UN bodies, NGOs, or host governments, and how have such protections varied geographically and historically? Finally, what protections, if any, are afforded to those migrants who are fleeing not persecution but rather “merely” endemic poverty or climate-induced displacement? The course draws on literature from sociology, history, anthropology, and international refugee law in order to understand the capacity (or lack thereof) of human rights discourses and declarations to contravene state sovereignty in the name of protecting the rightsless.
Instructor(s): I. Naveh Benjamin
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.381. Sociology of the Middle East and North Africa. 3.0 Credits.
This course takes a sociological approach to the contemporary Middle East and North Africa. Topics include urbanization and demographic change; rentier welfare states and the global political economy of oil; women in higher education and the labor force; the 2011 Arab Spring; conflict in Syria, Libya, and Yemen; Amazigh (Berber) identity in northwest Africa; Israel-Palestine; “Dubai, Inc.” and the sociology of migrant labor; neoliberal Islamic politics in Turkey; cinema and everyday life in Iran; conservative monarchy in Morocco and Saudi Arabia; and the role of the United States in the MENA region. Students will give presentations, write memos, and submit two papers. One aim of the course is to turn students into clear, polished academic writers and thinkers.
Instructor(s): R. Calder
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.382. Revolution, Reform and Resistance: India in World Historical Perspective. 3.0 Credits.
This course examines periods of revolutionary upheavals, reforms, and different forms of resistance in India during the 20th century and analyzes their world-historical implications.
Instructor(s): S. Upadhyay
Area: Social and Behavioral Sciences
Writing Intensive.
AS.230.383. Courts, Housing, and the City: A Research Seminar on Social Justice in Baltimore. 3.0 Credits.
This course will join an existing survey of the Housing Court in Baltimore City by the Public Justice Center (PJC) of Maryland to examine the role and process of evictions in the Baltimore civil litigation system. The course will examine the history of housing in Baltimore and the changing role of the courts in housing rights and law from the mid-20th century to the present. Working with the PJC’s Human Right to Housing Project, students will be expected to participate in the survey collection process by attending Rent Court and participating in the data collection process, followed by cleaning and analysis of the data. Counts as American Politics/Sociology of the United States for GSCD Track.
Prerequisites: AS.230.205 AND AS.230.265 or permission of instructor
Instructor(s): D. Pasciuti
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.230.385. Schooling, Racial Inequality and Public Policy in America. 3.0 Credits.
After examining alternative explanations for why individuals obtain different amounts and types of educational training, the course focuses on how an individual’s family background and race affect his or her trajectory through the educational system. The course covers the specific challenges that have confronted urban schooling in America since the 1960s, including the classic literature on the effects of school and community resources on student achievement as well as the development and later evaluation of school desegregation policies. The course also considers case studies of current policy debates in the US, such as housing segregation and school resegregation, voucher programs for school choice, and the motivation for and consequences of the establishment of state-mandated testing requirements. Throughout the course, emphasis is placed upon the alternative modes of inquiry and writing which opposing scholars, policymakers, and journalists use to address these contentious topics.
Instructor(s): S. Morgan
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.393. Global Health and Human Rights. 3.0 Credits.
Is access to healthcare a fundamental human right? If so, then which global actors are obligated to provide healthcare to whom, and for how long? How do meanings of health and illness vary across time and place? And finally, how are human rights principles translated into frontline practice in order to promote well-being? This course takes a critical interdisciplinary approach to these questions through a series of global case studies ranging from humanitarian aid in post-tsunami Sri Lanka to anti-FGM (female genital mutilation) campaigns in Ghana. How do international NGOs, UN bodies, and governments collaborate (or compete) to distribute healthcare in places beset by dire resource shortages? Do human rights principles carry legal weight across borders, and if so, could access to healthcare services and essential medicines be litigated in order to compel governments to provide it? And finally, what cultural assumptions do human rights discourses carry with them, and what happens if rights-based approaches are poorly received by recipient populations? Moving beyond the basic principle of healthcare as a human right, this course aims to bring this idea’s history and politics into focus by offering an in-depth exploration of its ethics and implementation.
Instructor(s): I. Naveh Benjamin
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.395. Contemporary Social Theory. 3.0 Credits.
This course will examine how major social theorists of the 20th century advanced upon the “classical” social theories of Marx, Weber, and Durkheim. As they grappled with the historical events and social concerns of the 20th century—the Russian revolution and its degeneration into Stalinism, the failure of communist movements in the West, the rise and fall of fascism and Nazism, the consolidation of capitalist democracies and welfare states, the emergence of anti-colonial movements in the “Third World,” and the persistence of race, gender and sexuality as forms of domination—social theorists provided novel answers to classical questions of social theory: 1) what is the structure of modern society, how does it change, and how is it reproduced?; 2) what is the relation between social structures and ideas, knowledge, and subjectivity?; and 3) what are the conditions of possibility for human freedom? Theorists to be covered include Antonio Gramsci, Franz Fanon, W.E.B. DuBois, Georg Lukacs, Talcott Parsons, Herbert Marcuse, Jürgen Habermas, Louis Althusser, Pierre Bourdieu, Michel Foucault, Nancy Fraser, Patricia Hill Collins, Judith Butler, and Henri Lefebvre. In addition to understanding and comparing the theories, we will try to use them to understand contemporary societies.
Instructor(s): M. Levien
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.397. The Political Economy of Drugs and Drug Wars. 3.0 Credits.
In the United States, we spend more than $100 billion annually on illegal drugs—and the government spends more than $50 billion a year to combat their sale and use. These statistics raise important and complicated social questions. This course will examine the production, sale, use, and control of illegal drugs from a historical and sociological perspective. We will have three objectives: to understand the social construction of drug use and illegality in the United States and other rich countries; to uncover the political and economic consequences of drug trafficking in those countries that produce drugs, particularly in Latin America; and to examine the political economy of drug control through the so-called War on Drugs, both domestically and internationally.
Instructor(s): C. Thornton
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.415. Social Problems in Contemporary China. 3.0 Credits.
In this course we will examine contemporary Chinese society, looking at economic development, rural transformation, urbanization and migration, labor relations, changes in class structure and family organization, health care, environmental problems, governance, and popular protest. The course is designed for both graduate and undergraduate students. Undergraduates must have already completed a course about China at Hopkins. Cross-listed with East Asian Studies.
Instructor(s): J. Andreas
Area: Social and Behavioral Sciences
Writing Intensive.
AS.230.435. The China Boom. 3.0 Credits.
This course addresses the origins, global impacts, and demise of China’s economic ascendancy as a world economic and political powerhouse at the turn of the twenty-first century. The course will cover the historical origins of the China boom and impacts of the boom on global political economic order. It will also address the social-political imbalances within China that contribute to the global financial crisis and recent slowdown of the Chinese economy. Particular topics include late imperial and Maoist legacies’ relation to contemporary economic growth, stages of China’s capitalist development, China’s outward investment in the developing world, formation and limits of US-China economic symbiosis, and China’s participation in global governance, among others.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.440. Port Cities and Historical Capitalism in Maritime Asia. 3.0 Credits.
The goal of the seminar is to examine the prospects and limits of understanding the incorporation of Asia in the capitalist world-system from the prism of oceanic connections. The theoretical thrust of this course is to develop but also to adapt Janet Abu-Lughod emphasis on the connections across port cities and littoral in the Afro-Eurasian continents before the long sixteenth century in her Before European Hegemony. But instead of looking at a port city as its adjacent hinterland polity’s gateway to global trade in the premodern era, the course examines the multifarious coast-hinterland relationships. The readings are organized by a chronological order, which begins with the historical maritime silk road between the third and thirteenth centuries, and will be followed by Asian port cities in the European age of empire and postwar American-led Cold War Structure, as well as the present-day Chinese New Silk Road Diplomacy. Students are expected to select an issue of regional tensions and to analyze its historical root.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences.

AS.230.460. Research Seminar on Stratification in the Modern World Economy: 1600-2014. 3.0 Credits.
This course examines stratification in the modern world economy from the 16th century to today, covering classical and contemporary theoretical perspectives and empirical studies on the hierarchical structure of the capitalist world economy (including Baranko Milanovic, Thomas Piketty, Andre Gunder Frank, Giovanni Arrighi, Christopher Chase-Dunn, P. Korzeniewicz and T. Moran, W. W. Rostow). Students will be expected to recreate and extend these empirical studies and engage in a quantitative discussion of theories of global inequality and development. In doing so, we will discuss how methodological choices, research designs, choice of indicators and inequality measures affect the outcomes and conclusions of this research. Using this theoretical and empirical background, the course will engage key questions on the contemporary and historical conditions of world inequality such as: has world income inequality been increasing or decreasing over time? Do we see stability or change in the hierarchical structure of the capitalist world economy? What are the consequences for contemporary rise of China and recent global financial meltdown for world income inequality? What will stratification in the world economy look like in the 21st century? Counts as IR/Global Sociology or Economics/Economic Sociology for GSCD Track.
Prerequisites: AS.230.150 AND AS.230.265 or permission of instructor
Instructor(s): D. Pasciuti; S. Karatasli
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

Earth Planetary Sciences
AS.271.360. Climate Change: Science & Policy. 3.0 Credits.
Prereq: 270.103 or permission of instructor. This course will investigate the policy and scientific debate over global warming. It will review the current state of scientific knowledge about climate change, examine the potential impacts and implications of climate change, explore our options for responding to climate change, and discuss the present political debate over global warming.
Instructor(s): B. Zaitchik; D. Waugh
Area: Natural Sciences.

AS.271.401. Environmental Ethics. 3.0 Credits.
Environmental Ethics is a philosophical discipline that examines the moral relationship between humans and the natural environment. For individuals and societies, it can help structure our experience of nature, environmental problems, human-environmental relations, and ecological awareness. Beginning with a comprehensive analysis of their own values, students will explore complex ethical questions, philosophical paradigms and real-life case studies through readings, films and seminar discussions. Traditional ethical theories, including consequentialism, deontology, and virtue ethics will be examined and applied. Environmental moral worldviews, ranging from anthropocentric to ecocentric perspectives, will be critically evaluated. Organized debates will help students strengthen their ability to deconstruct and assess ethical arguments and to communicate viewpoints rooted in ethical principles. Students will apply ethical reasoning skills to an examination of contemporary environmental issues including, among others, biodiversity conservation, environmental justice, climate change, and overpopulation. Students will also develop, defend and apply their own personal environmental ethical framework. A basic understanding of modern environmental history and contemporary environmental issues is required. Prior experience with philosophy and ethics is not required.
Instructor(s): A. Monopolis
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.271.402. Water, Energy, and Food. 3.0 Credits.
The water, energy and food (WEF) nexus is a topic of growing interest in the research and policy communities. This course will survey WEF concepts and principles, introduce tools of analysis, and engage students in case studies of critical WEF issues in the United States and internationally.
Instructor(s): B. Zaitchik.

AS.271.403. Environmental Policymaking and Policy Analysis. 3.0 Credits.
This course provides students with a broad introduction to US environmental policymaking and policy analysis. Included are a historical perspective as well as an analysis of future policymaking strategies. Students examine the political and legal framework, become familiar with precedent-setting statutes such as NEPA, RCRA, and the Clean Air and Clean Water Acts, and study models for environmental policy analysis. Cost benefit studies, the limits of science in policymaking, and the impact of environmental policies on society are important aspects of this course. A comparison of national and international policymaking is designed to provide students with the proper perspective. This course is taught in conjunction with an identical graduate course. All students will be expected to perform at a graduate level.
Instructor(s): J. Maldonado
Area: Social and Behavioral Sciences.
**Comparative Thought and Literature**

**AS.300.311. Introduction to Intellectual History. 3.0 Credits.**

This course offers a conceptual and historical introduction to Intellectual History. What makes the "history of ideas" different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call "ideas"? In what sense do they have a history? These are examples of the kind of questions addressed in the course.

Instructor(s): H. Sirin, P. Marrati
Area: Humanities.

**AS.300.313. Maintaining Social Order: Elements of Conservative Political Philosophy and its Critics. 3.0 Credits.**

The seminar will discuss (primarily German) political philosophy of a broadly "conservative" orientation in relation to three key periods of social and political upheaval: the Reformation, the French Revolution, and the crisis of parliamentary democracy in the Weimar Republic. Readings from these periods of European history will be approached under the common heading of "conservatism" for their shared preoccupation with how traditional sources of social unity are to be replaced following times of dramatic change and conflict. We will explore why different political crises have always led philosophers to reiterate the fundamental question of what binds political communities together. This preoccupation distinguishes the philosophical currents of conservative thought surveyed in this course from other, more familiar conservatism with purely reactionary agendas that reassert the superiority of a particular religion, culture, or ethnic group, the rule of elites, or the dismantling of the state in favor of free market forces. Each section on conservative thought will conclude with the most relevant critiques from Leftist political opponents. Readings include Hobbes, Burke, de Maistre, Herder, Hegel, Nietzsche, Schmitt, Kant, Marx, Marcuse.

Instructor(s): S. Carmel
Area: Humanities
Writing Intensive.

**East Asian Studies**

**AS.310.115. Ghost Tales from China and Japan, 14th-19th Centuries. 3.0 Credits.**

We cannot express our own experience of death – only imagine life after death. How did people in the past conceptualize the world of the dead? Ghost tales will teach us what we imagine as the experience of death and life after death. This course aims to introduce students to a variety of ghost stories in Late Imperial China and Tokugawa Japan and connect their literary imagination of the dead to the cultural, socio-historical, and religious context of each society as well as to the broad East Asian tradition of supernatural narratives. While we also touch upon earlier traditions on narrating the dead, most of the stories in class readings are from the Ming (1368-1644) and Qing (1644-1911) dynasties of China, and the Tokugawa period (1600-1868) of Japan. Key issues include family, gender, sexuality, body, medicine and many more. Although we will also take a look at visual and theatrical representations of the dead, we will primarily focus on literary texts about ghostly phenomena. Film screenings required. All readings are in English.

Instructor(s): F. Joo
Area: Humanities.

**AS.310.200. Economic Growth and Development in East Asia. 3.0 Credits.**

The course offers an overview of the complexities of East Asia’s development experience from a variety of perspectives, and it is divided into three parts to allow students to develop expertise in one or more countries and/or policy arenas, while also cultivating a broad grasp of the region and the distinct challenges of “East Asia fast-paced, sustained economic growth.” Part I considers the origins of Asian economic development, analyses the common economic variables behind the region’s success, looks at the East Asian financial crisis and its lessons and assesses whether or not East Asian countries have learned them. Part II will focus on the development experiences of individual countries, with an emphasis on the ASEAN economies, NIEs, Japan and China. Part III considers topics of special interest to Asia, including trends toward greater regional economic cooperation, both in the real and financial/monetary sectors, and issues related to poverty, migration, and inclusiveness.

Instructor(s): G. Dore
Area: Social and Behavioral Sciences.

**AS.310.205. Music in East Asia. 3.0 Credits.**

This survey course focuses on music in modern East Asia. By exploring historical and ethnographic works by scholars in ethnomusicology, history, and anthropology, this course examines traditional, contemporary, and popular musical and theatrical genres. Through case studies, we will discuss major topics—including nationalism, modernity, ethnicity, gender, colonialism, and globalization—of modern East Asia, ranging from Japan, South Korea, North Korea, China, Taiwan, Hong Kong, to Asian diasporas. This course aims to enhance students’ cross-cultural understanding, interdisciplinary approach to performance, and critical thinking on the concepts of “East Asia” and “performance.”

Instructor(s): P. Tse
Area: Humanities.

**AS.310.206. Film and Performing Arts in China: 1949–present. 3.0 Credits.**

This course explores Chinese film, music, and theater in post-1949 China. Through discussing scholarly works in history, theater, ethnomusicology, and film studies, students will be exposed to interdisciplinary approach to engaging with film, traditional theater (xiqiu), instrumental music, and popular music in China, Taiwan, Hong Kong, and Chinese diasporas. We will examine issues including nationalism, cultural hegemony, modernity, invented tradition, cultural policy, class, and gender. Supplemented by case studies, this course is organized around two overarching questions: how does film and performing arts inform us about the social history of China? How is expressive culture utilized in political agendas in the modern China?

Instructor(s): P. Tse
Area: Humanities.

**AS.310.302. Human Rights in China and U.S. Policy: Advocacy Opportunities and Challenges. 3.0 Credits.**

This interactive seminar will explore domestic human rights issues in China and U.S. policy toward China on human rights. In addition to learning about the broader landscape of human rights issues and related challenges in China, students will select a specific human rights issue to focus on during the course. As a practice-oriented seminar, students will develop advocacy skills that will enable them to effectively “make the case” for why the Administration and Congress should press China on the topic they’ve selected.

Instructor(s): A. Worden
Area: Social and Behavioral Sciences.
AS.310.305. Southeast Asia and US Security Strategy. 3.0 Credits.
This survey course is designed to introduce students to Southeast Asia – the ten member countries of the Association of Southeast Asian Nations (ASEAN) plus Australia and New Zealand. Southeast Asia is an integral part of the broader region of East Asia and a geographic bridge to the Indian subcontinent (South Asia). Southeast Asia has been one of the great success stories in the saga of modernization and development of post-colonial Afro-Asia over the last six decades. Its resulting economic importance is matched by its strategic significance given the presence of imbedded jihadist networks and the emergence of China as a regional great power and aspirant superpower. Nevertheless, the region has been largely overlooked by senior foreign policy and defense officials in Washington. This course will equip students to fill that void by examining the region from the perspective of national security strategy – broadly understood in its multiple dimensions. Students will be challenged to formulate some element of a viable U.S. national security strategy for the region.
Instructor(s): M. Ott
Area: Social and Behavioral Sciences.

AS.310.306. Domestic Politics of Contemporary China. 3.0 Credits.
This course introduces students to China’s contemporary political history and current political system. It helps students develop a critical understanding of China’s governance institutions and processes, political economy, and state-society relations. The course focuses primarily on China’s domestic politics but also covers China’s changing role in Asia and the world.
Instructor(s): Y. Yang
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.310.308. The Frontier in Late Imperial China. 3.0 Credits.
The tremendous expansion of Chinese frontiers during the late imperial period forced the state and those who lived within it to grapple with complex problems of governance, ethnicity, and the geographic extent of “China”. Issues and concerns associated with the massive Chinese frontiers have extended into the present; hence, no one can appreciate the current problems plaguing China’s northwestern, southwestern, or coastal regions without an understanding of its historical antecedents. This seminar is designed to introduce major scholarly works and theoretical frameworks on the Chinese frontier.
Instructor(s): J. Bandy
Area: Humanities
Writing Intensive.

AS.310.310. Shamans, She-Devils, and Pilgrims: Women & Gender in East Asian Religions. 3.0 Credits.
This course examines the complexities of gender and the role that women have played in the religions of China, Korea, and Japan. It explores two main types of content: 1) religious discourse on women and gender through doctrines, scriptures, narratives, myths, and legends; and 2) the practices, beliefs, and lives of real women through historical cases, including those of nuns, laity, sovereigns and family members. Organized in chronological order, the course begins with early sources across East Asia and finishes in contemporary times. Readings and assignments emphasize the analysis of primary sources, complemented by secondary works for historical and cultural context. Students will end the course with a research paper focused on a topic of their choice.
Instructor(s): C. Carter
Area: Humanities
Writing Intensive.

AS.310.352. Current Issues in US-Asia Relations: A Practitioner’s View. 3.0 Credits.
We will examine how major political events, players, norms and institutions have shaped US-Asia relations in the modern era.
Instructor(s): W. Konishi
Area: Social and Behavioral Sciences
Writing Intensive.

AS.310.401. Authoritarianism, Democracy, and Economic Development: Korea, Indonesia, and Myanmar. 3.0 Credits.
The East Asia’s “miracle growth” has not gone hand in hand with a decisive move toward democracy. This seminar explores the reasons why democratization proceeds slowly in East Asia, and seems to be essentially decoupled from the region’s fast-paced economic growth and development, and it is divided into three parts. Part I introduces the specifics of East Asia’s economic development strategies as well as key concepts of democracy, authoritarianism and military rule and the tensions between these theories and the East Asian experience. Part II will focus on the development experiences of Korea, Indonesia and Myanmar in light of what discussed in Part I of the seminar. The, Part III presents lessons emerging from the comparison of Korea’s, Indonesia’s and Myanmar’s developmental trajectories, and explore the role international organizations (e.g. ADB, EU, IMF, WB etc.) played in those choices.
Instructor(s): G. Dore
Area: Humanities.

AS.310.402. Labor Politics in China. 3.0 Credits.
This course explores the transformation of labor relations in China over the past century. It will cover the origins of the labor movement, the changes brought about by the 1949 Revolution, the industrial battles of the Cultural Revolution, the traumatic restructuring of state-owned enterprises over the past two decades, the rise of private enterprise and export-oriented industry, the conditions faced by migrant workers today, and recent developments in industrial relations and labor conflict. The course is designed for upper division undergraduates and graduate students. Cross-listed with Sociology and International Studies (CP).
Instructor(s): G. He; J. Andreas
Area: Social and Behavioral Sciences
Writing Intensive.
Program in Latin American Studies

AS.361.130. Introduction to Latin American Studies. 3.0 Credits.
The goal of this course is to provide an overview of Latin America, analyzing political and cultural aspects, chronologically organized. We will begin studying the origins of the multi-ethnic societies, starting with the ancient civilizations and their transformation under colonization. It is important to understand the survival of cultural traits among indigenous peasants today in the countries that were the cradle of ancient civilizations: Mexico, Guatemala and the Andean countries. In the republican era the course will focus on the classical Caribbean dictators in the first half of the 20th century and their reflection in the literature, comparing the historical reality with the magic representation in the work of Garcia Marquez. The course will scrutinize the most important revolutions in the continent: the Mexican, Cuban and Bolivian revolutions and the geopolitics of USA in the Americas. Weekly lectures related to the assigned reading will focus on specific periods, topics and regions. After each lecture, we will review the material, connecting specific details from the readings with the more theoretical aspects provided in my lecture. The course has a website where the PowerPoint presentations will be posted. Students are encouraged to post their questions, comments and suggestions on the web after their readings. Students will be given a study guide for each lecture, which will be the basis for the exams. Our perspective on Latin America will be enhanced by a selection of few films related to the topics.
Instructor(s): E. Cervone
Area: Humanities, Social and Behavioral Sciences.

AS.361.207. Afro-Latin American Biography. 3.0 Credits.
In this course, we will examine biographical accounts of men and women of African descent in Latin America and in the broader Black Atlantic. These individuals include conquistadors and slaves, saints and sinners, revolutionaries and ordinary people. In their life stories, we will not only examine questions of race, gender, and religiosity that were central to the construction of identity in the early modern Atlantic world, but also the nature of the sources that allow us to tell their stories.
Instructor(s): J. Clark
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.361.330. Latin America Otherwise: Voicing Dissent. 3.0 Credits.
This course proposes to look at various Latin American texts through an unconventional lens: that of dissent. Partly inspired by French philosopher Jacques Ranciere (2001), we will take as a premise the idea of dissent not simply as a moment of protest or resistance, nor of the collective plea for rights, but the moment when already given or accepted ways of living and institutional forms are unexpectedly modified by subjects not previously recognized as political. We will draw from diverse materials, ranging from political theory texts, Latin American literature, the literature on development, to the experiences of various social movements in the region. Recommended Course Background: an introductory level course in International Studies, Political Science, Anthropology, or Sociology
Instructor(s): T. Zille
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.361.335. Colombia at War. 3.0 Credits.
The history of Colombia comes down to a tale of armed conflicts, protracted and renewed civil wars, coups, ethnic cleansing riots, narcowars, besides the struggles for independence from Spanish colonial rule and extractive capitalist exploitation. We will study the literary, journalistic, and historical record about warring and uncivil Colombia through fiction from Gabriel García Márquez (The General in his Labyrinth and News of a Kidnapping), Fernando Vallejo (The Virgin of the Assassins), and Juan Gabriel Vázquez (The Sound of Things Falling and The Secret History of Costaguana). We will also delve into the current peace process and disarming of the FARC and the perils and promises that the absorption of the former combatants and recalcitrant holdovers pose to the skeptical and hopeful citizens and various political factions.
Instructor(s): E. Gonzalez
Area: Humanities.

AS.361.380. Brazil: Cinema, Popular Music, Counterculture and Politics from 1960-1990. 3.0 Credits.
We believe that understanding the second half of the 20th century is crucial to understand the challenges that Brazil faces in the 21st Century. This course investigates the cultural, intellectual, social and political history of Brazil from mid-1950s to the1990s. We begin with an overview of the legacy of Getúlio Vargas (1930-45) and the construction of Brasília (1961), examining the formation of ideas about Brazilian identity, development and modernization of the country. We then examine the dictatorship (1964-1985), its economic and social project, the place of human rights and its impact on Brazilian society, paying attention to how the people responded to an authoritarian regime through a counter revolutionary movement and through culture (Cinema Novo, MPB/ Brazilian popular music, Tropicália) in a fight for democracy. And, finally, we discuss the current issues that the country has dealt with such as of democracy, development, corruption, social mobility, and sporting mega events, for example. The course is taught in English, but ONE extra credit will be given to students who wish to do the course work in Portuguese. Those wishing to do the course work in English for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. The sections will be taught simultaneously. Section 01: 3 credits Section 02: 4 credits (instructor’s permission required)
Instructor(s): V. Santos
Area: Humanities, Social and Behavioral Sciences.

Center for Africana Studies

AS.362.122. History of Africa (since 1880). 3.0 Credits.
An introduction to the African past since 1880.
Prerequisites: Students are not allow to take both 100.122 and 362.122.
Instructor(s): K. Gallon
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

‘Africa rising’ has become an influential, albeit contested, narrative used by institutions like the International Monetary Fund and World Economic Forum to describe the rapid economic growth in 21st century Africa. This rapid ‘economic growth has been accompanied by another type of ‘Africa Rising’ — a mushrooming of social protest and popular uprisings across the continent. The course will introduce important theoretical perspectives, debates, and examples to equip students to critically examine contemporary social dynamics through the interconnected themes of land, labor and environmental rights and struggles that have gripped the African continent. What has given rise to these awakenings? Who are the actors involved in these actions? What are their demands and strategies? What lessons does it hold for social movement theory and development more broadly? The first section focuses on land reclamation movements, the new wave of ‘land grabs’ and responses from below. The second section presents the role of labour movements and its intersection with popular uprisings. The third section considers responses from communities and movements to the ecological destruction and climate change. Instructor(s): R. Jacobs
Area: Humanities.

AS.362.207. Race and public policy in comparative perspective. 3.0 Credits.

This course will explore the relationship between racial inequality, racial politics, and policy-making in the western world, particularly as it concerns the fight for equality by people of African descent in the US, Canada, Britain, and France. It will cover historical and contemporary struggles over policy, beginning with the African-American civil rights movement, the ensuing War on Poverty and War on Drugs, and followed by contemporary debates over immigration, racial segregation, poverty and racial economic inequality across the four countries. We will take insights from theory and empirical research to study the role that racial constructs and politics play in policy designs, contests over power and resources, electoral representation, public opinion, social movements, and political change. Through case studies of policies aimed at racial inequality (e.g., affirmative action, police reform, urban revitalization), we will examine why and under what circumstances they arise, what form they take, and in what ways they alleviate or reproduce racial inequality. These questions will be considered in light of the broader impact of neo-liberalism on normative ideas about policy, race, and inequality. Instructor(s): A. Livingstone
Area: Humanities.

AS.362.314. Police and Prisons in Comparative Perspective. 3.0 Credits.

This course will examine policing and prisons in the United States and beyond, with a focus on racial inequality. It will consist of two parts. First, we will explore the contemporary state of prisons and policing in the United States and look at debates around the rise of “mass incarceration” and aggressive forms of policing in the final third of the 20th century. Second, we will explore policing and prison in other parts of the globe in the contemporary moment, highlighting similarities and differences from the U.S. case. What can studying the instruments of social control reveal about our own? Students will develop an understanding of major trends, keywords, and debates in the literature on policing and prisons, with particular reference to race and racism. Instructor(s): S. Schrader
Area: Humanities.

AS.362.340. Power and Racism. 3.0 Credits.

This course investigates the impact of white supremacy and anti-black racism, as a global system of power, on the political development of the United States of America. Instructor(s): F. Hayes
Area: Social and Behavioral Sciences
Writing Intensive.

AS.362.344. Education Politics in Urban America. 3.0 Credits.

This seminar analyzes trends, developments, and future challenges related to the politics of urban public schooling with a concentration on community political dynamics and the struggle for equal educational opportunity and quality education. The course emphasizes the impact of socioeconomic class inequality, racial/ethnic conflict, and gender politics on the changing character of public school reform since the 1954 Supreme Court decision of Brown v. Board of Education. Cross-listed with Africana Studies. Instructor(s): F. Hayes
Area: Social and Behavioral Sciences
Writing Intensive.

Study of Women, Gender, Sexuality
AS.363.328. Beyond the Global West: Gender/Sexuality, Post-colonialism & Global Capitalism: Feminist Inquiries from Asian Perspectives. 3.0 Credits.

This course examines gender and sexuality issues in both East and South Asian Societies and situates subject matters in the broader contexts of post-colonialism, state formation, revolution and global capitalism. Instructor(s): Y. Dong
Area: Humanities
Writing Intensive.

Islamic Studies

https://krieger.jhu.edu/islamic/

The minor in Islamic Studies is open to all undergraduates regardless of major. It provides the intellectual and linguistic training to approach Islam — and the world — in a historically and culturally informed way, challenging stereotypes and misconceptions while exploring the diversity and complexity of the world’s second-largest religion.

Minor Requirements

All courses must be taken for letter grades and receive a grade of C- or higher.

Lawrence M. Principe
AS.194.101. Introduction to Islam. 3.0 Credits.
Study of Islam, its beliefs and practices in their historical development, from the preaching of Muhammad to the end of the Middle Ages, providing a historically-grounded understanding of Islam
Instructor(s): G. Ferrario
Area: Humanities.

AS.194.201. Jews, Muslims, and Christians in the Medieval World. 3.0 Credits.
The three most widespread monotheisms have much more in common than is generally portrayed: a common founding figure, a partly shared succession of prophets, closely comparable ethical concerns and religious practices, a history of coexistence and of cultural, religious, social and economic interaction. This course will focus on a number of key texts and historical events that have shaped the relationships between Jews, Muslims, and Christians during the Middle Ages and contributed to their reciprocal construction of the image of the "other." The geographical center of the course will be the Mediterranean and the Near and Middle East, a true cradles of civilizations, religions, and exchange.
Instructor(s): G. Ferrario.

AS.194.401. Themes in Medieval Islamic Thought. 3.0 Credits.
This seminar examines medieval Muslim thinkers who addressed themes at the intersection of theology, philosophy, science, and ethics: the definition of the nature of God's attributes, His uniqueness, transcendence and omnipotence; human freewill and the limits of human knowledge; the nature of the world; and the relationship among reason, religion, and science. The course will look at how these and other crucial themes were addressed by major medieval philosophers and philosophical schools not only in Islam, but also in Judaism and Christianity, and highlight similarities and differences among the three major monotheistic faiths.
Instructor(s): G. Ferrario.

Cross Listed Courses

History of Art
AS.010.110. Art of the Islamic World. 3.0 Credits.
This course is an introduction to the art of the Islamic world, covering a geography that stretches from Spain to India and a chronology that extends from the seventh century into our own time. Within this rich and varied continuum, we will look at a range of art forms—including architecture, painting, sculpture, ceramics, and calligraphy—in relation to such themes as patronage, production, function, and audience. A number of the artworks will be viewed firsthand in local collections. We will also explore the intersection of Islamic art with today's political realities.
Instructor(s): U. Rustem
Area: Humanities.

AS.010.329. Building an Empire: Architecture of the Ottoman Capitals, c. 1300–1600. 3.0 Credits.
Centered on modern-day Turkey and encompassing vast territories in Asia, Africa, and Europe, the Ottoman Empire (1299 – 1923) was the longest lived and among the most powerful Islamic states in history, with an artistic tradition to match. This course explores the functional and symbolic role that architecture played during the empire's formative centuries, when three successive capitals — Bursa, Edirne, and Istanbul — served to visualize the sultans’ growing claims to universal authority. With reference to mosques, palaces, tombs, and other categories of architecture, the course will examine the buildings in their artistic, social, and political contexts. Themes to be addressed include patronage and audience, architectural practice and the building trade, ceremonial and ritual, topography and urban planning, and the relationship of Ottoman architecture to other traditions.
Instructor(s): U. Rustem
Area: Humanities.

AS.010.330. Art of the Caliphates: Visual Culture and Competition in the Medieval Islamic World. 3.0 Credits.
Despite its modern-day association with a fringe extremist movement, the term "caliphate" was traditionally used to describe the Muslim world at large, the political and spiritual ruler of which bore the title of caliph. The original Islamic caliphate was established in the seventh century as a vast empire centered on the Middle East and extending deep into Africa, Asia, and Europe. It soon broke apart into a series of competing powers, until in the tenth century, three rival dynasties—the Baghdad-based Abbasids, the Spanish Umayyads, and the Fatimids of North Africa—each claimed to be the rightful caliphate. This course will examine how these fascinating political developments and conflicts played out in the realm of art and architecture between the seventh and thirteenth centuries. As well as palaces, mosques, and commemorative buildings, the course will look at media ranging from ceramics and metalwork to textiles and illustrated manuscripts, with many of the artifacts being viewed firsthand in local museum collections. These works will be considered in relation to such themes as patronage, audience, ceremony, and meaning. Particular attention will be paid to how the various caliphates—both in emulation of and competition with one another—used visual culture as a powerful tool to assert their legitimacy.
Instructor(s): U. Rustem
Area: Humanities.

AS.010.436. Orientalism and Occidentalism: The Discourse of the Other in the Visual Arts. 3.0 Credits.
This course explores works of art and architecture that reveal or are informed by the long, complex, and often troubled relationship between the West and the Islamic world. Though extending in scope from the early modern period into our own time, the course focuses on the eighteenth and nineteenth centuries, when East-West artistic interactions were arguably at their liveliest and most charged. Topics to be addressed include Ottoman Baroque architecture, Orientalist painting of the nineteenth century, Qajar portraiture and photography, Islamicate architecture at Western world’s fairs, and the recent Danish cartoons of the Prophet Muhammad. Students will be encouraged to consider the differences as well as commonalities between these various modes of cross-cultural representation and engagement, and to think critically about the political, cultural, and artistic conditions that engendered and shaped them.
Instructor(s): U. Rustem
Area: Humanities
Writing Intensive.
AS.010.636. Orientalism and Occidentalism: The Discourse of the Other in the Visual Arts.
This course explores works of art and architecture that reveal or are informed by the long, complex, and often troubled relationship between the West and the Islamic world. Though extending in scope from the early modern period into our own time, the course focuses on the eighteenth and nineteenth centuries, when East-West artistic interactions were arguably at their liveliest and most charged. Topics to be addressed include Ottoman Baroque architecture, Orientalist painting of the nineteenth century, Qajar portraiture and photography, Islamicate architecture at Western world's fairs, and the recent Danish cartoons of the Prophet Muhammad. Students will be encouraged to consider the differences as well as commonalities between these various modes of cross-cultural representation and engagement, and to think critically about the political, cultural, and artistic conditions that engendered and shaped them.
Instructor(s): U. Rustem
Area: Humanities.

AS.010.637. Ottoman Baroque and Beyond.
The eighteenth century saw the Ottoman capital of Istanbul transformed by the introduction of a brand-new style of architecture that scholars have dubbed the Ottoman Baroque. Informed, as its name suggests, by Western European models, this new manner of building heralded a permanent shift in late Ottoman visual culture that has been reductively discussed as decadent “Westernization.” This seminar will challenge the conventional wisdom and reconsider the Ottoman Baroque as a timely and sophisticated artistic statement by which the empire reaffirmed its global standing in terms that were both locally rooted and internationally resonant. Topics to be addressed include the semiotics of style; the roles and relationships of patrons, artists, and viewers; architecture as a locus of ceremonial and spectacle; and cross-cultural connections and networks. Although focusing on the architecture of eighteenth-century Istanbul, the seminar will extend into other regions and art forms that demonstrate the impact of the Ottoman Baroque, and it will also consider the style’s afterlife in the context of nineteenth-century Ottoman modernity.
Instructor(s): U. Rustem
Area: Humanities.

Anthropology
AS.070.204. An introduction to Islamic Intellectual History. 3.0 Credits.
This course will study the vibrant world of the Seljuks, an Islamic empire that flourished between 1037 and 1157 AD, from Khorasan across Baghdad to Hijaz and Anatolia. As an exploration in intellectual history, we will attempt to understand the social world of the Seljuk Turks through political, religious, and literary texts. We will first read a political treatise, Siyasaatnama (The Book of Government), written by Nizam al-Mulk (1018-1092), the formidable minister of the Seljuk Empire, who oversaw the reign of three successive sultans during the second half of the eleventh century and created a strong bureaucratic state for the Seljuks. During his administration, he commissioned the development of madrasas, colleges dedicated to the teaching of Islamic law, theology, literature, and history. The most famous of these madrasas was the Baghdad Nizamiyya where Al-Ghazali (1058-1111) taught from 1190 and 1194. We will read Al-Ghazali’s Deliverance from Error in order to explore the state of religious learning at the peak of the Islamic Golden Age. Having discussed the political and religious foundations of Islamic orthodoxy in the eleventh century, next we turn to the rise of heterodox movements that challenged the authority of the Seljuk state. We will briefly examine the history of the Isma’ili branch of Shia Islam, focusing on the politico-religious ideas of its most potent representative, Hassan-i Sabbah (1050s-1124). Finally, we will end our class with the Rubaiyat of Omar Khayyam (1048-1131), the prominent poet and polymath of the eleventh century.
Instructor(s): B. Polat
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.230. From Jihad to Revolution: The Political Struggles of Women in the Middle East. 3.0 Credits.
The course explores the role of women as political prisoners, combatants and activists in the modern history of the Middle East using a multidisciplinary approach. It explores the history of women’s engagement in political struggles in the Middle East over the long durée starting with anti-colonial movements in the 20th century up until the recent uprisings known as the “Arab Spring”. The course is geared towards the examination of the ways in which politics, in a broad sense, is gendered in the Middle East by examining how the social and political construction of women as political subjects influence the nature and practice of political life, as well as the ways in which sexual difference has served as a basis for social and political organization.
Instructor(s): F. Halbouni
Area: Humanities, Social and Behavioral Sciences.

AS.070.267. Culture, Religion and Politics in Iran. 3.0 Credits.
This is an introductory course for those interested in gaining basic knowledge about contemporary Iran. The focus will be on culture and religion and the ways in which they become interwoven into different kinds of political stakes.
Instructor(s): N. Haeri
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.070.333. Theologies of Political Life. 3.0 Credits.
This course explores the relationship between modern political forms and theological traditions. Looking at developments both in the West and the postcolonial world, we will examine the multiple ways in which theological traditions have continued to inform how political life is conceived and pursued. In particular, we will focus on the relation between liberalism and the Christian tradition; the turn to messianism in critical theory; the transformation of the shari?a into a legal form; and its imbrication in anti-colonial politics.
Instructor(s): B. Goldman
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.372. Religion and Media. 3.0 Credits.
This course examines the ways in which conventional and non-conventional media recreate or transform religious experience in modern life. Increasingly, religion is experienced not only in sacred spaces and as ritual prescriptions, but also through the information that is disseminated through radio, TV, and the Internet, as well as in consumer culture and political speeches. Beginning with this proposition that our ideas about religion are shaped not only by historical and scriptural legacies, but as well as by material practices and other sundry conditions of mediation, of which our present times supply many, we will reexamine how questions of revelation, belief, spirituality, ethereality, and ritual practice are constituted by these irreducible ways, thus complicating the neat separation of religion and secularism, or, for that matter, religion and culture.
Instructor(s): N. Haeri
Area: Humanities, Social and Behavioral Sciences.

AS.070.417. Political Spirituality. 3.0 Credits.
This course explores forms of political action that have emerged at the interface of modern revolutions with religious traditions. It focuses on the Middle East during the twentieth century and the civil rights struggle in the American south. We will attempt to trace the genealogy of these forms of action in the Islamic and Christian traditions, as well as examine their influence on the political thought of our own time.
Instructor(s): S. Al-Bahloly
Area: Humanities, Social and Behavioral Sciences.

AS.070.423. Anthropology of Poetry and Prayer. 3.0 Credits.
What kind of activity is prayer? Are we talking to God(s), to our ancestors, to ourselves? What are the differences between choosing our own words and repeating the words of an established prayer? The course will explore these and similar questions with particular attention to the language of prayers across a number of religious traditions.
Instructor(s): N. Haeri
Area: Humanities, Social and Behavioral Sciences.

History
AS.100.212. Freshman Seminar: Jews in the Medieval Mediterranean: The Politics of Conquest under Crescent and Cross. 3.0 Credits.
How can Jewish history help us understand the politics of Islamic and Christian states in Sicily, Spain, and Palestine in the age of Crusade and holy war? Freshman only
Instructor(s): B. Goldman
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.234. The Making of the Muslim Middle East, 600-1100 A.D.. 3.0 Credits.
A survey of the major historical transformations of the region we now call the "Middle East" (from late antiquity through the 11th century) in relation to the formation and development of Islam and various Muslim empires. Cross-listed with Near Eastern Studies and the Program in Islamic Studies.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.362. Children and Childhood in the Middle Ages. 3.0 Credits.
Seminar on the history of childhood and ideas of childhood around the medieval Mediterranean; themes include child custody; medieval education and punishment; parent-child private letters; child mortality and the arts of bereavement/consolation. Cross-listed with the Program in Islamic Studies and Near Eastern Studies.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.374. Conquest, Conversion, and Language Change in the Middle Ages. 3.0 Credits.
Examines cases of imperial conquest and attendant religious transformation (Christianization; Islamization) and language change in the medieval Mediterranean (Europe and Middle East), e.g. transition from Latin to vernacular languages in Europe; Arabization; translation movements.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.387. Everyday Life in the Medieval Middle East. 3.0 Credits.
In this seminar, students will explore the daily lives of non-elites in medieval Egypt (i.e. average folk, not kings in palaces)—including their food and cooking; clothes (and government edicts regulating fashion); the houses they inhabited; their marriage patterns, divorce rates, and child custody battles; and the burden of taxes on the working poor (e.g. urban craftsmen). We will examine and discuss artifacts and documents, including surviving hats (stuffed with recycled documents), private letters, marriage contracts (and the clauses women inserted into them), petitions for charity, and court records.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.456. Getting Medieval? Public Violence in the Middle Ages. 3.0 Credits.
Traditional studies and popular culture often consider violence as a hallmark of medieval life and hence, present it as a fundamental difference between a 'brutal and violent' Middle Ages and a 'civilized and humane' (Western) modernity. To evaluate these claims and images, we will examine different forms of violence in medieval societies—European and Middle Eastern—especially (i) martyrdom, (ii) communal violence, and (iii) public punishment. After exploring the specific cultural meanings of these practices, we will re-examine those modern polemics that invoke 'the medieval' (often vis-à-vis non-Western traditions and societies).
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.646. Marvels and Wonder in medieval Arabic Culture.
Explores the concept of marvels in different genres of medieval Arabic culture: Qur'anic exegesis; travel literature; 'ethnicography'; cosmography and geography; marvels of the natural world (e.g. hermaphrodites); Muslim views of pre-Islamic ('pagan') monuments.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.
Near Eastern Studies
AS.130.368. Nomads, Tyrrants and Kings: Water in the Ancient Near East. 3.0 Credits.
This course explores economic and social histories of water in the ancient Near East. It examines water’s diverse roles in ancient Mesopotamian, Egyptian, Levantine and South Arabian agriculture, politics, ritual and religion, including water’s interconnected significance in Judaism, Christianity, and Islam. Taught jointly with AS.131.615. Instructor(s): M. Harrower
Area: Humanities.

History of Science Technology
AS.140.301. History of Science: Antiquity To Renaissance. 3.0 Credits.
The first part of a three-part survey of the history of science. This course deals with the origins, practice, ideas, and cultural role of scientific thought in Graeco-Roman, Arabic/Islamic, and Medieval Latin/Christian societies. Interactions across cultures and among science, art, technology, and theology are highlighted. Instructor(s): G. Ferrario, L. Principe
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

Philosophy
AS.150.462. Islamic Political Philosophy. 3.0 Credits.
An introduction to the history of Islamic political philosophy, primarily focused on two flashpoints of encounter between the religion of Islam and other philosophical/political systems—an early one with ancient Greek philosophy (especially in the works of Plato and Aristotle), and a period of interface with modern Western secular political thought, from the late 19th century to present. Our goal will be to try to understand some of the varying responses in each period as Muslim thinkers seek authentic engagement with external and internal trends, both religious and philosophical. The focus will be on primary texts from philosophically engaged thinkers (who may or may not consider themselves philosophers). Instructor(s): S. Ogden
Area: Humanities.

Political Science
AS.190.394. Comparative Politics of the Middle East and North Africa. 3.0 Credits.
This course examines the domestic, regional, and transnational politics of the Middle East and North Africa. The class is organized into three units. The first examines major armed conflicts—anti-colonial, intra-state, and inter-state—from 1948 through the 1990s. It uses these historical moments as windows onto key issues in Middle Eastern and North African political issues such as external intervention/occupation, human rights, sectarianism, social movements, and memory politics. Unit Two focuses on policy relevant issues such as democratization, minority populations, religion and politics, and gender. In Unit Three, students will explore the politics of the Arab Uprisings through critical reading and discussion of new (post-2011) scholarship on MENA states, organizations, and populations. Enrollment limited to Political Science and International Studies majors. Instructor(s): S. Parkinson
Area: Social and Behavioral Sciences.

AS.191.335. Arab-Israeli Conflict. 3.0 Credits.
The course will focus on the origin and development of the Arab-Israeli conflict from its beginnings when Palestine was controlled by the Ottoman Empire, through World War I, The British Mandate over Palestine, and the first Arab-Israeli war (1947-1949). It will then examine the period of the Arab-Israeli wars of 1956, 1967, 1973, and 1982, the Palestinian Intifadas (1987-1993 and 2000-2005); and the development of the Arab-Israeli peace process from its beginnings with the Egyptian-Israeli treaty of 1979, the Oslo I and Oslo II agreements of 1993 and 1995, Israel's peace treaty with Jordan of 1994, the Road Map of 2003; and the periodic peace talks between Israel and Syria. The conflict will be analyzed against the background of great power intervention in the Middle East, the rise of political Islam and the dynamics of Intra-Arab politics, and will consider the impact of the Arab Spring. Instructor(s): R. Freedman
Area: Social and Behavioral Sciences.

Sociology
AS.230.147. Introduction to Islam Since 1800. 3.0 Credits.
This course is an introduction to contemporary Islam and Muslim societies from approximately 1800 to the present. Key themes will include the colonial encounter, state formation and reform, revolution, Islamic revival, and globalization. Reflecting Islam's status as a world religion, the course will touch on developments around the Muslim-majority world and in the West. Instructor(s): R. Calder
Area: Social and Behavioral Sciences.

AS.230.367. Islamic Finance. 3.0 Credits.
Today, Islamic finance is a global industry comprising nearly $2 trillion in assets, with hubs from Kuala Lumpur to Dubai to London. But half a century ago, nothing called “Islamic finance” existed. So where did Islamic finance come from? Why is it growing so fast? And what does it mean for finance to be Islamic? We discuss the ban on riba in the Quran and hadith, finance in early and medieval Islamic societies, petrodollars and the birth of Islamic banking in the 1970s, the rise of Islamic capital markets since 2000, contemporary shariah-compliant financial structures, and the constitution of piety through financial practice. Instructor(s): R. Calder
Area: Social and Behavioral Sciences.

Center for Language Education
AS.375.115. First Year Arabic. 4.5 Credits.
Introductory course in speaking, listening, reading, and writing Modern Standard Arabic. Presents basic grammatical structures and a basic vocabulary. Through oral-aural drill in classroom, tapes in Language Laboratory, and reading/writing exercises, students attain a basic level of competence on which they can build in subsequent years of study. Instructor(s): S. Jafire
Area: Social and Behavioral Sciences.

AS.375.116. First Year Arabic II. 4.5 Credits.
Continuation of AS.375.115. Introductory course in speaking, listening, reading, and writing Modern Standard Arabic. Presents basic grammatical structures and a basic vocabulary. Through oral-aural drill in classroom, tapes in Language Laboratory, and reading/writing exercises, students attain a basic level of competence on which they can build in subsequent years of study. Accelerated students should register for Section 01. May not be taken Satisfactory/ Unsatisfactory
Prerequisites: AS.375.115 or instructor permission
Instructor(s): F. Abdallah; I. Hassan; K. Tahrawi; S. Jafire.
The Leonard and Helen R. Stulman Jewish Studies Program

http://krieger.jhu.edu/jewishstudies/

The Leonard and Helen R. Stulman Jewish Studies Program was founded in 2002 to coordinate the many academic activities at Johns Hopkins dedicated to the study of Jewish history, literature, language, philosophy, politics, and religion. The program gives students the opportunity to explore over three millennia of Jewish culture, ranging from ancient Israel to the present. The Stulman Program sponsors visiting professors and course offerings in a wide variety of disciplines, awards undergraduate travel funds and graduate fellowships, and provides many opportunities for students, faculty, and the general public to participate in a wide range of lectures, conferences, and other special events.

Minor in the Leonard and Helen R. Stulman Jewish Studies Program

The Jewish Studies minor requires a minimum of six courses (amounting to at least 18 credits) selected from those approved by the Advisory Committee of the Jewish Studies Program. The courses must be from at least two departments, and at least three must be upper-level courses (300-level or above). All courses applied towards the minor must be taken for a letter grade and a grade of C- or better must be earned. In addition, only two courses with any single professor can be counted towards the minor.

The requirements for a minor in Jewish studies are as follows:

Six Jewish Studies Courses

<table>
<thead>
<tr>
<th>Description</th>
<th>Credits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Three courses at any level</td>
<td>9</td>
</tr>
<tr>
<td>Three 300-level or higher courses</td>
<td>9</td>
</tr>
<tr>
<td>Total Credits</td>
<td>18</td>
</tr>
</tbody>
</table>

Students may take up to two courses in Hebrew or Yiddish language study to apply towards the minor requirements.

For current faculty and contact information go to http://krieger.jhu.edu/jewishstudies/people/

Faculty Professors

- **Steven R. David**  
  (Political Science): Vice Dean for Centers and Programs: international relations, security studies, comparative politics.

- **Benjamin Ginsberg**  
  David Bernstein Professor (Political Science): Director, Washington Center for the Study of American Government: American government and politics, political development.

- **Theodore J. Lewis**  

- **Kyle P. McCarter**  

- **Yitzhak Melamed**  
  (Philosophy): Jewish Philosophy, (esp. Maimonides and Crescas), Rabbinics, Kabbalah and Hasidism.

- **Glenn M. Schwartz**  

- **Eric Sundquist, Emeritus**
Andrew W. Mellon Professor of the Humanities: American Literature and Culture, including African American and Jewish American, Literature of the Holocaust.

**Associate Professors**

Pawel Maciejko  
Stulman Chair in Rabbinics and Traditional Judaism; (History) Jewish mystical tradition

Kenneth B. Moss  
Felix Posen Associate Professor (History); Modern Jewish history, Russia and Eastern Europe, Yishuv/Palestine and Israel, Jewish political thought, nationalism, theory and practice of cultural history.

**Courses**

**Cross Listed Courses**

**English**

**AS.060.332. Jewish American Fiction. 3.0 Credits.**  
This course will consider the development of Jewish American fiction over the past century through an examination of major authors and topics, with particular attention to novels whose historical trajectories reach geographically back and forth from America to Europe, and temporally back and forth across the Holocaust, the century's defining event. These novels thus frequently have multiple settings and treat familial, communal, and intellectual life, along with topics such as emigration, anti-Semitism, and religious belief, over a span of several generations. The list includes authors whose works first appeared in Yiddish (Lamed Shapiro and Isaac Bashevis Singer) and authors whose sensibilities are decidedly American, but all write with attention to the tenuous assimilation, dislocation, trauma, and linguistic complexity that often marked twentieth-century Jewish life, no less in the United States at times than in Europe. Works studied will include: Dara Horn, In the Image; Rebecca Goldstein, Mazel; Bernard Malamud, The Fixer; Lamed Shapiro, The Cross and Other Jewish Stories; Isaac Bashevis Singer, Shosha; Cynthia Ozick, The Shawl; Nicole Krauss, A History of Love; Jerzy Kosinski, Steps; Philip Roth, Nemesis; Shalom Auslander, Hope: A Tragedy. A Novel  
Instructor(s): E. Sundquist  
Area: Humanities  
Writing Intensive.

**AS.060.382. Jewish American Literature. 3.0 Credits.**  
A survey of major works, principally novels.  
Instructor(s): E. Sundquist  
Area: Humanities  
Writing Intensive.

**History**

**AS.100.129. Introduction to Modern Jewish History. 3.0 Credits.**  
Jewish history 1750-present in Europe, the Near East, the US, Israel; the challenges of modernity and new forms of Jewish life and conflict from Enlightenment and emancipation, Hasidism, Reform and Orthodox Judaism to capitalism and socialism; empire, nationalism and Zionism; the Holocaust. Extensive attention to US Jewry and State of Israel.  
Instructor(s): K. Moss  
Area: Humanities, Social and Behavioral Sciences.

**AS.100.268. Jewish and Christian mysticism in the Middle Ages and the Early Modern Period. 3.0 Credits.**  
This course will trace the historical development of Jewish and Christian mysticism between the 12th and the 17th centuries.  
Instructor(s): P. Maciejko  
Area: Humanities, Social and Behavioral Sciences.

**AS.100.308. Introduction to the History of Jewish Mysticism. 3.0 Credits.**  
The course will familiarize the student with the history of the main phenomena of Jewish mysticism from the ancient times to the present.  
Instructor(s): P. Maciejko  
Area: Humanities, Social and Behavioral Sciences.
AS.100.315. Jewish Political Thought and Social Imagination, 1880-1940. 3.0 Credits.
How a range of Jewish thinkers, activists, and creative writers grappled intellectually with the challenge of the nation-state, the rise and collapse of empires, antisemitism as a political phenomenon, the nature of politics and political action, the nature of modern societies, and the question of Jewish self-determination and sovereignty, 1880-1940. Readings by Herzl, Bernard Lazare, Freud, Kafka, Leshhtshinsky, Arendt, Adorno, Michael Chabon, among others.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences.

AS.100.343. Diaspora, Nation, Race, and Politics. 3.0 Credits.
For millions of people across the globe, political fate in the 20th century was defined at the intersection of diaspora, race, and nation — and this may be true in the 21st century as well. This course, a collaborative effort involving a historian and a political scientist, explores the parallels and divergences in the deployment of these terms in nationalist and transnational mobilization, literature and aesthetics, and group identity formation in Eastern Europe, Africa and the New World of the Americas. Set against the backdrop of the fall of significant empires in the late 19th and early 20th centuries, we will explore themes of migration, human rights, the nation-state system, and racism through history, political sociology, and political and social theory. We will pay particular attention to the theoretically exemplary Jewish and Black experiences of diaspora, race, and nation, engaging with both those experiences were specially shaped by the imposition of national and racial logics and with Black and Jewish politics and thought in relation to those categories. Readings include Max Weber, W. E. B. Du Bois, Booker T. Washington, Theodor Herzl, Hannah Arendt, Benedict Anderson, Rogers Brubaker, Andrew Zimmerman, Michele Mitchell, David Scott.
Instructor(s): K. Moss; M. Hanchard
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.345. Religion, Secularity, and Nationhood in Modern Jewish Identity Politics. 3.0 Credits.
How have ethnonational, religious, and secular forms of self-definition played out in Jewish life over the past hundred years, and what sorts of relationships are taking shape between them now? Particular foci include: religious revival in Israel and the fate of Zionism’s ostensibly secular nationalist project in comparative perspective (Ravitzky, Walzer, Friedland); the surprising flourishing of kabbalistic/mystical thought in contemporary Jewish life (Garb); varieties of secular and religious visions of Jewish collective identity (Ohana, Lusick); and new and resurgent forms of Judaism in the US; religion and gender (Fader), among other topics. Time at end of semester for independent reading and research.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.363. The Development of the Sabbatian Movement. 3.0 Credits.
This course examines the development of Sabbatianism, the most important messianic movement in the history of Judaism. We shall discuss the messianic claims of Sabbatai Tsevi, the spread of religious fervor among the Jews of Middle East, Europe, and North Africa, rabbinic opposition to the movement, and shall compare it to similar phenomena in Islam and Christianity. Special attention will be paid to reading of primary Sabbathian sources in English translation.
Instructor(s): P. Maciejko
Area: Humanities, Social and Behavioral Sciences.

AS.100.364. Sacrilegious Jews: Accusations of Ritual Crime in Pre-Modern Europe. 3.0 Credits.
This course will examine the history of the accusations of the Jews of ritual crime (blood libel, host desecration etc.) in pre-modern Europe.
Instructor(s): P. Maciejko
Area: Humanities, Social and Behavioral Sciences.

AS.100.369. Themes and Concepts in Jewish History. 3.0 Credits.
The course will introduce students to the main themes and debates in Jewish historiography.
Instructor(s): P. Maciejko
Area: Humanities, Social and Behavioral Sciences.

AS.100.371. Jewish History in the 20th Century. 3.0 Credits.
Jewish history, politics, and culture across a century of enormous transformations and transformative enormities in Europe, the US, and the Middle East. Topics include: impacts on Jewish life of World War I, the Russian Revolution, and the post-imperial reordering of the Eastern Europe and the Middle East; Zionism and other modes of Jewish contestatory politics; the consolidation of American Jewry; Nazism and the Holocaust in Europe; formation and development of the State of Israel; the global reordering of Jewish life amid cross-currents of the Cold War, conflict in the Middle East, and success in the US. Substantial attention to recent and contemporary history including the dramatic changes in Israeli society and polity over the past forty years and the ongoing Israeli-Palestinian conflict. Each week, professor will provide detailed background lecture during first session and second session will be devoted to in-depth discussion of key primary texts and historical monographs that capture Jewish responses to 20th century processes and events.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.412. Jewish History in British Mandatory Palestine 1917-1947. 3.0 Credits.
Recent historical writing on Jewish politics, culture, and society in British Mandatory Palestine, 1917-1947. Significant attention will also be paid to work on Palestinian Arab society and politics and to Jewish-Arab-British relations.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.611. Kabbalah and the Enlightenment: Reading 'The Manuscript' Found in Saragossa.
The course will discuss the European Enlightenment’s attitude to the Jewish esoteric lore. As a lens to discuss this topic, we shall use Jan Potocki’s novel "The Manuscript Found in Saragossa".
Instructor(s): P. Maciejko
Area: Humanities, Social and Behavioral Sciences.

AS.100.643. Jewish Paths Through Modernity.
Intensive introduction to the key trends and trajectories in modern Jewish history and the major themes in Jewish historiography. Intended to serve both graduate students outside the Jewish history field and graduate students pursuing a field in modern Jewish history.
Instructor(s): K. Moss
Area: Humanities, Social and Behavioral Sciences Writing Intensive.
AS.100.656. Reading Koselleck.
The course will be devoted to close reading of the works of Reinhardt Koselleck.
Instructor(s): P. Maciejko
Area: Humanities, Social and Behavioral Sciences.

AS.100.657. Reading Koselleck.
The course will be devoted to close reading of the works of Reinhardt Koselleck.
Instructor(s): P. Maciejko
Area: Humanities, Social and Behavioral Sciences.

Near Eastern Studies
AS.130.140. Hebrew Bible / Old Testament. 3.0 Credits.
The Bible is arguably the most read and yet most misinterpreted book of all time, one of the most influential and yet most misapplied work of literature. The Hebrew Bible (Old Testament) is Scripture to Jews and Christians yet also a rich collection of literature w/ numerous literary genres that has been highly influential on secular Western culture. At its core, it is our most important literary source that (when wed with archaeology) helps us to understand the people and culture of Iron Age Israel and Judah. This is an introductory course surveying of the books of the Hebrew Bible (Old Testament) giving primary attention to the religious ideas they contain and the ancient contexts in which they were composed. Topics include: The Academic Study of Religion, Ancient Creation Accounts, Ancestral Religion, The Exodus and Moses, Covenant, Tribalism and Monarchy, The Ideology of Kingship, Prophecy, Priestly Sources, Psalms, Wisdom Literature, and Apocalyptic Thought.
Instructor(s): T. Lewis
Area: Humanities.

AS.130.202. Ancient Mythology. 3.0 Credits.
This course explores the mythology of the ancient Near East from the invention of writing in Sumer in 3000 B.C. until the conquest of Alexander the Great near the end of the first millennium B.C. Mythological texts from Mesopotamia, Egypt, Anatolia, the Levant, and the Bible will be read from a comparative perspective. Special attention is paid to the origin and development of the epic, culminating in the great Epic of Gilgamesh, but considerable time is also given to the vast mythological and historical literature, and such diverse genres as love poetry, proverbs, humorous dialogues, Omens, and legal and medical texts. All readings are in English translation.
Instructor(s): P. Delnero
Area: Humanities.

AS.130.216. History of the Jews in Modern Times, from the Middle Ages to 1917. 3.0 Credits.
A broad survey of the significant political and cultural dynamics of Jewish history in the Medieval, Early-Modern, and Modern Eras.
Instructor(s): D. Katz
Area: Humanities.

AS.130.301. History of Ancient Syria-Palestine. 3.0 Credits.
A survey of the history of Ancient Syria and Canaan, including Ancient Israel.
Instructor(s): J. Lauinger
Area: Humanities.

AS.130.302. History: Ancient Syria-Palestine II. 3.0 Credits.
A survey of the history of Ancient Syria and Cannan, including ancient Israel. Taught with AS.134.661. Cross-listed with Jewish Studies.
Instructor(s): P. McCarter
Area: Humanities.

AS.130.330. The Garden of Eden. 3.0 Credits.
References to the story of the Garden of Eden can be found in every significant issue of our time, from sex to politics, from race to the environment. The course will examine the story itself as well as how it’s been interpreted, leading up to today. Enthusiastic participation required.
Instructor(s): E. Robbins
Area: Humanities.

AS.130.341. Traditionalism vs. Orthodoxy in the Modern Era: The Case of Judaism. 3.0 Credits.
During the Modern Era in European history, the Traditionalist Jewish civilization of Europe that had evolved over many centuries went into deep crisis. The new political, social, and intellectual realities which characterized Modernity seriously challenged, overwhelmed, and indeed threatened to destroy the Jewish Traditionalist culture and society. In response, different Traditionalist thinkers and communities evolved a number of strategies for surviving in a modern environment, strategies that unexpectedly transformed Traditionalism into something different, which came to be called Orthodox Judaism. This course explores this process of transformation, which has had an important impact on Jewish life in the modern and post-modern eras. Cross-listed with Jewish Studies.
Instructor(s): D. Katz
Area: Humanities.

AS.130.343. Dead Sea Scrolls-English. 3.0 Credits.
A survey of the manuscripts found at Qumran and other sites near the Dead Sea.
Instructor(s): D. Gropp
Area: Humanities.

AS.130.346. Introduction to the History of Rabbinic Literature. 3.0 Credits.
Broadly surveying classic rabbinic literature, including the Talmud and its commentaries, the legal codes and the response, this seminar explores the immanent as well as the external factors that shaped the development of this literature, the seminal role of this literature in Jewish self-definition and self-perception, and the role of this literature in pre-modern and modern Jewish culture.
Instructor(s): D. Katz
Area: Humanities.

AS.130.348. Religious Law Wrestles With Change: The Case of Judaism. 3.0 Credits.
Description: "How does a religious system which defines its ancient laws as God-given and unchangeable apply them to radically different and changing social, political and intellectual situations? This course explores the literature of "Questions and Answers"(She'elot u-Teshuvot), the Jewish legal responsa which have struggled to match Jewish religious law to modern life for fifteen centuries. A sweeping survey of Jewish history as revealed by one of its most impenetrable yet fascinating sources. Cross-listed with Jewish Studies.
Instructor(s): D. Katz
Area: Humanities.

AS.130.359. Reading the Talmud in the Post-Talmudic Era. 3.0 Credits.
Life and Death, Survival and Martyrdom, in the Literature of Post-Talmudic Rabbinic Judaism. Readings in the Original Sources (Knowledge of Hebrew Required). Cross-listed with Jewish Studies.
Instructor(s): D. Katz
Area: Humanities.
AS.130.373. Prophets and Prophecy in the Bible. 3.0 Credits.
From thundering voices of social justice to apocalyptic visionaries, biblical prophets have been revered by Jews, Christians and Muslims for thousands of years. They have inspired civic leaders such as Martin Luther King Jr. yet also provided fodder for modern charlatans promising a utopian future. Yet who were these individuals (orators? politicians? diviners? poets?) and what was the full range of their message as set against the Realpolitik world of ancient Israel, Iraq, Egypt, Syria and Jordan?
Instructor(s): T. Lewis
Area: Humanities.

AS.130.376. Ancient Magic and Ritual. 3.0 Credits.
This course will introduce students to the vast body of rituals that were practiced and performed in antiquity, with a particular emphasis on rituals from ancient Mesopotamia, Egypt, and the Hebrew Bible. In addition to examining rituals from a comparative perspective, anthropological and sociological studies of ritual will be read and discussed to shed light on the social, cultural, and political significance of ritual in the ancient world and beyond.
Instructor(s): P. Delnero
Area: Humanities.

AS.130.387. The Poetics of Biblical Prose and Verse. 3.0 Credits.
An exploration of how ancient Israelite techniques of literary textual and inter-textual patterning contributes to cohesion and meaning in biblical prose and verse. Attention will be given to the distinguishing characteristics of Hebrew verse in relation to prose, and to a range of different kinds of prose in Israelite literature. These poetics will be exemplified in close readings of selected texts from the Hebrew Bible in English.
Instructor(s): D. Gropp
Area: Humanities.

AS.130.400. Elementary Biblical Hebrew. 3.0 Credits.
Introduction to the grammar, vocabulary, and writing system of biblical Hebrew.
Instructor(s): J. Estrada
Area: Humanities.

AS.130.440. Readings - Hebrew Prose. 3.0 Credits.
Reading of biblical Hebrew prose, especially from the Pentateuch, Joshua, Judges, Samuel, and Kings. Cross-listed with Jewish Studies.
Instructor(s): R. Liebermann
Area: Humanities.

AS.130.443. Reading Of Hebrew Prose. 3.0 Credits.
Reading of Biblical Hebrew prose, especially from the Pentateuch, Joshua, Judges, Samuel, and Kings.
Instructor(s): K. Medill
Area: Humanities.

AS.130.444. Readings - Hebrew Narrative and Poetry. 3.0 Credits.
Intermediate readings in a variety of narratives with some exposure to poetic text.
Instructor(s): K. Medill
Area: Humanities.
Philosophy

AS.150.428. Spinoza's Theological Political Treatise. 3.0 Credits.
The course is an in-depth study of Spinoza's Theological-Political Treatise. Among the topics to be discussed are: Spinoza's Bible criticism, the nature of religion, philosophy and faith, the nature of the ancient Hebrew State, Spinoza's theory of the State, the role of religion in Spinoza's political theory, the freedom to philosophize, the metaphysics of Spinoza’s Theological-Political Treatise, and finally, the reception of the TTP.
Instructor(s): Y. Melamed.

AS.150.435. Maimonides' Guide of the Perplexed & Political Theology. 3.0 Credits.
The seminar is an in-depth study of Maimonides’ magisterial work, the Guide of the Perplexed. Special attention will be given to Maimonides’ views about the political functions of religion. We will also read modern commentaries and responses to the Guide, by Leibniz, Spinoza, and Salomon Maimon.
Instructor(s): D. Katz; Y. Melamed
Area: Humanities.

AS.150.483. Topics in Jewish Philosophy: Heresy. 3.0 Credits.
Hasidism is the ecstatic religious movement that emerged in East European Jewry in the mid eighteenth century. In this research seminar we will concentrate on the teachings and activities of the circle of Dov Ber of Mezrich between 1760 and 1772. We will study both internal and external sources (such as Salomon Maimon’s report in his Lebensgeschichte). All materials will be available in English translation, though reading knowledge of Hebrew would be an asset.
Instructor(s): Y. Melamed.

Political Science

AS.190.344. Seminar In Anti-Semitism. 3.0 Credits.
Jews exercise a good deal of power in contemporary America. They are prominent in a number of key industries, play important roles in the political process, and hold many major national offices. For example, though Jews constitute barely two percent of America’s citizens, about one-third of the nation’s wealthiest 400 individuals are Jewish and more than ten percent of the seats in the U.S. Congress are held by Jews. One recent book declared that, “From the Vatican to the Kremlin, from the White House to Capitol Hill, the world’s movers and shakers view American Jewry as a force to be reckoned with.” Of course, Jews have risen to power in many times and places ranging from the medieval Muslim world and early modern Spain through Germany and the Soviet Union in the 20th century. In nearly every prior instance, though, Jewish power proved to be evanescent. No sooner had the Jews become “a force to be reckoned with” than they found themselves banished to the political margins, forced into exile or worse. Though it may rise to a great height, the power of the Jews seems ultimately to rest on a rather insecure foundation. Cross-listed with Jewish Studies. Course is open to juniors and seniors.
Instructor(s): B. Ginsberg
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.434. Does Israel Have a Future?. 3.0 Credits.
Israel is one of the only countries whose existence is openly challenged. This class will examine the future of Israel focusing on international and domestic threats to its continued existence as a Jewish democracy. Outside threats to be considered include nuclear attack and the growing international movement to delegitimize Israel. Domestic challenges include demographic changes, the role of religion in governance, and doubts as to whether one can be a Jewish state and still be a democracy. Lessons from the destruction of the ancient Israelite kingdoms and from contemporary state deaths will be included. The course will conclude by considering efforts that Israel can undertake to meet the threats it faces.
Instructor(s): S. David
Area: Social and Behavioral Sciences.

AS.191.335. Arab-Israeli Conflict. 3.0 Credits.
The course will focus on the origin and development of the Arab-Israeli conflict from its beginnings when Palestine was controlled by the Ottoman Empire, through World War I, The British Mandate over Palestine, and the first Arab-Israeli war (1947-1949). It will then examine the period of the Arab-Israeli wars of 1956, 1967, 1973, and 1982, the Palestinian Intifadas (1987-1993 and 2000-2005); and the development of the Arab-Israeli peace process from its beginnings with the Egyptian-Israeli treaty of 1979, the Oslo I and Oslo II agreements of 1993 and 1995, Israel’s peace treaty with Jordan of 1994, the Road Map of 2003; and the periodic peace talks between Israel and Syria. The conflict will be analyzed against the background of great power intervention in the Middle East, the rise of political Islam and the dynamics of Intra-Arab politics, and will consider the impact of the Arab Spring.
Instructor(s): R. Freedman
Area: Social and Behavioral Sciences.

Islamic Studies

AS.194.201. Jews, Muslims, and Christians in the Medieval World. 3.0 Credits.
The three most widespread monotheisms have much more in common than is generally portrayed: a common founding figure, a partly shared succession of prophets, closely comparable ethical concerns and religious practices, a history of coexistence and of cultural, religious, social and economic interaction. This course will focus on a number of key texts and historical events that have shaped the relationships between Jews, Muslims, and Christians during the Middle Ages and contributed to their reciprocal construction of the image of the “other.” The geographical center of the course will be the Mediterranean and the Near and Middle East, a true cradle of civilizations, religions, and exchange.
Instructor(s): G. Ferrario.
German Romance Languages Literatures

AS.210.163. Elementary Yiddish I. 3.0 Credits.
Year-long course. Includes the four language skills—reading, writing, listening, and speaking—and introduces students to Yiddish culture through text, song, and film. Emphasis is placed both on the acquisition of Yiddish as a tool for the study of Yiddish literature and Ashkenazic history and culture, and on the active use of the language in oral and written communication. Both semesters must be taken with a passing grade to receive credit. Students wishing to retain credits for Elementary Yiddish I must complete Elementary Yiddish II with a passing grade. Instructor(s): B. Lang.

AS.210.164. Elementary Yiddish II. 3.0 Credits.
Year-long course that includes the four language skills—reading, writing, listening, and speaking—and introduces students to Yiddish culture through text, song, and film. Emphasis is placed both on the acquisition of Yiddish as a tool for the study of Yiddish literature and Ashkenazic history and culture, and on the active use of the language in oral and written communication. Both semesters must be taken with a passing grade to receive credit. Recommended Course Background: AS.210.163 or instructor permission. Instructor(s): B. Lang.

AS.210.263. Intermediate Yiddish I. 3.0 Credits.
This course will focus on the Yiddish language as a key to understanding the culture of Yiddish-speaking Jews. Topics in Yiddish literature, cultural history and contemporary culture will be explored through written and aural texts, and these primary sources will be used as a springboard for work on all the language skills: reading, writing, listening, and speaking. Prerequisite: AS.210.164 or equivalent, or permission of instructor. Prerequisites: AS.210.164 or Permission of instructor. Instructor(s): B. Lang. Area: Humanities.

AS.210.265. Individualized Yiddish Practicum. 3.0 Credits.
This course will allow students at any stage of Yiddish language acquisition to hone their skills in reading, writing, listening and speaking. The program will be individualized for each student according to his or her needs while at the same time providing joint activities in which all can participate. Instructor(s): B. Lang. Area: Humanities.

AS.210.366. Advanced Yiddish II. 3.0 Credits.
Continuation of Advanced Yiddish I (AS.210.367). Students will continue to hone their skills in all four language areas: reading, writing, listening, and speaking. In addition to advanced grammar study and readings in Yiddish literature, the course will take into account the interests of each individual student, allowing time for students to read Yiddish texts pertinent to their own research and writing. Prerequisites: AS.210.367. Instructor(s): B. Lang. Area: Humanities.

AS.210.369. Yiddish Texts I. 3.0 Credits.
This course will give students who have completed Advanced Yiddish the chance to improve their proficiency. The curriculum will be determined according to the research interests of the students with an emphasis placed on reading primary texts fluently. Since the course is taught in Yiddish, students will also have ample opportunity to practice the other language skills (listening, speaking, writing). Prerequisites: AS.210.368 or permission of instructor. Instructor(s): B. Lang. Area: Humanities.

AS.210.370. Yiddish Texts II. 3.0 Credits.
Continuation of Yiddish Texts I. This course will give students who have completed Advanced Yiddish the chance to improve their proficiency. The curriculum will be determined according to the research interests of the students with an emphasis placed on reading primary texts fluently. Since the course is taught in Yiddish, students will also have ample opportunity to practice the other language skills (listening, speaking, writing). Recommended Course Background: Yiddish Texts I or permission of the instructor. Instructor(s): B. Lang. Area: Humanities.

AS.211.202. Freshman Seminar: A Thousand Years of Jewish Culture. 3.0 Credits.
This course will introduce students to the history and culture of Ashkenazi Jews through their vernacular, Yiddish, from the settlement of Jews in German-speaking lands in medieval times to the present day. Particular emphasis will be placed on the responses of Yiddish-speaking Jews to the challenges posed by modernity to a traditional society. In addition to studying a wide range of texts—including fiction, poetry, memoir, song, and film—students will learn how to read the Yiddish alphabet, and will prepare a meal of traditional Ashkenazi dishes. No prior knowledge of Yiddish is necessary for this course. Instructor(s): B. Lang. Area: Humanities.

AS.211.328. Berlin Between the Wars: Literature, Art, Music, Film. 3.0 Credits.
Explore the diverse culture of Berlin during the heyday of modernism. During the Weimar Republic, Berlin became a center for theater, visual arts, film, music, and literature that would have an outsized impact on culture throughout the world and the twentieth century. The thinkers, artists, and writers drawn to interwar Berlin produced a body of work that encapsulates many of the issues of the period: the effect of the modern city on society; “the New Woman”; socialist revolutionary politics; the rise of the Nazis; and economic turmoil. While learning about interwar Berlin's cultural diversity, we will take a special look at works by Jewish writers and artists that engage with the question of ethnic, religious, and national identity in the modern world, specifically in the context of Berlin's rich Jewish history and the rise of anti-Semitism in the interwar period. All readings will be in translation. Instructor(s): B. Lang. Area: Humanities.

AS.211.333. The Holocaust in Film and Literature. 3.0 Credits.
How has the Holocaust been represented in literature and film? Are there special challenges posed by genocide to the traditions of visual and literary representation? Where does the Holocaust fit in to the array of concerns that the visual arts and literature express? And where do art and literature fit in to the commemoration of communal tragedy and the working through of individual trauma entailed by thinking about and representing the Holocaust? These questions will guide our consideration of a range of texts — nonfiction, novels, poetry — in Yiddish, German, English, French and other languages (including works by Primo Levi and Isaac Bashevis Singer), as well as films from French documentaries to Hollywood blockbusters (including films by Alain Resnais, Claude Lanzmann, and Steven Spielberg). All readings in English. Prerequisites: Cannot be taken by anyone who previously took AS.213.361. Instructor(s): S. Spinner. Area: Humanities.
AS.211.337. Wandering Jews? Jewish Migration in Film and Literature. 3.0 Credits.
Migration in all its forms has played a major role in shaping Jewish identity throughout history. From the Biblical exodus from Egypt through the beginnings of the diaspora under the Romans to the massive European Jewish immigration to America in the late 19th and early 20th centuries to the founding of the state of Israel, the migrations of Jews have also had a major place in Jewish literature. Going all the way back to the Bible, but focusing on the 20th century, this course will explore the ways in which literature and film represent the experience of migration, whether negative (compelled by expulsion or violence); positive (lured by economic or social opportunity); or somewhere in-between. We will examine poetry, plays and film in Yiddish, German, Hebrew, and English (all in translation) on aspects of Jewish migration including the social and political factors motivating migration from the countryside to the shtetl (town) to the city and from Central and Eastern Europe to the Americas, Palestine, and Israel. Issues under discussion will include: adaptation and assimilation; minority rights; what is the relationship of old and new or major and minor languages and literatures?; what is the place of tradition and heritage in a diasporic context? We will also consider the resonances between contemporary debates on migration and historical examples of these issues as they are reflected in literature and film.
Instructor(s): S. Spinner
Area: Humanities
Writing Intensive.

AS.211.348. Holocaust Consciousness – An Intercultural and Interdisciplinary Approach Through Media Studies and Psychology. 3.0 Credits.
This course approaches Holocaust consciousness in the U.S. and Europe within a psychological and media-theoretical frame-work. It is also part of a larger research project between the Center for Advanced Media Studies at JHU and the Sigmund Freud University in Vienna. During the semester students will be tele-conferencing during five to six class sessions with students in the same course held at the Sigmund Freud University and taught by Professors Nora Ruck and Markus Brunner. Together we will examine Holocaust consciousness in the U.S. and Europe, and such phenomena as trauma, inter-generational transmission, and projection of the trauma of the victims’ and/or the perpetrators’ As primary materials we will be using war memoirs and documentary films (from the films of the “Bilderverbot” to today’s family ethnographies). Students will be teamed in small, inter-cultural groups to address both U.S. and a European perspectives on these materials. An excursion to the U.S. Holocaust Memorial Museum in Washington D.C. will also be part of the course.
Instructor(s): B. Wegenstein
Area: Humanities
Writing Intensive.

AS.211.361. Narratives of Dissent in Israeli Society and Culture. 3.0 Credits.
In this course we will study and analyze the notion of dissent in Israeli society and culture on its various literary and artistic forms. We will examine the emergence and the formation of various political and social protest movements, such as the Israeli Black Panthers, Israeli feminism and the 2011 Social Justice protest. We will discuss at length the history and the nature of dissent in the military and in relation to Israeli wars and will track changes in these relations. Significant portion of the course will be dedicated to the literary, cinematic and artistic aspects of Israeli dissent and their influence on Israeli discourse. We will explore the nature and role of specific genres and media such as the Israeli satire, Israeli television, newspaper op-ed and the recent emergence of social media. Students wishing to work in English exclusively for 3 credits should enroll in section one. Students who are fluent in Hebrew and are wishing to attend an additional 4-hour-long Hebrew discussion session per week with Professor Cohen (time TBD in consultation with enrolled students) for 4 credits should enroll in section two.
Instructor(s): N. Stahl; Z. Cohen
Area: Humanities.

AS.211.480. Religious Themes in Film and Literature. 3.0 Credits.
This course would be of interest to anyone who would like to learn about the intersection of religion and modern culture. At the center of the course will stand a close study of the representation of religious themes and their role in modern literature and cinema. The works which we will deal with are not considered religious yet they include religious themes as part of their narrative, images, language or symbolic meaning. We will trace in various works from various countries and genre, themes such as: divine justice, providence, creation, revelation, the apocalypse, prophecy, sacrifice and religious devotion. We will also study the ways in which Biblical and New Testament stories and figures are represented in these works. The course will have a comparative nature with the aim of learning more about the differences between the literary and cinematic representations.
Instructor(s): N. Stahl
Area: Humanities.

AS.211.754. Modernist Primitivism.
This course will explore the aesthetics and politics of primitivism in European modernity, focusing on the visual arts and literature in German and Yiddish, but looking at the wider European context, including France and Russia. We will begin with the back grounds of primitivism in Romanticism, looking especially at its ethnographic and colonial sources. We will then focus on the presence of anthropological and ethnographic discourses within various registers of modernist thought, literature, and visual culture, with special attention to visual and literary primitivism. Our central concerns will include: the attempt to create a modernist aesthetics grounded in ethnography; the primitivist critique of modernity; the place of primitivism in the historical avant-garde; the development of the notion of “culture” in modernity; and the aesthetics of modern ethnic and national identity. &nbsp;Key thinkers, artists, and writers to be considered include Herder; Gauguin; Picasso; Wilhelm Worringen; Carl Einstein; Hannah Höch; and Emil Nolde.
Instructor(s): S. Spinner
Area: Humanities.
AS.212.432. The Dreyfus Affair: Lying for Truth. 3.0 Credits.
In 1894 French military captain Alfred Dreyfus was found guilty of a crime of treason he did not commit. The true reasons for his arrest are still under debate today: was this a sheer act of antisemitism? Why did the army create false proof against a man they knew was innocent? What was the role of the press in propagating the Affair? This course proposes to approach the Dreyfus Affair in all its complex forms, while encouraging students to carry out original and innovative research based on a wide range of resources (caricatures and articles in the press, pamphlets, paintings, films, music, photographs, court transcripts, government archives, private letters, and hopefully more).
Instructor(s): S. Spinner
Area: Humanities.

AS.213.322. Museums and Jews, Jews in Museums. 3.0 Credits.
This course will examine the presence of Jews in museums. We will consider the history of the exhibition and collection of Jewish material culture in museums from the 19th century to the present day. Our main task will be to identify the various museological traditions that engage Jewish identity, including the collection of art and antiquities, ethnographic exhibitions, history museums, and Holocaust museums. Some of the questions we will ask include: how do museums shape identity? what is the relationship between the scholarly premises of many museums and their popular reception? and, centrally, what is the relationship between Jewish museums and museums of the Holocaust?
Instructor(s): S. Spinner
Area: Humanities.

AS.213.324. What is Jewish Culture?. 3.0 Credits.
We talk about Jewish literature, music, and art—but can a book, or a song, or a painting be Jewish? We will examine the premises of this question and the many answers that have been formulated in response to it focusing on modern European (and some American) culture. Jewishness as it relates to human identity has been conceived of as related to religion, ethnicity, race, nation, language, geography, and politics. But these keywords have also been used to engage with the question of the Jewish identity not of a person, but of a cultural product. To understand the implications of calling, say, a book Jewish, we will examine the history of the concept of culture and its emergence in the context of the formation of modern Jewish identity. We will examine theoretical and literary texts originally written in German, Yiddish, Hebrew, and English, as well as painting, photography, film, and architecture from Europe, Israel and the Americas. We will aim to arrive at an understanding of the ways that the idea of culture intersects with the formation of Jewish identity in modernity. All readings will be in English.
Instructor(s): S. Spinner
Area: Humanities.

AS.213.334. Kafka. 3.0 Credits.
Franz Kafka is one of the most important — and one of the most challenging — writers of the twentieth century. This course will investigate why both are true. We will analyze a wide range of his works and learn "how" to read Kafka. We will become familiar with his characteristic subjects: law; family; power; institutions; modernity. We will also attempt to become familiar with his characteristic forms and style and attempt, in the process, to find out what makes Kafka "kafkaesque." We will also consider his impact on art, literature, film, and thought from his time to the present. All readings in English. German majors/minors should enroll in section 02.
Instructor(s): S. Spinner
Area: Humanities.

AS.213.348. Picturing Jews: Representing Jewish Identity in Modern Art, Film & Literature. 3.0 Credits.
This course will consider the different ways Jewish identity has been represented in the 19th and 20th centuries, focusing primarily on Central and Eastern Europe. Race, nationalism, religion, language, geography, politics—all helped shape different ways of understanding just what it meant to be a Jew, and all found expression in art and literature by both Jews and non-Jews. Looking at texts originally written in German, Yiddish, and Hebrew, including prose, poetry, journalism and drama, as well as painting, photography, graphic design, architecture, and film we will gain an understanding of the range of ways that Jewish identity could be understood and expressed as well as of the ideological stakes and historical contexts of such representations. Writers and artists examined will include Chagall, Kafka, Sholem Aleichem, and Bialik. All readings will be in translation.
Instructor(s): S. Spinner
Area: Humanities.

AS.213.383. Jewish Travel Literature. 3.0 Credits.
Exile, Diaspora, Wandering, Refugee, Immigrant—these are all keywords that have been closely associated with Jews and the Jewish experience. What binds them all is movement, whether individual or communal, voluntary or involuntary. This course will examine the connection between movement and Jewish culture and history through the various forms of Jewish travel writing. In looking at depictions of travel both fictional and historical from the Middle Ages to the 20th century we will revisit and interrogate many of these keywords to understand the ways they have been deployed to understand Jewish identity in literature and beyond. A central point of consideration will be the role of travel in shaping conceptions of Jewish identity as well as Jewish literature in the modern period. We will examine novels, short stories, reportage, and travelogues describing real and imagined journeys from and to Asia, the Middle East, Europe, and America. All readings will be in English translation, primarily from sources in Yiddish, Hebrew, and German.
Instructor(s): S. Spinner
Area: Humanities.

AS.213.387. Major City, Minor Literature? Berlin in German-Jewish and Yiddish Literature. 3.0 Credits.
Between the two World Wars, a period of intense artistic and intellectual vitality, Berlin was an international center for theater, visual arts, and literature. Many important Yiddish-language writers were drawn to Berlin and, together with their German-language counterparts, produced a body of literature that explores issues of modernity and identity. By comparing works in Yiddish and German, we will learn about inter-War Berlin's cultural diversity and richness, while also gaining insight into the particular issues of writing about Jewish identity in the 1920s, and the implications of writing in a minor language (Yiddish). We will read works by authors including Joseph Roth and Alfred Döblin in German, and Moyshe Kulbak and David Bergelson in Yiddish. All texts will be in translation. Some questions we will explore include: • What is a minority/minor language or literature? • How did German and Yiddish interact in cultural and social spheres? • Can texts in different languages comprise a single body of literature? • What did it mean to be German and what did it mean to be Jewish? • Are assimilation and hybridity useful concepts? • Is there such a thing as Jewish modernism? • How did literature of the period respond to the rise of the Nazi party and the intensification of antisemitism?
Instructor(s): S. Spinner
Area: Humanities.
AS.213.407. Museums and Identity. 3.0 Credits.
This course will explore the phenomenon of the “identity” museum through case studies involving Jewish and Holocaust museums around the world. The museum boom of the last half-century has centered in large part around museums dedicated to the culture and history of particular minority groups; recent notable (and relatively local) examples include the brand new National Museum of African American History and Culture in Washington and the National Museum of American Jewish History in Philadelphia. Our understanding of the contemporary theory and practice of such museums will be based on an examination of the history of the various museological traditions that engage Jewish identity from the 19th century to the present, including the collection and display of art and antiquities, ethnographic exhibitions, history museums, and Holocaust museums. We will deal with two primary museological phenomena: first, the introduction of the “primitive other” into European modernity via ethnographic museums; second, the museological commemoration and representation of trauma, specifically of the Holocaust. We will explore these topics through historical documents, theoretical readings, and case studies including visits to nearby museums. All readings in English.
Instructor(s): S. Spinner
Area: Humanities.

AS.213.635. Anthropology and Modernism.
This course will examine the reciprocal relationship between modernism and anthropology in Western and Central Europe, including examples from French, German, and Yiddish contexts. We will focus on the presence of anthropological and ethnographic discourses within various registers of modernist thought, literature, and visual culture, with special attention to visual and literary primitivism. We will also consider attempts by ethnographers to shape their practice in a modernist mold. Our central concerns will include the attempt to create a modernist poetics grounded in ethnography and the relationship between anthropological theory and ethnographic praxis in the modernist understanding of “culture.”
Instructor(s): S. Spinner
Area: Humanities.

AS.216.300. Contemporary Israeli Poetry. 3.0 Credits.
This course examines the works of major Israeli poets such as Yehuda Amichai, Nathan Zach, Dalia Rabikovitch, Erez Biton, Roni Somek, Dan Pagis, Yona Wollach, Yair Horwitz, Maya Bejerano, and Yitzhak Laor. Against the background of the poetry of these famous poets we will study recent developments and trends in Israeli poetry; including less known figures such as Mois Benarroch, Shva Salhoov and Almog Behar. Through close reading of the poems, the course will trace the unique style and aesthetic of each poet, and will aim at presenting a wide picture of contemporary Hebrew poetry.
Prerequisites: Students may receive credit for AS.216.300 or AS.300.413, but not both.
Instructor(s): N. Stahl; Z. Cohen
Area: Humanities.

AS.216.307. Reflective Mirrors: Israeli and Palestinian Cinema. 3.0 Credits.
Palestinian and Israeli cinemas have emerged side by side, each depicting its Other as a deceiving mirror of its own self. This course will analyze the different images of these Others in both cinemas.
Instructor(s): N. Stahl; Z. Cohen
Area: Humanities
Writing Intensive.

AS.216.342. The Holocaust in Israeli Society and Culture. 3.0 Credits.
This course examines the role of the Holocaust in Israeli society and culture. We will study the emergence of the discourse of the Holocaust in Israel and its development throughout the years. Through focusing on literary, artistic and cinematic responses to the Holocaust, we will analyze the impact of its memory on the nation, its politics and its self-perception.
Instructor(s): N. Stahl
Area: Humanities
Writing Intensive.

AS.216.370. Israel Through Prose. 3.0 Credits.
This course examines representations of various aspects of Israeli society and culture in contemporary Israeli prose. The course will follow both a thematic and chronological path in order to study the ways in which Israeli prose reflects political, ideological, social and cultural aspects of contemporary Israel. In this context, we will read works by several major authors such as: Agnon, Shabtai, Kahanah-Carmon, Oz, Kenaz, Yehoshua, Grossman, Castel-Bloom, Matalon, Laor, Kashua and Hoffmann. Students who sign up for section 2 will work an additional hour in Hebrew with Professor Cohen at a time mutually agreed upon by the professor and the students enrolled. Carmon, Oz, Kenaz, Yehoshua, Grossman, Castel-Bloom, Matalon, Laor, Kashua and Hoffmann.
Instructor(s): N. Stahl; Z. Cohen
Area: Humanities
Writing Intensive.

AS.216.373. War in Israeli Arts and Culture. 3.0 Credits.
In this course we will study the various representations of what functions as one of Israel's most unifying and yet dividing forces: war. By analyzing literary and cinematic works as well as visual art and popular culture we will attempt to understand the role of war in shaping Israeli society, culture and politics. Topics such as commemorations and mourning, heroism, dissent and protest, trauma and memory and the changing image of the soldier will stand at the center of the course.
Instructor(s): N. Stahl; Z. Cohen
Area: Humanities.

AS.216.398. Zionism: Literature, Film, Thought. 3.0 Credits.
This course studies the relations between modern Hebraic and Israeli culture and Zionism. Based on a close reading of both literary and non-literary Zionist texts, we will explore the thematic, social and political aspects of the Zionist movement. The course focuses on primary sources and its main goal is to familiarize students with the various ways in which Zionism was formed and understood. In the last part of the semester we will investigate the different meanings of Post-Zionism through contemporary literary and non-literary texts as well as recent Israeli films.
Instructor(s): N. Stahl; Z. Cohen
Area: Humanities.

AS.216.412. The Divine in Literature and Cinema. 3.0 Credits.
This course studies various issues concerning literary and cinematic representations of the divine. We will investigate theoretical, theological, generic and aesthetic aspects of the topic and will familiarize ourselves with the general problem of the relationship between religion, literature and cinema. Among the topics to be discussed are, negative theology in literature and film, theodicy and anti-theodicy, the question of religion and literary modernism, providence and narratology in the modern novel and in contemporary cinema.
Instructor(s): N. Stahl.
AS.216.444. The Apocalypse in Literature and Film. 3.0 Credits.
"Everything which we loved is lost! We are in a desert" – this emotional assertion was the reaction to Kazimir Malevich's 1915 painting The Black Square, as the artist himself recalled it. This sentiment of fearing, warning and even witnessing the end of the world as we know it, will stand at the center of the course. We will study the literary and cinematic representations of this apocalyptic notion and investigate its theoretical, theological, physiological and aesthetic aspects. We will seek to trace the narrative dynamics as well as literary and cinematic means of apocalyptic representations in works from various periods, languages, cultures and religions. Among the issues to be discussed: what is the apocalypse, biblical apocalypse, dystopia and nostalgia, trauma and post-trauma, war and the apocalypse, the Holocaust as the end of civilization, the atomic bomb, realism and anti-realism, political changes and the apocalypse in popular culture.
Instructor(s): N. Stahl
Area: Humanities
Writing Intensive.

AS.216.500. Independent Study. 0.0 - 3.0 Credits.
Instructor(s): N. Stahl.

AS.216.800. Independent Study.
Instructor(s): N. Stahl.

Center for Language Education
AS.384.115. First Year Hebrew. 4.0 Credits.
Designed to provide reading and writing mastery, to provide a foundation in Hebrew grammar and to provide basic conversational skills. Cross-listed with Jewish Studies. Final day/time will be determined during the first week of classes based on students' schedules.
Instructor(s): Z. Cohen.

AS.384.116. First Year Hebrew II. 3.0 Credits.
Designed to provide reading and writing mastery, to provide a foundation in Hebrew grammar and to provide basic conversational skills. Cross-listed with Jewish Studies.
Prerequisites: AS.384.115
Instructor(s): Z. Cohen.

AS.384.215. Second Year Hebrew. 3.5 Credits.
Designed to enrich vocabulary and provide intensive grammatical review, and enhance fluency in reading, writing and comprehension. Cross-listed with Jewish Studies. Final day/time will be determined during the first week of classes based on students' schedules.
Prerequisites: AS.384.116 or equivalent.
Instructor(s): Z. Cohen
Area: Humanities.

AS.384.216. Second Year Hebrew II. 3.0 Credits.
Designed to enrich vocabulary and provide intensive grammatical review, and enhance fluency in reading, writing and comprehension. Recommended Course Background: AS.384.215 or permission required.
Prerequisites: AS.384.215
Instructor(s): Z. Cohen
Area: Humanities.

AS.384.315. Third Year Hebrew. 4.0 Credits.
Designed to maximize comprehension and the spoken language through literary and newspaper excerpts providing the student with the language of an educated Israeli. Cross-listed with Jewish Studies. Final day/time will be determined during the first week of classes based on students' schedules.
Prerequisites: AS.384.216 or equivalent.
Instructor(s): Z. Cohen
Area: Humanities.

AS.384.316. Third Year Hebrew II. 3.0 Credits.
Designed to: maximize comprehension and the spoken language through literary and newspaper excerpts providing the student with the language of an educated Israeli. Recommended Course Background: AS.384.315 or permission required. Cross-listed with Jewish Studies.
Prerequisites: AS.384.315 or instructor permission
Instructor(s): Z. Cohen
Area: Humanities.

Center for Language Education
http://krieger.jhu.edu/cle

The Center for Language Education (CLE) was established in 1992 and presently offers foreign-language courses in Arabic, Chinese, Hebrew, Hindi, Japanese, Korean, and Russian.

The CLE also offers, non-credit English as a Second Language (ESL) courses, English for International Teaching Assistants (ITAs), and a Summer Intensive English Language Program for visiting and pre-college students. The Summer Program consists of classes in Oral Communication, Academic and Professional Writing, Accent Reduction, American Culture, and Grammar/TOEFL Preparation.

Grading and Course Progression for Languages Offered by the Center for Language Education

CLE language classes may be taken satisfactory/unsatisfactory only at the intermediate level and above. A student earning a D in a course is not eligible to pass to the next higher level course. Students are granted credit for each semester course successfully completed, regardless of enrollment or performance in a subsequent course.

For current faculty and contact information go to http://krieger.jhu.edu/cle/people/

Courses

AS.370.010. Listening & Speaking - Advanced Beginner.
This course will be an in-depth study of higher level English grammar. Students will build on their foundational grammar skills, gain confidence in the more subtle nuances of grammar. Sentence structure will be studied at length giving the ability to more clearly express their ideas. Other focus areas will include but are not limited to, the perfect tenses, higher level punctuation, and modal verbs.
Instructor(s): Staff.

AS.370.020. Listening & Speaking.
Area: Humanities.
Instructor(s): D. McNeal
Writing Intensive.

AS.370.022. Reading & Writing English.
Instructor(s): Staff
Writing Intensive.

AS.370.030. Listening & Speaking.
Instructor(s): S. Lee.

AS.370.032. Reading & Writing English.
Instructor(s): A. Leone-Pizzighella
Writing Intensive.

AS.370.034. American Culture.
Instructor(s): D. McNeal
Writing Intensive.

AS.370.040. Listening & Speaking.
Instructor(s): M. Walsh.

AS.370.042. Reading & Writing English.
Instructor(s): M. Walsh
Writing Intensive.

AS.370.044. Accent Reduction.
In person registration only This course is designed to help non-native American English speakers tackle American English language skills and improve their pronunciation and manner of speaking dramatically. The course incorporates the learning of language skills such as the sounds, stress patterns, rhythm, and intonation patterns of American English. This is a separate process from learning the grammar and vocabulary of American English. The completion of this course will result in accent modification, accent improvement and easily understandable conversational speech and will help the learner to function more effectively at work and outside of work.
Instructor(s): A. Leone-Pizzighella.

AS.370.050. Strengthening English for the TOEFL.
This course will be an in-depth study of higher level English grammar. Students will build on their foundational grammar skills, gaining confidence in the more subtle nuances of grammar. Sentence structure will be studied at length giving students the ability to more clearly express their ideas. Other focus areas will include but are not limited to, the perfect tenses, higher level punctuation, and modal verbs.
Instructor(s): M. Walsh.

Description: This course will be an in-depth study of higher level English grammar. Students will build on their foundational grammar skills, gaining confidence in the more subtle nuances of grammar. Sentence structure will be studied at length giving students the ability to more clearly express their ideas. Other focus areas will include but are not limited to, the perfect tenses, higher level punctuation, and modal verbs.
Instructor(s): E. Dunn.

AS.370.062. Accent Reduction for ITAs.
This course is intended for international Teaching Assistants (TAs) who are not native speakers of English. It focuses on improving students’ perception and pronunciation of American English through learning articulation, phonetics, and phonology. Students learn the basics of anatomy of speech production in order to understand how difficult sounds and sound contrasts are made. Students also learn the International Phonetic Alphabet (IPA) to help them distinguish sound contrasts that are difficult depending on the individual students’ native languages. Moving beyond individual sounds, students learn how sounds change depending on what word or phrase they appear in and when they appear in fast or colloquial speech. Finally, students learn and practice intonation appropriate for various types of statements and questions.
Instructor(s): J. Yarmolinskaya.

This course is intended for international Teaching Assistants (TAs) who are not well acquainted with the culture of American universities. It focuses on improving students’ understanding of the culture and communication norms in American academia. Students learn the basics of conversation and e-mail etiquette in America, as well as the norms of interacting with college students they teach, professors, and colleagues in situations such as classes, office hours, lab meetings, and scientific meetings. Students practice designing and presenting lectures, supporting materials, tests, and assignments for classes they TA, as well as scholarly presentations of their research to the scientific community. This course is open only to graduate students in AS/EN.
Instructor(s): J. Yarmolinskaya.

AS.370.064. Academic Writing and Grammar.
This course is intended for international teaching assistants, graduate students and postdoctoral fellows who are not native speakers of English. Students will read and analyze the content, structure, and style of a wide range of academic and professional writing in order to improve their own essays, articles, reports, theses, critiques, and proposals using those features. They will learn to explain, support, compare and argue their ideas effectively through attention to organization, vocabulary, and style. Grammar will be infused into the course as it applies to revision and editing of written work and consistency within various types of writing. Students will use a variety of strategies to improve skills in idea development, organization, word choice, sentence fluency, voice, grammar and mechanics. Writing tasks will be integrated with content, vocabulary, and grammar from various texts.
Instructor(s): J. Yarmolinskaya.
This course is intended for international teaching assistants, graduate students and postdoctoral fellows who are not native speakers of English. This course aims to enable students to succeed in academic, professional, and social discussions and conversations. By focusing on strategies for initiating oral communication, responding to the comments and ideas of others; as well as improving listening skills, students will become better overall at speaking and listening to English. Fiction and non-fiction media from a variety of sources will be used to stimulate discussion, sharpen listening skills, and build vocabulary. Exercises and drills will target specific grammar trouble spots and explicit pronunciation errors. So as to empower students in formal speaking situations, they will be asked to deliver two short 2-4 minute presentations and one longer 5-8 minute presentation. Extensive practice and feedback from instructor and classmates encourage students’ confidence in their public speaking skills.
Instructor(s): D. McNeal.

This course aims to enable English language learning students to succeed in professional and social discussions and conversations by honing their public speaking skills. This course will focus on strategies for creating, delivering and observing a variety of presentations. Exercises and drills will target specific grammar trouble spots and explicit pronunciation errors. Material will augmented so as to empower students in formal and social speaking situations. Students will be asked to deliver seven short 3-5 minute presentations and one longer 5-8 minute presentation. Extensive practice and feedback from the instructor and classmates will encourage students’ confidence in their public speaking skills. At the end of this course, it is expected that students will be able to deliver cogent and engaging presentations as well be able to provide insightful and educated feedback on others’ presentations.
Instructor(s): D. McNeal.

AS.373.111. First Year Heritage Chinese. 3.5 Credits.
This course is designed for students who were raised in an environment in which Chinese is spoken by parents or guardians at home and for those who are familiar with the language and possess native-like abilities in comprehension and speaking. The course therefore focuses on reading and writing (including the correct use of grammar). Cross-listed with East Asian Studies
Instructor(s): N. Zhao; R. Hsieh.

AS.373.112. First Year Heritage Chinese II. 3.0 Credits.
For students who have significant previously-acquired ability to understand and speak Modern Standard Chinese. Course focuses on reading and writing. Teaching materials are the same as used in AS.373.115-116; however, both traditional and simplified versions of written Chinese characters are used. Lab required. Continuation of AS.373.111. Recommended Course Background: AS.373.111 or permission required.
Prerequisites: AS.373.111 or instructor permission
Instructor(s): N. Zhao.

AS.373.115. First Year Chinese. 4.5 Credits.
This course is designed primarily for students who have no prior exposure to Chinese. The objective of the course is to help students build a solid foundation of the four basic skills—listening, speaking, reading, and writing in an interactive and communicative learning environment. The emphasis is on correct pronunciation, accurate tones and mastery of basic grammatical structures. Note: Students with existing demonstrable skills in spoken Chinese should take AS.373.111-112. No Satisfactory/ Unsatisfactory. Students may choose to attend either lecture at 12pm or 3pm on TTh. Cross-listed with East Asian Studies
Instructor(s): J. Chen; N. Zhao; Y. Chen.

AS.373.116. First Year Chinese II. 4.5 Credits.
Introductory course in Modern Standard Chinese. Goals: mastery of elements of pronunciation and control of basic vocabulary of 800-900 words and most basic grammatical patterns. Students work first with Pin-Yin system, then with simplified version of written Chinese characters. Continuation of AS.373.115. Note: Student with existing demonstrable skills in spoken Chinese should take AS.373.111-112. Recommended Course Background: AS.373.115 or permission required.
Prerequisites: AS.373.115 or instructor permission
Instructor(s): J. Chen; L. Yin; N. Zhao; Y. Chiang.

AS.373.211. Second Year Heritage Chinese. 3.5 Credits.
This course is designed for students who finished AS.373.112 with C+ and above (or equivalent). Students in this course possess native-like abilities in comprehension and speaking. The course focuses on reading and writing. Cross-listed with East Asian Studies
Prerequisites: AS.373.112 or equivalent.
Instructor(s): A. Chen
Area: Humanities.

AS.373.212. Second Year Heritage Chinese II. 3.0 Credits.
For students who have significant previously-acquired ability to understand and speak Modern Standard Chinese. Course focuses on reading and writing. Teaching materials are the same as used in AS.373.115-116; however, both traditional and simplified versions of written Chinese characters are used. Continuation of AS.373.211. Recommended Course Background: AS.373.211 or permission required.
Prerequisites: AS.373.211 or instructor permission
Instructor(s): A. Chen
Area: Humanities.

AS.373.215. Second Year Chinese. 4.5 Credits.
Consolidation of the foundation that students have laid in their first year of study and continued drill and practice in the spoken language, with continued expansion of reading and writing vocabulary and sentence patterns. Students will work with both simplified and traditional characters. Note: Students who have native-like abilities in comprehension and speaking should take AS.373.211-212. Cross-listed with East Asian Studies
Prerequisites: AS.373.116 or equivalent.
Instructor(s): A. Chen; L. Yin
Area: Humanities.
AS.373.216. Second Year Chinese II. 4.5 Credits.
Consolidation of the foundation that students have laid in their
first year of study and continued drill and practice in the spoken
language, with continued expansion of reading and writing vocabulary
and sentence patterns. Students will work with both simplified
and traditional characters. Note: Students who have native-like
abilities in comprehension and speaking should take AS.373.211-212.
Recommended Course Background: AS.373.215 or Permission Required.
Cross-listed with East Asian Studies
Prerequisites: AS.373.215 or instructor permission.
Instructor(s): A. Chen; J. Yin
Area: Humanities.

2.0 Credits.
JHU China-STEM Program: Engineering: Specialized intermediate
language instruction for students of Mandarin in fields of science and
engineering. Courses offered at the Nanging Center in Nanjing, China.
By application only. Two years of College-level Mandarin required for
admission to the China-STEM Program.
Instructor(s): N. Yu
Area: Humanities.

AS.373.271. Intermediate Workshop and Practicum in Health Sciences
Chinese. 2.0 Credits.
JHU China-STEM Program: Engineering: Specialized intermediate
language instruction for students of Mandarin in fields of science and
engineering. Courses offered at the Nanging Center in Nanjing, China.
By application only. Two years of College-level Mandarin required for
admission to the China-STEM Program.
Instructor(s): N. Yu
Area: Humanities.

AS.373.313. Third Year Heritage Chinese. 3.0 Credits.
This course is designed for those who have already taken AS.373.212 or
equivalent. Students need to have native-level fluency in speaking and
understanding Chinese. The course focuses on reading and writing. In
addition to the textbooks, downloaded articles on current affairs may also
be introduced on a regular basis. Cross-listed with East Asian Studies
Prerequisites: Prereq: AS.373.211 AND AS.373.212 or instructor’s
permission
Instructor(s): L. Yin
Area: Humanities.

AS.373.314. Third Year Heritage Chinese II. 3.0 Credits.
This course is a continuation of AS.373.313. Students need to have
native-level fluency in speaking and understanding Chinese. The course
focuses on reading and writing. In addition to the textbooks, downloaded
articles on current affairs may also be included on a regular basis.
Recommended Course Background: AS.373.313 or Permission Required.
Lab required.
Prerequisites: AS.373.313 or equivalent
Instructor(s): J. Yin
Area: Humanities.

AS.373.315. Third Year Chinese. 3.5 Credits.
This two-semester course consolidates and further expands students’
knowledge of grammar and vocabulary and further develops reading
ability through work with textbook material and selected modern essays
and short stories. Class discussions will be in Chinese insofar as feasible,
and written assignments will be given. Cross-listed with East Asian Studies
Prerequisites: AS.373.216 or instructor permission
Instructor(s): A. Chen
Area: Humanities.

AS.373.316. Third Year Chinese II. 3.5 Credits.
This two-semester course consolidates and further expands students’
knowledge of grammar and vocabulary and further develops reading
ability through work with textbook material and selected modern essays
and short stories. Class discussions will be in Chinese insofar as feasible,
and written assignments will be given. Continuation of AS.373.315.
Recommended Course Background: AS.373.315 or permission required.
Prerequisites: AS.373.315 or instructor permission
Instructor(s): A. Chen
Area: Humanities.

AS.373.361. Chinese for Engineers. 6.0 Credits.
JHU China-STEM Program: Engineering: Specialized intermediate
language instruction for students of Mandarin in fields of science and
engineering. Courses offered at the Nanging Center in Nanjing, China.
By application only. Two years of College-level Mandarin required for
admission to the China-STEM Program.
Instructor(s): N. Yu
Area: Humanities.

2.0 Credits.
JHU China-STEM Program: Engineering: Specialized intermediate

AS.373.415. Fourth Year Chinese. 3.0 Credits.
This course is designed for students who finished AS.373.316 with a C+
or above (or equivalent). Readings in modern Chinese prose, including
outstanding examples of literature, newspaper articles, etc. Students are
supposed to be able to understand most of the readings with the aid of
a dictionary, so that class discussion is not focused primarily on detailed
explanation of grammar. Discussion, to be conducted in Chinese, will
concentrate on the cultural significance of the readings’ content. Cross-
listed with East Asian Studies
Prerequisites: AS.373.316 or instructor permission
Instructor(s): Staff
Area: Humanities.
AS.373.416. Fourth Year Chinese II. 3.0 Credits.
Continuation of AS.373.415. Readings in modern Chinese prose, including outstanding examples of literature, newspaper articles, etc. Students should understand most of the readings with the aid of a dictionary, so that class discussion need not focus primarily on detailed explanations of grammar. Discussion, to be conducted in Chinese, will concentrate on the cultural significance of the readings' content. Recommended Course Background: AS.373.415 or Permission Required. Cross-listed with East Asian Studies
Prerequisites: AS.373.415 or instructor permission
Instructor(s): L. Yin
Area: Humanities.

AS.373.451. Topics in Chinese Media. 3.0 Credits.
The main focus of this course is to expand the student's knowledge of four essential skills in Chinese language and to deepen the student's knowledge of Chinese culture. The course is taught based on various written and visual materials (including newspapers, journals, TV, movies, and short novels) to improve students' reading comprehension, maintain conversation skills through class discussion, increase understanding of the culture and society of China, and enhance writing ability through short compositions and a writing project. Recommended Course Background: Completion of four years of Chinese language or permission required.
Instructor(s): N. Zhao
Area: Humanities.

AS.373.491. 5th Year Chinese. 3.0 Credits.
Fifth Year Chinese is designed for students who finished fourth year regular or third year heritage Chinese course at JHU or its equivalent and wish to achieve a higher advanced proficiency level in Chinese. The goal of the course is to help students further develop their listening, speaking, reading and writing skills cohesively and to enhance students' understanding of Chinese culture and society through language learning.
Prerequisites: AS.373.416 or AS.373.314 or equivalent.
Instructor(s): N. Zhao.

AS.373.492. Fifth Year Chinese. 3.0 Credits.
Fifth Year Chinese is designed for students who finished fourth year regular or third year heritage Chinese course at JHU or its equivalent and wish to achieve a higher advanced proficiency level in Chinese. The goal of the course is to help students further develop their listening, speaking, reading and writing skills cohesively and to enhance students' understanding of Chinese culture and society through language learning.
Prerequisites: AS.373.491 or equivalent.
Instructor(s): N. Zhao.

AS.373.501. Independent Study - Chinese. 0.0 - 4.0 Credits.
Instructor(s): L. Lieven; M. Johnson; N. Zhao.

AS.373.502. Independent Study - Chinese. 2.0 Credits.
Independent Study - Chinese
Instructor(s): L. Lieven; M. Johnson.

AS.375.115. First Year Arabic. 4.5 Credits.
Introductory course in speaking, listening, reading, and writing Modern Standard Arabic. Presents basic grammatical structures and a basic vocabulary. Through oral-aural drill in classroom, tapes in Language Laboratory, and reading/writing exercises, students attain a basic level of competence on which they can build in subsequent years of study. No Satisfactory/ Unsatisfactory
Instructor(s): S. Jafire.

AS.375.116. First Year Arabic II. 4.5 Credits.
Continuation of AS.375.115. Introductory course in speaking, listening, reading, and writing Modern Standard Arabic. Presents basic grammatical structures and a basic vocabulary. Through oral-aural drill in classroom, tapes in Language Laboratory, and reading/writing exercises, students attain a basic level of competence on which they can build in subsequent years of study. Accelerated students should register for Section 01. May not be taken Satisfactory/ Unsatisfactory
Prerequisites: AS.375.115 or instructor permission
Instructor(s): F. Abdallah; I. Hassan; K. Tahrawi; S. Jafire.

AS.375.119. Beginning Arabic I. 3.0 Credits.
Introductory course in speaking, listening, reading, and writing Modern Standard Arabic. Presents basic grammatical structures and a basic vocabulary. Through oral-aural drill in classroom, tapes in Language Laboratory, and reading/writing exercises, students attain a basic level of competence on which they can build in subsequent years of study.
Instructor(s): F. Abdallah; K. Tahrawi.

AS.375.120. Beginning Arabic II. 3.0 Credits.
Continuation of Beginning Arabic I. Introductory course in speaking, listening, reading, and writing Modern Standard Arabic. Presents basic grammatical structures and a basic vocabulary. Through oral-aural drill in classroom, tapes in Language Laboratory, and reading/writing exercises, students attain a basic level of competence on which they can build in subsequent years of study.
Instructor(s): K. Tahrawi.

AS.375.215. Second Year Arabic. 4.0 Credits.
Designed to bring students up to competency level required for third/fourth year Arabic. Students will consolidate and expand their mastery of the four basic skills acquired in AS.375.115-116. More authentic material—written, audio, and visual—will be used, and culture will be further expanded on as a fifth skill. Recommended Course Background: AS.375.115-116 or equivalent.
Prerequisites: AS.375.116 or equivalent.
Instructor(s): Staff
Area: Humanities.

AS.375.216. Second Year Arabic II. 4.0 Credits.
Continuation of AS.375.215. Designed to bring students up to competency level required for third/fourth year Arabic. Students will consolidate and expand their mastery of the four basic skills acquired in AS.375.115-116. More authentic material—written, audio, and visual—will be used, and culture will be further expanded on as a fifth skill. Accelerated students should register for Section 01. Recommended Course Background: AS.375.215 or permission required.
Prerequisites: AS.375.215 or instructor permission
Instructor(s): I. Hassan; S. Jafire
Area: Humanities.

AS.375.301. Third Year Arabic. 3.0 Credits.
Designed to enhance students' ability to read, discuss, and write about various topics covered in traditional and contemporary Arabic texts. Recommended Course Background: AS.375.216 or equivalent.
Prerequisites: AS.375.116 or instructor permission
Instructor(s): S. Jafire
Area: Humanities.
AS.375.301. Advanced Russian Grammar. 4.0 Credits.
This course is designed for students who have no background in the
language and wish to learn the language at an academic level, obtaining
knowledge of the linguistic aspects of the language as well as skills
needed to communicate in Russian. The goal of the course is the
simultaneous progression of four skills (speaking, listening, writing, and
reading) as well as familiarity with aspects of Russian linguistics and
culture that are necessary for language competency higher than that
learned in First Year Russian.
Prerequisites: Students may not have completed AS.377.131 AND
AS.377.132 under the previous JHU/Goucher program.
Instructor(s): Staff.
AS.377.131. Elements of Russian I. 4.0 Credits.
Designed to give student a firm foundation in the language, with
special emphasis on the development of vocabulary, basic reading, and
conversational skills. (Section 02 taught at Goucher College)
Instructor(s): A. Czeczulin; O. Samilenko.
AS.377.132. Elementary Russian II. 4.0 Credits.
Designed to give students a firm foundation in the language, with
special emphasis on the development of vocabulary, basic reading, and
conversational skills. Continuation of AS.377.131. Section 02 taught at
Goucher. May not be taken Satisfactory/Unsatisfactory. Recommended
Course Background: AS.377.131.
Instructor(s): A. Czeczulin; O. Samilenko.
AS.377.301. Third Year Arabic II. 3.0 Credits.
Designed to enhance students' ability to read, discuss, and write about
various topics covered in traditional and contemporary Arabic texts.
Continuation of AS.377.301. Recommended Course Background:
AS.377.301 or permission required.
Prerequisites: AS.375.301 or instructor permission
Instructor(s): S. Jafire
Area: Humanities.
AS.377.401. Fourth Year Arabic II. 2.0 Credits.
This is an introductory course to different periods of the Arabic literature.
Selections of famous Arabic poetry and short prose works are the
substance of the course.
Prerequisites: AS.377.302 or equivalent.
Instructor(s): Staff
Area: Humanities.
AS.377.402. Fourth Year Arabic II. 2.0 Credits.
This is an introductory course to different periods of the Arabic literature.
Selections of famous Arabic poetry and short prose works are the
substance of the course. Continuation of AS.377.401. Recommended
Course Background: AS.377.302 or equivalent.
Prerequisites: AS.375.401 or equivalent.
Instructor(s): F. Ismail
Area: Humanities.
AS.377.501. Independent Study-Arabic. 0.0 - 3.0 Credits.
Instructor(s): M. Johnson.
AS.377.801. Independent Study - Arabic.
Graduate level Independent Study course in Arabic.
Instructor(s): B. Rajab.
AS.377.802. Independent Study -- Arabic.
Instructor(s): B. Rajab
Area: Humanities.
AS.377.115. First Year Russian. 4.0 Credits.
This course is designed for students who have no background in the
language and wish to learn the language at an academic level, obtaining
knowledge of the linguistic aspects of the language as well as skills
needed to communicate in Russian. The goal of the course is the
simultaneous progression of four skills (speaking, listening, writing, and
reading) as well as familiarity with aspects of Russian linguistics and
culture that are necessary for language competency higher than that
learned in First Year Russian.
Prerequisites: AS.377.132 or instructor permission
Instructor(s): A. Czeczulin
Area: Humanities.
AS.377.200. Say What You Mean, Mean What You Say. 3.0 Credits.
This course focuses on language as a form of communication – verbal,
nonverbal and written. It is designed to prepare students to study their
own language(s) as well as foreign languages such as Russian, relying
on physical cues, common grammar, and the global need to express
oneself to others, by taking a hard look at the mechanics of creating an
entertainment sensation. Taught at Goucher College.
Instructor(s): A. Czeczulin
Area: Humanities.
AS.377.208. Intensive Intermediate Russian. 4.0 Credits.
Intensive oral work; continued emphasis on grammar and reading
comprehension. Section 02 taught at Goucher College.
Prerequisites: AS.377.132 or instructor permission
Instructor(s): A. Czeczulin
Area: Humanities.
AS.377.209. Advanced Russian Grammar. 4.0 Credits.
Continuation of AS.377.208. Intensive oral work; continued emphasis on
grammar and reading comprehension.
Instructor(s): A. Czeczulin
Area: Humanities.
AS.377.210. Speak Russian. 3.0 Credits.
Discussions based on readings, films, and multimedia exercises. Special
attention is paid to the active use of grammar structures in fourth
semester Russian. Recommended Course Background: AS.377.209 or
instructor's permission.
Prerequisites: AS.377.209 or instructor permission
Instructor(s): O. Samilenko
Area: Humanities.
AS.377.211. Introduction to Russian Literature I. 3.0 Credits.
This first intensive reading course of the literary sequence focuses on a
survey of major writers, genres, and literary movements of mid-nineteenth
century Russia including select works of Pushkin, Gogol, Lermontov,
Turgenev, Tolstoy and Dostoevsky adapted to the intermediate level.
Taught in Russian
Prerequisites: AS.377.209 AND AS.377.210 or instructor permission
Instructor(s): O. Samilenko
Area: Humanities.
AS.377.215. Second Year Russian. 3.0 Credits.
This course is designed for students who have finished AS.377.116
with C+ or above, or by a placement exam. The goal of the course is the
simultaneous progression of four skills (speaking, listening, writing, and
reading) as well as familiarity with aspects of Russian linguistics and
culture that are necessary for language competency higher than that
learned in First Year Russian.
Instructor(s): Staff
Area: Humanities.
AS.377.237. The Russian Press. 3.0 Credits.
Reading and discussion of topics drawn from the Russian press.
Designed to strengthen the student's command of Russian vocabulary,
especially in the areas of history, political science, and economics, while
providing a deeper insight into the dynamics of everyday life in Russia
today. Taught at Goucher College.
Prerequisites: AS.377.209 OR AS.377.210 OR Permission of instructor.
Instructor(s): A. Czeczulin
Area: Humanities.
AS.377.253. The Soul of Russia: Culture and Civilization. 3.0 Credits.
The evolution of Russian culture and civilization from the Mongol
invasion to the present day conducted through a study of literary texts,
architecture, art, music, film, and multimedia. Taught in English. Held at
Goucher.
Instructor(s): A. Czeczulin
Area: Humanities
Writing Intensive.

AS.377.269. The Russian Fairy Tale. 3.0 Credits.
A survey course of Russian oral and subsequent written tradition using
multimedia and presented against the background of the Indo-European
tradition. Taught in English at Goucher College.
Instructor(s): A. Czeczulin
Area: Humanities
Writing Intensive.

AS.377.270. Out of the Shadows: Women in Russia. 3.0 Credits.
This course will explore the role of Russian women in the world by
carefully examining the significance of contributions by these women.
Diverse perspectives will be explored (Russian and Russian National).
Students will examine and analyze texts written by and about women
struggling with questions regarding patriarchal and male-based society.
The fact that these women have remained hidden from Russia and the
world at large will also be addressed, using feminist methodologies.
This course will provide students with the opportunity to pursue their
own questions in dialogue. Rus 270 is available as a traditional or hybrid
class. Offered Fall 2015 and every fall. Taught at Goucher College.
Instructor(s): A. Czeczulin
Area: Humanities.

AS.377.312. Chekhov and the Short Story. 3.0 Credits.
Chekhov's short stories and plays studied against the social, political, and
philosophic background of his time. Close readings and in-depth stylistic
analysis. Designed for advanced students. Taught in Russian
Instructor(s): O. Samilenko
Area: Humanities.

AS.377.315. Third Year Russian. 3.0 Credits.
This course offers advanced training in spoken as well as written
Russian. It is designed for students who have basic Russian language
proficiency acquired through AS.377.216 or equivalent. Advanced
level of grammatical structures will be learned and practiced through
communicative tasks.
Instructor(s): Staff
Area: Humanities.

AS.377.318. Chekov and the Short Story. 3.0 Credits.
Chekhov's short stories and plays studied against the social, political, and
philosophic background of his time. Close readings and in-depth stylistic
analysis. Designed for advanced students. Taught in Russian
Instructor(s): O. Samilenko
Area: Humanities.

AS.377.335. Technical Translation. 3.0 Credits.
Advanced work in translating Russian into English in the sciences and
social sciences. Taught at Goucher.
Instructor(s): A. Czeczulin
Area: Humanities.

AS.377.353. The Soul of Russia: Russian Culture and Civilization and
Capstone Project. 4.0 Credits.
Students will learn about Russian traditions, folklore, conceptions of the
world, and the search for national identity in juxtaposition with Russian
history and literature. Seven topics will be covered using literature, music,
cuisine and dance. At the 300-level students are required to complete a
research paper and a capstone project that includes work in the Russian
language done through reading and written assignments or through a
documented community-based learning capstone project with the
instructor's permission. The course is taught in English. Students taking
253 receive 3 credits. Students taking 353 receive 4 credits.
Instructor(s): A. Czeczulin
Area: Humanities
Writing Intensive.

AS.377.395. Readings in Russian Studies. 2.0 Credits.
The course examines aspects of Russian culture through Russian
literature. Readings include a wide range of texts. In this particular
course, we will read a play by a Soviet writer and watch a video recording
of a contemporary stage show by the Moscow Art Theater. Participation
in the course would require reading authentic Russian texts, extensive
classroom discussions, and frequent writing assignments. (All texts and
videos are in Russian.) Pre-req: 377.315-316 or by permission
Instructor(s): Staff
Area: Humanities.

AS.377.396. Senior Seminar II: Masterpieces of the 20th Century. 3.0
Credits.
A close study of Russian poetry from the eighteenth century to the
present, including major poetic movements. Taught in Russian.
Instructor(s): O. Samilenko
Area: Humanities.

AS.377.501. Independent Study-Russian. 3.0 Credits.
Through arrangement with the instructor.
Instructor(s): A. Czeczulin; O. Samilenko.

AS.377.506. Independent Study - Russian. 0.0 - 3.0 Credits.
Advanced work in translating Russian into English in the sciences and
social sciences.
Prerequisites: AS.377.237 or Instructor permission.
Instructor(s): A. Czeczulin.

AS.377.506. Independent Study - Russian. 0.0 - 3.0 Credits.
Instructor(s): O. Samilenko.

AS.377.599. Independent Study. 3.0 Credits.
Through arrangement with the instructor.

AS.378.115. First Year Japanese. 4.5 Credits.
This course is designed for students who have no background or previous
knowledge in Japanese. The course consists of lectures on Tuesday/
Thursday and conversation classes on Monday/Wednesdays/Fridays.
The goal of the course is the simultaneous progression of four skills
(speaking, listening, writing, and reading) as well as familiarity with
aspects of Japanese culture. By the end of the year, students will have
basic speaking and listening comprehension skills, a solid grasp of
basic grammar items, reading and writing skills, and a recognition
and production of approximately 150 kanji in context. Knowledge of
grammar will be expanded significantly in AS.373.215. No Satisfactory/
Unsatisfactory. Student may choose to attend either lecture at 10:30 am
or 12 pm on TTh. Cross-listed with East Asian Studies
Instructor(s): M. Johnson; S. Katagiri.
AS.378.116. First Year Japanese II. 4.5 Credits.
This course is designed for students who have no background or previous knowledge in Japanese. The course consists of lectures on Tuesday/Thursday and conversation classes on Monday/Wednesdays/Fridays. The goal of the course is the simultaneous progression of four skills (speaking, listening, writing, and reading) as well as familiarity with aspects of Japanese culture. By the end of the fall term, students will have basic speaking and listening comprehension skills, a solid grasp of basic grammar items, reading and writing skills, and a recognition and production of approximately 60 kanji in context. Knowledge of grammar will be expanded significantly in 2nd year Japanese. May not be taken Satisfactory/Unsatisfactory. Recommended Course Background: AS.378.115
Prerequisites: Prereq: AS.378.115 or instructor permission.
Instructor(s): M. Johnson; S. Katagiri.

AS.378.215. Second Year Japanese. 4.5 Credits.
Training in spoken and written language, increasing their knowledge of more complex patterns. At completion, students will have a working knowledge of about 250 Kanji. Recommended Course Background: AS.378.115 and AS.378.116 or equivalent.
Prerequisites: AS.378.116 or equivalent.
Instructor(s): M. Nakao
Area: Humanities.

AS.378.216. Second Year Japanese II. 4.5 Credits.
Continuation of Beginning Japanese and Intermediate Japanese I. Training in spoken and written language, increasing students' knowledge of more complex patterns. At completion, students will have a working knowledge of about 250 Kanji. Lab required. Recommended Course Background: AS.378.215 or equivalent.
Prerequisites: Prereq: AS.378.215 or instructor permission.
Instructor(s): M. Nakao
Area: Humanities.

AS.378.315. Third Year Japanese. 3.0 Credits.
Emphasis shifts toward reading, while development of oral-aural skills also continues apace. The course presents graded readings in expository prose and requires students to expand their knowledge of Kanji, grammar, and both spoken and written vocabulary. Cross-listed with East Asian Studies
Prerequisites: AS.378.215 AND AS.378.216 or instructor permission.
Instructor(s): M. Nakao
Area: Humanities.

AS.378.316. Third Year Japanese II. 3.0 Credits.
Emphasis shifts toward reading, while development of oral-aural skills also continues apace. The course presents graded readings in expository prose and requires students to expand their knowledge of Kanji, grammar, and both spoken and written vocabulary. Lab required. Continuation of AS.378.315. Recommended Course Background: AS.378.315 or equivalent.
Prerequisites: AS.378.315 or equivalent.
Instructor(s): M. Nakao
Area: Humanities.

AS.378.396. Fundamentals of Japanese Grammar. 2.0 Credits.
This course is designed for students who have already studied 1st-year Japanese grammar and wish to develop a thorough knowledge of Japanese grammar in order to advance all aspects of language skills to a higher level. It is also appropriate for graduate students who need to be able to read materials written in Japanese. Recommended Course Background: AS.378.115-116 or equivalent.
Instructor(s): M. Johnson
Area: Humanities.

AS.378.415. Fourth Year Japanese. 3.0 Credits.
By using four skills in participatory activities (reading, writing, presentation, and discussion), students will develop reading skills in modern Japanese and deepen and enhance their knowledge on Kanji and Japanese culture. Recommended Course Background: AS.378.315 and AS.378.316 or equivalent.
Prerequisites: AS.378.316 or equivalent.
Instructor(s): M. Nakao; S. Katagiri
Area: Humanities.

AS.378.416. Fourth Year Japanese II. 3.0 Credits.
By using four skills in participatory activities (reading, writing, presentation, and discussion), students will develop reading skills in modern Japanese and deepen and enhance their knowledge on Kanji and Japanese culture. Lab required. Recommended Course Background: AS.378.415
Prerequisites: AS.378.415 or instructor permission.
Instructor(s): M. Nakao; S. Katagiri
Area: Humanities.

AS.378.501. Independent Study - Japanese. 2.0 Credits.
Independent Study in advanced Japanese language.
Instructor(s): M. Johnson.

AS.378.502. Independent Study - Japanese. 0.0 - 2.0 Credits.
Instructor(s): M. Johnson.

This course is designed for graduate students (in East Asian Studies, Public Health, History of Medicine, History, etc.) and undergraduate students with a strong interest in improving Japanese reading skills. The main goal of the course is to learn strategies for reading and comprehending materials written in Japanese without using a dictionary. Specific strategies and techniques are introduced, followed by practice. Class materials include a broad spectrum of native materials, including novels, newspapers, scholarly articles, essays, historical papers, and so forth. A diverse range of articles and essays are selected to introduce and enforce various ways of reading Japanese effectively. 2 credits for undergraduate students.
Instructor(s): M. Johnson
Area: Humanities.

AS.380.101. First Year Korean. 4.5 Credits.
Introduces the Korean alphabet, hangeul. Covers basic elements of the Korean language, high-frequency words and phrases, including cultural aspects. Focuses on oral fluency reaching Limited Proficiency where one can handle simple daily conversations. No Satisfactory/Unsatisfactory. Cross-listed with East Asian Studies
Instructor(s): J. Song; S. Lee.

AS.380.102. First Year Korean II. 3.0 Credits.
Focuses on improving speaking fluency to Limited Proficiency so that one can handle simple daily conversations with confidence. It provides basic high-frequency structures and covers Korean holidays. Continuation of AS.380.101. Recommended Course Background: AS.380.101 or permission required.
Prerequisites: AS.380.101 or instructor permission
Instructor(s): J. Song; S. Lee.
AS.380.201. Second Year Korean. 4.0 Credits.
Aims for improving oral proficiency and confident control of grammar with vocabulary building and correct spelling intended. Reading materials of Korean people, places, and societies will enhance cultural understanding and awareness. Project due on Korean cities. Existing demonstrable skills in spoken Korean preferred.
Prerequisites: AS.380.101 AND AS.380.102 or instructor permission
Instructor(s): S. Lee
Area: Humanities.

AS.380.202. Second Year Korean II. 3.0 Credits.
Aims for improving writing skills with correct spelling. Reading materials of Korean people, places, and societies will enhance cultural understanding and awareness, including discussion on family tree. Continuation of AS.380.201. Recommended Course Background: AS.380.201 or equivalent.
Prerequisites: AS.380.201 or equivalent.
Instructor(s): S. Lee
Area: Humanities.

AS.380.301. Third Year Korean. 3.0 Credits.
Emphasizes reading literacy in classic and modern Korean prose, from easy essays to difficult short stories. Vocabulary refinement and native-like grasp of grammar explored. Project due on Korean culture. Cross-listed with East Asian Studies
Prerequisites: AS.380.202 or equivalent.
Instructor(s): S. Lee
Area: Humanities.

AS.380.302. Third Year Korean II. 3.0 Credits.
Emphasizes reading literacy in classic and modern Korean prose. By reading Korean newspapers and professional articles in one's major, it enables one to be well-versed and truly literate. Continuation of AS.380.301. Cross-listed with East Asian Studies Prerequisite: AS.380.301 or equivalent.
Prerequisites: AS.380.301 or instructor permission
Instructor(s): S. Lee
Area: Humanities.

AS.380.401. Fourth Year Korean. 2.0 Credits.
This course is designed for those who have finished AS.380.302 or beyond advanced mid level of competency in Korean in four skills. By dealing with various topics on authentic materials including news, articles on websites, short stories, this course aims to help students enhance not only linguistics knowledge and skills, but also current issues in Korea. It is expected that, by the end of the term, students will be able to discuss a variety of topics and express opinions fluently in both spoken and written language.
Prerequisites: AS.380.302 or instructor permission
Instructor(s): S. Lee
Area: Humanities.

AS.380.402. Fourth Year Korean II. 2.0 Credits.
This course is designed for those who have finished AS.380.302 or beyond advanced mid level of competency in Korean in four skills. By dealing with various topics on authentic materials including news, articles on websites, short stories, this course aims to help students enhance not only linguistics knowledge and skills, but also current issues in Korea. It is expected that, by the end of the term, students will be able to discuss a variety of topics and express opinions fluently in both spoken and written language.
Prerequisites: AS.380.401 or equivalent
Instructor(s): S. Lee
Area: Humanities.

AS.381.101. First Year Hindi I. 3.0 Credits.
Course focuses on acquisition of additional vocabulary and grammatical structures in culturally authentic contexts, listening, speaking, reading, and writing comprehension. No Satisfactory/ Unsatisfactory
Instructor(s): U. Saini.

AS.381.102. First Year Hindi II. 3.0 Credits.
This course prepares students to function in everyday situations in the Hindi speaking world. Focuses on the acquisition of basic vocabulary and grammatical structures in culturally authentic contexts through listening, speaking, reading, and writing comprehension. Hindi reading and writing is taught in its original Dayva-nagari script. Oral-aural drills in class and work in the Language Lab is required.
Prerequisites: AS.381.101 or instructor permission
Instructor(s): U. Saini.

AS.381.201. Second Year Hindi I. 3.0 Credits.
Course provides refinement of basic language skills in cultural context. Emphasis on expansion of vocabulary and grammatical structures and further development of communicative skills. Recommended Course Background: AS.381.101, AS.382.102
Prerequisites: AS.381.102 or equivalent.
Instructor(s): U. Saini
Area: Humanities.

AS.381.202. Second Year Hindi II. 3.0 Credits.
Course provides refinement of basic language skills in cultural context. Emphasis on expansion of vocabulary and grammatical structures and further development of communicative skills. Continuation of AS.381.201. Recommended Course Background: AS.381.201 or permission required.
Prerequisites: AS.381.201 or instructor permission
Instructor(s): U. Saini
Area: Humanities.

AS.381.301. Third Year Hindi I. 3.0 Credits.
Learn to converse in Hindi through Hindi songs, films, and media. Promotes the active use of Hindi in culturally authentic contexts. Development of fluency in oral and written communication is emphasized.
Prerequisites: AS.381.201 AND AS.381.202 or instructor permission
Instructor(s): U. Saini
Area: Humanities
Writing Intensive.

AS.381.302. Third Year Hindi II. 3.0 Credits.
This course is geared towards listening comprehension, enrichment of vocabulary and exposure to various social situations. Students will get an opportunity to learn to narrate and support their views in informal and formal styles. The course will promote a meaningful interaction to understand the cultural nuances.
Prerequisites: Prereq: AS.381.301 or equivalent.
Instructor(s): U. Saini
Area: Humanities
Writing Intensive.

Independent study in Hindi above 3rd year level.
Instructor(s): U. Saini.

AS.381.802. Independent Study - Hindi.
Independent study in Hindi above 3rd year level.
Instructor(s): U. Saini.
AS.384.115. First Year Hebrew. 4.0 Credits.
Designed to provide reading and writing mastery, to provide a foundation in Hebrew grammar and to provide basic conversational skills. Cross-listed with Jewish Studies. Final day/time will be determined during the first week of classes based on students’ schedules.
Instructor(s): Z. Cohen.

AS.384.116. First Year Hebrew II. 3.0 Credits.
Designed to provide reading and writing mastery, to provide a foundation in Hebrew grammar and to provide basic conversational skills. Cross-listed with Jewish Studies.
Prerequisites: AS.384.115
Instructor(s): Z. Cohen
Area: Humanities.

AS.384.215. Second Year Hebrew. 3.5 Credits.
Designed to enrich vocabulary and provide intensive grammatical review, and enhance fluency in reading, writing and comprehension. Cross-listed with Jewish Studies. Final day/time will be determined during the first week of classes based on students’ schedules.
Prerequisites: AS.384.116 or equivalent.
Instructor(s): Z. Cohen
Area: Humanities.

AS.384.216. Second Year Hebrew II. 3.0 Credits.
Designed to enrich vocabulary and provide intensive grammatical review, and enhance fluency in reading, writing and comprehension. Cross-listed with Jewish Studies. Final day/time will be determined during the first week of classes based on students’ schedules.
Prerequisites: AS.384.215
Instructor(s): Z. Cohen
Area: Humanities.

AS.384.315. Third Year Hebrew. 4.0 Credits.
Designed to maximize comprehension and the spoken language through literary and newspaper excerpts providing the student with the language of an educated Israeli. Cross-listed with Jewish Studies. Final day/time will be determined during the first week of classes based on students’ schedules.
Prerequisites: AS.384.216 or equivalent.
Instructor(s): Z. Cohen
Area: Humanities.

AS.384.316. Third Year Hebrew II. 3.0 Credits.
Designed to maximize comprehension and the spoken language through literary and newspaper excerpts providing the student with the language of an educated Israeli. Cross-listed with Jewish Studies.
Prerequisites: AS.384.315 or instructor permission
Instructor(s): Z. Cohen
Area: Humanities.

AS.384.503. Summer Internship-Hebrew. 1.0 Credit.
Instructor(s): Z. Cohen.

Cross Listed Courses
East Asian Studies
AS.310.316. First Year Classical Chinese: Language and Literature of the Ancient Period. 3.0 Credits.
Readings in prose and poetic texts of the Zhou and Han Dynasties. Class emphasizes language acquisition, especially grammar and vocabulary memorization. In addition we will read and discuss works in western languages that treat the culture and writers of the Ancient period. Quizzes and Tests (Midterm and Final) will cover both language and cultural data. A short paper also required.
Instructor(s): V. Cass
Area: Humanities.

Latin American Studies
http://krieger.jhu.edu/plas

The Program in Latin American Studies (PLAS) promotes the study of the histories, cultures, societies, and political systems of Latin America and the Caribbean at the Johns Hopkins University. PLAS’s curricular offerings and extracurricular activities provide undergraduate and graduate students with opportunities to explore the rich political, aesthetic, intellectual, and scientific traditions of Latin America. The program also regularly sponsors scholarship and teaching related to Latino Studies. Drawing on faculty expertise across the disciplines, PLAS aims to generate new perspectives on Latin America, the Caribbean, and the experience of Latinos in the United States.

PLAS coordinates an undergraduate major and minor in Latin American studies. The major and minor are designed to deepen student interest in, and understanding of, Latin America through course work and extracurricular programs. The program encourages and supports students wishing to undertake summer research in Latin America as well as those who seek to study abroad at Latin American universities.

Information about PLAS may be found on its website:

Major/Minor in Latin American Studies

Students entering Hopkins in Fall 2018 are not eligible to declare this major or minor. Questions may be directed to the KSAS Dean's Office.

Also see Requirements for a Bachelor’s Degree (p. 7).

The Program in Latin American Studies (PLAS) coordinates a major and a minor in Latin American studies. It aims to provide undergraduate students with a broad understanding of the complexity and richness of Latin American political, social, and cultural phenomena. As a result of completing the major or the minor, students will have gained a deep understanding of Latin American politics, economy, society, and culture, as well as of the intricate relationship between the region and the United States.

Learning Goals:

Students who graduate with a major or a minor in Latin American studies from Johns Hopkins will be able to:

- Demonstrate command of either Spanish or Portuguese in order to read documents, literature, or view media at an advanced level.
- Write effectively and support their arguments with appropriate evidence.
- Demonstrate an understanding of research methodologies drawn from both the humanities and social sciences appropriate to the field of Latin American studies.
- Critically evaluate the position of Latin America in an increasingly globalized world
- Demonstrate an awareness of the variety of cultures in Latin America.
- Demonstrate familiarity with the Latin American literary tradition and be able to analyze and interpret literary texts.

Students who decide to major or minor in Latin American studies are required to study Spanish or Portuguese. Language requirements can be waived for those who demonstrate suitable knowledge of either Spanish or Portuguese, or in an Amerindian language such as Quechua or
Guarani. The general "Introduction to Latin American Studies" course is required for the major.

Though students may choose to emphasize a particular area of specialization within Latin American studies (e.g., politics, public health, literature), the major and minor programs require a distribution of courses across a variety of areas.

**Requirements for the Major**

The requirements for a major in Latin American Studies are as follows:

- Four lower-level courses (100- and 200-level courses) dealing with Latin America, one of which must be the general introductory course (AS.361.130 Introduction to Latin American Studies) to Latin America.
- Five upper-level courses (300-level courses and above) focused on Latin America.
- Two electives courses (at any level) relevant or with reference to Latin America.
- Language proficiency (i.e., reading fluency and basic conversational skills) through the advanced level in either Spanish or Portuguese will be required. Language requirements can be waived for those who demonstrate a suitable proficiency in either Spanish or Portuguese.
- No grade below C- will be accepted for the major requirements and courses may not be taken satisfactory/unsatisfactory.

**Requirements for the Minor**

The requirements for a minor in Latin American Studies are as follows:

- Four upper-level courses (300 or above) focused on Latin America. Intersession courses may not be used to fulfill this requirement.
- Two additional courses at any level dealing with Latin America. Note: 3-credit intersession or summer session non-language courses offered by JHU may be used to fulfill this requirement.
- Language proficiency through the intermediate level in either Spanish or Portuguese.
- No grade below C- will be accepted for the minor requirement and courses may not be taken satisfactory/unsatisfactory.

Honors in the Major

For current course information and registration go to https://isis.jhu.edu/classes/
Latin American Studies

AS.361.130. Introduction to Latin American Studies. 3.0 Credits.
The goal of this course is to provide an overview of Latin America, analyzing political and cultural aspects, chronologically organized. We will begin studying the origins of the multi-ethnic societies, starting with the ancient civilizations and their transformation under colonization. It is important to understand the survival of cultural traits among indigenous peasants today in the countries that were the cradle of ancient civilizations: Mexico, Guatemala and the Andean countries. In the republican era the course will focus on the classical Caribbean dictators in the first half of the 20th century and their reflection in the literature, comparing the historical reality with the magic representation in the work of Garcia Marquez. The course will scrutinize the most important revolutions in the continent: the Mexican, Cuban and Bolivian revolutions and the geopolitics of USA in the Americas. Weekly lectures related to the assigned reading will focus on specific periods, topics and regions. After each lecture, we will review the material, connecting specific details from the readings with the more theoretical aspects provided in my lecture. The course has a website where the PowerPoint presentations will be posted. Students are encouraged to post their questions, comments and suggestions on the web after their readings. Students will be given a study guide for each lecture, which will be the basis for the exams. Our perspective on Latin America will be enhanced by a selection of few films related to the topics.
Instructor(s): E. Cervone
Area: Humanities, Social and Behavioral Sciences.

AS.361.502. Independent Study. 0.0 - 3.0 Credits.
Instructor(s): G. Paquette; H. Robbins; S. Castro-Klaren.

AS.361.550. Internship. 1.0 Credit.
Instructor(s): Staff.

Cross-Listed Course Offerings

Anthropology

AS.070.285. Understanding Aid: Anthropological Perspectives for Technology-Based Interventions. 3.0 Credits.
This course combines anthropological perspectives with the discussion and examination of technology-based interventions in the field of development and aid policies, with particular focus on activities related to water resources, sanitation, and hygiene. Readings and discussions analyze some of the theoretical, historically rooted, and practical issues that challenge those who hope to provide effective aid. A key aim of this course is to provide students with better understanding of cultural, social, environmental and economic issues relevant to technical intervention in developing countries.
Instructor(s): E. Cervone; W. Ball
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

German and Romance Languages & Literatures

AS.211.380. Modern Latin American Culture. 3.0 Credits.
Taught in Spanish. This course will explore the fundamental aspects of Latin-America culture from the formation of independent states through the present—in light of the social, political, and economic histories of the region. The course will offer a general survey of history of Latin-America, and will discuss texts, movies, songs, pictures, and paintings, in relation to their social, political, and cultural contexts. May not be taken satisfactory/unsatisfactory.
Prerequisites: AS.210.312
Area: Humanities.

AS.211.394. Brazilian Culture & Civilization. 3.0 Credits.
The course is taught in English. No knowledge of Portuguese is required. This course is intended as an introduction to the culture and civilization of Brazil. It is designed to provide students with basic information about Brazilian history, art, literature, popular culture, theater, cinema, and music. The course will focus on how indigenous Asian, African, and European cultural influences have interacted to create the new and unique civilization that is Brazil today. The course is taught in English, but ONE extra credit will be given to students who wish to do the course work in Portuguese. Those wishing to do the course work in English for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. The sections will be taught simultaneously. Section 01: 3 credits Section 02: 4 credits (instructor’s permission required)
Instructor(s): F. De Azeredo Cerqueira
Area: Humanities
Writing Intensive.

AS.215.458. Cuba and its Culture Since the Revolution. 3.0 Credits.
We will study the visual and textual arts, cinema, political culture, and blogosphere; reaching back to the first phases in the building of the revolutionary state apparatus and its sovereign mandate. Taught in Spanish.
Prerequisites: AS.210.312[C]
Instructor(s): E. Gonzalez
Area: Humanities.

Readings from colonial times to the present from three cultural legacies, Hispanic, English and French. Centered on slavery and its sequels.
Instructor(s): E. Gonzalez.

History of Art

AS.010.105. Art of the Ancient Americas. 3.0 Credits.
This course provides a basis for the study of ancient Americas art and architecture and a broad exposure to the issues relevant to its study. Select visual arts within the primary regions of Mexico and Central America will be emphasized. In conjunction with the Baltimore Museum of Art (BMA) and the JHU Archaeological Museum (JHAM), students will participate in on-site study of the collections.
Instructor(s): L. Deleonardis
Area: Humanities.

AS.010.320. Art of Colonial Peru. 3.0 Credits.
Viewed within the dynamic historical context of colonial society, we consider the pictorial, sculptural, and architectural programs that ensued in viceregal Peru (1532-1825). We examine the role of religious orders, art schools, artisan guilds and cofradía, and consider the social and political implications of art patronage.
Instructor(s): L. Deleonardis
Area: Humanities.

AS.010.365. Art of the Ancient Andes. 3.0 Credits.
The ancient visual arts of Andean South America and their respective cultural contexts form the basis of this course. In conjunction with the Baltimore Museum of Art and the Johns Hopkins Archaeological Museum students will have access to collections for study.
Instructor(s): L. Deleonardis
Area: Humanities.
History of Science

AS.140.390. Science and Technology in Latin America. 3.0 Credits.
The course surveys the development of western science and technology in Hispanic America (1492 to the present). We begin studying the hybridization of scientific practices between European and Native American cultures during the early colonial era and end with the transfer of technologies and industrialization of the 20th century. We emphasize the role on science and technology in state formation, the acculturation of foreign ideas in colonial and postcolonial societies, and the role of intellectual elites in modernization programs.
Instructor(s): M. Portuondo
Area: Humanities, Social and Behavioral Sciences.

Sociology

AS.230.343. Political Sociology of Latin America. 3.0 Credits.
This course provides an overview of Latin America through its historical, economic, social, and political dimensions. Emphasis will be given to the analysis of social structures: class, race and ethnicity, and the contemporary social movements. The course begins with an overview of the pre-Columbian civilizations and colonial legacies that gave rise to the multiethnic societies and the ethnic conflicts which characterize contemporary Latin America. Cross-listed with Program in Latin American Studies and International Studies (CP)
Instructor(s): M. von der Heydt-Coca
Area: Social and Behavioral Sciences.

AS.230.346. Economic Sociology of Latin America. 3.0 Credits.
This course will offer an overview of Latin America’s economic reality as an intertwined process of economic and political domestic factors within the constraints of the world economy. Latin American development will be analyzed from a historical perspective. The first half of the semester the course will focus on the analysis of the economic developmental patterns starting in the middle of the 19th century to the populist era in the middle of the 20th century. In the second half of the semester, we will analyze in depth the contemporary neoliberal approach to development. Globalization is the force that drives economic, social and political processes in Latin America. The course will include case studies as well the social conflicts generated by the increasing polarization of the society. Students will be exposed to important sociological theories.
Instructor(s): M. von der Heydt-Coca
Area: Social and Behavioral Sciences.

Mathematics

http://www.mathematics.jhu.edu/

Mathematics, more than the fundamental language and underlying analytical structure of science and technology, is a formal way of thinking —an art that ties together the abstract structure of reason and the formal development of the logic that defines the scientific method. From the study of just how arguments and theories are formed in language and technology to the framework of quantitative and qualitative models of the natural and social sciences, mathematics is based upon the development of precise expressions, logical arguments, and the search for and exposure of pattern and structure.

The undergraduate program in the Department of Mathematics is intended both for students interested in attaining the proper preparation for graduate study and research in pure mathematics, and for students interested in using mathematics to define, properly pose, and solve problems in the sciences, engineering, and other areas. With either purpose, the focus of the program is to help those who wish to understand further the logical content, geometric meaning, and abstract reasoning of mathematics itself. A flexible program involving a broad selection of courses is a department tradition. The program begins by introducing students to the basics of algebra and mathematical analysis and then gives them the choice of exploring topics in theoretical mathematics or studying applications to physics, economics, engineering, computer science, probability, statistics, or mechanics.

The graduate program is designed primarily to prepare students for research and teaching in mathematics. It is naturally centered around the research areas of the faculty, which include algebraic geometry, algebraic number theory, differential geometry, partial differential equations, topology, several complex variables, algebraic groups, and representation theory. The program can be supplemented in applied directions by courses in theoretical physics, computer science, mechanics, probability, and statistics offered in other departments of the Krieger School of Arts and Sciences and in the Department of Applied Mathematics in the Whiting School of Engineering.

Facilities
The Mathematics Department resides in Krieger Hall on the Keyser Quad of Homewood. Adjacent to Krieger Hall, The University’s Milton S. Eisenhower Library has an unusually extensive collection of mathematics literature, including all the major research journals, almost all of which are accessible electronically. The stacks are open to students. The department also has a useful reference library, the Philip Hartman Library. Graduate students share departmental offices, and study space can also be reserved in the university library. Graduate students may access the department’s Linux and Windows servers, as well as computers in graduate student offices. The department also hosts numerous research seminars, special lectures, and conferences throughout the academic year.

Undergraduate Programs
Math Course Placement and Sequencing for All Students

There are three different versions of single variable calculus offered by the Mathematics Department, including 2 versions of semester courses in Calculus I and II, roughly equivalent to Calculus AB and BC in the College Board’s Advanced Placement (AP) system, and a single semester honors version encompassing both Calculus I and II. Students should select their first course in mathematics at JHU based on their intended areas of study, prior experience and training in mathematics, and the results of an advisory Placement Exam offered to incoming freshmen. Students intending to major in mathematics, the natural sciences, or engineering, or who are interested in studying mathematics beyond a year of single variable calculus are strongly encouraged to begin with the AS.110.108 Calculus I - AS.110.109 Calculus II (For Physical Sciences and Engineering) sequence or AS.110.113 Honors Single Variable Calculus. Students majoring in other subjects, or who do not intend to continue taking mathematics courses beyond a year of calculus, may wish to take the sequence AS.110.106 Calculus I (Biological and Social Sciences) - AS.110.107 Calculus II (For Biological and Social Science). This latter sequence relates the methods of calculus to the biological and social sciences. A one-semester pre-calculus course (AS.110.105 Introduction To Calculus) is a pre-calculus course offered for students who would benefit from additional preparation in the basic tools (algebra, trigonometry and the properties of functions) used in calculus.

Entering students may receive course credit for Calculus I or Calculus I and II on the basis of the performance level on either the (AP) or International Baccalaureate (IB) exams (p. 21). All students, regardless of completion of advanced placement exams previously, must take a departmental placement exam to determine their appropriate first course in mathematics. Additional placement information can be found here (http://mathematics.jhu.edu/undergraduate/placement-exams).

After completing a full year of calculus, the courses AS.110.201 Linear Algebra, AS.110.202 Calculus III, or AS.110.302 Differential Equations and Applications may be taken in any order. The department offers honors courses of the former 2; AS.110.212 Honors Linear Algebra and AS.110.211 Honors Multivariable Calculus.

Requirements for the B.A. Degree

In addition to the Requirements for a Bachelor’s Degree (p. 7), a candidate for the Bachelor of Arts Degree in Mathematics is required to have
completed the major requirements listed below. All courses used to meet these requirements must be completed with a grade of C- or better and may not be taken satisfactory/unsatisfactory (S/U) grading scheme.

Instructor to aid the professor of a regular curriculum course as a mathematics in an environment where they are hired as a formal enables a student to practice the art of teaching and communicating to act as recitation instructors to our freshman courses. This award the department awards many upper-level undergraduates the opportunity at the time of application, a student must be a candidate for honors in year of study. A current GPA of least a 3.0/4.0 is required in the 400-advanced student can qualify for both degrees during the four years for the Bachelor of Arts degree and a Master of Arts degree, an By applying some courses simultaneously toward the requirements the undergraduate degree. Students may contact the graduate program of undergraduate study. Admission to the BAMA Program is by the to Abstract Algebra Math application course 3-4

4

7-8

Total Credits: 42-44

Requirements for a Minor in Mathematics
All courses used to meet the mathematics minor requirements must be completed with a grade of C- or better and may not be taken using the S/U grading scheme. One course in the Applied Mathematics and Statistics Department (at the 300-level or above) may be substituted for one of the elective courses for the minor.

AS.110.106 Calculus I (Biology and Social Sciences) 4
or AS.110.108
AS.110.107 Calculus II (For Biological and Social Science) 4
or AS.110.109
or AS.110.113 Honors Single Variable Calculus
AS.110.202 Calculus III 4
One 200-level or above math course (excluding AS.110.202) 4
Three 300-level or above math courses 12
Total Credits 28

Honors Program in Mathematics
As a general guideline, departmental honors are awarded to recipients of the B.A. degree who have completed AS.110.411 Honors Algebra I, as well as AS.110.412 Honors Algebra II, AS.110.415 Honors Analysis I, AS.110.416 Honors Analysis II, AS.110.407 Honors Complex Analysis and one more course at the 400-level or above with a combined grade point average of at least 3.6/4.0.

J.J. Sylvester Prize
The J.J. Sylvester Prize in Mathematics, which carries a cash award, is given each year to the one of two top-performing graduating seniors majoring in mathematics for outstanding achievement.

The B.A./M.A. Program
By applying some courses simultaneously toward the requirements for the Bachelor of Arts degree and a Master of Arts degree, an advanced student can qualify for both degrees during the four years of undergraduate study. Admission to the BAMA Program is by the standard graduate application form, completed during a student's junior year of study. A current GPA of at least a 3.0/4.0 is required in the 400-level mathematics courses taken while resident at the university, and at the time of application, a student must be a candidate for honors in the undergraduate degree. Students may contact the graduate program assistant for further information.

Undergraduate Teaching Assistantships
The department awards many upper-level undergraduates the opportunity to act as recitation instructors to our freshman courses. This award enables a student to practice the art of teaching and communicating mathematics in an environment where they are hired as a formal instructor to aid the professor of a regular curriculum course as a Teaching Assistant (TA). Undergraduate TAs are fully mentored and monitored, and the position provides a valuable credential and experience.

Graduate Programs
Admission
Admission to the Ph.D. program is based on academic records, letters of recommendation, a statement of purpose, an optional personal statement, and Graduate Record Examination scores.

Basic Program
Graduate study is centered around three core areas:

Analysis
AS.110.605 Real Variables
AS.110.607 Complex Variables
AS.110.608 Riemann Surfaces
AS.110.631 Partial Differential Equations I
& AS.110.632 Partial Differential Equations II
AS.110.645 Riemannian Geometry

Algebra
AS.110.601 Algebra
& AS.110.602 and Algebra
AS.110.617 Number Theory
AS.110.619 Lie Groups and Lie Algebras
AS.110.643 Algebraic Geometry
& AS.110.644 and Algebraic Geometry

Topology
AS.110.615 Algebraic Topology
& AS.110.616 and Algebraic Topology

These 600-level graduate courses are preliminary to research upon the foundations of an undergraduate math major.

The 700-level courses are designed to bring students abreast of recent developments and to prepare them for research in the area of their choice.

Requirements for the M.A. Degree
Although the Mathematics Department does not admit students seeking a terminal M.A. degree, students in the Ph.D. program may earn an M.A. degree. Advanced undergraduate students may also apply to be admitted to the accelerated B.A./M.A. program.

M.A. candidates must complete:

- Four graduate courses given by the Johns Hopkins Mathematics Department;
- Two additional courses at the graduate or 400-level, other than AS.110.401, AS.110.405, and AS.110.415, given by the Johns Hopkins Mathematics Department, or, with the permission of the graduate program director, graduate mathematics courses given by other departments or universities.

All courses used to satisfy the requirements must be completed with a grade of B- or better. (Advanced graduate courses completed with a grade of P can also be used to satisfy the requirements.)
Requirements for the Ph.D. Degree

The departmental requirements for the Ph.D. degree are:

1. Candidates must show satisfactory work in Algebra (AS.110.601-AS.110.602), Real Variables (AS.110.605), Complex Variables (AS.110.607), Algebraic Topology (AS.110.615), and one additional mathematics graduate course in their first year. The seminars and qualifying exam preparation course cannot be used to fulfill this requirement. The algebra and analysis requirements can be satisfied by passing the corresponding written qualifying exam in September of the first year; these students must complete at least two courses each semester. Students having sufficient background in topology can substitute an advanced topology course for AS.110.615, with the permission of the instructor.

2. Candidates must pass written qualifying exams by the beginning of their second year in Analysis (Real and Complex) and in Algebra. Exams are scheduled for September and May of each academic year.

3. Candidates must show satisfactory work in at least two mathematics graduate courses each semester of their second year, and, if they have not passed their oral qualifying exam, in the first semester of their third year.

4. Candidates must pass a departmental oral qualifying examination in the student's chosen area of research by April 8th of the third year. The topic of the exam is chosen in consultation with the faculty member who has agreed (provisionally) to be the student's thesis advisor, who will also be involved in administering the exam.

5. There is no longer a Mathematics Department foreign language requirement. With the vast majority of articles written in English, the importance of having the capability of reading another language has diminished. However, important earlier literature in certain areas of mathematics may be written in French, German, or Russian. Moreover, some articles are still being written in French. It is now at the discretion of the student's thesis advisor whether to impose a language requirement.

6. Candidates must produce a dissertation based upon independent and original research.

7. Candidates will gain teaching experience in mathematics as a teaching assistant for undergraduate courses. The student will be under the supervision of both the faculty member teaching the course and the director of undergraduate studies. First year students are given a reduced TA workload in the spring semester (this is related to item #2).

8. After completion of the thesis research the student will defend their dissertation by means of the Graduate Board Oral Exam. The exam must be held at least three weeks before the Graduate Board deadline the candidate wishes to meet.

Financial Aid

Students admitted to the Ph.D. program receive teaching assistantships and full tuition fellowships. Exceptional applicants become candidates for one of the university's George E. Owen Fellowships.

William Kelso Morrill Award

The William Kelso Morrill Award for excellence in the teaching of mathematics is awarded every spring to the graduate student who best exemplifies the traits of Kelso Morrill: a love of mathematics, a love of teaching, and a concern for students.

Excellence in Teaching Awards

Three awards are given each year to a junior faculty member and graduate student teaching assistants who have demonstrated exceptional ability and commitment to undergraduate education.

For current faculty and contact information go to http://www.mathematics.jhu.edu/people/

Faculty

Chair
David Savitt
Number theory, Galois representations.

Professors
Caterina Consani
Arithmetic geometry, number theory, and non-commutative geometry.

Nitu Kitchloo
Symplectic geometry, topology of Kac-Moody groups, classical algebraic topology

Hans Lindblad
Harmonic analysis, PDE, fluid dynamics, relativity.

Chikako Mese
Geometric analysis.

Mauro Maggioni

Bernard Shiffman
Several complex variables, complex geometry.

Vyacheslav V. Shokurov
Algebraic geometry.

Yannick Sire
Harmonic analysis, real geometry, complex geometry.

Christopher Sogge
J.J. Sylvester Professor; Fourier analysis, partial differential equations.

Joel Spruck
J.J. Sylvester Professor; Partial differential equations, geometric analysis.

W. Stephen Wilson
Algebraic topology, homotopy theory.

Steven Zucker
Hodge theory, algebraic geometry.

Associate Professors

Jacob Bernstein
Minimal surface theory, mean curvature flow.

Ben Dodson
Partial differential equations, harmonic analysis.

Assistant Professors

Fei Lu
Malliavin Calculus and stochastic partial differential equations, data-driven model reduction and data assimilation.
Emily Riehl
Homotopy theory.

Brian Smithling
Arithmetic, algebraic geometry.

Yi Wang
Geometric analysis, nonlinear partial differential equations

**Associate Teaching Professor**
Richard Brown
Director of Undergraduate Studies; Dynamical systems, low-dimensional topology.

**Emeriti**
J. Michael Boardman
Differential topology, algebraic topology.

Jack Morava
Algebraic topology, mathematical physics.

Takashi Ono
Algebra, number theory, algebraic groups.

**J.J.Sylvester Assistant Professor**
Christian Gavrus
Partial differential equations, harmonic analysis

Jingjun Han
Algebraic geometry

Jonas Luehrmann
Partial differential equations, mathematical physics.

Joel Specter
Number theory

Liming Sun
Geometric analysis, partial differential equations

Hang Xu
Complex geometry.

Valentin Zakharevich
Algebraic topology, quantum field theory

Xudong Zheng
Algebraic geometry.

**Associate Research Scientist/Lecturer**
Jian Kong
IT Senior Lecturer; Algebraic geometry.

**Assistant Research Professor**
Sui Tang
Applied harmonic analysis, mathematical signal processing.

Stefano Vigogna
Machine Learning, Harmonic Analysis.

**Joint Appointments**
Gregory Eyink
Professor (Applied Mathematics); Mathematical physics, fluid mechanics, turbulence, dynamical systems.

For current course information and registration go to https://sis.jhu.edu/classes/

**Courses**

**AS.110.105. Introduction To Calculus. 4.0 Credits.**
This course starts from scratch and provides students with all the background necessary for the study of calculus. It includes a review of algebra, trigonometry, exponential and logarithmic functions, coordinates and graphs. Each of these tools will be introduced in its cultural and historical context. The concept of the rate of change of a function will be introduced. Not open to students who have studied calculus in high school.
Instructor(s): C. VanBlargan
Area: Quantitative and Mathematical Sciences.

**AS.110.106. Calculus I (Biology and Social Sciences). 4.0 Credits.**
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, introduction to differential equations, functions of several variables, linear systems, applications for systems of linear differential equations, probability distributions. Many applications to the biological and social sciences will be discussed.
Instructor(s): B. Smithling; X. Zheng
Area: Quantitative and Mathematical Sciences.

**AS.110.107. Calculus II (For Biological and Social Science). 4.0 Credits.**
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, introduction to differential equations, functions of several variables, linear systems, applications for systems of linear differential equations, probability distributions. Applications to the biological and social sciences will be discussed, and the courses are designed to meet the needs of students in these disciplines.
Instructor(s): L. Sun
Area: Quantitative and Mathematical Sciences.

**AS.110.108. Calculus I. 4.0 Credits.**
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, polar coordinates, parametric equations, Taylor's theorem and applications, infinite sequences and series. Some applications to the physical sciences and engineering will be discussed, and the courses are designed to meet the needs of students in these disciplines.
Instructor(s): Staff
Area: Quantitative and Mathematical Sciences.

**AS.110.109. Calculus II (For Physical Sciences and Engineering). 4.0 Credits.**
Differential and integral calculus. Includes analytic geometry, functions, limits, integrals and derivatives, polar coordinates, parametric equations, Taylor's theorem and applications, infinite sequences and series. Some applications to the physical sciences and engineering will be discussed, and the courses are designed to meet the needs of students in these disciplines.
Instructor(s): Y. Wang
Area: Quantitative and Mathematical Sciences.
AS.110.113. Honors Single Variable Calculus. 4.0 Credits.
This is an honors alternative to the Calculus sequences AS.110.106-
AS.110.107 or AS.110.108-AS.110.109 and meets the general
requirement for both Calculus I and Calculus II (although the credit
hours count for only one course). It is a more theoretical treatment
of one variable differential and integral calculus and is based on our
modern understanding of the real number system as explained by Cantor,
Dedekind, and Weierstrass. Students who want to know the "why's and
how's" of Calculus will find this course rewarding. Previous background
in Calculus is not assumed. Students will learn differential Calculus
derivatives, differentiation, chain rule, optimization, related rates, etc),
the theory of integration, the fundamental theorem(s) of Calculus,
applications of integration, and Taylor series. Students should have a
strong ability to learn mathematics quickly and on a higher level than that
of the regular Calculus sequences.
Instructor(s): A. Nakade
Area: Quantitative and Mathematical Sciences.

AS.110.160. The Mathematics of Infinity. 1.0 Credit.
An interdisciplinary introduction to the history of infinity in mathematics,
from Zeno's paradox to the development of calculus to the crisis in
the foundations of mathematics in the early 20th century. We will read about
history, discuss philosophy, and learn some mathematics (including a
crash course in mathematical logic and proof, building up to the rigorous
definition of limits). A previous course in calculus is not required, but
some mathematical maturity will be necessary.
Instructor(s): V. Lorman.

AS.110.201. Linear Algebra. 4.0 Credits.
Vector spaces, matrices, and linear transformations. Solutions
of systems of linear equations. Eigenvalues, eigenvectors, and
diagonalization of matrices. Applications to differential equations.
Prerequisites: Grade of C- or better in AS.110.107 or AS.110.109 or
AS.110.113 or AS.110.202 or AS.110.302, or a 5 on the AP BC exam.
Instructor(s): S. Tang
Area: Quantitative and Mathematical Sciences.

AS.110.202. Calculus III. 4.0 Credits.
Calculus of functions of more than one variable: partial derivatives,
and applications; multiple integrals, line and surface integrals; Green's
Theorem, Stokes' Theorem, and Gauss' Divergence Theorem.
Prerequisites: Grade of C- or better in AS.110.107 OR AS.110.109 OR
AS.110.113 OR AS.110.201 OR AS.110.212 OR AS.110.302, or a 5 on the AP BC exam.
Instructor(s): R. Brown
Area: Quantitative and Mathematical Sciences.

AS.110.211. Honors Multivariable Calculus. 4.0 Credits.
This course includes the material in AS.110.201 with additional
applications and theory. Recommended for mathematically able students
majoring in physical science, engineering, or especially mathematics.
AS.110.211-AS.110.212 used to be an integrated yearlong course, but
now the two are independent courses and can be taken in either order.
Prerequisites: Grade of C- or better in (AS.110.201 or AS.110.212)
Instructor(s): X. Zheng
Area: Quantitative and Mathematical Sciences.

AS.110.212. Honors Linear Algebra. 4.0 Credits.
This course includes the material in AS.110.201 with additional
applications and theory, and is recommended only for mathematically
able students majoring in physical science, engineering, or mathematics
who are interested in a proof-based version of linear algebra. This course
can serve as an Introduction to Proofs (IP) course. Prerequisites: Grade of
B+ or better in 110.107 or 110.109 or 110.113, or a 5 on the AP BC exam.
Area: Quantitative and Mathematical Sciences.
Prerequisites: Grade of B+ or better in AS.110.107 or AS.110.109 or
AS.110.113 or AS.110.202, or AS.110.302, or a 5 on the AP BC exam.
Instructor(s): W. Wilson
Area: Quantitative and Mathematical Sciences.

AS.110.225. Problem Solving Lab. 2.0 Credits.
This course is an introduction to mathematical reason and formalism
in the context of mathematical problem solving, such as induction,
invariants, inequalities and generating functions. This course does
not satisfy any major requirement, and may be taken more than once
for credit. It is primarily used as training for the William Lowell Putnam
Mathematics Competition. Area: Quantitative and Mathematical
Sciences.
Instructor(s): Staff
Area: Quantitative and Mathematical Sciences.

AS.110.302. Differential Equations and Applications. 4.0 Credits.
This is a course in ordinary differential equations (ODEs), equations
involving an unknown function of one independent variable and some of
its derivatives, and is primarily a course in the study of the structure
of and techniques for solving ODEs as mathematical models. Specific
topics include first and second ODEs of various types, systems of linear
differential equations, autonomous systems, and the qualitative and
quantitative analysis of nonlinear systems of first-order ODEs. Laplace
transforms, series solutions and the basics of numerical solutions are
included as extra topics. Prerequisites: Grade of C- or better in 110.107
or 110.109 or 110.113, or a 5 on the AP BC exam. Area: Quantitative and Mathematical
Sciences.
Prerequisites: Grade of C- or better in AS.110.107 or AS.110.109 or
AS.110.113 or AS.110.201 or AS.110.202 or AS.110.211 or AS.110.212,
or a 5 on the AP BC exam.
Instructor(s): J. Kong
Area: Quantitative and Mathematical Sciences.

AS.110.304. Elementary Number Theory. 4.0 Credits.
The student is provided with many historical examples of topics, each
of which serves as an illustration of and provides a background for
many years of current research in number theory. Primes and prime
factorization, congruences, Euler's function, quadratic reciprocity,
primitive roots, solutions to polynomial congruences (Chevalley's
theorem), Diophantine equations including the Pythagorean and Pell
equations, Gaussian integers, Dirichlet's theorem on primes.
Prerequisites: Grade of C- or better in (AS.110.201 or AS.110.212)
Instructor(s): J. Kong
Area: Quantitative and Mathematical Sciences.

AS.110.311. Methods of Complex Analysis. 4.0 Credits.
This course is an introduction to the theory of functions of one complex
variable. Its emphasis is on techniques and applications, and it serves
as a basis for more advanced courses. Functions of a complex variable
and their derivatives; power series and Laurent expansions; Cauchy
integral theorem and formula; calculus of residues and contour integrals;
harmonic functions.
Prerequisites: Grade of C- or better in 110.202 or 110.211
Instructor(s): C. Mese
Area: Quantitative and Mathematical Sciences.
AS.110.328. Non-Euclidean Geometry. 4.0 Credits.

For 2,000 years, Euclidean geometry was the geometry. In the 19th century, new, equally consistent but very different geometries were discovered. This course will delve into these geometries on an elementary but mathematically rigorous level.

Instructor(s): M. Merling
Area: Quantitative and Mathematical Sciences.

AS.110.401. Introduction to Abstract Algebra. 4.0 Credits.

An introduction to the basic notions of modern abstract algebra and can serve as an Introduction to Proofs (IP) course. This course is an introduction to group theory, with an emphasis on concrete examples, and especially on geometric symmetry groups. The course will introduce basic notions (groups, subgroups, homomorphisms, quotients) and prove foundational results (Lagrange's theorem, Cauchy's theorem, orbit-counting techniques, the classification of finite abelian groups). Examples to be discussed include permutation groups, dihedral groups, matrix groups, and finite rotation groups, culminating in the classification of the wallpaper groups. Prerequisites: Grade of C- or better in 110.201 or 110.212 Area: Quantitative and Mathematical Sciences.

Prerequisites: Grade of C- or better in (AS.110.201 or AS.110.212)
Instructor(s): Staff
Area: Quantitative and Mathematical Sciences.

AS.110.405. Real Analysis I. 4.0 Credits.

This course is designed to give a firm grounding in the basic tools of analysis. It is recommended as preparation (but may not be a prerequisite) for other advanced analysis courses. Real and complex number systems, topology of metric spaces, limits, continuity, infinite sequences and series, differentiation, Riemann-Stieltjes integration.

Prerequisites: Grade of C- or better in (AS.110.201 or AS.110.212) AND (AS.110.202 OR AS.110.211)
Instructor(s): Staff
Area: Quantitative and Mathematical Sciences.

AS.110.406. Real Analysis II. 4.0 Credits.

This course continues AS.110.405 with an emphasis on the fundamental notions of modern analysis. Sequences and series of functions, Fourier series, equicontinuity and the Arzela-Ascoli theorem, the Stone-Weierstrass theorem, functions of several variables, the inverse and implicit function theorems, introduction to the Lebesgue integral.

Instructor(s): J. Spruck
Area: Quantitative and Mathematical Sciences.

AS.110.407. Honors Complex Analysis. 4.0 Credits.

AS.110.407. Honors Complex Analysis. 4.00 Credits. This course is an introduction to the theory of functions of one complex variable for honors students. Its emphasis is on techniques and applications, and can serve as an Introduction to Proofs (IP) course. Topics will include functions of a complex variable and their derivatives; power series and Laurent expansions; Cauchy integral theorem and formula; calculus of residues and contour integrals; harmonic functions, as well as applications to number theory and harmonic analysis. Area: Quantitative and Mathematical Sciences. This is not an Introduction to Proofs course (IP) and may not be taken as a first proof-based mathematics course except at the discretion of the instructor. This course satisfies a core requirement of the mathematics major as a second analysis course, and is a core requirement for honors in the major.

Prerequisites: AS.110.405 OR AS.110.415
Instructor(s): B. Shiffman
Area: Quantitative and Mathematical Sciences.

AS.110.411. Honors Algebra I. 4.0 Credits.

An introduction to the basic notions of modern algebra for students with some prior acquaintance with abstract mathematics. Elements of group theory: groups, subgroups, normal subgroups, quotients, homomorphisms. Generators and relations, free groups, products, abelian groups, finite groups. Groups acting on sets, the Sylow theorems. Definition and examples of rings and ideals.

Prerequisites: Grade of C- or better in AS.110.212 OR AS.110.304 OR AS.110.113 OR AS.110.405 OR AS.110.415 OR AS.110.407 OR AS.110.413 OR AS.110.421
Instructor(s): J. Specter
Area: Quantitative and Mathematical Sciences.

AS.110.412. Honors Algebra II. 4.0 Credits.

This is a continuation of 110.411 Honors Algebra I. Topics studies include principal ideal domains, structure of finitely generated modules over them. Introduction to field theory. Linear algebra over a field. Field extensions, constructible polygons, non-trisectability. Splitting field of a polynomial, algebraic closure of a field. Galois theory: correspondence between subgroups and subfields. Solvability of polynomial equations by radicals. Prerequisites: Grade of C- or better in 110.201 or 110.212 Area: Quantitative and Mathematical Sciences.

Prerequisites: C- or better in AS.110.411
Instructor(s): C. Consani
Area: Quantitative and Mathematical Sciences.

AS.110.413. Introduction To Topology. 4.0 Credits.

Topological spaces, connectedness, compactness, quotient spaces, metric spaces, function spaces. An introduction to algebraic topology: covering spaces, the fundamental group, and other topics as time permits.

Prerequisites: Grade of C- or better in (AS.110.202 OR AS.110.211)
Instructor(s): M. Rovelli
Area: Quantitative and Mathematical Sciences.

AS.110.415. Honors Analysis I. 4.0 Credits.

This highly theoretical sequence in analysis is reserved for the most able students. The sequence covers the real number system, metric spaces, basic functional analysis, the Lebesgue integral, and other topics.

Instructor(s): H. Xu
Area: Quantitative and Mathematical Sciences.

AS.110.416. Honors Analysis II. 4.0 Credits.

Prerequisites: Grade of C- or better in AS.110.415
Instructor(s): J. Bernstein
Area: Quantitative and Mathematical Sciences.

AS.110.417. Partial Differential Equations. 4.0 Credits.

Instructor(s): J. Luehrmann
Area: Quantitative and Mathematical Sciences.
AS.110.421. Dynamical Systems. 4.0 Credits.
This is a course in the modern theory of Dynamical Systems. Topic include both discrete (iterated maps) and continuous (differential equations) dynamical systems and focuses on the qualitative structure of the system in developing properties of solutions. Topics include contractions, interval and planar maps, linear and nonlinear ODE systems including bifurcation theory, recurrence, transitivity and mixing, phase volume preservation as well as chaos theory, fractional dimension and topological entropy. May be taken as an Introduction to Proofs (IP) course. Prerequisites: Grade of C- or better in 110.201 or 110.212 OR 110.202 or 110.211 and 110.302 Area: Quantitative and Mathematical Sciences
Prerequisites: Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.202 or AS.110.211) AND 110.302
Instructor(s): R. Brown
Area: Quantitative and Mathematical Sciences.

AS.110.422. Representation Theory. 4.0 Credits.
This course will focus on the basic theory of representations of finite groups in characteristic zero: Schur's Lemma, Mashcke's Theorem and complete reducibility, character tables and orthogonality, direct sums and tensor products. The main examples we will try to understand are the representation theory of the symmetric group and the general linear group over a finite field. If time permits, the theory of Brauer characters and modular representations will be introduced.
Prerequisites: Grade of C- or better in (AS.110.201 OR AS.110.212) AND (AS.110.401 OR AS.110.411)
Instructor(s): J. Morava
Area: Quantitative and Mathematical Sciences.

AS.110.423. Lie Groups for Undergraduates. 4.0 Credits.
This course is an introduction to Lie Groups and their representations at the upper undergraduate level. It will cover basic Lie Groups such as SU (2), U(n) , the Euclidean Motion Group and Lorentz Group. This course is useful for students who want a working knowledge of group representations. Some aspects of the role of symmetry groups in particle physics such as some of the formal aspects of the electroweak and the strong interactions will also be discussed. Recommended Course Background: AS.110.202; prior knowledge of group theory (AS.110.401) would be helpful.
Instructor(s): S. Zucker
Area: Quantitative and Mathematical Sciences.

AS.110.427. Introduction Calculus of Variations. 4.0 Credits.
The calculus of variations is concerned with finding optimal solutions (shapes, functions, etc.) where optimality is measured by minimizing a functional (usually an integral involving the unknown functions) possibly with constraints. Applications include mostly one-dimensional (often geometric) problems: brachistochrone, geodesics, minimum surface area of revolution, isoperimetric problem, curvature flows, and some differential geometry of curves and surfaces. Recommended Course Background: Calculus III
Prerequisites: Grade of B+ or better in AS.110.201 and AS.110.202.
Instructor(s): Y. Zhang
Area: Quantitative and Mathematical Sciences.

AS.110.431. Knot Theory. 4.0 Credits.
The theory of knots and links is a facet of modern topology. The course will mostly self-contained, but a good working knowledge of groups will be helpful. Topics include braids, knots and links, the fundamental group of a knot or link complement, spanning surfaces, and low dimensional homology groups.
Instructor(s): C. McTague
Area: Quantitative and Mathematical Sciences.

AS.110.433. Introduction to Harmonic Analysis and Its Applications. 4.0 Credits.
Prerequisites: (AS.110.201 OR AS.110.212 OR EN.550.291 OR EN.553.291) AND (AS.110.202 OR AS.110.211) AND (AS.110.405 OR AS.110.415)
Instructor(s): M. Maggioni
Area: Quantitative and Mathematical Sciences.

AS.110.435. Introduction to Algebraic Geometry. 4.0 Credits.
Algebraic geometry studies zeros of polynomials in several variables and is based on the use of abstract algebraic techniques, mainly from commutative algebra, for solving geometric problems about these sets of zeros. The fundamental objects of study are algebraic varieties which are the geometric manifestations of solutions of systems of polynomial equations. Algebraic geometry occupies a central place in modern mathematics and has multiple conceptual connections with diverse fields such as complex analysis, topology and number theory. This course aims to provide to an undergraduate student majoring in mathematics the fundamental background to approach the study of algebraic geometry by providing the needed abstract knowledge also complemented by several examples and applications.
Instructor(s): C. Consani
Area: Quantitative and Mathematical Sciences.
AS.110.439. Introduction To Differential Geometry. 4.0 Credits.
Theory of curves and surfaces in Euclidean space: Frenet equations, fundamental forms, curvatures of a surface, theorems of Gauss and Mainardi-Codazzi, curves on a surface; introduction to tensor analysis and Riemannian geometry; theorema egregium; elementary global theorems.
Prerequisites: Grade of C- or better in (AS.110.201 or AS.110.212) and (AS.110.202 or AS.110.211)
Instructor(s): H. Lindblad
Area: Quantitative and Mathematical Sciences.

AS.110.441. Calculus on Manifolds. 4.0 Credits.
This course provides the tools for classical three-dimensional physics and mechanics. This course extends these techniques to the general locally Euclidean spaces (manifolds) needed for an understanding of such things as Maxwell's equations or optimization in higher dimensional contexts, eg. in economics. The course will cover the theory of differential forms and integration. Specific topics include Maxwell's equations in terms of 4D Lorentz geometry, vector (in particular, tangent) bundles, an introduction to de Rham theory, and Sard's theorem on the density of regular values of smooth functions. The course is intended to be useful to mathematics students interested in analysis, differential geometry, and topology, as well as to students in physics and economics.
Instructor(s): J. Morava
Area: Quantitative and Mathematical Sciences.

AS.110.443. Fourier Analysis. 4.0 Credits.
An introduction to the Fourier transform and the construction of fundamental solutions of linear partial differential equations. Homogeneous distributions on the real line: the Dirac delta function, the Heaviside step function. Operations with distributions: convolution, differentiation, Fourier transform. Construction of fundamental solutions of the wave, heat, Laplace and Schrödinger equations. Singularities of differentiations, Fourier transform. Construction of fundamental solutions of linear partial differential equations. An introduction to the Fourier transform and the construction of fundamental solutions of linear partial differential equations. Recommended Course Background: More than basic computer programming experience in Matlab or R or Octave. Recommended Course Background: More than basic computer programming experience in Matlab or R; some more advanced probability and statistics (e.g. continuous random variables), some signal processing (e.g. Fourier transforms, discrete and continuous). Co-listed with EN.553.416
Prerequisites: AS.110.201
Instructor(s): M. Maggioni
Area: Quantitative and Mathematical Sciences.

AS.110.446. Introduction to Statistical Learning, Data Analysis and Signal Processing. 4.0 Credits.
Introduction to high dimensional data sets: key problems in statistical and machine learning. Geometric aspects. Principal component analysis, linear dimension reduction, random projections. Concentration phenomena: examples and basic inequalities. Metric spaces and embeddings thereof. Kernel methods. Nonlinear dimension reduction, manifold models. Regression. Vector spaces of functions, linear operators, projections. Orthonormal bases; Fourier and wavelet bases, and their use in signal processing and time series analysis. Basic approximation theory. Linear models, least squares. Bias and variance tradeoffs, regularization. Sparsity and compressed sensing. Multiscale methods. Graphs and networks. Random walks on graphs, diffusions, page rank. Block models. Spectral clustering, classification, semi-supervised learning. Algorithmic and computational aspects of the above will be consistently in focus, as will be computational experiments on synthetic and real data. Linear algebra will be used throughout the course, as will multivariable calculus and basic probability (discrete random variables). Basic experience in programming in C or MATLAB or R; some more advanced probability (e.g. continuous random variables), some signal processing (e.g. Fourier transforms, discrete and continuous). Co-listed with EN.553.416
Prerequisites: AS.110.201
Instructor(s): M. Maggioni
Area: Quantitative and Mathematical Sciences.

AS.110.503. Undergraduate Research in Mathematics. 0.0 - 4.0 Credits.
An introductory graduate course on fundamental topics in algebra to provide the student with the foundations for number theory, algebraic geometry, and other advanced courses. Topics include group theory, commutative algebra, Noetherian rings, local rings, modules, rudiments of category theory, homological algebra, field theory, Galois theory, and non-commutative algebras.
Instructor(s): V. Shokurov
Area: Quantitative and Mathematical Sciences.

AS.110.504. Undergraduate Research in Mathematics. 0.0 - 4.0 Credits.
Instructor(s): V. Shokurov
Area: Quantitative and Mathematical Sciences.

AS.110.595. Internship. 1.0 Credit.

AS.110.584. Independent Study. 0.0 - 4.0 Credits.
Instructor(s): R. Brown.

AS.110.586. Independent Study. 0.0 - 4.0 Credits.
Instructor(s): J. Morava.

AS.110.587. DRP Independent Study. 1.0 Credit.
Directed Reading Program (DRP) Independent Study
Instructor(s): D. Fuentes-Keuthan
Area: Quantitative and Mathematical Sciences.

AS.110.595. Internship. 1.0 Credit.

AS.110.601. Algebra.
An introductory graduate course on fundamental topics in algebra to provide the student with the foundations for Number Theory, Algebraic Geometry, and other advanced courses. Topics include group theory, commutative algebra, Noetherian rings, local rings, modules, rudiments of category theory, homological algebra, field theory, Galois theory, and non-commutative algebras.
Instructor(s): V. Shokurov
Area: Quantitative and Mathematical Sciences.

AS.110.602. Algebra.
An introductory graduate course on fundamental topics in algebra to provide the student with the foundations for Number Theory, Algebraic Geometry, and other advanced courses. Topics include group theory, commutative algebra, Noetherian rings, local rings, modules, and rudiments of category theory, homological algebra, field theory, Galois theory, and non-commutative algebras. Recommended Course Background: AS.110.401-AS.110.402
Instructor(s): C. Consani
Area: Quantitative and Mathematical Sciences.
AS.110.605. Real Variables.
Measure and integration on abstract and locally compact spaces (extension of measures, decompositions of measures, product measures, the Lebesgue integral, differentiation, Lp-spaces); introduction to functional analysis; integration on groups; Fourier transforms.
Instructor(s): J. Bernstein
Area: Quantitative and Mathematical Sciences.

AS.110.607. Complex Variables.
Analytic functions of one complex variable. Topics include Mittag-Leffler Theorem, Weierstrass factorization theorem, elliptic functions, Riemann-Roch theorem, Picard theorem, and Nevanlinna theory. Recommended Course Background: AS.110.405
Instructor(s): H. Xu.

AS.110.608. Riemann Surfaces.
Abstract Riemann surfaces. Examples: algebraic curves, elliptic curves and functions on them. Holomorphic and meromorphic functions and differential forms, divisors and the Mittag-Leffler problem. The analytic genus. Bezout's theorem and applications. Introduction to sheaf theory, with applications to constructing linear series of meromorphic functions. Serre duality, the existence of meromorphic functions on Riemann surfaces, the equality of the topological and analytic genera, the equivalence of algebraic curves and compact Riemann surfaces, the Riemann-Roch theorem. Period matrices and the Abel-Jacobi mapping, Jacobi inversion, the Torelli theorem. Uniformization (time permitting).
Instructor(s): H. Xu.

AS.110.612. Complex geometry.
Instructor(s): B. Shiffman.

AS.110.615. Algebraic Topology.
Polyhedra, simplicial and singular homology theory, Lefschetz fixed-point theorem, cohomology and products, homological algebra, Künneth and universal coefficient theorems, Poincaré and Alexander duality theorems.
Instructor(s): N. Kitchloo.

AS.110.616. Algebraic Topology.
Polyhedra, simplicial and singular homology theory, Lefschetz fixed-point theorem, cohomology and products, homological algebra, Künneth and universal coefficient theorems, Poincaré and Alexander duality theorems.
Instructor(s): E. Riehl
Area: Quantitative and Mathematical Sciences.

AS.110.617. Number Theory.
Topics in advanced algebra and number theory, including local fields and adeles, Iwasawa-Tate theory of zeta functions and connections with Hecke's treatment, semisimple algebras over local and number fields, adele geometry.
Instructor(s): C. Consani
Area: Quantitative and Mathematical Sciences.

AS.110.618. Number Theory.
Topics in advanced algebra and number theory, including local fields and adeles, Iwasawa-Tate theory of zeta-functions and connections with Hecke's treatment, semi-simple algebras over local and number fields, adele geometry.
Instructor(s): D. Savitt.

Lie groups and Lie algebras, classification of complex semi-simple Lie algebras, compact forms, representations and Weyl formulas, symmetric Riemannian spaces.
Prerequisites: AS.110.402
Instructor(s): C. Mese; J. Morava
Area: Quantitative and Mathematical Sciences.

AS.110.631. Partial Differential Equations I.
An introductory graduate course in partial differential equations. Classical topics include first order equations and characteristics, the Cauchy-Kowalewski theorem, Laplace's equations, heat equation, wave equation, fundamental solutions, weak solutions, Sobolev spaces, maximum principles.
Prerequisites: Grade of C- or better in AS.110.605
Instructor(s): J. Luehrmann.

AS.110.632. Partial Differential Equations II.
An introductory graduate course in partial differential equations. Classical topics include first order equations and characteristics, the Cauchy-Kowalewski theorem, Laplace's equation, heat equation, wave equation, fundamental solutions, weak solutions, Sobolev spaces, maximum principles. The second term focuses on special topics such as second order elliptic theory.
Instructor(s): J. Luehrmann.

AS.110.633. Harmonic Analysis.
Fourier multipliers, oscillatory integrals, restriction theorems, Fourier integral operators, pseudodifferential operators, eigenfunctions. Undergrads need instructor's permission.
Instructor(s): C. Sogge
Area: Quantitative and Mathematical Sciences.

AS.110.635. Microlocal Analysis.
Microlocal analysis is the geometric study of singularities of solutions of partial differential equations. The course will begin by introducing the geometric theory of (Schwartz) distributions: Fourier transform and Sobolev spaces, pseudo-differential operators, wave front set of a distribution, elliptic operators, Lagrangean distributions, oscillatory integrals, method of stationary phase, Fourier integral operators. The second semester will develop the theory and apply it to special topics such as asymptotics of eigenvalues/eigenfunctions of the Laplace operator on a Riemann manifold, linear and non-linear wave equation asymptotics of quantum systems, Bochner-Riesz means, maximal theorems.
Instructor(s): H. Lindblad.

AS.110.637. Functional Analysis.
Instructor(s): F. Lu.

AS.110.643. Algebraic Geometry.
Affine varieties and commutative algebra. Hilbert's theorems about polynomials in several variables with their connections to geometry. General varieties and projective geometry. Dimension theory and smooth varieties. Sheaf theory and cohomology. Applications of sheaves to geometry; e.g., the Riemann-Roch theorem. Other topics may include Jacobian varieties, resolution of singularities, geometry on surfaces, connections with complex analytic geometry and topology, schemes.
Instructor(s): X. Zheng.
AS.110.644. Algebraic Geometry.  
Affine varieties and commutative algebra. Hilbert’s theorems about polynomials in several variables with their connections to geometry. General varieties and projective geometry. Dimension theory and smooth varieties. Sheaf theory and cohomology. Applications of sheaves to geometry; e.g., the Riemann-Roch Theorem. Other topics may include Jacobian varieties, resolution of singularities, geometry on surfaces, schemes, connections with complex analytic geometry and topology.  
Instructor(s): V. Shokurov  
Area: Quantitative and Mathematical Sciences.

AS.110.645. Riemannian Geometry.  
Differential manifolds, vector fields, flows, Frobenius’ theorem. Differential forms, deRham’s theorem, vector bundles, connections, curvature, Chern classes, Cartan structure equations. Riemannian manifolds, Bianchi identities, geodesics, exponential maps. Geometry of submanifolds, hypersurfaces in Euclidean space. Other topics as time permits, e.g., harmonic forms and Hodge theorem, Jacobi equation, variation of arc length and area, Chern-Gauss-Bonnet theorems.  
Instructor(s): C. Mese  
Area: Quantitative and Mathematical Sciences.

AS.110.675. High-Dimensional Approximation, Probability, and Statistical Learning.  
The course covers fundamental mathematical ideas for certain approximation and statistical learning problems in high dimensions. We start with basic approximation theory in low-dimensions, in particular linear and nonlinear approximation by Fourier and wavelets in classical smoothness spaces, and discuss applications in imaging, inverse problems and PDE’s. We then introduce notions of complexity of function spaces, which will be important in statistical learning. We then move to basic problems in statistical learning, such as regression and density estimation. The interplay between randomness and approximation theory is introduced, as well as fundamental tools such as concentration inequalities, basic random matrix theory, and various estimators are constructed in detail, in particular multi scale estimators. At all times we consider the geometric aspects and interpretations, and will discuss concentration of measure phenomena, embedding of metric spaces, optimal transportation distances, and their applications to problems in machine learning such as manifold learning and dictionary learning for signal processing.  
Instructor(s): M. Maggioni  
Area: Quantitative and Mathematical Sciences.

Instructor(s): B. Dodson.

AS.110.711. Topics in Topos Theory.  
Reading course to discuss Topics in Topos Theory  
Instructor(s): E. Riehl.

AS.110.712. Topics in Mathematical Physics.  
Instructor(s): H. Lindblad.

AS.110.722. Topics in Homotopy Theory.  
The course will focus on recent developments in homotopy theory, such as Galois theory for $E_n$ ($n \geq 2$) ring-spectra, and on connections with number theory; in particular, work of Bhatt, Hesselholt, Lurie, Scholze and others on topological Hochschild homology and its applications to geometry over the p-adic complex numbers.  
Instructor(s): E. Riehl  
Area: Quantitative and Mathematical Sciences.

AS.110.724. Topics in Arithmetic Geometry.  
Topics around the subject of Arithmetic Geometry will be covered in this course.  
Instructor(s): B. Smithling  
Area: Quantitative and Mathematical Sciences.

AS.110.725. Topics in Analysis: Nonlinear Dispersive Equations.  
AS.110.726. Topics in Analysis.  
The topics covered will involve the theory of calculus of Functors applied to Geometric problems like Embedding theory. Other related areas will be covered depending on the interest of the audience.  
Instructor(s): Y. Sire  
Area: Quantitative and Mathematical Sciences.

AS.110.727. Topics in Algebraic Topology.  
Instructor(s): N. Kitchloo.

AS.110.728. Topics in Algebraic Topology.  
Instructor(s): N. Kitchloo.

AS.110.731. Topics in Geometric Analysis.  
Instructor(s): Y. Wang.

AS.110.733. Topics In Alg Num Theory.  
Instructor(s): D. Savitt.

AS.110.735. Topics In Hodge Theory.  
Instructor(s): C. Mese; R. Brown; S. Zucker.

AS.110.737. Topics Algebraic Geometry.  
Instructor(s): V. Shokurov.

AS.110.738. Topics Algebraic Geometry.  
Introduction to toric varieties. This class is a general introduction to toric varieties. Toric varieties are special kinds of algebraic varieties which can be described by lattices and convex sets. They provide a rich source of concrete examples in complex geometry or mathematical physics. If time permits, we discuss in the end the stability of toric embeddings. Students should know basic notions of algebraic geometry (schemes, sheaves, linear systems), as covered in AS.110.643.  
Instructor(s): C. Mese; R. Brown; V. Shokurov  
Area: Quantitative and Mathematical Sciences.

AS.110.742. Topics In Partial Differential Equations.  
In this course we will be discussing some dispersive evolution equations, primarily the nonlinear Schrodinger equation. Topics will include well-posedness theory, conservation laws, and scattering. The course will be accessible to students who have not taken graduate partial differential equations or functional analysis.  
Instructor(s): J. Spruck.

AS.110.749. Topics in Differential Geometry.  
In this class, we will study Aaron Naber and Jeff Cheeger’s recent result on proving codimension four conjecture. We plan to talk about some early results of the structure on manifolds with lower Ricci bound by Cheeger and Colding. We will prove quantitative splitting theorem, volume convergence theorem, and the result that almost volume cone implies almost metric cone. Then we will discuss regularity of Einstein manifolds and the codimension four conjecture.  
Instructor(s): J. Bernstein  
Area: Quantitative and Mathematical Sciences.

AS.110.755. Topics in Fluid Dynamics.  
Graduate students only.  
Instructor(s): J. Bernstein  
Area: Quantitative and Mathematical Sciences.
AS.110.756. Topics in Algebra.  
This will be a course in commutative algebra. Topics may include: Noetherian rings and modules, the Nullstellensatz, Hilbert basis theorem, localization, integrality, Noether normalization, primary decomposition, DVRs, Dedekind domains, dimension theory, smoothness and regularity, and homological methods.  
Instructor(s): C. Consani  
Area: Quantitative and Mathematical Sciences.

AS.110.761. Topics in Topology.  
Instructor(s): N. Kitchloo  
Area: Quantitative and Mathematical Sciences.

AS.110.764. Topics in Riemannian Geometry.  
Topics courses are restricted to graduate students only.  
Instructor(s): J. Bernstein  
Area: Quantitative and Mathematical Sciences.

AS.110.760. Seminar in Complex Geometry.  
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.  
Instructor(s): B. Shiffman; H. Xu  
Area: Quantitative and Mathematical Sciences.

AS.110.759. Seminar in Algebraic Geometry.  
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.  
Instructor(s): J. Bernstein  
Area: Quantitative and Mathematical Sciences.

AS.110.763. Seminar in Number Theory.  
For graduate students only. Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.  
Instructor(s): E. Riehl  
Area: Quantitative and Mathematical Sciences.

AS.110.762. Seminar in Topology.  
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.  
Instructor(s): N. Kitchloo  
Area: Quantitative and Mathematical Sciences.

AS.110.761. Seminar in Category Theory.  
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.  
Instructor(s): E. Riehl  
Area: Quantitative and Mathematical Sciences.

AS.110.765. Seminar in Data Science.  
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.  
Instructor(s): M. Maggioni  
Area: Quantitative and Mathematical Sciences.

AS.110.768. Seminar in Number Theory.  
Presentations of current research papers by faculty, graduate students and invited guest speakers. For graduate students only.  
Instructor(s): B. Shiffman  
Area: Quantitative and Mathematical Sciences.

AS.110.799. Seminar in Algebraic Geometry.  
For graduate students only. Presentations of current research papers by faculty, graduate students and invited guest speakers.  
Instructor(s): X. Zheng  
Area: Quantitative and Mathematical Sciences.

AS.110.800. Independent Study-Graduates.  
Instructor(s): J. Murphy  
Area: Quantitative and Mathematical Sciences.

AS.110.801. Thesis Research.  
Instructor(s): Staff.

Cross Listed Courses

**Applied Mathematics Statistics**

EN.553.738. High-Dimensional Approximation, Probability, and Statistical Learning. 3.0 Credits.  
The course covers fundamental mathematical ideas for certain approximation and statistical learning problems in high dimensions. We start with basic approximation theory in low-dimensions, in particular linear and nonlinear approximation by Fourier and wavelets in classical smoothness spaces, and discuss applications in imaging, inverse problems and PDE’s. We then introduce notions of complexity of function spaces, which will be important in statistical learning. We then move to basic problems in statistical learning, such as regression and density estimation. The interplay between randomness and approximation theory is introduced, as well as fundamental tools such as concentration inequalities, basic random matrix theory, and various estimators are constructed in detail, in particular multi scale estimators. At all times we consider the geometric aspects and interpretations, and will discuss concentration of measure phenomena, embedding of metric spaces, optimal transportation distances, and their applications to problems in machine learning such as manifold learning and dictionary learning for signal processing.  
Instructor(s): M. Maggioni.

**Medicine, Science, and the Humanities**

http://krieger.jhu.edu/msh

This is an interdisciplinary, humanities-based major using a cultural and historical context to explore scientific inquiry and the roots of medicine. The medicine, science, and the humanities major is ideal for students who plan to pursue careers in the health professions as well as those interested in issues of importance to science and medicine, and students who plan to pursue graduate work in a range of humanities, social science, or professional disciplines.

**MSH Major Goals and Objectives**

**Goal**

Medicine, science, and humanities majors will develop an interdisciplinary understanding of the cultural and historical roots of scientific inquiry and medicine, with the ability to apply these precepts to contemporary life.

**Objectives**

MSH majors will:

- Gain an introductory awareness of theory, interpretation, and methods in a specific humanistic topic related to science and medicine  
- Acquire and develop skills of interpretation and analysis in a specific humanities discipline by focusing on primary and secondary sources such as literature, imagery, film, artifacts, and commentary  
- Acquire fundamental skills of writing and oral presentation, emphasizing clear and logical exposition to enhance student readiness for subsequent graduate school, professional school, or the workforce  
- Acquire knowledge and experience in the natural sciences  
- Understand the advantages of multiculturalism through intermediate mastery of a language beyond English.

**Affiliated Humanities Departments**

- Anthropology (http://anthropology.jhu.edu)
Major Requirements

Introductory Level

• An introduction to the medical humanities course (usually AS.145.101)
• One course focusing on classic scientific and medical texts
  • Examples: History of Medicine, History of Modern Medicine, or Great Books at Hopkins II: The Sciences
  • Other courses may apply with approval from the director of undergraduate studies

Required Core Humanities Courses

• At least 4 courses totaling at least 12 credits in one, pre-approved humanities department
• 6 credits must be at the 300-level or higher
• Approved humanities departments: Anthropology, Classics, English, German and Romance Languages and Literatures, History, History of Art, History of Science and Technology, Humanities Center, Near Eastern Studies, Philosophy, and the Writing Seminars

Foreign Language

• Through the intermediate level (second year at the college-level)

Additional Courses in the Sciences and the Humanities

• At least 6 courses totaling 18 credits in sciences and humanities; at least 2 of these courses must be in the humanities and at least 2 must be science courses. Of the 6 courses, 4 must be at the 200-level or higher

Sample Program

A typical program might include the following sequence of courses (note, this example plan emphasizes science):

Total Credits: 50

* Examples of current choices include: AS.150.219, AS.360.134, AS.140.105, and AS.140.106

Honors in the Major

Honors will be offered as an option to juniors with a minimum GPA of 3.50 in major requirements. Honors projects will be a one-semester endeavor, typically aiming toward an original thesis paper (or equivalent scholarly or creative work) approximately 20-25 pages in length, whose topic is closely related to the student’s humanities core area. Thesis projects may be supervised by a faculty member in the student’s core area, or by another faculty member with expertise relevant to the topic.
In either case the supervisory/mentoring role will be by arrangement between the student, MSH advisors, and the faculty member being solicited. All topics and supervisors are to be approved by the Director of Undergraduate Studies. Juniors interested in the pursing honors option must apply with the Director of Undergraduate Studies before Fall of the senior year. The application requires development of an approved research proposal with an accompanying mentorship plan.

While writing the thesis, students may enroll in the Independent Research course (AS 145.511, 1-3 credits). These credits are taken in addition to the 12 credits of the normal major requirements and do not count as an elective or advanced course.

Additional Course Information

Study Abroad

Courses taken abroad count toward the major only if approved by the director of undergraduate studies in consultation with your adviser. This should be arranged prior to travel.

Thinking About Pre-Med?

Johns Hopkins offers an undergraduate pre-med program, but it is not a major. It is an advising track program through the Office of Pre-Professional Advising (http://web.jhu.edu/prepro). Any Johns Hopkins undergraduate student pursuing any major may also pursue the pre-med advising track.

The pre-professional advisers work with the students, providing them with academic advising, assistance in selecting the proper courses, and help with the medical school application process. Please note that the MSH major does not fulfill all of the requirements for a pre-med course of study. Speak with your adviser for more information.

Faculty

Directors
Charles Wiener
Professor of Medicine and Physiology; Director, Medicine, Science, and the Humanities

Mitchell Merback
Professor, History of Art; Director, Medicine, Science and the Humanities

Professor

Courses

AS.145.101. Death and Dying in Art, Literature, and Philosophy: Introduction to Medical Humanities. 3.0 Credits.
This team-taught course offers an interdisciplinary introduction to the university’s new concentration in "Medicine, Science, and Humanities."
The themes of death, dying, and the treatment of the dead are explored in their changing historical, anthropological, philosophical, literary, art historical and medical dimensions. Open to freshmen, sophomores, and upperclass Medicine, Science, and Humanities majors.
Instructor(s): E. Ender; M. Merback; W. Stephens
Area: Humanities
Writing Intensive.

AS.145.102. The Cosmic Imagination: How Literature Changes Our Understanding of the Universe. 3.0 Credits.
Since time immemorial humankind has looked to the skies for clues as to our origins, our destiny, and the nature of existence itself. In some ways, one of the hallmarks of western science has been a story of viewing the cosmos in ever-greater clarity and detail. Yet the very nature of the universe—its massive size, the distance and obscurity of its farthest reaches—requires the active intervention of our imaginations to picture it, no matter how powerful the technologies we use. In this course we will look at how western cultures from the middle ages to the present have deployed the literary and philosophical imagination to try to grasp the ungraspable, and how those attempts in some cases helped prepare intellectuals and scientists to make very real advances in understanding the universe.
Prerequisites: Students may not take and receive credit for AS.145.102 and AS.211.102.
Instructor(s): W. Egginton
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.145.103. Men, Women, and Melancholy: Premodern Physiologies of Madness. 3.0 Credits.
Definitions of madness change over time. From Antiquity through the Early Modern period, Melancholia was the predominant form of mental illness, thought to be caused by an imbalance in the bodily humors, resulting in an excess of black bile. The disturbed physiology adversely affected the imagination, which, with memory and intellect, was one of the three functions of the soul. Only gradually did imagination come to be identified with deliberate creativity: from about 1400 to 1800, there were two stereotypical victims of melancholia: male intellectuals and female witches. The disruption of society by witch-hunting was even more radical than the rise of the "man of genius." At stake were definitions of psychology ("science of the soul") and reality (whether witches and demons interacted "in the body" or only "in the imagination"). Readings from Plato to Freud.
Instructor(s): W. Stephens
Area: Humanities
Writing Intensive.
AS.145.104. Science, Medicine, Media. 3.0 Credits.  
Much of our understanding of science and medicine is filtered through what we casually refer to as “the media”: newspapers, magazines, television shows, films, and electronic social media. But the scientific world relies on its own media to produce and circulate knowledge: from scientific journals and conferences, to agar plates and petri dishes, cloud chambers and electrophoresis gels. Medical technologies from the stethoscope to the echocardiogram likewise mediate the perception of the body in health and disease, and increasingly our own understanding and perception of our bodies and our health is mediated via screens, scans, images — without which we cannot “imagine” our selves anymore. Students will learn several tools to critically assess the technologies that mediate our knowledge of our own bodies and the broader world. 
Instructor(s): B. Wegenstein; J. Greene 
Area: Humanities, Social and Behavioral Sciences 
Writing Intensive. 

AS.145.110. Discover Hopkins: Exploring Medical Careers. 1.0 Credit.  
Many people are unaware of the diversity of medical and health careers. This program introduces scientific knowledge and promotes awareness of a variety of medical and health careers, for example, multiple specialties of physicians, physician assistant, nurse careers, professional therapists (physical, occupational, respiratory, radiation), clinical nutritionist, pharmacist, genetic counselor, medical laboratory scientist, veterinarian, clinical trial professionals, clinical social worker, and public health related careers. Taught by diverse healthcare professionals currently working at Johns Hopkins Hospital System, students will gain meaningful scientific knowledge and practical career knowledge by participating in lectures, labs, hands-on/simulation activities, interviews, and workshops. 
Instructor(s): Y. Li 
Area: Natural Sciences. 

AS.145.201. Clues: Unreasoning the Medical Mystery. 3.0 Credits.  
Pioneering authors of detective fiction, including Edgar Allen Poe, Arthur Conan Doyle, and Pauline Hopkins, often used medical doctors and themes in their mystery plots. It’s no coincidence that medicine and crime fiction share a vocabulary of clues, evidence, and diagnosis. The mystery genre was integrally tied to the rise of scientific medicine as a respected profession. Indeed, classic detective stories are practically propaganda for the scientific method, showing readers how the powerful tools of observation and inference can solve any problem. Over the course of the 20th century, not only doctors, but also psychologists, social scientists and historians adopted the authoritative stance of the detective in constructing or reconstructing facts. However, as we study Sherlock Holmes and his modern proteges, such as TV doctor Gregory House, we will analyze how “medical mystery” narratives can limit our thinking about problems and solutions in medicine. We will consider post-modern detective stories that offer alternatives to the “Holmsian” model for understanding the complex clinical realities of today. 
Instructor(s): A. Puglionesi 
Area: Humanities, Social and Behavioral Sciences 
Writing Intensive. 

AS.145.301. Naturalizing the Human Body in Early Modern France: the Confrontation of Literature, Science and Politics. 3.0 Credits.  
Literature in early modern Europe was essential to the naturalizing of the human body, a partner in the reshaping of the cultures and disciplines around it. This course looks at several shifts within major literary works of the 17th and 18th centuries, a time of great intellectual upheaval, a moment when the interpenetration of the literary, scientific and political cultures was such that “art for art’s sake” would have been considered irresponsible. The primary goals of the course are to allow students to understand the intrinsic literary value of the texts, but equally to show how that literary activity, both of writing and of reading, was the vehicle for the elaboration of the modern mind set. We will focus on three cases: vision, the body’s “economy” and Body of the State, and the “scandal” of smallpox vaccination. Texts will include, for example, extracts from: Newton’s Opticks, Cyrano de Bergerac’s The States and Empires of the Sun, Montesquieu’s Persian Letters and Spirit of the Laws, Voltaire’s English Letters, Rousseau’s The New Eloise, Laclos’ Dangerous Liaisons, Guillotine’s text inventing the guillotine. For more information, please see the full course description at http://www.wilda.org/Courses/CourseVault/Undergrad/Naturalizing/Description.html. This course and texts will be in English, but readings will also be available in French. 
Instructor(s): W. Anderson 
Area: Humanities, Social and Behavioral Sciences 
Writing Intensive. 

AS.145.330. Insomnia in Modern Literature, Philosophy, and Film. 3.0 Credits.  
Insomnia, while being defined and treated as a sleep disorder in the field of medical discourse, has attracted other kinds of interest, too. Philosophers and writers have been intrigued by insomnia since antiquity. From their perspectives, the capability of being sleepless not only distinguishes humankind from animals but testifies to human awareness in its ceaseless striving for wisdom and truth. Insomnia appears as vigilance, an exalted state of mind well suited for philosophic reflection, intense scrutiny of the world, and sudden inspiration. Yet these moments of sustained productivity are inextricably bound to insomnia’s “dark” side, the fact that sleeplessness tortures the body and exhausts the mind, haunts the weary wakeful and makes him meditate on insomnia. Thus sleeplessness turns into an obsession with the potential to transform thinking into endless introspection, self-absorbed melancholy, if not misanthropic sarcasm. This course will examine representations of insomnia in modern philosophy, literature and film. We will analyze to what extent interpretations of sleeplessness in the humanities differ from those in medical and scientific discourse. Particular emphasis will be placed on the relationship between insomnia, subjectivity, thinking, and writing. Authors and films to be considered will include among others Emanuel Lévinas, Emil Cioran, Franz Kafka, Samuel Beckett, Ernest Hemingway, F. Scott Fitzgerald, Djuna Barnes, Gabriel García Márquez and Insomnia (2002; Christopher Nolan). 
Instructor(s): A. Krauss 
Area: Humanities, Social and Behavioral Sciences.
AS.145.401. In Search of the Human: Ways of Remembering. 3.0 Credits.
Studying narrative as a way of understanding the complex emotions associated with illness and the lifecycle has long been recognized as an important part of clinical training. This course focuses on autobiographical memory as a particularly important part of forming a personal narrative. These memories can offer foundations on which to build an approach to life and its challenges, and they can also be constraining. The course readings will illustrate how authors of fiction and scientists have grappled with the task of remembering and studied the configurations of autobiographical recollection.
Instructor(s): E. Ender; L. Wissow
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.145.502. Medicine, Science & the Humanities Internship. 3.0 Credits.
An internship in Medicine, Science & the Humanities approved by the director of the program.
Instructor(s): C. Wiener
Area: Humanities, Social and Behavioral Sciences.

AS.145.510. Medicine, Science & the Humanities Independent Research. 1.0 Credit.
This course is for students in the Medicine, Science & the Humanities doing independent research.
Instructor(s): A. Motion; C. Wiener
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.145.511. Medicine, Science & the Humanities Independent Research. 1.0 - 3.0 Credits.
This class is for the MSH majors completing their research project.
Instructor approval required.
Instructor(s): C. Wiener
Area: Humanities, Social and Behavioral Sciences.

Cross Listed Courses

History of Art
AS.010.403. Art and Science in the Middle Ages. 3.0 Credits.
This course investigates the intersections of art and science from the Carolingian period through the fourteenth century and the historical role images played in the pursuit of epistemic truths. Science – from the Latin scientia, or knowledge – in the Middle Ages included a broad range of intellectual pursuits into both the supernatural and natural worlds, and scholars have classified these pursuits in various ways (i.e. experimental or theoretical science, practical science, magic, and natural philosophy). A particular focus of this seminar will be placed on the assimilation of Greek and Islamic scientific advances in cartography, cosmology, and optical theory into the Latin theological tradition.
Instructor(s): C. Lakey
Area: Humanities
Writing Intensive.

Classics
AS.040.152. Medical Terminology. 3.0 Credits.
This course investigates the Greek and Latin roots of modern medical terminology, with additional focus on the history of ancient medicine and its role in the development of that terminology.
Instructor(s): J. Smith
Area: Humanities.

AS.040.238. Freshman Seminar: Magic and Miracles from Antiquity to the Renaissance. 3.0 Credits.
This freshman seminar will explore concepts of magic and miracles and their different forms from ancient Greece and Rome and early Christianity through the Middle Ages up to the Renaissance. Dean’s Prize Teaching Fellowship Course.
Instructor(s): M. Mueller
Area: Humanities
Writing Intensive.

AS.040.241. The Greeks and Their Emotions. 3.0 Credits.
This seminar is meant as an introduction to the study of ancient emotions, with a particular emphasis on how the Greeks of the Archaic, Classical and Hellenistic periods conceptualized, portrayed and lived their emotions through linguistic, literary and artistic expression. After an analysis of how the ancient Greek terminology for the emotions differs from our own, we shall focus on the phenomenon of emotion as deeply rooted in the physical body, and in light of this we will contemplate (and question) its universality. Texts will be read in translation. No knowledge of ancient Greek required.
Instructor(s): M. Asuni
Area: Humanities
Writing Intensive.

English
AS.060.108. Time Travel. 3.0 Credits.
Why is time travel such a consistent and perplexing theme in literature and film over the last 150 years? Why is modernity so concerned with peering backwards or forwards? This course will examine the history of time-travel fiction, from its beginning in utopian fiction through its box-office dominance in the 1980s, and into today. Writers will likely include Mark Twain, Edward Bellamy, Harold Steele Mackay, Ray Bradbury, Robert Heinlein, and Philip K. Dick. Movies will include *The Terminator*, *Back to the Future*, and *Primer*.
Instructor(s): J. Rosenthal
Area: Humanities
Writing Intensive.

AS.060.123. Freshman Seminar: Prophecy After Science. 3.0 Credits.
This course explores the history of prophecy from ancient Greek and Judaic sources to current intimations of technological singularity and ecological doom. We will focus on the influence of prophecy on the rise of science (and vice-versa). Readings will include texts by William Shakespeare, Francis Bacon, Mary Shelley, and Philip K. Dick.
Instructor(s): W. Miller
Area: Humanities
Writing Intensive.
AS.060.127. Muslim Science Fiction. 3.0 Credits.
This course will explore the wondrous and mysterious world of Islamic Sci-Fi. Writers of Muslim Sci-Fi have asserted a long tradition of speculative fiction and fantasy dating back to the 13th century. We will look into this literary history, beginning with earlier texts like The Arabian Nights, al-Qizwini's alien story Awaj bin Anfaq and Roquia Hussain's Sultana's Dream all the way through to modern texts like G. Willow Wilson's Alif the Unseen and Saladin Ahmed's Throne of the Crescent Moon. We will ask how this genre, as opposed to realism, might enable these writers to productively tackle themes of history, science, belief, and the politics of belonging and difference. We will pair our Muslim readings with more canonical science fiction works, such as Mary Shelley’s Frankenstein, H.G. Wells' The Time Machine, and more recently, Kazuo Ishiguro's Never Let Me Go, to think through the relationship of the SF writer to a particular cultural moment. We will also look at writers of afrofuturism and magical realism, like Octavia Butler and Gabriel García Márquez, to think about how other writers of color have employed fantasy and the fantastical, and to what ends.
Instructor(s): N. Hashem
Area: Humanities
Writing Intensive.

History
AS.100.205. Freshman Seminar: Health, Healing, and Medicine in Africa. 3.0 Credits.
A freshman seminar introducing students to the history of health, healing, and forms of medical practice in Africa over the last two centuries.
Instructor(s): P. Larson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.291. Medicine in an Age of Empires, 1500-1800. 3.0 Credits.
How did medicine emerge as a distinctive body of knowledge and a profession in the early modern period? The answers lie in the histories of disease, empire, and global commerce.
Instructor(s): Z. Dorner
Area: Humanities, Social and Behavioral Sciences

AS.100.381. Religion, Medicine, and the Mind in Japan. 3.0 Credits.
This seminar explores the relationship between religion and medicine in treating disorders of the mind and soul throughout Japanese history. We will consider such topics as animal spirit possession, Buddhism, family-based care, psychotherapy, gender, and social withdrawal.
Instructor(s): H. Kim
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

Near Eastern Studies
AS.130.259. Ancient Science. 3.0 Credits.
A survey of scientific practices and technological innovations in the ancient world, including astronomy, medicine, law, and divination. Special attention will be devoted to the relationship between magic and science during the periods covered.
Instructor(s): P. Delnero
Area: Humanities, Social and Behavioral Sciences.

History of Science Technology
AS.140.105. History of Medicine. 3.0 Credits.
Course provides an overview of the medical traditions of six ancient cultures; the development of Greek and Islamic traditions in Europe; and the reform and displacement of the Classical traditions during the Scientific Revolution.
Instructor(s): G. Pomata
Area: Humanities, Social and Behavioral Sciences.

AS.140.115. Freshman Seminar: Artificial Humans. 3.0 Credits.
Looking at the history of attempts to augment or construct human beings, the course will explore the role of technology in molding human existence and shaping the definition of humanity.
Instructor(s): Y. Frumer
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.146. History of Public Health in East Asia. 3.0 Credits.
This course examines the history of disease, epidemics, and public health responses in East Asia from the 17th-20th centuries. This public health history emphasizes the interactions, connections, and comparisons among China, Japan, Korea, and Taiwan.
Instructor(s): M. Hanson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.163. Jungle Doctors: Medical Missions in Africa from David Livingstone to Paul Farmer. 3.0 Credits.
Freshman seminar using a variety of primary and secondary sources, students will explore the motivations and activities of expatriates practicing medicine in Africa from the 19th century to the present.
Instructor(s): J. Cummiskey
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.165. Enlightenment Science Through Brilliant Books. 3.0 Credits.
Course explores the brilliant scientific and philosophic achievements of the 18th-century intellectual movement known as the Enlightenment through the reading of a selection of key authors (Voltaire, Franklin, the great Encyclopedists...). Includes introduction to research method and writing in the humanities.
Instructor(s): J. Richard
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.176. Public Health in East Asia Through Films & Documentaries. 1.0 Credit.
This course uses contemporary films and documentaries to address issues in public health in East Asia, past & present. Topics covered include medicine in turn-of-the-twentieth century Japan and China, revolutionary medicine, STDs, mental illness, HIV/AIDS in China, industrial pollution, the politics of universal health care insurance, and pandemics in East Asia.
Instructor(s): M. Hanson
Area: Humanities, Social and Behavioral Sciences.

AS.140.302. Rise Of Modern Science. 3.0 Credits.
Survey of important achievements in modern science from Newton to the Hubble Space Telescope, with topics drawn from physics, chemistry, biology, astronomy, and geology. Examines how science has shaped the modern world.
Instructor(s): J. Mercelis; S. Kingsland
Area: Humanities, Social and Behavioral Sciences.
AS.140.313. Psychopolitics: Science, Mind, and Society. 3.0 Credits.
This course explores the history of psychiatry and the mind sciences as social and political institutions in the United States, from the country's founding to the present. Each class meeting will explore a set of "alternative facts" emerging in the setting of a landmark political dispute in US history. Students will read, discuss, and research claims made by competing scientific experts about who should participate in American society and to what extent. Overall, the course is geared toward students interested in making sense of the exchange between scientific knowledge and social politics.
Instructor(s): S. Scharff
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.321. Scientific Revolution. 3.0 Credits.
Explore how the Western understanding of nature changed between 1500 and 1720 through the works of astronomers and astrologers, naturalists and magi, natural philosophers and experimentalists, doctors and alchemists & others.
Instructor(s): M. Portuondo
Area: Humanities, Social and Behavioral Sciences.

AS.140.343. What it Means to be Human: Perspectives in the History of Anthropology, 1860-1995. 3.0 Credits.
This course explores the changing scientific, social, and cultural ideas that shaped how anthropologists and other scholars approached the study of human beings from the mid-nineteenth through the twentieth centuries.
Instructor(s): A. Link
Area: Humanities, Social and Behavioral Sciences.

AS.140.345. Animal Minds: Beyond the Black Box. 3.0 Credits.
How do migratory birds and fish find their way home? Do honeybees communicate using a "dance language"? Do chimpanzees have mental lives akin to those of human beings? How do scientists attempt to answer such questions, and why was the "animal mind" a taboo for over 50 years in American science? Focusing on ethology and psychology from Darwin to the present, this course examines the history of the study of animal cognition and behavior. A major emphasis throughout the course will be on the question of animal consciousness from the late-19th through the 20th century.
Instructor(s): R. Nash
Area: Humanities, Social and Behavioral Sciences.

AS.140.346. History of Chinese Medicine. 3.0 Credits.
Students will study the most recent anthropological, philosophical, and historical scholarship on medicine in traditional and modern Chinese society. They will approach the topic from several angles including medical pluralism, the range of healers, domestic and literate medicine, gender, emergence of new disciplines, public health and the history of disease. The course relies on secondary sources and primary sources in English translation. Cross-listed with East Asian Studies.
Instructor(s): M. Hanson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.357. Science Fiction Movies in the East and West. 3.0 Credits.
What is a science fiction (SF) movie? How did SF movies and developments in science and technology influence each other during the twentieth century? What is the use of SF movies for societies? And why are SF movies much more popular in some countries than in others? By watching and analyzing classic and contemporary SF movies from the US, the Soviet Union, Japan, China, and other countries, we will search for answers to these questions. Special emphasis will be given to analyzing how historical, political, and cultural environments in different countries have influenced the production and acceptance of SF movies.
Instructor(s): D. Kim
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.370. History of Mental Illness and Psychiatry in Modern West. 3.0 Credits.
This course will be an introduction to the history of "madness" in modern Europe and America. In particular, it will examine the ideas that have shaped perceptions of madness, insanity, and mental illness; the changing experiences of those afflicted; the development of those professions designed to look after those deemed mad, insane, and mentally ill; and the social and cultural assumptions behind treatments, policies, and public opinions.
Instructor(s): J. Ballenger
Area: Humanities, Social and Behavioral Sciences.

AS.140.382. Plagues and Societies in World History. 3.0 Credits.
This course examines some of the most notable epidemics in world history from the Black Death to Ebola in 2014. Topics include the origins of epidemic diseases; the relations between epidemics and warfare, empires, and trade; and the sociocultural underpinnings of disease response.
Instructor(s): K. Arner
Area: Humanities, Social and Behavioral Sciences.

AS.140.390. Science and Technology in Latin America. 3.0 Credits.
The course surveys the development of western science and technology in Hispanic America (1492 to the present). We begin studying the hybridization of scientific practices between European and Native American cultures during the early colonial era and end with the transfer of technologies and industrialization of the 20th century. We emphasize the role on science and technology in state formation, the acculturation of foreign ideas in colonial and postcolonial societies, and the role of intellectual elites in modernization programs.
Instructor(s): M. Portuondo
Area: Humanities, Social and Behavioral Sciences.

AS.140.398. Godzilla and Fukushima: Japanese Environment in History and Films. 3.0 Credits.
Juxtaposing Japanese environmental history and its reflection in popular media, the course will explore the intersection between technology, environment, and culture. The course will be accompanied by relevant movie screenings.
Instructor(s): Y. Frumer
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.411. Senior Research Seminar. 2.0 Credits.
Instructor(s): J. Mercelis; M. Portuondo
Area: Humanities, Social and Behavioral Sciences.
AS.140.447. Science and the City. 3.0 Credits.
This seminar explores the nature and growth of urban scientific communities from Victorian Manchester, through geographic growth clusters such as Silicon Valley and Route 128, to new eco-cities in China and Abu Dhabi.
Instructor(s): J. Mercelis; R. Kargon; S. Leslie
Area: Humanities, Social and Behavioral Sciences.

Philosophy
AS.150.136. Philosophy & Science: An Introduction to Both. 3.0 Credits.
Philosophers and scientists raise important questions about the nature of the physical world, the mental world, the relationship between them, and the right methods to use in their investigations of these worlds. The answers they present are very different. Scientists are usually empiricists, and want to answer questions by experiment and observation. Philosophers don't want to do this, but defend their views a priori. Why? Can both be right? Readings will present philosophical and scientific views about the world and our knowledge of it. They will include selections from major historical and contemporary figures in philosophy and science. This course has no prerequisites in philosophy or science.
Instructor(s): P. Achinstein
Area: Humanities, Natural Sciences.

AS.150.182. What is Science?. 3.0 Credits.
A philosophical introduction to very basic questions about scientific reasoning, its scope and limits. Is there a universal scientific method? Can science really explain everything, anything? Must everything be proved in science? Is science incompatible with religion? Readings will be from scientists and philosophers who have thought about these issues from Descartes and Newton to the present. No prerequisites either in philosophy or science.
Instructor(s): P. Achinstein
Area: Humanities, Natural Sciences.

AS.150.219. Introduction to Bioethics. 3.0 Credits.
Introduction to a wide range of moral issues arising in the biomedical fields, e.g. physician-assisted suicide, human cloning, abortion, surrogacy, and human subjects research. Cross-listed with Public Health Studies.
Instructor(s): H. Bok
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.150.245. Introduction to Philosophy of Mind. 3.0 Credits.
This is an introduction to the central problems of philosophy of mind: the mind-body problem and the problem of self-knowledge. Of particular interest in contemporary work is the relation of mind and brain and whether, or how, we acquire self-knowledge.
Instructor(s): E. Taylor
Area: Humanities.

AS.150.431. Introduction to Philosophy of Science. 3.0 Credits.
Scientific knowledge plays an important role in human understanding. What makes something scientific? For that matter, what is a scientific explanation? Philosophers have long reflected on the nature of science and the way it shapes our conception of the universe. In this course, we will explore topics at the intersection of philosophy and science, including scientific explanation, laws of nature, the problem of induction, and reductionism. This course presupposes no philosophical or scientific background.
Instructor(s): P. Achinstein; R. Bett
Area: Humanities.

AS.150.454. The Value of Humanity. 3.0 Credits.
Are human beings distinctively valuable? What makes us valuable? And how should we respond to the value of human beings? The course is divided into four parts. The first part takes up questions about the basis of human value. We consider various proposals, including Kant's, about the valuable feature or capacity of human beings. Are we valuable in virtue of having a good will, in virtue of being agents, in virtue of being valuers, or something further? The second part takes up questions about the explanation of the value of human beings. Does the proposed feature make us valuable because it instantiates a simple value property, making us valuable in ourselves, or simpliciter? We consider whether the notion of value simpliciter is a notion we fully understand, or need. Does the proposed feature make us valuable because it makes us good-for something or someone? Who or what does it make us good-for? Or again, does the proposed feature make us such that we are objects of an appropriate attitude or practical stance? If so, what is the attitude or stance? The third part of the course takes up normative questions about the appropriate mode of responding to human beings. We consider whether it makes sense to say that human beings are "ends-in-themselves," and what it would mean to treat a person as an end-in-itself. We also consider various accounts of respect. A guiding question is whether human beings are the only appropriate objects of respect, or whether we can respect other beings, and even artifacts. The fourth part of the class applies what we have learned so far to related topics: to the question of whether human life or existence is valuable, and conversely, whether death is disvaluable. We consider, albeit briefly, the value of human beings in relation to the value of animals. And we ask about the role of Kantian notions like dignity in applied contexts, so that highly philosophical considerations about value are shown to have real-world bearing.
Instructor(s): L. Theunissen
Area: Humanities.

AS.150.474. Justice and Health. 3.0 Credits.
Course will consider the bearing of theories of justice on health care. Topics will include national health insurance, rationing and cost containment, and what justice requires of researchers in developing countries.
Instructor(s): H. Bok
Area: Humanities.

AS.150.476. Philosophy and Cognitive Science. 3.0 Credits.
This term’s topic will be "cognitive penetration". Can what you believe change how things look and sound? For example, do paintings look different to someone who knows a lot about art history and aesthetics? Can racial prejudice cause someone to see a cellphone as a gun? If your beliefs can alter your perceptions, how can perceptions provide neutral justification for beliefs? And how does one draw a distinction between perception and thought in the first place? Readings will be drawn both from philosophy (e.g., Fodor, Block, Siegel) and psychology (e.g., Pylyshyn, Firestone, Lupyan). Recommended Course Background: Some previous exposure to philosophy, the mind-brain sciences, or other relevant background.
Instructor(s): S. Gross
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
German Romance Languages Literatures
AS.210.313. Medical Spanish. 3.0 Credits.
Medical Spanish is a comprehensive examination of vocabulary and grammar for students who either work or intend to work in medicine and health-related fields in Spanish-speaking environments. The student will be able to participate in conversations on topics such as contrasting health systems, body structures, disorders and conditions, consulting your doctor, physical and mental health, first-aid, hospitalization and surgery on completion of this course. In completing the course’s final project students will apply, synthesize, and reflect on what has been learned in the class by creating a professional dossier individualized to their professional interests. There is no final exam. May not be taken satisfactory/unsatisfactory. Not open to native speakers of Spanish. No new enrollments permitted after the third class session.
Prerequisites: AS.210.311 OR AS.210.312 or appropriate Spanish placement exam score.
Instructor(s): J. López Raja
Area: Humanities.

AS.212.469. Limit-Experience, Limit-Texts. 3.0 Credits.
Why tell stories? What power do writers wield against the disorder of life? How do literary narratives measure up to experiences that usher us beyond the limits of the imaginable? In this course we will examine modern and contemporary works in French that engage with such limit states and situations as combat, imprisonment, madness, terminal illness, and corporeal transformation. Authors to be considered include Carrère, Chevillard, Darrieussecq, Delbo, Duras, Guibert, and Volodine.
Instructor(s): D. Schilling
Area: Humanities.

AS.212.696. Literature Confronts Science: Zola.
Zola worked with the theories of heredity of his time in the Rougon-Macquart novels. But he also attempted to use his understanding of biology and thermodynamics to reform the theory of the novel in general. This course will examine these two different effects of science on literature and try to see what leads an author to undertake such a project. For a more extended description, please see http://www.wilda.org/Courses/CourseVault/Grad/Zola/Syllabus.html. Advanced undergraduates with sufficient background may register for this course with permission of the instructor.
Instructor(s): W. Anderson.
Area: Humanities.

AS.213.345. Healing and Health Beyond Theology. 3.0 Credits.
Nietzsche argues in The Gay Science that to bring about a new day we need a new health—"great health," as he calls it, that enables us to surmount the sickness of our age and transcend ourselves. However much of an iconoclast Nietzsche considered himself to be, his idea of "great health" fits squarely within a theological tradition that claims that the condition for becoming a member of the ecclesia is faith, which cleanses the individual of sin and restores him to his original state. This course will examine the theological inheritance that has and continues to shape the notion of sickness and health dominant even in secular contexts, where well-being would seem to be regarded as a condition of the body rather than of the spirit. Reading to include works by Nietzsche, Kierkegaard, Augustine, Tillich, Heidegger, Schollem, Tolstoy, Büchner, Flaubert, and Kafka. Taught in English.
Instructor(s): R. Tobias
Area: Humanities
Writing Intensive.

AS.214.477. Magic, Marvel, and Monstrosity in the Renaissance. 3.0 Credits.
Magic, Monstrosity, and Marvels or Wonders call into question what we see and experience: what is reality, what is illusion; what's natural and what's supernatural? What's human and what's more, or less, than human? During the Renaissance, ideas about the nature of reality were bound up with questions and issues very different from those of our time. With the exact sciences still being invented, the nature of the world was much less hard and fast for Renaissance people than it is for the modern educated person. The literary masterpieces of the Italian Renaissance provide vivid illustrations of the early modern sense of wonder. Foremost among these are the theatrical comedies which Italian authors revived in imitation of the ancients, and the romances, especially Ariosto's Orlando furioso (1532) and Tasso's Gerusalemme liberata (1581). These and other works influenced ideas about magical and marvelous phenomena across Europe for centuries to come. Works will be read and discussed in English. Italian majors and graduate students (who should enroll in section 2) will attend a weekly supplemental discussion in Italian and compose their written work in Italian.
Instructor(s): W. Stephens
Area: Humanities
Writing Intensive.

Writing Seminars
AS.220.206. Writing about Science I: Daily News Journalism. 3.0 Credits.
This course is designed to teach students the skills of daily news reporting, with a focus on covering science news. Students will learn how turn scientific discoveries into lively and engaging prose for the general public, interview sources, and pitch stories to news organizations. The skills taught are applicable to all areas of journalism, not just science journalism.
Instructor(s): D. Grimm
Area: Humanities
Writing Intensive.

AS.220.210. Introduction to Non-Fiction: Science as a Social Activity. 3.0 Credits.
Using the political and economic milieu of science and technology as a context for our writing, we will study how social factors such as government, money, secrecy, and ethics affect the conduct and public presentation of scientific and medical research. Controversies from 20th century history as well as current events will be discussed. Writing assignments to satisfy the W requirement will consist of short papers derived from classroom topics.
Instructor(s): W. Biddle
Area: Humanities
Writing Intensive.

AS.220.309. Writing Healthy Baltimore. 3.0 Credits.
Students will explore public health issues in Baltimore and then write about them first in short pieces, and then in longer, polished works. The framework will be the mayor’s Healthy Baltimore 2015 initiative — launched in 2011 to address the city’s top-10 public health problems, including obesity, smoking, drug and alcohol abuse, STDs, cancer, and environmental health hazards. Students will study the initiative and its historical context; examine data sets; explore where and how the initiative intersects with public health practitioners and advocacy groups at the neighborhood level; and write what they learn in different formats, including essays, breaking news, and substance analysis. Students will then “workshop” each other’s papers.
Instructor(s): K. Masterson
Area: Humanities
Writing Intensive.
AS.220.317. Writing about Science II: Feature Writing Journalism. 3.0 Credits.
This course is designed to teach students the skills of long-form narrative journalism, with a focus on covering science news. Skills taught apply to all areas of journalism, not just science journalism, and include how to compose scenes, create three-dimensional characters, create narrative tension, and conduct on-site reporting. The primary writing assignment will be a 3,000-word feature piece that is pitched, reported, and workshoped throughout the course of the class. "Writing About Science I" (formerly Becoming a Science Journalist) is recommended as a prerequisite for this course. Students who have not taken this course will need to complete a short writing test (may be waived for Writing Seminars students) and obtain the permission of the instructor to enroll. To schedule this test, please contact the instructor at dgrim5@jhu.edu
Instructor(s): D. Grimm
Area: Humanities
Writing Intensive.

AS.220.424. Science as Narrative. 3.0 Credits.
Class reads the writings of scientists to explore what their words would have meant to them and their readers. Discussion will focus on the shifting scientific/cultural context throughout history. Authors include Aristotle, Copernicus, Galileo, Descartes, Newton, Darwin, Freud, Einstein, Heisenberg, Bohr, Crick and Watson.
Instructor(s): R. Panek
Area: Humanities
Writing Intensive.

Sociology
AS.230.341. Sociology of Health and Illness. 3.0 Credits.
This course introduces students to core concepts that define the sociological approach to health, illness and health care. Topics include: health disparities, social context of health and illness, and the Sociology of Medicine.
Instructor(s): E. Agree
Area: Social and Behavioral Sciences.

Comparative Thought and Literature
AS.300.139. Introduction to Intellectual History. 3.0 Credits.
This course offers a conceptual and historical introduction to Intellectual History. What makes the "history of ideas" different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call "ideas"? In what sense do they have a history? These are examples of the kind of questions addressed in the course.
Instructor(s): P. Marrati
Area: Humanities.

Humanities Center
AS.300.143. Introduction to Comparative Literature. 3.0 Credits.
This course offers an introduction to the history, theory, and praxis of comparative literature. We will read texts from some of the founding figures of the discipline and look at the most recent debates in the field, including translation studies, literary theory, and world literature, among others. Particular attention will be given to the methodologies and problems of studying literatures in different linguistic traditions and the relation between literature and other areas of thought and culture, such as philosophy, art history, and psychoanalysis. Case studies in comparative approaches to literature will provide concrete examples to our discussions.
Instructor(s): L. Lisi
Area: Humanities.

AS.300.325. American Madness – History of the Treatment of the Mentally Ill. 3.0 Credits.
As mental illnesses became a social issue during the 18th century, community institutions were created in order to handle the needs of individuals with such illnesses collectively. This course will investigate the history of these institutions in the USA from the seemingly quiet, secluded, and peaceful private asylums in country settings, at the beginning of the 19th century, through the notorious crowded public, so-called "psychopathic hospitals" in mid-20th century, to the crisis-services, short-term acute psychiatric units, and out-patient services that followed the "death of the asylum" at the end of the 20th century. The history of the institutional care of the mentally ill in America is also the story of American psychiatry changing attitudes towards these individuals. Reading will include selections from 200 years of writings of asylum superintendents, psychiatrists, patients, and historians of psychiatry such as Foucault, Goffman, Grob, Scull, Lunbeck, Micale, and Mora.
Instructor(s): O. Ophir
Area: Humanities.

AS.300.333. Melancholy in Science, Literature, and Film. 3.0 Credits.
This course explores the manifold nature of melancholy from an interdisciplinary perspective that combines sciences, history of medicine, and the arts. Defined by Greek medicine as the excess of black bile, melancholy, in its long history, has been seen as disease of the soul, state of intellectual grace, or psychological condition. The course will examine chronologically the development and variety of the meanings of melancholy between medical texts, visual representations, poetry, psychoanalytic theory, and films. The works analyzed will include, among others, those by Galen, Robert Burton, Albrecht Dürer, Shakespeare, Cervantes, Baudelaire, Freud, Lars von Trier.
Instructor(s): E. Fabietti
Area: Humanities.

AS.300.345. Madness Interpreted – A Case Study in Medical Humanities. 3.0 Credits.
Too often conventional medical education teaches the student to translate a rich and complex narrative of illness into a minimalistic account, stripped of its ambiguities. Case presentations, too, are highly formalized reports lacking the historical, cultural, and social context. Although medicine since antiquity relies on the interpretation of observations, "evidence-based medicine," when reductively used, tends to ignore the basic fact that we are "self-interpreting animals." Patients and doctors alike try to make sense of their experiences as they recount them and, hence, case narratives teach us not only about disease and medical practice but also what it means to be human. This course will concentrate on the "case" of what is arguably the most famous psychiatric patient in the world, Daniel Paul Schreber, the German finde- siècle Senatspräsident of the Saxon Supreme Court. Beginning with Freud, the first doctor who turned Schreber's rich psychotic delusional world, as expressed in his bizarre, at times comic and then again painful, Memoir, into a "case of paranoia," we will follow the many interpretations that this narrative of illness with its unique cosmology, private theology, extraordinary creatures, transgressed sexuality, and cataclysmic vision of the universe, inspired in generations of psychoanalysts, historians, philosophers, theologians, literary critics, essayists, and scholars in political science as well as queer studies. Whether he was a paranoid schizophrenic, victim of traumatic abuse, a solipsistic philosopher, proto-fascist, or cultural hero, Schreber's memoir offers a paradigmatic case in the study of the field of medical humanities. Readings will include: Schreber, Freud, Benjamin, Canetti, Klein, Lacan, Deleuze and Guattari, de Certeau, Lingis, Lyotard, and Santner. Cross-listed with GRLL and History.
Instructor(s): O. Ophir
Area: Humanities.
AS.300.371. The Modernist Novel: James, Woolf, and Joyce. 3.0 Credits.
The purpose of this course is to survey works by three of the greatest, most relentless innovators of the twentieth century – Henry James, Virginia Woolf, and James Joyce – who explored and exploded narrative techniques for depicting what Woolf called the “luminous halo” of life. Selected works include: "The Beast in the Jungle," The Portrait of a Lady, Jacob's Room, Mrs. Dalloway, To the Lighthouse, A Portrait of the Artist as a Young Man, and Ulysses.
Instructor(s): Y. Ong
Area: Humanities.

AS.300.383. History of Madness from the Bible to DSM-V. 3.0 Credits.
Madmen, lunatics or the insane, have seen an extraordinary variety of responses and attitudes across the centuries. Whether seen as a “true” phenomenon or as socially constructed “madness” was defined and treated, examined and controlled, diagnosed and “cured” according to the spirit of the time. This course will follow the varied social imageries of “madness” throughout Western history, from the Bible to the contemporary and controversial Diagnostic Statistical Manual (DSM) in its most recent 5th edition. Alongside primary texts by Hippocrates, Avicenna, Pinel, and Freud and secondary texts by Michel Foucault, Ian Hacking, Edward Shorter, and Elaine Showalter, among others, we will acquaint ourselves with first-person accounts of “madness” and its different forms of treatment, ranging from lunatic asylum, through electric-shock treatments and lobotomies to psychoanalysis. The course will explore the interaction between the historical and social, scientific and political as well as economical factors that have shaped the views of “madness” and its treatment.
Instructor(s): O. Ophir
Area: Humanities.

AS.300.427. Reading Freud. 3.0 Credits.
Sigmund Freud was one of the most influential thinkers of the 20th century. Psychoanalysis, which was his theory of mind, a research method, and a therapeutic technique, offered concepts that pervade Western culture and the humanities. In this seminar which is designed for students from all fields of knowledge, we will closely and chronologically read Freud’s major works, follow his developing theories, and become familiar with psychoanalytic concepts such as the unconscious, the uncanny, instincts, sexuality and aggression, which illuminated mysteries in other fields, from literature to anthropology, from political science to religious studies, and from philosophy to the arts.
Instructor(s): O. Ophir
Area: Humanities.

Study of Women, Gender, Sexuality
AS.363.420. Stories of Hysteria. 3.0 Credits.
Hysteria, an elusive and polymorphous disease associated with the female body, was first diagnosed in Greek Antiquity. When, in the late nineteenth-century, Sigmund Freud decided to study it, he made discoveries that shaped in a decisive way the new science of psychoanalysis and offered new foundations for discussions of what we might now call “psychosomatic illness.” Though rarely diagnosed nowadays, hysteria provides a fascinating introduction to medical, clinical, social, and ethical questions connected to gender that have lost none of their relevance. We will study fictional narratives from the 18th century to the present as if they were case-studies – as a way of appraising hysteria’s changing and provocatively volatile definitions across time and in different cultural frameworks. Among our topics: trauma and PTSD, the concept of repression, masculinities, women and madness, and, above all, transformations in gender roles and identities in the modern era. In addition to selected readings of medical and historical materials available on Blackboard, texts for study are: The Nun (Diderot), Trilby (du Maurier), Fragment of a Case of Hysteria (Freud), Regeneration (Barker), The Icarus Girl (Oyeyemi), Redeployment (Klay).
Instructor(s): E. Ender
Area: Humanities.

Program in Museums and Society
AS.389.201. Introduction to the Museum: Past and Present. 3.0 Credits.
This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends including the social movements of the 20th century. Anthropology, art, history, and science museums are considered. Cross-listed with History and History of Art.
Instructor(s): J. Kingsley
Area: Humanities, Social and Behavioral Sciences.

AS.389.353. Revolutions of the Book: Material Culture & the Transformation of Knowledge from Antiquity to the Renaissance. 3.0 Credits.
Explores the material culture of knowledge through transformations in the technologies and arts of communication, taught entirely from rare books, manuscripts, and artifacts in JHU libraries and museum collections.
Instructor(s): E. Havens
Area: Humanities
Writing Intensive.

Military Science

The JHU Army Reserve Officers’ Training Corps (ROTC) was among the first to be established by Congress in 1916 and is routinely ranked at the top of the Nation’s 273 programs. Nearly 3,000 Hopkins students have received Army officer commissions through the program, with over 40 attaining the rank of general officer. Students can enter the program with as little as two years remaining as an undergraduate or may complete the requirements while pursuing a graduate degree. Upon graduation, Hopkins students are commissioned as a second lieutenant in the U.S. Army. Some are selected to attend a funded law school or several medical programs, while others serve in the Active Army, Reserves or National Guard. The Leadership and Management class specializes in leader development and is an excellent course for students aspiring to become leaders on campus and beyond. Additional information on military science or ROTC can be obtained at our building (behind the athletic center), by asking a current cadet, and by calling 1-800-JHU-ROTC.
Scholarship and Financial Assistance
To apply for an ROTC scholarship go to http://www.goarmy.com/rotc/scholarships.html. Scholarship opportunities are regularly improved and incentives are added. Applications for scholarships by qualified students are awarded throughout the semester, and are often retroactive. A non-scholarship program is also available. For health profession and nursing students, ROTC can offer numerous opportunities to achieve specialized education, additional postgraduate scholarships and accession/graduation bonuses.

Curriculum
The curriculum normally consists of a two-year Basic Course (freshmen/sophomores) and a two-year Advanced Course (juniors/seniors). Some modification to this curriculum is common, as with graduate or transfer students. Completing the 30-day Basic Camp at Fort Knox, KY, is equivalent to the Basic Course. Successful graduates of Basic Camp are normally offered ROTC scholarships and an opportunity to enroll in the Advanced Course. Junior-ROTC experience, prior military service and military academy attendance may also qualify for Basic Course completion.

All Advanced Course students are cadets and have a contractual agreement with the Army. These students attend the Advanced Camp at Fort Knox, KY, between the 300- and 400-level courses. This is a core requirement to commission in the Army and cannot be waived.

Army ROTC strives to develop values-based graduates who offer expert leadership to the campus, the community and the Army. As such, we offer and encourage cadets to participate in: paid leadership and technical internships; cultural and language immersion programs; a number of Army military school opportunities in: Europe, South America, the Republic of Korea, Alaska, Hawaii, and across the continental United States.

Extracurricular activities may also include: community assistance, Red Cross blood drives, tutoring for at-risk children, and volunteering at the Veterans Administration. Cadets may apply for additional military training such as skydiving, helicopter rappelling, mountaineering, and cold weather training. New and challenging opportunities routinely become available.

Air Force ROTC Program
Admission to the Air Force ROTC program is available to JHU students through an agreement with the University of Maryland. AFROTC courses have been scheduled to enable students to complete all the requirements in one morning per week at the College Park campus. JHU students are eligible to compete for all AFROTC scholarships and flying programs. The two-, three-, and four-year scholarships pay tuition, books, fees, and a monthly stipend during the school year. After graduation and the successful completion of AFROTC requirements, students are commissioned second lieutenants in the Air Force.

Those interested in this program should call 301-314-3242 or write to:
AFROTC Det 330
University of Maryland
Cole Field House, Room 2126
College Park, MD 20742-1021

For more information see the website at http://www.afrotc.com/
**AS.374.102. Foundations of Agile and Adaptive Leadership. 2.0 Credits.**
The MSL I course produces a Cadet who accepts the Army as a values-based organization and embraces the scholar-athlete-warrior ethos; who is familiar with individual roles and responsibilities in support of team efforts and problem solving processes in military and non-military situations; who demonstrates oral and written communication skills, understands resilience, and demonstrates a commitment to learning. MSL102 introduces Cadets to the Army and the Profession of Arms. Students will examine the Army Profession and what it means to be a professional in the U.S. Army. The overall focus is on developing basic knowledge and comprehension of the Army Leadership Requirements Model while gaining a big picture understanding of the Reserve Officers’ Training Corps (ROTC) program, its purpose in the Army, and its advantages for the student. Cadets also learn how resiliency and fitness supports their development as an Army leader. As you become further acquainted with MSL102, you will learn the structure of the ROTC Basic Course program consisting of MSL101, 102, 201, 202, Fall and Spring Leadership Labs, and Basic Camp. The focus is on developing basic knowledge and comprehension of Army leadership dimensions, attributes and core leader competencies while gaining an understanding of the ROTC program, its purpose in the Army, and its advantages for the student.

**Instructor(s): C. Breaux; L. Scott.**

**AS.374.110. Basic Leadership Laboratory, ROTC 101. 1.0 Credit.**
These introductory courses in a laboratory environment are designed to expose students to practical experiences, challenges and individual learning opportunities in a small group. Students learn the fundamentals of an organization and apply principles of leadership and management at the foundation level. Students develop military courtesy, organizational discipline, communication and basic leadership and management skills. Ultimately, students understand how to facilitate and lead a small group of four to five people as an integral part of a larger organization of 75-100 people through situational training opportunities in a variety of conditions. As a leadership practicum, students have the opportunity to serve in leadership positions and receive tactical and technical training. In addition to learning to lead groups of five to 100 people, students will also be exposed to training on first aid, operating Army equipment; Army activities such as rappelling and drill and ceremony. These laboratories are required for enrolled ROTC participants who desire to be considered for a commission in the Army. Corequisite: AS.374.101-AS.374.102. Military Science courses require department permission and are restricted to active or inquiring ROTC members.

**Corequisites: AS.374.101 OR AS.374.102**

**Instructor(s): B. Blaska; C. Breaux; J. Kirkland.**

**AS.374.120. Basic Leadership Laboratory II. 1.0 Credit.**
Students learn and apply team echelon leadership at an entry level. They continue development of military courtesy, discipline, communication and basic Soldier skills. Ultimately, students understand how to operate in and lead 4-5 person teams through a program of training opportunities in a variety of conditions. Freshmen only.

**Instructor(s): L. Scott; R. Graves.**

**AS.374.201. Leadership and Decision Making. 2.0 Credits.**
The MSL II course produces a cadet grounded in foundational leadership doctrine and skills by following and leading small units to achieve assigned missions; who applies critical thinking and problem solving using Troop Leading Procedures (TLP); who comprehends the value of diversity and understands the officer’s role in leading change; understands the fundamentals of the Army as a profession. MSL201 adds depth to the Cadets understanding of the Adaptability Army Learning Area. The outcomes are demonstrated through Critical and Creative Thinking and the ability to apply Troop Leading Procedures (TLP) to apply Innovative Solutions to Problems. The Army Profession is also stressed through leadership forums and a leadership self-assessment. Students are then required to apply their knowledge outside the classroom in a hands-on performance-oriented environment during Leadership LABs team building exercises, and Field Training Exercises. Military Science courses require department permission and are restricted to active or inquiring ROTC members.

**Instructor(s): C. Breaux; J. Kirkland.**

**AS.374.202. Army Doctrine and Team Development. 2.0 Credits.**
MSL 202 focuses on Army doctrine and team development. The course begins the journey to understand and demonstrate competencies as they relate to Army doctrine. Army Values, Teamwork, and Warrior Ethos and their relationship to the Law of Land Warfare and philosophy of military service are also stressed. The ability to lead and follow is also covered through Team Building exercises in small units up to squad level. Students are then required to apply their knowledge outside the classroom in a hands-on performance-oriented environment during Leadership LABs (team building exercises, LTXs, VBS exercises). Includes a 1-Hour lab per week taught by MS III Cadets. The Army Reserve Officer Training Course (ROTC) Basic Course is an academically rigorous 2-year college program comprised of four semester courses of instruction, Leadership Labs (two sets, Fall/Spring), and the Cadet Basic Camp conducted at Fort Knox, KY.

**Instructor(s): C. Breaux; L. Scott.**

**AS.374.210. Basic Team Leadership. 1.0 Credit.**
Students lead and assist in leading 4-5 person teams through a variety of training opportunities. They learn the troop-leading procedures, basic problem solving, and tactical skills aimed at military leadership. Students will mentor and assist members of their team with improving their own skills and leadership as well. Corequisite: AS.374.210. Military Science courses require department permission and are restricted to active or inquiring ROTC members.

**Corequisites: AS.374.201**

**Instructor(s): C. Breaux; J. Kirkland.**

**AS.374.220. Advanced Team Leadership. 1.0 Credit.**
Students perform duties of and develop their leadership, as team leaders during a variety of induced training opportunities. Continued emphasis is placed on troop-leading procedures and simple problem solving. Students lead physical fitness training and mentor subordinates in military, academic and extra-curricular activities. Successful completion of advanced team leadership allows students to progress into ROTC Advanced Courses. Sophomores only.

**Instructor(s): C. Breaux; J. Adler; L. Scott; M. Gorreck.**
AS.374.255. US Intelligence Community: Theory & Practice. 3.0 Credits.
United States Intelligence Community (USIC): Theory & Practice is a course designed to introduce and familiarize the student with the function, organization, and operational elements of the USIC. The classroom instruction exposes the student to the realities of the Intelligence Community through structured individual and group exercises designed to replicate real world situations in a classroom setting. The full-spectrum of US intelligence is taught and includes: All-Source Intelligence production, multi-source data fusion processes, Special Operations, Counter-Terrorism, current affairs, and future national security challenges. The course is taught by former members of US Defense and Intelligence Communities. Military Science courses require department permission and are restricted to active or inquiring ROTC members.
Instructor(s): J. Adler, M. Boston
Area: Social and Behavioral Sciences
Writing Intensive.

AS.374.301. Training Management and the Warfighting Functions. 2.0 Credits.
MSL301 Training Management and the Warfighting Functions, is an academically challenging course where you will study, practice, and apply the fundamentals of Army Leadership, Officership, Army Values and Ethics, Personal Development, and small unit tactics at the platoon level. At the conclusion of this course, you will be capable of planning, coordinating, navigating, motivating and leading a squad and platoon in the execution of a mission during a classroom PE, a Leadership Lab, or during a Field Training Exercise (FTX). You will be required to write peer evaluations and receive feedback on your abilities as a leader and how to improve those leader skills that can further develop you in to a successful officer. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies, and practical exercises, a mid-term exam, and a final exam. You will receive systematic and specific feedback on your leader attributes, values, and core leader competencies from your instructor, other ROTC cadre, and MSL IV Cadets who will evaluate you using the Cadet Officer Evaluation Report (COER). Successful completion of this course will help prepare you for the SROTC Advanced Camp, which you will attend in the summer at Fort Knox, KY.
Prerequisites: AS.374.301 in the Fall
Corequisites: AS.374.320
Instructor(s): C. Breaux; J. Adler; J. Kirkland; M. Gorreck
Writing Intensive.

AS.374.302. Applied Leadership in Small Unit Operations. 2.0 Credits.
MSL302 Applied Leadership in Small Unit Operations, is an academically challenging course where you will study, practice, and apply the fundamentals of Army Leadership, Army Values and Ethics, Personal Development, and small unit tactics at the platoon level. At the conclusion of this course, you will be capable of planning, coordinating, navigating, motivating and leading a squad and platoon in the execution of a mission during a classroom PE, a Leadership Lab, or during a Field Training Exercise (FTX). You will be required to write peer evaluations and receive feedback on your abilities as a leader and how to improve those leader skills that can further develop you in to a successful officer. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies, and practical exercises, a mid-term exam, and a final exam. You will receive systematic and specific feedback on your leader attributes, values, and core leader competencies from your instructor, other ROTC cadre, and MSL IV Cadets who will evaluate you using the Cadet Officer Evaluation Report (COER). Successful completion of this course will help prepare you for the SROTC Advanced Camp, which you will attend in the summer at Fort Knox, KY.
Prerequisites: AS.374.301 in the Fall
Corequisites: AS.374.320
Instructor(s): C. Breaux; J. Adler; J. Kirkland; M. Gorreck
Writing Intensive.

AS.374.307. Leadership in Military History. 2.0 Credits.
This course provides students with a historical perspective to decisions made by American military leaders: battlefield complexity, resource limitations, and teamwork deficiencies. Students cover major military engagements from the colonial period through the current operating environment. Students examine how leaders motivated their men, devised battle strategies, implemented rules of engagement, and managed supplies, transportation, and logistics for their troops. Requires permission of the Director of Military Science. Registration restricted to contracted ROTC cadets only.
Instructor(s): J. Adler; J. Wood; M. Gorreck
Writing Intensive.

AS.374.310. Basic Tactical Leadership Laboratory. 1.0 Credit.
In Leadership Laboratory, students are given the opportunity to apply what they have learned in the classroom, in a tactical or field environment. Students learn and demonstrate the fundamentals of leadership by planning, coordinating, navigating, motivating, and leading squads in the execution of both garrison and tactical missions. Students are evaluated as part of the Leadership Development Program and FM 6-22, Army Leadership. Ultimately, prepares students to excel at the four-week National Leadership Development and Assessment Course at Fort Lewis, WA. Corequisite: AS.374.301. Military Science courses require department permission and are restricted to active or inquiring ROTC members.
Corequisites: AS.374.301
Instructor(s): J. Adler; M. Gorreck.

AS.374.320. Advanced Tactical Leadership. 1.0 Credit.
Students further develop their leadership skills by directing and coordinating the efforts of 9-60 personnel on offensive, defensive and civil-support tactical-tasks. Develop written plans for garrison and field environments while supervising its execution. Ultimately, prepares students to excel at the four-week National Leadership Development and Assessment Course at Fort Lewis, WA. Permission required. Juniors only.
Instructor(s): C. Breaux; J. Adler; J. Kirkland.
AS.374.401. The Army Officer. 2.0 Credits.
MLD 401 Focuses on development of the Army Officer. It is an academically challenging course were you will develop knowledge, skills, and abilities to plan, resource, and assess training at the small unit level. You will also learn about Army programs that support counseling cadets and evaluating performance, values and ethics, career planning, and legal responsibilities. At the conclusion of this course, you will be familiar with how to plan, prepare, execute, and continuously assess the conduct of training at the company or field grade officer level. Includes a lab per week overseeing MSL III lesson facilitation and supervised by ROTC Cadre. Military Science courses require department permission and are restricted to active or inquiring ROTC members.
Instructor(s): J. Adler; M. Gorreck.

AS.374.402. Company Grade Leadership. 2.0 Credits.
This is an academically challenging course where you will study, practice, develop, and apply critical thinking skills pertaining to Army leadership, officer skills, Army values and ethics, personal development, and small unit tactics at platoon level. This course includes reading assignments, homework assignments, small group assignments, briefings, case studies, practical exercises, mid-term exam, and a Capstone Exercise in place of the final exam. For the Capstone Exercise, you will be required to complete an Oral Practicum that you will be evaluated on your knowledge of the 20 Army Warfighting Challenges (AWFC) covered throughout MSL401 and 402 coursework. In addition, you could be assessed on leadership abilities during classroom PE, Leadership Labs, or during a Field Training Exercise (FTX). You will receive systematic and specific feedback on your leader attributes, values, and core leader competencies from your cadre, PMS and other MSL IV Cadets who will evaluate you using the Cadet Officer Evaluation Report (COER). You will be required to write peer evaluations and receive feedback on your abilities as a leader and how to improve those leader skills. At the conclusion of this course, you will be able to plan, coordinate, navigate, motivate and lead a platoon in future operational environments. Successful completion of this course will assist in preparing you for your BOLC B course and is a mandatory requirement for commissioning.
Instructor(s): J. Adler; M. Gorreck.

AS.374.407. Being a Platoon Leader. 1.0 Credit.
This course prepares Cadets for actual challenges not necessarily described in text books that junior officers may face in today’s Army. Topics include: serving during war, conflict management, ethical dilemmas, time-constrained planning, and change management. This course also serves as prerequisite for the Basic Officer Leadership Course “B” phase by providing students with reinforced development on: deployment preparation, the military style of writing, supply management, human resources management, family support and operations management. Students will also learn how the Army’s organizational structure and administration affects Soldiers across ranks and over time. Finally, students will learn ways to leverage automation to improve their efficiency and effectiveness of records management and developing presentations for superiors.
Instructor(s): G. Stambone; M. Gorreck.

AS.374.410. Advanced Planning & Decision Making I. 1.0 Credit.
Students develop a semester-long progression of programmed training activates that support completion of the unit’s Mission Essential Task List. The laboratory builds from fall to spring semester as students master advanced problem solving, resource synchronization and executive decision making. Students evaluate, mentor and develop subordinate leaders as part of the Leadership Development Program and FM 6-22, Army Leadership. The course serves as the final evaluation and determination on a student’s ability to lead Soldier’s as a Second Lieutenant in the US Army. Co-requisite: AS.374.401-AS.374.402.
Recommended Course Background: AS.374.301-AS.374.302, AS.374.310-AS.374.320 and Basic Course. Military Science courses require department permission and are restricted to active or inquiring ROTC members.
Corequisites: AS.374.401 OR AS.374.402
Instructor(s): J. Adler; M. Gorreck.

AS.374.420. Advanced Organizational Planning. 1.0 Credit.
Students develop a semester-long progression of training activates that support completion of the unit’s Mission Essential Task List. The laboratory builds on the first semester’s achievements through advanced problem solving, resource synchronization and executive decision making. Students evaluate and develop subordinate leaders as part of the Leadership Development Program and FM 6-22, Army Leadership. The course serves as the final evaluation and determination on a student’s ability to lead Soldier’s as a Second Lieutenant in the US Army. Permission required. Seniors only.
Instructor(s): J. Adler; M. Gorreck.

AS.374.456. 21st Century Intelligence Issues. 3.0 Credits.
Taught by a former U.S. intelligence officer with decades of experience in strategic, operational, and tactical intelligence and as a member of three national-level intelligence organizations, “21st Century Intelligence Issues” introduces students to current and future intelligence issues of the 21st century, to include intelligence successes and failures; adversarial deception and deception awareness; intelligence, the law, and government oversight; covert action; and critical 21st century intelligence challenges posed by terrorism, weapons of mass destruction, cyber warfare, unconventional warfare, and non-state actor threats.
Instructor(s): F. Hoffman
Area: Social and Behavioral Sciences
Writing Intensive.

AS.374.501. Independent Study. 1.0 Credit.
Instructor(s): J. Adler; M. Gorreck
Writing Intensive.

AS.374.512. Internship - Military Science. 0.0 - 3.0 Credits.
Students will select a topic relevant to the study of military leadership and will complete a project based on current military doctrine and the contemporary operating environment of current military operations. Permission required.
Instructor(s): M. Gorreck
Writing Intensive.

AS.374.556. USIC Individual Research Topics (IRT) Independent Study Seminar. 3.0 Credits.
Extension of AS.374.255, USIC Theory and Practices is an independent study course to formalize the research, analysis and production processes of United States Intelligence Cycle (USIC). The research topics will focus on collaboration of USIC thru specific topics in USIC sectors of HUMINT, SIGINT, OSINT, MASINT, Cyber-Security and Intelligence affairs.
Prerequisites: AS.374.555 OR AS.374.255
Instructor(s): J. Adler; M. Boston
Writing Intensive.
Museums and Society

http://krieger.jhu.edu/museums/

The Program in Museums and Society is concerned with the institutions that shape knowledge and understanding through the collection, preservation, interpretation, and/or presentation of material culture. It focuses on the role of museums (broadly defined) and their contents in societies past and present, including their cultural, intellectual, and political significance.

A minor in Museums and Society complements study in a range of fields, including but not limited to anthropology, archaeology, history, history of art, and history of science and technology. Many courses include visits to or focused work in local and regional institutions, as well as in on-campus collections (Archaeological Museum, Homewood Museum, Evergreen Museum and Library, and the Sheridan Libraries).

Whether they are researching a historical artifact or debating the obligations of public institutions, students in the program are challenged to approach their discipline from a new angle. While some may choose to pursue a museum career, the program has the larger goal of encouraging critical, careful thinking about some of the most influential cultural institutions of our day.

Requirements for a Minor in Museums and Society

Course requirements for the minor in Museums and Society are designed to introduce students to a broad set of historical, theoretical, and practical museum issues and to give them the opportunity to explore museums first-hand. Prospective minors should consult with the Director of Undergraduate Studies for guidance in designing a program of study.

- A minimum of six different courses (amounting to at least 18 credits) selected from those approved by the program.
- Four additional courses in the program: Of these courses, at least three must be 300-level or higher and at least two different primary disciplines must be represented; these four courses must also include a minimum of three credits of "practicum" [POS-Tag PMUS-PRAC] work.
- Courses used to satisfy minor requirements must be taken for a letter grade. Students must earn a "C-" or higher grade in all courses used to satisfy minor requirements.

Introductory Courses

</table>

Two courses must be from at least two different primary disciplines.

Total Credits: 18

Additional details:

Introduction to the Museum sequence: Ideally, students should take at least one of the two introductory courses before enrolling in more focused courses, but this is not required.

Departmental distribution: In keeping with the interdisciplinary nature of the program, students are encouraged to explore various fields and must complete courses in at least two different primary disciplines beyond Museums and Society. Primary disciplines are defined either as the home department for the course (identified by the course's three-digit prefix), as the first cross-listing beyond Museums and Society, or as the home discipline of the instructor. Students should seek guidance from the program to ensure they are fulfilling this requirement, and should note that Independent Study and Capstone credits cannot be applied to it.

Practicum Work: Practicum credits can be earned only from courses designated as Museums and Society "practicum" in the course description [POS-Tag PMUS-PRAC].

Independent Study and Capstone: Students have two options for pursuing independent work for credit in Museums and Society. The Independent Study typically takes a more traditional academic approach to research and presentation; the Capstone encourages research that is engaged with collections and results in an alternative, often public project. Students interested in these options should consult the university’s independent work policy and follow the guidelines outlined under Independent Research (http://krieger.jhu.edu/museums-society/academics/independent-research). Approval for credit will not be given until a project has been officially approved by an appropriate mentor, in full and frequent consultation with the Program in Museums and Society. No more than 3 credits of independent work can be applied to the minor.

Internships: Internships are valuable opportunities to expand horizons, learn in the field, and investigate real-world applications of academic work. The Program in Museums and Society highly encourages students to explore internship options and works with the Career Center to do so. However, while the program sponsors internships for academic credit when needed by the host institution, such credit cannot be used to satisfy minor requirements. Students interested in receiving credit for
independent work should consider the Independent Study and Capstone options instead.

Other Information: No course other than the Independent Study or Capstone may be counted toward the minor more than once (up to a maximum of 3 credits).

Sample Program of Study for a Minor in Museums and Society
A sample path toward completion might include the following sequence, but many other paths are possible. Please consult with the Director of Undergraduate Studies for guidance.

1 Recommended but not required to be taken freshman year.

For current faculty and contact information go to http://krieger.jhu.edu/museums-directory/

Faculty

Assistant Director
Jennifer P. Kingsley (interim director 2017-19)
Senior Lecturer, Museums and Society; medieval art, history of collecting and display, art museums, inclusive museums, history of the senses, digital knowledgescapes.

Affiliates Board
Sanchita Balachandran
Curator/Conservator, Johns Hopkins Archaeological Museum and Lecturer, Near Eastern Studies.

Rebecca M. Brown
Associate Professor, History of Art.

Aaron Bryant
Museum Curator, Smithsonian Institution, National Museum of African American History & Culture.

N.D.B. Connolly
Herbert Baxter Adams Associate Professor, History.

Gabrielle Dean
William Kurrelmeyer Curator, Modern Literary Rare Books and Manuscripts and Lecturer, Museums and Society.

Linda DeLibero
Director, Film and Media Studies Program.

François Furstenberg
Professor, History.

Gamynne Guillotte
Director of Interpretation and Public Engagement, Baltimore Museum of Art.

Stuart W. Leslie
Professor, History of Science and Technology.

Jean McGarry
Professor, Writing Seminars.

Jacqueline M. O’Regan

Anand Pandian
Associate Professor, Anthropology.

Professors

Betsy M. Bryan
Vice-Dean for Humanities and Social Sciences, Alexander Badawy Chair in Egyptian Art and Archaeology, Near Eastern Studies: Egyptian art and archaeology, and Egyptology.

Stephen Campbell
Henry M. and Elizabeth P. Wiesenfeld Professor, History of Art: Italian Renaissance art, the studiolo and Renaissance collecting.

Marian Feldman

Robert H. Kargon
Willis K. Shepard Professor of the History of Science, History of Science and Technology: history of physics, science, and social change.

Stuart W. Leslie
History of Science and Technology: history of technology, science-based industry, and 20th-century American science.

Tobie Meyer-Fong
History: social, cultural history of China since 1600.

Bernadette Wegenstein
German and Romance Languages and Literatures and Director, Center for Advanced Media Studies: media arts, film, and critical theory.

Associate Professor
Rebecca M. Brown
History of Art: Southeast Asian art and politics of display.

Assistant Professors
Emily S.K. Anderson
Classics: Aegean and Eastern Mediterranean Bronze Age art and archaeology, material culture, sociocultural interaction, craft, and glyptic.

Yulia Frumer
History of Science and Technology: East Asia and tediological instruments.

Samuel Spinner
German and Romance Languages and Literatures: Yiddish and German-Jewish literature, history of anthropology, museum studies, and visual culture.

Pier Luigi Tucci
History of Art: Roman art and architecture, spolia, and collecting of ancient art.

Molly Warnock
History of Art: modern art.

Teaching Faculty

Lisa DeLeonardis
Austen Stokes Associate Professor in Art of the Ancient Americas, History of Art: ancient art of the Americas.

Affiliated Instructors and Museum Professionals

James Archer Abbott
Philip Franklin Wagley Director and Curator, Evergreen Museum and Library: 19th- and 20th-century American decorative arts and furniture, historic houses, curatorial practice, including collections management and exhibitions.

Virginia Anderson
Art Historian and Independent Scholar.

Sanchita Balachandran
Curator/Conservator, Johns Hopkins Archaeological Museum and Lecturer, Near Eastern Studies: conservation history and ethics; archaeological conservation and site management; collections management and museum practice.

Doreen Bolger

Elizabeth Comer
Project Manager and Principal Investigator, EAC/Archaeology.

Gabrielle Dean
William Kurrelmeyer Curator, Rare Books and Manuscripts and Lecturer, Museums and Society: history of books, libraries, reading, literary culture; books as objects.

Lori Beth Finkelstein
Vice-President of Education, Interpretation and Volunteer Programs, Maryland Zoo in Baltimore.

Robert Forloney
Program Developer and Cultural Institution Consultant.

Earl Havens
William Kurrelmeyer Curator of Rare Books and Manuscripts and Adjunct Assistant Professor, Department of History: early modern Europe, history of collecting, early libraries.

Amy Landau
Director of Curatorial Affairs and Curator of Islamic and South and Southeast Asian Art, The Walters Art Museum.

Whitney C. Levandusky

Elizabeth Maloney
Museum Educator and Director of Interpretation, Baltimore Museum of Industry.

Arthur Molella
Director Emeritus, Lemelson Center for the Study of Invention and Innovation, National Museum of American History, Smithsonian Institution.

Jacqueline M. O’Regan

Elizabeth Rodini
Writer, Curator, Teacher, and Founder of the Program in Museums and Society.

Julie Rose
Curator, Homewood Museum.

Lorraine C. Trusheim
Independent Objects Conservator, Halcyon Objects Conservation LLC.

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

Freshmen will learn and apply analytical methods used in the technical study of archaeological objects by examining and researching ancient examples in the Johns Hopkins Archaeological Museum. Freshman Only. Instructor(s): S. Balachandran
Area: Humanities.

AS.389.120. Discover Hopkins: Examining Archaeological Objects. 1.0 Credit.
In this course, we examine artifacts from the Johns Hopkins Archaeological Museum in order to learn about the role of materials such as ceramics, metal, glass, faience and stone in the history, art and culture of the ancient world. We will visit local artists’ studios to understand how these materials are utilized today, and examine comparative examples in local art museums. Students will work hands on with artifacts each day. Instructor(s): S. Balachandran.

AS.389.201. Introduction to the Museum: Past and Present. 3.0 Credits.
This course surveys museums, from their origins to their most contemporary forms, in the context of broader historical, intellectual, and cultural trends including the social movements of the 20th century. Anthropology, art, history, and science museums are considered. Cross-listed with History and History of Art. Instructor(s): J. Kingsley
Area: Humanities, Social and Behavioral Sciences.

AS.389.202. Introduction to the Museum: Issues and Ideas. 3.0 Credits.
This course considers the practical, political, and ethical challenges facing museums today, including the impact of technology and globalization, economic pressures, and debates over the ownership and interpretation of culture. Included this year is some hands on work at the Peale Museum. Instructor(s): R. Forloney
Area: Humanities, Social and Behavioral Sciences.
AS.389.205. Examining Archaeological Objects. 3.0 Credits.
This course considers the role of materials in the production, study and interpretation of objects by examining artifacts from the Johns Hopkins Archaeological Museum. Students will consider materials such as ceramics, stone, metal, glass, wood and textiles, and visit artists' studios to gain an understanding of historical manufacturing processes. M&S practicum course. Cross-listed with Archaeology, Near Eastern Studies, Classics, and History of Art.
Instructor(s): S. Balachandran
Area: Humanities.

AS.389.250. Conservation of Material Culture: Art, Artifacts and Heritage Sites. 3.0 Credits.
This course will introduce students to the field of art conservation through the study of paintings, paper, books, objects, contemporary sculpture and historic preservation. Topics covered will include: methods of manufacture, agents of deterioration, preservation initiatives, conservation treatment and ethics, and conservation science. Cross-listed with History of Art. Class usually meets at 1:30 - 3:50 PM, except for days with field trips.
Instructor(s): L. Trusheim
Area: Humanities.

AS.389.275. Interpreting Sites & Collections: An Introduction to Museum Education. 3.0 Credits.
Part public history, part introduction to museum practices, this hands-on course explores how heritage areas and museums serve communities through interpretation. Each year, students partner with a community to develop research-based, visitor-centered interpretive material, in the 2015 Baltimore National Heritage Area. Field trips and community meetings will be a significant part of the course. Cross-listed with History and History of Science. M&S practicum course. Class usually meets 1:30 - 3:50 except for days with field trips.
Instructor(s): E. Maloney
Area: Humanities, Social and Behavioral Sciences.

AS.389.301. Curating Material Culture for the Digital Age. 4.0 Credits.
JHU pioneered the concept of the modern research university in the United States, but what does that mean for the everyday experiences of its students, faculty, staff and friends? Excavate the history of this place through the things collected, made and used here since the university's founding in 1876. Students research the material culture of Hopkins and present their findings on an interactive website: collectionsweb.jhu.edu. Course includes digital media labs. Cross-listed with History and History of Science. M&S practicum course.
Instructor(s): J. Kingsley
Area: Humanities, Social and Behavioral Sciences.

AS.389.302. The Virtual Museum. 3.0 Credits.
Course draws on both classic readings in material culture and emerging theories of the digital to consider how the internet has changed objects and the institutions that collect, preserve, display and interpret them. Students will contribute to an established virtual museum and create their own.
Instructor(s): J. Kingsley
Area: Humanities.

AS.389.303. World of Things. 3.0 Credits.
This course introduces students to current approaches to objects, their materials, and materiality. Each class starts from a specific inspiration (body parts, fakes, the materiality of ISIS....) and treats the museum as a site for investigating the relationship between people and things.
Instructor(s): J. Kingsley

AS.389.311. From Treasure House to Production House: Exploring New Roles for the Museum in the 21st Century. 3.0 Credits.
Students work with the Director of, the Peale Center for Baltimore History and Architecture as it reinvents itself as a museum for the twenty-first century. Involves working with community story-tellers in residence. Extra time is to allow for field trip travel - most days class runs 1:30-3:50.
Instructor(s): Staff
Area: Humanities, Social and Behavioral Sciences.

AS.389.315. Ancient Color: The Technologies and Meanings of Color in Antiquity. 3.0 Credits.
What role did the colorful surfaces of sculptures, vessels and textiles play in the ancient world? We examine historical texts and recent scholarly and scientific publications on the technologies and meanings of color in antiquity, and use imaging and analytical techniques to study polychromed objects from the Johns Hopkins Archaeological Museum.
Instructor(s): S. Balachandran
Area: Humanities, Social and Behavioral Sciences.

AS.389.321. GhostFood: Curatorial Practicum with the Contemporary. 3.0 Credits.
Students work with Baltimore's Contemporary and NYC artist Miriam Simun on GhostFood, a project using art to engage important questions concerning the environment, climate change, and the politics of food.
Instructor Permission. Contact erodini@jhu.edu for enrollment approval.
M&S practicum course.
Instructor(s): D. Haggag
Area: Humanities.

AS.389.329. Author/Canon/Archive. 3.0 Credits.
Why are some literary works from the past reprinted,anthologized, and considered worthy of study, but not others? Why are some works "lost" and some "rediscovered," while others simply fall out of favor? Focusing on nineteenth- and early twentieth-century American literary culture, we will use rare books and archival materials from JHU collections to examine Edgar Allan Poe, Walt Whitman, Emily Dickinson, Stephen Crane, Charles Chesnutt, and Zora Neale Hurston, along with a few authors you've never heard of, in terms of the relationship between authorship, stewardship, and status.
Instructor(s): G. Dean
Area: Humanities, Social and Behavioral Sciences.

AS.389.335. Recreating Ancient Greek Ceramics. 4.0 Credits.
This hands-on course in experimental archaeology brings together undergraduate and graduate students across disciplines to study the making of Athenian vases. Students work closely with expert ceramic artists, and in consultation with art historians, archaeologists, art conservators, and materials scientists to recreate Greek manufacturing processes.
Instructor(s): S. Balachandran
Area: Humanities.

AS.389.336. Heritage at Work. 3.0 Credits.
Working with the Catoctin Furnace historic site, students will gain hands-on experience connecting archaeology with interpretive exhibitions, public outreach, and community engagement. Several field trips to Catoctin required. M&S practicum course.
Instructor(s): E. Comer
Area: Humanities, Social and Behavioral Sciences.
AS.389.340. Critical Issues in Art Conservation. 3.0 Credits.
The course examines recent controversies in the conservation of major
global art works and sites, raising questions concerning the basic
theoretical assumptions, practical methods and ethical implications of
art conservation. Cross-Listed with History and Anthropology
Instructor(s): S. Balachandran
Area: Humanities.

AS.389.343. Edgar Allan Poe and His Afterlives. 3.0 Credits.
We will investigate the creative development and iconic afterlife of a
canonical American author, Edgar Allan Poe, as a case-study in literary
legacy and cultural heritage. What is the lifespan of a literary work, and
how do works “stay alive” for later generations? Students will examine
rare Poe materials and create a digital exhibition of Poe archives.
Instructor(s): G. Dean
Area: Humanities, Social and Behavioral Sciences.

AS.389.349. Art, Museums and the Law. 3.0 Credits.
This course will introduce and examine the legal systems that structure
and guide museums’ management of collections and relationships with
artists, employees, the public, the state, and the international community.
Instructor(s): W. Levandusky
Area: Humanities.

AS.389.352. Bibliomania: Ambition, Desire, & the Making of the George
Peabody Library in 19th-century Baltimore. 3.0 Credits.
In 1857 Baltimore’s historic George Peabody Library was born, one of
America’s first public libraries. This course studies its history, rare book
collections, and foundational role in Baltimore’s cultural history.
Instructor(s): E. Havens
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.389.353. Revolutions of the Book: Material Culture & the Transformation of Knowledge from Antiquity to the Renaissance. 3.0
Credits.
Explores the material culture of knowledge through transformations in the technologies and arts of communication, taught entirely from rare books, manuscripts, and artifacts in JHU libraries and museum collections.
Instructor(s): E. Havens
Area: Humanities
Writing Intensive.

AS.389.355. Literary Culture in the Nineteenth-Century Library. 3.0
Credits.
What did people actually read in the nineteenth century? What can we learn from their books and magazines? In this class, we read nineteenth-century English and American literary works and examine nineteenth-century literary objects from the collection of the George Peabody Library, to better understand the cultural and material environments within which literary works circulated. Featured writers likely to include Edgar Allan Poe, Charles Dickens, Harriet Beecher Stowe, Emily Dickinson, Mark Twain, Stephen Crane. Several field trips to the Peabody Library throughout the semester.
Instructor(s): G. Dean
Area: Humanities
Writing Intensive.

AS.389.356. Halls of Wonder: Art, Science, and Literature in the Age of the Marvelous, 1500-1800. 3.0 Credits.
Instructor(s): E. Havens
Area: Humanities.

AS.389.357. Heaven on Earth: Art, Culture and Wonder in the Vatican Museum and Library. 3.0 Credits.
This interdisciplinary course will explore the institutional, cultural, artistic and architectural history of St. Peter’s and the Vatican Museum and Library from Antiquity through the Renaissance, up to the present day. Class meets in the Dick Macksey Seminar Room of the Brody Learning Commons. Cross-listed with History.
Instructor(s): E. Havens
Area: Humanities.

AS.389.358. Collecting the Contemporary. 3.0 Credits.
What does it mean to be a collector? Students will visit private collections of contemporary art in Baltimore, learning from collectors and their objects. This course alternates seminar meetings, focused on theories and practices of collecting, with field trips. Cross-listed with History of Art.
Instructor(s): V. Anderson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.389.359. Modernist Networks in the Archive. 3.0 Credits.
This class examines three American writers who built important and enduring networks, Ezra Pound, Gertrude Stein, and Langston Hughes. We will investigate the artefactual traces of their networks through recently acquired special collections materials and digital representations, in order to address questions about aesthetics and style, politics and power, race and gender, and what is and is not present in the literary archive.
Instructor(s): G. Dean
Area: Humanities.

AS.389.372. Zoos as Community Institutions. 3.0 Credits.
This course examines zoos and living collections from historical and contemporary perspectives, taking into account the potentially conflicting role of zoos as conservation organizations, educational institutions, and entertainment venues. The class culminates in the creation of conservation education content for Baltimore City elementary school children. M&S practicum course.
Instructor(s): L. Finkelstein
Area: Humanities
Writing Intensive.

AS.389.374. Museum Lab: Creating Participatory Spaces at the Baltimore Museum of Industry. 3.0 Credits.
Where are visitor voices and perspectives in museums? Using contemporary scholarship, philosophical frameworks, and practical approaches, we tackle this question for an interactive exhibition at the Baltimore Museum of Industry. Approximately half of the class meetings will take place off campus at the museum. Transportation provided. Class usually meets 1:30-3:50. M&S practicum course; CBL course.
Instructor(s): E. Maloney
Area: Humanities, Social and Behavioral Sciences.
AS.389.375. Museums and Social Responsibility. 3.0 Credits.
Do museums have a social responsibility? What roles should they play in their communities? Should they be agents of social change or social justice? This course explores the ways in which museums engage with local communities. Students work in partnership with a specific museum to develop an original and fundable proposal that attends to its social responsibility. Field trips and guest speakers will be a key feature of this course. M&S practicum course. CBL course. Cross-listed with Sociology. Instructor(s): J. Kingsley Area: Humanities, Social and Behavioral Sciences.

AS.389.376. Enslaved at Homewood: Slavery in 19th Century Maryland. 3.0 Credits.
Students consider the representation of slavery in historic house museums of the late 20th century through the present, and use the university's Homewood Museum as a laboratory for the development, production and mounting of an exhibit about the men, women and children who labored at Homewood in the nineteenth century. Museums and Society Practicum course.
Instructor(s): A. Schreiber Area: Humanities, Social and Behavioral Sciences History, Writing Intensive.

AS.389.377. Black Artists in American Art Museums: Correcting the Canon. 3.0 Credits.
Students are invited to examine critically the history of Black artists exhibiting within American museums. With the help of BMA staff, class will develop interpretation for an installation to accompany a major retrospective of artist Jack Whitten that considers the “canon” of art history as a site of ongoing negotiation between taste-makers, artists, dealers, and critics, as well as art institutions that include the market and the museum. Students will take advantage of archives at the BMA, the Library of Congress and Howard University. Students will help select the artworks and themes for the show; research individual participants in the social networks that facilitated the success of some artists over others; and research the biographies of individual artworks - some that have entered the canon and some that should. M&S Practicum. CBL Course. Cross-listed with Africana Studies.
Instructor(s): J. Kingsley Area: Humanities, Social and Behavioral Sciences.

AS.389.378. Collections Remix: Black at Hopkins. 3.0 Credits.
We turn a critical eye on our university’s material culture and memory under the guidance of local experts on collecting and interpreting materials that represent the African-American experience. Students will develop a strategic plan to guide future collecting on campus and will stage creative interventions with or around objects to reveal hidden stories and rethink existing interpretation. M&S Practicum. CBL course.
Instructor(s): J. Kingsley Area: Humanities, Social and Behavioral Sciences.

AS.389.379. In the Gardens at Evergreen Museum. 3.0 Credits.
Investigate how historic houses design and manage their grounds for leisure, community engagement, environmental initiatives, art installations and special events. Consider the history of Evergreen’s 25-acre estate and create concepts for how to engage its many communities. Multiple class meetings take place at the Museum. Class runs 1:30-3:50 most days; 2:00-4:30 at the museum on field trip days.
Instructor(s): E. Maloney Area: Humanities, Social and Behavioral Sciences.

AS.389.384. Object Encounters at the Baltimore Museum of Art. 3.0 Credits.
Using the Baltimore Museum of Art as a laboratory, students examine canonical narratives in art museums and iterate new approaches to objects in museums that build equity, interrogate privilege, decolonise, revise and offer alternative stories. Class meets at the museum every other week.
Instructor(s): J. Kingsley Area: Humanities, Social and Behavioral Sciences.

AS.389.385. Islamic Art in the 21st Century Museum. 3.0 Credits.
What narratives about Islam and Islamic art does the visitor encounter at the museum? Recent re-installations of Islamic art will be studied in the context of current issues, including Islamophobia, attacks on cultural heritage, and hesitation in addressing matters of faith in public institutions. Cross-listed with History of Art and Islamic Studies.
Instructor(s): A. Landau Area: Humanities, Social and Behavioral Sciences.

AS.389.440. Who Owns Culture?. 3.0 Credits.
This seminar explores the complicated, often explosive concept of cultural property, including questions surrounding the ownership, preservation, and interpretation of artifacts, monuments, heritage sites, and living traditions. Cross-listed with Anthropology and History of Art.
Instructor(s): E. Rodini Area: Humanities, Social and Behavioral Sciences.

AS.389.450. Readings in Material Culture. 3.0 Credits.
Objects, things, “stuff”: this seminar will pursue classic texts and emerging methodologies to explore the myriad ways materials and materiality have been theorized across disciplines. For graduate/advanced undergraduate students.
Instructor(s): E. Rodini; R. Brown Area: Humanities.

AS.389.501. Independent Study - Museums & Society. 3.0 Credits.
Instructor(s): J. Kingsley.

AS.389.502. Independent Study- Museum and Society. 1.0 - 3.0 Credits.
Instructor(s): J. Kingsley.

AS.389.511. Museum & Society Internship. 1.0 Credit.
Instructor(s): E. Rodini.

AS.389.521. Capstone in Museums and Society. 1.0 - 3.0 Credits.
The Capstone allows students to develop and carry out their own, hands-on research project in a museum, collection, archive, or other living resource. Final projects must involve some form of public presentation (exhibition, lecture, poster, web-based, etc.) and a work of self-reflection (journal, brief paper, blog, or other). Projects must be approved and overseen by a supervising faculty member and approved by the Program’s Director, in keeping with the University’s Independent Work Policy. Instructor permission required.
Instructor(s): J. Kingsley.

AS.389.522. Capstone in Museum and Society. 1.0 - 3.0 Credits.
The Capstone allows students to develop and carry out their own, hands-on research project in a museum, collection, archive, or other living resource. Final projects must involve some form of public presentation (exhibition, poster, web-based, etc.) and a work of self-reflection (journal, brief paper, blog, or other). Projects must be approved and overseen by a supervising faculty member and approved by the Program’s Director, in keeping with the University’s Independent Work Policy.
Prerequisites: AS.389.201;AS.389.202
Instructor(s): J. Kingsley.
Cross Listed Courses

History of Art

AS.010.305. Global Modern Art: Africa, Asia, the Pacific and the Americas. 3.0 Credits.
Artists around the world grappled with the modern, working through local concerns and struggles but continually engaged with counterparts in Europe, North America, and across the “global South.” This course will introduce art, artists, movements, and institutions of modernism from approximately 1880 to the present and from outside of the northern Atlantic while critically examining the very notion of “global modernism.”
Instructor(s): M. Feldman
Area: Humanities
Writing Intensive.

AS.010.307. Diplomats, Dealers, and Diggers: The Birth of Archaeology and the Rise of Collecting from the 19th c. to Today. 3.0 Credits.
The development of archaeology in the Middle East – its history of explorers, diplomats, missionaries and gentlemen-scholars – profoundly shaped the modern world, from the creation of new museums and the antiquities market to international relations and terrorism.
Instructor(s): E. Anderson
Area: Humanities
Writing Intensive.

AS.010.310. The ‘Long Sixties’ in Europe. 3.0 Credits.
This seminar examines aspects of advanced artistic production that emerged in France, Italy, the Benelux, and German-speaking countries primarily in the years 1945-1972 as constituent elements of the “Long Sixties,” a period of extraordinary and often rapid social transformation. Among our questions: How was the work of art reimagined and repositioned in the wake of World War II and the horrors of the Holocaust, in the context of reconstruction and an emerging consumer society, and in light of the Cold War, decolonization, and other political tensions and cataclysms? How did artists conceive the claims of artistic tradition in a rapidly expanding field of aesthetic practices and possibilities? What were the relations among advanced artistic practices and the “cultural revolutions” generally taken to have come to a head ca. 1968? Integral to this course is a student-curated exhibition of avant-garde materials at the MSE Library, to open in November 2018.
Instructor(s): M. Warnock
Area: Humanities

AS.010.331. The Renaissance Body Exposed: Exhibiting the Nude in European Art 1400-1550. 3.0 Credits.
Explores the extraordinary currency of the naked human figure in pre-modern European visual culture, only inadequately accounted for by explanations such as the “rise of naturalism” or the “revival of antiquity.” Will also explore curatorial questions arising from an exhibition currently in preparation on the Renaissance nude. Assignment in the form of catalog texts and a "virtual exhibition."
Instructor(s): S. Campbell
Area: Humanities

CLASSICS

AS.040.137. Freshman Seminar: Archaeology at the Crossroads: The Ancient Eastern Mediterranean through Objects in the JHU Archaeological Museum. 3.0 Credits.
This seminar investigates the Eastern Mediterranean as a space of intense cultural interaction in the Late Bronze Age, exploring how people, ideas, and things not only came into contact but deeply influenced one another through maritime trade, art, politics, etc. In addition to class discussion, we will work hands-on with artifacts from the JHU Archaeological Museum, focusing on material from Cyprus.
Instructor(s): E. Anderson
Area: Humanities
Writing Intensive.

AS.040.235. Past is Present: Cultural Heritage and Global Interactions. 3.0 Credits.
The uncovering, collection and valuation of the archaeological past is deeply embroiled in global interactions - diplomatic, economic, cultural. We examine the complex role of cultural heritage through consideration of case studies and analytic approaches. Frequent visits to area museums.
Instructor(s): E. Anderson
Area: Humanities
Writing Intensive.

ENGLISH

AS.060.617. Black Print Culture.
Students interested in black print culture will engage in intensive archival research, both collaborative and individual, using the Sheridan Library’s Rare Book and Manuscript collections. Texts include poems, printed lectures, pamphlets, novels, periodicals, ephemera, correspondence, etc., alongside relevant critical and theoretical reading.
Instructor(s): N. Nurhussein
Area: Humanities
Writing Intensive.

HISTORY

AS.100.249. Baltimore as Historical Site. 3.0 Credits.
The city of Baltimore will serve as a laboratory in which to study American History. We will explore the urban landscape on foot as well as through written sources.
Instructor(s): M. Ryan
Area: Humanities, Social and Behavioral Sciences.

AS.100.301. America after the Civil Rights Movement. 3.0 Credits.
This course explores the history of late twentieth-century America by examining the social, economic, and political legacies of 1960s civil rights protest for the 1970s, 1980s, and 1990s. Students will also participate on an archiving project capturing the experience of Hopkins employees who have recollections of the decades immediately following the civil rights legislations of the 1960s.
Instructor(s): N. Connolly
Area: Humanities
Writing Intensive.
Near Eastern Studies
AS.130.334. Egyptian Funerary Arts in the Archaeological Museum. 3.0 Credits.
This class will aim to cover the production and choice of funerary objects for Egyptian elite tombs in several eras of antiquity: the Middle and New Kingdoms, the Third Intermediate Period, and the Late Periods. Students will work with specific objects after learning generally about them, and they will carry out analyses of materials, pigments, construction methods, and erosion and degradation effects. They will create a virtual exhibition for the Museum’s website and present their results for inclusion in the museum cataloguing project.
Instructor(s): B. Bryan; S. Balachandran
Area: Humanities.

AS.133.706. Egyptian Funerary Arts in the Archaeological Museum.
This class will aim to cover the production and choice of funerary objects for Egyptian elite tombs in several eras of antiquity: the Middle and New Kingdoms, the Third Intermediate Period, and the Late Periods. Students will work with specific objects after learning generally about them, and they will carry out analyses of materials, pigments, construction methods, and erosion and degradation effects. They will create a virtual exhibition for the Museum’s website and present their results for inclusion in the museum cataloguing project.
Instructor(s): B. Bryan; S. Balachandran.

History of Science Technology
AS.140.320. Modernity on Display: Technology and Ideology at World’s Fairs. 3.0 Credits.
Seminar focuses on ideological at World’s Fairs over technological modernity with special emphasis upon World War II and the Cold War.
Instructor(s): A. Molella; R. Kargon
Area: Humanities, Social and Behavioral Sciences.

AS.140.415. Thinking Through Things and Thinking Things Through. 3.0 Credits.
Combining hands-on experience of using historical instruments with primary sources analysis, the students will reconstruct the ways in which artifacts channeled human perception of their environment.
Instructor(s): Y. Frumer
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

German Romance Languages Literatures
AS.211.330. Curating Media Artists in Residence at JHU. 3.0 Credits.
The students will be closely involved with JHU’s Center for Advanced Media Studies (CAMS directed by Bernadette Wegenstein), and the Baltimore Museum of Art (curator Kristen Hileman) in preparing the BMA Black Box exhibit of Mary and Patrick Kelley’s new film, We Are Ghosts, set in a submarine: the film tells the story of life as experienced by the sailors in a U.S. submarine at the end of the second world war. Artist Mary Reid Kelley focuses on "minor aspects of life" in the submarine during non-combat — such as boredom, claustrophobia, and the effects of heavy drinking on the sailors. Included is also a restaging of Harry Truman’s announcement of the bombing of Hiroshima — told from the sailors’ point of view. While this new work will be on display in the BMA’s Black Box, Kelley’s 2016 film This is Offal (set in a morgue) will be showing at the museum. This film is centered around a dialogue between the ghost of a deceased woman, the victim of a suicide, and her animated organs. Students will also be traveling to Woodstock, NY on a field trip with professor Wegenstein for a studio visit with the artists at the beginning of the semester. Mary Reid Kelley is an artist who makes arresting, playful, and erudite videos that explore the condition of men and women throughout history. Drawing on literary and historical material, the videos involve intensive research and critical reassessments of standard historical narratives. Mary Reid Kelley is involved in every aspect of the videos’ creation—from writing the scripts (typically in highly structured poetic verse), to designing the sets, props, and costumes, to performing the leading roles—and all of the videos are produced by her and her partner, Patrick Kelley, at their private studio. Kelley is known for her feminist videos that recall the theater of the absurd and German Expressionist cinema. Please note that this class will be held as a practicum, and some of the dates and times will be flexibly adapted to the needs of the artists’ residency. If you have a very full calendar in the Spring it is best advised not to take this class.
Instructor(s): B. Wegenstein
Area: Humanities.

AS.213.322. Museums and Jews, Jews in Museums. 3.0 Credits.
This course will examine the presence of Jews in museums. We will consider the history of the exhibition and collection of Jewish material culture in museums from the 19th century to the present day. Our main task will be to identify the various museological traditions that engage Jewish identity, including the collection of art and antiquities, ethnographic exhibitions, history museums, and Holocaust museums. Some of the questions we will ask include: how do museums shape identity? what is the relationship between the scholarly premises of many museums and their popular reception? and, centrally, what is the relationship between Jewish museums and museums of the Holocaust?
Instructor(s): S. Spinner
Area: Humanities.
AS.213.407. Museums and Identity. 3.0 Credits.
This course will explore the phenomenon of the “identity” museum through case studies involving Jewish and Holocaust museums around the world. The museum boom of the last half-century has centered in large part around museums dedicated to the culture and history of particular minority groups; recent notable (and relatively local) examples include the brand new National Museum of African American History and Culture in Washington and the National Museum of American Jewish History in Philadelphia. Our understanding of the contemporary theory and practice of such museums will be based on an examination of the history of the various museological traditions that engage Jewish identity from the 19th century to the present, including the collection and display of art and antiquities, ethnographic exhibitions, history museums, and Holocaust museums. We will deal with two primary museological phenomena: first, the introduction of the “primitive other” into European modernity via ethnographic museums; second, the museological commemoration and representation of trauma, specifically of the Holocaust. We will explore these topics through historical documents, theoretical readings, and case studies including visits to nearby museums. All readings in English.
Instructor(s): S. Spinner
Area: Humanities.

AS.213.706. Literature, Museums, Mimesis.
Can museums be literary? Can literature be museal? Throughout the twentieth century and into the present, the museum has repeatedly challenged models of representation, none more so than mimesis, both as aesthetic theory and representational practice. This has been a role played by museums, both in their traditional guises as repositories of objects and — as André Malraux presciently had it — as “imaginary museums.” This course will examine the larger disruption of mimesis, and more specifically literary realism, through the particular catalyzing effects of museums. We will deal with two primary museological phenomena: first, the introduction of the “primitive other” into European modernity via ethnographic museums; second, the museological commemoration and representation of trauma, specifically of the Holocaust. Special attention will be paid to discursive, formal, and rhetorical locations of overlap between the museal and the literary, including ekphrasis, linearity, volume, and collection. Readings will include fiction, poetry, and theoretical texts, as well as secondary sources examining particular museums and exhibitions. All texts in English.
Instructor(s): S. Spinner
Area: Humanities
Writing Intensive.

Center for Africana Studies

AS.362.110. Colonial Encounters: Artistic Responses. 3.0 Credits.
This course disrupts conventional ways of seeing, reading, and examining artistic texts. When we read a novel or study a work of art, especially that produced by white people, we tend to treat it as representative of the nation, talk about its aesthetic genius, or discuss it as reflecting its social/historical moment. Black artistic production, on the other hand, is most often treated as “protest,” as that which simply responds to a social/historical moment. Black artistic production, on the other hand, is most often treated as “protest,” as that which simply responds to a national narrative. But what would happen if we treated the experience of black people and other people of color as universal? What would happen if we treated colonialism as the dominant social and intellectual problem of our age?
Instructor(s): S. Mott
Area: Humanities, Social and Behavioral Sciences.
Participate in an applied music experience for at least two semesters. Since the study of music should always take place in the context of practical music making, students completing the minor in music must select either private instrument lessons at Peabody or participation in an ensemble at Peabody or on the Homewood campus. Students must select an applied music experience in consultation with their advisor, who will approve the applied music experience. These experiences are not required to be for academic credit. Most students will take part in the placement audition process which takes place each fall during the week prior to Peabody’s registration process. In order to be given an audition slot, instrumentalists must be taking private minor lessons with a Peabody instructor, and that instructor must inform the Peabody Ensemble Office that they’ve evaluated the player’s ability to be on par with that of the student’s peers at Peabody. Occasional exceptions to this policy have been made for players of instruments which are uncommon or currently under-represented at Peabody. Due to the fact that each of the instrumental ensembles can accommodate only a certain number of players of each instrument, placement into these ensembles is made on a space-available basis, with priority given to Peabody instrumental majors for whom participation in large ensembles is a degree requirement.

Please direct any questions regarding participation in Peabody’s large ensemble program to Ensemble Coordinator Ryan Tani at rtani1@jhu.edu.

http://krieger.jhu.edu/music/minor-requirements/

Minor in Music

The School of Arts and Sciences offers a music minor to students majoring in other fields. The minor is intended for students who have some training and background in music and wish to pursue their interest in a systematic way without getting their degree in the field. It consists of a selection of music courses, including music history, music theory, ensembles, and/or lessons at Peabody. Students must earn a grade of C- or better in all courses applied towards the minor and courses can not be taken satisfactory/unsatisfactory.

Applied Music Experience

Since the study of music should always take place in the context of practical music making, students completing the minor in music must participate in an applied music experience for at least two semesters.

Advanced instrumentalists who wish to be considered for membership in Peabody’s large instrumental ensembles—the Peabody Symphony Orchestra, Peabody Concert Orchestra, Peabody Wind Ensemble, Peabody Camerata (contemporary music), Peabody Improvisation and Multimedia Ensemble, and Peabody Jazz Orchestra—are welcome to take part in the placement audition process which takes place each fall during the week prior to Peabody’s registration process. In order to be given an audition slot, instrumentalists must be taking private minor lessons with a Peabody instructor, and that instructor must inform the Peabody Ensemble Office that they’ve evaluated the player’s ability to be on par with that of the student’s peers at Peabody. Occasional exceptions to this policy have been made for players of instruments which are uncommon or currently under-represented at Peabody. Due to the fact that each of the instrumental ensembles can accommodate only a certain number of players of each instrument, placement into these ensembles is made on a space-available basis, with priority given to Peabody instrumental majors for whom participation in large ensembles is a degree requirement.

Please direct any questions regarding participation in Peabody’s large ensemble program to Ensemble Coordinator Ryan Tani at rtani1@jhu.edu.

**Courses**

**AS.376.111. Rudiments of Music Theory and Musicianship. 3.0 Credits.**
This course introduces written and aural music fundamentals including notation, scales, intervals, chords, rhythm, meter and sight-singing. Students will compose melodies and short pieces and complete listening projects. Course does not count towards the completion of the minor.
Instructor(s): J. Crouch; M. Rickelton; P. Maust.

**AS.376.211. Music Theory I. 3.0 Credits.**
Introduction to basic principles of tonal music through listening, analysis and music making. Students study melody, harmony, voice leading, figured bass and dissonance treatment, and will also undertake short composition projects. Must have taken the qualifying examination or AS.376.111. Recommended to be taken concurrently with AS.376.221.
Instructor(s): F. Chiao; L. Perry; M. Rickelton
Area: Humanities.

**AS.376.212. Music Theory II. 3.0 Credits.**
This course continues the aural and written work of the previous course, but focuses on chromatic harmony while continuing the study of melody, counterpoint, and figured bass. Prerequisite: Music Theory I.
Prerequisites: AS.376.211
Instructor(s): S. Stone
Area: Humanities.

**AS.376.214. Music Theory III - Formal Analysis. 3.0 Credits.**
An examination of the musical forms of the Common Practice Period and the logic of their structures. Forms studied will include variation, binary, rounded binary, ternary, rondo, sonata-allegro, and sonata-rondo. Recommended Course Background: AS.376.212
Instructor(s): J. Fishbein.

**AS.376.215. Theory III - 20th Century. 3.0 Credits.**
This course teaches compositional approaches to and analytical techniques for twentieth-century music, including modes, synthetic and exotic scales, set theory, serial theory, and geometric proportionality.
Prerequisites: AS.376.212
Instructor(s): T. Hardaway.

**AS.376.216. Theory III - Counterpoint. 3.0 Credits.**
A study of contrapuntal music, emphasizing composition in both the sixteenth- and eighteenth-century styles as epitomized by Palestrina and Bach.
Instructor(s): T. Hardaway.

**AS.376.217. Music Theory III - Song. 3.0 Credits.**
An examination of text-setting and song-writing in a variety of eras and styles. Topics will include art song, lieder, jazz standards, and pop tunes.
Instructor(s): M. Rickelton.
AS.376.250. Introduction to Computer Music. 3.0 Credits.
Introduction to Computer Music is an opportunity for people with no specialized training in music to explore electronic art music as a long-standing, if obscure, body of art, then to participate in creative work in the style. Participants will gain a heuristic understanding of forms of musical composition that operate outside the conventions of regular rhythm and harmony as they record and manipulate sound to sculpt into original musical works. The lecture portion combines an historical overview of electronic music, rudiments of acoustics and musical perception, and instruction in compositional techniques and in using computers as creative musical tools. The laboratory portion, given at the Digital Media Center, serves as a workshop for creative exploration and for the completion of assigned creative projects including original works of digital sound art.
Instructor(s): S. Burt
Area: Humanities.

AS.376.252. Jazz History. 3.0 Credits.
Survey, investigation, and study of Jazz music and how it shaped American history from it’s origins to current times.
Instructor(s): I. Sims
Area: Humanities.

AS.376.258. Jazz Improvisation and Theory. 3.0 Credits.
Study of the theory and practice of Jazz Improvisation. Must have taken the qualifying examination or AS.376.111.
Instructor(s): I. Sims
Area: Humanities.

AS.376.280. Creative Musical Improvisation. 3.0 Credits.
A musical performance class and workshop in which we will explore many different aspects of and approaches to creative musical improvisation through readings, lectures, recordings, videos, and personal experience. The emphasis will be placed on free improvisation, without pre-set song forms, chord progressions or other pre-determined structures. Most improvising will be done in small sub-groupings of anywhere from 2 to 5 students who will take turns performing short improvised pieces for the rest of the class and will be followed up with open discussions about the effectiveness of musical choices made by the participants. Ear training exercises and game pieces, such as John Zorn’s Cobra will be used to help students gain experience and build confidence improvising in this way. This course is open to any University student who plays an instrument or sings, and is interested in gaining experience with and knowledge about free improvisation.
Instructor(s): M. Formanek
Area: Humanities.

AS.376.303. Musical Theater from Aristophanes to Leonard Bernstein. 3.0 Credits.
This course examines the birth of musical theatre from Greek tragedy through the liturgical and secular plays of the middle ages and Renaissance, to the classical and romantic singspiels, operettas, and zarzuelas of the modern era, by such figures as Aristophanes, Adam de la Halle, Hildegard of Bingen, Angelo Poliziano, Juan del Encina, Wolfgang Amadeus Mozart, Gilbert and Sullivan, Ernesto Lecuona, Igor Stravinsky, and Kurt Welll. These will serve as a backdrop for a closer examination of the musicals of Jerome Kern, Cole Porter, George Gershwin, Irving Berlin, Richard Rodgers, Harold Arlen, Frank Loesser, Leonard Bernstein and others. In addition to studying and placing the works of these Broadway giants into a social, political, and economic context, we will study and perform from representative musicals and attend a performance at the Lyric Theatre. Student will be expected to write a capstone project.
Instructor(s): S. Weiss
Area: Humanities Writing Intensive.

AS.376.304. Voice and Contest: Historical Approaches to Singing Competitions. 3.0 Credits.
This course examines voice contests across time. While contests such as American Idol have received widespread attention, these competitions must be understood in terms of a much broader trend towards the proliferation of music prizes, both within and outside the so-called classical music tradition. Our course examines the deep history of the current obsession with voice contests, with examples drawn from the medieval period to the current day.
Instructor(s): L. Protano Biggs
Area: Humanities, Social and Behavioral Sciences.

AS.376.305. Operatic Technologies. 3.0 Credits.
Operatic Technologies offers an introduction to opera via a series of case studies about the materials used to produce it. With a particular focus on the Italian case, we will trace issues such as how auditoriums have historically been illuminated; orchestras directed; machines used to create and sustain illusion and operas simulcast. Students will leave this course with a clear sense of how the look and feel of the operatic experience has changed over time; how technological practices established in the past continue to determine productions now, and how the cinema can be considered an extension of opera. Our course includes a visit to the cinema to see a Metropolitan Opera simulcast. Ability to read music is not required.
Instructor(s): L. Protano Biggs
Area: Humanities Writing Intensive.

AS.376.308. Meet the Musician: Today’s Classical Musician. 3.0 Credits.
"Classical music in America is dead," Slate Magazine declared online in January 2014. In this seminar, students will learn that this art form is indeed alive and well. Peabody graduate students will perform solo and small ensemble works, present original research, and participate in open discussions about musical research, performance, professional challenges, and more. Homewood students will read articles on a weekly basis prior to the lecture-recitals. In response to each lecture-recital, students will write weekly reaction papers and prepare questions for the group discussion.
Instructor(s): M. Wertheimer
Area: Humanities Writing Intensive.
AS.376.309. Exploring American Music Through a Culture Lens. 3.0 Credits.
This course explores the richness of our American musical heritage through a cultural lens. A wide breadth of musical genres will be discussed such as jazz, r&b, rock, rap, pop, country, spirituals, gospel, polka, folk, and classical, as well as the role of music in mass socio-political movements. A spotlight will be given to artists who have successfully crossed genres in their careers such as Winton Marsallis, Louis Moreau Gottschalk, William Grant Still, Scott Joplin, and Gunther Schuller, among others.
Instructor(s): L. Kafka
Area: Humanities
Writing Intensive.

AS.376.325. Music and Migration. 3.0 Credits.
In this seminar, we will explore a wide variety of musics (art, folk, world, and popular) and how they record the movement of human communities. Students will gain an understanding of how music gives expression to both belonging to a place and to the experience of displacement arising from social, economic, geo-political, and environmental push factors. No prior musical experience necessary.
Instructor(s): E. Usner
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.376.371. Introduction to Music Cognition. 3.0 Credits.
What underlies our aesthetic response to music? How and why are we able to identify certain sounds as music? To what extent are music and natural language similar? What is it about music that evokes such powerful emotions such as happiness and sadness? What is unique to musical creativity? Examining such questions from cognitive science, neuroscience, psychology, and philosophical perspectives, this course explores relevant research and theory in the emerging domain of music perception and cognition. Students will complete a final research paper on the topic of their choice that integrates the course material.
Instructor(s): M. Lopez-Gonzalez
Area: Natural Sciences, Social and Behavioral Sciences.

AS.376.372. Topics in Music Cognition. 3.0 Credits.
This course explores the similarities and differences between music and language, the effects of musical training on cognitive development, and the expressive power of music, with an introduction to music and its role in film. We will read relevant research and theory on these topics from cognitive science, neuroscience, psychology, musicology, and philosophical perspectives.
Instructor(s): M. Lopez-Gonzalez
Area: Natural Sciences, Social and Behavioral Sciences.

AS.376.404. History of Musical Instruments. 3.0 Credits.
The history, technology, and performance of Western European musical instruments, their precursors, and their non-western counterparts, addressed by experts and explored on visits to historic collections. Recommended prerequisite: AS.376.231 "Western Classical Music"
Instructor(s): S. Weiss
Area: Humanities
Writing Intensive.

AS.376.407. Music and Evolution. 3.0 Credits.
This course will examine the bio-cultural evolution of music in light of recent interdisciplinary research on the social bases of human cognitive evolution, and explore its implications for current debates in musicology, ethno- musicology, psychology of music, and human cognitive evolution.
Instructor(s): E. Tolbert
Area: Humanities
Writing Intensive.

AS.376.428. 6 Mozart Operas. 3.0 Credits.
Lotharios and lovers, Turkish pashas and harem girls, churlish masters and wily servants, enraged women, bird-catchers, Italian soldiers disguised as Albanians, a Cretan King, and the Queen of the Night. These characters and many others occupy the worlds created in the operas of Wolfgang Amadeus Mozart. This course focuses on six of Mozarts most enduring operatic works: Idomeneo, The Abduction from the Seraglio, The Magic Flute, The Marriage of Figaro, Don Giovanni, and Così fan tutte. It explores the origins of the stories and characters of these operas, and the musical structures Mozart developed to convey these narratives in music, in the genres of opera seria, Singspiel, and opera buffa. In examining these operas, students will investigate Mozarts collaborations with librettists, the singers and theatrical venues for which he composed, and the patrons and audiences he hoped to appeal to with these works. Discussions of each opera will also turn to their performance, considering documentation of their premieres and nineteenth-century revivals, and more recent stage and cinematic productions available on DVD and online by directors including Joseph Losey, Ingrid Bergman, Peter Sellars, Jonathan Miller, Robert Wilson, and Julie Taymor, as well as in the movie Amadeus, to compare how interpretations of the opera have differed over time and between directors.
Instructor(s): J. Walden
Area: Humanities
Writing Intensive.

AS.376.502. Independent Study. 0.0 - 3.0 Credits.
Instructor(s): S. Weiss.

AS.376.505. Music Internship. 1.0 Credit.
Instructor(s): S. Weiss.

Cross Listed Courses
History
AS.100.257. From Voice to Parchment: Media and Communication before the Printing Press, 800-1440. 3.0 Credits.
Epic traditions, call to Crusade, public curses, music of the troubadours: this course examines oral tradition and music—the "viral media" of pre-modern Europe—while tracing the impact of new recording technologies: early musical notation, manuscripts, and book production.
Instructor(s): J. Phillips
Area: Humanities, Social and Behavioral Sciences.

AS.100.341. Historical Performance in the Age of the Troubadours and Trouvères. 3.0 Credits.
This seminar examines the practices of musical and theatrical performance in the era of the troubéres and troubadours, “the long thirteenth century.” We look at the context in which trouvère song was composed, performed, and transmitted in manuscript form. Students will also sing trouvère music, and while a knowledge of musical notation is not strictly necessary, it is helpful. The culmination of the course will be a concert and recording session. A final paper based on primary sources about an aspect of medieval performance is required.
Instructor(s): J. Phillips
Area: Humanities, Social and Behavioral Sciences.
German Romance Languages Literatures

AS.211.364. Drama Queens: Opera, Gender, and the Poetics of Excess. 3.0 Credits.
What is a drama queen? According to the Oxford English Dictionary, a drama queen is “a person who is prone to exaggeratedly dramatic behaviour” and “a person who thrives on being the centre of attention.” While drama queens exist among us, the world of opera is certainly one of their ideal environments. Echoing back to their tragic fates, the powerful voices of Dido, Medea, Violetta, and Tosca never ceased to affect their empathetic public. In fact, excess and overreactions are two main features of the operatic experience both on stage and in the audience. By focusing on the ways in which operatic characters are brought to life, the course explores the social, political, and gender dynamics that inform the melodramatic imagination. Students will have the opportunity to attend live HD broadcasts of Verdi’s La Traviata and Tchaikovsky’s Eugene Onegin from the Metropolitan Opera. No musical skills required.
Instructor(s): E. Refini
Area: Humanities
Writing Intensive.

AS.211.400. Topics in Romance Literatures. 3.0 Credits.
This year’s “Topics in Romance Literatures” course is entitled “Voicing the Body: Sex and Desire in Medieval Poetry.” If you think that medieval poetry is all about idealized love and spiritual sublimation, then this course will make you change your mind. We will explore works and authors from all across Europe, from the erotic “Carmina burana” to the voluptuous poetry of French troubadours and trouvères, from German love poetry to the sensual songs of Spain and the passionate verses of Italian poets such as Dante and Petrarch. The course will explore the ways in which medieval poets sing about bodily passions and voice the lovers’ desire, with a special focus on the ways in which poetry interacted with music and was transmitted through music. The class is taught in English and all readings will be available in English. Students in Romance Languages (Italian, French, Spanish), depending on their language skills, will have the opportunity to work on the originals. A special reading list will be set up for graduate students who will take the course.
Instructor(s): E. Refini
Area: Humanities
Writing Intensive.

AS.211.472. Barbers and countesses: conflict and change in the Figaro trilogy from the age of Mozart to the 20th century. 3.0 Credits.
2016 marks the bicentennial of Rossini’s irreverent masterwork The Barber of Seville, which premiered in Rome in February 1816. Thirty years earlier, in 1786, Mozart’s The Marriage of Figaro had opened in Vienna. The two operas, based on the first two plays of Beaumarchais’ controversial “Figaro trilogy”, stage conflicts of class and gender, challenging the assumptions of the aristocracy as well as the ludicrous pretentions of the raising bourgeoisie. The same themes inform the post-modern portrayal of the past in John Corigliano’s The Ghosts of Versailles (1991), which ideally completes the musical afterlife of the trilogy. By studying how the plays were adapted to the opera stage within their different cultural and historical contexts, the course will explore the representation of the ideological, social, and political turmoil that, eventually, culminated in the French Revolution. The course will also include field trips and screenings of movies such as Stanley Kubrick’s Barry Lyndon (1975) and Milos Forman’s Amadeus (1984). This course may be used to satisfy major requirements in both the French and Italian majors.
Instructor(s): E. Refini
Area: Humanities
Writing Intensive.

This course takes as its point of departure Klopstock’s efforts to model German poetry after music—“the harmony of the spheres”—which served as the impetus for Goethe’s and Schiller’s poetry and Hölderlin’s late hymns. We will examine his experiments with verse form and his notion of interiority as the backdrop for Herder’s theory of the Volkssied as a popular genre that joins word and music and expresses the soul of a nation. Music and poetry will emerge on the one hand as the glue that binds a community and on the other as a disruptive force that isolates its members. Its significance as a figure if not vehicle for transcendence will return again and again in works as varied as Achim von Arnim and Brentano’s Des Knaben Wunderhorn, Kleist’s “Heilige Cäcilie,” Hölderlin’s poetological writings, Schopenhauer’s Die Welt als Wille und Vorstellung, and Nietzsche’s Geburt der Tragödie among other texts.
Instructor(s): M. Dornbach; R. Tobias
Area: Humanities.

AS.214.125. Freshman Seminar: Dangerous Liaisons: Words and Music Through the Ages. 3.0 Credits.
How do music and words interact? Do words have a priority on music or vice versa? Does music need words to be understood and interpreted? Are words filled with meaning by music? A variety of readings and musical examples will be discussed, including genres as diverse as medieval songs, madrigals, Romantic Lieder, opera, the American musical, and contemporary pop music. The seminar will include field trips to the Baltimore Museum of Art, the Meyerhoff Symphony Hall, the Peabody Institute, and the Evergreen Museum and Library. Students will also have the opportunity to attend a live HD broadcast of Mozart’s Don Giovanni from the Metropolitan Opera. No musical skills required; strong doses of curiosity most welcome.
Instructor(s): E. Refini
Area: Humanities.

AS.214.333. Shakespeare on the Opera Stage. 3.0 Credits.
From Rossini’s Otello to Cole Porter’s Kiss me Kate, from Verdi’s Macbeth to Leonard Bernstein’s West Side Story, the works of William Shakespeare have been an extraordinary source of inspiration for musical theatre. By exploring operatic adaptations of Shakespeare in different periods and contexts, this course will examine the ways in which composers and librettists have interpreted and reshaped the plays. The course, primarily focused on the 19th century Italian reception of Shakespeare and, in particular, on operas by Rossini and Verdi, will also consider the phenomenon within a broad transnational perspective up to include contemporary opera and musical.
Instructor(s): E. Refini
Area: Humanities
Writing Intensive.
AS.214.377. Gendered Voices. 3.0 Credits.
The course will explore the notion of 'voice' in order to show how poetry, literature, philosophy, and music have been dealing with it throughout the ages. In particular, by focusing on classical figures such as the Sirens, Circe and Echo, as well as by considering the seminal discussions of the 'voice' in Plato and Aristotle, the course will address the gendered nature of the voice as a tool to seduce and manipulate the human mind. More specifically, the course will discuss the ways in which male and female voices embody different functions. Examples to be analyzed include texts by Dante, Petrarch, Ariosto, and Tasso. The course will also consider later rewritings of myths concerned with the voice such as Giuseppe Tomasi di Lampedusa's The Siren and Italo Calvino's A King Listens.
Instructor(s): E. Refini
Area: Humanities
Writing Intensive.

The course aims to outline the musical reception of Michelangelo's poems from the 16th to the 21st century. Moving from a critical introduction to Michelangelo's Rime, the course will address Michelangelo's own ideas on music and the few musical settings of his poems by contemporary composers. The course will turn then to the Post-Romantic renaissance of Michelangelo's myth as the context within which the main bulk of musical settings of the artist's poems was produced. What did composers such as Wolf, Britten, Dallapiccola, Shostakovich and Reimann find in Michelangelo's poetry? Through a close reading of the poems chosen by the composers, the course will explore the biographical, philosophical and socio-historical implications suggested by the different musical settings. No training in music performance or theory is required.
Instructor(s): E. Refini
Area: Humanities
Writing Intensive.

Although naturally and historically intertwined, music and poetry tended to be described in the early modern period as competing rather than interacting. By looking at both literary and theoretical texts, the seminar aims to explore the ways in which this controversial relation is revealed by the interplay of poetics, rhetoric, and music theory. Reading materials will include classical sources (e.g. Plato, Aristotle, Ps.-Longinus, Quintilian) and their early modern interpretations. Special attention will be given to Torquato Tasso, Giambattista Marino, and Giambattista Doni, whose works will be also discussed in the light of the contemporary development of musical genres (e.g. madrigals, opera). No musical skills required.
Instructor(s): E. Refini
Area: Humanities
Writing Intensive.

Sociology
AS.230.371. Sociology of Rock. 3.0 Credits.
This course examines the history and dynamics of rock music using key concepts and perspectives from sociology. The course is divided into four sections, each of which examines the phenomenon of rock music from a different analytical perspective. The first section on the origins of rock focuses on the confluence of developments in post-war America, especially in terms of race, class and generational change, which produced this new musical form. The second section, “Rock as Cultural Production,” looks at the different musical settings of the rock “field,” not just artists and audiences but record labels, stores, DJs and radio stations, the music press and journalists, performance venues. The third section examines rock as a force for social change and protest from the 1960s until present, and the final section examines the performative aspects of rock as a kind of “interaction ritual” with its own microsociological dynamics.
Instructor(s): T. Nelson
Area: Social and Behavioral Sciences
Writing Intensive.

Natural Sciences Area Major

The Natural Sciences Area major allows students to combine appropriate upper-level courses in two different areas of natural science. Students may bridge biology and chemistry, chemistry and physics, or some other combination as long as the curriculum forms a coherent whole. The major prepares students for careers in medicine, dentistry, or veterinary science, if the introductory courses chosen by the student include those prescribed for admission to these professional schools.

Students selecting the Natural Sciences Area major can also go on to graduate study in natural science, though they may have to take some remedial work in graduate school, if their undergraduate program does not include courses usually required by a traditional major in a particular subject.

Requirements for a B.A. Degree

Also see Requirements of a Bachelor's Degree (p. 7).

Requirements of the natural sciences area major are:

However, many undergraduate courses require no their own records, and language study is therefore an important part towards major requirements. **Near Eastern Studies**

http://neareast.jhu.edu/

The Department of Near Eastern Studies offers programs in four main areas: Egyptology, Assyriology, Northwest Semitic languages and literatures (including the Hebrew Bible), and Near Eastern Archaeology. The department approaches Near Eastern civilizations primarily through their own records, and language study is therefore an important part of the curriculum. However, many undergraduate courses require no knowledge of foreign languages and any interested student may take them. **Facilities**

The university's Milton S. Eisenhower Library contains an outstanding collection of books and journals in the branches of Near Eastern studies pursued by the department. The Johns Hopkins Archaeological Museum has a collection of Near Eastern antiquities, including excellent study collections of Egyptian artifacts and Palestinian pottery. The Baltimore-Washington area is especially rich in library and museum facilities. Of special interest to students of the Near East are the Walters Art Museum, the Smithsonian Institution, and the Library of Congress.

**Undergraduate Programs**

The ancient Near East is where history begins. It is where the first crops were sown, the first towns built, and where writing was first invented. The origins of Western culture are to be found in its great civilizations, from the three great monotheistic religions—Christianity, Islam, and Judaism—to everyday aspects of our life that we take for granted, such as the alphabet and marking time by hours and minutes. The Near Eastern studies major can be the focal point of a broad liberal arts education, as well as a basis for graduate study. An undergraduate major can specialize in one of the four main areas of specialization of the department - Egyptology, Assyriology, Northwest Semitic languages and literatures (including the Hebrew Bible), and Near Eastern Archaeology - or in the civilizations of the ancient Near East in general.

**Near Eastern Studies Major Requirements**

Also see Requirements for a Bachelor's Degree (p. 7).

Students must earn a "C+" or higher grade in all courses used to satisfy major requirements and courses may not be taken satisfactory/unsatisfactory.

Note: AS.130.420 - This writing intensive seminar covers different selected topics in order help students develop skills in specific research areas such as critical reading, analysis, interpretation, and writing. Specific topics vary each semester. AS.130.420 is required of NES Majors, but is also open to non-majors who have taken at least one 100-level and one 300-level Near Eastern Civilization course, or with the consent of the instructor. It is recommended that NES majors take the class during their sophomore or junior years.

* Students pursuing the language focus area need to select four courses from the following languages: Akkadian, Arabic, Ancient Egyptian, Biblical Hebrew, Modern Hebrew or Sumerian. These may not be 300-level.

**Honors**

Those seniors wishing to be considered for departmental honors may choose to write a senior thesis. A student must maintain a 3.5 GPA in the
major (through the junior year) to be eligible for departmental honors. It is advisable for such students to contact a faculty member to supervise the thesis during the spring semester of their junior year. The student should then register for two semesters of independent study in the senior year.

Total Credits: 36

Near Eastern Studies Minor Requirements
To minor in Near Eastern Studies, a student must complete six courses (18 credits) from among the department's offerings. One of these courses must be from among the Department's regularly offered introductory courses to the ancient Near East: 130.101 Ancient Near Eastern Civilizations; 130.126 Gods and Monsters in Ancient Egypt; 130.135 Pyramids, Temples and Tombs. The remaining five courses are selected, in consultation with the director of undergraduate studies in Near Eastern Studies, to meet the needs and interests of the student. Minors may wish to survey all of the different fields covered by the department or to focus on a single ancient language, culture, or methodology in more depth.

Students must earn a "C-" or higher grade in all courses used to satisfy minor requirements and courses may not be taken satisfactory/unsatisfactory.

Graduate Program
The graduate program, the oldest of its kind in the nation, is designed to train professional scholars and teachers in the above-mentioned areas. The courses listed below may be modified in particular years to suit the needs of students currently in residence. Reading and private study under the direction of the faculty are considered as important as work in class. The seminars allow small groups of students and faculty to engage in close study of special problems. As the program is intended to lead to the Ph.D., students are admitted as candidates for the M.A. only in unusual cases.

Requirements for the Ph.D. Degree
Students working full time toward the Ph.D. may expect to do three to four years of course work, after which comprehensive examinations must be written before work on the dissertation begins. The examinations cover a student’s major and minor fields of concentration. After passing these examinations, the student, in consultation with the faculty, prepares a dissertation proposal for faculty consideration and then proceeds to write the dissertation.

An ability to read scholarly French and German is necessary, and an examination in one of these must be passed within the first semester of residence at Hopkins. The examination in the other may be delayed not more than one year. Some command of Greek and Latin is necessary to pursue biblical studies.

Financial Aid
The department awards most students admitted to the Ph.D. program who are in need of financial aid a basic annual fellowship covering full tuition and a full stipend for living expenses for up to five years. For some of this period, the department’s support may take the form of a teaching assistantship. In addition, the period of support may be extended by the various competitive awards available to advanced students within the university. When appropriate, the department will award travel stipends for graduate students to participate in archaeological excavations in the Near East or visit collections in this country and abroad.

For further information on graduate study in Near Eastern Studies, visit the departmental website at http://neareast.jhu.edu/.

Courses
AS.130.101. Ancient Near Eastern Civilizations. 3.0 Credits.
Review of important issues in ancient Near Eastern history and culture from the Neolithic era to the Persian period. Included will be an examination of the Neolithic agricultural revolution, the emergence of cities, states and writing, and formation of empires. Cultures such as Sumer and Akkad, Egypt, the Hittites, Israelites, Assyrians, Babylonians, and Persians will be discussed.
Instructor(s): G. Schwartz
Area: Humanities.

AS.130.102. From the Neanderthals to the Neolithic. 3.0 Credits.
Emphasizing theories about human biological and cultural development, this course consists of an in-depth survey of Neanderthal morphology and culture, a brief discussion of evolutionary theory and our fossil ancestors, and concludes with an exploration of the mechanisms and results of the shift from hunting and gathering to farming. (Course formerly known as Introduction: Human Prehistory.) Cross-listed with Anthropology.
Instructor(s): S. McCarter
Area: Humanities.

AS.130.105. Freshman Seminar: Sex, Drugs, and Rock & Roll in Ancient Egypt. 3.0 Credits.
This seminar explores the social roles of sexuality, alcohol, other drugs, music, fragrance, and sensuality in secular and religious areas of Egyptian life, largely but not exclusively during the New Kingdom, ca. 1500 to 1000 B.C. The ancient attitudes towards these elements will be explored through the ancient textual sources in translation and the artistic representations.
Instructor(s): B. Bryan
Area: Humanities
Writing Intensive.

AS.130.106. Freshman Seminar: Ancient Empires. 3.0 Credits.
Freshman Only A case-study approach to the political, social, and cultural history of one of the ancient Near Eastern states commonly described as an “empire,” such as the Akkadian Empire, the Neo-Assyrian Empire, the Neo-Babylonian Empire, or the Achaemenid (Persian) Empire. Individual classes mix a discussion of theoretical issues relevant to the study of ancient empires with close attention to primary sources.
Instructor(s): J. Lauinger
Area: Humanities
Writing Intensive.

AS.130.108. Freshman Seminar: Demons & Doctors: Magic and Medicine in the Ancient Near East. 3.0 Credits.
This course will provide an introduction to the magical and medical arts of ancient Mesopotamia and Syria-Palestine by engaging with ritual texts dealing with disease, exorcisms, sorcery, and harmful ghosts.
Instructor(s): E. Guinn-Villareal
Area: Humanities
Writing Intensive.

AS.130.109. Freshman Seminar: Ancient Homes and Houses. 3.0 Credits.
What will your bedroom tell future archaeologists? What can ancient houses tell archaeologists of past societies? This course explores methods/theories of Household Archaeology in the Near East and beyond.
Instructor(s): J. Swerida
Area: Humanities.

AS.130.110. Introduction To Archaeology. 3.0 Credits.
An introduction to archaeology and to archaeological method and theory. exploring how archaeologists excavate, analyze, and interpret ancient remains in order to reconstruct how ancient societies functioned. Specific examples from a variety of archaeological projects in different parts of the world will be used to illustrate techniques and principles discussed.
Instructor(s): E. Anderson
Area: Humanities, Social and Behavioral Sciences.

AS.130.111. Freshman Seminar: Cleopatra’s Egypt. 3.0 Credits.
Egypt in the time of Cleopatra was a fascinating mix of peoples and cultures. Jews, Greeks, and other ethnic groups lived in this unique landscape along with the native Egyptians. In this class we will consider the rich civilization and complex history of Egypt during the reign of this legendary Queen.
Instructor(s): R. Jasnow
Area: Humanities
Writing Intensive.
AS.130.116. Freshman Seminar: Ritual and Magic in Ancient Egypt. 3.0 Credits.
This course will serve to introduce students to the study of religion, ritual and magic through the lens of a specific culture: ancient Egypt. Throughout the course students will be introduced to ancient Egyptian culture and will interact with Egyptian texts and artifacts, including those found in the collections of the Johns Hopkins Archaeological Museum, in order to illustrate key concepts.
Instructor(s): M. Fraser
Area: Humanities.

AS.130.122. Freshman Seminar: The Archaeology of Death, Burial, and the Human Skeleton. 3.0 Credits.
This course will introduce students to the archaeological investigation of past human populations through their mortuary and physical human remains. To this end, major theories and methodologies will be introduced, along with pertinent case studies for discussion.
Instructor(s): C. Brinker
Area: Humanities.

AS.130.126. Gods and Monsters in Ancient Egypt. 3.0 Credits.
To provide a basic introduction to Egyptian Religion, with a special focus on the nature of the gods and how humans interact with them. We will devote particular time to the Book of the Dead and to the "magical" aspects of religion designed for protective purposes.
Instructor(s): R. Jasnow
Area: Humanities.

AS.130.127. A Good Scribe & Learned Man: Wisdom & Knowledge in Ancient Egypt. 3.0 Credits.
Already in Antiquity, the Egyptians had a reputation for wisdom and "secret" knowledge. But what was the reality behind this reputation? Who was a "wise man" or "wise woman" in Egypt? How did they organize and teach scientific ideas and concepts? How did they compose, maintain, and transmit the "books" containing their canon of knowledge? From the abundant ethical, scientific, literary, magical, and religious writings of the Egyptians we will attempt to understand what wisdom and knowledge meant to the Ancient Egyptians.
Instructor(s): R. Jasnow
Area: Humanities
Writing Intensive.

AS.130.131. It's Alive! Statues in Ancient Egypt. 3.0 Credits.
Statues in ancient Egypt were extremely powerful images. Following the appropriate rituals, a statue could eat, breath, smell, and see. Wealthy men and women, including the king and his high officials, commissioned statues of themselves to erect in temples and their tombs. This allowed them to benefit from offerings set in front of the statues and essentially live forever. Throughout their history, the Egyptians also carved statues of prisoners, servants, and deities. In this class, we will explore a variety of statues from throughout ancient Egyptian history. How did the Egyptians use statues, and why did they create these objects? Do the answers to these questions vary for different types of statues? In considering this, we will discuss manufacturing techniques, materials, subject matter, style, and the relationship between text and image. However, we will also examine other topics that may at first seem to be less obviously related, including mummies and the process of mummmification, religion and magic in ancient Egypt, temples and tombs, and funerary beliefs. In order for students to directly analyze statues, we will take advantage of Baltimore's museums and visit collections of Egyptian art throughout the semester.
Instructor(s): T. Prakash
Area: Humanities.

AS.130.135. Pyramids, Temples and Tombs. 3.0 Credits.
Introduction to the monuments and culture of Egypt from 3500 B.C. to 100 A.D. From the pyramids at Giza to Hellenistic Alexandria, this course surveys in slide illustrated lectures the remains of one of the world's greatest early cultures.
Instructor(s): B. Bryan
Area: Humanities
Writing Intensive.

AS.130.140. Hebrew Bible / Old Testament. 3.0 Credits.
The Bible is arguably the most read and yet most misinterpreted book of all time, one of the most influential and yet most misapplied work of literature. The Hebrew Bible (Old Testament) is Scripture to Jews and Christians yet also a rich collection of literature w/ numerous literary genres that has been highly influential on secular Western culture. At its core, it is our most important literary source that (when wed with archaeology) helps us to understand the people and culture of Iron Age Israel and Judah. This is an introductory course surveying of the books of the Hebrew Bible (Old Testament) giving primary attention to the religious ideas they contain and the ancient contexts in which they were composed. Topics include: The Academic Study of Religion, Ancient Creation Accounts, Ancestral Religion, The Exodus and Moses, Covenant, Tribalism and Monarchy, The Ideology of Kingship, Prophecy, Priestly Sources, Psalms, Wisdom Literature, and Apocalyptic Thought.
Instructor(s): T. Lewis
Area: Humanities.

AS.130.170. Diplomacy and Conflict in the Ancient Middle East. 3.0 Credits.
The Middle East is home to the invention of agriculture, cities, and writing. It is also in the Middle East that we find evidence of humanity’s earliest diplomatic activity in, for instance, the actual letters sent by ancient kings to one another, the treaties drawn up after their conflicts, and the inscriptions that commemorate their conquests. In this course, we examine texts such as these to explore questions such as: How do we characterize the international system of the ancient Middle East? Does this system change over the approximately two millennia for which we have documentation? Is it better to approach ancient diplomacy through present-day eyes or in the context of ancient world-views? Is an understanding of diplomacy in the ancient Middle East relevant to our understanding of modern international relations? All texts read in translation.
Instructor(s): J. Lauinger
Area: Humanities.
AS.130.174. Scientists and Soothsayers: The Pursuit of Knowledge in Ancient Egypt. 3.0 Credits.
The ancient world viewed Egypt as a repository of wisdom and learning, and even today, Egypt possesses in the modern consciousness a reputation for secret knowledge. From within Egypt, a diverse corpus of texts meant to record and transmit knowledge have survived and attest to Egyptian "scholarship." This course will focus on what kinds of knowledge belonged to this written tradition (3000 BCE to 300 CE) and how those texts reflected broader social and cultural norms. This course will also consider, where relevant, the relationship between the intellectual traditions of Egypt and other societies of the ancient world, particularly Greece and Mesopotamia. Strong correlations between the Egyptian material and modern intellectual and scientific traditions, such as mathematics, astronomy, and medicine exist; but magic, divination, and religion were often treated in the same systematic, critical manner by the Egyptians. Thus the course will challenge modern understandings of science, and modern dichotomies such as rational versus irrational. After a brief introduction to Egypt, the first few weeks will concern who created these texts, who had access to them, and their physical and intellectual milieu. Then, each week will cover a particular area of knowledge, its primary sources, social and multicultural context, and its relationship to the theoretical themes of the course.
Instructor(s): R. Wanner
Area: Humanities.

AS.130.177. World Prehistory: An Anthropological Perspective. 3.0 Credits.
How and why did our nomadic hunting and gathering ancestors become farmers? What led agricultural societies to build cities, develop writing, religious institutions, wage war, and trade for exotic goods? This course surveys prehistory and ancient history from the origins of human culture to the emergence civilization. Although prehistory and ancient history yield evidence of tremendous cultural diversity this course emphasizes common elements of past human experience, culture, and culture change. These include the origins of modern humans and their adjustment to a variety of post-ice age environments, shifts from hunting and gathering to agricultural lifeways, and the initial development of the world's earliest cities and civilizations.
Instructor(s): R. Wanner
Area: Humanities, Social and Behavioral Sciences.

AS.130.202. Ancient Mythology. 3.0 Credits.
This course explores the mythology of the ancient Near East from the invention of writing in Sumer in 3000 B.C. until the conquest of Alexander the Great near the end of the first millennium B.C. Mythological texts from Mesopotamia, Egypt, Anatolia, the Levant, and the Bible will be read from a comparative perspective. Special attention is paid to the origin and development of the epic, culminating in the great Epic of Gilgamesh, but considerable time is also given to the vast mythological and historical literature, and such diverse genres as love poetry, proverbs, humorous dialogues, Omens, and legal and medical texts. All readings are in English translation.
Instructor(s): P. Delnero
Area: Humanities.

AS.130.203. Archaeology of Africa: From Human Origins to the Emergence of Civilizations. 3.0 Credits.
This course examines Africa’s ancient past from the emergence of biologically modern humans, ancient hunter-gatherers, the earliest animal herding and farming populations, to cities and civilizations. While Egypt plays an undeniably central role in world history, this course concentrates in particular on ancient geographies other than Egypt.
Instructor(s): M. Harrower
Area: Humanities.

AS.130.213. Introduction to Ancient Egyptian Art. 3.0 Credits.
This class is a combination of illustrated lecture and discussion, punctuated with visits to museums with Egyptian collections. Participants must be able to join at least one overnight trip to New York and/or Boston (weekend) and be available for two half day visits to Philadelphia and Washington, D.C. or elsewhere (TBA as best for participants), in addition to visiting Baltimore institutions with the class as part of the course. Discussion of sculpture will take place in front of the objects, so attendance is important for the visits.
Instructor(s): B. Bryan
Area: Humanities.

AS.130.216. History of the Jews in Modern Times, from the Middle Ages to 1917. 3.0 Credits.
A broad survey of the significant political and cultural dynamics of Jewish history in the Medieval, Early-Modern, and Modern Eras.
Instructor(s): D. Katz
Area: Humanities.

AS.130.243. Hammurabi in the Digital Age: Digital Humanities and the Ancient Middle East. 3.0 Credits.
The world's earliest poetry, cities, and empires all hail from the ancient Near East, but the remains of its remarkable cultures are under direct threat by the current conflicts in the Middle East. Digital technologies can help us to study, preserve, and recreate the artifacts that remain, and this class combines the use of such technologies with the study of the ancient world, offering students the chance to critically engage with modern scholarship methods and create their own digital resources, as well as gain familiarity with key themes and features of the ancient Near East, including urbanization, internationalism, and literature.
Instructor(s): M. Lewis
Area: Humanities.

AS.130.249. Sorcerers, Warriors and Femmes Fatales: Intro to Ancient Egyptian Literature. 3.0 Credits.
This course explores the ancient Egyptian literature of the first millennium BCE and the Roman Era: stories of magic, epic battles, animal fables, and even cultic sex hymns.
Instructor(s): M. Escolano Poveda
Area: Humanities.

AS.130.252. New Kingdom Egypt: Empire and Cosmopolitanism. 3.0 Credits.
This class surveys the history and art of Egypt empire period when pharaoh ruled over an area reaching from the Sudan to the north of Syria. Tutankhamun, Akhenaten, and Ramesses the Great represent the period, and the class will study how Egypt's interaction outside its borders affected the political, social, and artistic environment at home and abroad.
Instructor(s): B. Bryan
Area: Humanities.
AS.130.259. Ancient Science. 3.0 Credits.
A survey of scientific practices and technological innovations in the ancient world, including astronomy, medicine, law, and divination. Special attention will be devoted to the relationship between magic and science during the periods covered.
Instructor(s): P. Delnero
Area: Humanities, Social and Behavioral Sciences.

AS.130.300. History Anc Mesopotamia. 3.0 Credits.
A survey of the history of Sumer, Babylonia, and Assyria.
Instructor(s): P. Delnero
Area: Humanities.

AS.130.301. History of Ancient Syria-Palestine. 3.0 Credits.
A survey of the history of Ancient Syria and Canaan, including Ancient Israel.
Instructor(s): J. Lauinger
Area: Humanities.

AS.130.302. History: Ancient Syria-Palestine II. 3.0 Credits.
A survey of the history of Ancient Syria and Cannan, including ancient Israel. Taught with AS.134.661. Cross-listed with Jewish Studies.
Instructor(s): P. McCarter
Area: Humanities.

AS.130.303. Seminar Near Eastern History: Egypt. 3.0 Credits.
This class is one of the upper level choices for majors in Near Eastern Studies. It includes Graduate Students. Taught jointly with AS.131.600
Instructor(s): B. Bryan
Area: Humanities
Writing Intensive.

AS.130.312. Ancient Medicine. 3.0 Credits.
A study of medicine in the ancient Near Eastern and Aegean worlds, including an examination of the practices of medicine in these ancient societies but with primary emphasis given to ideas about health and disease. Readings are selected from primary sources in the writings of ancient Egypt, Mesopotamia, Israel, Greece, and Rome. Topics treated include the sources of our knowledge; the nature of medical practitioners, medical treatment, and surgery; beliefs about disease and the etiology of illness; concepts of contagion and ritual purity. Special attention is given to Hippocratic medicine, the synthesis of Galen, and the rise of humoralism.
Instructor(s): P. McCarter
Area: Humanities

AS.130.313. History of Egypt from ca. 1200-30 BCE. 3.0 Credits.
In this class we will study selected historical topics from the end of the New Kingdom (ca. 1200 BCE) to the death of Cleopatra VII (30 BCE).
Instructor(s): R. Jasnow
Area: Humanities
Writing Intensive.

AS.130.323. Cleopatra's Egypt: Ptolemaic-Roman Egypt. 3.0 Credits.
This lecture course is a survey of the history, society, and culture of Graeco-Roman Egypt. We will concentrate on Ptolemaic Egypt (ca. 332-30 B.C.), but will also devote some time to Roman Egypt, especially to the subjects of the decline of paganism and spread of Christianity in Egypt.
Instructor(s): R. Jasnow
Area: Humanities.

AS.130.330. The Garden of Eden. 3.0 Credits.
References to the story of the Garden of Eden can be found in every significant issue of our time, from sex to politics, from race to the environment. The course will examine the story itself as well as how it’s been interpreted, leading up to today. Enthusiastic participation required.
Instructor(s): E. Robbins
Area: Humanities.

AS.130.331. Traditionalism vs. Orthodoxy in the Modern Era: The Case of Judaism. 3.0 Credits.
During the Modern Era in European history, the Traditionalist Jewish civilization of Europe that had evolved over many centuries went into deep crisis. The new political, social, and intellectual realities which characterized Modernity seriously challenged, overwhelmed, and indeed threatened to destroy the Jewish Traditionalist culture and society. In response, different Traditionalist thinkers and communities evolved a number of strategies for surviving in a modern environment, strategies that unexpectedly transformed Traditionalism into something different, which came to be called Orthodox Judaism. This course explores this process of transformation, which has had an important impact on Jewish life in the modern and post-modern eras. Cross-listed with Jewish Studies.
Instructor(s): K. Bryson
Area: Humanities.

AS.130.334. Egyptian Funerary Arts in the Archaeological Museum. 3.0 Credits.
This class will aim to cover the production and choice of funerary objects for Egyptian elite tombs in several eras of antiquity: the Middle and New Kingdoms, the Third Intermediate Period, and the Late Periods. Students will work with specific objects after learning generally about them, and they will carry out analyses of materials, pigments, construction methods, and erosion and degradation effects. They will create a virtual exhibition for the Museum’s website and present their results for inclusion in the museum cataloguing project.
Instructor(s): B. Bryan; S. Balachandran
Area: Humanities.

AS.130.335. The Pharaohs: Power and Authority in Ancient Egypt. 3.0 Credits.
This course will introduce students to the triumphs and struggles of the men (and women) who ruled ancient Egypt, comparing Egyptian kingship to other ancient and modern systems of political power and authority.
Instructor(s): K. Bryson
Area: Humanities.

AS.130.341. Traditionalism vs. Orthodoxy in the Modern Era: The Case of Judaism. 3.0 Credits.
This class will aim to cover the production and choice of funerary objects for Egyptian elite tombs in several eras of antiquity: the Middle and New Kingdoms, the Third Intermediate Period, and the Late Periods. Students will work with specific objects after learning generally about them, and they will carry out analyses of materials, pigments, construction methods, and erosion and degradation effects. They will create a virtual exhibition for the Museum’s website and present their results for inclusion in the museum cataloguing project.
Instructor(s): B. Bryan; S. Balachandran
Area: Humanities.

AS.130.343. Dead Sea Scrolls-English. 3.0 Credits.
A survey of the manuscripts found at Qumran and other sites near the Dead Sea.
Instructor(s): D. Gropp
Area: Humanities.
AS.130.346. Introduction to the History of Rabbinic Literature. 3.0 Credits.
Broadly surveying classic rabbinic literature, including the Talmud and its commentaries, the legal codes and the response, this seminar explores the immanent as well as the external factors that shaped the development of this literature, the seminal role of this literature in Jewish self-definition and self-perception, and the role of this literature in pre-modern and modern Jewish culture.
Instructor(s): D. Katz
Area: Humanities.

AS.130.348. Religious Law Wrestles With Change: The Case of Judaism. 3.0 Credits.
Description: "How does a religious system which defines its ancient laws as God-given and unchangeable apply them to radically different and changing social, political and intellectual situations? This course explores the literature of "Questions and Answers" (She'elot u-Teshuvot), the Jewish legal responsa which have struggled to match Jewish religious law to modern life for fifteen centuries. A sweeping survey of Jewish history as revealed by one of its most impenetrable yet fascinating sources. Cross-listed with Jewish Studies.
Instructor(s): D. Katz
Area: Humanities.

AS.130.351. The Emergence of Civilization: A Cross-Cultural Examination. 3.0 Credits.
A comparative study of the origins of urban, literate civilizations in five culture areas: Mesopotamia, China, the Indus Valley, Egypt, and Mesoamerica. For each area, we will review the physical setting, the archaeological and textual evidence for the development of states and urban civilization, and theories advanced to explain the rise (and eventual collapse) of these complex societies.
Instructor(s): G. Schwartz
Area: Humanities, Social and Behavioral Sciences.

AS.130.353. Space Archaeology: An Introduction to Satellite Remote Sensing, GIS and GPS. 3.0 Credits.
This course introduces technologies archaeologists use to map ancient landscapes. These include Geographic Information Systems (GIS) mapping software, advanced Global Positioning System (GPS) receivers, and various types of satellite imagery. Taught together with AS.131.653.
Instructor(s): M. Harrower
Area: Natural Sciences, Social and Behavioral Sciences.

AS.130.354. Archaeological Method and Theory. 3.0 Credits.
Climate change, population growth, war - what questions do archaeologists ask about the ancient past, how do they collect relevant evidence, and how do they arrive at satisfying answers to their questions? This course will review major theoretical currents in archaeology including evolutionary, cultural-historical, processual and post-processual approaches and discuss the future of archaeology as a scientific and humanistic discipline. Basic techniques for analyzing major categories of artifacts such as lithics, ceramics, archaeobotanical, and zooarchaeological materials will also be introduced.
Instructor(s): M. Harrower
Area: Humanities, Social and Behavioral Sciences.

AS.130.357. Geographic Information Systems in Archaeology. 3.0 Credits.
Applications of GIS in archaeology have recently expanded dramatically and GIS has now become an indispensable tool for archaeological research worldwide. This course will introduce the major applications of Geographic Information Systems (GIS) in archaeology. These include the history of GIS in archaeology, air photography and satellite imagery, predictive modeling, hydrological modeling, viewsheds, and least-cost routes. It will grapple with theoretical issues manifest in archaeological GIS including conflicts between environment and social understandings of the ancient past, and will foster discussion of issues that affect outcomes of analyses including spatial scale and boundary delineation choices that can dramatically influence results. Students will learn the basics of ESRI's ArcGIS software. Taught with AS.131.657.
Instructor(s): M. Harrower
Area: Humanities, Natural Sciences.

AS.130.359. Reading the Talmud in the Post-Talmudic Era. 3.0 Credits.
This course explores the history of the Talmud as revealed by the literature of Post-Talmudic Rabbinic Judaism. Readings in the Original Sources (Knowledge of Hebrew Required). Cross-listed with Jewish Studies.
Instructor(s): D. Katz
Area: Humanities.

AS.130.368. Nomads, Tyrants and Kings: Water in the Ancient Near East. 3.0 Credits.
This course explores economic and social histories of water in the ancient Near East. It examines water's diverse roles in ancient Mesopotamian, Egyptian, Levantine and South Arabian agriculture, politics, ritual and religion, including water's interconnected significance in Judaism, Christianity, and Islam. Taught jointly with AS.131.615.
Instructor(s): M. Harrower
Area: Humanities.

AS.130.369. Law in the Ancient Middle East. 3.0 Credits.
The Middle East offers the earliest and most abundant source material for reconstructing ancient legal systems. From stone monuments like the Code of Hammurabi to clay tablets the size of postage stamps, the cuneiform record provides a window into not just legal thought but actual legal practice in the ancient Middle East. Surveying a span of more than two thousand years, we will explore the law in both its deep structure and its regional and temporal diversity. Specific topics will include homicide and personal injury law, family law, the legal status of women, codes and codification, and ancient Israelite law in its Middle Eastern context. No background is required and all texts are read in translation, but every enrolled student is expected to actively participate in this seminar-style course.
Instructor(s): J. Lauinger
Area: Humanities.

AS.130.373. Prophets and Prophecy in the Bible. 3.0 Credits.
From thundering voices of social justice to apocalyptic visionaries, biblical prophets have been revered by Jews, Christians and Muslims for thousands of years. They have inspired civic leaders such as Martin Luther King Jr. yet also provided fodder for modern charlatans promising a utopian future. Yet who were these individuals (orators? politicians? diviners? poets?) and what was the full range of their message as set against the Realpolitik world of ancient Israel, Iraq, Egypt, Syria and Jordan?
Instructor(s): T. Lewis
Area: Humanities.
AS.130.376. Ancient Magic and Ritual. 3.0 Credits.
This course will introduce students to the vast body of rituals that were practiced and performed in antiquity, with a particular emphasis on rituals from ancient Mesopotamia, Egypt, and the Hebrew Bible. In addition to examining rituals from a comparative perspective, anthropological and sociological studies of ritual will be read and discussed to shed light on the social, cultural, and political significance of ritual in the ancient world and beyond.
Instructor(s): P. Delnero
Area: Humanities.

AS.130.377. Creating an Egyptian Temple. 3.0 Credits.
This class will challenge every participant to plan a temple environment for a particular deity. The readings, lectures, and discussions will cover the mythology around specific gods and how it influenced temple architecture, location, ritual, and festivals. It will survey the history of temple building in Egypt, the role of architecture and art – particularly wall reliefs – in communicating the functions of particular parts of temples. The aim is to help students understand what requirements an Egyptian temple needed to fulfill. Then each student will plan a temple for a chosen deity and explain to peers how it meets the ancient requirements.
Instructor(s): B. Bryan
Area: Humanities.

AS.130.378. Geoarchaeology: Applications of Earth Science to Archaeology. 3.0 Credits.
Geoarchaeology is a multidisciplinary subfield that applies the tools and techniques of earth science to understand ancient humans and their interactions with environments. This course examines basic topics and concepts, including archaeological site formation, paleo-environmental reconstruction, raw materials and resources, soil science, deposition and erosion of wind and water-borne sediments in different environments such as along rivers, lakes and coastlines, radiocarbon and other chronometric dating methods, and ground-based remote sensing, including ground penetrating radar.
Instructor(s): M. Harrower
Area: Natural Sciences, Social and Behavioral Sciences.

AS.130.379. The Development of Useful Things: Technology and Economy in the Ancient World. 3.0 Credits.
This course provides an overview of technological developments in the ancient world, by foregrounding the development of objects (stone tools, pottery, metals) and of non-material technologies (agriculture, animal domestication, writing).
Instructor(s): I. Dumitru
Area: Humanities.

AS.130.380. Elementary Akkadian. 3.0 Credits.
An introduction to the paleography, grammar and lexicon of the Akkadian language, and the reading of simpler texts in that language.
Instructor(s): M. Chapin
Area: Humanities.

AS.130.381. History of Mesopotamia II. 3.0 Credits.
A survey of the history of Sumer, Babylonia, and Assyria.
Instructor(s): J. Lauinger
Area: Humanities.

AS.130.382. Elementary Akkadian II. 3.0 Credits.
An introduction to the paleography, grammar, and lexicon of the Akkadian language, and the reading of simpler texts in that language. Continues AS.130.381
Instructor(s): J. Lauinger; P. Delnero
Area: Humanities.

AS.130.383. Old Kingdom Art. 3.0 Credits.
This course will explore the artistic expression of Egyptian culture from the 3rd through the 6th Dynasties, ca. 2700-2100 B.C. Tombs, temples, statues and two-dimensional wall decoration provide a large visual vocabulary of Egyptian concepts. This class will look at these elements, separately and in combination in order to consider the intentions behind the art and evaluate the degree to which religious and ideological symbolism, known from later Egyptian art, should be understood in the early pyramid-building era.
Instructor(s): B. Bryan
Area: Humanities.

AS.130.384. The Poetics of Biblical Prose and Verse. 3.0 Credits.
An exploration of how ancient Israelite techniques of literary textual and inter-textual patterning contributes to cohesion and meaning in biblical prose and verse. Attention will be given to the distinguishing characteristics of Hebrew verse in relation to prose, and to a range of different kinds of prose in Israelite literature. These poetics will be exemplified in close readings of selected texts from the Hebrew Bible in English.
Instructor(s): D. Gropp
Area: Humanities.

AS.130.385. Being_ in Ancient Egypt: Ethnicity, Sexuality, and Gender. 3.0 Credits.
What was it like to live in ancient Egypt? At first this question may seem deceptively straightforward. But with further thought, its complexity becomes clear. Who are we concerned with? How the king lived? A poor farmer? His wife or children? A foreign immigrant? Moreover, what is our evidence for life in Egypt? Do all of the sources support similar interpretations? This course will begin to tackle these questions by considering the experiences of different people in ancient Egypt.
Instructor(s): T. Prakash
Area: Humanities.

AS.130.390. Introduction To Middle Egyptian. 3.0 Credits.
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2055-1650 B.C.). In the second semester, literary texts and royal inscriptions will be read. Course meets with AS.133.600.
Instructor(s): R. Jasnow
Area: Humanities.

AS.130.391. Introduction To Middle Egyptian. 3.0 Credits.
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2011-1700 B.C.). Co-listed with AS.133.601.
Prerequisites: Prereq: AS.130.400 or equivalent.
Instructor(s): L. Zhang
Area: Humanities.
AS.130.420. Seminar in Research Methods in Near Eastern Studies: (Auto)biography in the Ancient Near East. 3.0 Credits.
Just as in our time, the peoples of the ancient Near East were greatly interested in their own pasts. One of the most vibrant manifestations of this interest was the writing of biographies, in which ancient authors told the stories of individual lives. These biographies present an enormous challenge to contemporary historians. On the one hand, they offer a wealth of evidence – sometimes our only evidence – about some of the most famous persons of antiquity. On the other hand, the biographies were seldom written according to what we might consider “proper historical method.” How, as modern historians, do we approach these biographies in studying the ancient past? Using a variety of case studies, students will develop skills in specific research skills such as critical reading, analysis, and interpretation. AS.130.420 is required of NES Majors, but is also open to non-majors who have taken at least one 100-level and one 300-level Near Eastern Civilization course, or with the consent of the instructor.
Instructor(s): J. Lauinger
Area: Humanities
Writing Intensive.

AS.130.440. Elementary Biblical Hebrew. 3.0 Credits.
Introduction to the grammar, vocabulary, and writing system of biblical Hebrew.
Instructor(s): J. Estrada
Area: Humanities.

AS.130.441. Elementary Biblical Hebrew. 3.0 Credits.
Survey of grammar and reading of simple texts. (Credit given only on completion of AS.130.440 and AS.130.441). May not be taken on a satisfactory/unsatisfactory basis.
Instructor(s): R. Liebermann
Area: Humanities.

AS.130.442. Readings - Hebrew Prose. 3.0 Credits.
Reading of biblical Hebrew prose, especially from the Pentateuch, Joshua, Judges, Samuel, and Kings. Cross-listed with Jewish Studies.
Instructor(s): R. Liebermann
Area: Humanities.

AS.130.443. Reading Of Hebrew Prose. 3.0 Credits.
Reading of Biblical Hebrew prose, especially from the Pentateuch, Joshua, Judges, Samuel, and Kings.
Instructor(s): K. Medill
Area: Humanities.

AS.130.446. Readings - Hebrew Narrative and Poetry. 3.0 Credits.
Intermediate readings in a variety of narratives with some exposure to poetic text
Instructor(s): K. Medill
Area: Humanities.

AS.130.447. Readings - Hebrew Narrative and Poetry. 3.0 Credits.
Intermediate readings in a variety of narratives with some exposure to poetic text. A continuation of AS.130.446.
Instructor(s): K. Medill
Area: Humanities.

AS.130.501. Readings & Research. 3.0 Credits.
Instructor(s): M. Feldman; P. Delnero; R. Jasnow.

AS.130.504. Independent Study. 1.0 - 3.0 Credits.
Instructor(s): P. Delnero; P. McCarter.

AS.130.505. Independent Study-Archaeology Fieldwork. 1.0 Credit.
Instructor(s): E. Anderson; G. Schwartz; L. Deleonardis; M. Harrower.

AS.130.506. Independent Study-Archaeology Fieldwork. 1.0 - 3.0 Credits.
Instructor(s): B. Bryan; E. Anderson; G. Schwartz; M. Feldman; M. Harrower.

AS.130.510. Archaeology Major Honors Thesis I. 3.0 Credits.
Instructor(s): E. Anderson; G. Schwartz; L. Deleonardis; M. Harrower; M. Roller
Writing Intensive.

AS.130.511. Archaeology Major Honors Thesis II. 3.0 Credits.
Prerequisites: AS.130.510
Instructor(s): E. Anderson; G. Schwartz; L. Deleonardis; M. Harrower; M. Roller
Writing Intensive.

AS.130.590. Independent Study. 0.0 - 3.0 Credits.
Instructor(s): D. Viete; K. Livi; M. Harrower.

AS.131.600. Seminar Near Eastern History: Egypt.
Seminar in Near Eastern History: Egypt
Instructor(s): B. Bryan.

A three-year history cycle required of all graduate students and forming the core of our graduate program. One year each will be devoted to Egyptian history, Mesopotamian history, and Syro-Palestinian history.
Instructor(s): R. Jasnow.

AS.131.613. Archaeology of Africa: From Human Origins to the Emergence of Civilizations.
This course examines Africa's ancient past from the emergence of biologically modern humans, ancient hunter-gatherers, the earliest animal herding and farming populations, to cities and civilizations. While Egypt plays an undeniably central role in world history, this course concentrates in particular on ancient geographies other than Egypt.
Instructor(s): M. Harrower
Area: Humanities.

This course explores economic and social histories of water in the ancient Near East. It examines water's diverse roles in ancient Mesopotamian, Egyptian, Levantine and South Arabian agriculture, politics, ritual and religion, including water's interconnected significance in Judaism, Christianity, and Islam. Taught jointly with AS.130.368
Instructor(s): M. Harrower
Area: Humanities.

Topic varies but can include the archaeology of Mesopotamia, Syria, or Palestine, or thematic discussions (e.g., on ideology, state collapse, etc.).
Instructor(s): G. Schwartz.

AS.131.635. Seminar: Near East Archaeology.
Topic varies but can include the archaeology of Mesopotamia, Syria, or Palestine, or thematic discussions (e.g., on ideology, state collapse, etc.).
Instructor(s): G. Schwartz
Area: Humanities.

AS.131.653. Space Archaeology: An Introduction to Satellite Remote Sensing, GIS and GPS.
This course introduces technologies archaeologists use to map ancient landscapes. These include Geographic Information Systems (GIS) mapping software, advanced Global Positioning System (GPS) receivers, and various types of satellite imagery. Taught together with AS.130.353.
Instructor(s): M. Harrower
Area: Natural Sciences, Social and Behavioral Sciences.
Climate change, population growth, war - what questions do archaeologists ask about the ancient past, how do they collect relevant evidence, and how do they arrive at satisfying answers to their questions? This course will review major theoretical currents in archaeology including evolutionary, cultural-historical, processual and post-processual approaches and discuss the future of archaeology as a scientific and humanistic discipline. Basic techniques for analyzing major categories of artifacts such as lithics, ceramics, archaeobotanical, and zooarchaeological materials will also be introduced.
Instructor(s): M. Harrower
Area: Humanities, Social and Behavioral Sciences.

Applications of GIS in archaeology have recently expanded dramatically and GIS has now become an indispensable tool for archaeological research worldwide. AS.131.800. Readings & Research.
Instructor(s): Staff.

AS.131.801. Readings And Research.
Instructor(s): Staff
Area: Humanities.

AS.131.848. Dissertation Research.
Instructor(s): Staff.

Instructor(s): Staff.

AS.132.600. Elementary Akkadian.
An introduction to the paleography, grammar and lexicon of the Akkadian language, and the reading of simpler texts in that language. Co-listed with AS.130.381
Instructor(s): M. Chapin.

AS.132.601. Elementary Akkadian II.
An introduction to the paleography, grammar and lexicon of the Akkadian language, and the reading of simpler texts in that language. Undergraduates admitted to this course earn 4.5 credits per semester.
Instructor(s): R. Essam
Area: Humanities.

In this course a selection of intermediate level Akkadian texts from different genres and period will be read, analyzed and discussed. To build on skills learned in Introduction to Akkadian, specific emphasis will be placed on understanding more advanced grammatical forms and learning how to critically use research tools like the Chicago Assyrian Dictionary and von Soden’s Akkadisches Handwörterbuch.
Instructor(s): J. Lauinger
Area: Humanities.

In this course a selection of intermediate level Akkadian texts from different genres and period will be read, analyzed and discussed. To build on skills learned in Introduction to Akkadian, specific emphasis will be placed on understanding more advanced grammatical forms and learning how to critically use research tools like the Chicago Assyrian Dictionary and von Soden’s Akkadisches Handwörterbuch.
Instructor(s): J. Lauinger
Area: Humanities.

This course introduces students to letters written in the Akkadian language from a variety of historical periods. Recommended course background: AS.132.600 and AS.132.601.
Instructor(s): K. Medill
Area: Humanities.

This writing intensive seminar examines how textual and artistic production were used separately and together to engender and communicate social, cultural, and political meaning in ancient Mesopotamia and the rest of the Near East from the 4th millennium to the Hellenistic period. Using a variety of case studies, students will develop skills in specific research skills such as critical reading, analysis, and interpretation. AS.130.420 is required of NES Majors, but is also open to non-majors who have taken at least one 100-level and one 300-level Near Eastern Civilization course, or with the consent of the instructor. Cross-listed with History of Art.
Instructor(s): M. Feldman; P. Delnero
Area: Humanities
Writing Intensive.

Students will read a variety of Akkadian texts commonly described as literary in the original cuneiform.
Instructor(s): J. Lauinger.

AS.132.640. Historical Texts.
This course has two primary objectives: To introduce students to texts commonly described as “historical” (e.g., royal inscriptions, chronicles); and to further expose students to the Old Babylonian dialect of the Akkadian language. A secondary objective is to begin to develop familiarity with critical research tools such as the Chicago Assyrian Dictionary and the Akkadisches Handwörterbuch.
Instructor(s): J. Lauinger.
Students read the diplomatic correspondence from Tell el-Amarna in the original cuneiform. Focus is on language and history: the dialect(s) of Akkadian in which the letters are written and the diplomatic history of the Late Bronze Age.
Prerequisites: Prereqs: AS.132.600 or instructor's consent.
Instructor(s): J. Lauinger
Area: Humanities.

AS.132.644. Treaties And Diplomacy.
Reading treaties and related materials in Akkadian.
Instructor(s): J. Lauinger.

AS.132.650. Peripheral Akkadian.
Includes texts from Amarna, Emar, Ugarit, Boghazkoi, Nuzi, Alalakh, and Elam.
Instructor(s): J. Lauinger.

AS.132.700. Elementary Sumerian.
An introduction to the paleography, grammar and lexicon of the Sumerian language, and the reading of simpler texts in that language.
Instructor(s): P. Delnero
Area: Humanities.

AS.132.701. Elementary Sumerian.
Instructor(s): P. Delnero
Area: Humanities.

AS.132.710. Advanced Sumerian.
We will read Letter Collection B and related materials in the original cuneiform.
Instructor(s): A. Glenn.

AS.132.711. Advanced Sumerian.
In this course a selection of Sumerian texts from different periods and genres will be read and discussed from a linguistic, philological, historical, and literary perspective.
Instructor(s): P. Delnero.

AS.132.800. Mesopotamian Seminar.
Research and discussion on topics of current interest.
Instructor(s): G. Schwartz; J. Lauinger; M. Feldman.

AS.132.801. Mesopotamian Seminar.
Research and discussion on topics of current interest.
Instructor(s): G. Schwartz; J. Lauinger; M. Feldman; P. Delnero
Area: Humanities.

AS.133.450. Seminar in Egyptian Art and Archaeology: Approaching Egyptian Art. 3.0 Credits.
A seminar-based course requiring that students have had at least one prior course in Egyptian art or archaeology. The course will consider the wide variety of ways that people analyze Egyptian art – currently and over the last hundred twenty-five years. Art historical, anthropological, semiological, and various other approaches will be evaluated during the term. We will focus on reading authors discussing examples chosen from three millennia of art production. Recommended Course Background: At least one prior course in Egyptian art or archaeology.
Instructor(s): B. Bryan
Area: Humanities.

AS.133.600. Introduction To Middle Egyptian.
Introduction to the grammar and writing system of the classical language of the Egyptian Middle Kingdom (ca. 2135-2000 B.C.). In the second semester, literary texts and royal inscriptions will be read.
Instructor(s): R. Jasnow.
Prerequisites: Prereq: AS.132.600 or equivalent.
Area: Humanities.
AS.133.657. Creating an Egyptian Temple.
This class will challenge every participant to plan a temple environment for a particular deity. The readings, lectures, and discussions will cover the mythology around specific gods and how it influenced temple architecture, location, ritual, and festivals. It will survey the history of temple building in Egypt, the role of architecture and art -- particularly wall reliefs -- in communicating the functions of particular parts of temples. The aim is to help students understand what requirements an Egyptian temple needed to fulfill. Then each student will plan a temple for a chosen deity and explain to peers how it meets the ancient requirements.
Instructor(s): B. Bryan
Area: Humanities.

AS.133.706. Egyptian Funerary Arts in the Archaeological Museum.
This class will aim to cover the production and choice of funerary objects for Egyptian elite tombs in several eras of antiquity: the Middle and New Kingdoms, the Third Intermediate Period, and the Late Periods. Students will work with specific objects after learning generally about them, and they will carry out analyses of materials, pigments, construction methods, and erosion and degradation effects. They will create a virtual exhibition for the Museum's website and present their results for inclusion in the museum cataloguing project.
Instructor(s): B. Bryan; S. Balachandran.

AS.133.750. Seminar in Egyptian Art and Archaeology.
The theme for this course will be archaeology of the Mut precinct in Luxor where Johns Hopkins is excavating. Study of the comparative materials from other sites will be central with the publication of the work approaching.
Instructor(s): B. Bryan.

AS.133.751. Seminar in Egyptian Art and Archaeology: Old Kingdom Art.
This course will explore the artistic expression of Egyptian culture from the 3rd through the 6th Dynasties, ca. 2700-2100 B.C. Tombs, temples, statuary, and two-dimensional wall decoration provide a large visual vocabulary of Egyptian concepts. This class will look at these elements, separately and in combination in order to consider the intentions behind the art and evaluate the degree to which religious and ideological symbolism, known from later Egyptian art, should be understood in the early pyramid-building era.
Instructor(s): B. Bryan.

AS.134.604. The Book Of Job.
Reading the Hebrew text of the book of Job with attention to philology, textual criticism, and various aspects of interpretation.
Instructor(s): T. Lewis
Area: Humanities.

Translation, textual, philological, prosodic, literary and thematic analysis of Isaiah 40-55, with focus on how Hebrew verse as distinct from prose is constructed.
Instructor(s): D. Gropp
Area: Humanities.

A rapid reading course aimed at increasing proficiency in reading the Hebrew text of the book of Ezekiel. Various aspects of translation and interpretation will be studied (e.g., grammar, textual criticism, Philology) including literary, historical, and theological questions. Cross-listed with Jewish Studies.
Instructor(s): T. Lewis.

AS.134.610. Historical Hebrew Grammar.
Phonology and morphology of Biblical Hebrew.
Instructor(s): P. McCarter.

AS.134.612. Qumran Aramaic.
Readings in the Aramaic texts from Qumran, such as the Prayer of Nabonidus, the Genesis Apocryphon, Targum of Job, and the Enochic literature. Basic ability to read Aramaic is necessary.
Instructor(s): D. Gropp
Area: Humanities.

AS.134.621. Textual Criticism.
An introduction to the ancient witnesses of the biblical text and the principles of textual criticism.
Instructor(s): P. McCarter.

AS.134.630. Qumran (Dead Sea) Texts.
Instructor(s): P. McCarter.

Translation and analysis of selected texts in Biblical Hebrew giving attention to advanced features of grammar and syntax. Topic: "The Book of Judges"
Instructor(s): P. McCarter.

AS.134.652. Seminar in Ancient Israelite Religion.
Topics include history of scholarship, methodology, representations of deity, the aniconic tradition, solar Yahwism, sacred space, blood rituals, pasover, royal cult, family religion, divination, prophecy, incantations, etc.
Instructor(s): T. Lewis.

AS.134.655. Comparative Semitics.
Comparative and historical analysis of the Semitic languages in their Afro-Asiatic context.
Instructor(s): P. McCarter.

AS.134.660. History of Ancient Syria/Palestine.
A survey of the history of Ancient Syria and Canaan, including Ancient Israel.
Instructor(s): J. Lauinger.

AS.134.661. History: Ancient Syria-Palestine II.
A survey of the history of Ancient Syria and Cannan, including Ancient Israel.
Instructor(s): P. McCarter
Area: Humanities.

Instructor(s): P. McCarter.

Instructor(s): P. McCarter
Area: Humanities.

AS.134.720. Ugaritic I.
A year-long course studying Ugaritic language and literature. The first semester will focus on grammar and translating a representative selection of mythological texts. The second semester will concentrate on ritual texts. The course will also be epigraphic in nature using both conventional and digital techniques.
Instructor(s): T. Lewis.

AS.134.721. Ugaritic II.
A continuation of AS.134.720 with emphasis on the mythological and ritual texts from Ugarit. A digital epigraphy lab will also form part of the course.
Instructor(s): W. Reed
Area: Humanities.

AS.134.744. Survey Of Aramaic Texts.
Instructor(s): T. Lewis
Area: Humanities.
An advanced course in Aramaic devoted to the study of Old Aramaic inscriptions. We will be translating and analyzing a selection of texts from Northern Syria (e.g. Bar-Rakib; Hadad; Kuttabmuwa, Nerab, Panamuwa, Sefire, Zakku), Southern Syria (e.g. Bar-Hadad/Melqart Stela, Hazael, Tel Dan) and Northern Mesopotamia (e.g. Tell FakhrIyeh). Students will be expected to vocalize such texts as a study in historical and comparative linguistics and to clarify their understanding of the morphology and syntax.
Instructor(s): T. Lewis
Area: Humanities.

Cross Listed Courses
History of Art
AS.010.105. Art of the Ancient Americas. 3.0 Credits.
This course provides a basis for the study of ancient Americas art and architecture and a broad exposure to the issues relevant to its study. Select visual arts within the primary regions of Mexico and Central America will be emphasized. In conjunction with the Baltimore Museum of Art (BMA) and the JHU Archaeological Museum (JHAM), students will participate in on-site study of the collections.
Instructor(s): L. Deleonardis
Area: Humanities.

AS.010.236. Palaces, Temples and Tombs in Mesopotamia. 3.0 Credits.
Mesopotamia, the “land between the rivers,” is considered the cradle of civilization. Its earliest urban centers appeared by 3500 BCE in the region of modern-day Iraq, Iran, and Syria. Along with urbanism came the emergence of temples and palaces as large-scale elite institutions (along with written records). Their arts manifest some of the earliest complex representations and follow a vibrant course for several millennia. The first empires marshaled large armies and amassed fabulous riches. Complex religious and ritual ideologies were expressed in the art and architecture. And all has been revealed by the archaeologist’s spade. This class explores the art and architecture of Mesopotamia (ancient Sumer, Babylonia and Assyria) from 3500 to 330 BCE. Emphasis is placed on the relationship between the arts and ancient society in order to enable students to acquire the skills for accessing and appreciating ancient civilizations.
Instructor(s): M. Feldman
Area: Humanities.

AS.010.301. Art and Interactions in the Eastern Mediterranean from 2000-500 BCE. 3.0 Credits.
The Mediterranean Sea has always acted as a connector for the many great civilizations that flourished around its shores. From 2000 to 500 BCE, these interactions were particularly dynamic, resulting in a diversity of arts including painting wall frescoes, precious jewelry, and elaborate furnishings and weaponry. This course examines the arts of the interactions among the Egyptians, Near Easterners, and Greeks, considering the role of artistic products in intercultural relations.
Instructor(s): M. Feldman
Area: Humanities.

AS.010.307. Diplomats, Dealers, and Diggers: The Birth of Archaeology and the Rise of Collecting from the 19th c. to Today. 3.0 Credits.
The development of archaeology in the Middle East – its history of explorers, diplomats, missionaries and gentlemen-scholars – profoundly shaped the modern world, from the creation of new museums and the antiquities market to international relations and terrorism.
Instructor(s): M. Feldman
Area: Humanities.

AS.010.315. Art of the Assyrian Empire, 1000-600 BCE. 3.0 Credits.
The Assyrian Empire dominated the ancient world from 1000-612 BCE, stretching from Iran to Egypt and laying the foundation for the later Persian and Macedonian empires. With imperial expansion came an explosion of artistic production ranging from palace wall reliefs to small-scale luxury objects. This course provides an integrated picture of the imperial arts of this first great empire, situating it within the broader social and political contexts of the first millennium BCE.
Instructor(s): M. Feldman
Area: Humanities.

AS.010.389. The Stone and the Thread. 3.0 Credits.
Inka architecture in its social, historical and cultural contexts forms the basis of this course. Shared forms and ideas implicit in the fiber arts offer comparative points for analysis and discussion.
Instructor(s): L. Deleonardis
Area: Humanities
Writing Intensive.

AS.010.398. Tombs for the Living. 3.0 Credits.
Centering on the tomb as the unit of analysis, this course examines the cultural and material aspects of death and funerary ritual. Draws on case studies from North America, Mesoamerica, and the Andes. Collections study in museums.
Instructor(s): L. Deleonardis
Area: Humanities.

AS.010.421. Creating Sacred Space in the Ancient and Medieval World. 3.0 Credits.
What makes a space sacred? How is it different from other spaces? This seminar explores the various means - visual, artifactual, architectural, and performative - of creating sacred space in the ancient and medieval worlds of the Near East and Mediterranean. Possible cases for study include early Sumerian temples, state-sponsored Assyrian temples, votive deposits, Greek sanctuaries, sanctuaries and landscape, early medieval Jewish, Christian, and Islamic cult buildings, cave sanctuaries, pilgrimage sites, icons and sacred space.
Instructor(s): M. Feldman
Area: Humanities
Writing Intensive.

AS.010.470. Power and Politics in Assyrian Art. 3.0 Credits.
Assyria, centered in northern Iraq, created one of the world’s first great empires that dominated the ancient Near Eastern world from around 900 to 612 BCE. In concert with imperial expansion came an explosion of artistic production ranging from palace wall reliefs to small-scale luxury objects. This seminar examines the close relationship between the arts and politics in the Assyrian empire. Some themes that will be explored are: historical narrative, text and image, portable luxury arts and gender, politics and religion. The course will engage in close visual analysis of the ancient materials and readings of critical scholarship.
Instructor(s): M. Feldman
Area: Humanities
Writing Intensive.
Seals, artifacts associated with property, oversight, and control, were used in the ancient Near East as early as the 7th millennium BCE. These took the form of a single carved surface that could be impressed in a malleable substance such as clay to leave behind a physical mark. With the growth of large-scale urbanism and, most critical, the invention of cuneiform writing, a spool-shaped seal carved around its circumference appeared. This quintessentially Mesopotamian artifact – the cylinder seal – persisted until cuneiform writing died out around the beginning of the Common Era. The over-three-thousand-year span of the cylinder seal provides remarkably rich evidence for the ancient civilizations of the Near East.
Instructor(s): M. Feldman
Area: Humanities

The arts of the Near East, Aegean and Egypt are typically taught separately from one another. However, the Mediterranean Sea has always served as a connector, and the diverse cultures of these areas were in close contact with one another for much of their histories. During the Bronze Age (3000 to 1200 BCE), these interactions were particularly dynamic, resulting in a diversity of arts including wall frescoes, precious jewelry, and elaborate furnishings and weaponry. This course examines the arts of the interactions among Near Easterners, Greeks, Egyptians and others. It focuses special attention on the role of artistic products in intercultural relations, including trade, diplomacy, war and imperialism. Students are not expected to have extensive knowledge of all the areas, although some experience in at least one of them will be helpful. The course will interweave establishing a knowledge base necessary to tackle this topic with broader conceptual concerns and interdisciplinary approaches (art historical, archaeological, anthropological, and historical). There will be a final paper.
Instructor(s): E. Anderson; M. Feldman
Area: Humanities

Assyria, centered in northern Iraq, created one of the world’s first great empires that dominated the ancient Near Eastern world from around 900 to 612 BCE. In concert with imperial expansion came an explosion of architectural and artistic production including entire cities and their ornamentation. This seminar examines the close relationship between the arts and politics in the Assyrian empire. The course will engage in close visual analysis of the ancient materials and critical readings of scholarship. There will be a final project.
Instructor(s): M. Feldman
Area: Humanities

AS.040.363. Craft and Craftpersons of the Ancient World: Status, Creativity and Tradition. 3.0 Credits.
This course explores the dynamic work and social roles of craftpersons in early Greece, the eastern Mediterranean and Near East. Readings and discussion will query the identities and contributions of these people—travelers, captives, lauded masters, and even children—through topics including gender, class, and ethnicity. Special focus on late third-early first millennia BCE; local field trips.
Instructor(s): E. Anderson
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.040.366. The Archaeology of Ancient Cyprus: Investigating a Mediterranean Island World in the JHU Museum. 3.0 Credits.
This course explores the visual and material worlds of ancient Cyprus from the earliest human evidence through the Iron Age. Course topics will include the island’s unique position between the Aegean and Near East and how this has impacted both Cyprus’ ancient past and the way in which it has been conceived in the modern world. Class involves regular analysis of artifacts based in the Archaeological Museum.
Instructor(s): E. Anderson
Area: Humanities

History
AS.100.234. The Making of the Muslim Middle East, 600-1100 A.D.. 3.0 Credits.
A survey of the major historical transformations of the region we now call the "Middle East" (from late antiquity through the 11th century) in relation to the formation and development of Islam and various Muslim empires. Cross-listed with Near Eastern Studies and the Program in Islamic Studies.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.362. Children and Childhood in the Middle Ages. 3.0 Credits.
Seminar on the history of childhood and ideas of childhood around the medieval Mediterranean; themes include child custody; medieval education and punishment; parent-child private letters; child mortality and the arts of bereavement/consolation. Cross-listed with the Program in Islamic Studies and Near Eastern Studies.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.374. Conquest, Conversion, and Language Change in the Middle Ages. 3.0 Credits.
Examines cases of imperial conquest and attendant religious transformation (Christianization; Islamization) and language change in the medieval Mediterranean (Europe and Middle East), e.g. transition from Latin to vernacular languages in Europe; Arabization; translation movements.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.383. Conversion and Apostasy in the Middle Ages. 3.0 Credits.
Compares religious transformation in medieval Europe and the Middle East (ca. 600-1500), including conquest and conversion; conversion narratives; apostasy, martyrdom and other encounters between medieval Jews, Christians, and Muslims.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.615. States, Scribes, and Archives: Medieval Arabic Documentary Cultures.
A historical survey of the bureaucratic practices of medieval Islamic states (in comparative perspective); includes close readings of primary official documents, e.g. petitions, edicts, fiscal receipts, and administrative reports.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

AS.100.646. Marvels and Wonder in medieval Arabic Culture.
Explores the concept of marvels in different genres of medieval Arabic culture: Qur’anic exegesis; travel literature; ‘ethnography; cosmography and geography; marvels of the natural world (e.g. hermaphrodites); Muslim views of pre-Islamic (‘pagan’) monuments.
Instructor(s): T. El-leithy
Area: Humanities, Social and Behavioral Sciences.

Archaeology
AS.136.101. Introduction To Archaeology. 3.0 Credits.
An introduction to archaeology and to archaeological method and theory, exploring how archaeologists excavate, analyze, and interpret ancient remains in order to reconstruct how ancient societies functioned. Specific examples from a variety of archaeological projects in different parts of the world will be used to illustrate techniques and principles discussed.
Instructor(s): G. Schwartz
Area: Humanities, Social and Behavioral Sciences.

Earth Planetary Sciences
AS.270.205. Introduction to Geographic Information Systems and Geospatial Analysis. 3.0 Credits.
The course provides a broad introduction to the principles and practice of Geographic Information Systems (GIS) and related tools of Geospatial Analysis. Topics will include history of GIS, GIS data structures, data acquisition and merging, database management, spatial analysis, and GIS applications. In addition, students will get hands-on experience working with GIS software.
Instructor(s): X. Chen
Area: Engineering, Natural Sciences.

Program in Museums and Society
AS.389.205. Examining Archaeological Objects. 3.0 Credits.
This course considers the role of materials in the production, study and interpretation of objects by examining artifacts from the Johns Hopkins Archaeological Museum. Students will consider materials such as ceramics, stone, metal, glass, wood and textiles, and visit artists’ studios to gain an understanding of historical manufacturing processes. M&S practicum course. Cross-listed with Archaeology, Near Eastern Studies, Classics, and History of Art.
Instructor(s): S. Balachandran
Area: Humanities.

AS.389.315. Ancient Color: The Technologies and Meanings of Color in Antiquity. 3.0 Credits.
What role did the colorful surfaces of sculptures, vessels and textiles play in the ancient world? We examine historical texts and recent scholarly and scientific publications on the technologies and meanings of color in antiquity, and use imaging and analytical techniques to study polychromed objects from the Johns Hopkins Archaeological Museum.
Instructor(s): S. Balachandran
Area: Humanities, Social and Behavioral Sciences.

Neuroscience
http://krieger.jhu.edu/neuroscience

Neuroscience is the study of the nervous system and how it functions. Neuroscientists study the nervous system from all levels, ranging from molecules interacting with cell membranes to brain systems subserving cognitive functions such as language. Dramatic progress has been made at all levels, and the field continues to grow. On the Homewood campus, researchers studying the nervous system are in the departments of Biology, Biomedical Engineering, Biophysics, Cognitive Science, and Psychological and Brain Sciences and in the Krieger Mind/Brain Institute. Their presence provides the opportunity for an innovative, interdepartmental program which offers a broad overview of the neuroscience field, as well as more advanced training in one of four focus areas.

Cellular and Molecular Neuroscience (CM) focuses on the mechanisms by which information flows within and between cells in the nervous system, and the mechanisms through which the cellular structure of the nervous system develops and is maintained. Topics include the molecular basis of membrane permeability, action potentials, sensory transduction, synaptic transmission, neuronal modulation, mechanisms of drug action, and the molecular basis of genetic disorders of the nervous system.

Cognitive Neuroscience (CG) focuses on how cognitive functions, such as vision or language, are implemented by the brain. Drawing upon a variety of techniques for probing the working brain at cognitive and neural levels, including functional neuroimaging, analysis of cognitive impairments in brain-damaged patients, and electrophysiological techniques, research in cognitive neuroscience seeks to relate mental representations and computations to brain mechanisms and processes.

Computational Neuroscience (CP) focuses on applying mathematical tools and theories to investigate brain function. This discipline incorporates a diverse set of approaches from mathematics, physics, engineering, and computer science, to understand how the nervous system processes information. Such principles are used to answer questions across a variety of domains of neuroscience: cellular/molecular, systems and circuits, behavioral and cognitive.

Systems Neuroscience (ST) seeks to relate brain structure and functioning to behaviors and related physiological processes. Research in this area explores the description and analysis of neural circuits. This includes identifying the brain nuclei and interconnections making up a circuit, identifying and investigating the implicated neurotransmitters, and characterizing the intrinsic and extrinsic factors that modulate the development and adult functioning of the circuit. Topics as diverse as learning and memory, communication, sensory systems, and motivated behaviors (e.g., reproduction, feeding, and aggression) are explored from this perspective.

Neuroscience Program Committee
The Neuroscience Program Committee coordinates course offerings, oversees the program’s interdepartmental courses, reviews and updates the administration of the program, makes decisions about admission to the B.S./M.S. program, approves proposed research programs and mentors for students in the B.S./M.S. mentored research program, and evaluates the final reports and presentations from the research year.

Undergraduate Programs
The neuroscience major consists of two degree programs: a four-year B.S. based primarily on course work and 6 credits of research; and a five-year concurrent B.S./M.S. involving additional course work and a yearlong intensive laboratory experience. (Under special circumstances, a student may be able to complete the B.S./M.S. program in less than five years.) Both programs are designed to provide rigorous preparation
for advanced study in either a Ph.D., M.D. or Ph.D./M.D. programs. The concurrent B.S./M.S. program accepts students every spring semester.

Additional information regarding the undergraduate degree and the B.S./M.S. programs is available through our website at http://krieger.jhu.edu/neuroscience. You may also contact our Academic Program Administrator, Linda White, mailto:linda.m.white@jhu.edu (linda.m.white@jhu.edu) or 410-516-6196.

**Requirements for the B.S. Degree**
Also see Requirements for a Bachelor’s Degree (p. 7).

### General Information
- Students are encouraged to complete an optional introductory course in their freshman year, such as AS.200.141 Foundations of Brain, Behavior and Cognition or AS.050.105 Introduction to Cognitive Neuropsychology.
- Students interested in attending medical school will need to take a second semester of organic chemistry and its corresponding laboratory to meet medical school admission requirements; however, these courses are not major requirements.
- Students are required to select their advanced neuroscience elective courses from one of four approved focus areas: cellular and molecular neuroscience, cognitive neuroscience, computational neuroscience, or systems neuroscience. Approved courses fulfilling this requirement are found on the neuroscience website (http://krieger.jhu.edu/neuroscience/bs-program/courses) or in the schedule of classes.
- To apply towards the major, all courses must be taken for a letter grade and a grade of C- or better is required.

### Advanced Neurosciences Elective Courses and Focus Area
Nine credits of 300-level or higher approved courses from one of four focus areas: systems neuroscience, cognitive neuroscience, computational neuroscience, or cellular and molecular neuroscience.

Three credits of 300-level or higher approved course outside of focus area selected above.

If pursuing the Computational Neuroscience focus area, EN.553.291 is required in addition to the other 12 credits required of the focus area (or the combo of AS.110.201/212 and AS.110.302 may be used).

If pursuing the Cellular and Molecular Neuroscience focus area, AS.020.306 and AS.020.316 must be selected as one of the two required biology courses with lab.

### Research **
Six credits of neuroscience research

* For students with AP Biology credit, they may use only one course and its lab from those credits towards this requirement. Therefore, these students must take at least one biology course and its lab at JHU. Students who elect to take General Biology I or II with its lab will lose the corresponding AP credits. Students should also refer to AP credit policies for additional details around the use of AP Biology credits.

** Research must be conducted in one of the neuroscience laboratories participating in the program. Students must register for AS.080.500 Scientific Communication: Neuroscience concurrently with neuroscience research each term they register for research until they have completed 6 credits of research.
Sample Program
The following course sequence is only a suggestion and is based on the assumption that there are no AP/IB/TR credits applied. Please consult with your faculty advisor when selecting and registering for classes, as there are multiple ways to complete the major.

**Courses**

**AS.080.203. Neuroscience: Cognitive. 3.0 Credits.**

This course surveys theory and research concerning how the human brain carries out mental processes. The sections of this course correspond with the sections listed for AS.020.203. All sections will meet together on exams day and guest lecture days. Co-listed as AS.050.203 in Cognitive Science. It's strongly recommended that students have background in one of the following courses: AS.050.101 OR AS.050.105 OR AS.200.141.

Instructor(s): Staff  
Area: Natural Sciences, Social and Behavioral Sciences.

**AS.080.250. Neuroscience Laboratory. 3.0 Credits.**

This course will give students the "hands-on" experience of the interdisciplinary nature of neuroscience. Students will use anatomical and neuro-physiological techniques to understand the basic underlying principles of neuroscience. There will be a total of 13 class meetings during the summer session. Course open to JHU undergraduates only.

Prerequisites: (AS.080.305 AND AS.080.306) OR AS.200.141

Instructor(s): J. Trageser; L. Gorman  
Area: Natural Sciences.

**AS.080.260. Bridging the gap between Biology and Statistics. 1.0 Credit.**

This course is designed to support the lectures and assignments in Probability and Statistics in Life Sciences, EN.553.211. This one-hour a week course is led by a behavioral biology professor with extensive expertise in statistics and mathematics. The primary goal of this course is to increase success and understanding of EN.553.211 by bridging the gap between theoretical statistics and biological thinking. In addition, when possible, examples and direct applications in neuroscience and behavioral biology will be presented to provide a context for EN.553.211 materials.

Instructor(s): K. Bohn.

**AS.080.301. Behavioral Assessment of Animal Models of Cognition and Neuropsychiatric Disorders. 3.0 Credits.**

What does a rat exploring it’s environment tell us about memory? How can a mouse help us better understand schizophrenia? This course will focus on procedures that are routinely used to study behavior in animal models of cognition and neuropsychiatric disorders. Topics will include motor function, emotional and motivational states, disorders such as dementia and schizophrenia, among others. Throughout the course, we will read and discuss original research articles to illustrate and compare some of the measures and results from the various procedures.

Prerequisites: Students may not have taken AS.200.302; AS.200.141 OR (AS.080.305 and AS.080.306), OR by instructor permission.

Instructor(s): D. Smith  
Area: Social and Behavioral Sciences.

**AS.080.303. Structure of the Nervous System. 3.0 Credits.**

This course takes a structural biological approach to studying the nervous system. In using a systems approach it provides students of cellular-molecular and computational neuroscience with a thorough introduction to functional, microscopic and submicroscopic organization of the brain, spinal cord and peripheral nervous system.

Prerequisites: AS.080.305 AND AS.080.306

Instructor(s): S. Hendry  
Area: Natural Sciences.
AS.080.304. Neuroscience Learning and Memory. 3.0 Credits.
This course is an advanced survey of the scientific study of learning and memory. Different perspectives will be used to review the science of learning and memory including the cellular-molecular basis of synaptic plasticity, the functional circuitry involved in learning and memory and memory systems in the brain. The course is designed to provide a deep understanding of the issues and current debates in learning and memory research and focuses specifically on animal models of memory and memory impairment. This is an interactive lecture course with a strong emphasis on student participation.
Instructor(s): A. Bakker
Area: Natural Sciences.

AS.080.305. Neuroscience: Cellular and Systems I. 3.0 Credits.
(Formerly Nervous Systems I) Neuroscience: Cellular and Systems I is a fully integrated, two-semester course that surveys the cellular and molecular biology of neurons as well as the structure and function of the nervous system. Students must register for Neuroscience: Cellular and Systems II offered in the second term. Course open to JHU undergraduates only.
Prerequisites: AS.080.203 OR AS.050.203 OR AS.200.141 or 080.105 or Permission
Instructor(s): H. Zhao; S. Hendry
Area: Natural Sciences.

AS.080.306. Neuroscience: Cellular and Systems II. 3.0 Credits.
(Formerly Nervous Systems II) Neuroscience: Cellular and Systems II uses the functional organization of the somatosensory system as a means to examine mechanisms of neural development. Generation and maturation of neurons, guidance of axons, formation of synapses and the regressive events that shape the adult nervous system will be examined. At the same time we will explore the structure and function of brain regions that allow us to feel pain and temperature, detect vibration, recognize shape and perceive where we are in space. Finally, the single-neuron events that lead to adaptive changes in function will be explored in the context of central nervous system control of movement and of higher order functions of speech and memory. Students who do not register for Neuroscience: Cellular and Systems I offered during the first term should not register for this class.
Prerequisites: AS.080.305
Instructor(s): H. Zhao; S. Hendry
Area: Natural Sciences.

AS.080.308. Neuroeconomics. 3.0 Credits.
Every day decisions often require us to weigh the costs and benefits of engaging in a particular course of action in order to obtain some expected outcome. Unfortunately, we often lack the information necessary to obtain our desired goal with complete certainty. Economists have long been interested in understanding human decision-making under these circumstances. In parallel, neuroscientists have made great strides at describing the underlying neural basis of simple decision-making. However, despite much progress in both fields, our understanding of how the brain makes decisions is incomplete. In order to strengthen and further research in both fields, the interdisciplinary field of Neuroeconomics arose. This course will survey the field of Neuroeconomics focusing on theoretical concepts developed by economists and the role these theories are playing in guiding current experimental neuroscience. Recommended Course Background: AS.080.305 and AS.080.306 or AS.020.312 and AS.020.306 or AS.200.141 and AS.020.306 or permission.
Prerequisites: Pre-reqs: AS.080.306 OR AS.200.141 OR AS.020.312
Instructor(s): J. Trageser
Area: Natural Sciences.

AS.080.310. Communication Between Cells: The Synapse as a Model System. 3.0 Credits.
Biochemistry (020.305) & Cell Biology (020.306) or 080.304 All cells inform neighbors of their own activities. That act of communication frequently requires the formation of cell junctions across which information can pass. One of the best studied of the means of communication between cells is the synapse between neurons. This course examines the synapse in depth. both as a means to look at the nature of neuronal communication and as a model for communication across cells of all types. Lectures on the physiology, structure, biochemistry and cell biology of synapses will be used as an introduction to the function of synapses in learning and memory and the effect on synapses of drugs and disease. (CM)
Prerequisites: Pre-reqs: AS.020.306 OR ( AS.080.304 AND AS.080.306 )
Instructor(s): A. Kirkwood; H. Lee
Area: Natural Sciences.

AS.080.317. Developmental Neurobiology: Signaling in Development and Disease. 3.0 Credits.
An advanced undergraduate level seminar on current topics on signal transduction mechanisms underlying neuronal morphology, development and function. The proper functioning of the nervous system relies on the establishment of precise neuronal circuits through a developmental program including proliferation, neuronal migration, axonal growth, and neuronal survival. This course pertains to the extracellular cues and downstream neuronal signaling pathways that coordinate these key events during neuronal development. The course will also cover the role of aberrant signaling mechanisms in neuronal degeneration and disease. Recommended Course Background: AS.020.305 and AS.020.306.
Prerequisites: Pre-req: AS.080.306
Instructor(s): R. Kuruvilla
Area: Natural Sciences.
AS.080.320. The Auditory System. 3.0 Credits.
This course will cover the neuroanatomy and neurophysiology of the human auditory system from the ear to the brain. Behavioral, electrophysiological, and neuroimaging methods for assessing peripheral and central auditory function will be discussed. Acquired and developmental disorders of auditory function will be reviewed using clinical case studies.
Prerequisites: AS.080.305 OR AS.080.203 OR AS.050.203 OR AS.200.141 OR AS.020.312 or permission of the instructor.
Instructor(s): D. Boatman
Area: Natural Sciences.

AS.080.321. Computational Neuroscience. 3.0 Credits.
This course is designed to give students an overview of computational neuroscience. The topics discussed will cover many exciting domains of the field including neural coding, decision-making, learning, attention and connectomics. Lectures will be complemented with hands-on experience working with computational models using Matlab and/or other programming language. The overarching goal of the course is to increase overall literacy in the field of computational neuroscience and to gain an appreciation of the interplay between experimental and theoretical neuroscience.
Prerequisites: EN.553.291 OR (AS.110.302 AND (AS.110.201 OR AS.110.212)). Students should be familiar with programming.
Instructor(s): J. Trageser
Area: Natural Sciences.

AS.080.322. Cellular and Molecular Biology of Sensation. 3.0 Credits.
Leading scientists in sensory biology from the Johns Hopkins community will present the most current knowledge in the cellular and molecular biology of sensation. A lecture and a student presentation of an exemplar manuscript will be presented each week on a different topic of sensory systems.
Instructor(s): P. Fuchs
Area: Natural Sciences.

AS.080.326. Neurobiology and Diseases of the Peripheral Nervous System. 3.0 Credits.
This course will cover neurobiology and disorders of the peripheral nervous system (PNS). A particular emphasis will be on cellular interactions within the PNS and with target tissues. For example, the two principal components of the peripheral nerves- axons and Schwann cells-have intimate and continuous cellular communications that are critical for physiological function of the PNS. The course will teach how these cellular interactions are developed, maintained throughout life, and are impacted by injury and diseases.
Prerequisites: AS.080.305 AND AS.080.306
Instructor(s): M. Farah
Area: Natural Sciences
Writing Intensive.

AS.080.328. Behavioral Neuroscience Lab. 3.0 Credits.
Class designed to give students first-hand knowledge of the behavioral procedures and techniques used to study behavior in the field of neuroscience. Students will gain hands-on experience by carrying out some of the behavioral tasks used to assess animals under specific behavioral domains, discuss why certain aspects (i.e. genotype, environment conditions, group size, etc.) are important factors to consider when designing, planning, and carrying out such experiments, and learn the relevance of behavioral research in translational medicine.
Prerequisites: AS.200.141 OR AS.200.302 OR AS.080.301 OR (AS.080.305 AND AS.080.306) or permission by instructor.
Instructor(s): D. Smith
Area: Natural Sciences.

AS.080.330. Brain Injury & Recovery. 3.0 Credits.
This course investigates numerous types of brain injuries and explores the responses of the nervous system to these injuries. The course’s primary focus is the cellular and molecular mechanisms of brain injury and the recovery of function. Discussions of traumatic brain injury, stroke, spinal cord, and tumors, using historical and recent journal articles, will facilitate students’ understanding of the current state of the brain injury field. Cross-listed with Psychological and Brain Sciences and Behavioral Biology.
Prerequisites: (AS.080.305 AND AS.080.306) OR (AS.020.312 OR AS.020.306) OR (200.141 and 020.306) OR Permission of Instructor
Instructor(s): L. Gorman
Area: Natural Sciences
Writing Intensive.

AS.080.335. Great Discoveries in Neuroscience. 3.0 Credits.
This course examines the historical and intellectual context of selected, key advances in neuroscience, how they were made and the impact they had on an understanding of the nervous system. Particular attention will be paid to advances in cellular and molecular neuroscience. Among the topics covered will be the discovery of monoamine neurotransmitters and of endocannabinoids, the role of neurotrophins in neural development, and prion-based diseases of the brain.
Prerequisites: Pre-reqs: AS.080.306
Instructor(s): J. Baraban
Area: Natural Sciences

AS.080.345. Science of Learning. 3.0 Credits.
Can we know about the brain guide how we learn or teach in our schools? This seminar course is designed to address this question. In this course we will focus on the science of what we know about learning and teaching (and not the politics) to see if we can actually use the research to “optimize learning in society”. As we read the literature, we will look at some of the “neuromyths” that have been propagated thus far and discuss how to avoid creating new neuromyths by effectively communicating the research.
Prerequisites: Pre-reqs: AS.080.306 OR AS.200.141
Instructor(s): L. Gorman
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive.

AS.080.357. Developmental Neuroscience. 3.0 Credits.
The developmental neuroscience course will cover principles of neural development. The course will focus on major events in neural development: patterning and growth of the nervous system, neuronal determination, axonal navigation and targeting, neuron survival and death, synapse function, developmental plasticity, and behavioral and cognitive development.
Prerequisites: AS.080.305 AND AS.080.306
Instructor(s): M. Farah.
AS.080.360. Diseases & Disorders of the Nervous System. 3.0 Credits.
Prerequisites: Pre-reqs: (EN.580.421 AND EN.580.422) OR (AS.020.305 AND AS.020.306) OR AS.080.306 OR By Permission.
Instructor(s): K. Wagner; S. Hendry
Area: Natural Sciences.

AS.080.362. Neurobiology of Hearing. 3.0 Credits.
The course focuses on sound processing, including current research topics in Auditory Neuroscience, including synaptic physiology, neural circuitry, acoustics, physiology, and behavior. Course taught in Salamanca. This course fulfills upper-level Neuroscience electives. Course must be taken for a grade.
Instructor(s): Staff
Area: Natural Sciences
Writing Intensive.

AS.080.366. Neuroscience of Pain. 3.0 Credits.
This course is a systems-oriented course focusing on the basic neural processing of pain signals in both the spinal cord and the brain. Class lectures will cover the anatomical and molecular basis for the transmission and perception of pain signals, basic concepts such as allodynia, hyperalgesia, peripheral and central sensitization, remodeling, the pathophysiology of chronic pain disorders and the cognitive and emotional aspects of pain. We will also discuss the regulation of pain signals by descending systems, and current practices and new advances in the treatment of pain.
Prerequisites: Pre-reqs: AS.080.306 OR AS.020.312 OR AS.020.316 OR AS.200.141 OR INSTRUCTOR'S PERMISSION
Instructor(s): H. Adwanikar
Area: Natural Sciences, Social and Behavioral Sciences.

AS.080.370. The Cerebellum: Is it just for motor control?. 3.0 Credits.
The cerebellum is traditionally thought to be involved in movement and motor control, and observations of patients with cerebellar damage do in fact show motor deficits. However, since the proliferation of functional MRI, cerebellar activations have been observed in a surprising number of brain activation studies that were designed to investigate the neural correlates of cognitive function. Over the past 2 decades, an increasing number of investigators have tried to characterize the role of the cerebellum in cognitive function. Through lectures and reading discussions this course will survey cerebellar circuitry, neuroimaging and neuromodulatory methods for investigating the cerebellum, and traditional and non-traditional functions of the cerebellum, including cerebellar involvement in cognitive functions such as language, working memory, and executive control.
Prerequisites: Pre-reqs: (AS.080.306 AND AS.080.203) OR AS.050.203
Instructor(s): J. Desmond
Area: Natural Sciences, Social and Behavioral Sciences.

AS.080.400. Research Practicum: Language Disorders-Community Based Learning. 2.0 Credits.
This course provides the opportunity to learn about adult aphasias; language disorders which are one of the most common consequence of stroke. You will receive training in Supportive Communication Techniques and work as a communication partner with an individual with aphasia for two hours per week. Three class meetings for orientation and reading assignments will be held on campus; training and practicum will be conducted at a local aphasia support center. Transportation required. A valid driver's license for zip car use. This is a two (2) credit practicum.
Instructor(s): B. Rapp
Area: Natural Sciences, Social and Behavioral Sciences.

AS.080.411. Advanced Seminar: Neuroscience I. 3.0 Credits.
For students in the first semester of the BS/MS Program. Instructor permission required.
Instructor(s): J. Baraban
Area: Natural Sciences.

AS.080.412. Advanced Seminar: Neuroscience II. 3.0 Credits.
For students in the 2nd semester of the BS/MS Program.
Instructor(s): J. Baraban
Area: Natural Sciences.

AS.080.413. Advanced Seminar: Neuroscience III. 3.0 Credits.
For students in the 3rd semester of the BA/MS Program.
Instructor(s): J. Baraban
Area: Natural Sciences.

AS.080.500. Scientific Communication: Neuroscience. 0.5 Credit.
Scientific communication is crucial to advancing science. The Scientific Communication section is taken concurrently with Neuroscience Research and consists of a two hour research orientation session held at the beginning of the semester and a two hour exit session held at the end of the semester. The student is also expected to meet with their lab supervisor or attend a lab meeting once a week to understand the research the lab is currently working on and receive feedback on the work they are doing. See special notes section for specific meeting day/time. Students must sign up for Scientific Communication prior to signing up for NS Research until they complete their 6 credits of research. See Neuroscience Research website for more details.
Corequisites: Co-reqs: AS.080.531 OR AS.080.541 OR AS.080.551 OR AS.080.561

AS.080.511. Independent Study. 1.0 - 3.0 Credits.
Instructor(s): L. Gorman.

AS.080.512. Independent Study. 0.0 - 3.0 Credits.
Instructor(s): L. Gorman.

AS.080.531. Research Neuroscience-Freshmen. 1.0 - 3.0 Credits.
Corequisites: AS.080.500 (Scientific Communication)
Instructor(s): Staff.

AS.080.534. Neuroscience Research- Freshmen. 0.0 - 3.0 Credits.
Corequisites: AS.080.500
Instructor(s): Staff.

AS.080.541. Research Neuroscience - Sophomores. 1.0 - 3.0 Credits.
Corequisites: AS.080.500 (Scientific Communication)
Instructor(s): Staff.

AS.080.544. Neuroscience Research-Sophomores. 0.0 - 3.0 Credits.
Corequisites: AS.080.500
Instructor(s): Staff.

AS.080.550. Neuroscience BS/MS Summer Research - Seniors.
This summer research course is only for Neuroscience BS/MS students that are seniors in the program over the summer.
Instructor(s): J. Baraban.

AS.080.551. Research Neuroscience for Juniors. 1.0 - 3.0 Credits.
Corequisites: AS.080.500 (Scientific Communication)
Instructor(s): Staff.

AS.080.554. Neuroscience Research - Juniors. 0.0 - 3.0 Credits.
Corequisites: AS.080.500
Instructor(s): Staff.

AS.080.561. Research Neuroscience for Seniors. 1.0 - 3.0 Credits.
Corequisites: AS.080.500 (Scientific Communication)
Instructor(s): Staff.
Instructor(s): J. Trageser.

AS.080.564. Neuroscience Research - Seniors. 0.0 - 3.0 Credits.
Corequisites: AS.080.500
Instructor(s): Staff.

AS.080.572. Direct Readings/Independent Study. 0.0 - 3.0 Credits.
Instructor(s): J. Baraban; L. Gorman.

AS.080.582. Neuroscience: Internship. 1.0 - 3.0 Credits.
Instructor(s): L. Gorman.

AS.080.590. Independent Study. 1.0 - 3.0 Credits.
Corequisites: AS.080.500
Instructor(s): J. Baraban; L. Gorman.

AS.080.592. Research-Freshmen. 1.0 - 3.0 Credits.
Corequisites: AS.080.500
Instructor(s): Staff.

AS.080.594. Research-Sophomores. 1.0 - 3.0 Credits.
Corequisites: AS.080.500
Instructor(s): Staff.

AS.080.595. Neuroscience: Internship. 1.0 - 3.0 Credits.
Corequisites: AS.080.500
Instructor(s): L. Gorman.

AS.080.596. Research-Juniors-Summer. 1.0 - 3.0 Credits.
Corequisites: AS.080.500
Instructor(s): Staff.

AS.080.597. Internship: Neuroscience. 1.0 - 3.0 Credits.
Instructor(s): L. Gorman.

AS.080.598. Research-Seniors-Summer. 1.0 - 3.0 Credits.
Corequisites: AS.080.500
Instructor(s): Staff.

AS.080.600. Neuroscience Research: BA/MS Undergraduate. 0.0 - 3.0 Credits.
This course is ONLY for Neuroscience BA/MS students that are in the program during their undergraduate senior year. This course is similar to the course that the BA/MS graduate students take but is for BA/MS Seniors in their 7th semester summer period.
Instructor(s): J. Baraban.

AS.080.601. Neuroeconomics -Graduate Level. 0.0 - 3.0 Credits.
Every day decisions often require us to weigh the costs and benefits of engaging in a particular course of action in order to obtain some expected outcome. Unfortunately, we often lack the information necessary to obtain our desired goal with complete certainty. Economists have long been interested in understanding human decision-making under these circumstances. In parallel, neuroscientists have made great strides at describing the underlying neural basis of simple decision-making. However, despite much progress in both fields, our understanding of how the brain makes decisions is incomplete. In order to strengthen and further research in both fields, the interdisciplinary field of Neuroeconomics arose. This course will survey the field of Neuroeconomics focusing on theoretical concepts developed by economists and the role these theories are playing in guiding current experimental neuroscience. Only graduate students can register for this course. Instructor signature is required.
Instructor(s): J. Trageser.

AS.080.610. Experiential Learning: HopKids – Kennedy Krieger Institute. 0.0 - 3.0 Credits.
This experiential learning experience provides the opportunity to learn and interact with children recovering from brain, spinal, and musculoskeletal injuries. Students will travel to the Kennedy Krieger Institute to volunteer in the Child Life Department where they will participate in a variety of therapeutic activities including playing with the children and helping them achieve goals on Saturdays (days/times TBA). Students will gain valuable clinical experience while learning patient empathy. Students MUST attend a mandatory orientation and a mandatory exit session held on the Homewood campus (see section web notes for days/times). Students are required to present a written description of their experiences and to discuss their experiences at the exit session. Transportation will be provided by the JHMI shuttle. No credit - S/U Grading Only
Instructor(s): L. Gorman.

AS.080.612. Experiential Learning: Autism and other Neurological Disorders. 0.0 - 3.0 Credits.
In this experiential learning experience, students will work with children who have a variety of neurological disabilities, including autism, cerebral palsy and Down syndrome through exercise and recreational activities. We partner with the KEEN (Kids Enjoy Exercise Now), a nonprofit organization. Student “coaches” will receive a profile for the KEEN athlete that they will pair up with during a session. Students will receive initial training and then select 4 sessions to attend. Sessions are held on the first and third Sunday of each month during the semester at KEEN centers in Maryland. Students MUST attend a mandatory orientation and a mandatory exit session held on the Homewood campus (see section web notes for days/times). Students are required to present a written description of their experiences and to discuss their experiences at the exit session. Transportation will be via student carpools using Zipcars, personal vehicles or Hop Vans. No credit - S/U Grading Only
Instructor(s): L. Gorman.

AS.080.614. Experiential Learning: STEM in the Classroom. 0.0 - 3.0 Credits.
STEM subjects are particularly important in today's society and getting students interested in these areas early is crucial. Working with Making Neuroscience Fun (MNF), a community outreach program, which brings age-appropriate interactive presentations about the brain and nervous system to Baltimore city and county elementary school students, our students share their love of the sciences with young children. The elementary school students learn about the nervous system and our students learn valuable communication skills. Hopkins students will receive initial training prior to participating and will select and present 6, 45-minute presentations. In order to participate, students must be available either 7am-11am or 11am-3pm at least one day per week, Monday-Friday. Students MUST attend a mandatory orientation, a mandatory training and a mandatory exit session held on the Homewood campus (see section web notes for days/times). Students are required to present a written description of their experiences and to discuss their experiences at the exit session. Students will also be given the opportunity to work with the faculty to develop new materials for the program. Presentations will take place at Baltimore city and county elementary schools. Transportation to the schools will be via student carpools using Zipcars or personal vehicles. No credit - S/U Grading Only
Instructor(s): L. Gorman.
AS.080.616. Experiential Learning: Working with Children in the Clinic. This experiential learning experience provides students the opportunity to learn, play and interact with children receiving treatment in over 20 different specialties including dermatology, endocrine, GI, immunology, urology, plastics and hematology. Students will volunteer in outpatient clinics at the Johns Hopkins Children’s Center where they will encourage, play and participate in a variety of activities including art projects, coloring, board games, and reading. Students will gain valuable clinical experience and be exposed to a wide range of children with a variety of diseases/illnesses. Students MUST attend a mandatory orientation and a mandatory exit session held on the Homewood campus (see section web notes for days/times. Students will sign up for 5 shifts on a first-come, first-serve basis after the mandatory orientation. Shifts are Mondays 1pm-3pm, Tuesdays 10am-12pm, Wednesdays 1pm-3pm, Thursdays 10am-12pm and Fridays 10am-12pm throughout the semester. There is a limit of 4 students per session. Students are required to present a written description of their experiences and to discuss their experiences at the exit session. Volunteer shifts will take place at outpatient clinics in the Rubenstein Child Health Building. Transportation will be provided by the JHMI shuttle. No credit - S/U Grading Only Instructor(s): L. Gorman.

AS.080.620. Theoretical Neuroscience. Topics of theoretical neuroscience and computational neuroscience will be discussed based on the original literature. Students are expected to actively participate in the discussion and also to present selected material to the class. Instructor(s): E. Niebur.

AS.080.630. Bodian Seminar Series. The Bodian Seminar is an interdisciplinary colloquium for discussion of current research into the neural basis of mental processes. Leading researchers, generally from outside the University, are invited to give lectures, which will be announced per e-mail. Undergraduate students who register for this course are asked to study a publication by the speaker, as provided with the announcement, and to prepare a question for each speaker together with a brief discussion of the possible answers. Permission required for undergraduate students. Instructor(s): V. Stuphorn.

AS.080.631. Bodian Seminar Series. Graduate students and Seniors with instructor permission. The Bodian Seminar is an interdisciplinary colloquium for discussion of current research into the neural basis of mental processes. Leading researchers, generally from outside the University, are invited to give lectures. About 12 lectures are scheduled per semester (see http://www.mb.jhu.edu/seminars.asp). Speakers, titles of lectures, and dates are announced to participants per e-mail (contact Debby Kelly, 410 516-8640). The announcements also include links to one or two recent publications of the speaker. Undergraduate students who register for this course are asked to study these papers and to prepare a question for each speaker together with a brief discussion of the possible answers. Question and discussion have to be in writing and turned in the day before the lecture. Undergraduates must e-mail the instructor for permission (von.der.heydt@jhu.edu) prior to registering for the course. Instructor(s): V. Stuphorn.

AS.080.660. Commencement Project. This course is for BA/MS students that have completed their year of research and are now working on their final thesis. In this course, students devote their semester to preparing their final thesis documentation and move forward with their Master’s Thesis Defense which is the last piece to the program. This course is for BA/MS student only and students should only register for this course in their last semester in the program. Instructor(s): J. Baraban.

AS.080.850. Mentored Research: Neuroscience I. For students in the BA/MS Program first semester. Permission required. Instructor(s): J. Baraban.

AS.080.852. Mentored Research: Neuroscience II. Permission Required. For students in the BA/MS Program. Instructor(s): J. Baraban.

AS.080.854. Mentored Research: Neuroscience III. For students in the BA/MS Program Permission required. Instructor(s): J. Baraban.

Cross Listed Courses

Biology

AS.020.317. Signaling in Development and Disease. 3.0 Credits.
An advanced undergraduate level seminar on current topics on signal transduction mechanisms underlying neuronal morphology, development and function. The proper functioning of the nervous system relies on the establishment of precise neuronal circuits through a developmental program including proliferation, neuronal migration, axonal growth, and neuronal survival. This course pertains to the extracellular cues and downstream neuronal signaling pathways that coordinate these key events during neuronal development. The course will also cover the role of aberrant signaling mechanisms in neuronal degeneration and disease. Recommended Course Background: AS.020.305, AS.020.306, and AS.080.306
Instructor(s): R. Kuruvilla
Area: Natural Sciences.

Cognitive Science

AS.050.102. Language and Mind. 3.0 Credits.
Introductory course dealing with theory, methods, and current research topics in the study of language as a component of the mind. What it is to "know" a language: components of linguistic knowledge (phonetics, phonology, morphology, syntax, semantics) and the course of language acquisition. How linguistic knowledge is put to use: language and the brain and linguistic processing in various domains. Cross-listed with Neuroscience and Psychology.
Instructor(s): C. Wilson
Area: Natural Sciences, Social and Behavioral Sciences.
AS.050.105. Introduction to Cognitive Neuropsychology. 3.0 Credits.
When the brain is damaged or fails to develop normally, even the most basic cognitive abilities (such as the ability to understand words, or perceive objects) may be disrupted, often in remarkable ways. This course explores a wide range of cognitive deficits, focusing on what these deficits can tell us about how the normal brain works. Topics include brain anatomy and causes of brain damage, reading and spelling deficits, unilateral spatial neglect, hemispheric disconnection, cortical plasticity, and visual perception of location and orientation. Students read primary sources: journal articles that report deficits and discuss their implications.
Instructor(s): M. McCloskey
Area: Natural Sciences, Social and Behavioral Sciences.

When we think about our ability to see, we tend to think about our eyes, but in fact vision happens mostly in the brain. This course explores the remarkable perceptual deficits that occur when the visual regions of the brain are damaged or fail to develop normally, focusing on what these perceptual malfunctions tell us about normal visual perception. Topics include visual system anatomy and physiology; functional specialization in the lower visual system as revealed by cerebral achromatopsia (color blindness resulting from brain damage) and akinetopsia (impaired motion perception); cortical plasticity in the visual system; spatial deficits in perception and action; and the implications of high-level visual deficits, including prosopagnosia (impaired face recognition), Charles Bonnet syndrome (complex visual hallucinations in blind areas of the visual field), blindsight (accurate responding to visual stimuli despite apparent inability to see them), and Anton's syndrome (denial of blindness).
Prerequisites: AS.050.105 OR AS.050.203 OR AS.080.203 OR AS.050.101 OR AS.200.110 OR AS.200.211 or instructor's permission.
Instructor(s): M. McCloskey
Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.326. Foundations of Cognitive Science. 3.0 Credits.
This course explores general issues and methodologies in cognitive science through the reading of classic works (from Plato and Kant through Skinner and Turing) and recent research articles to begin construction of a coherent picture of many seemingly divergent perspectives on the mind/brain. Recent brain-based computational models serve to focus discussion.
Instructor(s): P. Smolensky
Area: Natural Sciences, Social and Behavioral Sciences Writing Intensive.

AS.050.332. Developmental Cognitive Neuroscience. 3.0 Credits.
In-depth examination of the current literature on cognitive development in the context of developmental cognitive neuroscience. Please see course prerequisites. Meets with AS.050.632.
Prerequisites: AS.050.101 OR AS.050.339 OR AS.200.132 OR AS.050.105 OR Instructor's Permission.
Instructor(s): B. Landau
Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.339. Cognitive Development. 3.0 Credits.
This is a survey course in developmental psychology designed for individuals with some basic background in psychology or cognitive science, but little or none in development. The course is strongly theoretically oriented, with emphasis on issues of nature, and development psychology as well as relevant empirical evidence. The principle focus will be early development, i.e., from conception through middle childhood. The course is organized topically, covering biological and prenatal development, perceptual and cognitive development, the nature and development of intelligence, and language learning.
Instructor(s): J. Yarmolinskaya
Area: Natural Sciences, Social and Behavioral Sciences.

Also offered as AS.050.326. This course explores general issues and methodologies in cognitive science through the reading of classic works (from Plato and Kant through Skinner and Turing) and recent research articles to begin construction of a coherent picture of many seemingly divergent perspectives on the mind/brain. Recent brain-based computational models serve to focus discussion.
Instructor(s): P. Smolensky
Area: Natural Sciences, Social and Behavioral Sciences Writing Intensive.

Also offered as AS.050.339. This is a survey course in developmental psychology designed for individuals with some basic background in psychology or cognitive science, but little or none in development. The course is strongly theoretically oriented, with emphasis on issues of nature, and development psychology as well as relevant empirical evidence. The principle focus will be early development, i.e., from conception through middle childhood. The course is organized topically, covering biological and prenatal development, perceptual and cognitive development, the nature and development of intelligence, and language learning.
Instructor(s): J. Yarmolinskaya.

Psychological Brain Sciences
AS.200.141. Foundations of Brain, Behavior and Cognition. 3.0 Credits.
A survey of neuropsychology relating the organization of behavior to the integrative action of the nervous system. Cross-listed with Behavioral Biology and Neuroscience.
Instructor(s): L. Gorman
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.302. Behavioral Assessment of Animal Models of Cognition and Neuropsychiatric Disorders. 3.0 Credits.
What does a rat exploring its environment tell us about memory? How can a mouse help us better understand schizophrenia? This course will focus on procedures that are routinely used to study behavior in animal models of cognition and neuropsychiatric disorders. The procedures discussed will include assessments that fall into 3 broad functional domains: motor function, affective or emotional states, and cognition. Throughout the course, we will read and discuss original research articles to illustrate and compare some of the measures and results from the various procedures. Postdoc Teaching Fellowship. This is designed to be an upper level course.
Prerequisites: Pre-req: AS.200.141 OR ( AS.080.305 AND AS.080.306 ) or permission of the instructor.
Instructor(s): D. Smith
Area: Social and Behavioral Sciences.
AS.200.304. Neuroscience of Decision Making. 3.0 Credits.
This course will survey the neural mechanisms of decision-making. Current experimental research and theory concerning selection, control, and evaluation of actions are examined in humans and animals. Topics will range from simple perceptual judgements to complex social behavior. The course involves a weekly lecture about a specific topic followed by a student presentation of a current research paper. Cross-listed with Neuroscience.
Prerequisites: AS.080.305 OR AS.200.141
Instructor(s): V. Stuphorn
Area: Natural Sciences.

AS.200.344. Behavioral Endocrinology. 3.0 Credits.
An examination of the effects of hormones on behavior in non-human and human animals. Topics will include the effects of hormones on sexual differentiation, reproductive behavior, parental behavior, homeostasis and biological rhythms, regulation of body weight, learning and memory. Cross-listed with Behavioral Biology and Neuroscience.
Prerequisites: Prereqs: (AS.200.141 OR AS.080.306) OR (AS.020.151 AND AS.020.152) OR (AS.020.305 AND AS.020.306) or instructor's permission
Instructor(s): K. Bohn
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.368. Sleep, Dreams, and Altered States of Consciousness. 3.0 Credits.
Sleep, dreaming, resting and arousal to waking represent very different states of consciousness which differ dramatically both psychologically and physiologically. This course focuses on cognitive, psychological, physiological, biological and genetic aspects characterizing each of these states with some reference to other altered states. The course includes a focus on the major pathologies affecting sleep-wake states. Clinical cases will be considered. These inform about both psychological and biological aspects of these states. The relative biological functions of each state will be evaluated with particular attention to the mystery of why we have and apparently need REM and NREM sleep. Actual physiological recordings of sleep states will be reviewed and the student will learn how these are obtained and how to evaluate these. The circadian rhythms, ontogeny and evolution of these sleep-wake states will also be covered. This will include a review of information learned from non-human animal sleep. The change from sleep to full awakening reflects change toward increasing brain organization supporting consciousness. Understanding of the neurobiology of these states will be used to explore some of the more modern and scientific concepts of human self-awareness or consciousness. Recommended Course Background: AS.200.101 OR AS.080.203 OR AS.050.203
Instructor(s): R. Allen
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.376. Psychopharmacology. 3.0 Credits.
Designed to provide information about how drugs affect the brain and behavior. The course focuses on biological concepts underlying structures and functions of the brain that relate to mental disorders. An introduction to neurobiology and brain function is presented as it applies to the interaction of various classes of drugs with the individual neurotransmitter systems in the brain. A brief historic review is followed by a discussion of clinical relevance. Cross-listed with Behavioral Biology and Neuroscience. Enrollment limited to juniors and seniors.
Prerequisites: AS.200.141 OR AS.020.306 OR AS.080.305 OR Instructor Permission
Instructor(s): H. Adwanikar; S. Sterbing-d’angelo
Area: Natural Sciences, Social and Behavioral Sciences.

Biomedical Engineering
EN.580.694. Statistical Connectomics. 3.0 Credits.
This course will cover the basics of an exciting emerging field of statistical connectomics (aka, brain-graphs). It is so new, that we are going to make some of it up in this class! The first week will be introductory lectures that I give. The rest of the semester will be run like a seminar; each week will focus on a different topic. On Tuesdays we will hear about a statistical method that operates on graphs, and on Thursdays we will read about some neuroscience data upon which one could apply these techniques. The final project will consist of implementing a statistical method devised for graphs on a brain-graph problem. Recommended background: coursework in probability, linear algebra, and numerical programming (eg, R, Python, Matlab).
Instructor(s): J. Vogelstein
Area: Engineering.

Philosophy
http://philosophy.jhu.edu/
The Department of Philosophy offers programs and courses at the undergraduate and graduate levels. The courses cover major periods in the history of Western philosophy and many of the main topics of systematic investigation: epistemology, metaphysics, ethics, aesthetics, philosophy of language, mathematical logic, and philosophy of science.

The undergraduate courses are designed to introduce students to the history of philosophy and its place in Western civilization, to teach them how to read philosophical texts, and to help them think about philosophical problems, including those that arise in other disciplines. Students may major in philosophy or use it as a concentration for an area major in Humanistic Studies. They may also study philosophy along with another subject, either by constructing a double major or by taking courses designed to help them develop philosophical perspectives on their own fields of interest.

The graduate program is intended primarily for those planning to teach philosophy and make their own contributions to it. While the acquisition of a broad background in the history and different systematic fields of philosophy is required, students will have ample opportunity to develop their own special interests.

The Department of Philosophy encourages its students to take advantage of the rich resources of other departments at Johns Hopkins University. As a look at their offerings will show, numerous philosophically important courses are offered by such departments as Political Science (political philosophy), History of Science and Technology (philosophy of science), the Humanities Center (hermeneutic, interpretive, and literary theory), and Cognitive Science.

Undergraduate Programs
Philosophy poses such fundamental questions as: What can we know? How should we live? and How do the results of human inquiry, obtained so far, hang together? It is an excellent preparation for professional studies such as law and medicine; it provides perspective on other disciplines such as psychology, mathematics, literature, and political science; and it centers on a set of questions that thinking people cannot avoid. At Hopkins it can be studied in a variety of ways.

A number of our courses are designed to provide broad introductions to the subject. Both AS.150.111 Philosphic Classics and AS.150.112 Philosophical Problems cover a wide range of topics, the former through the study of some of the major texts of Western thought,
the latter by more systematic examination of representative issues. Either one will show a student a variety of approaches to philosophical problems. The courses AS.150.201 and AS.150.205 offer historically oriented introductions to the subject, giving the student a basic grasp of the development of philosophy in two of its major periods. Other courses, such as AS.150.118 Introduction to Formal Logic, 150.223 Aesthetics, and AS.150.220 Introduction to Moral Philosophy, are designed for students with interest in the particular areas they cover. All of these courses are readily available without prior study of philosophy.

The 400-level courses are open to graduate students as well as to undergraduates. Some require no previous course work in philosophy. Others presuppose some familiarity with philosophy, such as would be provided by one of the introductory courses. Still others require more specific preparation. A student with questions about whether he/she has the background for a particular 400-level course should consult either the instructor or the departmental undergraduate studies.

A student who wants to study an area of philosophy not provided for in the regular curriculum or to undertake a special project of writing and research should consult with a faculty member about taking AS.150.511 Directed Study-AS.150.512 Directed Study. An undergraduate who has the proper background may enroll in a graduate seminar if the instructor approves.

Learning Goals
A student who graduates with a BA in philosophy will be able to demonstrate:

- A broad understanding of the work of major figures in the history of philosophy, both ancient (especially Plato and Aristotle) and modern (especially the period of Descartes through Kant)
- Familiarity with the most important topics in a range of areas that are typically regarded as lying at the center of contemporary philosophical thought, including metaphysics, theory of knowledge, philosophy of mind, and philosophy of language
- Familiarity with the most important topics in ethics and political philosophy
- Familiarity with formal logic, including the ability to understand the logical symbolism used in many contemporary philosophical texts
- The capacity to think analytically and creatively about philosophical texts and issues
- The capacity to express philosophical ideas and support them effectively in argument, both in writing and orally.

Requirements for the B.A. Degree
(Also see Requirements for a Bachelor’s Degree (p. 7).)

Philosophy majors must take 11 departmental courses. A minimum of six courses must be at the 300 level or higher. Of the two general introductory courses, 150.111 Philosphic Classics and 150.112 Philosophic Problems, only one may count toward the major, and two total 100-level courses may count toward the major. Majors are required to take the Undergraduate Seminar, preferably in the junior year. Courses in which a grade of D is received may not count toward the major, nor may courses taken satisfactory/unsatisfactory.

Other courses must be distributed by taking at least one course in each of the five following categories:

- Ancient philosophy
- Philosophy of mind, theory of knowledge, philosophy of language, or metaphysics
- Ethics, aesthetics, or political philosophy
- Modern philosophy
- Logic, philosophy of science, or philosophy of mathematics

The first two categories are normally satisfied by taking AS.150.201 Introduction To Greek Philosophy and AS.150.205 Introduction to the History of Modern Philosophy. The student thus has four or five additional electives after satisfying the distribution requirements.

Well-qualified majors may be admitted to a graduate seminar during their senior year. They should consult their major adviser.

If you have any questions or concerns regarding these requirements, please contact the director of undergraduate studies.

Honors Project and AS.150.552 Honors Project, to write a thesis of about 50 pages under the supervision of a faculty member. The thesis must be completed prior to spring vacation of senior year. If the student withdraws prior to completion of a thesis, a satisfactory/unsatisfactory grade will be awarded.

The grade for the thesis will depend on the thesis itself and an oral examination about it, conducted by the thesis adviser and two other faculty members. Graduation Honors will be awarded to those whose work receives an A- or better. For more information about the Honors Program, contact the department’s director of undergraduate studies.

**Minor in Philosophy**

Philosophy minors must take seven departmental courses, which should include the following:

- At least one course in the history of philosophy, either ancient or modern.
- At least one course in two of the following areas:
  - Logic, philosophy of science, or philosophy of mathematics
  - Ethics, aesthetics, or political philosophy
  - Philosophy of mind, theory of knowledge, philosophy of language, or metaphysics

**Minor Restrictions**

- Either AS.150.111 Philosophic Classics or AS.150.112 Philosophical Problems, but not both, may count as one of the seven courses.
- Neither is a required course.

If you have any questions or concerns regarding these updated requirements, please contact the director of undergraduate studies.

**Minor in Bioethics**

The practice of medicine, the development of public health policies, and advances in the biomedical sciences raise fundamental moral and philosophical issues. The bioethics program is designed to provide students with an understanding of these issues, and the background and the conceptual tools to think about them clearly. The program is a collaboration between the Berman Institute of Bioethics and the Department of Philosophy, and draws on the resources of both.

See Bioethics Program (http://e-catalog.jhu.edu/departments-program-requirements-and-courses/arts-sciences/bioethics) for more details.

**BA/MA Program**

The department now offers an accelerated BA/MA program. The requirements for the BA and for the MA remain unchanged, but in the combined BA/MA program, two 400-level courses taken as part of the BA can also be used toward the MA. This means that the MA requires only eight additional courses, rather than the 10 required for a free-standing MA. See the Graduate tab for more information.
Graduate Programs

When The Johns Hopkins University was founded in 1876, it was the first university in the United States designed as a center for research and doctoral education. Among its earliest graduate students were Josiah Royce and John Dewey; C. S. Peirce was an early faculty member. The Department of Philosophy continues this tradition today, preparing graduate students to make original contributions to the field and to pursue careers in college and university teaching.

Usually there are about 15 graduate students taking courses and seminars, and another 15 at various stages in the writing of their dissertations. Because classes are small, we look for students who wish to take advantage of the individual attention available here. The department’s purpose is to provide opportunities for students to develop special interests within a program that also ensures breadth of knowledge. We offer classes, seminars, and directed study in the history of ancient, modern, and contemporary Western philosophy, and in the systematic areas of epistemology, metaphysics, ethics, philosophy of science, philosophy of physics, philosophy of language, philosophy of mind, philosophy of mathematics, mathematical logic, and aesthetics. Courses with relevance to philosophy are frequently offered in other departments, and in certain circumstances these may be used toward the PhD or MA course requirements in philosophy.

The graduate program is designed primarily for those seeking the PhD, but under exceptional circumstances students aiming at the MA may be admitted.

Graduate Requirements

Graduate students are required to take 13 courses, some of which must be selected to meet the departmental distribution requirements. Students also take an examination in a field of special interest to them. During the third year, students work intensively on a substantial paper on a topic in that field. After satisfying these requirements and writing a dissertation prospectus, students concentrate on the doctoral dissertation.

Students are expected to complete examinations and course work within three years. Most students take about two to three years to write their doctoral dissertation.

For complete details of PhD and MA requirements, advising, student evaluation, and other matters relating to the graduate program, view the following:

Philosophy Graduate Program Requirements (http://philosophy.jhu.edu/wp-content/uploads/sites/7/2013/01/Philosophy-Graduate-Program-Requirements-Revised.pdf) (students entering before 2015).

BA/MA Program

The department now offers an accelerated BA/MA program. The requirements for the BA and for the MA remain unchanged, but in the combined BA/MA program, two 400-level courses taken as part of the BA can also be used toward the MA. This means that the MA requires only eight additional courses, rather than the 10 required for a free-standing MA. For full details of the MA program and the BA/MA program, see the Requirements handbook (2015 and after) in the Graduate section here and on the department website.

In order to be admitted to the BA/MA program, you must already be a philosophy major; you can apply in the spring term of your junior year or any time in your senior year. If you meet the qualification for the BA honors thesis (overall GPA of 3.0, philosophy GPA of 3.5), you will automatically be admitted; others may be admitted on a case-by-case basis. Interested students should contact the chair of the department, Professor Richard Bett (http://philosophy.jhu.edu/directory/richard-bett).

Please note that there is no departmental financial aid for BA/MA students. However, BA/MA students whose MA-level studies extend into a fifth year get a 50% discount on their tuition in their fifth year.

All application material and supporting documents should be uploaded through the online application; these include:

- Online application (https://grad.jhu.edu/apply) – be sure to select Combined Graduate Student option
- Transcripts: unofficial transcripts must be uploaded through the online application.

PhD Admissions

While an undergraduate major in philosophy is good preparation for graduate study in the department, applications are welcomed from students with other majors whose interests are now turning toward philosophy.

To apply, please read the information below and on the Graduate Admissions website (http://www.grad.jhu.edu/admissions/apply), and complete the application online.

If applying to more than one department, please send complete application materials for each department. All application documents must be provided in English (either the original or translations of the original documents). If you are unable to secure translations to English, we recommend that you contact World Education Services (http://www.wes.org).

All application materials and supporting documents should be uploaded through the online application; these include:

- Online application (https://grad.jhu.edu/apply)
- Application fee
- Statement of Purpose (briefly state your area of interest at the beginning of your Statement of Purpose; upload through the online application)
- Letters of recommendation (at least two): Letters of recommendation should be submitted and uploaded electronically following the instructions in the online application.
- Transcripts: Unofficial transcripts must be uploaded through the online application. Applications will be ready for review with unofficial transcripts, but official transcripts will be required if an offer of admission is made
- GRE scores (mandatory)
- TOEFL or IELTS score (for international applicants)
- Sample of work (the sample should reflect the applicant’s area of interest, and generally does not have to be more than 20 pages in length).
Application Deadline
The deadline for applications is January 15 or, if January 15 falls on a weekend or a holiday, the next business day. Admissions decisions will be made by around March 15.

For questions or inquiries about the online application and supporting documents, contact the Graduate Admissions office using the online contact form (https://grad.jhu.edu/contact). You may also contact Veronica Feldkircher-Reed, the academic program coordinator for the philosophy department, at vfeldki1@jhu.edu or 410-516-7524.

Financial Aid
All students admitted to the program receive financial assistance. Support is guaranteed for five years, provided that a student continues to make satisfactory progress toward completion of the PhD. Department fellowships cover tuition and pay a stipend. Outstanding applicants may be nominated for a George Owen Fellowship, which also covers tuition and for which the stipend is higher. All students receive fellowship support for the first two years; no teaching is required.

Third, fourth, and fifth-year students are supported by teaching assistantships, which carry full tuition and a stipend. In practice, the department is often able to offer teaching assistantships to students beyond their fifth year, though this support is not guaranteed.

Sachs Fellowship Fund
A generous bequest by a former member of the department, David Sachs, has established the Sachs Fellowship Fund. Sachs Fellowships are dissertation-year fellowships awarded to students who are making substantial progress toward completing their dissertations. For more information, see the Philosophy Graduate Program Requirements (http://philosophy.jhu.edu/wp-content/uploads/sites/7/2013/01/Philosophy-Graduate-Program-Requirements-Revised.pdf) (Attachments 4 and 5).

Graduate Student Travel Funding
The department encourages graduate students to present their work at conferences and workshops, and it is committed to helping to make this possible by providing funds for travel and/or accommodation to students whose papers are accepted for presentation. Funding for students to participate in special summer schools is also a possibility; however, in such cases the topic must be clearly related to the student's actual or intended area of specialization.

The funds available to the department for these purposes are limited, and so some guidelines are necessary in order to ensure that the money is distributed in the most equitable and effective way possible. With this in mind, the following guidelines are in now in place:

- For any student who makes one request for funding in a given academic year, the department will do its best to provide funding. If a student requests funding for more than one event in a given academic year, the second request will have lower priority. Similarly, a student who has had numerous trips funded over several years may find further requests given lower priority.
- The amount provided may vary depending on the cost of the trip. However, more expensive trips are more likely to receive only partial funding than less expensive ones. In particular, those involving international travel may receive only partial funding.
- The significance and prestige of the conference, workshop, or summer school in which a student is to participate will be a factor in decisions as to whether, or to what extent, to provide funding.
- A student's proximity to the job market may result in a funding request being given higher priority than it would otherwise.
- Since conferences and workshops can happen at any time of year, it is not practical to impose any specific deadlines for funding requests. The department will, however, ensure that some funds remain available throughout the year, so that students making requests late in a given year do not lose out simply because of the timing. (This means that students making requests early in the year may sometimes receive less than they have asked for.)

These guidelines may sometimes be in tension with one another. But these will be the major factors to be taken into account in making these decisions.

Students requesting funding should supply documentation concerning the event—a link to a website will often be sufficient—as well as a breakdown of the expected costs of attending. Requests should be sent to the department chair and the director of graduate study.

William Miller Essay Prize
The Miller Prize is an essay prize awarded for an essay submitted by an eligible student in the philosophy graduate program. A prize competition is held every year. It is not guaranteed that an award will be made every year; however, provided at least one essay submitted in a given year is judged to be of superior quality, the prize will go to the author of the best essay submitted in that year. Given essays of sufficiently high quality, it is also possible that more than one award could be made in the same year.

Miller Prize Submission Guidelines
Entrants must be registered graduate students in philosophy at Johns Hopkins University who are prior to the completion of their eighth semester in the program (i.e., anyone in their first four years). Submissions should be self-contained essays of no more than 10,000 words, not including footnotes. Students may submit at most one essay per year. Papers accepted for publication are not appropriate submissions.

Submissions should be anonymous; your name should not appear anywhere in the paper. The papers should be submitted to Veronica Feldkircher-Reed, either electronically (via email at vfeldki1@jhu.edu) or as a hard copy. If you do the latter, you should include a separate cover page with your name, the title of the paper, and a word count. If you submit it electronically, do not include a cover page, but include the paper title and word count in the email to which you attach the paper. The cover pages or emails will be kept separately in the office and will not be shown to the selection committee.

The submission deadline for the Miller Prize is the same day the third-year papers are due.

For current faculty and contact information go to http://philosophy.jhu.edu/people/

Faculty
Chair
Richard Bett
Professor (Chair): ancient Greek philosophy, ethics.

Professors
Peter Achinstein
philosophy of science, analytic philosophy.

Eckart Förster
metaphysics, history of philosophy, Kant and German idealism.

Robert Rynasiewicz
logic, philosophy of science, history and philosophy of physics.

Michael Williams
Krieger-Eisenhower Professor; theory of knowledge, philosophy of language, history of modern philosophy, epistemology.

**Associate Professors**

Hilary Bok
Henry R. Luce Professor in Bioethics and Moral and Political Theory; moral philosophy, bioethics, freedom of the will Kant.

Steven Gross
philosophy of language, philosophy of mind, metaphysics.

Chris Lebron
political philosophy focusing on issues of social justice and race

Yitzhak Melamed
Early Modern Philosophy, German idealism, metaphysics.

Dean Moyar
German idealism, social and political philosophy, ethics.

**Assistant Professors**

Justin Bledin
logic, epistemology, philosophy of language.

Elanor Taylor
metaphysics, philosophy of science, and philosophy of mind; she also works on the metaphysical side of philosophy of gender

**Emeriti**

Stephen Barker

Jerome B. Schneewind

Meredith Williams

**Joint/Adjunct Appointments**

Jeffrey Bub
Professor (Philosophy, University of Maryland, College Park); philosophy of quantum mechanics.

Jeffrey Kahn
Professor (Bloomberg School of Public Health)

Paola Marrati
Professor (Humanities Center): contemporary French thought.

Maria Merritt
Assistant Professor (Bloomberg School of Public Health); bioethics.

Govind Persad
Assistant Professor (Bloomberg School of Public Health)

Lawrence Principe
Professor (History of Science and Technology): history and philosophy of science.

Andrew Siegel
Core Faculty (Berman Institute of Bioethics).

Hent de Vries
Professor (Humanities Center): modern European thought.

For current course information and registration go to https://sis.jhu.edu/classes/

**Courses**

**AS.150.100. Philosophy of Sport. 3.0 Credits.**
This is course introduces students to philosophical methods by bringing them to bear on the topic of sports and games. We will explore questions about what it is for a certain practice to be a game or a sport (the metaphysics of sport) as well as questions about fair play, performance enhancement, gender equity, and commercialism and corruption in sports (the ethics of sports).

Instructor(s): T. Wilk
Area: Humanities

**Writing Intensive.**

**AS.150.111. Philosophic Classics. 3.0 Credits.**
The course introduces students to philosophy by critically examining selected texts in the Western philosophical tradition. Philosophers whose ideas will be examined include Plato, Descartes, Kant and Nietzsche.

Instructor(s): A. Abazari
Area: Humanities

**Writing Intensive.**

**AS.150.112. Philosophical Problems. 3.0 Credits.**
An introduction to philosophy through several central problems. This year's topics are free will, death, time, and race.

Instructor(s): S. Gross
Area: Humanities

**AS.150.113. Freshman Seminar: Objectivity. 3.0 Credits.**
This course examines the notion of objectivity and challenges to it. Its topics include the status of objective facts and beliefs, the structure of social reality, and rational disagreement. Dean's Prize Freshman Seminar

Instructor(s): N. Goldberg
Area: Humanities

**AS.150.114. Philosophy of Human Rights. 3.0 Credits.**
From domestic debates about abortion and health care to international dialogue about women's rights, genital mutilation and genocide, human rights claims have become increasingly common, and we've come to rely on the discourse of human rights to assess the way human beings are treated by one another and by states. But what are human rights? How are human rights claims justified? Are human rights really objective and universal or are they contingent and relative to particular cultures? Where did the human rights culture begin, and how has it become so important? This course aims to explore these questions by examining foundational human rights documents, historical works on human rights and contemporary philosophical inquiry into their foundations (or lack thereof).

Instructor(s): T. Wilk
Area: Humanities.
AS.150.116. Mortal Questions. 3.0 Credits.
What is the meaning of life? Is the question well-formed? What does living well require? Does death give human life meaning? What does it mean to say that life is ‘absurd’? Are we free to do as we choose? What should we make of human nature or the human condition in light of the great and ever more pervasive technological advances of the present epoch? Will we transform our nature? In light of threats of environmental catastrophes spurred by global warming, nuclear war and the like, what do we make of our daily lives and the activities that compose them? Do those equipped with the relevant capacities and apprised of the relevant information bear a moral obligation to the communities of which they are members? Crucially, these questions require us to reflect deeply on our human values. To address these questions, we will read selected works of philosophers ranging in time from Plato to the present – including both analytic and continental philosophers, men and women, the canonized and otherwise.
Instructor(s): D. Lindeman
Area: Humanities
Writing Intensive.

AS.150.118. Introduction to Formal Logic. 3.0 Credits.
An introduction to symbolic logic and probability. In the first two parts of the course we study formal ways of determining whether a conclusion of an argument follows from its premises. Included are truth-functional logic and predicate logic. In the third part we study the basic rules of probability, and learn how to make probability calculations and decisions in life. Co-listed with AS.150.632 (for graduate students) (01-F 11:00-11:50am).
Instructor(s): P. Achinstein
Area: Humanities, Quantitative and Mathematical Sciences.

AS.150.122. Mortal Questions. 3.0 Credits.
What is the meaning of life? Is the question well-formed? What does living well require? Does death give human life meaning? What does it mean to say that life is ‘absurd’? What is free will, and do we have it? What should we make of human nature or the human condition in light of the great and ever more pervasive technological advances of the present epoch? Will we transform our nature? In light of threats of environmental catastrophes spurred by global warming, nuclear war and the like, what do we make of our daily lives and the activities that compose them? Are we living as we ought to? Crucially, these questions and others like them require us to reflect deeply on our human values. To address these questions, we will read selected works of philosophers ranging in time from Plato to the present.
Instructor(s): D. Lindeman
Area: Humanities.

AS.150.129. The Theory of Knowledge: Classic and Contemporary Questions. 3.0 Credits.
What is knowledge and how to define it? Does knowing require an ability to produce supporting reasons or is it sufficient that our beliefs track the truth? Which general model better its structure, Foundationalism, Coherentism or Infinitism? Does knowing depend on context? Can we discover empirically what knowledge is? These are key questions we will be discussing in our seminar, inspired by reading texts ranging from classics like Plato, the Stoics, and Sextus Empiricus, to contemporary authors like Gettier, Davidson, Goldman, DeRose, and others. Dean’s Prize Freshman Seminar.
Instructor(s): P. Stojanovic
Area: Humanities.

AS.150.134. Freshman Seminar: Socrates in Context. 3.0 Credits.
A study of Socrates as portrayed by his contemporaries, and of intellectual and political trends to which he may have been reacting. Authors will include Plato, Xenophon and Aristophanes. Freshmen Only.
Instructor(s): R. Bett
Area: Humanities.

AS.150.135. Freshman Seminar: The Philosophy of Race and Racism. 3.0 Credits.
The twin specters of race and racism have perennially dominated nearly every aspect of American social, economic, and political life. In this course, we will try to appreciate the nature and scope of this dominance by addressing fundamental questions about the natures, functions, and manifestations of race and racism in contemporary American life. Topics include: the “metaphysics” of race, conditions of racial membership, the moral harms introduced by racism, the psychology of racial bias, and institutional forms of racism.
Instructor(s): P. O'Donnell
Area: Humanities, Social and Behavioral Sciences.

AS.150.136. Philosophy & Science: An Introduction to Both. 3.0 Credits.
Philosophers and scientists raise important questions about the nature of the physical world, the mental world, the relationship between them, and the right methods to use in their investigations of these worlds. The answers they present are very different. Scientists are usually empiricists, and want to answer questions by experiment and observation. Philosophers don’t want to do this, but defend their views a priori. Why? Can both be right? Readings will present philosophical and scientific views about the world and our knowledge of it. They will include selections from major historical and contemporary figures in philosophy and science. This course has no prerequisites in philosophy or science.
Instructor(s): P. Achinstein
Area: Humanities, Natural Sciences.

AS.150.140. Minds, Bodies, and Persons. 3.0 Credits.
This course is a philosophical exploration of the mind and its relation to the body, personhood, and artificial intelligence. First, we will consider competing definitions of the mind and how it fits into the world. From here, we will engage with the concept of human personhood through an examination of what it takes to remain the same person over time. We will also be considering whether machines could ever have minds in the same way that human persons do, as well as the metaphysical and practical implications of mind uploading. Through testing the boundaries of cognition and personhood through technology, we hope to bring the relationship between minds, bodies, and persons into clearer focus.
Instructor(s): K. Brophy
Area: Humanities.

AS.150.182. What is Science?. 3.0 Credits.
A philosophical introduction to very basic questions about scientific reasoning, its scope and limits. Is there a universal scientific method? Can science really explain everything, anything? Must everything be proved in science? Is science incompatible with religion? Readings will be from scientists and philosophers who have thought about these issues from Descartes and Newton to the present. No prerequisites either in philosophy or science.
Instructor(s): P. Achinstein
Area: Humanities, Natural Sciences.
AS.150.191. Freshman Seminar. 3.0 Credits.
The class takes a problem-oriented approach to select dialogues in Plato. Central questions will include: the nature of motivation, and in particular, whether it is true that everyone desires the good; and the role of knowledge in leading a good life, in particular, whether it is true that that virtue is knowledge. We will focus on Ion, Apology, Euthyphro, the Meno, and the ethical books of the Republic.
Instructor(s): L. Theunissen
Area: Humanities
Writing Intensive.

AS.150.193. Philosophy of Language Seminar: Proper Names and Definite Descriptions. 3.0 Credits.
In talking with each other, we often use proper names like 'Juliet' and definite descriptions like 'The most beautiful fresco in Italy' to pick out persons and objects in our world. But what do these expressions mean exactly? In this seminar, we'll slowly and carefully work through some classic philosophical texts that address this issue. These texts will provide an introduction to the philosophy of language, and to analytic philosophy in general.
Instructor(s): J. Bledin
Area: Humanities
Writing Intensive.

AS.150.194. Freshman Seminar: Skepticism Ancient and Modern. 3.0 Credits.
Can we gain knowledge of reality, or is everything a matter of opinion? Does it matter? Why do we want (or need) knowledge anyway? Questions like this have been the stock in trade of philosophical skeptics throughout the entire history of our Western philosophical tradition. This class will involve close readings of some classic works on the topic of skepticism with a view to understanding some of the main arguments for (and against) skepticism: how they work and how they may have changed over time. Readings include selections from Sextus Empiricus, Descartes, Hume and Wittgenstein.
Instructor(s): M. Williams
Area: Humanities

AS.150.196. Freshman Seminar: Being A Good Person. 3.0 Credits.
In this seminar we explore the virtue ethics tradition and it's pursuit to figure out what it means to be a good person. We creatively read the works of Ion, Apology, Euthyphro, the Meno, and the ethical books of the Republic.
Instructor(s): R. Bett
Area: Humanities

AS.150.201. Introduction To Greek Philosophy. 3.0 Credits.
A survey of the earlier phase of Greek philosophy. Socrates, Plato, and Aristotle will be discussed, as well as two groups of thinkers who preceded them, usually known as the pre-Socratics and the Sophists.
Instructor(s): M. Bergamaschi Ganapini
Area: Humanities.

AS.150.202. Introduction to the History of Modern Philosophy. 3.0 Credits.
An overview of philosophical thought in the seventeenth and eighteenth centuries. We shall focus on fundamental questions in epistemology (knowledge, how we acquire it, its scope and limits), metaphysics (the ultimate nature of reality, the relation of mind and body, free will), and theology (the existence and nature of God, God's relation to the world, whether knowledge of such things is possible): all questions that arose in dramatic ways as a result of the rise of modern science. The principal philosophers to be discussed are Descartes, Locke, Hume and Kant, though we shall also make the acquaintance of Spinoza, Leibniz and Berkeley.
Instructor(s): Y. Melamed
Area: Humanities.

AS.150.205. Philosophy and Schizophrenia. 3.0 Credits.
We will read historical text by Aristotle, Hume, Adam Smith, Mill, Marx, and Keynes. Then we will see how these philosophical concepts and theories can be applied to the contemporary world of business. The main goal of this course is to critically evaluate the philosophical foundations and justifications for business and economic systems, and how these apply to specific issues as workplace discrimination, ethics of advertising, environmental destruction and consumer protection.
Instructor(s): N. Andonovski
Area: Humanities, Natural Sciences, Social and Behavioral Sciences.

AS.150.207. Philosophy and Schizophrenia. 3.0 Credits.
A survey of the earlier phase of Greek philosophy. Socrates, Plato, and Aristotle will be discussed, as well as two groups of thinkers who preceded them, usually known as the pre-Socratics and the Sophists.
Instructor(s): M. Bergamaschi Ganapini
Area: Humanities.

AS.150.210. Introduction to Ethics. 3.0 Credits.
Or is morality an invention of society? We will be exploring the works of Aristotle, Kant, and Mill, as well as looking into some more contemporary readings. Further, we will be making connections and discussing how the questions relate to bioethics and business.
Instructor(s): A. Englert
Area: Humanities.

AS.150.215. Business Ethics. 3.0 Credits.
What is a responsible business practice? Do corporations have responsibility as "moral agents"? What is the relation between business and environment? In this course we will investigate the relationship between business practices and ethical thinking by analyzing and assessing philosophical arguments about the moral status of business. We will start by reading philosophical texts that offer an analysis of moral practices, decision-making procedures, and moral theories. In particular, we will read historical text by Aristotle, Hume, Adam Smith, Mill, Marx, and Keynes. Then we will see how these philosophical concepts and theories can be applied to the contemporary world of business. The main goal of this course is to critically evaluate the philosophical foundations and justifications for business and economic systems, and how these apply to specific issues as workplace discrimination, ethics of advertising, environmental destruction and consumer protection.
Instructor(s): K. Brophy
Area: Humanities.

AS.150.216. Minds and Machines. 3.0 Credits.
The course is a philosophical introduction to the topic of artificial intelligence. We will examine such questions as whether machines can think and whether we can build robots that have emotions, personalities and a sense of self. In doing so, we will touch upon a closely connected question: is the human mind itself a machine?
Instructor(s): N. Andonovski
Area: Humanities, Natural Sciences.
AS.150.219. Introduction to Bioethics. 3.0 Credits.
Introduction to a wide range of moral issues arising in the biomedical fields, e.g. physician-assisted suicide, human cloning, abortion, surrogacy, and human subjects research. Cross-listed with Public Health Studies. Instructor(s): H. Bok
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.150.220. Introduction to Moral Philosophy. 3.0 Credits.
An introduction to moral philosophy through in-depth and critical reading of selected texts from the history of philosophy. The philosophers whose texts will be discussed include Plato, Aristotle, Kant and Nietzsche. Instructor(s): L. Theunissen
Area: Humanities.

AS.150.223. Formal Methods of Philosophy. 3.0 Credits.
During the last century or so, symbolic logic and other formal methods have come to play an essential role in most areas of systematic philosophical inquiry. This course serves as an introduction to these formal prerequisites for more advanced study in a wide variety of contemporary philosophical areas. Topics include the syntax and semantics of sentential and first-order predicate logic, natural deduction, basic set theory, mathematical induction and recursion, probability, modal logic, and non-standard logics. The emphasis is on basic comprehension, not on mathematical virtuosity. (Co-listed/combined with AS.150.434) Instructor(s): R. Rynasiewicz
Area: Humanities.

AS.150.231. Philosophical Intuitions. 3.0 Credits.
At least according to a prevalent conception, analytic philosophers frequently appeal to intuitions - immediate opinions we come to have about cases or claims. In this course, we will discuss three questions that naturally arise: (1) How can we define intuitions and what underlies them? (2) Do philosophers really appeal to intuitions as frequently as many seem to think? (3) Which role should intuitions play in philosophy? Instructor(s): J. Lossau
Area: Humanities, Social and Behavioral Sciences.

AS.150.235. Philosophy of Religion. 3.0 Credits.
Can one prove or disprove the existence of God? What is the relation between reason and faith? Are science and religion at odds with one another? We will consider historically significant discussions of these questions as well as important contemporary writings. Instructor(s): S. Gross
Area: Humanities.

AS.150.236. Contemporary Moral Issues. 3.0 Credits.
In this course, we will discuss ethical controversies related to some of the issues currently debated in the public sphere: homosexuality, sexism, racism, immigration, abortion, cloning, genetic enhancement, war, terrorism, torture, and others. Our goal will be to explore how major philosophical theories in ethics approach these controversies, and how they can help us understand and resolve these controversies. Instructor(s): P. Stojanovic
Area: Humanities.

AS.150.237. Foundations of Modern Political Philosophy. 3.0 Credits.
This course is an introduction to modern political philosophy through an intensive study of the classic texts. The focus will be on the nature and limits of political authority under modern social conditions. Authors included are Machiavelli, Hobbes, Locke, Rousseau and Mill. Instructor(s): D. Moyar
Area: Humanities.

AS.150.238. Philosophy, Science Fiction, and Human Nature. 3.0 Credits.
This is an introduction to philosophy through themes in science fiction. Particular emphasis will be on philosophical questions related to what it means to be a human such as personal identity, free will, the nature of mind, and the nature of knowledge. Instructor(s): J. Simpson
Area: Humanities
Writing Intensive.

AS.150.240. Intro-Political Philosoph. 3.0 Credits.
Instructor(s): C. Lebron
Area: Humanities
Writing Intensive.

AS.150.245. Introduction to Philosophy of Mind. 3.0 Credits.
This is an introduction to the central problems of philosophy of mind: the mind-body problem and the problem of self-knowledge. Of particular interest in contemporary work is the relation of mind and brain and whether, or how, we acquire self-knowledge. Instructor(s): E. Taylor
Area: Humanities.

AS.150.248. Introduction to Metaphysics. 3.0 Credits.
The class is an introduction to contemporary, analytic, metaphysics. Topics to be discussed include: what is metaphysics, the nature of existence, time and temporality, modality and possible worlds, identity and personal identity, persistence, mereology, causation, and universals and abstract entities. Instructor(s): Y. Melamed
Area: Humanities.

AS.150.253. Introduction to Philosophy of Psychology. 3.0 Credits.
Psychology is the study of mind and behavior, and philosophy of psychology is the study of the foundations of psychology. Foundational issues in psychology addressed by philosophy of psychology come in the form of the following questions. What is the nature of mental representation? What is the basic architecture of the mind, and is it innate? Can psychological theories proceed in abstraction from the environment? The purpose of this course is to introduce students to these and related questions and the various answers they’ve been given. Instructor(s): D. Lindeman
Area: Social and Behavioral Sciences.

AS.150.254. Philosophy and Memory. 3.0 Credits.
This course is designed as a survey of the major philosophical questions about memory, with a particular emphasis on the way in which these questions are affected by recent empirical evidence from psychology and the neurosciences. The course is divided into four main parts, exploring the topics of concern: 1. Memory and Representation 2. Memory and Understanding 3. Memory, Time and Personal Identity 4. Memory, Ethics and Politics In addressing these questions, we will read some of the major philosophical works concerning memory published in the last 100 years, but we will also investigate the emerging theoretical and experimental paradigms coming from psychology and the neurosciences. Instructor(s): N. Andonovski
Area: Humanities, Social and Behavioral Sciences.
AS.150.256. Is There Progress in Science?. 3.0 Credits.
In this class we will consider the problems related to the progress of science. First, we will discuss the problem of theory change: is there a way to compare different scientific paradigms and to assess their progressiveness? Next, we will deal with a more specific question: does history of science provide evidence that our best current theories are approximately true? Indeed, are we even justified in thinking that our scientific theories gradually approach truth?
Instructor(s): A. Kabeshkin.

AS.150.259. Introduction to the Theory of Knowledge. 3.0 Credits.
An introduction to the central problems, concepts and theories of philosophical epistemology (theory of knowledge). Topics to be explored will include: what is knowledge (and why do we want it)? Can we get it (skeptics answer "No!"), or is everything in the end a matter of opinion? (skeptics say "Yes!"). Theories of knowledge and justification: foundationalism versus the coherence theory; externalism versus internalism in epistemology. To what extent is knowledge an appropriate object of theory? Readings from early 20th century through contemporary sources.
Instructor(s): J. Ali
Area: Humanities.

AS.150.260. Introduction to Metaphysics. 3.0 Credits.
Metaphysics addresses fundamental questions about the nature and structure of reality. This course will offer an introduction to metaphysics, and a survey of metaphysical debates about topics including time, causation, personal identity, God and free will.
Instructor(s): E. Taylor
Area: Humanities.

AS.150.269. Freshman Seminar: Philosophy of Human Rights. 3.0 Credits.
This course introduces students to the methods of philosophical inquiry and writing via an exploration of philosophical questions about the foundations of human rights, the modern human rights culture, and the relationships between human rights, civil rights, group rights, and women's rights. No background in philosophy will be assumed, as the aim of the course is to teach philosophical methods while examining the language and practice of human rights, which have been central to the post-WWII global order.
Instructor(s): T. Wilk
Area: Humanities
Writing Intensive.

AS.150.300. Prometheus Editorial Workshop. 1.0 Credit.
Prometheus is an international undergraduate philosophy journal published by students at Johns Hopkins University. The purpose of the journal is to promote philosophic discourse of the highest standard by offering students an opportunity to engage in open discussion, participate in the production and publication of an academic journal, and establish a community of aspiring philosophers. Students enrolled in this workshop will act as the staff readers for the journal. For more information, please visit www.prometheus-journal.com. Prerequisite: MUST have taken one philosophy course.
Instructor(s): C. Cummings
Area: Humanities
Writing Intensive.

AS.150.301. Majors Seminar: Ancient Greek Ethics. 3.0 Credits.
Required for philosophy majors and restricted to philosophy majors and minors. The course this year will focus on ancient Greek ethics, including selections from Plato, Aristotle, the Stoics, the Epicureans, the Skeptics, and perhaps others.
Instructor(s): R. Bett
Area: Humanities.

AS.150.304. The Ethics of Human Experimentation. 3.0 Credits.
This course will explore ethical theory, key historical events, and operational requirements of research involving human beings. Weekly discussions will focus on seminal literature and case studies that highlight conceptual and practical challenges related to informed consent; research ethics review; risk/benefit analysis; justice/fairness; globalization of research; participation of vulnerable populations; clinical equipoise; obligations to research participants and communities during studies and after research is completed; and deception in psychological and behavioral research. The course will also explore the emergence and development of the rules governing the protection of human subject research.
Instructor(s): D. Lindeman
Area: Humanities.

AS.150.309. Introduction to Philosophy of Physics. 3.0 Credits.
This course starts on July 7th and runs until August 1st. This course aims at introducing the student to the basic philosophical issues that lie at the heart of the modern physicist's conception of nature. To this end, we will look carefully at the foundations of two modern theories of physics, namely, the special theory of relativity and quantum theory. Relativity revolutionized our understanding of space and time, whereas quantum physics shattered our established beliefs about causality and determinism in nature. In the special relativity section of this class, we will cover topics such as the speed of light postulate, conventionality of simultaneity thesis, and the twin paradox. In the foundations of quantum physics, we will probe the measurement problem, Schrodinger's cat paradox and the uncertainty principle. No previous background in physics is required.
Instructor(s): G. Guralp
Area: Humanities, Natural Sciences.

AS.150.315. Philosophy of Human Rights. 3.0 Credits.
From domestic debates about abortion and health care to international dialogue about women's rights, genital mutilation and genocide human rights claims have become increasingly common, and we've come to rely on the discourse of human rights to assess the way human beings are treated by one another and by states. But what are human rights? How are human rights claims justified? Are human rights really objective and universal or are they contingent and relative to particular cultures? Where did the human rights culture begin, and how has it become so important? This course aims to explore these questions by examining foundational human rights documents, historical works on human rights and contemporary philosophical inquiry into their foundations (or lack thereof).
Instructor(s): T. Wilk
Area: Humanities

AS.150.316. Puzzles and Paradoxes. 3.0 Credits.
The course is a survey of puzzles and paradoxes of truth, belief, knowledge, meaning, confirmation, rational action, and vagueness. Specific puzzles and paradoxes include, among others: Russell's paradox, the Liar paradox, Moore's paradox, the Skeptical paradox, Newcomb's paradox, and the Sorites paradox. Besides being fun to think about, these puzzles and paradoxes touch on many areas of philosophy, including philosophy of language, logic, metaphysics, and epistemology. When introducing each puzzle or paradox, attention will be paid to its history and significance. In addition to this exposure to some of the many domains of philosophy, students will gain analytical skills applicable well beyond philosophy.
Instructor(s): T. Wilk
Area: Humanities
Writing Intensive.

AS.150.319. Philosophy of Quantum Physics. 3.0 Credits.
We explore how quantum physics presents us with a new understanding of the nature of reality. We will cover topics such as the speed of light postulate, conventionality of simultaneity thesis, and the twin paradox. In the foundations of quantum physics, we will probe the measurement problem, Schrodinger's cat paradox and the uncertainty principle. No previous background in physics is required.
Instructor(s): G. Guralp
Area: Humanities, Natural Sciences.

AS.150.330. Social Theory of Science. 3.0 Credits.
We will consider the progress of science, the role of values in research, and the ethical and social implications of science. We will consider the role of science in society, and examine the relationship between science and technology. We will also consider the role of science in politics and policy-making.
Instructor(s): T. Wilk
Area: Humanities

AS.150.331. Gender and Philosophy. 3.0 Credits.
We will consider the role of gender in the history of philosophy, and the ways in which gender has been represented in philosophical thought. We will also consider the ways in which gender has been used to structure philosophical thought, and to construct masculine and feminine identities.
Instructor(s): T. Wilk
Area: Humanities

AS.150.332. Ethics of Technology. 3.0 Credits.
We will consider the ethical implications of technology, and the ways in which technology has been used to construct and maintain social and political power. We will also consider the ways in which technology has been used to construct and maintain social and political power.
Instructor(s): T. Wilk
Area: Humanities

AS.150.333. Environmental Ethics. 3.0 Credits.
We will consider the ethical implications of environmental issues, and the ways in which environmental issues have been used to construct and maintain social and political power. We will also consider the ways in which environmental issues have been used to construct and maintain social and political power.
AS.150.317. Undergraduate Seminar for Philosophy Majors: Can Everything Be Explained?. 3.0 Credits.
We will study various philosophical theories about the nature of explanation, reduction, and speculation.
Instructor(s): P. Achinstein
Area: Humanities

AS.150.320. Marx: Critique of Political Economy. 3.0 Credits.
A close reading of Marx’s Capital: Volume One. Specific attention will be given to clarification of Marx’s methodology, the foundational categories of his critique of political economy, the systematic unity of his theory, and the underlying normative concepts which inform his work. No previous course in philosophy or social sciences is required.
Instructor(s): A. Abazari
Area: Humanities, Social and Behavioral Sciences.

AS.150.322. Emotion, Mind & Morality. 3.0 Credits.
In this course, we will investigate a number of important philosophical questions about the normative structure of emotions and their role in moral cognition by surveying some of the classic works in philosophy. We will also read a number of contemporary papers. Finally, we will look at recent work in psychology and cognitive neuroscience on the impact of emotion on reason.
Instructor(s): M. Bergamaschi Ganapini
Area: Humanities
Writing Intensive.

AS.150.323. Undergraduate Seminar: Topics in Meta-Ethics. 3.0 Credits.
This is a seminar on theoretical topics in ethics. We focus on debates over cognitivism and non-cognitivism; realism and anti-realism: reasons internalism and externalism; relativism and pluralism. We read contemporary classics by Sharon Street, T.M. Scanlon, Joseph Raz, Bernard Williams, Allan Gibbard, and others.
Instructor(s): L. Theunissen
Area: Humanities
Writing Intensive.

AS.150.325. Philosophy of Oppression and Resistance. 3.0 Credits.
Human social structures can be oppressive in either explicit or covert forms, even in societies highly committed to just democratic ideals. The course will investigate what it means for an individual, practice, or institution to be oppressive, and will explore the concrete mechanisms which can underlie racialized and gendered forms of oppression in particular. Special attention will be given to the political and moral problems raised by hate speech, pornography, propaganda, ideology, and material inequality. Finally, we will discuss how social agents can resist explicit and covert oppression in a way that is conducive to the realization of just ideals.
Instructor(s): K. Powell
Area: Humanities
Writing Intensive.

AS.150.326. Philosophy of Art: A Historical Introduction. 3.0 Credits.
A reading of a number of important texts from the history of philosophy dealing with topics in the philosophy of art. Particular attention will be given to the German aesthetic tradition, and especially to Hegel's aesthetics, although the most important ancient Greek contributions will be considered as well. In particular, we will read Plato, Aristotle, Plotinus, Kant, Schiller, early German Romantics, and Hegel, as well as selected secondary literature. No previous coursework in philosophy or history of art is required.
Instructor(s): A. Kabeshkin
Area: Humanities.

AS.150.330. Decisions, Games & Social Choice. 3.0 Credits.
This course is an introduction to decision theory, game theory, and social choice theory with an emphasis on their philosophical underpinnings and philosophical applications. Topics covered include the Prisoner’s Dilemma, Newcomb’s Problem, convention and social contracts, risk, and Arrow’s Theorem.
Instructor(s): J. Bledin
Area: Humanities.

AS.150.351. The Philosophy of Race and Racism. 3.0 Credits.
The twin specters of race and racism have perennially dominated nearly every aspect of American social, economic, and political life. In this course, we will try to appreciate the nature and scope of this dominance by addressing fundamental questions about the nature, functions, and manifestations of race and racism in contemporary American life. Topics include: the ”metaphysics” of race, conditions of racial membership, the moral harms introduced by racism, the psychology of racial bias, and institutional forms of racism.
Instructor(s): P. O'Donnell
Area: Humanities, Social and Behavioral Sciences.

AS.150.355. Philosophy of Law. 3.0 Credits.
In this course we will examine major issues in the philosophy of law, including the relation of law to moral theory, the role of the Constitution in legal decisions, and the justification of punishment. No previous knowledge of law or philosophy is required.
Instructor(s): D. Moyar
Area: Humanities.

AS.150.401. Greek Philosophy: Plato and His Predecessors. 3.0 Credits.
A study of pre-Socratic philosophers, especially those to whom Plato reacted; also an examination of major dialogues of Plato with emphasis upon his principal theses and characteristic methods.Cross-listed with Classics.
Instructor(s): R. Bett
Area: Humanities
Writing Intensive.

AS.150.402. Aristotle. 3.0 Credits.
A study of major selected texts of Aristotle.
Instructor(s): R. Bett
Area: Humanities
Writing Intensive.

AS.150.403. Hellenistic Philosophy. 3.0 Credits.
A study of later Greek philosophy, stretching roughly from the death of Aristotle to the Roman imperial period. Epicureans, Stoics, and Skeptics will be the main philosophical schools examined.
Instructor(s): R. Bett
Area: Humanities
Writing Intensive.

AS.150.404. The Idea of Power. 3.0 Credits.
The idea of Power surveys seminal texts in the history of political thought on the nature, promise, and dangers of political and social power; it also critically engages contemporary texts on race and gender power relations
Instructor(s): C. Lebron
Area: Humanities.
AS.150.407. Enlightenment and Alienation. 3.0 Credits.
Why does the increase in enlightenment not correlate with an increase in morality and happiness? Jean-Jacques Rousseau raised this question in the middle of the 18th century and it remains a pressing question today. The course will examine the issue in Rousseau, Hegel, Marx, and Adorno, as well as in the contemporary work of Richard Moran and Rahel Jaeggi.
Instructor(s): D. Moyar
Area: Humanities.

AS.150.408. The Ethics of Climate Change. 3.0 Credits.
In this course we consider ethical issues related to climate change and climate change policy. These include issues about how we ought to distribute the burden of mitigation and adaption, what we owe to future generations and to the non-human world, and about our responsibilities as individuals (with respect, for example, to our diets). We briefly consider geoengineering and issues related to the widespread reliance on cost-benefit analyses in climate policy.
Instructor(s): J. McBee
Area: Humanities.

AS.150.409. Wittgenstein On Certainty. 3.0 Credits.
Wittgenstein's On Certainty consists of four notebooks containing remarks on knowledge, certainty, doubt and truth. In this course, we will undertake a close study of Wittgenstein's notes, critically examining competing interpretations of Wittgenstein's ideas and the different use of those ideas have been taken up in current debates about philosophical skepticism.
Instructor(s): M. Williams
Area: Humanities.

AS.150.410. The Philosophy of Afrofuturism I. 3.0 Credits.
The main goal of speculative fiction is to render a familiar world slightly unfamiliar to then ask familiar questions in new ways. Afrofuturism as a genre of sci-fi, fantasy, and horror written by and about black people, applies this ethic to the problems of race, broadly speaking. In this course we survey major texts to philosophically inquire into phenomena like incarceration, Slavery and it's lingering effects, and colonialism among other themes.
Instructor(s): C. Lebron
Area: Humanities
Writing Intensive.

AS.150.411. Arabic-Islamic Philosophy. 3.0 Credits.
Introduction to major philosophers of the Arabic-Islamic tradition, including Avicenna, al-Ghazali, and Averroes. Topics addressed include the existence of God, metaphysics (e.g., causality), human freedom and knowledge, revelation and reason.
Instructor(s): S. Ogden
Area: Humanities.

AS.150.412. Kant's Critique of Practical Reason. 3.0 Credits.
A historical and systematic study of Kant's ethics and philosophy of religion, with special attention to his Critique of Practical Reason.
Instructor(s): E. Forster
Area: Humanities.

AS.150.413. Kant's 'Critique Of Pure Reason'. 3.0 Credits.
An examination of the philosophy of Immanuel Kant, with emphasis on The Critique of Pure Reason.
Instructor(s): E. Forster
Area: Humanities.

AS.150.414. Topics in Political Philosophy: Liberalism. 3.0 Credits.
This course will examine recent liberal political philosophy, with particular emphasis on the work of John Rawls and Jürgen Habermas.
Instructor(s): D. Moyar
Area: Humanities.

AS.150.415. Schelling's System of Transcendental Idealism. 3.0 Credits.
Schelling's System of Transcendental Idealism is one of the key texts in the transition from Kant to Hegel. It is also one of Schelling's clearest and most successful publications, and one of the best introductions to his philosophy. This course offers a close examination of the System of Transcendental Idealism against the background of Kant and Fichte.
Instructor(s): E. Forster
Area: Humanities.

AS.150.416. Kant's major "minor writings". 3.0 Credits.
Some of Kant's so-called "minor writings" are in fact brilliant essays that represent important stages in the formation and development of his mature, "critical" philosophy. In this course we will study ten of these essays in detail.
Instructor(s): E. Forster
Area: Humanities.

AS.150.417. Kant's 'Critique Of Pure Reason'. 3.0 Credits.
An examination of the philosophy of Immanuel Kant, with emphasis on The Critique of Pure Reason.
Instructor(s): E. Forster
Area: Humanities.

AS.150.418. Schelling's System of Transcendental Idealism. 3.0 Credits.
Schelling's System of Transcendental Idealism is one of the key texts in the transition from Kant to Hegel. It is also one of Schelling's clearest and most successful publications, and one of the best introductions to his philosophy. This course offers a close examination of the System of Transcendental Idealism against the background of Kant and Fichte.
Instructor(s): E. Forster
Area: Humanities.

AS.150.419. Kant's Critique/Judgment. 3.0 Credits.
This course will examine closely and in detail the aesthetic and teleological parts of Kant's third masterpiece, The Critique of the Power of Judgment.
Instructor(s): E. Forster
Area: Humanities.

AS.150.420. Mathematical Logic I. 3.0 Credits.
The development, first, of sentential logic and, then, of first-order predicate logic. Topics covered include formal languages, effective procedures, truth-functional and Tarski semantics, logical entailment, systems of derivation, deductive soundness and completeness, compactness, theories, formalization of mathematics, sizes of models, and interpretations between theories.
Instructor(s): R. Rynasiewicz
Area: Humanities, Quantitative and Mathematical Sciences.

AS.150.421. Mathematical Logic II. 3.0 Credits.
Gödel's two incompleteness theorems regarding, first, the unaxiomatizability of arithmetic and, second, the impossibility of proving the consistency of arithmetic using arithmetic methods (unless arithmetic is inconsistent). Computability and Church's Thesis. 
Prerequisites: AS.150.420
Instructor(s): R. Rynasiewicz
Area: Humanities, Quantitative and Mathematical Sciences.
AS.150.422. Axiomatic Set Theory. 3.0 Credits.
A development of Zermelo-Fraenkel set theory (ZF), including the axiom of choice (ZFC), a system in which all of mathematics can be formulated (i.e., entails all theorems of mathematics). Although, we'll do an exposure to transfinite ordinals and cardinals in general so that you can get a sense for how stupendously "large" these can be, the main thrust concerns certain simple, seemingly well-posed conjectures whose status appears problematic. For example, the Continuum Hypothesis (CH) is the conjecture that the cardinality of the real numbers is the first uncountable cardinality, i.e., the first cardinality greater than that of the set of natural numbers. Equivalently, there is no uncountable subset of real numbers strictly smaller in cardinality than the full set of reals. (You'd think that if there were one, you would be able eventually to find such.) Cantor thought that CH is true, but could not prove it. Gödel showed, at least, that if ZFC is consistent, then so is ZFC+CH. However, Paul Cohen later proved that if ZFC is consistent, then so is ZFC + the negation of CH. In fact, CH could fail in astounding many ways. For example, the cardinality of the continuum could be (weakly) inaccessible, i.e., of a cardinality that cannot even be proved to exist in ZFC (although the reals can certainly can be proved to exist in ZFC). So, are there further, intuitively true axioms that can be added to ZFC to resolve the cardinality of the continuum, and CH is definitely true or false? Or, as Cohen thought, does CH simply lack a definite truth value?
Instructor(s): R. Rynasiewicz
Area: Humanities, Quantitative and Mathematical Sciences.

AS.150.425. Poetic Thought. 3.0 Credits.
This course will examine essays and poems by Goethe, Hölderlin, and Rilke with an eye toward the ways in which their work addresses issues central to German Idealism and modern German thought. These include the relation of subject to object; the problem of the representation of the whole; the reconciliation of science and art; and the role of consciousness in the construction of the world. Readings to include texts by Goethe, Hölderlin, and Rilke with commentary by Heidegger, Gadamer, Henrich, Husserl, Benjamin, and Allemann. Reading knowledge of German is required.
Instructor(s): E. Forster; R. Tobias
Area: Humanities, Natural Sciences.

AS.150.426. Philosophy and Disability. 3.0 Credits.
In this course, we will consider various philosophical issues related to disability. What counts as a disability? What obligations do we have, both as individuals and as a society, to people with disabilities? What counts as respecting people with disabilities, and what counts as unjustifiable discrimination against them?
Prerequisites: AS.150.219 OR AS.150.220
Instructor(s): H. Bok
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.150.427. Aristotelian Philosophical Psychology. 3.0 Credits.
What did philosophy of mind look like before Descartes? It centered on study of the soul (psuche), or philosophical psychology. This course will focus on Aristotle's view of the soul, its functions, and its relation to matter (hylomorphism), as well as the development of his thought by later ancient and medieval Aristotelians, including Alexander of Aphrodisias, Averroes, and Aquinas. Will conclude with examination of some renewed interest in Aristotle relative to contemporary philosophy of mind.
Instructor(s): S. Ogden
Area: Humanities.

AS.150.428. Spinoza's Theological Political Treatise. 3.0 Credits.
The course is an in-depth study of Spinoza's Theological-Political Treatise. Among the topics to be discussed are: Spinoza's Bible criticism, the nature of religion, philosophy and faith, the nature of the ancient Hebrew State, Spinoza's theory of the State, the role of religion in Spinoza's political theory, the freedom to philosophize, the metaphysics of Spinoza's Theological-Political Treatise, and finally, the reception of the TTP.
Instructor(s): Y. Melamed.

AS.150.429. Topics in Logic: Ontology and Knowledge Representation. 3.0 Credits.
Knowledge representation deals with the possible structures by which the content of what is known can be formally represented in such a way that queries can be posed and inferences drawn. Ontology concerns the hierarchical classification of entities from given domains of knowledge together with the relations between various classes, subclasses, or individuals. The main framework in which we will work is that of description logics, which are decidable fragments of varying degrees of first order predicate logic. In ontology development we will examine RDF (Resource Description Framework), its extension to RDFS, and OWL (Web Ontology Language), and use the software Protegé for specific applications. Finally, we will take a look at query languages such as SPARQL (SPARQL Protocol and RDF Query Language).
Instructor(s): R. Rynasiewicz
Area: Humanities, Quantitative and Mathematical Sciences.

AS.150.430. Hegel's Phenomenology of Spirit. 3.0 Credits.
An in-depth study of Hegel's masterpiece, the Phenomenology of Spirit. We will be concentrating on the first half of the text.
Instructor(s): E. Forster.

AS.150.431. Introduction to Philosophy of Science. 3.0 Credits.
Scientific knowledge plays an important role in human understanding. What makes something scientific? For that matter, what is a scientific explanation? Philosophers have long reflected on the nature of science and the way it shapes our conception of the universe. In this course, we will explore topics at the intersection of philosophy and science, including scientific explanation, laws of nature, the problem of induction, and reductionism. This course presupposes no philosophical or scientific background.
Instructor(s): P. Achinstein; R. Bett
Area: Humanities.

AS.150.432. Hegel's Phenomenology of Spirit, Part 2. 3.0 Credits.
This course is a continuation of Hegel's Phenomenology of Spirit, Part One, taught last Spring. We will closely study the second half of the book, compare its methodology with that of the first half, and end with an examination of Hegel's systematic reflections in the "Preface".
Prerequisites: AS.150.430
Instructor(s): E. Forster
Area: Humanities.
AS.150.433. Philosophy of Space & Time. 3.0 Credits.
Is space an entity that exists independently of matter, or is it only an abstraction from spatial relations between bodies? Is there a lapse of time even when nothing changes, or is time only a measure of motion? Are motion and rest contrary states of a body, or are there only changes in the positions of bodies relative to one another? Philosophers and physicists have disputed these questions from antiquity to the present day. We survey the arguments and attempt to find a resolution. But there are further questions. Is there a fact of the matter as to the geometry of space (Euclidean or non-Euclidean), or as to whether spatially separated events occur at the same time? Why does time but not space have a "direction"? Are past, present and future objective features of reality? Are space and time ultimately discrete on small scales? Do space and time, or even just spatio-temporal relations between bodies and events, really exist? Or are they merely emergent features of a fundamental non-spatio-temporal reality?
Instructor(s): R. Rynasiewicz
Area: Humanities, Natural Sciences.

AS.150.434. Formal Methods of Philosophy. 3.0 Credits.
During the last century or so, symbolic logic and other formal methods have come to play an essential role in most areas of systematic philosophical inquiry. This course serves as an introduction to these formal prerequisites for more advanced study in a wide variety of contemporary philosophical areas. Topics include the syntax and semantics of sentential and first-order predicate logic, natural deduction, basic set theory, mathematical induction and recursion, probability, modal logic, and non-standard logics. The emphasis is on basic comprehension, not on mathematical virtuosity. (Co-listed/combined with AS.150.223)
Instructor(s): R. Rynasiewicz
Area: Humanities.

AS.150.435. Maimonides' Guide of the Perplexed & Political Theology. 3.0 Credits.
The seminar is an in-depth study of Maimonides' magisterial work, the Guide of the Perplexed. Special attention will be given to Maimonides' views about the political functions of religion. We will also read modern commentaries and responses to the Guide, by Leibniz, Spinoza, and Salomon Maimon.
Instructor(s): D. Katz; Y. Melamed
Area: Humanities.

AS.150.436. Philosophy of Gender. 3.0 Credits.
In this class we will examine philosophical questions about gender, and about the intersections between gender and other social categories including race, class and sexuality. We will focus specifically on questions about the metaphysics of gender and other social categories.
Instructor(s): E. Taylor
Area: Humanities.

AS.150.437. KANT'S Opus Postumum. 3.0 Credits.
Why did Kant, after he had completed the three Critiques, work on a book with the title, Transition from the Metaphysical Foundations of Natural Science to Physics – better known as his Opus postumum? Why did this project eventually come to include ethics and result in a revision of Kant's transcendental philosophy? Questions like these will be answered by means of a close study of Kant's text, and by relating the text to (a) his Metaphysical Foundations of Natural Science and (b) to his ethical writings from the critical period.
Instructor(s): E. Forster
Area: Humanities.

AS.150.438. Spinoza's Ethics. 3.0 Credits.
The seminar is an in-depth study of Spinoza's major work, The Ethics.
Instructor(s): Y. Melamed
Area: Humanities.

AS.150.440. The Making of Black Lives Matter. 3.0 Credits.
This course explores the history of black thought that informs the ethics of the contemporary movement for black lives.
Instructor(s): C. Lebron
Area: Humanities
Writing Intensive.

AS.150.442. The Philosophy of Ludwig Wittgenstein. 3.0 Credits.
We will read Wittgenstein's two great works: Tractatus Logico-Philosophicus (1921) and Philosophical Investigations (1953). We may also devote some time to his late, unpublished work, Uncertainty.
Instructor(s): M. Williams
Area: Humanities.

AS.150.443. Wittgenstein's Philosophy of Mind. 3.0 Credits.
The seminar will begin with a careful examination of the private language argument in the Philosophical Investigations. Among the additional themes we will examine is his analogy between philosophy of mathematics and his philosophy of psychology, implicit criticisms of the representational theory of mind, the problem of other minds and the role of deception, and the "grammar" of psychological concepts. There are numerous manuscripts concerned with mental and psychological concepts. Two volumes of the Remarks on the Philosophy of Psychology will be ordered for the seminar, though we will not be "working through" them in a systematic way. The Philosophical Investigations and Zettel are essential. Recommended Course Background: Familiarity with Wittgenstein's work.
Instructor(s): M. Williams
Area: Humanities.

AS.150.444. The Identity of Indiscernibles. 3.0 Credits.
Can two things (such as bodies, events, moments, thoughts, or geometrical points) have precisely the same qualities? If so, what makes them different from each other? In this class we will explore the debate about the Principle of the Identity of Indiscernibles. Readings will include texts by: Leibniz, Clarke, Max Black, Ayer, Ian Hacking, Robert Adams, and Michael Della Rocca.
Instructor(s): Y. Melamed
Area: Humanities.

AS.150.446. Hegel's Science of Logic. 3.0 Credits.
In this course we will focus on the first two parts of Hegel's Science of Logic, and address the following issues (among others). In what sense is Hegel's dialectical logic continuous with the classical metaphysical tradition and in what sense is it a critique of traditional metaphysics? What motivates the project, or what questions does Hegel think his logic can answer that previous logics did not?
Instructor(s): D. Moyar; E. Forster
Area: Humanities.
AS.150.447. The Logic of Spinoza's Ethics. 3.0 Credits.
One of the unique aspects of Spinoza's major work, the Ethics, is its formal or "geometric" structure. The book is written following the model of Euclid's Elements, with Definitions, Axioms, Propositions, and Demonstrations. In this seminar, we scrutinize the deductive structure of the Ethics and some of its earlier drafts. We consider the role and epistemic status of the definitions and axioms, attempt to provide rigorous reconstructions of some of its key propositions, and also investigate the possibility of alternative routes between these propositions.
Instructor(s): J. Bledin; Y. Melamed
Area: Humanities.

AS.150.448. The Religion of Morality. 3.0 Credits.
In the wake of the Enlightenment criticism of traditional forms of religion, philosophers attempted to give religion a rational basis by equating it with moral practice. We will examine this religion of morality with the goal of determining whether it can vindicate its claim to be a genuine religion. We will read texts by Rousseau, Kant, Fichte, Hegel and Emerson.
Instructor(s): D. Moyar
Area: Humanities.

AS.150.452. Freedom of Will & Moral Responsibility. 3.0 Credits.
What are freedom of the will and moral responsibility? Are they compatible with determinism or naturalism? This course will examine various philosophers' answers to these questions.
Instructor(s): H. Bok
Area: Humanities
Writing Intensive.

AS.150.454. The Value of Humanity. 3.0 Credits.
Are human beings distinctively valuable? What makes us valuable? And how should we respond to the value of human beings? The course is divided into four parts. The first part takes up questions about the basis of human value. We consider various proposals, including Kant's, about the valuable feature or capacity of human beings. Are we valuable in virtue of having a good will, in virtue of being agents, in virtue of being valuers, or something further? The second part takes up questions about the explanation of the value of human beings. Does the proposed feature make us valuable because it instantiates a simple value property, making us valuable in ourselves, or simpliciter? We consider whether the notion of value simpliciter is a notion we fully understand, or need. Does the proposed feature make us valuable because it makes us good-for something or someone? Who or what does it make us good-for? Or again, does the proposed feature make us such that we are objects of an appropriate attitude or practical stance? If so, what is the attitude or stance? The third part of the course takes up normative questions about the appropriate mode of responding to human beings. We consider whether it makes sense to say that human beings are "ends-in-themselves," and what it would mean to treat a person as an end-in-itself. We also consider various accounts of respect. A guiding question is whether human beings are the only appropriate objects of respect, or whether we can respect other beings, and even artifacts. The fourth part of the class applies what we have learned so far to related topics: to the question of whether human life or existence is valuable, and conversely, whether death is disvaluable. We consider, albeit briefly, the value of human beings in relation to the value of animals. And we ask about the role of Kantian notions like dignity in applied contexts, so that highly philosophical considerations about value are shown to have real-world bearing.
Instructor(s): L. Theunissen
Area: Humanities.

AS.150.456. Medieval Philosophy. 3.0 Credits.
Instructor(s): S. Ogden
Area: Humanities.

AS.150.457. Color and Color Perception. 3.0 Credits.
An examination of philosophically relevant discussions of the nature of color and color perception, from both historical and contemporary perspectives.
Instructor(s): E. Forster; S. Gross
Area: Humanities.

AS.150.460. Rawls and His Critics. 3.0 Credits.
John Rawls was the most important moral and political thinker of the 20th century. In this course we will look at his two main works, A Theory of Justice and Political Liberalism, along with some of the more influential criticisms of his ideas. Main topics will include the derivation of principles of justice, the role of the good in liberal political theory, and the nature of reasonable pluralism.
Instructor(s): D. Moyar; H. Bok
Area: Humanities.

AS.150.461. Russell, Frege, Wittgenstein: Foundations of Analytic Philosophy. 3.0 Credits.
Russell, Frege, and Wittgenstein (in Tractus) provided much of the philosophical foundation for 20th C. analytic philosophy. Their influence continues to be felt, especially in their conception of philosophical problems and the methods by which they can be solved.
Instructor(s): M. Williams
Area: Humanities.

AS.150.462. Islamic Political Philosophy. 3.0 Credits.
An introduction to the history of Islamic political philosophy, primarily focused on two flashpoints of encounter between the religion of Islam and other philosophical/political systems—an early one with ancient Greek philosophy (especially in the works of Plato and Aristotle), and a period of interface with modern Western secular political thought, from the late 19th century to present. Our goal will be to try to understand some of the varying responses in each period as Muslim thinkers seek authentic engagement with external and internal trends, both religious and philosophical. The focus will be on primary texts from philosophically engaged thinkers (who may or may not consider themselves philosophers).
Instructor(s): S. Ogden
Area: Humanities.
AS.150.466. Recent Work in Skepticism. 3.0 Credits.
We all take it for granted that perceptual experience yields knowledge of the world around us. But in the first of his Meditations on First Philosophy, Descartes invents a new and puzzling thought experiment. He imagines an Evil Demon with the power to manipulate the total course of his (Descartes’s) experience, so that what he naturally takes to be experience of the world around him is really a kind of perpetual dream: a simulation or virtual reality, as we might way today. Descartes’s problem, which has made its way into popular culture through films like those in the “Matrix” series, remains a source of philosophical puzzlement. While no one believes that skeptical hypotheses like Demon or computer deception are true, it is not easy to say how we can exclude them. Given that the deception is systematic, it seems that any “evidence” I cite could itself be part of the simulation. So how do I (or could I) know (for sure) that I’m not the victim of the Deceiver or the Matrix? We shall examine some of the latest attempts to respond to Descartes’s challenge. Does the “How could I know?” question admit of a theoretical answer, or is the question itself somehow ill-posed? Can we answer it without making significant concessions to skepticism? Exploring such questions should teach us some interesting lessons about knowledge (or the concept of knowledge).
Instructor(s): M. Williams
Area: Humanities.

AS.150.467. Philosophic Logic. 3.0 Credits.
This course is a survey of various topics in philosophical logic. We begin with a review of the model theory of classical first-order logic (FOL). In our first unit, we will then move beyond the standard existential and universal quantifiers of FOL and consider generalized quantifiers, substitutional quantifiers, and plural quantification. In our second unit, we investigate the theory of propositional modal logic, considering its syntax, semantics, proof theory, and some of its applications. In our fourth unit, we inquire into the nature and normativity of logical validity.
Instructor(s): J. Bledin
Area: Humanities.

AS.150.468. Global Food Ethics. 3.0 Credits.
This course is an introduction to ethical issues that arise within the contemporary global agrifood system. The overarching goal of the class is to give you the opportunity to think critically about a variety of conflicting views as to how we should produce, distribute, and consume food to achieve food security for over 9.6 billion people by 2050. We will borrow tools from practical ethics and theories of justice to shed light on these pressing issues that determine our common future and the way we personally relate to the food we eat.
Instructor(s): Y. Saghai
Area: Humanities.

AS.150.474. Justice and Health. 3.0 Credits.
Course will consider the bearing of theories of justice on health care. Topics will include national health insurance, rationing and cost containment, and what justice requires of researchers in developing countries.
Instructor(s): H. Bok
Area: Humanities.

AS.150.475. Addiction, Depression, and the Self. 3.0 Credits.
An examination of the moral implications and effects of addiction, depression and Pharmacological treatments for depression on our conception of our own agency. Recommended Course Background: AS.150.219, AS.150.220, or permission required.
Instructor(s): H. Bok
Area: Humanities
Writing Intensive.

AS.150.476. Philosophy and Cognitive Science. 3.0 Credits.
This term’s topic will be “cognitive penetration”. Can what you believe change how things look and sound? For example, do paintings look different to someone who knows a lot about art history and aesthetics? Can racial prejudice cause someone to see a cellphone as a gun? If your beliefs can alter your perceptions, how can perceptions provide neutral justification for beliefs? And how does one draw a distinction between perception and thought in the first place? Readings will be drawn both from philosophy (e.g., Fodor, Block, Siegel) and psychology (e.g., Pylyshyn, Firestone, Lupyan). Recommended Course Background: Some previous exposure to philosophy, the mind-brain sciences, or other relevant background.
Instructor(s): S. Gross
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.150.479. The Ethics of Making Babies. 3.0 Credits.
In this class, we will investigate many aspects of the ethics of making babies, asking not only which children we should create and how we should create them, but whether we should make any more people at all. Investigating these questions will take us through large chunks of moral theory, bioethics, and public health ethics. For more information, or to request permission of the instructor (for those who do not meet the prerequisite requirements), email Travis Rieder at trieder@jhu.edu.
Recommended Course Background: One course in ethics or bioethics, or permission of the instructor.
Instructor(s): T. Rieder
Area: Humanities.

AS.150.482. Food Ethics. 3.0 Credits.
Eating is an essential human activity: we need to eat to survive. But how should we eat? In this course, we consider such ethical questions as: Are certain forms of agriculture better for the environment, and is this a decisive reason to support them? What is the extent of hunger and food insecurity, in this country and globally, and what should be done about it? Is it morally wrong to make animals suffer and to kill them in order to eat them? Should we eat in ways that express and honor our cultures, our religions, and our family traditions—or is this comparatively unimportant? Should the government try to influence our food choices, to make them healthier?
Instructor(s): A. Barnhill
Area: Humanities.

AS.150.483. Topics in Jewish Philosophy: Heresy. 3.0 Credits.
Hassidism is the ecstatic religious movement that emerged in East European Jewry in the mid eighteenth century. In this research seminar we will concentrate on the teachings and activities of the circle of Dov Ber of Mezrich between 1760 and 1772. We will study both internal and external sources (such as Salomon Maimon’s report in his Lebensgeschichte). All materials will be available in English translation, though reading knowledge of Hebrew would be an asset.
Instructor(s): Y. Melamed.

AS.150.484. Philosophy and Cognitive Science. 3.0 Credits.
AS.150.487. Fundamental Principles of Philosophical Rationalism. 3.0 Credits.
At the center of Leibniz rationalist metaphysics are four interrelated philosophical principles: (1) The Law of Non-Contradiction, (2) The Principle of Sufficient Reason (roughly, the claim that everything must have a reason), (3) The Identity of Indiscernibles (roughly, the claim that there are no two perfectly similar things), and (4) The Predicate in Subject Principle (the claim that in every true proposition the concept of the predicate is somehow contained in the concept of the subject). In this class we will study these four principles, i.e., their modal strength, range, justification, and interrelations both in early modern philosophy (Leibniz, Spinoza, and Clarke), and in contemporary philosophy (Della Rocca, Sam Levey, Dasgupta, Max Black).
Instructor(s): J. Bledin; Y. Melamed
Area: Humanities.

AS.150.493. Introduction to Scientific Methods. 3.0 Credits.
We will study various methods for proving scientific claims defended by scientists and philosophers. Included will be rationalism (Descartes), various forms of empiricism (Newton, Mill, Whewell), realism vs. anti-realism, and scientific strategies to follow when you cannot prove your favorite theory. No particular scientific background required.
Instructor(s): P. Achinstein
Area: Humanities, Social and Behavioral Sciences.

AS.150.498. Modal Logic and Its Applications. 3.0 Credits.
In the first part of the course, we'll investigate the theory of modal logic, considering its syntax, semantics, and proof theory. We'll then turn to some of its philosophical applications: epistemic logic, counterfactuals, deontic logic, intuitionistic logic, and the metaphysics of time.
Instructor(s): J. Bledin
Area: Humanities, Quantitative and Mathematical Sciences.

AS.150.499. The Principle of Sufficient Reason. 3.0 Credits.
According to the Principle of Sufficient Reason every fact must have a reason, or explanation. In other words: there are no brute facts. If a certain penguin has three dots on its right wing - there must be a reason for this. If there are no penguins with precisely three dots on their right wings - there must be a reason for that as well. In the first half of the course we will read works by the two philosophers who introduced the principle: Spinoza and Leibniz. In the second part, we will read texts by Kant, Maimon, Hegel, Schopenhauer, and some contemporary analytic philosophers, and discuss the plausibility, implications, and justification of the principle.
Instructor(s): Y. Melamed
Area: Humanities.

AS.150.511. Directed Study. 3.0 Credits.
Individual study of special topics, under regular supervision of a faculty member. Special permission is required.
Instructor(s): Staff
Writing Intensive.

AS.150.512. Directed Study. 0.0 - 3.0 Credits.
Instructor(s): Staff.

AS.150.551. Honors Project. 3.0 Credits.
See departmental major adviser.
Instructor(s): Staff.

AS.150.552. Honors Project. 0.0 - 3.0 Credits.
Instructor(s): Staff.

AS.150.598. Internship. 1.0 Credit.
Instructor(s): D. Moyar; M. Tumulty.

AS.150.600. Reason Virtue and the Good.
This is a course in theoretical ethics structured around the topics of reason, virtue, and the good. Questions include: Are there types of value? What is it to value something? Is there a property good? What would it mean for goodness to be relational rather than non-relational? What is the ground of excellence? How is excellence related to the good? Should we understand virtue on the model of perception? Is there an important difference between facts and values? Is there something distinctive about practical reason? What is the role of the good in intentional action?
Instructor(s): L. Theunissen
Area: Humanities.

An introduction to the major theories of probability and to theories of evidence. There are no mathematical or philosophical pre-requisites.
Instructor(s): P. Achinstein
Area: Humanities, Quantitative and Mathematical Sciences.

AS.150.604. Graduate Seminar in the Philosophy of Science: The Big Issues.
Readings from Duhem, Carnap, Hempel, Popper, Quine, Kuhn, Feyerabend, van Fraassen, and others who, in the 20th and 21st centuries, got us where we are in the field today. And Quine added: philosophy of science is philosophy enough. Is it?
Instructor(s): P. Achinstein
Area: Humanities, Social and Behavioral Sciences.

AS.150.605. Foundations of Ethics.
The seminar will serve as an advanced, topical introduction to normative theories in ethics, and will include some meta-ethics. Our central question is: what is the foundation, or motivational basis, of ethics? Is it the individual asking what she wants for her life? Is it the determination of rational requirements on action? We think about the relationship between reason, reasons, and motivation. We consider the debate over internalism and externalism about reasons. We work through the distinction between agent-neutral and agent-relative reasons and values. Among others, we will read Thomas Nagel, Phillipa Foot, Shelly Kagan, Samuel Scheffler, Derek Parfit, G. E. M. Anscombe, and Bernard Williams.
Instructor(s): L. Theunissen
Area: Humanities.

The seminar will focus on ancient skepticism as a way of life, and on the role of epistemological argument in skepticism so conceived. The seminar will end with a brief look at early modern reactions to ancient skepticism.
Instructor(s): M. Williams; R. Bett.

AS.150.607. Graduate Seminar: Knowledge and Perception.
How does perception reveal the world, if it does? Why have philosophical reflections on perception often led to skepticism? For background, we will start with readings from McDowell, Travis and (possibly) others.
Instructor(s): M. Williams
Area: Humanities.
AS.150.608. Graduate Seminar—Speculation: Scientific and Philosophical. Some say that speculation whether in science or philosophy, should be avoided at all costs (e.g., Descartes, Newton). Others say that speculation is okay as long as it is followed by argument or evidence (e.g., Popper). Still others encourage one to freely speculate in the absence of argument or evidence (e.g., Feyerabend). Are any of these views right? What is speculation, and is it subject to any universal standards? What is evidence, and is it subject to universal standards? Readings will be from authors mentioned above and from quite a few others. We will look at some very general influential philosophical=scientific speculations, such as the claim that nature is simple and that everything is explainable, as well as some more specific ones.
Instructor(s): P. Achinstein
Area: Humanities.

AS.150.609. Fichte, Schelling and Spinoza. Spinoza constituted a major philosophical interlocutor for both Fichte and Schelling. In this class will study the critical reception of Spinoza by the two philosophers. Among the topics we intend to discuss are: freedom, God, the concept of substance, the nature of thought, and reason. Recommended Course Background: Previous acquaintance with Spinoza’s ethics.
Instructor(s): E. Forster; Y. Melamed
Area: Humanities.

AS.150.610. Virtue Ethics. A study of recent work in virtue ethics.
Instructor(s): H. Bok.

AS.150.614. Topics in Meta-Ethics (Graduate Seminar). This is a seminar on theoretical topics in ethics. We focus on debates over cogitivism and non-cogitivism; realism and anti-realism; reasons internalism and externalism; relativism and skepticism. We read contemporary classics by Sharon Street, T. M. Scanlon, Joseph Raz, Bernard Williams, Allan Gibbard, and others.
Instructor(s): L. Theunissen
Area: Humanities.

AS.150.615. Martin Heidegger, Being and Time: Integral Reading and Current Perspectives. Starting with a detailed discussion of its Introduction and Division One, this jointly taught seminar will bring phenomenological, hermeneutic, and deconstructive as well as analytic, epistemological, and pragmatist methods and viewpoints to bear upon this modern classic. Co-listed with AS.300.653
Instructor(s): H. de Vries; M. Williams
Area: Humanities.

AS.150.616. Martin Heidegger, Being and Time: Integral Reading and Current Perspectives II. Starting with a brief overview and recapitulation of themes discussed in its Introduction and Division One, this jointly will focus on Division Two of Being and Time and bring phenomenological, hermeneutic, and deconstructive as well as analytic, epistemological, and pragmatist methods and viewpoints to bear upon this modern classic.
Instructor(s): H. de Vries; M. Williams
Area: Humanities.

AS.150.619. Topics in Hegel’s Philosophy: The Philosophy of Right. This course will be a close reading of G.W.F. Hegel’s Philosophy of Right. Some of the main topics for discussion will be the relation of law and morality, the dependence of the political philosophy on Hegel’s Logic, and the relation of individual and social conceptions of freedom.
Instructor(s): D. Moyar
Area: Humanities.

AS.150.625. Fatalism and the Logic of Unconditionals. Since the early eighties, there has been a growing movement away from traditional truth-centric theories of meaning and consequence towards more information-oriented accounts. Given these relatively new developments, I think the time is ripe for reconsidering one of the oldest arguments in philosophy: the ”Idle Argument” for fatalism. This notorious argument survives in Cicero’s De Fato from 44BC but the version that we will focus on in the seminar is based on Dummett’s classic “Bringing About the Past” [1964].
Instructor(s): J. Bledin
Area: Humanities.

AS.150.627. Seminar in Epistemology. Topic: Realism and its Critics Questions circling around issues of “realism” have been prominent in contemporary philosophy. Some philosophers argue for or against realism across the board. Here the fundamental issue is often taken to be semantic: can truth be radically evidence-transcendent, so that a proposition must be true or false even if we will never have evidence one way or another? But there are also more local questions. Do scientific theories that postulate unobservables aim to state literal truths about such theoretical entities (as scientific realists claim), or are they better understood as devices for linking and systematizing observational evidence (as instrumentalists or constructive empiricists argue)? Are there mind-independent moral or aesthetic facts (as moral and aesthetic realists suppose), or are moral and aesthetic judgments better understood in some other way, for example as fundamentally “expressive” rather than “descriptive”. Many philosophers continue to hold that such questions raise deep metaphysical issues. But this view has been challenged by metaphysical quietists, who argue that the whole issue of realism versus non- or anti-realism is best avoided. So should we be realists, either in general or selectively? Or is quietism the better option? What is realism anyway? The aim of this seminar is to explore influential arguments that arise in the attempt to answer such questions.
Instructor(s): M. Williams; P. Achinstein
Area: Humanities.

AS.150.632. Formal Logic. “An introduction to symbolic logic and probability. In the first two parts of the course we study formal ways of determining whether a conclusion follows from its premises. Included are truth-functional logic and predicate logic. In the third part we study the basic rules of probability, and learn how to make probability calculations and decisions in life.” Co-listed with AS.150.118 (for undergraduate students) 11:00-11:50am.
Instructor(s): P. Achinstein
Area: Humanities, Quantitative and Mathematical Sciences.

AS.150.633. Kant’s Opus Postumum. This research seminar examines the reasons that led Kant to revise his transcendental philosophy late in life. Special attention to problems in the Metaphysics of Nature and the Metaphysics of Morals. Students should be familiar with Kant’s theoretical and practical philosophy.
Instructor(s): E. Forster.
AS.150.636. Spinoza and Hegel.
Spinoza and Hegel are two of the greatest philosophers of the modern period. Both philosophers are bold and difficult, and both exerted a decisive influence on later developments of Western philosophy. In this class, we will attempt to reconstruct a philosophical dialogue between the two philosophers. Topics to be discussed include: the nature of philosophy, basic ontology, kinds of knowledge, negation and contradiction, freedom, the reality of time, teleology and human history, the role and value of the state.
Instructor(s): E. Forster; Y. Melamed
Area: Humanities.

This seminar will focus on language acquisition as involving a special kind of learning, one that requires the active participation of an adult in what the child does. The account we will be discussing draws heavily on Wittgenstein’s philosophy of language, particular the treatment of the problem of similarity and the development of reference.
Instructor(s): M. Williams
Area: Humanities.

Although all three were Copernicans in the broad sense, these great mathematician-philosophers of the 17th century held subtly different positions on the question whether the sun or the earth moves, in large part because they proposed very different analyses of what it is for a body to move. These analyses emerge from quite divergent views on space, time, matter, mind, and scientific-philosophical method in relation to natural theology. The focus of the seminar is on the interaction of these views: Newton’s rejection of Descartes’ Followed by the clash between Newton’s and Leibniz’s.
Instructor(s): R. Rynasiewicz
Area: Humanities.

AS.150.652. Seminar in the Philosophy of Science.
Philosophy of experiment, Bayesianism, severe tests. Readings from Hacking, Galison, Franklin, Mayo, and others. Applications range from physiology to cosmology.
Instructor(s): R. Rynasiewicz
Area: Humanities, Social and Behavioral Sciences.

AS.150.653. Seminar in Philosophy in Physics.
Philosophical Problems of Cosmology. Topics include: the nature of spacetime; physical infinity; the arrow of time; laws of nature and initial conditions; limits to explanation; applicability of quantum mechanics to the universe as a whole; inflation; selection effects and the anthropic principle, multiverses, objective probability.
Instructor(s): R. Rynasiewicz
Area: Humanities.

AS.150.655. Practical Reason in German Idealism.
In this course we will examine the development of idealist theories of practical reason. We will read Kant's Critique of Practical Reason, Fichte's System of Ethics, and selections from Hegel’s writings.
Instructor(s): D. Moyar
Area: Humanities.

AS.150.657. Philosophy of Language.
We will investigate one or more specialized topics in formal semantic and pragmatics.
Instructor(s): J. Bledin.

AS.150.658. Topics in the Philosophy of Language.
An examination of recent work in the philosophy of language and/or related work in the philosophy of mind.
Instructor(s): S. Gross.

AS.150.659. Topics in Formal Semantics: Counterfactuals?
In this seminar, we will investigate the semantics and communicative function of counterfactuals. Among the questions that we will consider are these: What are the compositional semantic values of counterfactual conditionals? What is the context change potential of a counterfactual and what kind of structure must we add to the common ground of a conversation to model its communicative effect? Do counterfactuals recommend a dynamic approach to meaning? Are counterfactual conditionals truth-apt? Do they serve to describe the world? If so, which aspect of reality is a counterfactual sensitive to?
Instructor(s): J. Bledin
Area: Humanities, Social and Behavioral Sciences.

AS.150.667. Explanation in Science and Metaphysics.
Questions about the nature of metaphysical explanation are central to contemporary metaphysics. These questions are relevant to similar debates in philosophy of science about the nature of scientific explanation. In this seminar we will examine questions about the nature and role of metaphysical explanation, specifically focusing on the comparison between metaphysical explanation and scientific explanation.
Instructor(s): E. Taylor
Area: Humanities, Social and Behavioral Sciences.

AS.150.810. Independent Study.

Instructor(s): Staff.

Preparing philosophy graduate students for the impending job market by discussions of, and practicing for, constructing and submitting dossiers, interviews and giving talks both in and outside one's particular field. Open to all philosophy graduate students, regardless of year and field. No degree credits. Offered sporadically.
Instructor(s): P. Achinstein.

AS.150.821. Research Seminar in Language and Mind.
A workshop for current departmental research in language and mind. Permission required.
Instructor(s): S. Gross
Area: Humanities.
Cross Listed Courses

**Classics**

AS.040.241. The Greeks and Their Emotions. 3.0 Credits.
This seminar is meant as an introduction to the study of ancient emotions, with a particular emphasis on how the Greeks of the Archaic, Classical and Hellenistic periods conceptualized, portrayed and lived their emotions through linguistic, literary and artistic expression. After an analysis of how the ancient Greek terminology for the emotions differs from our own, we shall focus on the phenomenon of emotion as deeply rooted in the physical body, and in light of this we will contemplate (and question) its universality. Texts will be read in translation. No knowledge of ancient Greek required.
Instructor(s): M. Asuni
Area: Humanities
Writing Intensive.

**History**

AS.100.295. American Intellectual History since the Civil War. 3.0 Credits.
Readings in American social thought since 1865, ranging across developments in philosophy, literature, law, economics, and political theory.
Instructor(s): A. Burgin
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

**Political Science**

AS.191.344. Belonging to Nature in the Anthropocene. 3.0 Credits.
This course explores debates in contemporary environmental political thought concerning humanity's relationship to nature in the Anthropocene. The Anthropocene refers to the era in which "human" activity becomes a force of "nature"—when the impact of human activity on natural processes manifests itself in the stuff of the Earth. For many of us, these planetary transformations are hardly noticeable in day-to-day life, but they are dramatic: we are living through the Earth's sixth mass extinction. What is our relationship to these transformations? Do we have the power to stop them, or at least to minimize their harmful effects? Course readings and films introduce multiple visions of the human/nature relationship and examine the responses they recommend to these and other questions. The political stakes of these visions are brought to light as we consider: How do visions of the human/nature relationship shape and texture core political concepts like freedom, agency, responsibility, and progress? What do they suggest about the strategies most likely to motivate action amid the uncertainty of the Anthropocene? How do these visions subtly (and not so subtly) relegate some to the realm of "nature" so that others can be classified as "human"?
Instructor(s): S. Erev
Area: Humanities
Writing Intensive.

**Islamic Studies**

AS.194.401. Themes in Medieval Islamic Thought. 3.0 Credits.
This seminar examines medieval Muslim thinkers who addressed themes at the intersection of theology, philosophy, science, and ethics: the definition of the nature of God's attributes, His uniqueness, transcendence and omnipotence; human freewill and the limits of human knowledge; the nature of the world; and the relationship among reason, religion, and science. The course will look at how these and other crucial themes were addressed by major medieval philosophers and philosophical schools not only in Islam, but also in Judaism and Christianity, and highlight similarities and differences among the three major monotheistic faiths.
Instructor(s): G. Ferrario.

**Psychological Brain Sciences**

AS.200.336. Foundations of Mind. 4.0 Credits.
An interdisciplinary investigation into the innateness of concepts: perception, number, language, and morality, physics discussed. Evidence from animals, infants, patients, brains. Students collect data in sections investigating claims from the readings. Cross-listed with Cognitive Science and Philosophy.
Instructor(s): J. Halberda; L. Feigenson
Area: Social and Behavioral Sciences.

**German Romance Languages Literatures**

AS.211.265. Panorama of German Thought. 3.0 Credits.
This course explores the rich terrain of German literature and philosophical thought, from Kant to today. At each meeting, we will investigate canonical texts of the German intellectual tradition, with an eye to discovering their unity as "German" philosophical and cultural artifacts and icons, as well as with an interest in establishing their well-deserved place in the wider, global discourses of world literature. In this way, we will learn to think critically in and with these important literary and philosophical texts from German-speaking lands as a means of viewing and appreciating the full panorama of German thought. Among authors read and discussed will be Kant, Goethe, Schiller, Hegel, Kleist, Heine, Fontane, Nietzsche, Freud, Kafka, Heidegger, Mann and Bernhard. Readings and discussions will be in English. German is appreciated but not required.
Instructor(s): M. Dornbach
Area: Humanities
Writing Intensive.

AS.211.707. Film and Philosophy: The Surrealist Cinema of Alejandro Jodorowsky.
The films of Chilean cult director Alejandro Jodorowsky have confounded, infuriated, and intrigued critics and audiences alike throughout his 50-plus-year career. In this seminar we will examine the expansive of his cinematic production in order to delve into fundamental philosophical questions of representation, violence, and the relation between visual imagery and poetry.
Instructor(s): W. Egginton
Area: Humanities
Writing Intensive.

What if Rousseau's description of the sentiment de l'existence were to join to the models of consciousness Damasio develops in The Feeling of What Happens? This course explores aspects of consciousness in French literature (Rousseau, Sand, Nerval, Amiel, Flaubert, Valéry, Proust, Sartre) in a dialogue with recent texts in theory, philosophy, neuroscience (e.g. Poulet, Merleau-Ponty, Sartre, Scarry, Noé, Humphrey, Damasio, Sacks). 
Instructor(s): E. Ender
Area: Humanities
Writing Intensive.

AS.213.313. Heidegger's "Being and Time" and "Rectify". 3.0 Credits.
This course will introduce students to Heidegger's seminal work as seen through the lens of the TV series Rectify, which considers what it means to be "thrown" into the world and how we construct a meaningful horizon for our experiences. We will explore some of the fundamental concepts in Being and Time, including care, projection, fallensness, affect and time, and being-unto-death, and consider how these same ideas are taken up in Rectify, which as a TV show has to develop its own visual vocabulary to explore the structure and nature of being in the world. Taught in English.
Instructor(s): R. Tobias
Area: Humanities.
AS.213.374. Existentialism in Literature and Philosophy. 3.0 Credits.
This course explores the themes of existentialism, including the meaning of existence, the nature of the self, authenticity and inauthenticity, the inescapability of death, the experience of time, anxiety, freedom and responsibility to others, in literary and philosophical works. It will be examined why these philosophical ideas often seem to demand literary expression, or bear a close relation to literary works. Readings may include writings by Kierkegaard, Nietzsche, Tolstoy, Heidegger, Rilke, Kafka, Sartre, de Beauvoir, and Camus, among others. Course will be taught by the Kurrelmeyer Chair in German. Taught in English.
Instructor(s): Staff
Area: Humanities.

AS.213.666. “To be continued” - Seriality in Literature and Other Media.
Taught in German. By ending with the words "(To be continued)" ["ist fortzusetzen"], Goethe’s Wilhem Meisters Wanderjahre not only reflects on the open form of the modern novel but also points toward serialized formats of fiction as they emerge in the 19th century due to advances in printing technologies. The publication of fiction in periodical installments in magazines or newspapers brings about the development of new genres (serialized novel/Feuilletonroman) along with specific serial narrative techniques. The cliffhanger e.g. – although invented earlier – becomes a prominent technique to create suspense. The course analyzes seriality with respect to narrative forms and genres across various media (literature, theater, film, TV) from the 19th century to the present. It further discusses serial aesthetics, seriality in structuralist and poststructuralist theory as well as the ambivalent status of seriality in the arts between avantgarde and popular culture. The course material will include: Stifter, Fontane, excerpts from the magazine “Die Gartenlaube”, Wagner, Freud, Kafka, Lévi-Strauss, Deleuze, Eco, Iser,”The Perils of Pauline” (serial, 1914), “Copycat” (Jon Amiel, 1995), “Twin Peaks” and current US-American TV series.
Instructor(s): E. Strowick
Area: Humanities
Writing Intensive.

AS.213.705. Hegel’s Phenomenology of Spirit.
We will study key passages of The Phenomenology of Spirit from a queer-feminist perspective and engage with some of the feminist scholarship on Hegel
Instructor(s): K. Pahl
Area: Humanities.

The course explores some aspects of the contradictory constitution of the modern subject as a subject that is split, opposed, in tension. Two archetypal figures of this split are the “bourgeois,” as the social-economic subject, and the “citizen” or “citizen,” as the political subject. The bourgeois and the citizen are defined by distinct and opposing conceptions of the “will” of education (Bildung), and of the relation between law and nature, normativity and facticity. In asking how to understand the conflictual relationship between these two basic figures of the modern subject, the course will focus especially on the paradoxes of “individual rights” (subjektive Rechte) as the fundamental mechanism of modern subject-formation. How do rights both empower subjects, while also contributing to forms of their disempowerment? To what extent do rights contain and organize the tensions between subjects understood as social or economic, and as political? CLASS BEGINS FEBRUARY 25 AND ENDS APRIL 1. Readings will include excerpts from (among others): Hegel, Marx, Nietzsche, Horkheimer and Adorno, Heidegger, Foucault, Balibar and Rancière.
Instructor(s): C. Menke; R. Tobias
Area: Humanities.

AS.214.479. Dante Visits the Afterlife: The Divine Comedy. 3.0 Credits.
Dante’s Divina commedia is the greatest long poem of the Middle Ages; some say the greatest poem of all time. We will study the Commedia critically to find: (1) What it reveals about the worldview of late-medieval Europe; (2) how it works as poetry; (3) its relation to the intellectual cultures of pagan antiquity and Latin (Catholic) Christianity; (4) its presentation of political and social issues; (5) its influence on intellectual history, in Italy and elsewhere; (6) the challenges it presents to modern readers and translators; (7) what it reveals about Dante’s understanding of cosmology, world history and culture. We will read and discuss the Commedia in English, but students will be expected to familiarize themselves with key Italian terms and concepts. Students taking section 02 (for 4 credits) will spend an additional hour working in Italian at a time to be mutually decided upon by students and professor.
Instructor(s): W. Stephens
Area: Humanities
Writing Intensive.

Giambattista Vico’s Principi di scienza nuova d’intorno alla comune natura delle nazioni (1725, 1730, 1744) was intended to found an “ideal” and “eternal” model of human development, valid for all societies. Vico considered his project both philology and philosophy, and tried to revolutionize thinking about human history as practiced between about 1550 and 1700, by exposing misconceptions behind attempts to square “sacred history” (the presumed historical accuracy of the Bible) with “profane” or non-Judeo-Christian concepts of history, both ancient and modern. The culture shock underlying this “old science” stimulated Vico to base philosophical and historical knowledge of mythology on a conception of narration. Recommended background: Italian and Latin
Instructor(s): W. Stephens
Area: Humanities
Writing Intensive.

AS.225.328. The Existential Drama: Philosophy and Theatre of the Absurd. 3.0 Credits.
Existentialism, a powerful movement in modern drama and theatre, has had a profound influence on contemporary political thought, ethics, and psychology, and has transformed our very notion of how to stage a play. Selected readings and lectures on the philosophy of Kierkegaard, Nietzsche, Camus and Sartre – and discussion of works for the stage by Sartre, Ionesco, Genet, Beckett, Albee, Pinter, Athol Fugard (with Nkani & Nshone), Heiner Müller and the late plays of Caryl Churchill. Opportunities for projects on Dürennatt, Frisch, Havel, Witkiewicz, and Mrozek.
Instructor(s): J. Martin

Humanities Center
AS.300.228. Brain and Society. 3.0 Credits.
On April 2, 2013, President Obama unveiled the Brain Activity Map Project, a 100 million dollar investment to map the single-celled neurons composing the human brain. Scientific in its aim, the project is culturally significant as well. Popular websites lumosity.com and neuronetlearning.com offer brain-exercises to boost intelligence, while the emergent academic fields neurophilosophy, neuroethics, and neurohistory borrow from the brain sciences. The interaction between the brain and society, however, is by no means new. In this course, we will investigate the origins of brain maps and trace their reception in nineteenth-century European and American literature, philosophy, and politics. Topics include phrenology, the nervous system, psychopathology, and brain localization, and these fields’ resonance in German Idealism, Victorian literature, French anthropology, and American fiction. The course is reading intensive.
Instructor(s): H. de Vries
Area: Humanities, Social and Behavioral Sciences.

AS.300.327. Introduction to Comparative American Cultures: Obama and Philosophy. 3.0 Credits.
This course will investigate the philosophical as well as theological, juridical and political, and rhetorical and literary backgrounds that have informed and shaped Barack Obama's writings, speeches, and policy strategies leading up to and during his presidency. While paying minute attention to a few selected controversial debates in domestic and international governance and relations, and while discussing the question of Obama's legacy in and after the upcoming elections, our primary focus will be on understanding the curious blend of Christian realism, influenced by the theologian Reinhold Niebuhr, the tradition of American civic republicanism and pragmatism, and Obama's specific brand of post-Civil Rights, if not necessarily post-racial, politics. All these tenets coalesce in a vision and politics that may well be described as one of "deep" pragmatism. Attention will be paid to Obama's early appeal to "simple ideas" and "small miracles," each of them yielding the Biblical and sobered injunction of a "hope against hope." But extensive consideration of his thought and impact in the assessment of biographers and intellectual historians, legal scholars and political theorists, cultural critics and pundits will add to our attempt to understand and take stock of the Obama phenomenon as well.
Instructor(s): L. McGrath
Area: Humanities, Social and Behavioral Sciences.

AS.300.399. Cinema and Philosophy. 3.0 Credits.
Do movies have anything to say about philosophical problems? Why is contemporary philosophy so interested in cinema? What are the most productive ways of bringing films and philosophy into conversation? Why is contemporary philosophy so interested in cinema?
Instructor(s): M. McCreary; P. Marrati
Area: Humanities.

AS.300.422. Luther, Philosophy, Politics: 500 Years After the Reformation. 3.0 Credits.
As historical legend has it, in 1517 the German monk and then professor of theology Martin Luther inaugurated a revolution in thinking, belief and moral practice, known as the Protestant Reformation by nailing his Ninety-Five Theses, under the title Disputation on the Power of Indulgences, to the door of the Castle Church of Wittenberg. Known for his brutal characterization of reason as "the devil's whore," his theology of the hidden god, his catechisms, the doctrine of the two realms, and his condemnation of peasants' revolts of his days, Luther’s influence has been profound and lasting. We will study some of his most influential theses, treatises, and sermons and will seek to gauge the effect they had on the Western narrative of secularization and modernity, together with their deep influence on post-Reformation and, indeed, recent philosophy and political thought. Readings include: Luther, G.W. F. Hegel, Max Weber, Martin Heidegger, Karl Barth, Erik Peterson, Dietrich Bonhoeffer, Kaj Munk, Ernst Bloch, Philippe Lacoue-Labarthe, Marcel Gauchet, Giorgio Agamben, and others.
Instructor(s): H. de Vries
Area: Humanities.

AS.300.424. Psychoanalysis as a Theory of Thinking. 3.0 Credits.
This course will introduce students to the writings of Wilfred Bion, the British psychoanalyst who expanded Sigmund Freud's and Melanie Klein's metapsychology. Bion developed an epistemological theory of thinking, surmising that the mind grows when it is exposed to the truth of one’s emotional experience. In his many writings and lectures, Bion developed a sophisticated theoretical model that conceptualizes the transformation of emotional experience into the capacity for thought. While in his early writings he is inspired by life sciences and mathematics, in his later writings Bion shifts away from the scientific view to an aesthetic/mystical vertex, drawing on poets mystics and philosophers, such as Keats, Milton, Shakespeare, Sophocles, Meister Eckhart, St John of the Cross, Plato, Hume and Kant.
Instructor(s): O. Ophir
Area: Humanities.

Humanities Center
AS.300.435. Emmanuel Levinas: Essential Works, Guiding Concepts, Lasting Influence. 3.0 Credits.
This seminar will address the major writings and guiding concepts of Emmanuel Levinas and investigate his increasing critical role as a touchstone and dividing line in the formation of twentieth century and contemporary schools of thought (phenomenology, pragmatism, post-analytic philosophy, literary, feminist, and political theory, anthropology). Additional readings will include Stanley Cavell, Jacques Derrida, Vasily Grossman, Jean-François Lyotard, and Hilary Putnam.
Instructor(s): H. de Vries
Area: Humanities.

AS.300.653. Martin Heidegger, Being and Time: Integral Reading and Current Perspectives.
Starting with a detailed discussion of its Introduction and Division One, this jointly taught seminar will bring phenomenological, hermeneutic, and deconstructive as well as analytic, epistemological, and pragmatist methods and viewpoints to bear upon this modern classic.
Instructor(s): H. de Vries; M. Williams.
AS.300.657. **Martin Heidegger, Being and Time: Integral Reading and Current Perspectives, II.**
Starting with a brief overview and recapitulation of themes discussed in its Introduction and Division One, this jointly will focus on Division Two of Being and Time and bring phenomenological, hermeneutic, and deconstructive as well as analytic, epistemological, and pragmatist methods and viewpoints to bear upon this modern classic. Instructors: H. de Vries; M. Williams.

AS.300.658. **Must We Mean What We Say?.**
Starting out from Stanley Cavell's programmatic book and title, this seminar will revisit his discussion of J.L. Austin, John Searle, Jacques Derrida, and Shoshana Felman, with special emphasis on these authors' theories of intentionality, seriousness, and sincerity, and with reference to the ancient and modern concepts of tragedy on which they partly rely. In addition to the aforementioned thinkers' relevant works, reading will include selections from Euripides, Henrik Ibsen, Isaiah Berlin, Emmanuel Levinas, and Jean-Luc Marion. Instructor(s): H. de Vries.

**Center for Africana Studies**

AS.362.450. **Critical Thinking in Africana Studies. 3.0 Credits.**
This seminar examines various ideas, theories, and practices of thinkers, writers, and activists whose work and practices have constituted an Africana Studies intellectual tradition. The purpose of this seminar is to teach students to read, think, and write critically about questions relative to the formation and history of Africana thought and its intellectual tradition, in particular, and the genealogy of thought and intellectual traditions, in general. We will also think about various fields of knowledge that have shaped Africana Studies. The seminar therefore will work through the different meanings of intellectual work and critical thought and theory in Africana Studies. Instructor(s): F. Hayes. Writing Intensive.

**Henry A. Rowland Department of Physics and Astronomy**

http://physics-astronomy.jhu.edu/

Johns Hopkins is the nation's first research university. That emphasis on research continues to this day and forms the backbone of the undergraduate and graduate programs in the Department of Physics and Astronomy. The department's research program is focused into four areas of excellence: Astrophysics, Condensed Matter Physics, Elementary Particle Physics, and Plasma Physics. For graduate students interested in these fields, the department offers world-class research opportunities in a friendly and supportive setting. For undergraduates, JHU offers exposure to cutting-edge research combined with a level of personal attention that is typically found only in liberal arts colleges. Nearly all physics majors at JHU work on research projects and many begin as freshmen or sophomores.

All research builds upon an established body of knowledge. To be effective researchers, teachers, or professionals, both undergraduate and graduate students must acquire a core knowledge of physics. Our undergraduate and graduate courses are designed to cover the core subjects at the appropriate levels, leading to advanced courses on a variety of specialized topics. As a consequence, students having different backgrounds or different ultimate objectives can select those parts that are most appropriate for them. The selections are made under the guidance of a faculty advisor. The advisor aids the student in making the most efficient use of his or her time and ensures that his or her program contains a reasonable balance among classroom and laboratory, mathematics, seminars, and introduction to research.

**Undergraduate Programs**

**Requirements for the B.A. and B.S. Degrees**
(See also Requirements for a Bachelor's Degree (p. 7).)

The major program is structured so that nearly all students take the same courses during the first two years and must complete the same list of core upper-level courses during their second two years, but permits a variety of choices in upper-level electives. The total number of credits required for the B.A. degree is 120 and the B.S. is 126. By the end of the four years our students share an understanding of classical mechanics, electromagnetism, and quantum mechanics, and have acquired physics lab skills that will support them in graduate school or in a host of other pursuits.

**Core Courses**

**Mathematics**
The standard mathematics requirements for all physics majors consist of:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>

Total Credits: 73-78

B.A. Degree

Two (2) additional courses (at least 3 credits each) at the 300-600 level in the Department of Physics and Astronomy or approved physics-related courses in other departments. Students who intend to continue Physics in graduate school are strongly encouraged to take these electives in Physics and Astronomy, and take both AS.171.301 Electromagnetic Theory II and AS.171.312 Statistical Physics/Thermodynamics.

B.S. in Physics Degree

Five (5) additional courses (at least 3 credits each) at the 200-600 level in the following departments: Physics and Astronomy, Biology, Biophysics, Chemistry, Cognitive Science, Earth and Planetary Sciences, Mathematics, and/or the School of Engineering (excluding courses listed as 500.xxx, 660.xxx, 551.xxx and 661.xxx). These courses must constitute a coherent and rigorous program of study approved by the Departmental Advisor and Director of Undergraduate Studies no later than the registration period for the fall semester of the senior year. At least four (4) of these courses must be taken in a single department in the Krieger School of Arts and Sciences or within a single department or program in the Whiting School of Engineering (note: called "Department elective" in the above Sample Program of Study). One (1) semester of research may be used as one elective.

Recommendations

An additional two semesters of mathematics are recommended, either AS.110.405 Real Analysis I or AS.110.311 Methods of Complex Analysis and one other. It is recommended that Physics majors become proficient in a computer programming language, either independently or through course work. Students are encouraged to broaden their background by taking introductory courses in other natural science or engineering disciplines, such as AS.030.101 Introductory Chemistry I.

Other Departmental Requirements:

A grade of C- or higher is required for a course to be counted towards major requirements. This includes required math courses. An exception for a single course taken in the year before graduation may be granted by the Director of Undergraduate Studies when there are extenuating circumstances.

Honors in the Major:

To receive Honors in Physics, you must have a GPA in your major requirements of a 3.5 or higher.

Senior Thesis

Any student majoring in the department may write a senior thesis, based on original research conducted under the supervision of a member of the faculty. Arrangements for this research will be made on an individual basis. The department views the writing of a senior thesis as an excellent capstone experience to an undergraduate education in physics, and encourages all students to consider it.

Minor in Physics

To earn a minor in Physics, a student must complete four (4) courses (at least 3 credits each) at the 200-level or above, plus AS.172.203 Contemporary Physics Seminar.

Restrictions: A grade of "C-" or better must be earned in required courses, which may not be taken S/U.

Donald E. Kerr Memorial Prize

In recognition of Dr. Kerr’s work in microwave physics, the department awards the Donald E. Kerr Memorial Prize each year to the most outstanding undergraduate major graduating in physics.
Graduate Programs

Graduate study in physics and astronomy at Hopkins is intended primarily to prepare Ph.D. graduates for careers in teaching and research in physics and astronomy, or in applications such as biophysics, space physics, and industrial research. Entering students may elect to work toward a Ph.D. in physics or a Ph.D. in astronomy and astrophysics. The two programs are similar in structure but have somewhat different course requirements (see below). A wide range of research projects—both theoretical and experimental—are available for graduate students in Astrophysics, Condensed Matter Physics, Particle Physics, and Plasma Spectroscopy.

Admission

To obtain admission, a student is expected to submit evidence that he or she has a good chance to succeed. Such evidence will ordinarily consist of transcripts of previous academic work, Graduate Record Examination scores (including advanced physics), letters of recommendation, and, for international students, a Test of English as a Foreign Language (TOEFL) score.

Requirements for the Ph.D. Degree

The Ph.D. program has strong emphasis on early and active involvement in graduate research. Thus, students are required to have a research advisor and file a research summary every semester they are enrolled in the program, starting with the first one. Furthermore, students must complete the required courses with a grade of B- or better; the coursework is typically done over the first two years. In the beginning of the second year, students complete the research examination, and in the beginning of the third year — the University’s Graduate Board Oral examination, both of which are based on completed or proposed research. During the first two years, students are typically involved in introductory research projects, which may or may not be related to their thesis work, and sometimes work with several different advisors, but they must identify (and have an agreement with) a thesis advisor no later than the beginning of their third year in the program, after which point students focus on their thesis research. The thesis is to be completed by no later than the end of the 6th year, ending with an oral presentation of the thesis to a faculty committee.

Course Requirements

Ph.D. in Physics

Students must complete the following courses:

- AS.171.603 Electromagnetic Theory
- AS.171.605 Quantum Mechanics
- AS.171.606 and Quantum Mechanics
- AS.171.703 Advanced Statistical Mechanics
- AS.172.632 Physics Seminar

Ph.D. in Astronomy and Astrophysics

Students must complete the following courses:

- AS.171.611 Stellar Structure and Evolution
- AS.171.612 Interstellar Medium and Astrophysical Fluid Dynamics
- AS.171.613 Radiative Astrophysics
- AS.171.627 Astrophysical Dynamics
- AS.172.633 Language Of Astrophysics

The department offers a wide range of graduate physics, astrophysics, mathematical methods and statistics classes, and while only five are required, the students are encouraged to use the flexibility of the graduate program and the available classes to design programs of study that best prepare them for their chosen area of research. In addition to the required courses listed above, below is the list of the graduate courses that have been taught in recent years:

- AS.171.610 Numerical Methods-Physics
- AS.171.618 Observational Astronomy
- AS.171.619 Molecular Astrophysics
- AS.171.621 Condensed Matter Physics
- AS.171.625 Experimental Particle Physics
- AS.171.639 Group Theory in Physics
- AS.171.644 Exoplanets and Planet Formation
- AS.171.646 General Relativity
- AS.171.648 Physics of Cell Biology: From Mechanics to Information
- AS.171.697 Astro-Particle Physics
- AS.171.672 Introduction Plasma Physics
- AS.171.699 Planets, Life and the Universe
- AS.171.701 Quantum Field Theory
- AS.171.702 and Quantum Field Theory II
- AS.171.704 Phase Transitions and Critical Phenomena
- AS.171.732 Elementary Particle Physics
- AS.171.750 Cosmology
- AS.171.751 Neutron Scattering and Quantum Condensed Matter Physics
- AS.171.752 Black Hole Astrophysics
- AS.171.753 String Theory
- AS.171.755 Fourier Optics and Interferometry in Astronomy
- AS.171.762 Advanced Condensed Matter
- AS.171.783 Black Hole Physics
- AS.171.784 Advanced Particle Theory: "What to Expect at the LHC"
- AS.171.785 Advanced Particle Theory: Dark Matter
- AS.173.608 Advanced Laboratory

Students in both programs must receive at least a B- in each required course, or they will be required to retake the specific course once more and pass it.

Advising

All entering students are assigned to a first-year advisor who works closely with the student through the first two years of graduate study, or until a thesis advisor is found. The first-year advisor advises the student on courses of study, helps familiarize them with the department and provides guidance in finding research opportunities. In the beginning of each fall semester, the department holds a “research jamboree” where incoming students are introduced to the research in the department through a series of brief talks, lab tours, and research group open houses. Thus, the students are familiar, immediately upon their arrival, with the scope of research in the department and can identify prospective research advisors they may wish to work with.
First and Second-Year Research Requirement

First-year students must find, by the end of the third week of class in the fall semester, and by the end of the first week of class the second semester, as well as before the summer term begins, a member of the professorial faculty to advise them in some type of research project. The students are required to submit a short written summary of that research experience at the end of the semester. Students may continue with one advisor through all three semesters, or they may choose to cycle through several different research advisors. In some cases, one of these first-year research advisors may become a thesis advisor, but in others, the thesis advisor may change. This research requirement continues until the end of the second year, or until the student finds a thesis advisor.

The nature of these first-year research projects may vary from student to student, from one advisor to another, and from one sub-field of physics to another. In some cases they lead to published research. In other cases, they may be first steps in a longer-term research project. And in some cases, they may comprise reading or independent-study projects to develop background for subsequent research. It is left to the individual advisor to determine what the written summary should entail. These research projects are not research assistantships and are performed in addition to other graduate student responsibilities (teaching and graduate coursework), although they are typically merged with RA-supported research for those students supported by RAs.

Thesis Research and Defense

Students are required to find a thesis advisor no later than the beginning of the third year. After the student chooses a thesis advisor, the student forms their Thesis Committee consisting of the advisor and two other faculty members (all Thesis Committees contain at least two full-time faculty from the department). These committees function as extended advisory bodies; students have the opportunity to discuss their progress and problems with several faculty. They also conduct one formal annual review of each student’s progress. Research leading to the dissertation can be carried out not only within the Department of Physics and Astronomy, but with appropriate arrangements, either partly or entirely at other locations if necessitated by the project goals. At the conclusion of thesis research, the student presents the written dissertation to the faculty committee and defends the thesis in an oral examination.

Requirements for the M.A. Degree

Although the department does not admit students who intend to pursue the master’s degree exclusively, students in the department’s Ph.D. program and students in other Ph.D. programs at Johns Hopkins may apply to fulfill the requirements for the M.A. degree in the Department of Physics and Astronomy. Students from other JHU departments must seek approval from their home department and from the Department of Physics and Astronomy before beginning their M.A. studies.

Course Requirements for the M.A.

Students must master the basic undergraduate material covered by the following courses:

- AS.171.204 Classical Mechanics II 4
- AS.171.301 Electromagnetic Theory II 4
- AS.171.303 Quantum Mechanics I 8
- AS.171.304 Quantum Mechanics II
- AS.171.312 Statistical Physics/Thermodynamics 4

Courses taken elsewhere may qualify at the discretion of the Graduate Program Committee.

Students must also complete six one-semester graduate-level (at least three hours/week) courses offered by the Department of Physics and Astronomy. AS.171.801 Independent Research-Graduates, AS.171.802 Independent Research-Graduate may be substituted for any of the above-mentioned graduate or undergraduate courses. The research course must include an essay supervised and approved by a faculty member of the Department of Physics and Astronomy.

The student must receive a grade of B- or above in each of the courses. The graduate-level courses may be retaken once; the undergraduate courses cannot be repeated.

Furthermore, the student must complete at least two semesters of research projects, as described in the requirements for the Ph.D., and complete the departmental research exam. The deadline to fulfill all requirements is the date of the Ph.D. thesis defense.

Facilities

The Department of Physics and Astronomy’s first facility was Rowland’s measuring engine for determining the solar spectrum in the 1880s. Ever since that time the Department has maintained a long and continuous history in instrumentation. In recent decades this has extended to instrumentation for space missions. The Department maintains a Class-1000 clean room for microfabrication and nanofabrication, a high bay lab, professional and student machine shops, and supports a world-renowned Instrument Development Group (IDG) with six full-time engineers and three full-time machinists.

Among the diverse techniques used for studying condensed matter physics are magnetometry/susceptometry, specific heat and transport measurements, atomic force and magnetic force microscopy, X-ray and electron diffraction, terahertz spectroscopy, and neutron scattering at the nearby NIST Center for Neutron Research and at the Spallation Neutron Source, ORNL. A variety of cryostats, He3 refrigerators, and He3-He4 dilution refrigerators together with high temperature ovens, electromagnets, and superconducting magnets allow measurements to be made from 0.05 K to 1100 K and in magnetic fields up to 14 Tesla. Apparatus for the preparation of samples includes two image furnaces for floating zone growth, single-crystal growth vacuum furnaces, box and tube furnaces, arc furnaces, several high vacuum and ultra-high vacuum chambers for thin film fabrication using evaporation, MBE, pulsed laser deposition, sputtering, and focused ion beam (FIB) milling. Also available on campus are cutting-edge transmission electron microscopes and scanning electron microscopes.

In astrophysics, research groups have state-of-the-art laboratories for testing cryogenic transition-edge bolometer detectors with SQUID read-out electronics, and closed-cycle helium cryocgens. Recent instrumentation advances include the design and manufacture of large free-standing polarization grids and novel high-bandwidth smooth-wall feed horns. Current activities include development of microwave and millimeter-wave instruments for far-infrared and microwave astronomy and cosmology.

The research groups in the department have a wide range of state-of-the-art computer facilities including high performance clusters with over a thousand processors and the largest database at a university—over a petabyte. All undergraduate majors and graduate students have access to high performance workstations.

Financial Aid

Students in good standing are normally supported by a combination of fellowships, research assistantships and teaching assistantships. The financial package covers full tuition, individual health insurance,
and an academic year salary commensurate with that of other leading research institutions. Teaching assistantship is a common mode of financial support; experience in teaching is a valuable part of the Ph.D. program. A teaching assistantship supports the student during the academic year and is supplemented by a research assistantship during the summer. The assistant is expected to help in the teaching of the general physics course and other introductory and major courses. The typical teaching duties include leading a problem-solving section or laboratory exercises and homework grading. Research assistantships are based on the availability of funding to the research advisor and are arranged directly with him/her. Research assistantships provide an opportunity for deep engagement in ongoing experimental or theoretical research. In addition, the department and the University offer several fellowships on a competitive basis, some covering travel, supplies or research expenses and some covering a semester’s or a year’s worth of the entire financial package. Some students are supported by external fellowships, such as the pre-doctoral fellowship of the National Science Foundation.

All fellows and teaching and research assistants in the Department of Physics and Astronomy register as full-time students and thus fulfill their residence requirements while holding appointments. Loans and work-study arrangements are available from the Office of Financial Aid.

For current faculty and contact information go to http://physics-astronomy.jhu.edu/people/

**Faculty**

**Chair**
Timothy Heckman  
Chair and A. Hermann Pfund Professor

**Professors**

N. Peter Armitage  
experimental condensed matter physics.

Charles L. Bennett  
Bloomberg Distinguished Professor and Alumni Centennial Professor: experimental astrophysics; cosmology; radio/submillimeter/infrared astronomy; astronomical instrumentation.

Barry J. Blumenfeld  
experimental high-energy physics; neutrino physics, hadron colliders.

Collin Broholm  
Gerhard H. Dieke Professor (Director, Institute for Quantum Matter): experimental condensed matter physics, using neutron scattering.

Chia-Ling Chien  
Jacob L. Hain Professor: experimental condensed matter physics, nanostructured solids.

Andrei V. Gritsan  
experimental high-energy physics; colliders.

Marc Kamionkowski  

David Kaplan  
thematical particle physics and cosmology.

Julian H. Krolik  
thematical astrophysics, particularly high-energy and relativistic astrophysics.

Robert Leheny  
experimental condensed matter physics; disordered materials, soft matter.

Petar Maksimovic  
experimental high-energy physics; hadron colliders.

David A. Neufeld  
thematical astrophysics, interstellar medium, astrophysical masers.

Colin A. Norman  
thematical and observational astrophysics.

Daniel H. Reich  
thematical condensed matter physics; biological physics.

Adam Riess  
Bloomberg Distinguished Professor, Thomas J. Barber Professor, Krieger Eisenhowe Professor and Nobel Laureate: observations of physical cosmology, primarily through the use of distance indicators like supernovae; measurements of dark energy and the expansion history of the universe using optical and near-infrared instruments from space and the ground.

Mark O. Robbins  
thematical condensed matter physics; non-equilibrium processes, atomic origins of macroscopic phenomena.

Morris Swartz  
thematical high-energy physics; precision tests of and searches for physics beyond the Standard Model.

Alexander Szalay  
Bloomberg Distinguished Professor (Director, IDIES): thematical astrophysics, galaxy formation.

Oleg Tchernyshyov  
thematical condensed matter physics.

Rosemary F. G. Wyse  
thematical physics, galaxy formation and evolution (Director, Theoretical Interdisciplinary Physics and Astrophysics Center).

**Associate Professors**

Jared Kaplan  
effective field theory, particle physics, and cosmology.

Tobias Marriage  
cosmology and astrophysics.

Brice Menard  
extragalactic astrophysics, cosmology, large surveys.

Nadia Zakamska  
observational and theoretical astrophysics.

**Assistant Professors**

Ibrahima Bah  
thematical high-energy physics and cosmology.

Brian Camley  
physics of cell biology.

Yi Li
theoretical condensed matter physics.

Kevin Schlaufman
observational and theoretical astrophysics.

Francesca Serra
soft matter physics and liquid crystals.

**Research Professor**
Jonathan A. Bagger
Krieger-Eisenhower Professor: particle theory; theory and phenomenology of supersymmetry, supergravity, and superstrings.

Luciana Bianchi
observational astrophysics, nearby galaxies, stellar populations, hot stars, UV instrumentation.

William P. Blair
experimental astrophysics, supernova remnants; cataclysmic variable stars.

Paul D. Feldman
Academy Professor: experimental astrophysics, spectroscopy, space physics, planetary and cometary atmospheres.

Michael Finkenthal
experimental plasma and atomic physics.

Holland Ford
experimental astrophysics; stellar dynamics, evolution of galaxies, active galactic nuclei, astronomical instrumentation.

Riccardo Giacconi
University Professor and Nobel Laureate: experimental astrophysics, extragalactic astronomy, the early universe.

Richard Conn Henry
Academy Professor (Director, Maryland Space Grant Consortium): astronomy and astrophysics.

Stephan McCandliss
experimental astrophysics; sounding rocket space astronomy in the far UV (Director, Center for Astrophysical Sciences).

H. Warren Moos
the interstellar medium; stellar processes; the solar system; space instrumentation.

Joseph Silk
Homewood Professor: cosmology.

Ethan Vishniac
theoretical astrophysics.

Harold Weaver
ultraviolet, optical, infrared, X-ray, and radio spectroscopy and imaging of comets, planets, and satellites.

**Associate Research Professor**
Tamas Budavari
observational cosmology, large-scale structure, galaxy clustering; data-intensive parallel computing.

Natalia Drichko
condensed matter physics.

**Professors Emeriti**
Bruce Barnett
Academy Professor: experimental high energy physics; hadron colliders.

Chih-Yung Chien
experimental high-energy physics; hadron colliders.

Gabor Domokos
theoretical elementary particle physics, astroparticle physics.

Brian R. Judd
Gerhard H. Dieke Professor Emeritus: theoretical atomic and molecular physics, group theory, solid state theory.

Chung W. Kim
theory of elementary particles, nuclear theory, cosmology.

Susan Kovesi-Domokos
theoretical elementary particle physics, astroparticle physics.

Yung Keun Lee
experimental nuclear physics.

Ahluv Pevsner
Jacob L. Hain Professor Emeritus: experimental elementary particle physics.

**Adjunct and Visiting Appointments**
Ronald J. Allen
Adjunct Professor (Space Telescope Science Institute): observational astronomy; spiral structure of galaxies, interstellar medium, radio and optical imaging.

Henry Ferguson
Adjunct Professor (Space Telescope Science Institute): observational cosmology, galaxy evolution, dwarf galaxies, space astronomy instrumentation, and calibration.

Ann E. Hornschemeier
Adjunct Associate Professor (NASA Goddard Space Flight Center): studies of x-ray emission from star formation in galaxies at cosmologically interesting distances.

John MacKenty
Adjunct Professor (Space Telescope Science Institute): Astronomy and Astrophysics

Roeland van der Marel
Adjunct Professor (Space Telescope Science Institute): extragalactic observational and theoretical astronomy; galaxy structure, dynamics, and formation; black holes.

Peter McCullough
Adjunct Associate Professor (Space Telescope Science Institute): astronomy.

Predrag Nikolic
Adjunct Associate Professor (George Mason University): theoretical condensed matter physics.

Cedomir Petrovic
Adjunct Professor (Brookhaven National Laboratory): experimental condensed matter physics.

Kimberly Weaver
Adjunct Professor (NASA Goddard Space Flight Center): experimental astrophysics.

Joint Appointments
Tamas Budavari
Assistant Professor (Applied Mathematics) observational cosmology, large-scale structure, galaxy clustering; data-intensive parallel computing.

Gregory Eyink
Professor (Applied Mathematics and Statistics): mathematical physics, fluid mechanics, turbulence, dynamical systems.

Michael Falk
Associate Professor (Materials Science and Engineering): theoretical and computational research.

Taekjip Ha
Bloomberg Distinguished Professor (Department of Biophysics, Department of Biomedical Engineering, Department of Biophysics and Biophysical Chemistry)

Tyrel McQueen
Associate Professor (Chemistry): solid state and inorganic chemistry/condensed matter physics.

Jack Morava
Professor (Mathematics): algebraic topology, mathematical physics.

Peter C. Searson
Professor (Materials Science and Engineering): electronic, nanophase, and semiconductor materials.

Sabine Stanley

Darrell F. Strobel
Professor (Earth and Planetary Sciences): planetary atmospheres and astrophysics.

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

AS.171.101. General Physics: Physical Science Major I. 4.0 Credits.
First semester of a two-semester sequence in general physics covers mechanics, heat, sound, electricity and magnetism, optics, and atomic physics. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Recommended Course Background: A grade of C- or better in either Physics I or the first semester of Intro to Mechanics I (AS.171.101 OR AS.171.103 OR AS.171.105 OR AS.171.107 OR EN.530.103)
Prerequisites: A grade of C- or better in either Physics 1 or the two-semester sequence of Engineering Mechanics: A(S.171.101 OR AS.171.103 OR AS.171.105 OR AS.171.107) OR (EN.530.103 OR EN.530.123)
Instructor(s): P. Maksimovic
Area: Engineering, Natural Sciences.

AS.171.102. General Physics: Physical Science Major II. 4.0 Credits.
Second semester of a two-semester sequence in general physics covers mechanics, heat, sound, electricity and magnetism, optics, and atomic physics. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Recommended Course Background: A grade of C- or better in either Physics I or the first semester of Intro to Mechanics I (AS.171.101 OR AS.171.103 OR AS.171.105 OR AS.171.107 OR EN.530.103)
Prerequisites: A grade of C- or better in either Physics 1 or the two-semester sequence of Engineering Mechanics: A(S.171.101 OR AS.171.103 OR AS.171.105 OR AS.171.107) OR (EN.530.103 OR EN.530.123)
Instructor(s): P. Maksimovic
Area: Engineering, Natural Sciences.

AS.171.103. General Physics I for Biological Science Majors. 4.0 Credits.
First-semester of two-semester sequence in calculus-based general physics, tailored to students majoring in one of the biological sciences. In this term, the topics covered include the basic principles of classical mechanics and fluids as well as an introduction to wave motion.
Recommended Corequisites: (AS.173.111) AND (AS.110.106 or AS.110.108 or AS.110.113). Midterm exams are given at 8am Tuesdays, so students must leave their schedules open at this time in order to be able to take these exams
Instructor(s): C. Broholm
Area: Engineering, Natural Sciences.

AS.171.104. General Physics/Biology Majors II. 4.0 Credits.
This two-semester sequence is designed to present a standard calculus-based physics preparation tailored to students majoring in one of the biological sciences. Topics in electricity & magnetism, optics, and modern physics will be covered in this semester. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Recommended Course Background: C- or better in AS.171.101 or AS.171.103; Corequisite: AS.110.109, AS 173.112.
Instructor(s): N. Armitage
Area: Engineering, Natural Sciences.

AS.171.105. Classical Mechanics I. 4.0 Credits.
An in-depth introduction to classical mechanics intended for physics majors/minors and other students with a strong interest in physics. This course treats fewer topics than AS.171.101 and AS.171.103 but with greater mathematical sophistication. It is particularly recommended for students who intend to take AS.171.201-AS.171.202. Recommended Corequisites: AS.173.115 and AS.110.108
Instructor(s): M. Robbins
Area: Engineering, Natural Sciences.

AS.171.106. Electricity and Magnetism I. 4.0 Credits.
Classical electricity and magnetism with fewer topics than 171.101-103, but with greater mathematical sophistication. Particularly recommended for students who plan to take AS.171.201-AS.171.202. Recommended Course Background: C- or better in AS.171.105, Corequisite: AS.173.116, AS.110.109
Instructor(s): C. Bennett
Area: Engineering, Natural Sciences.
AS.171.107. General Physics for Physical Sciences Majors (AL). 4.0 Credits.
This two-semester sequence in general physics is identical in subject matter to AS.171.101-AS.171.102, covering mechanics, heat, sound, electricity and magnetism, optics, and modern physics, but differs in instructional format. Rather than being presented via lectures and discussion sections, it is instead taught in an “active learning” style with most class time given to small group problem-solving guided by instructors. Midterm exams for every section are given during the 8 AM section time! Accordingly, students registering for sections at times other than 8 AM must retain availability for 8 AM sections as needed. Recommended Corequisites: (AS.173.111) AND (AS.110.106 or AS.110.108 or AS.110.113)
Instructor(s): R. Leheny; R. Wyse
Area: Engineering, Natural Sciences.

AS.171.108. General Physics for Physical Science Majors (AL). 4.0 Credits.
This two-semester sequence in general physics is identical in subject matter to AS.171.101-AS.171.102, covering mechanics, heat, sound, electricity and magnetism, optics, and modern physics, but differs in instructional format. Rather than being presented via lectures and discussion sections, it is instead taught in an “active learning” style with most class time given to small group problem-solving guided by instructors. Recommended Corequisite: (AS.173.111) AND (AS.110.106 or AS.110.108 OR AS.110.211 OR AS.110.113)
Prerequisites: Corequisite: (AS.173.111) AND (AS.110.106 or AS.110.108 OR AS.110.211 OR AS.110.113)
Instructor(s): D. Reich; P. Maksimovic
Area: Engineering, Natural Sciences.

AS.171.113. Subatomic World. 3.0 Credits.
Introduction to the concepts of physics of the subatomic world: symmetries, relativity, quanta, neutrinos, particles and fields. The course traces the history of our description of the physical world from the Greeks through Faraday and Maxwell to quantum mechanics in the early 20th century and on through nuclear physics and particle physics. The emphasis is on the ideas of modern physics, not on the mathematics. Intended for non-science majors.
Instructor(s): B. Blumenfeld
Area: Natural Sciences.

AS.171.118. Stars and the Universe: Cosmic Evolution. 3.0 Credits.
This course looks at the evolution of the universe from its origin in a cosmic explosion to emergence of life on Earth and possibly other planets throughout the universe. Topics include big-bang cosmology, origin and evolution of galaxies, stars, planets, life, and intelligence; black holes; quasars; and relativity theory. The material is largely descriptive, based on insights from physics, astronomy, geology, chemistry, biology, and anthropology.
Instructor(s): W. Zheng
Area: Natural Sciences.

AS.171.123. How to build an iPhone: physics in modern life. 3.0 Credits.
As the famous author Arthur C. Clarke posited, “Any sufficiently advanced technology is indistinguishable from magic.” The goal of this course is to understand the workings of and the science behind modern technologies such as the iPhone, internet, GPS, and others. We will discuss the technology itself, as well as the story of how it came to be and the people involved. Emphasis will be on the ideas behind these technologies, not the mathematics. Intended for both nonscience and science majors, every attempt will be made to keep any math at the level of simple algebra.
Instructor(s): C. Morris; L. Pan
Area: Natural Sciences.

AS.171.125. It's not magic, it's physics: Extraordinary Experiments. 3.0 Credits.
Students will learn key concepts of everyday physics through experimentation. They will design, build, and run experiments themselves. The course will be graded on participation and a graded final presentation.
Instructor(s): M. Valdivia Leiva
Area: Natural Sciences.

AS.171.127. Freshman Seminar: The Unsolved Mysteries of the Cosmos. 3.0 Credits.
While our knowledge of the universe has expanded greatly over the past century, there are some very basic problems that stump astronomers to this very day. In this course, we will explore some of the unsolved mysteries that astronomers are actively working on, including the formation of planets to the composition of the universe. This course will be a freshman seminar directed towards non-physical science majors. The focus will be on qualitative questions and phenomena rather than numerical details.
Instructor(s): M. Rahman
Area: Natural Sciences.

AS.171.131. Physics and Technology in Society. 3.0 Credits.
This course presents technology and science issues and how they shape public policy. Students will learn how institutions carry out scientific research while exploring the interactions between the scientific community and policy makers.
Instructor(s): M. Valdivia Leiva
Area: Natural Sciences.

AS.171.132. Now I See! Optical Phenomena Explained. 1.0 Credit.
Could you explain why rainbows form an arc or how it is possible to bend light to make an object invisible? This course aims to clearly explain some of the most beautiful optical phenomena encountered in nature or in a lab by teaching simple physics principles and using in-class demonstrations. The course is not math intensive and, rather, seeks to help the student gain an appreciation for the basic principles behind these optical effects without becoming lost in complex mathematics. An emphasis will be placed on current research that directly makes use of the physics underlying the phenomena. The ultimate goal of this course is to show students that physics is powerfully beautiful and to build their appreciation for it.
Instructor(s): G. Bosse
Area: Natural Sciences.
AS.171.133. Black Holes and Other Compact Objects: For Non-Majors. 3.0 Credits.
This is a lecture and discussion course aimed at undergraduate students who are not physics and astronomy majors. The topic of the lectures will be a basic overview of the qualitative properties of and historical work on compact astrophysical objects (such as black holes, neutron stars, white dwarfs) and related phenomena.
Instructor(s): J. Bankert
Area: Natural Sciences.

AS.171.201. Special Relativity/Waves. 4.0 Credits.
Course continues introductory physics sequence (begins with AS.171.105-AS.171.106). Special theory of relativity, forced and damped oscillators, Fourier analysis, wave equation, reflection and transmission, diffraction and interference, dispersion. Meets with AS.171.207.
Prerequisites: Corequisite: AS.110.202 OR AS.110.211;Students must have completed Lab Safety training prior to registering for this class.; ( AS.171.106 OR AS.171.108 OR AS.171.102 OR AS.171.104 ) AND Calculus II ( AS.110.107 OR AS.110.109 OR AS.110.113 )
Instructor(s): D. Reich
Area: Engineering, Natural Sciences.

AS.171.202. Modern Physics. 4.0 Credits.
Course completes four-semester introductory sequence that includes AS.171.105-AS.171.106 and AS.171.201. Planck’s hypothesis, de Broglie waves, Bohr atom, Schrodinger equation in one dimension, hydrogen atom, Pauli exclusion principle, conductors and semiconductors, nuclear physics, particle physics.
Instructor(s): F. Serra
Area: Natural Sciences.

AS.171.204. Classical Mechanics II. 4.0 Credits.
Principles of Newtonian and Lagrangian mechanics; application to central-force motion, rigid body motion, and the theory of small oscillations. Recommended Course Background: AS.110.108 and AS.110.109, AS.110.202, AS.171.201, or AS.171.309. AS.110.201 or equivalent is strongly recommended.
Prerequisites: Pre-req: AS.110.302 or equivalent.
Instructor(s): B. Blumenfeld
Area: Natural Sciences.

AS.171.205. Introduction to Practical Data Science: Beautiful Data. 3.0 Credits.
The class will provide an overview of data science, with an introduction to basic statistical principles, databases, fundamentals of algorithms and data structures, followed by practical problems in data analytics. Recommended Course Background: Familiarity with principles of computing.
Instructor(s): S. Szalay
Area: Natural Sciences, Quantitative and Mathematical Sciences.

AS.171.207. Special Relativity. 1.0 Credit.
Three-week introduction to special relativity for students who elect to take AS.171.209 in place of AS.171.201.
Prerequisites: Corequisite: AS.110.202 OR AS.110.211;Prerequisite: ( AS.171.106 preferred OR AS.171.108 OR AS.171.102 OR AS.171.104 ) AND ( AS.110.107 OR AS.110.109 OR AS.110.113 )
Instructor(s): D. Reich
Area: Natural Sciences.

AS.171.301. Electromagnetic Theory II. 4.0 Credits.
Static electric and magnetic fields in free space and matter; boundary value problems; electromagnetic induction; Maxwell’s equations; and an introduction to electrodynamics.
Prerequisites: Prereqs: ( AS.171.102 OR AS.171.104 OR AS.171.106 OR AS.171.108 ) AND Calculus III ( AS.110.202 OR AS.110.211 ) AND Linear Algebra ( AS.110.201 OR AS.110.212 )
Instructor(s): K. Schlaufman
Area: Natural Sciences.

AS.171.303. Quantum Mechanics I. 4.0 Credits.
Fundamental aspects of quantum mechanics. Uncertainty relations, Schrodinger equation in one and three dimensions, tunneling, harmonic oscillator, angular momentum, hydrogen atom, spin, Pauli principle, perturbation theory (time-independent and time-dependent), transition probabilities and selection rules, atomic structure, scattering theory. Recommended Course Background: AS.110.302 or AS.110.306.
Prerequisites: ( AS.171.202 AND AS.171.204 ) AND ( AS.110.201 OR AS.110.212 ) AND ( AS.110.202 OR AS.110.211 )
Instructor(s): C. Chien
Area: Natural Sciences.

AS.171.304. Quantum Mechanics II. 4.0 Credits.
Instructor(s): Y. Li
Area: Natural Sciences.

AS.171.309. Wave Phenomena with Biophysical Application. 4.0 Credits.
Introduction to wave phenomena, primarily through study of biophysical probes that depend on the interaction of electromagnetic radiation with matter. Topics include Fourier Analysis; standing waves; sound and hearing; diffraction and crystallography; geometrical and physical optics – the physics of modern light microscopy; quantum mechanics – how living things absorb light; NMR and MRI. Occasional laboratory exercises are included.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): D. Reich
Area: Natural Sciences.

AS.171.310. Biological Physics. 4.0 Credits.
Introduces topics of classical statistical mechanics. Additional topics include low-Reynolds number hydrodynamics and E&M of ionic solutions, via biologically relevant examples.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.;( AS.171.106 OR AS.171.108 OR AS.171.102 OR AS.171.104 ) AND ( AS.110.107 OR AS.110.109 OR AS.110.113 )
Instructor(s): F. Serra
Area: Natural Sciences.

AS.171.312. Statistical Physics/Thermodynamics. 4.0 Credits.
Undergraduate course that develops the laws and general theorems of thermodynamics from a statistical framework.
Prerequisites: AS.171.202 and Calculus II ( AS.110.107 or AS.110.109 or AS.110.113 ). It is recommended that students have also taken Quantum Mechanics (AS.171.303), Linear Algebra (AS.110.201 or AS.110.212) and Calculus III (AS.110.202 or AS.110.211)
Instructor(s): J. Kaplan
Area: Natural Sciences.
AS.171.313. Introduction to Stellar Physics. 3.0 Credits.
Survey of stellar astrophysics. Topics include stellar atmospheres, stellar interiors, nucleosynthesis, stellar evolution, supernovae, white dwarfs, neutron stars, pulsars, black holes, binary stars, accretion disks, protostars, and extrasolar planetary systems. Recommended Course Background: AS.110.108-AS.110.109, AS.171.202
Instructor(s): R. Wyse
Area: Natural Sciences.

AS.171.314. Introduction to Galaxies and Active Galactic Nuclei. 3.0 Credits.
This course will introduce student to the physics of galaxies and their constituents: stars, gas, dust, dark matter and a supermassive black hole in the central regions.
Instructor(s): R. Wyse
Area: Natural Sciences.

AS.171.321. Introduction to Space, Science, and Technology. 3.0 Credits.
Topics include space astronomy, remote observing of the earth, space physics, planetary exploration, human space flight, space environment, orbits, propulsion, spacecraft design, attitude control and communication. Crosslisted by Departments of Earth and Planetary Sciences, Materials Science and Engineering and Mechanical Engineering. Recommended Course Background: AS.171.101-AS.171.102 or similar; AS.110.108-AS.110.109.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): J. MacKenty; S. McCandlish
Area: Engineering, Natural Sciences.

AS.171.324. Statistical thinking and data analysis. 3.0 Credits.
We live in a complex, data-rich world with a flux of information increasing exponentially. We will start from information theory concepts and learn how to *understand* statistics. We will then learn techniques to reveal structure in a variety of datasets: news reports, scientific articles, geography, cities, social networks, etc. and how to use this knowledge to make decisions and predictions. We will explore patterns, correlations, fractals. This course will allow the student to better understand the complex world we live in. It will involve some python coding. Junior, senior and graduate students only.
Instructor(s): B. Menard
Area: Natural Sciences.

AS.171.333. Planets, Life and the Universe. 3.0 Credits.
This multidisciplinary course explores the origins of life, planets’ formation, Earth’s evolution, extrasolar planets, habitable zones, life in extreme environments, the search for life in the Universe, space missions and planetary protection. Co-listed with AS.020.334, AS.020.616 and AS.270.335
Prerequisites: Students may not register for this class if they have already received credit for AS.020.334 or AS.270.335.
Instructor(s): C. Norman; J. Druggiero; N. Levin
Area: Engineering, Natural Sciences.

AS.171.405. Condensed Matter Physics. 3.0 Credits.
Undergraduate course covering basic concepts of condensed matter physics: crystal structure, diffraction and reciprocal lattices, electronic and optical properties, band structure, phonons, superconductivity and magnetism. Co-listed with AS.171.621 Recommended Course Background: AS.171.304, AS.110.201-AS.110.202.
Instructor(s): O. Tchernyshyov
Area: Natural Sciences.

AS.171.406. Condensed Matter Physics. 3.0 Credits.
Instructor(s): C. Broholm
Area: Natural Sciences.

AS.171.408. Nuclear and Particle Physics. 3.0 Credits.
Basic properties of nuclei, masses, spins, parity. Nuclear scattering, interaction with electromagnetic radiation, radioactivity, Pions, muons, and elementary particles, including resonances. Recommended Course Background: AS.171.303
Instructor(s): A. Gritsan
Area: Natural Sciences.

AS.171.410. Physical Cosmology. 3.0 Credits.
This course provides an overview of modern physical cosmology. Topics covered include: the contents, shape, and history of the universe; the big bang theory; dark matter; dark energy; the cosmic microwave background; Hubble's law; the Friedmann equation; and inflation. Recommended Course Background: (AS.171.101-AS.171.102), or (AS.171.103-AS.171.104), or (AS.171.105-AS.171.106), or (AS.171.107-AS.171.108), or equivalent.
Instructor(s): C. Bennett
Area: Natural Sciences.

AS.171.411. Light and Optics. 3.0 Credits.
What is light? How does it propagate and interact with matter? How do we use it to transmit information? How does technology make use of light? This course is designed for majors in physics as well as other science and engineering departments.
Instructor(s): B. Menard
Area: Engineering, Natural Sciences.

AS.171.416. Numerical Methods for Physicists. 4.0 Credits.
Instructor(s): K. Schlaufman
Area: Natural Sciences, Quantitative and Mathematical Sciences.

AS.171.425. Group Theory in Physics. 3.0 Credits.
Introduction to finite and Lie groups, representations and applications to quantum mechanics, condensed matter physics, and other fields of physics; selected topics from differential geometry and algebraic topology. Recommended Prerequisite: AS.171.304
Instructor(s): Y. Li
Area: Natural Sciences.

AS.171.472. Introduction to Plasma Physics & Atomic Processes in Hot Plasmas. 3.0 Credits.
Course will be a combination between an introduction to plasma physics and an overview of the basic atomic processes which determine the properties of hot, laboratory and astrophysical plasmas. Undergraduate students may register online for this course and will be assigned 3 credits during the add/drop period. Co-taught with AS.171.672
Instructor(s): M. Finkenthal
Area: Natural Sciences.

AS.171.501. Independent Research- Undergraduate. 3.0 Credits.
Students may register for independent research with a faculty member in the Department of Physics and Astronomy. A research plan should be sent to the Director of Undergraduate Study before the add/drop date that includes project details, the number of hours of effort each week and the number of credits. This course may not be used for one of the two electives required for a BA, but one semester of research may be used as one of four focused electives in a BS program.
Instructor(s): Staff.
AS.171.502. Undergraduate Independent Research. 0.0 - 3.0 Credits.
Research done in senior year in conjunction with experimental equipment of intermediate laboratory or as special project in research group. Credit for independent study given to junior and senior students who act as tutors.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): Staff.

AS.171.503. Senior Thesis. 3.0 Credits.
Preparation of a substantial thesis based upon independent student research, supervised by at least one faculty member in Physics and Astronomy. This course may only be taken for credit during one semester. However, students are expected to have engaged in their research project during previous semesters through 171.501-502, summer research, etc. This course may not be used as one of the two electives required for a BA, but can be used as one of the four focused electives in a BS program. Open to senior department majors only.
Instructor(s): N. Markovic; R. Wyse; T. Marriage Writing Intensive.

AS.171.504. Senior Thesis. 0.0 - 3.0 Credits.
Preparation of a substantial thesis based upon independent student research, supervised by at least one faculty member in Physics and Astronomy.
Instructor(s): M. Kamionkowski; O. Tchernyshyov; R. Leheny; T. Marriage Writing Intensive.

AS.171.595. Internship. 1.0 Credit.
Instructor(s): Staff.

AS.171.597. Independent Research. 3.0 Credits.
Instructor(s): Staff.

AS.171.603. Electromagnetic Theory.
Theory of the Maxwell equations, with static and dynamic applications, boundary-value problems, guided and free waves, diffraction, scattering, special relativity, electron theory.
Instructor(s): J. Krolik.

AS.171.605. Quantum Mechanics.
Review of wave mechanics and the Schrodinger equation, Hilbert space, harmonic oscillator, the WKB approximation, central forces and angular momentum, scattering, electron spin, density matrix, perturbation theory (time-independent and time-dependent), quantized radiation field, absorption and emission of radiation, identical particles, second quantization, Dirac equation.
Instructor(s): O. Tchernyshyov.

AS.171.606. Quantum Mechanics.
Review of wave mechanics and the Schrodinger equation, Hilbert space, harmonic oscillator, the WKB approximation, central forces and angular momentum, scattering, electron spin, density matrix, perturbation theory (time-independent and time-dependent), quantized radiation field, absorption and emission of radiation, identical particles, second quantization, Dirac equation. Recommended Course Background: AS.171.303 and AS.171.304
Instructor(s): I. Bah.

Topics in applied mathematics used by physicists, covering numerical methods: linear problems, numerical integration, pseudo-random numbers, finding roots of nonlinear equations, function minimization, eigenvalue problems, fast Fourier transforms, solution of both ordinary and partial differential equations. Undergraduate students may register online for this course and will be assigned 3 credits during the add/drop period.
Instructor(s): K. Schlaufman.

AS.171.611. Stellar Structure and Evolution.
Basic physics of stellar structure and evolution will be discussed with emphasis on current research.
Instructor(s): E. Vishniac.

AS.171.612. Interstellar Medium and Astrophysical Fluid Dynamics.
Instructor(s): C. Norman.

AS.171.613. Radiative Astrophysics.
A one-term survey of the processes that generate radiation of astrophysical importance. Topics include radiative transfer, the theory of radiation fields, polarization and Stokes parameters, radiation from accelerating charges, bremsstrahlung, synchrotron radiation, thermal dust emission, Compton scattering, properties of plasmas, atomic and molecular quantum transitions, and applications to astrophysical observations.
Instructor(s): D. Neufeld.

AS.171.618. Observational Astronomy.
How do we observe the Universe at each wavelength and what do we see? This course will present the knowledge required for astronomical observations across the entire spectrum. For each wavelength range (gamma rays, X-rays, UV, visible, IR, radio) we will discuss the type of detector used, the range of possible observations and current open questions. We will also discuss the dominant astronomical and terrestrial sources across the spectrum, and study the differences between ground- and space-based observations.
Instructor(s): B. Menard.

An advanced graduate level course that emphasizes the importance of molecules in astrophysical environments as diverse as interstellar clouds, circumstellar outflows, cometary comae, and active galactic nuclei. Topics will include the chemistry and photochemistry of astrophysical molecules; molecular excitation; astrophysical masers; interstellar molecular clouds; interstellar shock waves; circumstellar outflows; cometary comae; molecular accretion disks.
Instructor(s): D. Neufeld.

This sequence is intended for graduate students in physics and related fields. Topics include: metals and insulators, diffraction and crystallography, phonons, electrons in a periodic potential, transport. Co-listed with AS.171.405
Instructor(s): O. Tchernyshyov.

This sequence is intended for graduate students in physics and related fields. Topics include superconductivity, magnetism, metal-insulator transitions, low dimensional materials, quantized hall effect.
Instructor(s): C. Broholm.
AS.171.625. Experimental Particle Physics.
For graduate students interested in experimental particle physics, or theory students, or students from other specialties. Subjects covered: experimental techniques, including particle beams, targets, electronics, and various particle detectors; and a broad description of high energy physics problems. Undergraduate students may register online for this course and will be assigned credits during the add/drop period.
Instructor(s): A. Gritsan.

AS.171.627. Astrophysical Dynamics.
This is a graduate course that covers the fundamentals of galaxy formation, galactic structure and stellar dynamics and includes topics in current research.
Instructor(s): C. Norman.

AS.171.629. First Year Research.
Instructor(s): P. Maksimovic.

AS.171.630. First Year Research.
Instructor(s): P. Maksimovic; R. Wyse.

Introduction to finite and Lie groups, representations and applications to quantum mechanics, condensed matter physics, and other fields of physics; selected topics from differential geometry and algebraic topology.
Instructor(s): Y. Li
Area: Natural Sciences.

AS.171.641. Second Year Research.
Instructor(s): P. Maksimovic.

AS.171.642. Second Year Research.
Instructor(s): P. Maksimovic; R. Wyse.

AS.171.644. Exoplanets and Planet Formation.
A graduate-level introduction to the properties of the solar system, the known exoplanet systems, and the astrophysics of planet formation and evolution. Topics also include the fundamentals of star formation, protoplanetary disk structure and evolution, exoplanet detection techniques, and the status of the search for other Earths in the Galaxy. Upper-level undergraduates may enroll with the permission of the instructor.
Instructor(s): K. Schlaufman.

AS.171.646. General Relativity.
An introduction to the physics of general relativity. Principal topics are: physics in curved spacetimes; the Equivalence Principle; the Einstein Field Equations; the post-Newtonian approximation and Solar System tests; the Schwarzschild and Kerr solutions of the Field Equations and properties of black holes; Friedmann solutions and cosmology; and gravitational wave propagation and generation.
Instructor(s): D. Kaplan
Area: Natural Sciences.

Cells are actively-driven soft materials – but also efficient sensors and information processors. This course will cover the physics of those cellular functions, from the mechanics of DNA to the sensing of chemical signals. Questions answered include: How does polymer physics limit how quickly chromosomes move? Why do cells use long, thin flagella to swim? What limits the accuracy of a cell’s chemotaxis? Some experience with partial differential equations required. No biology knowledge beyond the high school level necessary. Some problem sets will require minimal programming.
Instructor(s): B. Camley
Area: Natural Sciences.

Course will be a combination between an introduction to plasma physics and an overview of the basic atomic processes which determine the properties of hot, laboratory and astrophysical plasmas. Undergraduate students may register online for this course and will be assigned credits during the add/drop period. Co-taught with AS.171.472
Instructor(s): M. Finkenthal.

AS.171.697. Astro-Particle Physics.
Topics include: Dark matter, dark energy, ultra-high energy cosmic rays, neutrino astrophysics, black holes, WIMPS, sterile neutrinos, axions, gamma ray bursts, particle acceleration, cosmic backgrounds, dark energy equation-of-state. Senior undergraduates with permission.
Instructor(s): M. Kamionkowski.

AS.171.701. Quantum Field Theory I.
Introduction to relativistic quantum mechanics and quantum field theory. Canonical quantization; scalar, spinor, and vector fields; scattering theory; renormalization; functional integration; spontaneous symmetry breaking; Standard Model of particle physics.
Instructor(s): M. Kamionkowski.

AS.171.702. Quantum Field Theory II.
Introduction to relativistic quantum mechanics and quantum field theory. Recommended Course Background: AS.171.605-AS.171.606 or equivalent.
Instructor(s): M. Kamionkowski.

AS.171.703. Advanced Statistical Mechanics.
Brief review of basic statistical mechanics and thermodynamics. Then hydrodynamic theory is derived from statistical mechanics and classical treatments of phase transitions, including Ginzburg-Landau theory.
Instructor(s): R. Leheny.

Course covers phase transitions and critical phenomena. Building on the ideas of spontaneous symmetry breaking and scale invariance at a critical point we develop Landau’s theory of phase transitions and the apparatus of renormalization group using both analytic and numerical techniques for studying interacting systems.
Instructor(s): O. Tchernyshyov.

AS.171.732. Elementary Particle Physics.
Description TBA
Instructor(s): M. Swartz.

AS.171.750. Cosmology.
Review of special relativity and an introduction to general relativity, Robertson-Walker metric, and Friedmann equation and solutions. Key transitions in the thermal evolution of the universe, including big bang nucleosynthesis, recombination, and reionization. The early universe (inflation), dark energy, dark matter, and the cosmic microwave background. Development of density perturbations, galaxy formation, and large-scale structure.
Instructor(s): C. Norman.

Introduction to the use of neutron scattering techniques to probe atomic scale structure and dynamics of hard condensed matter. Subjects covered include basic theory of nuclear and magnetic neutron scattering, neutron sources and instrumentation, polarized neutrons, Larmor labeling, structural refinement methods, surfaces and interfaces, group theoretical analysis of magnetic structures, phonons, magnetic excitations, and critical phenomena.

Prerequisites: AS.171.621 OR AS.171.622
Instructor(s): C. Broholm.

AS.171.752. Black Hole Astrophysics.

Black holes are the central engines for a wide variety of astrophysical objects: Galactic X-ray sources, active galactic nuclei, stellar tidal disruptions, and the black hole mergers that are the only directly-detected gravitational wave sources (as of this writing). Although the mass distribution of astrophysical black holes spans at least eight orders of magnitude and their circumstances can vary tremendously, the physical processes relevant to them are often closely related. This class will present the most important of them: relativistic orbits; accretion dynamics, the structure of accretion flows, and their radiation mechanisms; relativistic jet launching; binary black hole dynamics and gravitational wave radiation.

Instructor(s): J. Krolik.

AS.171.753. String Theory.

Instructor(s): I. Bah
Area: Natural Sciences.

AS.171.755. Fourier Optics and Interferometry in Astronomy.

A course for advanced undergraduate and beginning graduate students covering the principles of optics and image formation using Fourier Transforms, and a discussion of interferometry and other applications both in radio and optical astronomy.

Instructor(s): R. Allen.

This course is designed for graduate students interested in learning the language, techniques, and problematic of modern quantum many-body theory as applied to condensed matter physics.

Instructor(s): Y. Li.

AS.171.783. Black Hole Physics.

General Relativity predicts its own demise in the existence of singular black hole solutions. There have been mounting astrophysical evidence that black holes do exist in nature. Thus they are not just pathological issues of the theory but fundamental objects in gravity that require understanding. Theoretically, they serve as “laboratories” for studies in quantum gravity; indeed, most of the research in the field aims to resolve various paradoxes and puzzles that emerge when one tries to understand physics inside or outside black holes. The goal of this course is to elucidate these paradoxes and puzzles. First, we will study the classical properties of black holes in general relativity such as horizons, causal history, singularity theorems, area theorems and black hole mining. Next, we will study semi-quantum and quantum properties such as black hole thermodynamics, Hawking radiation, black hole evaporation. We will also explore modern results and perspectives on the fundamental physics of black holes that are necessary for current research. A background in general relativity and quantum field theory is recommended for the course.

Instructor(s): I. Bah.

AS.171.784. Advanced Particle Theory: "What to Expect at the LHC".

The course will focus on scenarios and principles for new particle physics that can be tested at the CERN Large Hadron Collider and other particle experiments.

Instructor(s): D. Kaplan.

AS.171.785. Advanced Particle Theory: Dark Matter.

The overwhelming evidence that dark matter exists and that it is not part of the fundamental theory of matter (the standard model) suggests the need for a graduate course. I will cover what is known and not known about dark matter; being specific enough to open lines of inquiry. I will cover what the rules of quantum field theory would allow it to be and how it could interact with us. I will go over possible mechanisms that explain the generation of dark matter in our universe in the first place. In addition, I will go over the ways to potentially discover (interact with) it directly. The first half or more of the course should be mostly accessible to advanced graduate students in astrophysics and high-energy particle experimentalists. The last half/third will be more field-theory oriented.

Instructor(s): D. Kaplan
Area: Natural Sciences.

Instructor(s): Staff.

AS.172.203. Contemporary Physics Seminar. 1.0 Credit.

This seminar exposes physics majors to a broad variety of contemporary experimental and theoretical issues in the field. Students read and discuss reviews from the current literature, and are expected to make an oral or written presentation. Recommended Course Background: AS.171.101-AS.171.102, AS.171.103-AS.171.104, or AS.171.105-AS.171.106.

Instructor(s): N. Drichko
Area: Natural Sciences.

AS.172.601. Department Colloquium.

Instructor(s): Staff.

AS.172.604. Joint JHU/STScI Colloquium.

A joint JHU Department of Physics and Astronomy and Space Telescope Science Institute Colloquium Series.

Instructor(s): Staff.
Intended for beginning graduate students. Study of the methods and results of modern physics and other topics of interest. Each student will discuss some phase of the subject. Graduate students only.
Instructor(s): Staff.

AS.172.633. Language Of Astrophysics.
Survey of the basic concepts, ideas, and areas of research in astrophysics, discussing general astrophysical topics while highlighting specialized terms often used compared to physics.
Instructor(s): E. Vishniac.

During the Spring 2015 Planets Life and the Universe Seminar, we will read and discuss classic papers and (later in the semester) frontier research on the fundamental issues concerning the Origin of Life on our planet Earth and Exoplanets in general. The recent Kepler mission has now shown that are typical earth-like planets around every typical star in the Universe-- giving almost Avagadro's number of earthlike planets in our Universe. The study of Life in the Universe consequently becomes an observational science. The intellectual framework underpinning these endeavors becomes one of the central intellectual issues of our age (possibly any age!). We will have relaxed and enjoyable discussions of these topics on Friday afternoons. At times mathematical and physics based fluency will be useful.
Recommended Course Background: AS.171.333/AS.171.699 or AS.200.334/AS.200.616
Instructor(s): Staff.

AS.172.722. Hot Topics in Astrophysics.
Instructor(s): C. Norman.

AS.172.731. CAS Research Seminar.
Instructor(s): S. McCandliss.

AS.172.732. CAS Research Seminar.
Instructor(s): S. McCandliss.

Instructor(s): Staff.

AS.172.751. Elementary Particle Physics Seminar.
Instructor(s): Staff.

AS.172.752. Elementary Particle Physics Seminar.
Instructor(s): P. Maksimovic.

AS.172.753. Advanced Particle Theory Seminar.
Instructor(s): Staff.

AS.172.754. Advanced Particle Theory Seminar.
Instructor(s): J. Kaplan.

Instructor(s): Staff.

Instructor(s): N. Armitage.

AS.173.111. General Physics Laboratory I. 1.0 Credit.
Experiments are chosen from both physical and biological sciences and are designed to give students background in experimental techniques as well as to reinforce physical principles. Corequisite: AS.171.101, AS.171.103, or AS.171.105.
Instructor(s): C. Chien; J. Mumford
Area: Natural Sciences.

AS.173.112. General Physics Laboratory II. 1.0 Credit.
Experiments are chosen from both physical and biological sciences and are designed to give students background in experimental techniques as well as to reinforce physical principles. Recommended Course Background: AS.171.111; Corequisite: AS.171.102.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.;AS.171.101 OR AS.171.102 OR AS.171.104 OR AS.171.106 OR AS.171.108
Corequisites: AS.171.102
Instructor(s): J. Mumford
Area: Natural Sciences.

AS.173.115. Classical Mechanics Laboratory. 1.0 Credit.
Experiments chosen to complement the lecture course Classical Mechanics I, II AS.171.105-AS.171.106 and introduce students to experimental techniques and statistical analysis. Corequisite: AS.171.105.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): C. Chien; J. Mumford
Area: Natural Sciences.

AS.173.116. Electricity and Magnetism Laboratory. 1.0 Credit.
Experiments chosen to complement Electricity and Magnetism AS.171.106 and introduce students to experimental techniques and statistical analysis.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): C. Chien; J. Mumford
Area: Natural Sciences.

AS.173.125. Understanding the World through Physics: An experimental approach. 3.0 Credits.
Students will learn key concepts of everyday physics through experimentation. They will design, build, and run experiments themselves. The course will be graded on participation and a graded final presentation.
Instructor(s): M. Valdivia Leiva
Area: Natural Sciences.

AS.173.308. Advanced Physics Laboratory. 3.0 Credits.
A broad exposure to modern laboratory procedures such as holography, chaos, and atomic, molecular, and particle physics.
Prerequisites: Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): T. Marriage
Area: Natural Sciences
Writing Intensive.

AS.173.311. Mentoring in General Physics Laboratory. 1.0 Credit.
This course provides students who have take General Physics I and II and General Physics Laboratory I and II with the opportunity to mentor new students in General Physics Laboratory I and II. Mentors collaborate General Physics laboratory Teaching Assistants to interact with students to help them to complete laboratory assignments and to master the concepts of General Physics. Mentors must have a strong background in Physics. They are expected to interact with students during one three-hour laboratory section per week and to attend the associated TA training once per week. Permission of the instructor required. S/U only.
Prerequisites: AS.173.111 and AS.173.112; Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): J. Mumford
Area: Natural Sciences.
AS.173.312. Mentoring in General Physics Laboratory. 1.0 Credit.
This course provides students who have to take General Physics I and II and General Physics Laboratory I and II with the opportunity to mentor new students in General Physics Laboratory I and II. Mentors collaborate with the General Physics laboratory Teaching Assistants to interact with students to help them to complete laboratory assignments and to master the concepts of General Physics. Mentors must have a strong background in Physics. They are expected to interact with students during one three-hour laboratory section per week and to attend the associated TA training once per week. Permission of the instructor required. S/U only.

Prerequisites: AS.173.111 AND AS.173.112; Students must have completed Lab Safety training prior to registering for this class.
Instructor(s): C. Chien
Area: Natural Sciences.

AS.173.608. Advanced Laboratory.
Experiments carried out on cosmic rays, X-ray scattering Mössbauer effect, atomic beams, and optical spectroscopy.
Instructor(s): T. Marriage.

Cross Listed Courses
Chemistry
The course is designed to provide the essential principles and concepts underlying the modern study of the structure and properties of solids in bulk crystals, thin films, and nanoscale objects. Topics include basic crystallography, structure determination by x-ray, neutron, and electron diffraction, fundamental concepts of bonding in solids, lattice dynamics, electronic band structure, magnetism, and strongly correlated electron behavior. Particular emphasis is placed on the impact of the structure, dimensionality, and electron count on electrical and magnetic properties (electric conduction, superconductivity, thermoelectricity, etc). More course info available at <a href="http://occamy.chemistry.jhu.edu">http://occamy.chemistry.jhu.edu</a>. Cross-listed with Physics and Astronomy
Instructor(s): T. Mcqueen.

Applied Mathematics Statistics
EN.553.793. Turbulence Theory. 3.0 Credits.
An advanced introduction to turbulence theory for graduate students in the physical sciences, engineering and mathematics. Both intuitive understanding and exact analysis of the fluid equations will be stressed. Previous familiarity with fluid mechanics is not required, although it could be helpful.
Instructor(s): G. Eyink.

Political Science
http://politics.jhu.edu
The programs of the Political Science Department are designed to help students attain a deeper understanding of politics and civic life in its various dimensions. The department encourages students to become sophisticated theoretically and to study politics in global and comparative perspective. We divide the curriculum into American Politics, Comparative Politics, Political Theory, and International Relations (and Law and Politics at the graduate level). Students are encouraged to develop expertise in several of these areas.

The department has 26 faculty members. The undergraduate program offers a broad range of courses about politics and government at local, state, national, and international levels. In addition to taking courses on the Homewood campus, students can do independent research under the guidance of a faculty mentor, take courses at the Nitze School of Advanced International Studies (SAIS) in Washington, D.C., and participate in the Aitchison Public Service Undergraduate Fellowship Program at the Johns Hopkins Washington Center.

Intellectual Orientation
In addition to our work within the traditional fields of Political Science, faculty research engages four clusters of activity that cut across the various subfields while speaking to core questions of politics: power and inequality, identities and allegiances, agency and structures, and borders and flows.

Power and Inequality
In many ways, political science is the study of power. This includes the wide array of rules, authority structures, and forms of violence at the local, national, transnational and international levels, as well as how the value, distribution, and accumulation of resources create conditions of security and insecurity among nation states, regions, economic classes, or populations.

Identities and Allegiances
A second cluster of research centers on questions of identity and the various allegiances and attachments organized around them. These include how racial, ethnic, gender, and sexual identities inform citizenship and nationalism, the organization of civil society, or the formation of social movements.

Agency and Structure
A third cross-cutting area of activity in the department explores questions of agency and structures. Agency includes entrepreneurship, innovation and creative action, and the agency of material things. Structures include formal and informal institutions, particularly the rules, roles, and regulations that guide human relations in the public, private, and non-profit worlds, among states and within them, at the global level and in local communities.

Borders and Flows
A fourth cluster examines borders and flows. Research in this area examines the movement of people, ideas, material objects, and natural forces across space and over time. A focus on borders and flows informs the study of territorial regimes, sovereignty, religious intensities, immigration and diasporas, globalizing capital, information, and ecological politics.

Undergraduate Programs
Political Science courses can contribute to two different majors:

Major in Political Science
The major in political science described below is designed for students interested in intensive study of the institutions, theory, and problems of politics, government and modern political culture.

Major in International Studies
The department contributes to an interdisciplinary program leading to B.A. or B.A./M.A. degrees in International Studies. This program and its requirements are described under International Studies (p. 403).

Requirements for the B.A. Degree
(See also Requirements for a Bachelor's Degree (p. 7).)

The requirements for the political science major listed below apply to those students who entered the University in Fall 2014 and later. Students who entered prior to Fall 2014 should refer to the archived catalog (http://web.jhu.edu/registrar/catalog) based on their year of entry into the institution. All courses applied towards the major must be taken for a
letter grade and students must receive a grade of C or higher, including courses taken in the first semester of freshman year. A maximum of four courses may come from transfer credit and only one letter-graded independent study of 3 credits may apply towards the major (unless honors thesis). The Department of Political Science does not award credit toward the major for the Advanced Placement Exam in government.

Writing Intensive Course
One 3-credit writing intensive course in political science. This course may overlap with one of the 12 required political science courses and with the the four required KSAS writing-intensive courses.

Political Science Elective Courses
One political science course at any level 3
Seven political science courses at the 300- or 400-level 21

Cognate Courses
Four elective courses (at any level) selected from the following areas: history, history of art, history of science & technology, philosophy, anthropology, geography, economics, sociology, or psychology 12

World Politics and Global Governance Double Major
The World Politics and Global Governance (WPGG) (http://politics.cs.jhu.edu/undergraduate/world-politics-and-global-governance-double-major) program offers an intellectually rigorous path for students who want to understand world politics from a broad interdisciplinary perspective. Completing this course of study satisfies the requirements for a double major in political science and international studies. Students take courses from one of five different thematic foci: Global governance and law; Political economy; International security; Borders and identities; Environmental politics. The WPGG program enables students to develop their analytical skills and their critical judgment as citizens of the world. The program provides excellent preparation for professional careers as well as for graduate studies in political science, public affairs, law, business, and beyond. http://politics.cs.jhu.edu/undergraduate/world-politics-and-global-governance-double-major/

Honors Thesis Program
Seniors may choose to write a senior research thesis. To be eligible to write this thesis, seniors must have taken at least one research-focused political science course (R) in their junior year (senior year with special permission). After the student has obtained approval from a faculty sponsor to supervise the project, the student will enroll in a three-credit thesis colloquium course during the fall semester of their senior year. If at the end of the fall semester adequate progress has been made and the project warrants further work, the student must enroll in a three-credit independent study supervised by the faculty sponsor.

Students who complete a distinguished senior thesis with a grade of A- or better and have a final major GPA (including final semester grades) of 3.7 will be awarded departmental honors. All students may choose to write a thesis, regardless of GPA, provided they have a detailed proposal approved by a faculty member at the beginning of the fall semester of their senior year.

All thesis-related courses apply to the total of twelve (12) political science courses required for graduation in the major.

Graduate Programs
The Johns Hopkins University Department of Political Science has built an international reputation for its strengths in theory and in innovative and trans-disciplinary approaches to uncovering new knowledge. The program of doctoral study draws on these strengths to provide a diverse and rigorous doctoral education. Our program is designed for highly qualified, intellectually curious, and creative graduate students who seek to learn from and contribute to this community of scholars.

Doctoral students develop in-depth knowledge of a major field and a minor field (or two major fields), chosen from American politics, comparative politics, international relations, law and politics, and political theory. Students may also complete a certificate in comparative racial politics. All doctoral students have opportunities to work closely with faculty, to pursue independent research, and to draw on the deep
connections between Political Science and other departments across the humanities and social sciences.

Both the Department and the Krieger School of Arts and Sciences provide opportunities for developing teaching and other career-related skills, all in the vibrant setting of the Homewood campus and Baltimore city.

Admission
The Department of Political Science admits approximately 16 new graduate students each year, selected from approximately 200 applications. Our entering class is typically around 10 students. The deadline for application for admission to graduate study and the award of financial assistance is January 15 (most years). Decisions are made exclusively in late February or early March and announced by March 15. A B.A., B.S., or their equivalent, and results of the Graduate Record Examination are required for application. Students whose native language is not English must take the TOEFL examinations or provide other evidence of fluency in English (such as a degree from an institution in which the language of instruction is English.) A broad background in the liberal arts and sciences is preferred. Further information can be found at http://grad.jhu.edu/apply/application-process/.

Financial Aid
The department ordinarily provides financial aid to all students admitted to the graduate program unless they hold fellowships from sources outside the university. Departmental fellowships cover full tuition and an annual stipend. Assuming satisfactory progress toward the Ph.D., students can normally expect to receive funding for five years. All students receiving financial aid are expected to serve as teaching assistants for one semester of each academic year.

Requirements for the Ph.D. Degree
The requirements for the Ph.D. are divided between those that must be satisfied by all candidates for that degree and those particular to the student’s major and minor fields.

Department-wide Requirements
All candidates for the Ph.D. must satisfy the following requirements:

Course Requirements
A minimum of 12 semester courses at the 600-level with a grade of B or better. At least 10 of these must be in the Krieger School’s Department of Political Science.

Foreign Language Requirement
All students must demonstrate proficiency in a foreign language. This requirement can be fulfilled as follows:
1. Demonstrate fluency in a foreign language (granted automatically for students whose first language is not English).
2. Complete four semesters of college-level foreign language instruction.
3. Pass a translation exam.
4. Earn a degree from a University where instruction is not in English.
5. With a degree from an institution in which the language of instruction is a language other than English.
6. Place into a third-year foreign language course through online placement tests (see GRLL website).

Comprehensive Examination Requirement
Students are required, at a minimum, to take comprehensive exams in one major field and one minor field. Students may also elect to take two major exams or a major exam and two minor exams (one of which may be outside the Department of Political Science). Faculty in the field write and evaluate the exams and determine the format. Major field comprehensive exams take place over two days (8 hours per day); minor field exams take place over one day. The fields within the department are: American Politics, Law and Politics, Political Theory, Comparative Politics and International Relations.

Students choosing a second minor outside the Political Science Department must devise a coherent program of study in that discipline, in consultation with their Political Science faculty advisor and with faculty from the other department. Students choosing an external minor must complete a minimum of three courses at the 600 level in the external minor’s discipline, earning a grade of B or better. They must also pass a comprehensive examination prepared and evaluated in consultation with faculty of the Department of Political Science by the instructors in those courses.

Dissertation
The dissertation is the capstone of doctoral education, and it must be a substantial work of independent scholarship that contributes to knowledge in the student’s field of study. Preparation of the dissertation will be supervised and must be approved by two members of the faculty, at least one of whom (the dissertation director) must be a member of the Department of Political Science.

Defense
The final examination of the dissertation will take the form of a defense conducted under the rules of the Graduate Board of The Johns Hopkins University.

Field-specific requirements
Field-specific basic expectations, procedures, and requirements are stated below. These are implemented, interpreted, and adjusted in the light of the intellectual orientations and objectives of individual students. It is of great importance that students work closely with their advisors and with the faculty in their major and minor fields in constructing and pursuing their programs of study.

American Politics
Students majoring and minoring in American Politics will work with at least two faculty members to develop a plan of study that includes recommended course work and other preparation needed to pass a comprehensive exam. Students completing a major are expected to demonstrate a breadth of knowledge sufficient for framing a dissertation in the relevant disciplinary literature and teaching undergraduate courses in the field; students who pursue a minor may focus more narrowly on an area of study in which they demonstrate fluency. These may include, but are not limited to, the following areas of faculty interest:

- American Political Institutions (Congress, Courts, and the Executive)
- Urban Politics
- American Political Development
- Race and Politics
- Political Behavior and Public Opinion
- Public Policy
- American Political Thought
- Political Parties and Elections
In addition, students majoring in the field are strongly encouraged to take AS.190.602 Introduction to Quantitative Political Science as part of their course of study.

**Comparative Politics**

All students majoring and minoring in this Comparative Politics will become conversant with major substantive and methodological debates in the field, and be able to comment on the key theoretical literature in several of those debates. They will normally also develop knowledge of at least one world region. Students majoring or minoring in Comparative Politics are required to take AS.190.625 Theories of Comparative Politics and at least one seminar in quantitative or qualitative methods. We expect all students to master the material covered in these courses, as well as others with more specialized topics.

Students will take a comprehensive exam that will test their ability to engage with several areas of theoretical debate in Comparative Politics, and their ability to use comparative examples to support their arguments. Students may focus on (but are not limited to):

- Civil Society
- Institutional Theories
- Transnational Relations, Social Movements, and Contentious Politics
- Political Parties, Interest Groups, Representation, and Political Behavior
- Comparative Political Economy
- Comparative Racial Politics, Nationalism, and Migration and Citizenship
- The Political Economy of Development
- Economic and Political Transitions
- Ideas and Politics

Within the spirit of this division of the overall field, students may propose alternative delineations of thematic subfields.

Students working in specific thematic and substantive subfields within Comparative Politics will be required to demonstrate competence in methodologies and bodies of theory judged by the faculty to be necessary for quality research and teaching in those subfields.

**International Relations**

All students majoring or minoring in International Relations will be required to be conversant with the major theoretical, substantive, and methodological themes and debates of the field. It is strongly recommended that students take As 190.676 Field Survey of International Relations and a methods course. Students majoring in International Relations will take an examination covering two subfields. The first subfield must be International Politics. The other subfield is to be determined in consultation with faculty teaching International Relations. Choices include but are not restricted to:

- International Law and Diplomacy
- International Relations Theory
- International Security Studies
- Science, Technology, and Art and International Relations
- Global Political Economy

Students minoring in International Relations will take a comprehensive examination in International Politics.

**Political Theory**

Students majoring in Political Theory will take a comprehensive examination covering the following two subfields:

- Contemporary Political Theory
- History of Political Thought

Each student preparing for a major comprehensive exam will propose six or seven thinkers in the history of thought, six or seven recent or contemporary thinkers, and three or four issue areas. Examination questions are composed in light of the theorists and issues articulated in the exam prospectus.

The minor comprehensive exam in political theory asks the student to select half the number of thinkers required for the major exam and three issue areas.

Preparation for these examinations will be arranged in consultation with relevant faculty.

Students majoring in political theory will also take at least one minor field from American Politics, Law and Politics, Comparative Politics, or International Relations.

**Law and Politics**

Law and Politics focuses on American constitutional thought, judicial politics, law and society, and philosophy of law and jurisprudence.

Students learn not only about the history and context of American constitutional developments but also about the operation of the judicial branch of government in the past and the present, how courts and judges do their work, and how that work has changed. In addition, students explore how legislation as well as course decisions reflect and influence groups, and professional networks help to shape law’s content and implementation. Students may major or minor in Law and Politics in either case, students work closely with at least two members of the faculty to develop a plan of study regarding coursework and additional reading to prepare them for comprehensive exams. Majors are expected to demonstrate a breadth of knowledge in the field sufficient for framing a dissertation and for teaching undergraduate courses; minors may focus more narrowly on a particular area of study.

**Certificate in Comparative Racial Politics**

The graduate certificate program in Comparative Racial Politics is designed to help train graduate students who are developing empirically based and/or theoretically informed scholarship on citizenship, racism and immigration in contemporary societies, whether in a single national society or cross-spatially. There are two required courses: Comparative Racial Politics, and Qualitative Methods. In addition the student must take two electives from this (preliminary) list:

- Nationalism
- Comparative Citizenship and Immigration
- Politics
- Topics in Black Political Thought
- Race and Political Theory
- Civil Society
- States, Regimes and Governmentality
- American Political Development
- Political Economy of Development

Progress Toward the Ph.D.
The time necessary to obtain a Ph.D. in the department varies according to the preparation individual students bring to the program, the scope and complexity of their dissertation topics, and other factors. Students are required to make satisfactory progress, meaning that they must work toward fulfilling the requirements in a timely manner. Students are encouraged to satisfy the department's foreign language requirement by the time of their first comprehensive exam. Most students take their comprehensive examinations in the third year in the program. Students who have completed all requirements except the dissertation must work to complete their dissertations as quickly as is reasonable given the unique circumstances of their course of study, and they must periodically demonstrate progress on the dissertation.

The Master of Arts degree is offered only to students who have been admitted into the Ph.D. program. For the M.A., the student must complete at least seven one-semester courses at the 600-level with a grade of B or better, and demonstrate an effective reading knowledge of one approved foreign language.

Faculty
Chair
Adam Sheingate
American Politics, Comparative Politics

Professors
Adam Sheingate
American Politics, Comparative Politics
Samuel Chambers
Political theory, cultural politics
Jane Bennett
Political theory, American political thought, ecophilosophy.
William E. Connolly
Krieger-Eisenhower Professor; political theory, international relations.
Steven R. David
International relations, security studies, comparative politics.
Benjamin Ginsberg
David Bernstein Professor and Director of the Washington Center for the Study of Government: American government and politics, political development.
Richard Katz
Comparative Politics (parties, elections, European politics), American Politics
Robert Lieberman
Krieger-Eisenhower Professor; American Politics
Renée Marlin-Bennett
International relations, political economy of information.
Robert Shilliam
International Relations

Associate Professors
Adria Lawrence

Aronson Associate Professor of International Studies and Political Science: Comparative politics, Middle Eastern and North African politics, colonialism, nationalism, conflict and collective action

Vesla Weaver
Bloomberg Distinguished Associate Professor and Assistant Research Professor: American Politics

Erin Chung
Charles D. Miller Associate Professor of East Asian Politics and co-director of the Racism, Immigration and Citizenship Program: comparative politics, East Asian politics, international migration, comparative racial politics.

Jennifer L. Culbert
Political theory, jurisprudence.

Daniel H. Deudney
International relations, political theory.

Nicolas Jabko
Comparative politics, international political economy, European politics.

Lester Spence
Black politics, race and politics, urban politics, American political behavior and public opinion.

Steven Teles
Social policy, law and public policy, political analysis.

Assistant Professors
Sarah Parkinson
Aronson Assistant Professor of Political Science and International Studies: Comparative politics, political violence, Middle East and North African politics, social network theory, qualitative methods, refugees

Bentley Allan
International relations, science and politics, global governance, global environmental politics.

P.J. Brendese
Political theory, comparative political thought, race and politics.

Sebastian Mazzuca
Political Economy, Comparative Politics, Latin American Politics and Economy

Daniel Schlozman
American politics, political parties, and the welfare state.

Sebastian Schmidt
International Relations, Security Studies

Emily Zackin
Constitutional law, American politics.

Professors Emeriti
Joseph Cooper
Legislative politics, executive-legislative relations, institutional theory.

Matthew A. Crenson
Urban government, American political development.

Joel B. Grossman
Constitutional law, law and politics, American politics.

Margaret Keck
Comparative politics, international relations (Latin American politics, the environment, social movement)

Adjunct Faculty
Robert Freedman
Arab-Israeli politics and Russian politics.

Lecturer
Matthew Kocher
Comparative Politics, International Relations, and Political Methodology

Courses

AS.190.101. Introduction to American Politics. 3.0 Credits.
This course examines the ideals and operation of the American political system. It seeks to understand how our institutions and politics work, why they work as they do, and what the consequences are for representative government in the United States. Emphasis is placed on the federal government and its electoral, legislative, and executive structures and processes. As useful and appropriate, attention is also given to the federal courts and to the role of the states. The purpose of the course is to understand and confront the character and problems of modern government in the United States in a highly polarized and plebiscitary era.
Instructor(s): R. Lieberman
Area: Social and Behavioral Sciences.

AS.190.102. Introduction To Comparative Politics. 3.0 Credits.
To understand politics, the sound bites of the modern media take us only so far. In this course, we will take a step back and implement an intellectually rigorous method. Scholars of comparative politics use the method of comparison in order to illuminate important political phenomena of our times. Following this method, we will embark on a scholarly tour of the world and compare the politics of various countries. We will also trace these politics back to their historical sources. We will work from the assumption that there is something to be gained from such comparisons across space and time.
Instructor(s): N. Jabko
Area: Social and Behavioral Sciences.

AS.190.108. Freshmen Seminar: The Human Condition. 3.0 Credits.
This freshman seminar will focus on reading just one book, The Human Condition, by Hannah Arendt. Such a narrow focus is justified by the breadth of topics the book itself discusses and the influence these various discussions have had on modern political thought. Among the various topics that will be studied and talked about are the meaning of the distinctions Arendt makes between “public,” “private,” and “social,” as well as between “labor,” “work,” and “action.” In the course of their studies, students will be challenged to think about the relation of philosophy to politics, the significance of the scientific revolution for public life, the character of contemporary society, and what it means to be “free.” Also, by focusing on just one book, students will have the opportunity to learn how to do the kind of close reading and textual analysis success in college requires. In addition to reading assignments, students will be required to write four short papers.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.109. Politics of East Asia. 3.0 Credits.
This course examines some of the central ideas and institutions that have transformed politics in the contemporary world through the lens of East Asia, focusing on Japan, South Korea, Taiwan, and China. We analyze two enduring themes of classic and contemporary scholarship in comparative politics: development and democracy. The purpose is to introduce students to the various schools of thought within comparative politics as well as to the central debates concerning East Asian politics.
Instructor(s): E. Chung
Area: Social and Behavioral Sciences.

AS.190.110. American Politics in Film. 3.0 Credits.
This class uses film to explore a central question in American politics: what is the relationship between the public and those who endeavor to represent them? Over the course of several weeks, we will address this question by viewing Mr. Smith Goes to Washington, A Face in the Crowd, The Candidate, Wag the Dog, and The Ides of March. We will use these films to discuss how political institutions, the media, and money shape our politics. We will also consider how the representation of politics in film has changed over time.
Instructor(s): A. Sheingate
Area: Social and Behavioral Sciences.

AS.190.111. Introduction to Global Studies. 3.0 Credits.
This course surveys scholarly approaches to processes, relations, institutions, and social structures that cross, subvert, or transcend national borders. The course will also introduce students to research tools for global studies. Students who have taken Contemporary International Politics 190.209 or International Politics 190.104 may not register.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences.

AS.190.204. Ancient Political Thought. 3.0 Credits.
The premise of this course is that a political perspective is tied up with a (meta)physical one, that is to say, with ideas about the nature of Nature and of the status of the human and nonhuman elements within it. How is the universe ordered? Who or what is responsible for it? What place do or should humans occupy within it? How ought we to relate to nonhuman beings and forces? We will read three different responses to such questions and show how they are linked to a particular vision of political life. In the first, the world into which human are born is ordered by gods whose actions often appear inexplicable: Prometheus Bound by Aeschylus, Oedipus the King by Sophocles, and Hippolytus by Euripides will represent this tragic vision of the cosmos. In the second, Plato , in Republic and in Phaedrus, the forces of reason and eros play central and powerful roles. In the third, Augustine of Hippo presents a world designed by a benevolent, omnipotent God who nevertheless has allowed humans a share in their own fate. We end the course with Nietzsche’s Birth of Tragedy , which offers a perspective on these three visions of the world – the tragic, the rational, and the faithful – which will help us evaluate them in the light of contemporary political and ecological concerns.
Instructor(s): J. Bennett
Area: Humanities, Social and Behavioral Sciences.
AS.190.205. Capital: The Best Seller. 3.0 Credits.
When Thomas Piketty published _Capital in the Twenty-First Century_ last spring, he made the rounds on talk shows just like a movie star with a new film out, or a rock star with an album about to drop. How is such an “event” possible, and what does it tell us about the book’s subject, capital? This class explores the questions Piketty’s book raises: What is capital? How does it come about, how does it function, and what are its effects?
Instructor(s): S. Chambers
Area: Humanities, Social and Behavioral Sciences.

AS.190.208. The Politics of Music. 3.0 Credits.
This course will provide a critical examination of the role of music in political and social change. We will be especially concerned with the correspondences between musical innovations and their capacities to inspire and shape social movements as well as their capacity to address to the politics of race and sexuality, radical democratic resistance, etc. We will also explore how music is utilized to advance agendas that are anti-democratic, such as the transnational spread of white supremacist groups, the glorification of violence, and exclusionary nationalism.
Instructor(s): P. Brendese
Area: Humanities, Social and Behavioral Sciences.

AS.190.209. Contemporary International Politics. 3.0 Credits.
An introduction to international politics. Emphasis will be on continuity and change in international politics and the causes of war and peace. The first half of the course will focus on events prior to the end of the Cold War, including the Peloponnesian War, the European balance of power, imperialism, the origins and consequences of WWI and WWII, and the Cold War. The second half will focus on international politics since 1990, including globalization, whether democracies produce peace, the impact of weapons of mass destruction, terrorism, and the prospects for peace in the 21st century. Theories of realism and liberalism will also be considered.
Instructor(s): S. David
Area: Social and Behavioral Sciences.

AS.190.217. Introduction to International Relations Theory. 3.0 Credits.
This course is a broad introduction to international relations theory in a format that encompasses lecture and discussion. We will explore mainstream theoretical perspectives and critiques of those perspectives, as well as more recent developments in the field.
Instructor(s): S. Schmidt
Area: Social and Behavioral Sciences.

AS.190.220. Global Security Politics. 3.0 Credits.
Contemporary and emerging technologies of nuclear (weapons, terrorism, energy) outer space (missiles, missile defense, asteroids), biosecurity (bioweapons, pandemics, terrorism) and cyber (war, spying, surveillance) and implications for security, international politics, arms control, and political freedom.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

AS.190.226. Global Governance. 3.0 Credits.
Global problems like poverty, financial instability, human rights abuses, and climate change threaten both international order and human well-being. In the absence of a world state, these problems must be addressed by an increasingly complex, transnational network of organizations and social groups. First, we will aim to understand and explain how global problems are governed through detailed case studies of International Organizations and Non-Governmental Organizations such as the United Nations, World Bank, Intergovernmental Panel on Climate Change, Amnesty International and more. Second, we will critically evaluate the successes and failures of these organizations and explore the possibilities for improving democratic governance at the global level.
Instructor(s): B. Allan
Area: Social and Behavioral Sciences.

AS.190.227. U.S. Foreign Policy. 3.0 Credits.
This course will provide and analysis of US foreign policy with a focus on the interests, institutions, and ideas underpinning its development. While the course will offer a broader survey, the emphasis will be on important developments during the Cold War, such as the articulation of containment strategies and nuclear deterrence, and the analysis of contemporary foreign policy questions, including the problems of terrorism and failed states. In addition to security issues, attention will also be paid to significant developments in international trade policy.
Instructor(s): S. Schmidt
Area: Social and Behavioral Sciences.

AS.190.250. Statistics for Public Policy. 3.0 Credits.
This course is a short, intensive supplement to Thinking Visually About Data, designed to give students a deeper understanding of the basic statistical concepts needed to inform public policy decision-making.
Prerequisites: Cannot enroll in AS.190.250 if you have already taken EN.553.111 OR AS.230.205
Instructor(s): Staff
Area: Quantitative and Mathematical Sciences.

AS.190.265. Comparative Political Behavior. 3.0 Credits.
An introduction to the study of political behavior, emphasizing electoral behavior in democratic countries.
Instructor(s): R. Katz
Area: Social and Behavioral Sciences.

AS.190.280. Political Persuasion. 3.0 Credits.
An introduction to Euro-American political thought, with a focus on the role of language, rhetoric, and Eros within politics. Texts by Plato, Machiavelli, Hobbes, Walt Whitman, and Emma Goldman.
Instructor(s): J. Bennett
Area: Social and Behavioral Sciences.

AS.190.281. Virtue, Labor, and Power (Classics of Political Thought II). 3.0 Credits.
This is not a class in the history of political thought. Instead, it is an opportunity for a selective, circumscribed, but very focused engagement with some of the most powerful and provocative texts in that history. We will read selections from six thinkers (Socrates, Machiavelli, Locke, Marx, Nietzsche, and Foucault), focusing on three themes (Virtue, Labor, and Power). These texts have all profoundly shaped the way we think about politics, and they are texts that resonate with our own political problematics today.
Instructor(s): S. Chambers
Area: Social and Behavioral Sciences.
AS.190.282. Authority and Liberty. 3.0 Credits.
Beginning with Plato, and using Nietzsche's history of metaphysics as a guide, this course serves as an introduction to Euro-American political thought by analyzing the philosophical foundations of political authority. In addition to works by Plato and Nietzsche, readings will include works by Kant, Mill, Hart, and Foucault.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.283. The Politics of Memory (Classics of Political Thought IV). 3.0 Credits.
Was George Orwell right that those who control the past control the future—and those who control the present control the past? This is a course on the politics of memory: how political power shapes what is available to be remembered, the timing, spaces, and occasions of commemoration, and who is permitted to invoke (or disavow) the past. We will engage a range of highly contested works of ancient, modern and contemporary political theory to investigate how the past might haunt present day politics through memories that are conscious and unconscious. The themes we will take up include: the correspondence between memory and freedom; whether we ever be free given that we are creatures endowed with memory, whether it is sometimes politically necessary (or even possible) for people to forget, and what politics of memory emboldens, or threatens, democracy. There are no prerequisites for this course.
Instructor(s): P. Brendese
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.284. Classics of Political Theory: Political Freedom. 3.0 Credits.
This course investigates core questions of what constitutes political freedom, what limits on freedom (if any) should be imposed by authority, and the relationship between freedom, responsibility and political judgment. Spanning texts ancient, modern and contemporary, we shall investigate how power inhabits and invigorates practices of freedom and consent. Among the questions we will consider: Can we always tell the difference between consent and coercion? Are morality and freedom incompatible? Is freedom from the past possible? By wrestling with slavery (freedom’s opposite) we will confront the terrifying possibility that slavery can be both embodied and psychic. If our minds can be held captive by power, can we ever be certain that we are truly free? The political stakes of these problems will be brought to light through a consideration of issues of religion, gender, sexuality, civil liberties, class and race.
Instructor(s): P. Brendese
Area: Social and Behavioral Sciences

AS.190.301. Global Political Economy. 3.0 Credits.
Examines the intersection of politics and economics in global affairs. Focuses on theoretical approaches to global political economy; institutions of governance of the global political economy; flows of goods, services, capital, and information; and transborder problems. Recommended Course Background: AS.190.209
Prerequisites: Not open if you have previously taken AS.190.216.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.302. How to be a Capitalist. 3.0 Credits.
Everyone usually assumes that they know what capitalism is and how it works. Yet some of us often make very poor choices given the framework of a capitalist system, and many of us continually express shock and outrage over outcomes and results that are perfectly reasonable (and to be expected) given the operation of capitalism. This advanced seminar will engage with readings in political theory and political economy that explore the fundamental logic of capitalism. Previous course in Political Theory or Instructor's Permission.
Instructor(s): S. Chambers
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.307. Race, Politics and Literature. 3.0 Credits.
Instructor(s): P. Brendese
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.308. Democracy and Dictatorship: Theory and Cases. 3.0 Credits.
The course will cover three topics: 1) The conceptualization of political regime, democracy and authoritarianism. We will also consider neighboring concepts of other macro-political structures—government, state, and administration—in order to be able to demarcate what is distinctive about the study of political regimes. 2) The characterization of political regimes in most Western and some non-Western countries, in history and today. We will centrally focus on the so called “Waves of Democratization,” but we will also consider stories with less happy outcomes, that is, processes that led to the breakdown of democracies and the installation of repressive dictatorships. 3) The explanation(s) of the stability and change of political regimes around the world. Theoretical accounts of regime change come in many flavors—emphasis on economic versus political causes, focus on agents and choices versus structures and constraints, international versus domestic factors, among others. We will consider most of them.
Instructor(s): S. Mazzuca
Area: Social and Behavioral Sciences.

AS.190.310. The Political Economy of Order and Prosperity. 3.0 Credits.
The course offers an introduction to the relation between politics and economics in the long run by focusing on the interaction between order and prosperity. A central topic is the effects of macro-political institutions, like types of regime and state, on the capacity of societies to generate wealth and redistribute it. The course will also examine the political impact of economic performance across countries, for instance: how do economic booms and recessions affect democratic governance? The course provides the essential conceptual and theoretical tools for the analysis of political economy processes and outcomes.
Instructor(s): S. Mazzuca
Area: Social and Behavioral Sciences.

AS.190.311. Disposable People: Race, Immigration and Biopolitics. 3.0 Credits.
This course will explore theories and practices of race and immigration in order to illuminate the proliferation of populations regarded as disposable in contemporary politics. We will pay special attention to the contestable criteria used to determine eligibility for membership in the human race. We shall also examine how political power influences the relays between citizenship status and those whose lives are worthy of protection, and those who should be allowed to die.
Instructor(s): P. Brendese
Area: Social and Behavioral Sciences.
AS.190.313. Dreams of America. 3.0 Credits.
An exploration of recurrent themes and aspirations in American political thought, focused around three (interconnected) versions of the American dream: Tabula Rasa, Upward Mobility, and Landed Independence.
Instructor(s): J. Bennet
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.314. Struggles for Democracy: from the French Revolution to the Arab Spring. 3.0 Credits.
This course is a systematic introduction to theories of regime change, which includes episodes of democratic transitions (gradual or revolutionary) and breakdowns, as well as trajectories of regime stability, like the persistence of various types of authoritarian rule and democratic politics. Two thirds of the course will cover theories, which in comparative politics are mostly inductive constructions from historical experiences. The remaining third will be case studies of exemplary events and processes, for instance, the differentiation of political regimes in post-WWI Europe in terms of liberal, fascist, and social-democratic regimes, the convergence towards democracy in Western Europe and Latin America between 1950 and 1990, and the fragility of democracy in Tropical Africa and the Middle East.
Instructor(s): S. Mazzuca
Area: Social and Behavioral Sciences.

AS.190.315. Asian American Politics. 3.0 Credits.
This course examines issues of political identity, political incorporation, and political participation of Asian Americans. Themes include Asian American panethnicity, the struggle for immigration and citizenship, Asian American electoral politics, political activism and resistance since the 1960s, and the impact of Asian Americans on the politics of race and ethnicity in the United States.
Instructor(s): E. Chung
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.317. Race and Segregated Time. 3.0 Credits.
This course explores how time, and not just space, is segregated along racial lines. We shall examine how racial injustices are experienced as impositions on human time, how resistance to racial inequality has often been figured in temporal terms, and what it means to think in untimely ways that challenge how the extended lifespans of racially dominant groups is contingent upon the foreshortened lifetimes of racial others. Readings will bring political theory into contact with contemporary experiences of race, such as: criminal (in)justice, environmental racism and the proliferation of human disposability. Recommended Course Background: One Political Theory course.
Instructor(s): P. Brendese
Area: Social and Behavioral Sciences.

AS.190.318. Political Monsters. 3.0 Credits.
This undergraduate seminar in political theory will explore the politics of fear through the trope of political monsters. We will engage with the genre of horror as a political genre, and ask why our current time period seems to be marked by particular sorts of monsters – zombies, vampires, and others. The course will engage with a variety of texts (political tracts, literary and other fictional projects, theoretical works) along with film and television and other media. The trope of political monsters will be the vehicle through which we explore the politics of democracy, of race, of colonialism, and of capitalism.
Instructor(s): P. Brendese; S. Chambers
Area: Social and Behavioral Sciences.

AS.190.320. Politics Of East Asia. 3.0 Credits.
Examines some of the central ideas and institutions that have transformed politics in the contemporary world through the lens of East Asia, focusing on Japan, South Korea, Taiwan, and China. Topics include state-society relations, late development, nationalism, democratization, political culture, social movements, and globalization.
Instructor(s): E. Chung
Area: Social and Behavioral Sciences.

AS.190.325. Finding Equality in Law and Society. 3.0 Credits.
In this class, we will ask questions about the relationship between equality, law, and society. We will investigate how people have used law in their movements for greater equality, and ask whether law has served these movements well and how it has worked. We will pay particular attention to movements based on race, gender, and economic class.
Instructor(s): E. Zackin

AS.190.326. Democracy And Elections. 3.0 Credits.
An examination of most aspects of democratic elections with the exception of the behavior of voters. Topics include the impact of various electoral systems and administrative reforms on the outcome of elections, standards for evaluations of electoral systems, and the impact of the Arrow problem on normative theories of democratic elections.
Instructor(s): R. Katz
Area: Social and Behavioral Sciences.

AS.190.327. Politics of Information. 3.0 Credits.
Considers global and comparative politics of information, information technologies, and the Internet. Examines governance of information (ownership of information, rights to information, privacy) and governance of information technologies (domain names, social media websites, etc.). Students who previously took AS.190.327 Politics of Information may not take this course.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences.

AS.190.329. National Security-Nuclear Age. 3.0 Credits.
This course examines the impact of weapons of mass destruction on international politics with an emphasis on security issues. The first half of the course focuses on the history of nuclear weapons development during the Cold War and theories of deterrence. The second half of the class considers contemporary issues including terrorism, chemical and biological weapons, ballistic missile defense and proliferation. Requirements include a midterm, final and a ten page paper.
Instructor(s): S. David
Area: Social and Behavioral Sciences.

AS.190.330. Japanese Politics. 3.0 Credits.
This course introduces students to the major debates and issues of postwar Japanese politics. Topics include nationalism, electoral politics, civil society, and immigration.
Instructor(s): E. Chung
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.333. American Constitutional Law. 3.0 Credits.
This course covers enduring debates about the way the Constitution has structured the U.S. government and about which powers the Constitution assigns to the federal government and to the states. We will examine these debates in the context of American political history and thought by studying the writings of prominent participants, and landmark Supreme Court cases.
Instructor(s): D. Dagan de Picciotto; E. Zackin
Area: Social and Behavioral Sciences.
AS.190.334. Constitutional Law. 3.0 Credits.
The second semester of a two semester course. Topics include executive and emergency power, racial and gender equality, and selected free speech and religious freedom issues.
Prerequisites: AS.190.333
Instructor(s): E. Zackin
Area: Social and Behavioral Sciences.

AS.190.335. Imagining Borders. 3.0 Credits.
What is a border and why do borders matter in global politics. What do borders mean under conditions of globalization? An examination of the politics of borders, transborder flows, and networks within and across borders. The readings which come from political science and other disciplines, will include theoretical and case-specific works.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences.

AS.190.339. American Racial Politics. 3.0 Credits.
Recommended Course Background: AS.190.214
Instructor(s): L. Spence
Area: Social and Behavioral Sciences.

AS.190.340. Black Politics I. 3.0 Credits.
This course is a survey of the bases and substance of politics among black Americans and the relation of black politics to the American political system up to the end of Jim Crow. The intention is both to provide a general sense of pertinent issues and relations over this period as a way of helping to make sense of the present and to develop criteria for evaluating political scientists' and others' claims regarding the status and characteristics of black American political activity.
Instructor(s): L. Spence
Area: Social and Behavioral Sciences.

AS.190.341. Korean Politics. 3.0 Credits.
This course introduces students to the historical and institutional foundations of modern South Korean politics. Topics include nationalism, political economic development, civil society, globalization, and ROK-DPRK relations. (CP)
Instructor(s): E. Chung
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.342. Black Politics II. 3.0 Credits.
Recommended Course Background: AS.190.340.
Instructor(s): L. Spence
Area: Social and Behavioral Sciences

AS.190.343. Research Seminar on Political Parties. 3.0 Credits.
This seminar has two basic objectives: both theoretical and empirical study of selected topics in the comparative literature on political parties, and the ultimate production of a publishable-quality (or conference-presentable-quality) paper. Topics will include (but not be limited to) the place of parties in political theory and the nature of party systems, party organization, and party behavior in the United States and other countries.
Instructor(s): R. Katz
Writing Intensive.

AS.190.344. Seminar In Anti-Semitism. 3.0 Credits.
Jews exercise a good deal of power in contemporary America. They are prominent in a number of key industries, play important roles in the political process, and hold many major national offices. For example, though Jews constitute barely two percent of America's citizens, about one-third of the nation's wealthiest 400 individuals are Jewish and more than ten percent of the seats in the U.S. Congress are held by Jews. One recent book declared that, "From the Vatican to the Kremlin, from the White House to Capitol Hill, the world's movers and shakers view American Jewry as a force to be reckoned with." Of course, Jews have risen to power in many times and places ranging from the medieval Muslim world and early modern Spain through Germany and the Soviet Union in the 20th century. In nearly every prior instance, though, Jewish power proved to be evanescent. No sooner had the Jews become "a force to be reckoned with" than they found themselves banished to the political margins, forced into exile or worse. Though it may rise to a great height, the power of the Jews seems ultimately to rest on a rather insecure foundation. Cross-listed with Jewish Studies. Course is open to juniors and seniors.
Instructor(s): B. Ginsberg
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.352. The Politics of Global Development. 3.0 Credits.
Development is often assumed to be an economic issue. In this course we examine the politics of development on a global scale. We begin by looking at the colonial and Cold War histories of development. We then use these histories to contextualize contemporary development issues that directly affect international relations such as aid and debt, humanitarianism, food security, land "grabs", migration and indigenous rights. The course also seeks to understand the ways in which the issues underlying global development have always connected and continue to connect the peoples and polities of the Global North and Global South.
Instructor(s): R. Shilliam.

AS.190.360. Power and Democracy in the American City. 3.0 Credits.
How do race and class intersect to shape how democracy works in American cities? In this innovative course students will learn about urban citizenship, authority, and activism using Baltimore as a case. The class, co-taught with Baltimore organizers, will use a community based learning approach.
Instructor(s): L. Spence
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.365. Black Politics: Black Lives Matter. 3.0 Credits.
Over the past two years the #blacklivesmatter movement has transformed the discussion about policing in American cities. In this course we will examine the broad movement against police brutality through the lens of black politics.
Instructor(s): L. Spence
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.368. Pluralism. 3.0 Credits.
This seminar will explore the theory and politics of pluralism: from European debates over religious tolerance to American debates over constitutional founding; from liberal political philosophy to radical democracy. Authors may include Bentley, Dahl, Locke, Madison, Ranciere, Rawls, Young. Recommended Course Background: Previous course in political theory or permission of instructor.
Instructor(s): S. Chambers
Area: Social and Behavioral Sciences.
AS.190.373. The Politics of Public Policy. 3.0 Credits.
This course is an introduction to the political structure and process of making public policy in the United States. Public policymaking is, above all, an arena in which policy professionals try to bring systematic evidence and scientific knowledge to bear to diagnose, understand, and solve social problems. At the same time, policymaking also takes place in a political environment, in which strategic and purposive actors contend for power and seek to advance their own goals and realize their own visions about how the world ought to be changed for the better. The goals that participants in the policymaking process pursue may take a variety of forms: substantive policy outcomes, of course, but also power, political advancement, or material advantage. The actors who populate the process, moreover, may disagree about the goals they seek and making policy — especially in democratic political systems — requires some means of resolving these disagreements. Actors also differ in the resources they have at their disposal to seek their goals — power, money, organization, for example, but also knowledge and expertise. Finally, policymakers cannot do anything they want in pursuit of their goals. They are constrained by the rules and structures that make up the policymaking system. These factors — actors, goals, resources, knowledge, and rules — shape the politics of policymaking and frame the strategic options available to policymakers.
Instructor(s): B. Mikulski; R. Lieberman.

AS.190.379. Nationalism and the Politics of Identity. 3.0 Credits.
Nationalism ties powerful organizations to political mobilization, territory, and individual loyalty. Yet nationalism is typically studied in isolation from other social formations that depend upon organizational — individual linkages. Alternative types of identity category sometimes depend similarly upon organizations that collect and deploy resources, mobilize individuals, erect boundaries, and promote strong emotional connections among individuals as well as between individuals and institutions. In this class, we study classic and contemporary works on nationalism, drawn from multiple disciplinary and analytic traditions, in the comparative context of alternative forms of identity. The focus of the class will be primarily theoretical, with no regional or temporal limitations.
Instructor(s): M. Kocher.

AS.190.380. The American Welfare State. 3.0 Credits.
This course analyzes the distinctive US welfare state in historical and comparative perspective. We begin with a survey of the policy context, an historical overview from the poorhouses through the Great Society, and a tour of welfare states across the rich democracies. We then survey developments — and explain the actual workings of policy — across jobs, education, welfare, pensions, and health care. We explore the institutional and political factors behind their divergent trajectories through conservative revival and the age of Obama. Students will write a seminar paper exploring policy development over time in a program or area of their choosing. Enrollment restricted to Social Policy minors only.
Prerequisites: Students may take AS.190.380 or AS.360.380, but not both.
Instructor(s): D. Schlozman
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.381. Global Environmental Politics. 3.0 Credits.
Instructor(s): B. Allan
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.382. Democracy and Development: Theory and Cases. 3.0 Credits.
Most wealthy countries are democracies. But not all democracies are wealthy—India, Costa Rica, and Mongolia are prominent examples of poor countries with democratic regimes. The course will examine the relation between economic development and political democratization under three big questions. (a) Under what conditions, and through which mechanisms, does economic development promote democracy? (b) If economic development is not possible in the foreseeable future, how do countries achieve stable democratization? (c) Under what conditions, and through which mechanisms, does democracy foster economic development?
Instructor(s): S. Mazzuca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.384. Urban Politics & Policy. 3.0 Credits.
An analysis of public policy and policy-making for American Cities. Special attention will be given to the subject of urban crime and law enforcement, poverty and welfare, and intergovernmental relations.
Cross-listed with Africana Studies
Instructor(s): L. Spence
Area: Social and Behavioral Sciences.

AS.190.385. Urban Politics and Policy. 3.0 Credits.
An analysis of public policy and policy-making for American Cities. Special attention will be given to the subject of urban crime and law enforcement, poverty and welfare, and intergovernmental relations. Cross listed with Africana Studies.
Instructor(s): L. Spence
Area: Social and Behavioral Sciences.

AS.190.387. Parties and Elections in America. 3.0 Credits.
Considers how parties and elections structure political conflict, and facilitate (or not) democratic control of government. Topics include campaigns, voting behavior, election administration, money in politics, presidential nomination, and party coalitions.
Instructor(s): D. Schlozman
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.391. Time to Kill: Race, Punishment, Death and Desire. 3.0 Credits.
This course examines the role of race in determining who deserves to be punished, the timing and occasions of punitive action and how long punishment should endure. Key to our inquiry is how racialized presumptions about human desire might justify punitive logics of power. The class explores inequalities in the distribution of punishment and death in order to illuminate how race shapes questions of whose time is more valuable, who lives and who dies, and ultimately whose lives count as human.
Instructor(s): P. Brendese
Area: Social and Behavioral Sciences.

AS.190.393. Theories of Constitutional Interpretation. 3.0 Credits.
In this course, we will read and discuss a variety of arguments about how best to interpret constitutional texts, with particular attention to debates about the U.S. Constitution. The course will also cover debates about the role of ordinary people, legislatures, and judges in determining the content of constitutional law.
Instructor(s): E. Zackin
Area: Social and Behavioral Sciences.
AS.190.397. States and Markets. 3.0 Credits.
The course offers an introduction to the relation between politics and economics by focusing on the interaction between the two most important institutions of the modern world: states and markets. Under what conditions do states and markets combine to promote or damage human welfare? Essential concepts, theories and cases of economic development will be examined.
Instructor(s): S. Mazzuca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.398. Politics Of Good & Evil. 3.0 Credits.
The Politics of Good and Evil places a set of classic myths into conversation with recent philosophical and political work on existential questions. The myths include the Book of Job, Genesis (J version), two dramas by Sophocles, a selection from Augustine, and Voltaire's Candide. Texts by Nietzsche (Thus Spoke Zarathustra), William James, (A Pluralistic Universe) and Connolly are then placed into conversation with both each other and these classic stories. Kohler's The Sixth Extinction closes the class, encouraging us to think again about the relations between mythic orientations to responsibility, tragic possibility, nature/culture imbrications and the shape of contemporary life during the Anthropocene. Previous work in political theory is recommended. The course is devoted to "elemental theory", in which diverse existential stories jostle each other and periodically disturb us, challenging us to explore new thoughts in a new world. One class presentation, two 10-12 page papers, and extensive class discussion.
Instructor(s): W. Connolly
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.401. International Relations Theory. 3.0 Credits.
This seminar covers the main theoretical perspectives employed in the analysis of international politics, covering a variety of realist, liberal, and constructivist work. The strengths and weaknesses of different approaches will be assessed and contrasted with one another, with the goal being to provide students with a broad foundation on which to develop their own understandings. The course is open to graduate students and advanced undergraduates.
Instructor(s): S. Schmidt
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.402. Environmental Racism. 3.0 Credits.
This is an undergraduate political theory seminar that addresses the disproportionate impact of environmental destruction on racially stigmatized populations. We shall examine the logics of power whereby the natural world is subjected to exploitation and domination, in tandem with the subordination of racial subjects historically identified as closer to nature. Likewise, we will explore political and theoretical challenges to environmental racism, such as those posed by indigenous communities, decolonial theory, and political movements contesting the intersection of racial inequalities and ecological crises.
Instructor(s): P. Brendese
Writing Intensive.

AS.190.404. Race and Debt: Living on Borrowed Time. 3.0 Credits.
This is an advanced undergraduate seminar that explores how racial stigma functions as a marker of being always already in debt. In view of the legacies of settler-colonialism, imperialism and chattel slavery, how is it that those from whom so much has been taken are nevertheless regarded as perpetually in debt? We shall examine the moral, economic and racialized logics of power through which a range of political subjects come to be regarded as ungrateful "takers" as opposed to "makers," and owing a debt to society. In so doing, we will investigate how temporality functions as a tool of power by considering how the indebted are made vulnerable to precarity, discipline, and disposability—in effect, forced to live life on borrowed time.
Instructor(s): P. Brendese
Writing Intensive.
Instructor(s): D. Deudney; S. David.

This course examines the politics of food at the local, national, and global level. Topics include the politics of agricultural subsidies, struggles over genetically modified foods, government efforts at improving food safety, and issues surrounding obesity and nutrition policy. Juniors, seniors, and graduate students only. Cross-listed with Public Health Studies.

Instructor(s): A. Sheingate
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.406. The Executive Branch. 3.0 Credits.
In the 19th Century America was noted for its courts, political parties and representative institutions. Today, America's political parties and representative institutions have declined in importance while the institutions of the executive branch have increased in importance. This seminar will examine the nation's key executive institutions and aspects of executive governance in the U.S. Students will alternate primary responsibility for week's readings. Every student will prepare a 10-15 page review and critique of the books for which they are responsible in class.

Instructor(s): B. Ginsberg
Area: Social and Behavioral Sciences.

AS.190.407. Geopolitics, Nuclear Weapons and World Order. 3.0 Credits.
Intensive examination of unresolved debates about the implications of nuclear weapons for world order, focusing on deterrence, strategy, arms control, multipolarity, proliferation, terrorism, and abolition, as well as roles of liberal, democratic, and constitutional political forms and popular public involvement. Readings from classic and contemporary sources.

Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

AS.190.408. Sovereignty: Historical Perspectives and Contemporary Issues. 3.0 Credits.
This seminar provides an in-depth exploration of the concept of sovereignty by examining its historical development and its use in international relations scholarship. Our discussion will also be informed by works in political theory and the international law literature. The course is open to advanced undergraduate students and graduate students.

Instructor(s): S. Schmidt
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.412. The Use and Misuse of Force. 3.0 Credits.
An examination of the ways in which violence has been used to secure political ends. Topics include terrorism, assassination, genocide, coups, rebellions and war itself. Students examine what makes types of political violence unique and what unites them. (Formerly AS.190.372)

Instructor(s): S. David
Area: Social and Behavioral Sciences.

AS.190.416. Nuclear Weapons and World Politics. 3.0 Credits.
This course examines the impact of nuclear weapons on international politics and world order. Topics to be considered include theories of deterrence, proliferation, the development of new weaponry, terrorism, defense, arms control and abolition. The effect of nuclear weapons on the existing state system and prospects for new configurations of world governance will also be addressed.

Instructor(s): D. Deudney; S. David.

AS.190.420. Nuclear Power and World Order. 3.0 Credits.
This course provides an in-depth examination of evolving debates over world political order and nuclear deterrence, war-fighting, arms control, world government, proliferation, and terrorism.

Instructor(s): D. Deudney
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.424. Policy Disasters. 3.0 Credits.
Investigates the causes of large-scale policy disasters, examining the role of ideology, psychology, organization design and political incentives. Examples may be drawn from the Iraq War, Bay of Pigs, Hurricane Katrina, the U.S. Financial crisis, Shuttle Challenger disaster, economic development policy, privatization, and the Great Society. Limited to seniors or with permission of instructor. (CP / AP)

Instructor(s): S. Teles
Area: Social and Behavioral Sciences.

AS.190.425. The New Deal and American Politics. 3.0 Credits.
This seminar explores how the New Deal, the fundamental moment in the post-Civil War United States, has structured politics and government across a variety of domains ever since. Topics include presidential leadership, executive power, political parties, labor, race, and the welfare state.

Instructor(s): D. Schlozman
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.426. Science and Expertise in Global Politics. 3.0 Credits.
An in-depth examination of complex global problems that demand the effective use of scientific and expert knowledge in global governance. We will begin with a theoretical overview covering different perspectives on the role of knowledge and technology in global politics before looking in more detail at case studies drawn from environmental politics, nuclear management, colonial history, international political economy, UN peacekeeping, and more.

Instructor(s): B. Allan
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.427. Political Economy of Japan and Korea. 3.0 Credits.
This upper-level seminar examines some of the major debates and issues of postwar Japanese and South Korean political economy. Topics include nationalism, gender politics, civil society, immigration, and US-Japan-South Korea trilateral relations.

Instructor(s): E. Chung
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.429. The Political Bases of the Market Economy. 3.0 Credits.
Although "the market" is conventionally understood as separate from "politics", the modern market economy did not arise in a political vacuum. In fact, the very separation between the economy and politics is itself the product of a politically potent set of ideas. This course is an upper-division reading seminar on the origins and evolution of the modern market economy. Readings will include Smith, Marx, Weber, Polanyi, Keynes, Hayek, Friedman, Becker, and Foucault. Recommended course background: Introduction to comparative politics OR any college-level course in social or political theory.

Instructor(s): N. Jabko
Area: Social and Behavioral Sciences.
AS.190.430. Time and Punishment. 3.0 Credits.
"If you can't do the time, don't do the crime." According to ask.com, this common expression was made popular in the 1970s by the theme song for the television show "Beretta." Aside from amusing us with the irony that the star of "Beretta" was Robert Blake who was later charged with the murder of Bony Lee Bakely, the expression raises a profound issue: What is the relationship between punishment and time? This course will explore that question. Topics to be discussed include different philosophical understandings and experiences of time, views of mortality and fate, theories of punishment, specific punishments in the U.S. (including sentences of juveniles, life, death, and LWOP), as well as punishments that are not specifically meted out but are known to be the consequences of political, social, and economic circumstance. Students will read texts in criminology, political theory, philosophy, and jurisprudence, as well as a selection of Supreme Court cases, novels, and short stories. This writing intensive course is limited to undergraduates who have taken at least one "Classics of Political Thought" course (190.280, 190.281, 190.282, or 190.283).
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences.

AS.190.431. Global Climate Governance. 3.0 Credits.
This course will offer an in-depth study of the history and politics of global climate governance. It will examine the central actors, agreements, and policy proposals that shape climate governance.
Instructor(s): B. Allain
Area: Social and Behavioral Sciences.

AS.190.432. Topics in Global Security Politics. 3.0 Credits.
Intensive examination of catastrophic and existential risks posed by natural and technogenic sources (including nanotechnology, synthetic biology, cyberwar, artificial intelligence, asteroidal collision, climate change and space colonization) and their political implications
Prerequisites: Pre-reqs: AS.190.413 or AS.190.220
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.433. Republican Orders and Sustainability. 3.0 Credits.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

AS.190.434. Violence and Politics. 3.0 Credits.
This seminar will address the role of violence—both domestic and international—in political life. Though most claim to abhor violence, since the advent of recorded history, violence and politics have been intimately related. States practice violence against internal and external foes. Political dissidents engage in violence against states. Competing political forces inflict violence upon one another. Writing in 1924, Winston Churchill declared—and not without reason—that, "The story of the human race is war." Indeed, violence and the threat of violence are the most potent forces in political life. It is, to be sure, often averred that problems can never truly be solved by the use of force. Violence, the saying goes, is not the answer. This adage certainly appeals to our moral sensibilities. But whether or not violence is the answer presumably depends upon the question being asked. For better or worse, it is violence that usually provides the most definitive answers to three of the major questions of political life—statehood, territoriality and power. Violent struggle, in the form of war, revolution, civil war, terrorism and the like, more than any other immediate factor, determines what states will exist and their relative power, what territories they will occupy, and which groups will and will not exercise power within them. Course is open to juniors and seniors.
Instructor(s): B. Ginsberg
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.435. Law and Literature. 3.0 Credits.
Students will read texts in criminology, political theory, philosophy, and jurisprudence, as well as a selection of Supreme Court cases, novels, and short stories. This writing intensive course is limited to undergraduates who have taken at least one "Classics of Political Thought" course (190.280, 190.281, 190.282, or 190.283).
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.436. European Politics in Comparative Perspective. 3.0 Credits.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.437. Advanced Topics in Global Politics: Learning Through Research. 3.0 Credits.
Join a research team. In this course, students will explore topics in global politics and methods for the conduct of inquiry in the Johns Hopkins tradition of learning through research. Under the guidance of the professor, students will learn about a topic from existing primary and secondary sources, collect new empirical evidence, analyze the evidence, and contribute to research products. Recommended for students planning to write a thesis. Junior or Senior standing in Political Science or International Studies or permission of instructor.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.440. European Politics in Comparative Perspective. 3.0 Credits.
Europe has been in a sense the first testing ground for theories of comparative politics, but many outsiders now see Europe as a pacified and somewhat boring place. This course will question conventional wisdom through an examination of European politics in historical and cross-national perspective. We will apply the comparative method to the study of European politics today, and conversely we will ask what Europe tells us more generally about politics. We will see that Europe is still a locus of intense conflict as well as remarkably diverse experimentation. Topics will include: political, legal, and economic governance; the evolution of democracy and fundamental rights, the welfare state, class stratification, immigration and race, the role of religion; European integration and globalization. Juniors and seniors only.
Instructor(s): N. Jabko
Area: Social and Behavioral Sciences.
AS.190.441. Comparative European Politics. 3.0 Credits.
In comparison with other regions of the world, Europe can easily appear as a pacified and somewhat boring place. This course will question this stereotype through an examination of European politics in historical and cross-national perspective. From a historical perspective, Europe has been the crucible of modern politics. And to this day, Europe remains a locus of intense conflict as well as remarkably diverse experimentation. We will read seminal scholarly works as well as recent comparative politics literature on European politics. The goal is to understand and discuss central concepts that comparative politics scholars mobilize in the study of European politics across time and space. Topics will include: political, legal, and economic governance; the evolution of democracy, the welfare state, partisan politics, immigration, race, and religion; European integration and globalization.
Instructor(s): S. David
Area: Social and Behavioral Sciences.

AS.190.444. Causes of Peace. 3.0 Credits.
Since 1945, the great powers have enjoyed their longest period of peace in history. Interstate conflict between lesser powers is also at an all time low. What accounts for this "long peace?" This course will look at various explanations including the spread of democracy, the proliferation of nuclear weapons, globalization, American hegemony, and fundamental changes in attitudes regarding the use of force. Students will present draft versions of their research papers during the last weeks of the course. Co-listed with AS.190.619
Instructor(s): S. David
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.445. Power and Wealth: Sources, Dynamics and Linkages. 3.0 Credits.
This seminar explores theoretical approaches to the multiple relations between political power and economic power, including pluralism, Marxism, and historical institutionalism. Major empirical transformations will provide the motivation: the rise of modern states, capitalism and social classes in Early Modern Europe, the creation of highly unequal societies in post-colonial Latin America and Africa, the varieties of Welfare State in the golden age of advanced capitalism (1950-75), and the powerful rebirth of inequality in advanced economies for the last 25 years. Theories of sources and interactions of political and economic power will be coupled with accounts of the effects of power and wealth on macroscopic change, especially democratization and economic development. Open to juniors, seniors, and graduate students.
Instructor(s): S. Mazzuca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.442. Civil Society. 3.0 Credits.
This course explores classic and contemporary debates on the concept of civil society and critically examines its analytical value in light of recent developments. Topics include the relationship between civil society, the state, and markets, the role of civil society in development and democratization, social capital, and global civil society. This course is open to graduate students from any discipline. Advanced undergraduate students must obtain permission from the instructor and are expected to keep up with graduate students during class discussions.
Instructor(s): E. Chung
Writing Intensive.

AS.190.443. Politics of Outer Space. 3.0 Credits.
Intensive examination of the political aspects of human activities in outer space, past, present and future, with focus on militarization, earth-remote sensing, surveillance, navigation, resource exploitation, the Outer Space Treaty, and colonization.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.446. Politics of TransHumanism. 3.0 Credits.
Examination of politics of human biological and cybernetic augmentation, and replacement with focus on stratification, weaponization, collectivization, extinction and irregulation.
Instructor(s): D. Deudney
Writing Intensive.

AS.190.450. Power. 3.0 Credits.
Power is a – if not the – key concept of international relations, yet there is no single definition of power that is accepted by all scholars in the field. In this course we will critically examine definitions of power from classic and contemporary works of international relations, political science, and related areas of study.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences.

AS.190.451. Geopolitics. 3.0 Credits.
Intensive exploration of theories of how geography, ecology, and technology shape political orders. Case studies of ancient, early modern, global, and contemporary topics, including European ascent, industrial revolution, tropics and North South divide, climate change, geo-engineering and global commons (oceans, atmosphere and orbital space colonization).
Instructor(s): D. Deudney
Writing Intensive.

AS.190.455. Comparative Racial Politics. 3.0 Credits.
This upper-level seminar surveys the major trends and approaches to the comparative study of race in political science and critically examines the link between race and politics. Topics include race and state formation, citizenship and national membership, immigration, racial regimes, and the political economy of race. Recommended background: Courses in comparative politics, political economy, immigration, and racial politics.
Instructor(s): E. Chung
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.457. The University and Society. 3.0 Credits.
In the 20th century, American universities became the envy of the world, leading in most categories of scholarly productivity and attracting students from every nation. In recent years, though, American higher education has come to face a number of challenges including rapidly rising costs, administrative bloat, corporatization and moocification. We will examine the problems and promises of American higher education, the political struggles within the university and the place of the university in the larger society. Upper classes and Grad Students only.
Instructor(s): B. Ginsberg; R. Kargon
Area: Social and Behavioral Sciences.
AS.190.479. Imag(in)ing Cities. 3.0 Credits.
Cities exert a substantial degree of control over American life. Throughout the 20th and early years of the 21st Century they have been centers of industry, of social change, of political change. And in part because of their status, scholars have begun to theorize about cities. The purpose of this class is to interrogate these theories through a filmic lens. Students will be exposed to readings and then in the second half of the semester, to films about cities that implicitly and explicitly speak to and about these theories. Some coursework in urban studies preferred, though not necessary.
Instructor(s): L. Spence
Area: Social and Behavioral Sciences.

AS.190.480. Planetary Interdependence and World Governments. 3.0 Credits.
Intensive exploration of alternative global political architectures for high levels of security, ecological and internet interdependence
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.481. Conservatism and Crime. 3.0 Credits.
This course will examine the evolution of conservative thought on crime and criminal justice from the 1960s to the present. We will focus in particular on how the subject of crime illuminates different strains of conservatism, reveals tensions between its values of liberty, authority and anti-statism, and shows the changing approach that conservative intellectuals have had to race.
Instructor(s): S. Teles
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.491. Game Theory in the Social Sciences. 3.0 Credits.
Strategic thinking is a fundamental component of many political and economic phenomena, from international wars and national elections to wage bargains and monopoly power. Game Theory is a set of ideas and techniques for analyzing strategic interactions and making predictions about its outcomes. This course provides an introduction to Game Theory and its main applications to relevant political and social outcomes.
Juniors and Seniors Only.
Prerequisites: AS.110.106 or AS.110.108
Instructor(s): S. Mazzuca
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.190.498. Thesis Colloquium. 3.0 Credits.
Open to and required for Political Science majors writing a thesis. International Studies majors writing a senior thesis under the supervision of a Political Science Department faculty member may also enroll.
Topics include: research design, literature review, evidence collection and approaches to analysis of evidence, and the writing process. The course lays the groundwork for completing the thesis in the second semester under the direction of the faculty thesis supervisor. Students are expected to have decided on a research topic and arranged for a faculty thesis supervisor prior to the start of the semester. Seniors. Under special circumstances, juniors will be allowed to enroll. Enrollment limit: 15.
Instructor(s): A. Sheingate.

AS.190.499. Senior Thesis. 3.0 Credits.
Seniors also have the opportunity to write a senior research thesis. To be eligible to write this thesis, students must identify a faculty sponsor who will supervise the project. Once a faculty sponsor has approved a topic, students must enroll in a three credit independent study during the fall semester of their senior year. At the end of the fall semester, if the faculty sponsor determines that adequate progress has been made and the project warrants further work, the student may enroll in the senior thesis (AS.190.499) which will be worth 6 credits.
Instructor(s): G. Paquette; S. David
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.501. Internship-Political Science. 1.0 Credit.
Instructor(s): Staff.

AS.190.502. Political Science Internship. 0.0 - 3.0 Credits.
Instructor(s): Staff.

AS.190.503. Internship-International Relations. 1.0 Credit.
Instructor(s): Staff.

AS.190.504. Internship-International Relations. 0.0 - 3.0 Credits.
Instructor(s): Staff.

AS.190.506. International Studies Internship. 0.0 - 3.0 Credits.
Instructor(s): Staff.

AS.190.535. Independent Study - Freshmen. 3.0 Credits.
Permission required.
Instructor(s): Staff.

AS.190.536. Independent Study-Freshmen. 0.0 - 3.0 Credits.
Instructor(s): Staff.

AS.190.537. Independent Study-Sophomores. 3.0 Credits.
Instructor(s): Staff.

AS.190.538. Independent Study-Sophomores. 0.0 - 3.0 Credits.
Instructor(s): Staff.

AS.190.539. Independent Study-Juniors. 3.0 Credits.
Instructor(s): Staff.

AS.190.540. Independent Study-Juniors. 0.0 - 3.0 Credits.
Instructor(s): Staff.

AS.190.541. Independent Study-Seniors. 3.0 Credits.
Instructor(s): Staff.

AS.190.542. Independent Study-Seniors. 0.0 - 3.0 Credits.
Instructor(s): Staff.

AS.190.543. Independent Research. 3.0 Credits.
Instructor(s): Staff.

AS.190.544. Independent Research. 0.0 - 3.0 Credits.
Instructor(s): Staff.

Instructor(s): Staff.

AS.190.552. Summer Internship. 1.0 Credit.
Instructor(s): Staff.

AS.190.598. Independent Study. 3.0 Credits.
Instructor(s): Staff.

AS.190.599. Research - Summer. 3.0 Credits.
Instructor(s): E. Chung; L. Spence; M. Crenson; R. Hsieh; S. Parkinson.
**AS.190.601. Qualitative Research.**
This class is designed to introduce students to qualitative methodology. Practically, students will gain first hand experience with qualitative research methods via research design, ethics review, in-depth interviewing, participant observation, and archival/primary source research. They will learn to deploy analytical techniques such as discourse analysis and process tracing. Students will also be asked to consider the merits of qualitative approaches more generally, and discuss the relative advantages of qualitative, experimental, and quantitative approaches. Questions that we will discuss include: What place should qualitative research have in a research design? Can qualitative research test hypotheses, or only generate them? Can qualitative research explain social phenomena, or only interpret them? What are the disadvantages and advantages of qualitative approaches compared to quantitative approaches? For what kinds of research questions are ethnographic techniques best suited? Is replicability possible for ethnographic field research? What criteria of evidence and analytical rigor apply on this terrain?
Instructor(s): A. Lawrence; S. Parkinson
Area: Social and Behavioral Sciences.

**AS.190.602. Introduction to Quantitative Political Science.**
An introduction to measurement and data analysis in contemporary American political science. Measurement topics will include the formation of indices and cumulative scales. Analytic topics will topics include sampling variations, statistical association and causation, as manifested in contingency tables and correlation and regression. Emphasis will be on fundamental concepts and assumptions, and on comprehension and evaluation of the scholarly literature. Advanced undergraduates by permission only.
Instructor(s): R. Katz
Area: Social and Behavioral Sciences.

**AS.190.603. Power.**
Power is a – if not /the/ – key concept of international relations, yet there is no single definition of power that is accepted by all scholars in the field. In this course we will critically examine definitions of power from classic and contemporary works of international relations, political science, and related areas of study.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences
Writing Intensive.

**AS.190.606. Nuclear Weapons and World Order.**
This course examines the impact of nuclear weapons on international politics and world order. Topics to be considered include theories of deterrence, proliferation, the development of new weaponry, terrorism, defense, arms control and abolition. The effect of nuclear weapons on the existing state system and prospects for new configurations of world governance will also be addressed.
Instructor(s): D. Deudney; S. David.

**AS.190.608. Influx and Efflux.**
"While many contemporary philosophies of the self, and of human agency, tend to emphasize the activity of expression – the enactment or externalization of an intention, desire, will, or purpose, this course will explore the process through which the outside comes in. Influence: the default condition of intrinsically porous and relational bodies. We will examine different models of the process through which individuals are psychically and physiologically affected by forces, shapes, ideas, affects, and tendencies coming from the "outside." Readings include Walt Whitman's experimentation with the democratic potential of "sympathy," Alfred North Whitehead's theory of "affective tone" (which focuses on unconscious and in-sensible modes of influence), Roger Caillois's theory of the "instinct of abandon" (developed at the time of an emergent fascism in Europe), and contemporary theories (in behavioral psychology and cognitive science) of embodied cognition."
Instructor(s): A. Pandian; J. Bennett.

**AS.190.609. Law, Critique, Genealogy.**
This course will offer a survey of classical and contemporary trends in critical theory through the prism of the law. The readings will trace the development of two modes of critical reflection emerging from Kant's philosophical project, critique and genealogy, exploring the tensions between them through the study of categories such as judgment, case, and jurisdiction. We will examine how these categories themselves reflect the question of "modernity" and the Enlightenment as that question is posed and answered by thinkers from Kant to Foucault and Habermas and beyond. To ground this study, we will focus on critical engagements with human rights, property, and institutional justice around the world. Within an arch of readings that goes from Kant to Butler, the course will include key texts by Hegel, Marx, Benjamin, Horkheimer, Adorno, Marcuse, Habermas, Foucault, and Nancy, as well as texts drawn from critical legal studies and the anthropology of law and justice. There are no prerequisites for this interdisciplinary course. To receive credit, students will be required to attend seminar, prepare for class discussions, and turn in a 20-30 page final research paper, a draft of which will be presented at a workshop at the end of the year.
Instructor(s): J. Culbert; J. Obarrio.

**AS.190.610. Process Philosophies and Political Manifestos.**
What do the process philosophies of Bergson, Whitehead and Daoism have to say to political manifestos advanced by writers such as Marx and Engels, Naomi Klein, Hardt and Negri, Dziga Vertov, Haitian and French revolutionaries, Folco Portinari. How, in turn, can the latter illuminate, deform, or inform them? The readings in this seminar bounce back and forth between the cosmic politics of process philosophy and a variety of short manifestos designed to speak to the vicissitudes of today.
Instructor(s): J. Bennett; W. Connolly.

**AS.190.611. Feminist and Queer Theory.**
Graduate students only.
Instructor(s): S. Chambers.

**AS.190.612. Comparative Citizenship and Immigration Politics.**
Graduate students only. Examines the contemporary political dynamics of migration, citizenship, and race concentrating on North America, Europe and East Asia. We will focus on how citizenship and immigration policies shape immigrant political identities, claims, and strategies as well as how immigrants impact public debates and policies in receiving societies.
Instructor(s): E. Chung
Area: Social and Behavioral Sciences.
AS.190.614. Nietzsche and Deleuze.
This seminar examines key texts by Nietzsche and Deleuze to see how the former influenced the latter and how, where and why Deleuze breaks the Nietzschean influence. Both are known for rethinking radically agency, nature, time, ethics, culture, explanation, politics and the multiple intersections between them. Deleuze treats Nietzsche as a key figure in the “minor” tradition that challenges western “majoritarian” Christian and secular thought. Both are attuned to the role of affective communication, the severe limits of human exceptionalism in Christianity and secularism, the ubiquity of heterogeneous connections, the pursuit of affirmative attachments, the exploration of tragic possibility, and the grasp of unruly periods in nature. While reading Nietzsche might help us to understand otherwise opaque moments in Deleuze (and vice versa) Deleuze can also be said to twist and turn Nietzsche’s thought, as he pulls it to the political left, examines the global capitalist “axiomatic”, explores “nomadic” science, embraces critical social movements, pursues a world of intersecting “minorities”, and emphasizes the rhizomatic character of culture/nature connections. The texts read by Nietzsche texts may include Daybreak, sections from The Gay Science, The Genealogy of Morals and sections from Will to Power. D&G texts may include Difference and Repetition, sections from A Thousand Plateaus, What is Philosophy? and The Fold. Untimely Interventions from Simondon, C Keller, Whitehead, L. Margulis, I Stengers, N. Lawtoo, or B. Massumi could be “folded” into the mix.
Instructor(s): W. Connolly.

AS.190.615. International Relations Theory.
This seminar covers the main theoretical perspectives employed in the analysis of international politics, covering a variety of realist, liberal, and constructivist work. The strengths and weaknesses of different approaches will be assessed and contrasted with one another, with the goal being to provide students with a broad foundation on which to develop their own understandings. Meets with AS.190.401
Instructor(s): S. Schmidt
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.616. American Political Development.
An examination of state-building and nation-building throughout American political history. (AP)
Instructor(s): A. Shengate; R. Lieberman.

AS.190.617. Romanticism and Radicalism.
A study of a group of European and American writers, including Schiller, Shelley, Emma Goldman, Walt Whitman, Georges Sorel, Carl Schmitt, Guy Debord and other Situationists, Georges Perec, Herbert Marcuse, Theodor Adorno, and contemporary artists and theorists of the aesthetic, in order to explore connections between romantic themes and the aspiration for a significant transformation of political life. What are the complex relations between artistic and revolutionary practice? What are the standards by which to assess the viability of romantic, counter-cultural, or eccentric artworks/texts/events?
Instructor(s): J. Bennett; W. Connolly
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.618. What Was/Is Fascism?.
An examination of texts on twentieth century fascist movements and societies in relation to twenty first century movements. What roles do capitalism, imperialism, racism, democracy, the media, global processes and planetary processes play in them? To what extent does the production and exploitation of resentment shape their intensities? What rhetorical strategies mobilize such movements? What rhetorics and social movements to resist or retune such movements show promise? Texts by Hitler, Arendt, Neumann, Adorno, Marcuse, Deleuze and Kenneth Burke may be among those included. Perhaps the films “Our Hitler” and “The Conformist”, plus a couple of speeches by Donald Trump will be included. Conceptions to democracy first united to challenge fascist drive will also be explored.
Instructor(s): W. Connolly
Area: Social and Behavioral Sciences.

AS.190.619. Great Powers in the Middle East and North Africa.
How have Great Powers shaped the history and politics of states in the Middle East and North Africa? For over a century, Great Powers have been extensively involved in the region: they established colonies, protectorates, and mandates during colonial period; afterward, they employed military force to constrain and shape regimes. Focusing primarily on Great Britain, France, and the United States, this course examines the causes and consequences of foreign military intervention from colonial conquest through the post-colonial period. Students will critically assess claims that link Great Power actions to current-day conditions in the region through evaluating contemporary scholarship and analyzing the history of selected cases.
Instructor(s): A. Lawrence.

In Twilight of the Idols/The Anti-Christ, Nietzsche famously confessed, “I am afraid we are not rid of God because we still have faith in grammar.” Drawing from scholarship identified with the Law and Literature movement as well as philosophy, jurisprudence, literary theory, and political theory, this course will engage an on-going conversation about the capacity of language to invent and enforce the expectations, regulations, and ritual formulas we know as law. Readings will include texts by classical and contemporary scholars, including Arendt, Plato, Pierce, Nietzsche, and Nancy, as well as stories by Borges, Kafka, and Melville.
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences.

AS.190.621. Poiesis and Politics.
This graduate seminar will investigate how an aesthetic approach to political concepts and practices – in particular the concept of the polity and the practice of judgment – responds to, troubles, and complicates political thought. In the company of Plato, Kant, Heidegger, Arendt, and Auden, we will explore two related sets of questions. First, what are the advantages and disadvantages of figuring the polity as a work of art or as an artistic creation? Second, how might poetry play a role in politics? Students will be required to submit weekly response papers and write a final 20-30 page paper on a topic related to the course, drawing on the work of at least two of the thinker-poets discussed.
Instructor(s): J. Culbert.
AS.190.622. Contemporary International Relations Theory.
This course will focus on recent work (from approximately the past 10 years) in International Relations Theory. Emphasis will be placed on contending schools of thought and often divergent means of determining what counts as good theory. In Fall 2014, we will focus on critical approaches to the global and the political, with a special emphasis on theories of borders, bodies, and the global-ness of cyberspace.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.623. Capitalism, Discipline, Debt the Anthropocene.
How do we rethink Capitalism in an age of Discipline, Debt, and the Anthropocene? This seminar draws upon a series of Left Nietzscheans to pursue that agenda. It starts with Nietzsche's examination of debt, guilt and subjectivity in The Genealogy, turns to work by Foucault, Deleuze, Esposito, and Lazzarato on capitalism, debt and molecular control, adds Klein and Connolly on capitalism and the Anthropocene, and returns to all of the above to explore the potential of critical social movements today.
Graduate students only.
Instructor(s): W. Connolly.

AS.190.624. Postcolonial Ecologies and Planetary Temporalities.
This is an exploratory seminar in which we place recent work on postcolonial ecology and images of time into conjuction with geological and philosophical texts detailing a world of multiple, interfolding human and nonhuman temporalities. The task is to see how each set of readings can enrich and exert pressure upon the others with respect to theory and politics. Texts may include Rob Nixon, The Environmentalism of the Poor; Viveiros de Castro, The Relative Native: Indigenous Conceptual Worlds; Michael Benton, When Life Nearly Died; Donna Haraway, Staying With the Trouble; Deleuze and Guattari, What is Philosophy?; Connolly, Facing the Planetary; Glissant, The Poetics of Relation, Nabokov, A Forest of Time
Instructor(s): P. Brendese; W. Connolly
Writing Intensive.

AS.190.625. Theories-Comp Politics.
This seminar is intended for graduate students planning to take the comprehensive exam in comparative politics, either as a major or as a minor. In addition to exploring central methodological debates and analytic approaches, the seminar reviews the literature on state-society relations, political and economic development, social movements, nationalism, revolutions, formal and informal political institutions, and regime durability vs. transition. Graduate students only.
Instructor(s): S. Mazzuca
Area: Social and Behavioral Sciences.

AS.190.626. Quantitative Methods for the Study of Politics.
This course is intended as Ph.D.-level introduction to applied statistics, with a focus on the identification of causal effects in the tradition of the Neyman/Rubin potential outcomes framework. Prior coursework in applied statistics or quantitative methods will be useful but is not required. Upon completion of the course, students will be in a position to understand and critically assess scholarship that uses instrumental variables, difference-in-differences, regression discontinuity, and other quasi- and natural-experimental research designs. Formal mathematical proof will be kept to a minimum. Students will be asked to adapt existing code and write some of their own code in R.
Instructor(s): M. Kocher.

AS.190.627. Pragmatism in Politics.
After a long eclipse, the scholarly tradition of pragmatism has recently experienced a revival across the social sciences. The goal of this course is to take stock of this movement and to discuss the usefulness of pragmatism for the study of politics. The readings attempt to weave together classical and recent texts in philosophy, cultural theory, sociology, economics, science studies, as well as political science. We will begin with a survey of pragmatism's core concepts and methods. Then we will discuss recent applications of the pragmatist approach in the social sciences. Finally, we will explore the links between pragmatism and three contemporary approaches.
Instructor(s): A. Sheingate; N. Jabko
Area: Social and Behavioral Sciences.

AS.190.629. American Racial Politics.
Race is not a biological fact but rather a social construction. However, it is a social construction with very real consequences. Definitions of citizenship, allocation of state resources, attitudes about government and government policy, the creation of government policy, all shape and are shaped by race and racial classifications. Serving as a critical corrective to American politics treatments that ignore race, this class will examine how race functions politically in the United States. While not required, some knowledge of statistics is helpful.
Instructor(s): L. Spence
Area: Social and Behavioral Sciences.

AS.190.630. Politics of Territory and Boundaries.
This seminar will explore territorial dimensions of politics and political action, including the political construction of territorial space and the territorial construction of political space, and borders as spatial markers of fixity and flows. As supra-, sub-, multi-, trans-, inter-, and pluri-national political arenas proliferate, how are they connected, institutionally and in practice? How are they structured by – and how do they structure – the actions of individuals and groups? How does location affect the nature of political authority? Graduate students only.
Instructor(s): M. Keck; R. Marlin-Bennett.

Examines American social policy in comparative perspective. Special attention to issues of poverty and inequality, and their relation to the political system.
Instructor(s): D. Schlozman.

AS.190.632. The Development of American Political Institutions.
This course explores institutional development in American national politics, from the Founding until the present. It traces parties, Congress, the presidency, bureaucracy, and courts, and also examines how those institutions have interacted with one another across American history. Throughout the course, we will consider how ideas, interests, procedures, and sequence together shape institutions as they collide and abrade over time. Finally, although it hardly covers the entire corpus across the subfield, the course is also designed to prepare students to sit for comprehensive examinations in American politics.
Instructor(s): A. Sheingate; D. Schlozman.

AS.190.633. Black Political Thought.
This course will introduce you to a survey of Black political thought. Our examination will cover the time period between the latter years of the Transatlantic Slave Trade and the present. In the first two thirds of the course we will deal with primary texts (including but not limited to Incidents in the Life of a Slave Girl, The Souls of Black Folk, and The Wretched of the Earth), and in the last third we will deal with modern day attempts to wrestle with the ideas in these texts (including but not limited to Intimate Justice and Critique of Black Reason).
Instructor(s): L. Spence.
AS.190.635. Theories of Constitutional Governance.
This class is focused on the nature of constitutions and the way that they should and do work within a political system, with particular emphasis on the U.S. context. We will examine both normative and empirical arguments about the relationship between politics and constitutional law. More specifically, we will think about how societies and individual actors should make meaning out of constitutional texts, how they do seem to make meaning out of those texts, and the conditions that give rise to constitutional drafting and change. Graduate students only.
Instructor(s): E. Zackin
Area: Social and Behavioral Sciences.

AS.190.639. Critical IR Theories.
Generally relegated to the last week or two on the standard IR theory syllabus, critical IR theories take center stage in this course. We explore the intellectual roots of clusters of critical theories, the foundational works for each cluster, and the current debate. The course will cover Feminist IR Theory, the Practice Turn, and New Materialist IR, among other perspectives.
Instructor(s): R. Marlin-Bennett; S. Schmidt
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.640. Modes of Political Persuasion.
An examination of influential texts in Euro-American political thought, with an eye toward what each has to say about the "how-to" of political persuasion: What techniques can leaders, citizens, and theorists deploy to foster allegiance or conversion to a particular model of politics and public life? How are the powers of words, images, and feelings, especially eros, invoked and inflected? Given that being persuaded of something may or may not induce a will to enact it, what techniques are available to jump the gap between profession of ideals and undertaking of action? Texts include Aristophanes' Women Celebrating the Thesmophoria; Plato's Phaedrus and Books II and III of Republic; Machiavelli's Prince, Whitman's "Calamus" poems, Freud's Civilization and Its Discontents, Foucault's writings on sexuality and ancient Greek ethical practices, and Beauvoir's Ethics of Ambiguity and "Must We Burn Sade."
Instructor(s): J. Bennett
Area: Social and Behavioral Sciences.

AS.190.641. Political Theories of Violence.
The aim of this course is to explore a range of theories and images of violence, from bloody war, torture, and terrorism to the "everyday" violence of policing and disciplinary practices, to the violence of conceptual, linguistic, or figural representation. As we read contemporary and classic treatments of violence, we will ask: What constitutes violence? Does violence have specific modes of agency or is it an intensification of generally available modes of action? What is the relationship between violence and bodies, violence and representation, violence and social and psychic structures? Is there a relationship between violence and technology? Violence and the sacred? From whence the force of violence? Among others we will read Nietzsche, Freud, Foucault, Arendt, Schmitt, Agamben, Sorel, Benjamin, Derrida, Levinas, and Fanon. Grad students only
Instructor(s): J. Culbert
Area: Social and Behavioral Sciences.

This course covers a series of special topics in IR theory with an emphasis on how an appreciation of practices and process provides a fresh perspective on old questions and raises new ones. The course will focus on the pertinent sociological literature and how this has been applied in IR.
Instructor(s): S. Schmidt
Writing Intensive.

AS.190.645. Black Politics.
Grad Students only.
Instructor(s): L. Spence
Area: Social and Behavioral Sciences.

Graduate students only.
Instructor(s): L. Spence; P. Brendese
Area: Social and Behavioral Sciences.

AS.190.647. Race and Memory in Politics, Theory and Literature.
This seminar will investigate various modes of theorizing experiences of race through a critical engagement of a range of literary and philosophical sources pertaining to African-American and Afro-diasporic populations. Specifically, we will explore the extent to which politically attuned approaches to literature and drama can disclose how memory and temporality function as vehicles of racial domination, resistance and identity formation. Graduate students only.
Instructor(s): P. Brendese
Area: Social and Behavioral Sciences.

This graduate seminar will examine a range of indigenous political theorists and critics of settler colonialism. In so doing, we will interrogate the role of liberal Anglo-centrism in contested theories and practices of sovereignty, property rights, freedom, equality, race, sexuality and nature. Likewise, we will investigate the contention that settler colonialism is acquisitive of territory in perpetuity, as opposed to being a moment in history, in order to assess the enduring political and theoretical impact of colonial legacies. Importantly, we shall explore how the relays between indigenous cosmologies and temporalities shape theories and practices of resistance, reason, identity and political imagination. Graduate students only.
Instructor(s): P. Brendese

AS.190.650. The Theories and Politics of Rights.
Grad Students only.
Instructor(s): E. Zackin
Area: Social and Behavioral Sciences.

AS.190.651. Policy Dynamics.
Policy dynamics is the study of changes of the political system in its entirety, from the point of view of the system's outputs--what government actually does, or fails to do. It is dynamic in that it seeks to explain changes in what matters governments feel can or must be addressed, the tools that are available to deal with problems, and the interactions of government and non-government actors that generate change. Particular emphasis will be placed on studying policy dynamics over long periods of time, including such post-enactment issues as implementation, policy feedback on political identities and group formation, and policy durability.
Instructor(s): S. Teles.
AS.190.652. The Politics of Money, Debt and Credit.
This course will survey recent scholarship on the politics of monetary and financial flows in the economy. We will reflect on the significance and causes of changes in underlying political economy and institutions since the mid-20th century. We will pay special attention to the rise of a new political economy often characterized as neoliberal, and we will discuss how scholars within and beyond political science make sense of these changes.
Instructor(s): N. Jabko
Writing Intensive.

AS.190.653. Organizations.
Graduate students only. "Organizations are the fundamental building blocks of economic, social and political life. This course will examine how different disciplines (sociology, economics, political science) approach the problem of explaining how organizations operate, as well as exploring the structure and development of a very wide range of organizations (firms, interest groups, charitable foundations, universities, militaries, bureaucracies, international organizations, and professions)."
Instructor(s): S. Teles
Area: Social and Behavioral Sciences.

AS.190.656. Sovereignty: Historical Persepctives and Contemporary Issues.
This seminar provides an in-depth exploration of the concept of sovereignty by examining its historical development and its use in international relations scholarship. Our discussion will also be informed by works in political theory and the international law literature. The course is open to advanced undergraduate students and graduate students. Co-listed with AS.190.408
Instructor(s): S. Schmidt
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.659. Postcolonial Political Economy.
There is currently an intermittent and under-examined relationship between postcolonial studies and critical political economy. The aim of this module is to help you to account for this relationship on your own terms. We will examine the entanglements of capitalism and colonialism by building unconventional conversations between classical political economists (as well as their 19th century successors) and thinkers and traditions invested in confronting colonialism and its legacies. We will focus primarily on regions affected by (Anglo) settler colonialism – especially the Americas and the Pacific.
Instructor(s): R. Shilliam.

This graduate seminar will conduct close readings of a wide swath of the writings of Jacques Rancière and Arthur Bentley, considering how each eschews the style and mode of argumentation of today's "normative" political theory. Grad students only.
Instructor(s): S. Chambers
Area: Social and Behavioral Sciences.

AS.190.662. Technology and Politics.
Grad students only.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

AS.190.666. Political Economy Of Development.
Graduate students only.
Instructor(s): E. Chung.

AS.190.667. Reconstructing International Relations Theory.
In this class, we will study IR theory in a reconstructive mode. We will return to foundational texts in light of more recent theoretical developments both in IR and social thought more broadly. Our goal will be to critically assess the basic epistemological, ontological, and historical assumptions of IR theory while charting paths for its possible futures.
Instructor(s): B. Allan.

AS.190.668. Nuclear Weapons and World Order.
Instructor(s): D. Deudney
Area: Social and Behavioral Sciences.

AS.190.670. Capitalism, Marx and the Value-Form.
This seminar will explore the capitalist value-form (Wertform) by way of a reading of Marx and a number of value-form theorists. Grad students only.
Instructor(s): S. Chambers
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.672. Money.
What is money? And given its absolute centrality to economics and politics, shouldn't political economy and political theory hold answers to this question? Instead, the history of both neoclassical economics and modern political thought is marked by eschewals or refusals of it or its importance. This graduate seminar will explore the theory and politics of money, through critical readings of orthodox theories, engagements with heterodox political economy, and encounters with contemporary political theory.
Instructor(s): S. Chambers.

AS.190.675. Neoliberalism.
Readings on the history, theory, and politics of neoliberalism, from midcentury to the present.
Instructor(s): A. Burgin; N. Jabko
Writing Intensive.

AS.190.676. Field Survey of International Relations.
This course provides a scaffold for the study of international relations theory, organized historically and by major approaches. The focus is on close reading and discussion of exemplars of important bodies of theory. Intended for doctoral students with IR as their major or minor field. Graduate students only.
Instructor(s): R. Marlin-Bennett
Area: Social and Behavioral Sciences.

AS.190.678. Law and Politics.
As a field, Law and Politics has evolved from the study of constitutional law and judicial politics to the political behavior of judges and their associates to the study of law and society, the operation of law and courts "on the ground" in the international arena as well as in the United States, historical institutionalism, and the carceral state. In this graduate course, we will review some of the classic texts in the field, with a focus on the tension between legal institutions and democratic politics. In particular, we will examine how that tension is manifest in the foundations of the American political system and in critical reflection on contemporary practices of American democracy. Students will turn in response papers every week on the reading. In addition, there will be two 10-20 page papers due during the semester. Graduate Students Only.
Instructor(s): E. Zackin; J. Culbert
Area: Social and Behavioral Sciences.
AS.190.679. The Political Poetics of Walt Whitman and Henry Thoreau. Examination of the works of Thoreau and Whitman with an eye toward how their texts engage in subjectivity-formation and the inducement of publics. What are the powers and limits of their practices of language, including myth-making, affirmations of nonhuman agencies, and nature-writing? Grad students only. Instructor(s): J. Bennett Area: Social and Behavioral Sciences.

AS.190.680. Race and the Politics of Punishment in the US. Contact with criminal justice has become a primary way that many Americans see and experience government, particularly those from race-class subjugated communities. Yet, our field has been slow to appreciate the development of the carceral state or to consider its manifold impacts for citizenship. In this graduate seminar, we will survey key debates around punishment, state violence, and surveillance, with a particular focus on research that takes institutional development, history, and racial orders seriously. Why did the carceral state expand in “fits and starts” and with what consequence for state-building? We explore its (racialized and gendered) relationship to other key systems: foster care, social provision, labor relations and the labor market, and immigration enforcement. A core preoccupation of this course will be to understand the ways in which the criminal justice system “makes race” and how debates about crime and punishment were often debates about black inclusion and equality. How does exposure to criminal justice interventions shape political learning, democratic habits, and racial lifeworlds? In addition to policy, political discourse, and racial politics, we will employ works from a range of fields – history, sociology, law, and criminology – and a range of methods (ethnography, historical analysis, quantitative and qualitative). Required books include: Khalil Muhammad’s Condemnation of Blackness: Race, Crime, and the Making of Modern Urban America, Elizabeth Hinton’s From the War on Poverty to the War on Crime, David Oshinsky’s Worse than Slavery: Parchman Farm and the Ordeal of Jim Crow Justice, Bruce Western’s Punishment and Inequality in America, and Michael Fortner’s Black Silent Majority: The Rockefeller Drug Laws and the Politics of Punishment. Instructor(s): V. Weaver Writing Intensive.

AS.190.681. Strategy in Politics. Political scientists today increasingly recognize the importance of strategy in politics. Yet they often implicitly adopt a rationalist conception of strategy directly inspired by game theory. This course will discuss the usefulness of this conception, and explore the possibility that alternative conceptions of strategy might also (and perhaps better) illuminate what a strategy is in real-world politics. We will read texts from a variety of disciplines – political science/political economy, but also sociology, organization theory, psychology, and history. Graduate Students Only. Instructor(s): N. Jabko Area: Social and Behavioral Sciences.

AS.190.682. A Short History of Eccentric Theory: Lucretius, Spinoza, Kafka, Serres. An examination of the political insights yielded by the distinctive modes of inquiry pursued by these four thinkers/writers. Instructor(s): J. Bennett Area: Social and Behavioral Sciences Writing Intensive.

AS.190.684. Comparative State Formation. The course examines causes, effects and paths of state formation in history and across societies. Weberian and Marxist analyses of the emergence of the modern state in Western Europe are a necessary point of departure. To develop a stronger comparative perspective, however, the course will analyze theoretical approaches and historical studies on state formation in the Ancient World (Mesopotamia, Egypt and China) and in modern Latin America and Africa. The course will also examine whether variations in state formation have a systematic effect on state capacities and political regimes. Graduate Students Only. Instructor(s): S. Mazzuca.

AS.190.686. Philosophy and the Anthropocene. How do philosophers such as Heidegger, Whitehead, Deleuze and Braidotti help us to think about the dynamics of the Anthropocene? What do anthropologists and geoscientists such as Anna Tsing, Bruno Latour, Jason Moore, Michael Benton, Jan Zalasiewics and Wally Broeker--teach those philosophies and us about the contemporary condition? Class presentations on assigned readings, seminar paper, and class discussions. Instructor(s): B. Allan; W. Connolly Area: Social and Behavioral Sciences.

AS.190.687. Micro- and Meso-Level Approaches to Political Violence. How is violence organized, produced, and understood? This course will introduce graduate students to advanced scholarship on political violence and will encourage students to explore the relationship between violence, agency, and structure. Central themes include: mobilization and recruitment; the emergence and behavior of armed organizations (e.g. militant groups, pro-state militias); ethnic violence; civilian targeting; gender-based violence in war; election violence; and vigilantism. The class will challenge students to critically examine violence as an outcome, political process, and as an indicator of underlying relationships and social structures. Instructor(s): S. Parkinson Area: Social and Behavioral Sciences Writing Intensive.

AS.190.690. Planetary Interdependence and World Governments. Intensive exploration of alternative global political architectures for high levels of security, ecological and internet interdependence. Instructor(s): D. Deudney Area: Social and Behavioral Sciences Writing Intensive.

AS.190.692. Planetary Interdependence and World Governments. Intensive exploration of alternative global political architectures for high levels of security, ecological and internet interdependence. Instructor(s): D. Deudney Area: Social and Behavioral Sciences Writing Intensive.
AS.190.695. Politics, Time and the Tragic.
What can tragic visions teach us today? What cosmological and ontological issues are posed to late modern life by tragic traditions? What conceptions of time and political aspiration can inhabit a tragic vision? What contending conceptions of politics grow out of them? This seminar starts with Hesiod’s Theogony, moves through the Sophocles Trilogy, examines attempts to rework the tragic by Friedrich Nietzsche, Bernard Williams, Judith Butler, Bonnie Honig, and James Baldwin, returns to these issues through King Lear, and explores again the issues that emerge through a close engagement with Deleuze’s philosophy and time in Cinema II.
Instructor(s): W. Connolly
Area: Social and Behavioral Sciences
Writing Intensive.

AS.190.697. Norm and Change in International and Comparative Perspective.
This seminar will explore the dynamics behind the origin and demise of foundational normative understandings that inform action in a variety of issue areas. Readings will be drawn from the international relations and comparative politics literatures, with attention focusing on the themes of power, discourse, and practice as well as on how these literatures relate to one another.
Instructor(s): N. Jabko; S. Schmidt

Instructor(s): R. Katz.

AS.191.102. Diasporas in World Politics. 3.0 Credits.
This course explores the role of diasporas - ethnic, religious, and migrant groups - in world politics. What impact do diaspora communities have on the foreign policy of their country of residence or country of origin? What is the involvement of diaspora communities in civil wars, ethnic conflicts, and conflict resolution? How does this kind of transnationalism affect international order?
Instructor(s): Y. Abramson.

AS.191.103. The Politics of Crime and Punishment. 1.0 Credit.
In this class, we will ask questions about the relationship between crime, law, and punishment in modern democratic states. Students will be introduced to dominant modern approaches to understanding punishment and modern state’s power to enforce the law. In light of these theoretical approaches, we will consider the connection between criminalization, punishment, and politics in contemporary United States.
Instructor(s): T. Bardelli.

AS.191.104. Covert Action in International Politics. 3.0 Credits.
This course examines covert action from the Second World War up until the present. Covert action is any activity undertaken by a sponsor seeking to influence a target while remaining anonymous. We will be covering some of the more prominent examples of the use of assassinations, coup d’états bribery, blackmail, propaganda, election rigging, cyber-war, and economic sabotage. By the end of this course you should have a solid and detailed empirical knowledge of a large number of covert operations from around the world. You should be familiar with the definitions and categories for covert action and you should be able to engage with debates on the utility of covert action and the ethical and legal issues involved in using covert activities.
Instructor(s): T. Tutunji
Writing Intensive.

AS.191.106. Freshman Seminar: Mass Incarceration and American Politics. 3.0 Credits.
This freshman seminar examines how the United States became the world’s leading jailer, the impact of mass incarceration on American politics, and the dynamics of reform. Points of emphasis include elections, federalism, and race.
Instructor(s): D. Dagan de Picciotto
Writing Intensive.

AS.191.119. Freshman Seminar: Thinking Critically through the Global South. 3.0 Credits.
This seminar exposes students to tools for thinking critically about life and politics by introducing them to contemporary debates in International Relations and Political Theory that have been proposed by authors from the Global South. Topics include, but are not limited to: development, postcolonial studies, environment, knowledge production, and gender and sexuality.
Instructor(s): T. Zille
Area: Social and Behavioral Sciences.

AS.191.201. Love in Politics, Politics in Love. 3.0 Credits.
In much of political science, political power is assumed to flow from fear. Using classic texts in political theory, this class will consider the existence of a different kind of political power, one flowing from love. The following questions will structure the course: What are the powers and forms of love? Are political bonds and loving bonds related? Class discussions will draw from a variety of sources, including readings by Hobbes, Nygren, Plato, Augustine, Rousseau, Engels, Jordan, and Berlant.
Instructor(s): M. Helsel
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.191.206. Violence, Fast and Slow. 3.0 Credits.
Is poverty a form of violence? What about lead contamination in drinking water? How about rising sea levels? Do abrupt forms of violence supervene on slower forms? Can political struggles around violence be fast and slow? Can peacekeeping efforts? In this class, we read about violence, fast and slow
Instructor(s): J. Mohorcich
Area: Humanities, Social and Behavioral Sciences.
AS.191.222. Politics and Nature. 3.0 Credits.
Introduces students to contemporary discussions in environmental political thought by exploring the concepts “politics” and “nature” in Western political thought using films, novels, and traditional texts. Focusing on issues such as climate warming, decreases in species biodiversity, and human overpopulation, the course explores how various other moments in the Western political tradition conceived the relationship between politics and nature. The goal is to ask how insights from these other moments might help us today.
Instructor(s): Z. Reyna
Area: Humanities.

AS.191.311. Who Are You Laughing At?! Political Theories of Pluralism and Laughter. 3.0 Credits.
Laughter in recent years has emerged as a key experience through which diverse political interests, beliefs, and identities form, interact, and compete with one another. From Donald Trump’s claims that China, Mexico, and North Korea “are laughing at us,” to the 2015 Charlie Hebdo attacks and the 2010 Jon Stewart rally on the National Mall, the question “who are you laughing at?!” lies at the center of contemporary political struggles. This course puts various philosophical, historical, and literary accounts of laughter into conversation with classic and contemporary theories of pluralism to explore how practices of laughter construct, preserve, and transform barriers of political difference today.
Instructor(s): P. Giamario.

AS.191.312. The Politics of Personal Life: Work, Family and Consumption. 3.0 Credits.
This course explores various theoretical attempts to broaden the meaning of “politics” by examining three spheres of action typically equated with “personal” life: work, family, and consumption. The following questions orient our inquiry: what does the phrase “the personal is political” mean, and what sort of political solutions does it typically endorse? What can we learn about politics by studying family dynamics? Why do Americans work so much, and how does “work ethic” discourse promote punitive social policies? What is the relationship between our everyday acts of consumption and larger political phenomena such as climate change and racialization processes? What can theories of intersectionality tell us about such dynamics?
Instructor(s): J. Masin-Peters.

AS.191.313. Why We Punish. 3.0 Credits.
A multidisciplinary exploration of the justifications and problems associated with punishment broadly defined, including prison sentences, personal acts of revenge, and military reprisals. Course texts will include international court cases, philosophical texts, and classic legal thinkers, in addition to fiction and news articles. Particular attention will be paid to when punishment is (or is not) cruel, deserved, or proportionate; when restraint should be shown; and whether it is desirable to abolish it altogether. Case studies will include the practice of solitary confinement, cycles of retaliatory violence in communal conflicts, the death penalty, and International Criminal Court efforts to punish perpetrators of war crimes and crimes against humanity. Writing intensive.
Instructor(s): J. White
Writing Intensive.

AS.191.315. The Domestic Politics of Israel. 3.0 Credits.
Israel’s politics and history are complex, involving multiple military conflicts, domestic struggles and dynamic international relationships. This course will focus on Israel’s domestic politics by tracing the story of the development of its party system and the parties the compose it. A parliamentary democracy with a proportional representation electoral system, Israel’s party system includes multiple parties who represent the various segments of Israeli society. What are the origins of this party system and the parties that compose it? What changes have they experienced and what are the factors that influence those changes? Who are the important actors and what might be motivating them? These questions and others will serve as our guide on a journey to a better understanding of Israel’s domestic politics.
Instructor(s): A. Dolinsky
Writing Intensive.

AS.191.323. Transing Politics. 3.0 Credits.
This course is designed to explore transgender politics through multiple valances and to ask what does it mean for us to to trans politics. Although there have been countless examples of gender variance throughout history, the term transgender has only recently emerged to describe a variety of such identities and experiences. Throughout this course we will examine the politics of transgender lives, how they are represented at large, and how transgender individuals represent themselves. To do so we will employ diverse mediums including film, literature, and comics in addition to more standard Political Science texts.
Instructor(s): P. Moskowitz
Writing Intensive.

AS.191.325. International Politics from the Global South. 3.0 Credits.
This course focuses on the interests and preferences of developing countries in international politics. The formal and informal rules of international politics tend to favor the interests and preferences of powerful countries: richer states, with better technologies and superior military capabilities. Sometimes, however, the interests and preferences of great powers do not align with what the rest of the countries want, especially with states in the Global South. We will analyze what developing countries do to restrain the leeway of powerful countries, particularly when their interests and preferences conflict. The course is divided into four main sections: a review of the structure of international politics and the Global South, hierarchies of authority, tools to restrain great powers, and actors that try to constrain the leeway of these countries. Given the nature of the material that will be discussed, a previous course on either Global Security Politics or Contemporary International Politics is recommended.
Instructor(s): J. Rodriguez Aquino.
AS.191.327. By Any Means Necessary? Political Theories of Violence. 3.0 Credits.
Questions of violence are as old as questions of politics itself. Are politics and violence essentially the same or is politics fundamentally non-violent? Is violence the only way to achieve political change? Has the state been a force for eliminating violence and securing freedom or has it only created more conflict? Who gets to define what counts as violent, and for what purposes? This course engages such questions through a theoretical lens, often focusing on political actors and activists responding on the ground to these pertinent questions. It asks students to reconsider what they normally think violence, non-violence, and politics are. We will particularly investigate this angle through the lens of race and colonialism—reading such figures as Michel Foucault, Franz Fanon, Mao Zedong, Gandhi, Martin Luther King Jr., Malcolm X, Angela Davis, and Ida B. Wells—as well as focusing on histories of state formation and state violence.
Instructor(s): Q. Lester
Writing Intensive.

AS.191.335. Arab-Israeli Conflict. 3.0 Credits.
The course will focus on the origin and development of the Arab-Israeli conflict from its beginnings when Palestine was controlled by the Ottoman Empire, through World War I, The British Mandate over Palestine, and the first Arab-Israeli war (1947-1949). It will then examine the period of the Arab-Israeli wars of 1956, 1967, 1973, and 1982, the Palestinian Intifadas (1987-1993 and 2000-2005); and the development of the Arab-Israeli peace process from its beginnings with the Egyptian-Israeli treaty of 1979, the Oslo I and Oslo II agreements of 1993 and 1995, Israel's peace treaty with Jordan of 1994, the Road Map of 2003; and the periodic peace talks between Israel and Syria. The conflict will be analyzed against the background of great power intervention in the Middle East, the rise of political Islam and the dynamics of Intra-Arab politics, and will consider the impact of the Arab Spring.
Instructor(s): R. Freedman
Area: Social and Behavioral Sciences.

AS.191.344. Belonging to Nature in the Anthropocene. 3.0 Credits.
This course explores debates in contemporary environmental political thought concerning humanity's relationship to nature in the Anthropocene. The Anthropocene refers to the era in which "human" activity becomes a force of "nature"—when the impact of human activity on natural processes manifests itself in the stuff of the Earth. For many of us, these planetary transformations are hardly noticeable in day-to-day life, but they are dramatic: we are living through the Earth's sixth mass extinction. What is our relationship to these transformations? Do we have the power to stop them, or at least to minimize their harmful effects? Course readings and films introduce multiple visions of the human/nature relationship and examine the responses they recommend to these and other questions. The political stakes of these visions are brought to light as we consider: How do visions of the human/nature relationship shape and texture core political concepts like freedom, agency, responsibility, and progress? What do they suggest about the strategies most likely to motivate action amid the uncertainty of the Anthropocene? How do these visions subtly (and not so subtly) relegate some to the realm of "nature" so that others can be classified as "human"?
Instructor(s): S. Erev
Writing Intensive.

AS.191.345. Russian Foreign Policy. 3.0 Credits.
This course will explore the evolution of Russian Foreign Policy from Czarist times to the present. The main theme will be the question of continuity and change, as the course will seek to determine to what degree current Russian Foreign Policy is rooted in the Czarist (1613-1917) and Soviet (1917-1991) periods, and to what degree it has operated since 1991 on a new basis. The main emphasis of the course will be on Russia’s relations with the United States and Europe, China, the Middle East and the countries of the former Soviet Union—especially Ukraine, the Baltic States, Transcaucasia and Central Asia. The course will conclude with an analysis of the Russian reaction to the Arab Spring and its impact both on Russian domestic politics and on Russian foreign policy.
Instructor(s): R. Freedman
Area: Social and Behavioral Sciences.

AS.191.352. War, The Garrison State, and the American Security Tradition. 3.0 Credits.
We will explore the rise of the national security state in the United States, and the constitutional challenges this establishment posed and continues to pose for Constitutional government in the modern day republic. We will also examine the role of the United States in world politics with a special emphasis on how the United States changed as a result of the international system in the 19th and 20th centuries.
Instructor(s): R. Fried
Area: Social and Behavioral Sciences
Writing Intensive.

AS.191.354. Congress and Foreign Policy. 3.0 Credits.
This course is an introduction to the Congressional role in foreign policy. The Constitution grants the President the authority to conduct foreign policy. Yet it also gives Congress a substantial role in the shaping of foreign policy. The distinct roles are not always clear, creating an inherent tension between these two branches of government and efforts on each side to increase their power. This class will address the “rules of the road” in conducting American foreign policy and how they change. The class will go beyond theory to include case studies that show the tension between Congress and the Administration – including the Iran Agreement, Climate Change, sanctions on Russia and American policy towards Cuba. The course will include guest lecturers who work in Congress on the various aspects of foreign policy – including appropriations, intelligence, oversight and investigations. We will address the Congressional role in ratification of treaties and in declaring war. The class will consider the different ways that each branch of government approaches human rights, arms sales and sanctions. The class will also address the domestic political aspects of foreign policy – including the role of advocacy groups and special interests and the political use of Congressional investigations.
Instructor(s): J. Frifield

AS.191.362. Covert Action in International Relation. 3.0 Credits.
This course introduces the use of covert action in relations between states. We will cover various cases with different sponsoring and targeted countries and from different time periods. The class ends with a review of the latest Russian covert action against the United States.
Instructor(s): T. Tutunji
Area: Social and Behavioral Sciences.
AS.191.365. U.S Constitutional Law - Civil Liberties. 3.0 Credits.
The course is designed to introduce students to the study of civil liberties as protected by the Constitution of the United States. The emphasis will be upon those rights incorporated into the Bill of Rights and made applicable to the states through the Fourteenth Amendment. Specifically, the course will examine freedom of speech and freedom of the press—as well as freedom of freedom of thought, belief, and association. In addition, the course will address the right to privacy, the rights of those accused of crimes, and the rights and protections secured under the two clauses of the First Amendment relating to religious liberty—the Establishment Clause and the Free Exercise Clause.

This course meets in Block two- October 24-December 12.
Instructor(s): Staff
Area: Quantitative and Mathematical Sciences.

AS.191.389. The Politics of Race and Ethnicity in the Postcolonial Society. 3.0 Credits.
The postcolonial society offers a unique terrain for the study of comparative racial politics, providing a setting for which racial and ethnic politics often take place between predominately non-white groups. In this course, students will examine contemporary understandings of the concepts of race and ethnicity and how they are deployed politically in the postcolonial society, enabling students to make deeper explications about the relationship between race, ethnicity and national inclusion as global phenomena that are the persistent and widespread legacies of colonialism, nationalism and white supremacy. Specifically, students will become familiar with the processes of colonization and decolonization—as well as postcolonial theories of resistance—that structure group politics today, drawing upon theoretical sources from Africa, Asia and the Caribbean. These theoretical and historical tools will be used to study racial and ethnic politics across a range of postcolonial cases, including Indonesia, Mauritius, Fiji, Trinidad, Colombia and Brazil.
Instructor(s): E. Thornton
Writing Intensive.

AS.191.402. Numbers, Pictures, Politics. 3.0 Credits.
Aitchison students only.
Instructor(s): L. Drutman
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.191.405. Modernity and the Slaughterhouse: Labor, Violence, and Animals in Contemporary Society. 3.0 Credits.
Steven Pinker opens his influential bestseller The Better Angels of Our Nature with the claim that "If the past is a foreign country, it is a shockingly violent one," going on to argue that the contemporary age is one marked by relatively more peace and less violence than ever before. Drawing on a long tradition of optimist thinkers, he credits this civilizational progress to a combination of the intellectual legacy of Enlightenment humanism, greater faith in scientific rationality and technological progress, a strong system of states and social institutions, and the development of democracy and the liberal market economy. For Pinker, this account holds as much for humans as it does for animals, and he goes so far as to claim the emergence of animal rights as "another rights revolution" akin to civil rights and women's rights. But does this account of modern society hold up under scrutiny? Or, more specifically, where does it fail? And how exactly does contemporary society relate to different forms of violence (against humans and animals) that it has not done away with? The historical processes described by Pinker have not only drastically changed human society, but they have also impacted how we interact with animals. The United States today produces and consumes more meat than ever, but most Americans live at an increasing geographic and perceptual distance from animals and the humans who work with them, relying on a system of industrial production and a complex division of labor. This course approaches the politics of this distribution of labor, violence, and human-animal relations from a site rarely considered in political analysis: the modern slaughterhouse. It engages with this institution as a historical and cultural object, using the story of its emergence and operation to ask broader questions about the politics of social change. We will draw on an interdisciplinary range of academic and non-academic works to explore a range of questions about the relationships between institutions and rationality, visibility and invisibility, hygiene and marginalization, and labor and society, and to examine the narratives ostensibly peaceful, liberal democracies tell themselves about violence, history, and progress.
Instructor(s): Staff
Writing Intensive.
AS.191.420. Are We Living In an Age of Collapse?. 3.0 Credits.
This course will investigate the themes of civilizational crisis and collapse with the primary goal of understanding the “perfect storm” of converging crises confronting humanity in the 21st century, including earth system, economic, food and energy crises. While these crises are often studied in isolation from each other, this course will engage with more holistic approaches to study them as interrelated components of a deeper system-wide crisis in the contemporary world order. The first part will explore theories of world-systems, political ecology, and collapse in historical perspective. The second will focus on specific dimensions of the contemporary global crisis and their relations, in particular the earth system crisis, the global economic crisis, food and energy crises. The third part will then explore the implications of these crises for the future of world order by investigating possible scenarios, both for the world-system as a whole and for the United States in particular, and then by evaluating different responses and proposed solutions to our critical civilizational condition.
Instructor(s): Staff
Area: Humanities, Social and Behavioral Sciences

Cross Listed Courses

History of Art
AS.010.382. The Politics of Display in South Asia. 3.0 Credits.
Through examining collecting, patronage, colonial exhibitions, and museums, this course examines how South Asia has been constructed in practices of display. Themes: politics of representation, spectacle, ethnography, and economies of desire related to colonialism and the rise of modernity. Cross-list with Anthropology, Museums and Society and Political Science.
Instructor(s): R. Brown
Area: Humanities
Writing Intensive.

Anthropology
AS.070.278. “Cutting (out) the Middleman” ?. 3.0 Credits.
Middleman are popularly conceived as a person who acts as an interface between two parties, usually for a fee. The figure of the middleman, however is seen in a negative light as an exploitative element. Rather than assume the middleman to be a given entity, this course takes a detour into ethnography, fiction and film to rethink how specific social milieus shape practices, politics and networks of mediation that exceed the physical figure itself. This course will thus, cut the middleman "out" of everyday life and draw mediation into our field of vision.
Instructor(s): Staff
Area: Humanities, Social and Behavioral Sciences.

AS.070.294. Political Anthropology of Africa. 3.0 Credits.
The course will explore classical and contemporary ethnographies of the political in Africa, examining how their authors address issues of power, hierarchy and symbol. We will study various articulations of state, ethnicity and community that are analyzed by observing relations between power and resistance or between law, economy and violence through war, custom and ritual. The seminar will also address the way in which Africa has been constituted as a key source of the sub-field of political anthropology through colonial trajectories, postcolonial detours and the political imagination of the past and the future.
Instructor(s): J. Obarrio
Area: Humanities, Social and Behavioral Sciences.

AS.070.333. Theologies of Political Life. 3.0 Credits.
This course explores the relationship between modern political forms and theological traditions. Looking at developments both in the West and the postcolonial world, we will examine the multiple ways in which theological traditions have continued to inform how political life is conceived and pursued. In particular, we will focus on the relation between liberalism and the Christian tradition; the turn to messianism in critical theory; the transformation of the shari?a into a legal form; and its imbrication in anti-colonial politics
Instructor(s): S. Al-Bahioly
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.417. Political Spirituality. 3.0 Credits.
This course explores forms of political action that have emerged at the interface of modern revolutions with religious traditions. It focuses on the Middle East during the twentieth century and the civil rights struggle in the American south. We will attempt to trace the genealogy of these forms of action in the Islamic and Christian traditions, as well as examine their influence on the political thought of our own time.
Instructor(s): S. Al-Bahioly
Area: Humanities, Social and Behavioral Sciences.

AS.070.621. An Ontological Turn?.
Recent years have seen a number of ambitious and controversial efforts to find, in ontology, a means of surpassing the inherited humanism, culturalism, and essentialism of anthropology. This course will critically examine this proposition of a fundamental "turn" in our thinking, juxtaposing recent work on matters of perspectivism, materialism, relationality, and divinity with earlier attempts in anthropology to grasp being and becoming otherwise.
Instructor(s): A. Pandian.

History
AS.100.237. Freshman Seminar: Impeachments and Beyond: Law, Justice, and Politics in Latin America. 3.0 Credits.
This course is an introduction to legal ideas and institutions through the Latin American political experience. By the end of this course, students will be equipped with the fundamentals of Latin America's long political history (from colony to present) and will be able to identify how legal ideas and institutions change over time. Students will also gain insights on debates and conversations on the relationship between law, justice, and politics that go beyond Latin America's history.
Instructor(s): A. Caso Bello
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.295. American Intellectual History since the Civil War. 3.0 Credits.
Readings in American social thought since 1865, ranging across developments in philosophy, literature, law, economics, and political theory.
Instructor(s): A. Burgin
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.343. Diaspora, Nation, Race, and Politics. 3.0 Credits.
For millions of people across the globe, political fate in the 20th century was defined at the intersection of diaspora, race, and nation — and this may be true in the 21st century as well. This course, a collaborative effort involving a historian and a political scientist, explores the parallels and divergences in the deployment of these terms in nationalist and transnational mobilization, literature and aesthetics, and group identity formation in Eastern Europe, Africa and the New World of the Americas. Set against the backdrop of the fall of significant empires in the late 19th and early 20th centuries, we will explore themes of migration, human rights, the nation-state system, and racism through history, political sociology, and political and social theory. We will pay particular attention to the theoretically exemplary Jewish and Black experiences of diaspora, race, and nation, engaging both with how those experiences were specially shaped by the imposition of national and racial logics and with Black and Jewish politics and thought in relation to those categories. Readings include Max Weber, W. E. B. Du Bois, Booker T. Washington, Theodor Herzl, Hannah Arendt, Benedict Anderson, Rogers Brubaker, Andrew Zimmerman, Michele Mitchell, David Scott.
Instructor(s): K. Moss; M. Hanchard
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.404. John Locke. 3.0 Credits.
Seminar style course in which John Locke's major works will be read intensively, together with some of his contemporaries' works, and select scholarly interpretations.
Instructor(s): J. Marshall
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.100.699. Neoliberalism.
Readings on the history, theory, and politics of neoliberalism, from midcentury to the present.
Instructor(s): A. Burgin
Area: Humanities, Social and Behavioral Sciences

Philosophy

AS.150.404. The Idea of Power. 3.0 Credits.
The Idea of Power surveys seminal texts in the history of political thought on the nature, promise, and dangers of political and social power; it also critically engages contemporary texts on race and gender power relations
Instructor(s): C. Lebrón
Area: Humanities.

AS.150.462. Islamic Political Philosophy. 3.0 Credits.
An introduction to the history of Islamic political philosophy, primarily focused on two flashpoints of encounter between the religion of Islam and other philosophical/political systems—an early one with ancient Greek philosophy (especially in the works of Plato and Aristotle), and a period of interface with modern Western secular political thought, from the late 19th century to the present. Our goal will be to try to understand some of the varying responses in each period as Muslim thinkers seek authentic engagement with external and internal trends, both religious and philosophical. The focus will be on primary texts from philosophically engaged thinkers (who may or may not consider themselves philosophers).
Instructor(s): S. Ogden
Area: Humanities.

International Studies

AS.192.320. Colonialism and Foreign intervention in the Middle East and Africa. 3.0 Credits.
How did colonial rule and post-colonial foreign intervention shape the history and politics of states in the Middle East and Africa? The first part of this course focuses on the colonial period, examining the era of conquest, considering how and whether colonial rule differed from other types of ruling arrangements, and studying how people in colonized territories reacted to conquest and foreign rule. Part Two focuses on post-colonial foreign military interventions. Part Three considers the potential long-term consequences of colonialism and foreign intervention. The course focuses on British, French, and American imperialism.
Instructor(s): A. Lawrence
Area: Social and Behavioral Sciences Writing Intensive.

AS.192.401. Political Violence. 2.0 Credits.
This class will function predominantly as a discussion seminar that uses the case of the Lebanese Civil War to examine the causes, duration, and dynamics of civil war as well as the debates surrounding foreign intervention and peacebuilding. Themes include: ethnic violence; economic explanations for civil war; civilian targeting; intra-rebellion dynamics; sexual and gender-based violence; election violence; occupation; peacekeeping; and the Responsibility to Protect.
Instructor(s): S. Parkinson
Area: Social and Behavioral Sciences.

AS.192.402. Military Organizations in the Middle East and North Africa. 2.0 Credits.
This course will examine the diverse roles state and non-state military organizations play in MENA politics, economics, and society. Each week will use an organizational case study as a window into core themes such as military involvement in state economies, militia politics, or combatant discipline in war.
Instructor(s): S. Parkinson
Area: Social and Behavioral Sciences.

German Romance Languages Literatures

AS.211.174. Media of Propaganda. 3.0 Credits.
Today, promoting a particular political or personal point of view is not viewed as "propaganda," but rather as building a community of equally minded people. But where do we draw the line, and when does the use of a medium in service of a certain message become intrusive and misleading? What role do democracy and cultural values play in this use or abuse of media? In this class the term "propaganda" will be evaluated carefully and applied to such historical media case studies as the informational use of the radio in World War One, Leni Riefenstahl's Nazi propaganda films, the legendary success of advertisement campaigns in the 1950s and 1960s, the AIDS movement and other mobilization strategies from the 1980s to the 1990s, and the new values of friendship and propaganda in our current facebook nation.
Instructor(s): B. Wegenstein
Area: Humanities.
AS.211.341. Power and Resistance in French Political Thought. 3.0 Credits.
Even as a strong, divine-right monarchy emerged in France, following the Renaissance wars of religion, rebellious French thinkers never stopped questioning the foundations of power. They focused critically not only on the claims of authority issuing from the top, but also on the submissiveness of the governed and the reach of propaganda. This course examines how power shapes minds and bodies, from absolutism to the Revolution, to democratic laïcité. Readings include works by La Boétie, Montaigne, Loyseau, Bayle, Rousseau, Saint-Just, Maistre, Tocqueville, Foucault, Lefort, Rancière and the Assemblée Nationale. Readings and discussion in English.
Instructor(s): E. Russo
Area: Humanities.

AS.211.394. Brazilian Culture & Civilization. 3.0 Credits.
The course is taught in English. No knowledge of Portuguese is required. This course is intended as an introduction to the culture and civilization of Brazil. It is designed to provide students with basic information about Brazilian history, art, literature, popular culture, theater, cinema, and music. The course will focus on how indigenous Asian, African, and European cultural influences have interacted to create the new and unique civilization that is Brazil today. The course is taught in English, but ONE extra credit will be given to students who wish to do the course work in Portuguese. Those wishing to do the course work in English for 3 credits should register for section 01. Those wishing to earn 4 credits by doing the course work in Portuguese should register for section 02. The sections will be taught simultaneously. Section 01: 3 credits. Section 02: 4 credits (instructor's permission required)
Instructor(s): F. De Azeredo Cerqueira
Area: Humanities.
Writing Intensive.

AS.211.341. Power and Resistance: Approaches to French Political Thought... 3.0 Credits.
Even as a coherent, rational conception of state power emerged in France in as early as the Renaissance, French thinkers never stopped challenging the ways by which power justified itself in order to foster obedience and consensus. In doing so, they focused critically as much on the claims of sovereignty issuing from the top as on the willingness of the governed to submit to them. The course will examine the dialectic between the legitimation and delegitimation of power, from the Renaissance wars of religion to the Revolution and beyond: the haunting fear of the corruption and death of the political body; the notion of permanent crisis; the right to revoke the social contract; the reach of power in shaping minds and bodies. Readings may include works by La Boétie, Bodin, Bayle, Rousseau, Sade, Saint-Just, Constant, Maistre, Tocqueville, Foucault, Lefort and Rancière. Readings and discussion in English.
Instructor(s): E. Russo; W. Anderson
Area: Humanities.

AS.212.470. Censorship in Language and Practice. From the Ancien Regime to Democracy. 3.0 Credits.
An exploration of the boundaries of acceptability when speaking about religion, government, sexuality and gender. Students will learn about the political, theological and legal basis of blasphemy and punishable behavior, and how they have changed from the time of divine-right monarchy to contemporary laïcité. Selected readings ranging from the clandestine culture of free-thinkers and rakes in the 17th century, to the trials and causes célèbres of the Enlightenment, to modern-day democratic polemics.
Prerequisites: AS.210.302
Instructor(s): E. Russo
Area: Humanities.

AS.213.705. Hegel's Phenomenology of Spirit.
We will study key passages of The Phenomenology of Spirit from a queer-feminist perspective and engage with some of the feminist scholarship on Hegel
Instructor(s): K. Pahl
Area: Humanities.

AS.216.398. Zionism: Literature, Film, Thought. 3.0 Credits.
This course studies the relations between modern Hebrew and Israeli culture and Zionism. Based on a close reading of both literary and non-literary Zionist texts, we will explore the thematic, social and political aspects of the Zionist movement. The course focuses on primary sources and its main goal is to familiarize students with the various ways in which Zionism was formed and understood. In the last part of the semester we will investigate the different meanings of Post-Zionism through contemporary literary and non-literary texts as well as recent Israeli films.
Instructor(s): N. Stahl; Z. Cohen
Area: Humanities.

Sociology
AS.230.275. Revolution, Reform and Social Inequality in China. 3.0 Credits.
This course explores various aspects of social inequality in China during the Mao Zedong and the post-Mao reform eras. We will examine inequality within villages, the rural/urban divide, urban inequality, education and health policies, and gender and ethnic inequality. Each of these issue areas will be tackled analytically, but the aim is also to understand what it was/is like to live in China during and after the Mao era. Formerly offered as AS.230.321.
Instructor(s): J. Andreas
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.318. State and Society in Modern India. 3.0 Credits.
This course examines the complex, at times conflicting, relationship that has emerged between Indian seats of power from above and Indian expressions of society from below. Attention will be placed on the period between 1947 to the present.
Instructor(s): R. Agarwala
Area: Social and Behavioral Sciences
Writing Intensive.
AS.230.357. Baltimore and Beyond. 3.0 Credits.
This course uses the city of Baltimore as a lens through which to explore issues of urban inequality. We will focus on Baltimore’s history of racial segregation and concentrated poverty, and its effect on the social and economic well-being of the city and its residents, with attention to education, employment, health and crime. Students will learn how to employ Census data, GIS approaches, and sociological research to inform questions about population change, inequality and the distribution of resources across the city and metropolitan region. Students will also work on one or more policy relevant studies based in Baltimore, including: a project on abandoned and vacant housing, a desegregation intervention, and a longitudinal study of inner city youth. Finally, students will become familiar with Baltimore City’s programs and policy approaches to addressing the city’s most pressing problems, and will design innovative and effective and innovative solutions as part of their course assignments. Enrollment restricted to Social Policy minors only.
Prerequisites: Students that took AS.360.372 may not take AS.230.357
Instructor(s): S. Deluca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.374. Poverty and Public Policy. 3.0 Credits.
This course examines the causes and consequences of U.S. urban poverty, its implications for health and wellbeing, and explores strategies for addressing it. We cover the major theoretical explanations scholars have advanced to explain the persistence of urban poverty including labor markets, residential segregation, welfare policy, family structure, and the criminal justice system. Within each topic area, students are introduced to a range of interventions aimed at alleviating urban poverty. Students will conduct a formal policy analysis of 20 pages and participate in a mock congressional hearing. Enrollment restricted to Social Policy minors only.
Prerequisites: Students that took AS.360.372 may not take AS.230.374.
Instructor(s): K. Edin
Area: Social and Behavioral Sciences
Writing Intensive.

East Asian Studies

AS.310.200. Economic Growth and Development in East Asia. 3.0 Credits.
The course offers an overview of the complexities of East Asia’s development experience from a variety of perspectives, and it is divided into three parts to allow students to develop expertise in one or more countries and/or policy arenas, while also cultivating a broad grasp of the region and the distinct challenges of “East Asia fast-paced, sustained economic growth.” Part I considers the origins of Asian economic development, analyses the common economic variables behind the region’s success, looks at the East Asian financial crisis and its lessons and assesses whether or not East Asian countries have learned them. Part II will focus on the development experiences of individual countries, with an emphasis on the ASEAN economies, NIEs, Japan and China. Part III considers topics of special interest to Asia, including trends toward greater regional economic cooperation, both in the real and financial/monetary sectors, and issues related to poverty, migration, and inclusiveness.
Instructor(s): G. Dore
Area: Social and Behavioral Sciences.

AS.310.305. Southeast Asia and US Security Strategy. 3.0 Credits.
This survey course is designed to introduce students to Southeast Asia -- the ten member countries of the Association of Southeast Asian Nations (ASEAN) plus Australia and New Zealand. Southeast Asia is an integral part of the broader region of East Asia and a geographic bridge to the Indian subcontinent (South Asia). Southeast Asia has been one of the great success stories in the saga of modernization and development of post-colonial Afro-Asia over the last six decades. Its resulting economic importance is matched by its strategic significance given the presence of imbedded jihadist networks and the emergence of China as a regional great power and aspirant superpower. Nevertheless, the region has been largely overlooked by senior foreign policy and defense officials in Washington. This course will equip students to fill that void by examining the region from the perspective of national security strategy -- broadly understood in its multiple dimensions. Students will be challenged to formulate some element of a viable U.S. national security strategy for the region.
Instructor(s): M. Ott
Area: Social and Behavioral Sciences.

AS.310.306. Domestic Politics of Contemporary China. 3.0 Credits.
This course introduces students to China’s contemporary political history and current political system. It helps students develop a critical understanding of China’s governance institutions and processes, political economy, and state-society relations. The course focuses primarily on China’s domestic politics but also covers China’s changing role in Asia and the world.
Instructor(s): Y. Yang
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.310.307. Governance and Politics in China. 3.0 Credits.
A dramatic rise of popular protests in China today has spurred lively discussions about the causes, dynamics, and impact of these protests. This course will provide students with an opportunity to understand these issues by discussing the social, institutional and cultural background of protests, major forms of protest, social groups involved, government responses, and social implications of various kinds of protests. The first part of the course will explore significant socio-economic changes since 1978 and the effects of these changes on China’s social structure and stratification. This part will also examine changes in governance and political systems in the reform era and review important theories of contentious politics. The second part will examine protests by distinct social groups, including peasants, workers, homeowners, and ethnic minority groups, pro-democratic activists, among others. This part will identify similarities and differences in the demands and actions of different groups, introduce the major forms of popular resistance, and explore how the state deals with them accordingly. The course will conclude with discussion of the outcomes of social protests in China and make a cross-national comparison between protests in China and other authoritarian states. By taking China as an example, this course will enhance students’ knowledge about forms of popular contention and government responses in an authoritarian regime as well as help students develop analytical and critical thinking skills with regard to contentious politics.
Instructor(s): Y. Li
Area: Social and Behavioral Sciences
Writing Intensive.
AS.310.352. Current Issues in US-Asia Relations: A Practitioner’s View. 3.0 Credits.
We will examine how major political events, players, norms and institutions have shaped US-Asia relations in the modern era.
Instructor(s): W. Konishi
Area: Social and Behavioral Sciences
Writing Intensive.

AS.310.401. Authoritarianism, Democracy, and Economic Development: Korea, Indonesia, and Myanmar. 3.0 Credits.
The East Asia's "miracle growth" has not gone hand in hand with a decisive move toward democracy. This seminar explores the reasons why democratization proceeds slowly in East Asia, and seems to be essentially decoupled from the region's fast-paced economic growth and development, and it is divided into three parts. Part I introduces the specifics of East Asia's economic development strategies as well as key concepts of democracy, authoritarianism and military rule and the tensions between these theories and the East Asian experience. Part II will focus on the development experiences of Korea, Indonesia and Myanmar in light of what discussed in Part I of the seminar. The, Part III presents lessons emerging from the comparison of Korea's, Indonesia's and Myanmar's developmental trajectories, and explore the role international organizations (e.g. ADB, EU, IMF, WB etc.) played in those choices.
Instructor(s): G. Dore
Area: Humanities.

AS.310.600. Advanced Topics in East Asian Studies.
This interdisciplinary seminar gives graduate students in East Asian Studies opportunities to present and receive comments on their dissertation chapters, prospectuses, conference papers, and/or potential publications.
Instructor(s): E. Chung
Area: Humanities, Social and Behavioral Sciences.

Interdepartmental

AS.360.247. Introduction to Social Policy: Baltimore and Beyond. 3.0 Credits.
This course will introduce students to basic concepts in economics, political science and sociology relevant to the study of social problems and the programs designed to remedy them. It will address the many inequalities in access to education and health care, unequal treatment in the criminal justice system, disparities in income and wealth, and differential access to political power. The focus will be on designing effective policies at the national and local level to address these pressing issues. This course is open to all students, but will be required for the new Social Policy Minor. The course is also recommended for students who are interested in law school, medical school, programs in public health, and graduate school in related social science fields. This course does not count as one of the required courses for the Economics major or minor, but it is required for the Social Policy Minor. Cross list with Sociology, Economics and Political Science. Freshman, Sophomore and Juniors only.
Instructor(s): B. Morgan; D. Schlozman; S. Deluca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.360.331. Methods for Policy Research. 3.0 Credits.
This course will introduce students to quantitative methods for studying social policy problems. Topics to be covered include descriptive statistics and sampling, correlation and causation, simple and multiple regression, experimental methods, and an introduction to cost-benefit analysis. The emphasis will be on the selection, interpretation and practical application of these methodologies in specific policy settings, rather than with formal proofs. Skills will be reinforced by hands-on exercises using statistical software. Over the course of the semester, students will critically analyze policy reports and empirical research in a range of policy areas and learn how to present this research to a non-specialist audience. Finally, we will discuss the pros and cons of quantitative vs. qualitative methodologies. The course will conclude with group presentations that draw on all these skills. Enrollment restricted to Social Policy minors only.
Instructor(s): B. Morgan
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.360.366. Public Policy Writing Workshop. 3.0 Credits.
This workshop is designed to hone the analytical and communications skills necessary for effective formulation and advocacy of public policy. Topics include how to develop op-ed pieces and other forms of advocacy journalism, memoranda, position papers, and grant proposals. The workshop puts special stress on how to make a clear and persuasive exposition of complex or counter-intuitive policy arguments in the market place of ideas, including the challenges of writing for popular journals and communicating to specific audiences both in and out of government. Students receive intensive individual instruction, including close editing of their work and advice on how to publish or promote it in the public sphere. Enrollment restricted to Social Policy minors only.
Instructor(s): P. Longman
Area: Social and Behavioral Sciences
Writing Intensive.

AS.360.372. Poverty and Public Policy. 3.0 Credits.
This course examines the causes and consequences of U.S. urban poverty, its implications for health and wellbeing, and explores strategies for addressing it. We cover the major theoretical explanations scholars have advanced to explain the persistence of urban poverty including labor markets, residential segregation, welfare policy, family structure, and the criminal justice system. Within each topic area, students are introduced to a range of interventions aimed at alleviating urban poverty. Students will conduct a formal policy analysis of 20 pages and participate in a mock congressional hearing. Permission of instructor required.
Instructor(s): K. Edin
Area: Social and Behavioral Sciences
Writing Intensive.

AS.360.380. Making America Social Policy. 3.0 Credits.
This course analyzes the distinctive US welfare state in historical and comparative perspective. We begin with a survey of the policy context, an historical overview from the poorhouses through the Great Society, and a tour of welfare states across the rich democracies. We then survey developments – and explain the actual workings of policy – across jobs, education, welfare, pensions, and health care. We explore the institutional and political factors behind their divergent trajectories through conservative revival and the age of Obama. Students will write a seminar paper exploring policy development over time in a program or area of their choosing. Enrollment restricted to Social Policy minors only.
Instructor(s): D. Schlozman
Area: Social and Behavioral Sciences
Writing Intensive.
Program in Latin American Studies

AS.361.330. Latin America Otherwise: Voicing Dissent. 3.0 Credits.
This course proposes to look at various Latin American texts through an unconventional lens: that of dissent. Partly inspired by French philosopher Jacques Ranciére (2001), we will take as a premise the idea of dissent not simply as a moment of protest or resistance, nor of the collective plea for rights, but the moment when already given or accepted ways of living and institutional forms are unexpectedly modified by subjects not previously recognized as political. We will draw from diverse materials, ranging from political theory texts, Latin American literature, the literature on development, to the experiences of various social movements in the region. Recommended Course Background: an introductory level course in International Studies, Political Science, Anthropology, or Sociology
Instructor(s): F. Hayes
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

Center for Africana Studies

AS.362.175. Freshman Seminar: Remembering the Black Power Movement. 3.0 Credits.
This course explores trends, developments, contradictions, and dilemmas related to the Black Power Movement. The objective of studying this historical movement is not to engage in nostalgia, but to think through and learn the lessons of this historic social movement. An active participant in the Black Power Movement as a university undergraduate and graduate student, I do not approach this subject merely as a set of interesting intellectual issues and dynamics that can be explored with complete dispassion and objectivity. Rather, I seek to examine critically some of the contradictions and dilemmas that I, too, was caught up in, seeking to come to grips with and clarify my own participation and activities. We study these historical events with the expectation of making a positive contribution to the future.
Instructor(s): F. Hayes
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.362.340. Power and Racism. 3.0 Credits.
This course investigates the impact of white supremacy and anti-black racism, as a global system of power, on the political development of the United States of America.
Instructor(s): F. Hayes
Area: Social and Behavioral Sciences
Writing Intensive.

AS.362.344. Education Politics in Urban America. 3.0 Credits.
This seminar analyzes trends, developments, and future challenges related to the politics of urban public schooling with a concentration on community political dynamics and the struggle for equal educational opportunity and quality education. The course emphasizes the impact of socioeconomic class inequality, racial/ethnic conflict, and gender politics on the changing character of public school reform since the 1954 Supreme Court decision of Brown v. Board of Education. Cross-listed with Africana Studies.
Instructor(s): F. Hayes
Area: Social and Behavioral Sciences
Writing Intensive.

AS.362.412. Black Political Thought. 3.0 Credits.
This course examines how modern black political thought emerged through a series of critical engagements with Enlightenment ideas about universalism, progress, the authority of reason, and the foundations of citizenship. Course readings include texts by W. E. B. Du Bois, Angela Davis, James Boggs, Frantz Fanon, bell hooks, and others.
Instructor(s): L. Spence
Writing Intensive.

Study of Women, Gender, Sexuality

AS.363.304. Love and Its Discontents. 3.0 Credits.
This course aims to familiarize students with a wide-range of feminist and queer conceptions of love as a political force. While reading theoretical texts and selections of poetry, students will be encouraged to interrogate the political implications of different conceptions of love, Eros, and desire.
Instructor(s): K. Glanz
Area: Humanities

AS.363.395. Poetics and Politics of Sex: Intimacy and Its Discontents. 3.0 Credits.
Where might one turn for intimacy if its available forms are dissatisfying? What happens when politics authorizes certain forms of intimacy but not others? How might intimacies and their discontents lack a language to do them justice? This course explores problems with normative intimacies such as monogamy, family, and intimate publics. It covers issues such as optimism, ambivalence, trauma, queerness, war, and longing. It also explores how authors try to describe intimacy through different genres, such as poems, aphorisms, novellas, essays, and scholarly articles.
Instructor(s): C. Shomura
Area: Humanities
Writing Intensive.

Psychological and Brain Sciences

http://pbs.jhu.edu/

The psychological and brain sciences are concerned with understanding the biological and psychological processes underlying animal and human behavior at all stages of development.

The undergraduate program leading to the baccalaureate degree is intended to provide students with a sound background in psychological and brain sciences and, at the same time, to prepare them for advanced study.

The program for doctoral students in psychological and brain sciences has a strong empirical focus and emphasizes research methodology. The broad aim of the graduate program is to train students to become scientists rather than practitioners.

Facilities

The department’s offices and laboratories contain dozens of desktop computers (PCs and Macintoshes) and UNIX workstations used for experimental control and for computational studies, simulation, data analysis, and manuscript preparation.

The F. M. Kirby Research Center for Functional Brain Imaging houses 3.0T and 7.0T Philips research-directed MRI scanners for fMRI studies of human perception, memory, and cognition.

The cognitive psychology and cognitive neuroscience laboratories contain a wide range of computer equipment and special-purpose research equipment, including image-processing and large-format graphics systems, eye-movement monitors, speech recognition and
analysis systems, stereoscopic graphic systems, video equipment, EEG, Transcranial Magnetic Stimulation, and other stimulus-presentation and response-collection devices.

The biopsychology laboratories have all the facilities necessary to conduct modern behavioral neuroscience research, including equipment for behavioral and operant testing, electrophysiology, histology, surgery, neurochemistry, and systems for the analysis and synthesis of audio signals.

**Undergraduate Programs**

**Psychology Degree Objectives**

The courses in Psychological and Brain Sciences have four purposes:

1. to acquaint all interested students with a sampling of topics through a variety of introductory and advanced courses;
2. to prepare majors for graduate work in psychology and related disciplines through a program that meets the admission requirements of the outstanding graduate departments in the United States;
3. to offer a distribution of courses for a minor concentration in psychology as well as several fields of concentration for area majors in the social and behavioral sciences; and
4. to provide an honors track designed for exceptional students who want training beyond that provided by the standard undergraduate curriculum.

**Psychology Major Requirements**

Also see Requirements for a Bachelor’s Degree. (p. 7)

Note: Students who entered JHU prior to Fall 2018 may follow the old requirements as detailed in the catalog based on their year of entry to the institution or may follow these revised requirements.

**General Requirement:**

All classes taken for the major (including those for NQE credit) must be taken for a grade and be completed with a C- or better.

**Specific Requirements:**

- **Intro Level Course Requirement:** Three 100-level psychology courses. These are typically taken during Year 1 and Year 2.
- **Experimental Methods, Design & Analysis:** AS.200.200 Research Methods in Experimental Psychology and AS.200.201 Design & Analysis for Experimental Psychology should be taken as a two-course sequence in Fall and Spring of Year 2.
- **Upper Level Course Requirement:** Five upper level psychology courses (200- or 300-level), three of which must be at the 300-level. These are typically dispersed throughout Years 2-4.
- **Small Group Experience:** 3 credits of either research, internship, independent study or an additional 300-level psychology course with an enrollment cap of 19 students or less. Students who are interested in graduate work in psychology are encouraged to get involved in research/internship activity starting in Year 2 and to continue throughout their time at Hopkins.
- **9 NQE Credits:** Students must complete 9 additional NQE credits using courses not taught within the psychology department (AS.200.XXX) and not counting otherwise toward the psychology major.

Please note that not all courses offered by the Department of Psychological & Brain Sciences (AS.200.XXX) will fulfill the requirements of the Psychology major/minor (ex. AS.200.220 Discover Hopkins Health Studies: Application of Abnormal Psychology to Forensic Cases). Consult with Academic Advising and your psychology major advisor to ensure appropriate progress toward degree completion.

**I. Required Courses Outside the Department**

Nine credits of additional N, Q, or E courses * 9

**II. Required Courses Within the Department**

Research, internship, independent study, or a designated seminar course * 3

Five additional psychology courses distributed as follows: ** 15

Two additional courses at the 200-400 level

Three additional courses at the 300-400 level

* The seminar course must have a maximum enrollment of 19 students. Courses used to fulfill the five upper-level course requirements may not be used to satisfy this requirement. Students may take 1-3 credits in any given semester to fulfill this requirement. All students are required to discuss their plans with their faculty advisor before junior clearance.

** One upper level course in Cognitive Science may be used to satisfy these course credits with the approval of the Director of Undergraduate Studies. Research, independent study, and internships may not be used to satisfy these course requirements.

*** Students who are planning advanced study in psychological and brain sciences are strongly encouraged to engage in psychological research and/or clinical internships.

**III. Sample Program**

A typical path toward degree completion might include the following sequence of courses (this sample is a suggestion, course requirements should be filled based upon your scheduling and plan of studies, with guidance from your Academic Advisor and/or Major Advisor):

The B.A. degree with honors provides recognition for outstanding achievement in formal course work and research. The requirements for a degree with honors include those for the regular B.A. degree, plus the following:

- A minimum grade point average of 3.5 in psychology courses (exclusive of independent study or research) through the fall semester of the student’s junior year.

A formal application to be submitted to the Director of Undergraduate Studies by March 31 of the student’s junior year. The application must include a copy of the student’s transcript, a brief description of the proposed honors research project, and written endorsement of the application by the student’s faculty sponsor. The sponsor must have a full-time faculty appointment at Johns Hopkins and either a primary or a joint appointment in the Department of Psychological and Brain Sciences. Admission into the Honors Program is not guaranteed.

- Completion of two 300- or 600-level psychology courses, in addition to those required for the regular B.A. degree. Neither of these can be research or reading courses. These additional courses are not in addition to the 120 credits required for graduation.

- Completion of an independent research project under the supervision of a member of the department’s faculty, culminating in a written honors thesis. The student will enroll in AS.200.519 Seniors Honors Research and AS.200.520 Seniors Honors Research during both semesters of the senior year. The honors thesis must be submitted no later than March 31 of the senior year and must be read and approved in writing by two members of the faculty.

- Students considering application to the honors program should begin discussing possible thesis research topics with a faculty sponsor no later than the fall semester of their junior year.

### Minor in Psychology

A minor in psychology is available to undergraduates majoring in any department. Students electing to minor in psychology should declare their intention directly to the Director of Undergraduate Studies in the Department of Psychological and Brain Sciences by the end of junior year. All classes taken for the minor must be taken for a grade and be completed with a C- or better. The minor requires successful completion of the following:

Select three of the following:

<table>
<thead>
<tr>
<th>Course Code</th>
<th>Course Title</th>
<th>Credits</th>

- No course from the Carey Business School or School of Education may count toward the minor.

### Undergraduate Academic Awards

The Department of Psychological and Brain Sciences offers two undergraduate academic awards. The G. Stanley Hall Prize is awarded for outstanding achievement by an undergraduate in psychology. The Julian C. Stanley Award is given to the psychology major who most closely approximates Dr. Stanley’s personal and professional standards of excellence.
will qualify for the M.A. degree at the end of their second year, after having completed two area seminars and at least two courses in psychological research design and/or advanced statistics, provided that their performance is of the quality judged satisfactory for the M.A. level. There is no terminal master's program.

**Requirements for the Ph.D. Degree**

The Department of Psychological and Brain Sciences emphasizes training and experience in the research methods essential to the development of new knowledge in the various sub-fields of psychology. Our core program for doctoral students emphasizes scientific methodology and provides rigorous research training. Each doctoral candidate is expected to become familiar with both a relatively narrowly defined area and a broad spectrum of knowledge related to the student’s topic of specialization.

In addition to general university requirements, the Department of Psychological and Brain Sciences has the following regulations:

**Statistics**

Most graduate students will complete take AS.200.657 Advanced Statistical Methods during the first semester and AS.200.658 Advanced Research Design and Analysis during the second semester. Students with exceptional statistical training should take two more advanced courses by arrangement with the Director of Graduate Studies.

**Fundamentals and Core Topics in PBS**

AS.200.613 Fundamentals of Biopsychology, AS.200.617 Fundamentals of Cognitive Psychology, AS.200.654 Psychological & Brain Sciences Core Topics A, and AS.200.655 Psychological & Brain Sciences Core Topics B offer an introduction to the fundamental principles and methods of the psychological & brain sciences. Students will read seminal and contemporary papers in topics that cover the breadth of the field. In addition, students become versed in the careful consideration of data and in formulating written and oral arguments.

**First-Year Research Report**

During the first year, the student, together with the faculty advisor, identifies a research project that will provide extended research experience. Normally, the student designs a study as part of a larger ongoing project. A project proposal must be submitted by April 15 of the first year; this proposal introduces the nature of the scientific problem, reviews the relevant literature, and describes the proposed study in detail, together with the anticipated data, means of analysis, and interpretations. A final written version of this report must be submitted by December 15 of the student's second year, ideally, this "first year project" report includes all the information that would be appropriate for submission to a scientific journal.

**Advanced Examination**

Each student must pass an in depth examination in his/her chosen area. This examination, which includes both a written and oral part, is graded by a committee of at least two faculty members. The written and oral portions of the advanced examination offer the student an opportunity to demonstrate both in-depth, focused knowledge in their specialty area of study, and also a breadth of knowledge outside of their area of expertise. The student must pass the advanced examination by the beginning of the third year of study.

**Advanced Study**

Each student, in collaboration with a faculty advisor, plans a course of study consisting of intermediate and advanced topical and research seminars.

**Topical Seminars**

The Department of Psychological and Brain Sciences offers topical seminars in which one or more faculty members leads seminars on topics of special interest, such as memory, cognitive development, neurophysiological aspects of behavior, vision sciences, and decision making. Through participation in these seminars, student are exposed to findings in subfields of psychology. Topics vary from semester to semester and are determined by the interests of both faculty and graduate students.

**Research Seminars**

Students and faculty engaged or interested in research in particular areas organize these seminars. Participants discuss their own research and other current research in the area.

**Teaching Requirement**

Graduate students serve as teaching assistants (TAs) to members of the department’s faculty. All graduate students are expected to TA a minimum of four semesters. Although there is some flexibility in TA assignments, students typically initiate their TA experience during the first semester of their second year, continuing consecutively through the second semester of the third year. The Department Chair, Director of Graduate Studies, Department Administrator, and Academic Program Coordinator collaborate to assess the instructional support needs of the department and assign these teaching duties.

Advanced students may apply for a Dean’s Teaching Fellowship. A course is proposed by the student and is sponsored by a faculty member. These are highly competitive and prestigious awards. For details please visit http://krieger.jhu.edu/teachingfellowship/.

**Literature Review**

Students complete a written literature review in preparation of the completion of their dissertation. The literature review is modeled on articles appearing in professional journals. Typically the review provides a background for the thesis plan, but for some students it may be prepared on a topic other than the one selected for the thesis. The literature review is evaluated by the same committee that will evaluate the thesis plan.

**Thesis Plan**

At least one calendar year before receiving the Ph.D. degree, each doctoral candidate must develop a plan for the dissertation research and present the plan before a departmental committee. With the committee’s approval, the student then prepares a dissertation.

**Dissertation**

The dissertation represents the student’s culminating piece of scholarly work. It establishes the start of a research career and the basis for postgraduate employment. The Graduate Board of the University administers the final oral examination, a defense of the thesis. The doctoral dissertation must be in a form suitable for and worthy of publication.

**Financial Aid**

Financial support packages are available to all doctoral students, with 9-month stipends that are competitive with those of other universities. Financial support includes tuition remission. Summer research assistantships are available in the department.

For further information on graduate study in psychology, contact the Academic Program Coordinator for the Department of Psychological and Brain Sciences.
For current faculty and contact information go to http://krieger.jhu.edu/publichealth/people/

**Faculty**

**Chair**
Peter Holland  
Krieger-Eisenhower Professor: mechanisms of behavior, learning, memory, motivation, behavioral ecology

**Professors**

Susan Courtney-Faruque  
Vice Provost for Faculty Affairs & Professor: cognitive neuroscience, functional neuroimaging, working memory, attention

Howard Egeth  
perception & cognition, attention & attentional selectivity, memory, eyewitness testimony, psychology & law

Lisa Feigenson  
cognitive development, numerical cognition

Michela Gallagher  
Krieger-Eisenhower Professor: learning & memory, neurobiology of aging

Justin Halberda  
cognitive & developmental psychology, reasoning, language acquisition

Patricia Janak  
Bloomberg Distinguished Professor: behavioral & neurobiological mechanisms of associative learning, addiction

Cynthia Moss  
auditory information processing, spatial attention & perception, learning & memory, memory & sensorimotor integration

**Associate Professor**

Jonathan Flombaum  
visual perception, attention, cognition

**Assistant Professors**

Marina Bedny  
brain development & plasticity, cognitive neuroscience, concepts

Janice Chen  
real-world memory, cognitive neuroscience, temporal structure in cognition

Chaz Firestone  
perception, attention, visual cognition, foundations of cognitive science

Jason Fischer  
visual scene understanding using fMRI, psychophysics, computational modeling

Christopher Honey  
cognitive neuroscience, computational neuroscience, memory in neural circuits

Kishore Kuchibhotla  
neural circuits; attention, learning & decision-making; audition; neural circuit dysfunction; computational modeling

Shreesh Mysore  
nervous circuits for behavior (attention, decision-making, etc), computational neuroscience, comparative approach to the design of neural circuits

**Associate Faculty**

Richard Allen  
Associate Professor; School of Medicine (Neurology): clinical & medical psychology

Kirsten (Kisi) Bohn  
Assistant Research Professor: acoustic communication, vocal production, social behavior, neuroethology, evolution of vocal complexity

Jeff Bowen  
Lecturer: close relationships, social psychology, self-regulation, mental representation, psycholinguistics

Stephen Drigotas  
Teaching Professor & Undergraduate Advisor: social psychology, interpersonal relationships, friendship networks, intergroup behavior, social dilemmas

Heather Roberts Fox  
Senior Lecturer: industrial/organizational psychology

Linda Gorman  
Teaching Professor: neuroscience

Paul J. Hofer  
Adjunct Associate Professor; U.S. Sentencing Commission (Washington, D.C.): law & psychology

Chelsea Howe  
Lecturer: forensics, abnormal psychology, dual diagnosis, therapy, assessment

Ann Jarema  
Junior Lecturer: clinical psychology

Chris Kraft  
Psychologist & Instructor; School of Medicine (Psychiatry & Behavioral Sciences, Center for Marital & Sexual Health); Senior Lecturer: human sexuality & behaviors

Meghan McLaughlin  
Junior Lecturer: clinical psychology

Rick Ostrander  
Teaching Faculty: clinical & adolescent psychology

Alison Papadakis  
Associate Teaching Professor: clinical & adolescent psychology, developmental psychopathology of depression in adolescence

Tyler Rickards  
Teaching Faculty: rehabilitation Neuropsychology, traumatic breaking injury, clinical psychology

Veit Stuphorn  
Associate Professor; School of Medicine (Neuroscience): neurophysiological studies of decision-making

Jason Trageser  
Lecturer: neuroscience
Courses

AS.200.101. Introduction To Psychology. 3.0 Credits.
Do we all see colors the same way? How did so many 'good' people support the Nazi party? Do crossword puzzles really stave off Alzheimer's Disease? This course tries to answer these questions and many others, providing a comprehensive overview of the scientific study of the mind. We'll explore topics such as perception, language, memory, decision-making, creativity, love, sex, art, politics, religion, dreams, drugs, brain damage and mental illness, grappling with deep and long-standing controversies along the way: differences between the sexes, the relationship between mind and brain, causes and consequences of racism, human uniqueness (or not) within the animal kingdom, nature vs. nurture, good and evil, consciousness. Appropriate for anyone wanting to know who and what we are as human beings (or who noticed that psychology is now on the MCAT).
Instructor(s): C. Firestone
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.110. Introduction to Cognitive Psychology. 3.0 Credits.
Introductory survey of current research and theory on topics in cognitive psychology. The course will cover a range of topics in perception, attention, learning, reasoning, and memory, emphasizing relationships among mind, brain, and behavior.
Instructor(s): J. Flombaum
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.132. Introduction to Developmental Psychology. 3.0 Credits.
An introductory survey of human development from the prenatal period through adolescence. The developing child is examined in terms of cognitive, social, emotional, motor, and language development.
Instructor(s): L. Feigenson
Area: Social and Behavioral Sciences.

AS.200.133. Introduction to Social Psychology. 3.0 Credits.
An introductory survey of social psychology. Topics include social perception, social cognition, attitudes, prejudice, attraction, social influence, altruism, aggression, and group behavior.
Instructor(s): S. Drigotas
Area: Social and Behavioral Sciences.

AS.200.141. Foundations of Brain, Behavior and Cognition. 3.0 Credits.
A survey of neuropsychology relating the organization of behavior to the integrative action of the nervous system. Cross-listed with Behavioral Biology and Neuroscience.
Instructor(s): L. Gorman
Area: Natural Sciences, Social and Behavioral Sciences.
AS.200.142. Discover Hopkins: Profiling Mentally Ill Mass Murderers. 1.0 Credit.
Mass Shootings by mentally ill are a scourge upon society. Factors like easy access to guns by dangerous mentally ill, inadequate commitment laws, the inability to predict dangerous behavior, and media frenzy, contribute to an increasing death toll. This course uses case studies to highlight the role played by diagnostic assessment (suicide by cop, psychopathic behavior, PTSD, major mental disorders), inadequate prevention civil and gun policy strategies, and stigmatization of the mentally ill as dangerous. Pre-college students only.
Instructor(s): L. Raifman
Area: Humanities, Social and Behavioral Sciences.

AS.200.159. Freshmen Seminar: Evolutionary Psychology. 1.0 Credit.
In this course we discuss evolutionary psychology, which is the idea that the mind can be understood as an adaptation to our ancestral environment by means of natural selection. Freshmen only. Note: This course does not count towards the Psychology major.
Instructor(s): H. Egeth
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.161. Illusions, delusions, and other confusions: Why what you think you know about human nature is (largely) wrong. 1.0 Credit.
This course is suitable for all, but would be especially useful for a student who does not expect to take many (or any) additional psychology or cognitive science courses. We will explore what modern psychology has uncovered about how our intuitions concerning human nature deceive us. Freshmen Only. Note: This course does not count towards the Psychology major.
Instructor(s): H. Egeth
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.162. Childhood Disorders & Treatments. 3.0 Credits.
This is an online course. The class will meet for ten weeks from May 29 through August 3 and will follow the deadlines for Term I for add/drop/withdraw and grade changes. This course examines the psychological disorders that are usually first diagnosed prior to adulthood. Some of the specific disorders that will be discussed are Attention-Deficit and Disruptive Behavior Disorders, Pervasive Developmental Disorders, Learning Disorders and Intellectual Disability. Students will become familiar with various diagnoses, etiologies, and methods of treatment. Note: This course does not count towards the Psychology major.
Instructor(s): A. Jarema
Area: Social and Behavioral Sciences.

AS.200.163. Gamechangers: Conceptual Breakthroughs in Neuroscience. 3.0 Credits.
Freshman Seminar; This introductory class will highlight some of the key findings in neuroscience over the past century and a half that have revolutionized our understanding of how the brain works. The goal is to convey both the essence of, and the excitement surrounding, neuroscience breakthroughs that caused paradigm-shifts. We will also look at recent neuroscience-related headlines in popular media and unpack them from a scientific perspective. Topics covered will include “Is the brain just one big lump of tissue?”, “Telephones in the brain?”, “The frog with upside-down vision”, “Brains vs. hard-drives”, “Monkey see=monkey do neurons”, Epigenetics, “Changing the brain’s wiring diagram”, “Do ants have GPS?”, The science behind the movie ‘Memento’, “Implanting false memories into brains”, “My brain sees you, but I don’t”, etc. For each big question, we will first examine the thinking that previously existed, and then explore the shift in thinking. Note: This course does not count towards the Psychology major.
Instructor(s): S. Mysore
Area: Natural Sciences
Writing Intensive.

AS.200.200. Research Methods in Experimental Psychology. 4.0 Credits.
The goal of this course is to introduce how psychological scientists develop and test research questions about the mind and behavior. We will explore how empirical investigation differs from other ways of making discoveries and learning about the world, and how psychologists employ various methodologies to tackle their phenomena of interest. We will examine the relationships between research questions and research designs, the benefits and drawbacks of differing measurement and sampling approaches, the ethical implications of various research paradigms, and best practices in communicating research findings clearly and engagingly. You will have the opportunity to engage “hands-on” with the research process through interactive labs and demonstrations. Over the course of the semester, you will develop and receive feedback on a research proposal, which will serve as a foundation for the spring course “Design and Analysis for Experimental Psychology”.
Instructor(s): J. Bowen
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
Writing Intensive.

AS.200.201. Design & Analysis for Experimental Psychology. 4.0 Credits.
The goal of this course is to introduce you to the processes of data collection, analysis, and dissemination in psychology. This course is the follow-up to “Research Methods in Experimental Psychology,” and therefore will draw on the methodological principles and practices covered in the Fall semester. This course will cover a wide array of analytical techniques (i.e., statistics) that you will apply to data collected as part of a semester-long group research project. The course will also include extensive coverage of the R programming language for use in data management, analysis, and visualization. With your group members, you will collect primary research data, carry out appropriate statistical tests, compose individual research manuscripts, and collectively present a poster at an on-campus research symposium. In combination with the Fall course, this class will serve as strong preparation for those considering honors theses, joining research labs at Homewood and/or JHMI, conducting independent research projects, and ultimately pursuing careers/graduate work in experimental psychology.
Prerequisites: AS.200.200
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
Writing Intensive.
AS.200.202. Forensic Psychology. 3.0 Credits.
The field of forensic psychology is focused on answering legal questions about the causes of human behavior. This survey course will explore the work that forensic psychologists do; their research, assessment, and clinical methods; and how their work influences lawyers, judges, and other legal practitioners. Specific topics will include mental capacity assessment, psychopathy, claims of mental distress, child custody evaluations, juvenile delinquency, forensic treatment, and forensic neuropsychological assessments.
Prerequisites: Students can only receive credit for AS.200.202 or AS.200.325, not both.
Instructor(s): C. Howe
Area: Social and Behavioral Sciences.

AS.200.204. Human Sexuality. 3.0 Credits.
Course focuses on sexual development, sexuality across the lifespan, gender identity, sexual attraction and arousal, sexually transmitted disease, and the history of commercial sex workers and pornography. Please note that the use of electronic devices is not permitted during this class, in order to promote the full interactive potential of this engaging seminar-style offering. Open to Juniors & Seniors within the following majors/minors: Behavioral Biology; Biology; Cognitive Science; Medicine, Science & the Humanities; Molecular & Cellular Bio; Neuroscience; Psychological & Brain Sciences; Public Health; Sociology; Study of Women, Gender, & Sexuality.
Corequisites: Students may enroll in both AS.200.204 and AS.290.420, but cannot do so in the same semester.
Instructor(s): C. Kraft
Area: Social and Behavioral Sciences.

AS.200.205. Discover Hopkins: Psychological Profiling. 1.0 Credit.
“Psychological Profiling” focuses on strengths and limitations of psychological methods employed by forensic professionals who assist police in criminal investigations. Clinical cases of serial offenders, spree killers, disgruntled employees, police profiling, and terrorists will be studied. Legal and ethical issues will be explored, especially racial profiling controversies. We anticipate visits to the FBI Behavioral Sciences Unit at Quantico, Virginia; Baltimore County Forensic Crime Lab (with emphasis on crime scene analysis), and the Baltimore Police Profiling Program.
Instructor(s): L. Raifman
Area: Social and Behavioral Sciences.

AS.200.208. Animal Behavior. 3.0 Credits.
Examines basic principles of animal behavior (orientation, migration, communication, reproduction, parent-offspring relations, ontogeny of behavior and social organization). Evolution and adaptive significance of behavior will be emphasized.
Prerequisites: AS.200.141 OR AS.200.152 OR Permission of Instructor.
Instructor(s): K. Bohn
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.209. Personality. 3.0 Credits.
This is a survey course focused on theory and research on human personality. Topics include personality traits, motivation, unconscious processes, self-regulation, cognitive and behavioral aspects of personality, biological and evolutionary influences on personality, and dysfunctional manifestations of personality.
Instructor(s): C. Howe
Area: Social and Behavioral Sciences.

AS.200.211. Sensation & Perception. 3.0 Credits.
This course surveys how stimuli from the environment are transformed into neural signals, and how the brain processes those signals to interpret the objects and events in the world. A primary focus will be on the visual system, with additional coverage of hearing, touch, taste, and smell.
Instructor(s): J. Fischer
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.212. Abnormal Psychology. 3.0 Credits.
A survey of the major syndromes of psychological disorders. Research and theory about the mechanisms, development, and diagnosis of psychopathology are emphasized.
Instructor(s): A. Papadakis
Area: Social and Behavioral Sciences.

AS.200.220. Discover Hopkins Health Studies: Application of Abnormal Psychology to Forensic Cases. 1.0 Credit.
This introductory course will examine the basic diagnostic psychology principles with special application to forensic psychology. The class will focus on investigating forensic psychology queries including: Does my client have a mental illness? Why did he or she act in such a self-defeating way? Does the law require special disposition? Should my client be punished or rehabilitated? We will explore the reasons behind why a movie star would shoplift or a famous athlete would engage in a series of extra marital relationships; why a policeman would commit a series of bank robberies in broad daylight; or why someone would shoot a Congresswoman and kill and wound many others in the process. As part of this course, students will visit with doctors and lawyers (including Judges), view and analyze video and movies about forensic cases, and participate in mock trial exercises. Note: This course does not count towards the Psychology major.
Instructor(s): K. Hill; L. Raifman; L. Williams
Area: Social and Behavioral Sciences.

AS.200.222. Positive Psychology. 3.0 Credits.
The course will review the growing field of positive psychology and will review the research on positive human attributes such as optimism, happiness, hope, resiliency, self-esteem, altruism, empathy, and forgiveness. This course will explore the research on how such positive attributes are developed and how they relate to psychological and physical well-being.
Instructor(s): J. Halberda
Area: Social and Behavioral Sciences.

AS.200.228. The Illusion of Perception. 3.0 Credits.
In this course, students will gain a comprehensive understanding of the ways we perceive (or fail to perceive) things in the real world by studying examples in perception, memory and awareness. Students will read both empirical and theoretical writing on these topics and participate in class discussions exploring their potential ramifications. If the world isn't what we perceive, what are the implications for our society, or for ourselves?
Recommended Course Background: AS.050.101 OR AS.200.101 OR AS.200.110
Instructor(s): M. Schurgin
Area: Social and Behavioral Sciences.
AS.200.301. History Of Psychology. 3.0 Credits.
A survey of leading figures, schools, and systems in the history of psychology. The course will emphasize the development of experimental psychology in late 19th century Germany and its establishment in America at Johns Hopkins, Harvard, Chicago, and Columbia. Special topics will include the development of clinical and applied psychology and psychological testing. Enrollment limited to Juniors and Seniors only. Sophomores with instructor approval. Recommended Course Background: two prior Psychology courses.
Instructor(s): P. Hofer
Area: Humanities, Social and Behavioral Sciences.

AS.200.302. Behavioral Assessment of Animal Models of Cognition and Neuropsychiatric Disorders. 3.0 Credits.
What does a rat exploring its environment tell us about memory? How can a mouse help us better understand schizophrenia? This course will focus on procedures that are routinely used to study behavior in animal models of cognition and neuropsychiatric disorders. The procedures discussed will include assessments that fall into 3 broad functional domains: motor function, affective or emotional states, and cognition. Throughout the course, we will read and discuss original research articles to illustrate and compare some of the measures and results from the various procedures. Postdoc Teaching Fellowship. This is designed to be an upper level course.
Prerequisites: Pre-reqs: AS.200.141 OR (AS.080.305 AND AS.080.306) or permission of the instructor.
Instructor(s): D. Smith
Area: Social and Behavioral Sciences.

AS.200.304. Neuroscience of Decision Making. 3.0 Credits.
This course will survey the neural mechanisms of decision-making. Current experimental research and theory concerning selection, control, and evaluation of actions are examined in humans and animals. Topics will range from simple perceptual judgements to complex social behavior. The course involves a weekly lecture about a specific topic followed by a student presentation of a current research paper. Cross-listed with Neuroscience.
Prerequisites: AS.080.305 OR AS.200.141
Instructor(s): V. Stuphorn
Area: Natural Sciences.

AS.200.305. Advanced Seminar in Forensic Psychology. 3.0 Credits.
Forensic psychologists determine clinical diagnoses and offer expert opinions to assist court decision makers who must employ legal tests to make case determinations. This course will explore how forensic psychologists communicate with the courts via consultation, report writing, and expert testimony. Students will write forensic analyses on a variety of controversial, cutting edge forensic topics (e.g., for competence to stand trial, child abuse, civil commitment, compensation for mental injuries, sex offender commitment, insanity, fitness for duty, child custody).
Prerequisites: AS.200.202 AND AS.200.212
Instructor(s): C. Howe
Area: Natural Sciences, Social and Behavioral Sciences Writing Intensive.

AS.200.306. Psychology in the Workplace. 3.0 Credits.
What variables determine whether a person will be happy and productive in an organization? How do you select the employee that is the right fit for a job? Industrial-organizational (I-O) psychology is the study of behavior in the workplace. Topics include job analysis, selection, performance, motivation, satisfaction, leadership and work-life balance.
Instructor(s): H. Roberts Fox
Area: Social and Behavioral Sciences.

AS.200.307. Medical Psychology. 3.0 Credits.
Medical Psychology is a specialization within clinical psychology that focuses on the application of psychological theories, research, and techniques to physical health problems and health promotion. Students will learn about the consultation process and interventions used in medical psychology practice to improve the physical and psychological health of medical patients, including those with chronic conditions (e.g., chronic pain, heart disease) and those with acute illnesses and injuries. Enrollment limited to Junior & Senior Psychology Majors or with instructor approval.
Prerequisites: AS.200.212
Instructor(s): R. Ostrander
Area: Social and Behavioral Sciences.

AS.200.309. Evolutionary Mechanisms of Human Behavior. 3.0 Credits.
This course examines the evolution of human adaptive behaviors. In particular it examines evolutionary contributions to behaviors concerned with problems of survival such as mating strategies, parenting, and group living. Recommended Course Background: AS.200.101
Instructor(s): H. Petri
Area: Social and Behavioral Sciences.

AS.200.311. Sensory Representations in the Brain: Maps, Modules, & Distributed Coding. 3.0 Credits.
In this course we will explore the ways in which information from vision, hearing, touch, smell, and taste is encoded in the brain. We will compare and contrast different representation schemes and their computational advantages in order to uncover some overarching organizing principles of sensory processing in the brain. Class meetings will consist of lectures plus group discussions of classic papers in cognitive neuroscience, computational modeling, and neurophysiology. Enrollment limited to Juniors & Seniors.
Prerequisites: AS.200.211 OR AS.080.203 OR AS.050.203 OR AS.200.141 OR AS.020.312
Instructor(s): J. Fischer
Area: Social and Behavioral Sciences.

AS.200.313. Models of Mind and Brain. 3.0 Credits.
This is a seminar surveying computational approaches to understanding mental and neural processes, including sensory and conceptual representation, categorization, learning and memory. The course will also develop familiarity with computational tools such as numerical simulation, linear transformation and data visualization. Enrollment limited to Juniors and Seniors. Recommended Course Background: AS.110.106 / Calculus I OR AS.110.108 Calculus I, AS.050.101 / Cognition OR AS.200.211 / Sensation & Perception OR AS.080.105 / Introduction to Neuroscience OR other introductory coursework in cognitive & neural sciences.
Instructor(s): C. Honey
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.
AS.200.316. Thought and Perception. 3.0 Credits.
This year's topic: Philosophical, Foundational, and Methodological Issues Connected to Bayesian Approaches in Cognitive Science. Bayesian probability theory and Bayesian decision theory aim to lay out how ideal reasoners update their beliefs in the light of new evidence and make decisions based on those beliefs. But what about such apparently non-ideal agents such as ourselves? The past few decades have witnessed a rising tide of Bayesian work on perception, higher cognition, neural coding, etc. It's been accompanied by vigorous debate concerning the aims and claims of these approaches. Some see the prospect of a grand unified theory of the mind/brain; others demur. We'll examine these debates and what one can learn from them regarding more generally about approaches to modeling the mind and the nature of rationality. Readings will be drawn both from the empirical and the philosophical literature. (This course meets jointly with AS.200.616 & AS.150.476)
Instructor(s): C. Firestone; S. Gross
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.200.317. Interpersonal Relations. 3.0 Credits.
This course will investigate interpersonal processes ranging from attraction and courtship to relationship functioning and distress. Enrollment limited to Psychology majors, Psychology minors, and Behavioral Biology majors.
Prerequisites: AS.200.133
Instructor(s): S. Drigotas
Area: Social and Behavioral Sciences.

AS.200.320. The Interface of Psychology & Semantics: Procedural Matters. 3.0 Credits.
Often, languages are described as sets of expressions. But in acquiring a language, a child acquires a procedure that generates expressions. If linguistic expressions pair pronunciations with mental representations, then one task shared by linguists and psychology is to specify the forms of these representations. This seminar explores this relationship in detail.
Instructor(s): J. Halberda
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.321. Child and Adolescent Psychology. 3.0 Credits.
This course focuses on mental disorders in children and adolescents. The course begins with an exploration of the general models and theories for why psychopathology occurs in childhood. The second portion of the course provides a systematic review of the symptoms, course, risk factors, theories, and treatments for specific disorders, including mood disorders, anxiety disorders, autism, ADHD, eating disorders, and behavioral disorders.
Prerequisites: AS.200.212
Instructor(s): A. Papadakis
Area: Social and Behavioral Sciences.

AS.200.322. Clinical Neuropsychology. 3.0 Credits.
Clinical Neuropsychology is a clinical psychology specialty focused on assessment and treatment of acquired or developmental disorders of the nervous system, including dementia, neurodegenerative disorders, traumatic brain injury, learning disabilities, and neuromotor disorders. This course will focus on research findings and techniques used by psychologists in the assessment, treatment, and rehabilitation processes. Recommended Course Background: AS.200.141 / Foundations of Brain Behavior Cognition.
Prerequisites: AS.200.212
Instructor(s): T. Rickards
Area: Social and Behavioral Sciences.

AS.200.316. Thought and Perception. 3.0 Credits.
AS.200.323. Psychology and Social Media. 3.0 Credits.
This course explores modern-day social media use (e.g., Facebook, Match.com) through multiple theoretical lenses within psychology. Through weekly student-led discussions and readings, it will accomplish 3 aims: 1) applying psychology of identity, motivation, and communication to social media (e.g., self-presentation, intergroup dynamics), 2) investigating clinical/health implications of social media use (e.g., addiction, loneliness), and 3) exploring social media as data-gathering environments (e.g., user experience research from already committed guest-speakers who work in social media industries).
Instructor(s): J. Bowen
Area: Social and Behavioral Sciences.

AS.200.324. Choosing the 'champion' animal in neuroscience research. 3.0 Credits.
This course will explore some of the most important breakthroughs in the field of neuroscience and reveal the sometimes underestimated animals who have been at the core of these discoveries. Understanding how diverse animal models can serve to answer different questions in neuroscience is key for the advancement of the field. Choosing the "champion animal" is a phrase often used in neuroethology to describe the idea of finding the best model to investigate the scientific question at hand. Invertebrates have been at the core of neuroscience research for the better part of the last century. Since the discovery of the squid giant axon and subsequent description of axon function and action potentials, invertebrates have been pioneering at every corner of neurobiological research. To mention some, the first description of central pattern generators was discovered in the isolated nervous system of the locust, the first described molecular underpinnings of learning and memory were described in the sea slug Aplysia californica and the foundation of the field of connectomics started with the complete wiring diagram of the nervous system of Caenorhabditis elegans. Nowadays, invertebrates remain key models to study the brain; Drosophilia flies and new techniques in genetics have given way to important discoveries of brain development and neuronal and gene function that have helped us understand further how these mechanisms work in other species, including humans. Enrollment limited to Majors/Minors in Biology, Behavioral Biology, Cognitive Science, Medicine science & the Humanities, Molecular & Cellular Biology, Neuroscience, Biophysics, Natural Sciences, Psychology. Recommended Course Background: AS.080.305 Nervous System I & AS.080.306 Nervous System II.
Prerequisites: AS.200.141 OR AS.080.305
Instructor(s): A. Salles
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.326. Law, Psychology and Public Policy. 3.0 Credits.
An introduction to applications of psychological research in policy analysis. Special emphasis is given to the use and misuse of psychology in Supreme Court advocacy and decision making in the areas of children's rights, adult sexuality, and educational and employment opportunity. Recommended Course Background: Statistics & Regression Analysis
Instructor(s): P. Hofer
Area: Social and Behavioral Sciences
Writing Intensive.
AS.200.329. Real World Human Data: Analysis & Visualization. 3.0 Credits.
Experiments in human cognition typically involve careful manipulation and control of variables in order to answer specific questions about the mind or brain. However, digital devices now provide an ocean of incidental human data: information collected continuously about our behavior and physiological states as we go about our lives. These incidental datasets are often large and noisy, and pose different analysis and visualization challenges from more traditional manipulated experiments. In this course students will learn computational tools and qualitative approaches for exploring, visualizing and interpreting large human data. The course emphasizes computer-based analysis of open-source human behavioral and neuroimaging datasets. Analyses will be conducted in MATLAB. Instructor will grant approval as long as you have previous programming experience (roughly equivalent to material covered in an introductory-level programming course). Self-taught or real-world experience can be applicable in lieu of previous formal classroom instruction.
Instructor(s): J. Chen
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.200.333. Advanced Social Psychology. 3.0 Credits.
The class is designed as a seminar including discussion of primary readings of social psychology articles ranging in topics from interpersonal relationship to behavior in large groups. Rising junior & senior Psychology majors only.
Prerequisites: AS.200.133
Instructor(s): S. Drigotas
Area: Social and Behavioral Sciences.

AS.200.336. Foundations of Mind. 4.0 Credits.
An interdisciplinary investigation into the innateness of concepts: perception, number, language, and morality, physics discussed. Evidence from animals, infants, patients, brains. Students collect data in sections investigating claims from the readings. Cross-listed with Cognitive Science and Philosophy.
Instructor(s): J. Halberda; L. Feigenson
Area: Social and Behavioral Sciences.

AS.200.339. Cognitive Development. 3.0 Credits.
How do children acquire knowledge about the world? In this course, we will explore how children understand the world, looking at concepts of objects, number, space, and other people. Students will read both empirical and theoretical writing on these topics, participate in class discussions, and complete short critical writing assignments and final literature review paper.
Instructor(s): M. Kibbe
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.344. Behavioral Endocrinology. 3.0 Credits.
An examination of the effects of hormones on behavior in non-human and human animals. Topics will include the effects of hormones on sexual differentiation, reproductive behavior, parental behavior, homeostasis and biological rhythms, regulation of body weight, learning and memory. Cross-listed with Behavioral Biology and Neuroscience.
Prerequisites: Prereqs: ( AS.200.141 OR AS.080.306 ) OR (AS.020.151 AND AS.020.152) OR (AS.020.305 AND AS.020.306) or instructor's permission
Instructor(s): K. Bohn
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.361. Tests & Measurements. 3.0 Credits.
Psychological tests and measures are used in several settings including research, clinical, business, forensic, school and other applied settings. This course will consider the methodological and practical issues involved in test construction, the evaluation of instruments, and the uses of psychological tests across settings and for different purposes. Examples of assessments that may be discussed are aptitude and achievement tests; personality and behavioral inventories; neuropsychological tests, observations and interviews; and tests for employment and forensic use. Enrollment limited to Junior & Senior Cognitive Science & Psychology Majors, or instructor approval.
Instructor(s): H. Roberts Fox
Area: Social and Behavioral Sciences.

AS.200.368. Sleep, Dreams, and Altered States of Consciousness. 3.0 Credits.
Sleep, dreaming, resting and arousal to waking represent very different states of consciousness which differ dramatically both psychologically and physiologically. This course focuses on cognitive, psychological, physiological, biological and genetic aspects characterizing each of these states with some reference to other altered states. The course includes a focus on the major pathologies affecting sleep-wake states. Clinical cases will be considered. These inform about both psychological and biological aspects of these states. The relative biological functions of each state will be evaluated with particular attention to the mystery of why we have and apparently need REM and NREM sleep. Actual physiological recordings of sleep states will be reviewed and the student will learn how these are obtained and how to evaluate these. The circadian rhythms, ontogeny and evolution of these sleep-wake states will also be covered. This will include a review of information learned from non-human animal sleep. The change from sleep to full awakening reflects change toward increasing brain organization supporting consciousness. Understanding of the neurobiology of these states will be used to explore some of the more modern and scientific concepts of human self-awareness or consciousness. Recommended Course Background: AS.200.101 OR AS.080.203 OR AS.050.203
Instructor(s): R. Allen
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.369. Neuroscience of Motivation & Reward. 3.0 Credits.
This course will explore the neurobiological bases of motivated behavior, including eating, drinking, and reproduction, tracing the history of our understanding from early neuroscientific studies to the modern day, with a focus on mammalian model systems. We will discuss innate motivated behaviors, and well as how learning can guide the expression of these behaviors. Neural mediation of processes such as reward and aversion will be considered in depth, as will applications of these findings to the understanding of addiction and other behavioral disorders. The course will be a mixed lecture/seminar format; we will read original research articles and scholarly reviews.
Prerequisites: AS.080.306 (students may enroll concurrently); AS.080.305; Students may not have taken AS.200.366.
Instructor(s): P. Janak
Area: Natural Sciences.
AS.200.372. The Aging Brain. 3.0 Credits.
We will examine what current research can tell us about changes in mental abilities as we grow older, what biological changes in the brain during aging cause cognitive decline, and finally, how scientists are meeting the challenge of maintaining the functions of the mind into advanced old age.
Instructor(s): M. Gallagher
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive.

AS.200.376. Psychopharmacology. 3.0 Credits.
Designed to provide information about how drugs affect the brain and behavior. The course focuses on biological concepts underlying structures and functions of the brain that relate to mental disorders. An introduction to neurobiology and brain function is presented as it applies to the interaction of various classes of drugs with the individual neurotransmitter systems in the brain. A brief historic review is followed by a discussion of clinical relevance. Cross-listed with Behavioral Biology and Neuroscience. Enrollment limited to juniors and seniors.
Prerequisites: AS.200.141 OR AS.020.306 OR AS.080.305 or Instructor Permission
Instructor(s): H. Adwanikar; S. Sterbing-d'angelo
Area: Natural Sciences, Social and Behavioral Sciences.

AS.200.377. Neuroethology. 3.0 Credits.
A comparative and evolutionary approach to understanding the neural underpinnings of biologically relevant behaviors in vertebrate and invertebrate animals. Enrollment limited to Sophomores, Juniors, Seniors or by instructor approval. Recommended Course Background: AS.200.141
Instructor(s): C. Moss
Area: Natural Sciences.

AS.200.379. Research Seminar in Clinical Psychology. 3.0 Credits.
A small group exploration of current issues in clinical psychology, aimed at developing students’ empirical research skills. Following critical analysis of the empirical literature, students develop research proposals for novel research and/or conduct research and author research reports. Topics vary by semester. In the current offering, the topic will be stress, coping, emotion-regulation, peer relationships, and psychopathology among adolescents and emerging adults. Recommended Course Background: AS.200.212
Prerequisites: AS.200.212
Instructor(s): A. Papadakis
Area: Social and Behavioral Sciences
Writing Intensive.

AS.200.380. Neurobiology of Human Cognition. 3.0 Credits.
The complexity of human behavior surpasses even our closest primate relatives. Only humans communicate through language, build complex technology, devise legal system and wage war. What neurobiological capacities set humans apart from other animals? This course will explore the neurobiology of cognition, focusing on cognitive domains that are particularly developed in the human species: language, social cognition, number, executive function and concepts. The course format will consist of lectures and in class workshops.
Prerequisites: AS.200.141 OR AS.200.312 OR AS.080.105 OR AS.080.203 OR AS.050.203 OR AS.050.312
Instructor(s): M. Bedny
Area: Natural Sciences, Social and Behavioral Sciences.
AS.200.509. Internship-Psychology. 1.0 Credit.
S/U grading only.
Instructor(s): Staff.

AS.200.510. Psychology Internship. 0.0 - 3.0 Credits.
Grading Satisfactory/ Unsatisfactory only.
Instructor(s): Staff.

AS.200.511. Psychological Research - Juniors. 3.0 Credits.
S/U grading only.
Instructor(s): Staff.

AS.200.512. Psychology Research-Juniors. 0.0 - 4.0 Credits.
Grading Satisfactory/ Unsatisfactory only.
Instructor(s): Staff.

AS.200.513. Psychological Research - Seniors. 3.0 Credits.
The student chooses some research problem with the advice and approval of a faculty member. S/U grading only.
Instructor(s): Staff.

AS.200.514. Psychology Research-Seniors. 0.0 - 4.0 Credits.
Instructor(s): Staff.

AS.200.519. Seniors Honors Research. 3.0 Credits.
Seniors working on the honors thesis enroll with the approval of the undergraduate coordinator.
Instructor(s): Staff.

AS.200.520. Seniors Honors Research. 0.0 - 3.0 Credits.
Instructor(s): Staff.

AS.200.540. Independent Study-Seniors. 3.0 Credits.
Instructor(s): Staff.

AS.200.541. Psychological Research - Juniors. 3.0 Credits.
Instructor(s): Staff.

AS.200.542. Independent Study - Sophomores. 3.0 Credits.
Instructor(s): Staff.

AS.200.595. Internship. 1.0 Credit.
Instructor(s): Staff.

AS.200.597. Psychology Research. 3.0 Credits.
Instructor(s): Staff.

AS.200.599. Independent Study. 1.0 - 3.0 Credits.
Instructor(s): Staff.

This is a required course for all first year PhD students in the Department of Psychological and Brain Sciences. The course covers foundational concepts and methods in neurobiology and cognitive neuroscience.
Instructor(s): P. Holland; P. Janak
Area: Natural Sciences, Social and Behavioral Sciences.

Graduate students only or permission required.
Instructor(s): B. Anderson; K. Blacker.

Graduate student only.
Instructor(s): K. Blacker.

AS.200.616. Thought and Perception.
This year’s topic: Philosophical, Foundational, and Methodological Issues Connected to Bayesian Approaches in Cognitive Science. Bayesian probability theory and Bayesian decision theory aim to lay out how ideal reasoners update their beliefs in the light of new evidence and make decisions based on those beliefs. But what about such apparently non-ideal agents such as ourselves? The past few decades have witnessed a rising tide of Bayesian work on perception, higher cognition, neural coding, etc. It’s been accompanied by vigorous debate concerning the aims and claims of these approaches. Some see the prospect of a grand unified theory of the mind/brain; others demur. We’ll examine these debates and what one can learn from them regarding more generally about approaches to modeling the mind and the nature of rationality. Readings will be drawn both from the empirical and the philosophical literature. (This course meets jointly with AS.200.316 & AS.150.476)
Instructor(s): C. Firestone; S. Gross
Writing Intensive.

This is a required course for all first year PhD students in the Department of Psychological and Brain Sciences. The course covers foundational concepts and methods in cognition.
Instructor(s): J. Flombaum.

Often, languages are described as sets of expressions. But in acquiring a language, a child acquires a procedure that generates expressions. If Linguistic expressions pair pronunciations with mental representations, then one task shared by linguists and psychology is to specify the forms of these representations. This seminar explores this relationship in detail.
Instructor(s): J. Halberda.

This course will provide an overview of clinical, neuropsychological, imaging and neuropathological approaches to the study of cognitive systems altered in aging, AD and other neurodegenerative disorders. It will consider research using animal models as well as human subjects and clinical populations. The course is intended for graduate students and is open to advanced undergraduates only with permission of the professor. Predoctoral and Postdoctoral students from A&S, SPH and SOM students participating in the NIA Training Program on Age-Related, Cognitive and Neuropsychiatric Disorders are required to take this course; meets concurrently with PH.330.802(01).
Instructor(s): M. Albert; M. Gallagher.

AS.200.649. Aging, Cognition, and Neurodegenerative Disorders II.
Second part of a two-semester course. Course will provide an overview of clinical, neuropsychological, imaging and neuropathological approaches to the study of cognitive systems altered in aging, AD and other neurodegenerative disorders. It will consider research using animal models as well as human subjects and clinical populations. The course is intended for graduate students and is open to advanced undergraduates only with permission of the professor. Predoctoral and Postdoctoral students from A&S, SPH and SOM students participating in the NIA Training Program on Age-Related, Cognitive and Neuropsychiatric Disorders are required to take this course; meets concurrently with PH.330.802(01)
Instructor(s): M. Albert; M. Gallagher.
AS.200.654. Psychological & Brain Sciences Core Topics A.
This course is designed to introduce students to core topics in psychological and brain sciences. Students will read seminal and contemporary papers in topics that cover the breadth of the field. Graduate students in Psychological and Brain Sciences.
Instructor(s): L. Feigenson.

AS.200.655. Psychological & Brain Sciences Core Topics B.
This course is designed to introduce students to core topics in psychological and brain sciences. Students will read seminal and contemporary papers in topics that cover the breadth of the field. Graduate Students in Psychological & Brain Sciences.
Instructor(s): L. Feigenson.

Topics in applied probability and statistical inference; analysis of variance; experimental design. Intended for graduate students. Recommended Course Background: one statistics course.
Prerequisites: Statistics Sequence restriction: students who have completed any of these courses may not register: EN.550.211 OR EN.550.230 OR AS.280.345 OR EN.550.310 OR EN.550.311 OR EN.560.435 OR EN.550.420 OR EN.550.430 OR EN.560.348
Instructor(s): J. Bowen
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

Second half of graduate statistics sequence, covering complex research design and analysis. Recommended Course Background: AS.200.657. Enrollment limited to seniors by instructor approval and graduate students.
Area: Quantitative and Mathematical Sciences.

Focus on frequently-used quantitative methods used in the study of brain sciences, including gaining conceptual understanding of techniques, analysis and summarization of data, extracting the process underlying a data set, explaining data as a function of variables, data visualization, etc. Enrollment is limited to undergraduate seniors and graduate students with instructor approval. Recommended Course Background: Probability & Statistics, Linear Algebra, MATLAB programming.
Area: Quantitative and Mathematical Sciences.

AS.200.661. Topics in Psychological & Brain Sciences.
An introduction to postdoctoral activities (e.g., grant applications, journal article submission, meeting presentations, the politics of psychology and American science) for Ph.D. candidates in psychology.
Instructor(s): L. Feigenson.

AS.200.662. Psychological and Brain Sciences: Career Development.
Instructor(s): L. Feigenson.

This seminar will cover advanced topics in vision from the perspectives of several disciplines. Topics include human visual psychophysics, perception and cognition, and computational vision. Graduate students only.
Instructor(s): H. Egeth; J. Flombaum; J. Halberda.

Instructor(s): L. Feigenson.

A cross-disciplinary investigation of space representation and navigation in a broad range of animal species. Topics will include sonar orientation, landmark use, the role of dead reckoning, spatial memory, long-distance migration, and map-making. Contact instructor for enrollment approval.
Instructor(s): C. Moss.

This seminar will cover advanced topics in neurocognitive aging. Topics will include animal models of memory loss in normal aging and in Alzheimer’s disease (AD), including both behavioral and neurobiological findings. Special attention will be given to the relation between such findings and the effects of aging and AD on memory and the brain in man. Similar comparative analysis in other cognitive domains (e.g. attentional processes) will also be considered.
Instructor(s): M. Gallagher.

Instructor(s): J. Flombaum.

Guided independent readings. The class is designed as a seminar including discussion of primary research articles of cognitive aging. Specific topics include human imaging and animal models of memory, aging, and neurodegenerative disease.
Instructor(s): R. Haberman.

AS.200.810. Research In Psychology.
Students plan and execute original research under guidance of advisers. Results are usually prepared in a form suitable for publication. Graduate students only.
Instructor(s): L. Feigenson.

Instructor(s): H. Egeth.

Instructor(s): L. Feigenson.

Instructor(s): J. Halberda.

Instructor(s): P. Holland.

Instructor(s): L. Feigenson.

Instructor(s): V. Stuphorn.

Instructor(s): V. Stuphorn.

Guided independent readings and research in special fields. Graduate Students only.
Instructor(s): L. Feigenson.

Graduate students only.
Instructor(s): F. Madison; G. Ball.

Research seminar covering topics on human memory and perception in real-world settings.
Instructor(s): J. Chen.

AS.200.825. Research Seminar: Psychobiology. Graduate students only. Instructor(s): C. Moss; M. Gallagher; P. Holland; P. Janak.

AS.200.848. Current Advances in Psychological and Brain Sciences. Introduces advanced research topics to graduate students (as well as faculty) through a series of speakers and discussions. Instructor(s): J. Flombaum.

AS.200.849. Teaching Practicum. All candidates are required to obtain special experience in various aspects of undergraduate teaching. Graduate students only. Instructor(s): L. Feigenson.

AS.200.850. Advanced Teaching Practicum. Instructor(s): L. Feigenson.

AS.200.899. Psychology Internship/Practicum. The Ph.D. program in Psychological & Brain Sciences trains students in psychological science through general and advanced seminars in the various subdisciplines of psychology and by active engagement in research. Registration in this course will be accompanied by the student's participation in an internship/practicum experience. Instructor(s): L. Feigenson.

Cross Listed Courses

Cognitive Science

AS.050.102. Language and Mind. 3.0 Credits. Introductory course dealing with theory, methods, and current research topics in the study of language as a component of the mind. What it is to “know” a language: components of linguistic knowledge (phonetics, phonology, morphology, syntax, semantics) and the course of language acquisition. How linguistic knowledge is put to use: language and the brain and linguistic processing in various domains. Cross-listed with Neuroscience and Psychology. Instructor(s): C. Wilson Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.312. Cognitive Neuroimaging Methods in High-Level Vision. 3.0 Credits. This course is an advanced seminar and research practicum course. It will provide the opportunity to learn about fMRI methods used in the field of vision science and for students to have hands-on experience to develop, design and analyze a research study on topics in the cognitive neuroscience field of high-level vision. In the first part of the course students will read recent fMRI journal papers and learn about common fMRI designs and analysis methods; in the second part of the course students will conduct a research study as a group to address a research question developed from readings. Students are expected to write a paper in a journal article format at the end of the course and to present their results in front of the class. Research topics will vary but with special focus on topics in object, scene and space recognition. Cross-listed with Neuroscience and Psychology. Instructor’s permission required.

Prerequisites: AS.050.240(C) OR AS.050.319(C) OR AS.050.105(C) OR AS.200.312(C) OR AS.200.110(C) OR AS.050.203(C) OR AS.080.203(C) Instructor(s): S. Park Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.339. Cognitive Development. 3.0 Credits. This is a survey course in developmental psychology designed for individuals with some basic background in psychology or cognitive science, but little or none in development. The course is strongly theoretically oriented, with emphasis on issues of nature and development psychology as well as relevant empirical evidence. The principle focus will be early development, i.e., from conception through middle childhood. The course is organized topically, covering biological and prenatal development, perceptual and cognitive development, the nature and development of intelligence, and language learning. Instructor(s): J. Yarmolinskaya Area: Natural Sciences, Social and Behavioral Sciences.

AS.050.358. Language & Thought. 3.0 Credits. Have you ever wondered about the relationships between language and thought? Philosophers, linguists, psychologists, evolutionary theorists and cognitive scientists have too and this course will survey the current thinking on this matter. Classical papers such as those by Whorf and Sapir; more recent philosophical papers by people such as Fodor and Dennett, and recent empirical work by linguists and psychologists on the relationship between language and thinking in development and in adults will be covered. Discussions will focus on the theoretically possible relationships between language and thought and the empirical data that speak to these. Juniors and seniors only. Freshmen and sophomores by permission of instructor only. Instructor(s): B. Landau Area: Humanities, Natural Sciences, Social and Behavioral Sciences.
AS.050.375. Probabilistic Models of the Visual Cortex. 3.0 Credits.
The course gives an introduction to computational models of the
mammalian visual cortex. It covers topics in low-, mid-, and high-
level vision. It briefly discusses the relevant evidence from anatomy,
electrophysiology, imaging (e.g., fMRI), and psychophysics. It
concentrates on mathematical modeling of these phenomena taking into
account recent progress in probabilistic models of computer vision and
developments in machine learning, such as deep networks.
Prerequisites: AS.110.106 OR AS.110.108
Instructor(s): A. Yuille
Area: Quantitative and Mathematical Sciences.

Instructor’s permission required. (Also offered as AS.050.312.)
Instructor(s): S. Park
Area: Natural Sciences, Social and Behavioral Sciences.

The course gives an introduction to computational models of the
mammalian visual cortex. It covers topics in low-, mid-, and high-
level vision. It briefly discusses the relevant evidence from anatomy,
electrophysiology, imaging (e.g., fMRI), and psychophysics. It
concentrates on mathematical modelling of these phenomena taking into
account recent progress in probabilistic models of computer vision and
developments in machine learning, such as deep networks. Also offered as AS.050.375. Co-listed with Computer Science as EN.601.485.
Instructor(s): A. Yuille.

Neuroscience
AS.080.304. Neuroscience Learning and Memory. 3.0 Credits.
This course is an advanced survey of the scientific study of learning
and memory. Different perspectives will be used to review the science of
learning and memory including the cellular-molecular basis of synaptic
plasticity, the functional circuitry involved in learning and memory and
memory systems in the brain. The course is designed to provide a deep
understanding of the issues and current debates in learning and memory
research and focuses specifically on animal models of memory and
memory impairment. This is an interactive lecture course with a strong
emphasis on student participation.
Prerequisites: AS.200.141[C] OR (AS.080.305[C] AND AS.080.306[C] )
OR (AS.020.312[C] AND AS.020.306[C] ) or instructor permission.
Instructor(s): A. Bakker
Area: Natural Sciences.

AS.080.330. Brain Injury & Recovery. 3.0 Credits.
This course investigates numerous types of brain injuries and explores
the responses of the nervous system to these injuries. The course’s
primary focus is the cellular and molecular mechanisms of brain injury
and the recovery of function. Discussions of traumatic brain injury, stroke,
spinal cord, and tumors, using historical and recent journal articles, will
facilitate students’ understanding of the current state of the brain injury
field. Cross-listed with Psychological and Brain Sciences and Behavioral
Biology.
Prerequisites: ( AS.080.305 AND AS.080.306) OR (AS.020.312 OR
AS.020.306) OR (200.141 and 200.306) OR Permission of Instructor
Instructor(s): L. Gorman
Area: Natural Sciences
Writing Intensive.

AS.080.348. Science of Learning. 3.0 Credits.
Can what we know about the brain guide how we learn or teach in our
schools? This seminar course is designed to address this question. In
this course we will focus on the science of what we know about learning
and teaching (and not the politics) to see if we can actually use the
research to “optimize learning in society”. As we read the literature, we
will look at some of the “neuromyths” that have been propagated thus
far and discuss how to avoid creating new neuromyths by effectively
communicating the research.
Prerequisites: Pre-reqs: AS.080.306 OR AS.200.141
Instructor(s): L. Gorman
Area: Natural Sciences, Social and Behavioral Sciences
Writing Intensive.

Behavioral Biology
AS.290.420. Human Sexual Orientation. 3.0 Credits.
This course will examine the historical and current theories of sexual
orientation and sexual variation development by examining the biological,
psychological and social contributing factors that influence the
development of sexual orientations and variations along with treatment
and modification of problematic sexual behaviors. Please note that the
use of electronic devices is not permitted during this class, in order to
promote the full interactive potential of this engaging seminar-style
offering. Students may enroll in both AS.200.204 and AS.290.420, but
cannot do so in the same semester. Enrollment is limited to Senior Majors
& Minors in Behavioral Biology; Biology; Cognitive Science; Medicine,
Science & the Humanities; Molecular & Cellular Bio; Neuroscience;
Psychology; Public Health; Sociology; Study of Women, Gender, &
Sexuality.
Corequisites: Students may enroll in both AS.200.204 and AS.290.420,
but cannot do so in the same semester.
Instructor(s): C. Kraft
Area: Social and Behavioral Sciences.

Public Health Studies
http://krieger.jhu.edu/publichealth/
Public Health combines a prevention orientation with a population
perspective in pursuit of better health for all members of society.
Public health professionals deal with critical large-scale issues such as
access to health care; chronic disease control; mapping, predicting,
and containing outbreaks of infectious disease; as well as researching
factors that contribute to health outcomes such as gender, poverty, and
education. Public Health has close ties with medicine through research,
clinical practice, and formulating policy.

The Public Health Studies Program offers undergraduates a major that
links them to the world of public health through core courses taken on
the Homewood campus, as well as electives taken at the Johns Hopkins
Bloomberg School of Public Health (JHSPH).

Core coursework at Homewood includes Introduction to Public Health,
Research Methods for Writing in Public Health, Fundamentals of
Epidemiology, Environment and Your Health, Fundamentals of Health
Policy and Management, Biostatistics, and a course in Social and
Behavioral Health. Students also take coursework in Social Sciences,
Biology and Calculus. Students will select additional public health
coursework from a range of options that include the global health,
demography, health economics, medical sociology, history, and politics.
The major is flexible and easily adapted to further course work in the
natural sciences and historically. About two-thirds of Public Health Studies majors complete the premedical core curriculum.

Public Health Studies majors also complete the Public Health Applied Experience as part of their undergraduate degree requirements. This involves a supervised, hands-on experience working with public health professionals. The goal of the applied experience requirement is to ensure that students have practical public health exposure in a research or community setting. Find more information at http://krieger.jhu.edu/publichealth/applied-experience/

The Johns Hopkins Bloomberg School of Public Health is the oldest and largest school of public health in the United States. Although its primary function is as a graduate school, seniors majoring in public health studies take a semester’s worth of courses there in fulfilling their B.A. degree requirements. Many students get involved in ongoing research projects at JHSPH.

Available coursework at JHSPH includes the following areas: health education, environmental health sciences, epidemiology, health finance and management, health policy, human genetics, immunology and infectious diseases, international health, maternal and child health, mental health, nutrition, occupational medicine/health protection and practice, population studies, toxicology, and tropical medicine, among others.

An honors option is available to Public Health Studies seniors with a major GPA of 3.5. Public Health Students honors complete an independent research project under the supervision of a JHU faculty member and with the guidance of the Honors seminar instructor. Students register for 280.495 Honors in Public Health Seminar in the fall and 280.499 in the spring. Interested students should discuss their plans with PHS advisor no later than the spring of their junior year.

Many Public Health Studies students have pursued international public health internships and study abroad opportunities both during the academic year and over the summer. In addition to a wide array of general options available through the JHU Office of Study Abroad, the PHS program has established two public-health specific annual programs: Intersession (3 weeks) in Uganda and Summer (7 weeks) in South Africa. Each includes both academic and applied components and allows students to earn graded JHU credits which can be used toward the Public Health Studies major. The Uganda program compares health issues in urban and rural settings, while the South Africa program closely investigates the impact of the HIV epidemic on prevention measures and healthcare delivery in that country. For more information, go to krieger.jhu.edu/publichealth/academics/study-abroad/.

The Public Health Studies office is located in the 3505 North Charles Building, adjacent to the Homewood campus. Public Health Studies advisors may be consulted about the various courses, careers, and graduate programs in public health on a walk-in basis or by appointment. Information can also be obtained by emailing phstudies@jhu.edu or at http://krieger.jhu.edu/publichealth.

**Bachelor of Arts/Masters Program**

The Bachelor of Arts/Master of Health Sciences (BA/MHS) and Bachelor of Arts/Master of Sciences in Public Health (BA/MSPH) programs are a coordinated academic collaboration between the Krieger School of Arts and Sciences and the Johns Hopkins Bloomberg School of Public Health. It enables talented and committed Public Health Studies Program majors to complete a BA and master’s degree from the School of Public Health in five to six years.

The Department of Environmental Health Sciences, Department of Epidemiology, Department of Mental Health and Department of International Health will consider JHU undergraduates majoring in Public Health Studies for admission to the BA/MHS program. The Department of Environmental Health Sciences also offers a BA/MSPH in Occupational and Environmental Hygiene. The Department of Health Policy and Management offers a BA/MSPH in Health Policy.

Public Health Studies students apply for early admission during their junior year. Admitted students must complete the BA degree before formally enrolling in the graduate school, but up to 16 of the public health credits earned inter-divisionally toward the BA may also apply toward the MHS or MSPH degree. In addition, students in this program will receive co-advising from both schools to optimize their academic experience. Find more information at http://krieger.jhu.edu/publichealth/academics/.

**Public Health Studies Program Advisory Board**

The Public Health Studies Program Advisory Board reviews the progress and status of the Public Health Studies Program. Members provide advice and guidance on issues that are vital to a successful program, such as faculty appointments, curriculum reviews, utilization of university resources, and new funding opportunities.

One designated Public Health Studies Alumni serves a 2-year term on the committee.

**Board Members**

**Krieger School of Arts and Sciences**

- Joel Schildbach; Vice Dean for Undergraduate Education; Professor (Biology)
- Andy Cherlin; Professor (Sociology); Benjamin H. Griswold III Professor of Public Policy
- Adam Sheingate; Associate Professor (Political Science); Advisory Board Chair

**Johns Hopkins Bloomberg School of Public Health**

- Marie Diener-West; Abbey-Merrell Professor of Biostatistics; Chair, Master of Public Health Program
- John Groopman; Anna M. Baetjer Professor in Environmental Health and Engineering
- Colleen Barry; Fred and Julie Soper Professor in Health Policy and Management
- Laura Morlock; Executive Vice Dean for Academic Affairs and Professor in Health Policy and Management
- James Yager; Professor (Environmental Health and Engineering)
- Scott Zeger; Professor (Biostatistics); Professor (Epidemiology)

**Requirements for the B.A. Degree**

Also see Requirements for a Bachelor’s Degree (p. 7).

All major requirements must be taken for a letter grade. Course taken satisfactory/unsatisfactory do not apply towards the major with some exceptions for the applied experience requirement. Major requirements are as follows:

**Courses at Homewood**

<table>
<thead>
<tr>
<th>AS.110.106</th>
<th>Calculus I (Biology and Social Sciences)</th>
<th>4</th>
</tr>
</thead>
<tbody>
<tr>
<td>AS.110.108</td>
<td>Calculus I</td>
<td>3</td>
</tr>
<tr>
<td>AS.280.101</td>
<td>Introduction to Public Health</td>
<td>3</td>

<tr>
<td>AS.280.240</td>
<td>Research Methods and Scientific Writing for Public Health</td>
<td>4</td>
</tr>
</tbody>
</table>
A typical program might include the following sequence of courses:

### Sample Program

#### Freshman

**Fall**
- **Credits**: 3
  - AS.280.335 The Environment and Your Health
  - AS.280.340 Fundamentals of Health Policy & Management
  - AS.280.345 Public Health Biostatistics
  - AS.280.350 Fundamentals of Epidemiology

**Spring**
- **Credits**: 3
  - Two courses in biology and one corresponding lab: 9-10
    - AS.020.151 General Biology I & AS.020.153 General Biology Laboratory I
    - AS.020.152 General Biology II & AS.020.154 General Biology Lab II
    - AS.020.305 Biochemistry & AS.020.315 and Biochemistry Project lab
    - AS.020.306 Cell Biology & AS.020.316 and Cell Biology Lab

Select two introductory social science courses from Table 1. Students matriculating Fall 2017 or later must take these from two different departments.

Select one course to satisfy the core competency in the social and behavioral aspects of public health:
- AS.230.341 Sociology of Health and Illness or AS.280.360 Clinical & Public Health Behavior Change

Three public health courses at the 200-400 level offered on the Homewood campus
- **Credits**: 9

Ten credits of courses at the Bloomberg School of Public Health
- **Credits**: 10

Applied clinical or community-based experience
- **Credits**: 0-3

**Requirements at JHSPH**

Fifteen (15) units of courses are taken at the Johns Hopkins Bloomberg School of Public Health in the student's fourth year. This is equivalent to 10 Homewood credits. Within the 15, students must create an 8 unit focus in one particular area, topic, or department. Other courses may be taken in any department. These courses may not be independent research/special study, taken S/U or online.

**Applied Experience**

Public health studies majors will complete one (1) approved supervised, hands-on experience working with public health professionals. A minimum of 80 hours of applied work is required along with written academic work including a synthesizing assignment. Additional information about this requirement is available here (http://krieger.jhu.edu/publichealth/applied-experience).

#### Sophomore

**Fall**
- **Credits**: 4
  - Introduction to Public Health (If not taken in Fall)
- **Spring**
  - 4 Fundamental of Health Policy and Management, if not taken Spring of Freshman year OR Environment and Your Health, if not taken in Fall

**Junior**

**Fall**
- **Credits**: 3
  - Epidemiology, if not taken Sophomore year OR Applied Experience
- **Spring**
  - 3 Upper Level Public Health Elective (200-400 level)

**Senior**

**Fall**
- **Credits**: 4-6
  - Bloomberg School of Public Health Courses (Honors)
- **Spring**
  - 3 (Honors)

**Total Credits: 71-81**

**Honors in Public Health Studies**

An honors option is available to Public Health Studies seniors with a major GPA of 3.5. Public Health Honors students complete an independent research project under the supervision of a JHU faculty member and the guidance of the Honors seminar instructor. Students register for AS.280.495 Honors in Public Health - Seminar in the fall and AS.280.499 Honors in Public Health in the spring. Interested students should discuss their plans with their PHS advisor no later than the spring of their junior year. Students may not count the honors courses towards any other requirement of the major; they are in addition to major requirements.

For current faculty and contact information go to http://krieger.jhu.edu/publichealth/directory/

**Faculty**

**Program Director**
Maria Bulzacchelli
PhD; Assistant Research Professor; Director, Undegraduate Program in Public Health Studies

**Assistant Director**
Lisa Folda
M.H.S.; Lecturer (Public Health Studies); Academic Advisor.

**Academic Advisor**
Katherine Henry
PhD; Academic Advisor (Public Health Studies).

**Faculty**
Stanley Becker
Professor (Population, Family, and Reproductive Health).

Peter Beilenson
Associate (Public Health Studies).

David Bishai
Professor (Population, Family, and Reproductive Health).

Lee Bone

Associate Professor (Health, Behavior, and Society).

Joseph Bressler
Professor (Environmental Health and Engineering)

Amelia Buttress
Assistant Scientist (Health, Behavior and Society)

Lawrence Cheskin
Associate Professor (Health, Behavior, and Society).

Ann Herbert
School of Public Health Post-Doctoral Student (Health, Behavior and Society)

Leah Jager
Assistant Scientist (Biostatistics).

Megan Latshaw
Assistant Scientist (Environmental Health and Engineering)

Philip Leaf
Professor (Mental Health).

Catherine Maulsby
Associate Scientist (Health, Behavior and Society)

Heather McKay
Research Associate (Epidemiology)

Michael Schneider
Research Associate (Epidemiology)

Margaret Taub
Assistant Scientist (Biostatistics).

Roland Thorpe
Associate Professor (Health, Behavior and Society)

Jon Vernick
Professor (Health Policy and Management)

Peter Winch
Professor (International Health).

Barry Zirkin
Professor (Biochemistry and Molecular Biology).

For current course information and registration go to https://sis.jhu.edu/classes/

**Courses**

**AS.280.101. Introduction to Public Health. 3.0 Credits.**

This course provides an overview of the field of public health. Topics include the major causes of morbidity and mortality; the socioeconomic, behavioral, and environmental factors that affect health; the analytical methods used in the field; the role of government in protecting the public’s health; key features of the U.S. health care system; and current challenges in the field. The course also introduces students to the basic conceptual models and approaches that are central to public health practice. This course is restricted to rising Sophomores who are declared Public Health Studies majors, and incoming Freshman only. Your enrollment may be withdrawn at the discretion of the instructor if you don't meet one of those criteria.

Instructor(s): M. Bulzacchelli
Area: Social and Behavioral Sciences.
AS.280.120. Lectures on Public Health and Wellbeing in Baltimore. 1.0 Credit.
This course introduces students to urban health challenges in Baltimore as a case study. It examines the historical, social, and economic factors that contribute to public health issues in the city. Lectures are held at various locations throughout the city, providing students with a real-world perspective on urban health. Instructor(s): P. Beilenson
Area: Social and Behavioral Sciences.

AS.280.161. Applications of Biological Concepts in Public Health. 3.0 Credits.
This course explores the basic biology concepts relevant to public health. It covers topics such as infectious diseases, environmental health, and public health genetics. Instructor(s): J. Emerson
Area: Natural Sciences.

AS.280.203. Introduction to International Nutrition. 1.0 Credit.
The course presents a broad overview of international public health nutrition, including: main nutritional problems in developing countries, causes and consequences of malnutrition, and multi-level approaches for the prevention and treatment of malnutrition. Grades will be based on class attendance, participation, and a presentation that describes the key nutrition indicators for a low-income country of the student’s choice, and proposes an intervention to address the country’s nutrition challenges. Instructor(s): J. Emerson
Area: Social and Behavioral Sciences.

AS.280.205. Baltimore and The Wire: A focus on major urban issues. 3.0 Credits.
Playing off the themes raised in the HBO series "The Wire", this course will provide an introduction to major issues confronting Baltimore and other American urban centers through a series of lectures by policy makers in the region. Instructor(s): P. Beilenson
Area: Social and Behavioral Sciences.

AS.280.224. Health, Homelessness & Social Justice. 3.0 Credits.
Homelessness is bad for one’s health, and its existence, persistence, and growth demonstrate deep policy failures and social ills. This course examines issues fundamental to the modern phenomena of homelessness in the U.S. – and the connection between disparate health and desperate inequality. There are ethical values and dimensions to the decisions we make about health policy – and public policy generally. Life, liberty, the pursuit of happiness, equality, justice, community, democracy, human rights, and human flourishing; there are many values that we might prioritize – both individually and collectively – as we develop and assess programs, policies, and systems. In this course, we will consider these and other values together with issues of health and homelessness. We will also examine tools of policy analysis and political action, and how those committed to changing the world can use those tools to engage that system critically. Instructor(s): A. Schneider
Area: Social and Behavioral Sciences.

AS.280.225. Population, Health and Development. 3.0 Credits.
This course will cover the major world population changes in the past century as well as the contemporary situation and projections for this century. Topics include rapid population growth, the historical and continuing decline of death and birth rates, contraceptive methods as well as family planning and child survival programs, population aging, urbanization, population and the environment and the demographic effects of HIV/AIDS. This course is restricted to Public Health Studies majors. Students minoring in Study of Women, Gender, and Sexuality can register with instructor approval. Prerequisites: Students who have taken AS.230.225 may not take AS.280.225.
Instructor(s): S. Becker
Area: Social and Behavioral Sciences.

AS.280.226. Mini-Term: Urban Environments and Public Health. 3.0 Credits.
Introduction to physical and social environmental systems issues affecting the health of several marginalized populations (e.g. immigrants, impoverished and homeless). The course will primarily use Baltimore as the field for experiential learning, and will incorporate cross-cultural discussions, a variety of readings, and guest lecturers from Hopkins faculty and industry experts. Course will meet for two weeks: from July 7th through 18th. Instructor(s): A. Rule
Area: Social and Behavioral Sciences.

AS.280.232. Applications of Precision Medicine in Public Health. 1.0 Credit.
This course will introduce students to principles of precision medicine (PM) across the care continuum and engage students to think critically about how PM will change the medical and public health landscape. Students will learn about the PM initiative and current examples of PM in disease prevention, diagnosis, treatment and surveillance. Students will identify challenges associated with incorporating PM into our health care system and discuss strategies to mitigate such challenges. Instructor(s): M. Roberts.
Area: Social and Behavioral Sciences.

AS.280.240. Research Methods and Scientific Writing for Public Health. 4.0 Credits.
This course examines the research process, with an emphasis on formulating research questions, critically evaluating published research, and drawing objective conclusions from a body of scientific literature. Students conduct a systematic review of the scientific literature related to a public health issue. Labs focus on developing and documenting a sound review methodology and communicating the review findings effectively in writing. Prerequisites: AS.280.101
Instructor(s): R. Thorpe
Area: Social and Behavioral Sciences Writing Intensive.
AS.280.302. GIS as a Public Health Tool. 3.0 Credits.
This course provides an introduction to Geographic Information Systems (GIS) and presents its utility in the various fields of public health such as Epidemiology, Environmental Health and International Health. Provides exposure to GIS as a tool for describing the magnitude of health problems and for supporting health decision making. Course topics include a historical overview of the intersection between geography and public health; current epidemiological use of GIS; and, GIS applications in identifying public health problems such as the current Ebola outbreak. This course is ideal for students who desire exposure to the vast utility of GIS as it applies to public health.
Instructor(s): J. Ferguson
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.280.303. Responding to Disasters: From Earthquakes to Ebola. 3.0 Credits.
Responding to Disasters: from Earthquakes to Ebola introduces students to the fundamentals of humanitarian and disaster response. The course is divided into four topic areas: (1) fundamentals of humanitarian emergencies, (2) methods in humanitarian emergency settings, (3) refugee health, and (4) emerging issues in humanitarian response.
Instructor(s): J. Freeman
Area: Social and Behavioral Sciences.

AS.280.312. Media, Politics, and Evidence in the History of Public Health. 3.0 Credits.
This writing intensive course will encourage students to consider what counts as evidence among public health professionals as well as popular audiences. Using case studies from the field of epidemiology, now emblematic of the field, students will learn about historical changes in theories of population health and disease. Through a series of writing assignments, students will interrogate the formal structure of scientific arguments and gain practice in synthesizing and communicating complex ideas to a lay audience. Juniors/Seniors Only
Prerequisites: Prerequisite/Corequisite: AS.280.350
Instructor(s): A. Buttress
Area: Humanities, Social and Behavioral Sciences Writing Intensive.

AS.280.320. Seminar on Public Health and Well-being in Baltimore. 3.0 Credits.
Seminar combines lectures from AS.280.120 with additional readings and discussion to more deeply address urban health issues. The course will revolve around student projects that can impact health and wellbeing in Baltimore. If you are accepted for this course do NOT register for AS.280.120. Course registration is by instructor permission only. You will be asked to provide a brief description of a project in order to determine your potential linkage with this course. This course is utilizing the online active approval process. Permission requests should be submitted via SIS Self-Service upon the opening of your registration period. The instructor will review requests and approve registrations using SIS Self-Service for Faculty. Please note, a request does not guarantee registration into the course. Status inquiries should be address to the instructor or departmental administrator.
Instructor(s): P. Leaf
Area: Social and Behavioral Sciences.

AS.280.323. Public Health Policy and Politics. 3.0 Credits.
This course will introduce students to the major concepts of the American political process (local, state and federal), and to the use of different aspects of the political realm to achieve policy change in the public health/health care arena. As part of the course we will illustrate the decision making process of making policy change through political action with real world examples (mostly from Baltimore and Maryland), examine policy and politics of the U.S. health care system, and participate in the political process through a mock legislative hearing. You cannot register for this course if you have taken AS.280.103.
Prerequisites: Students may not enroll if you have taken AS.280.103.
Instructor(s): P. Beilenson
Area: Social and Behavioral Sciences.

AS.280.325. Public Health in South Africa. 3.0 Credits.
This course provides an in-depth overview of Public Health in South Africa, including material on the political climate, health care services, and the impact of the HIV/AIDS epidemic. Course is taught in Cape Town, South Africa.
Instructor(s): M. Smart
Area: Social and Behavioral Sciences.

AS.280.326. Community-Based Learning in South Africa. 3.0 Credits. 3 Credit course taught in Cape Town, South Africa. This course may be used to satisfy the Public Health Applied Experience requirement. Students will participate in a community-based service learning program with a local NGO in Cape Town.
Instructor(s): M. Smart
Area: Social and Behavioral Sciences.

AS.280.329. The Good, the Bad, and the Ugly: Scientific Writing in Public Health. 3.0 Credits.
This course covers how to conduct a literature review, and interpret and evaluate scientific literature that focuses on public health. In addition, this course will provide students with fundamental skills of writing a scientific manuscript. Skills obtained in this course will prepare students for advanced-level senior year classes at Bloomberg and other graduate institutions.
Prerequisites: AS.280.350;AS.280.345
Instructor(s): R. Thorpe
Area: Social and Behavioral Sciences Writing Intensive.

AS.280.335. The Environment and Your Health. 3.0 Credits.
This course surveys the basic concepts underlying environmental health sciences (toxicology, exposure assessment, risk assessment), current public health issues (hazardous waste, water- and food-borne diseases), and emerging global health threats (global warming, built environment, ozone depletion, sustainability). Public Health Studies, Global Environmental Change and Stability, and Earth and Planetary Science majors have 1st priority for enrollment. Your enrollment may be withdrawn at the discretion of the instructor if you are not a GECS, PHS, or EPS major.
Instructor(s): J. Bressler; J. Yager; M. Latshaw
Area: Natural Sciences.

AS.280.340. Fundamentals of Health Policy & Management. 3.0 Credits.
Through lectures and small group discussions, students will develop a framework for analyzing health care policy problems and gain familiarity with current issues including managed care, Medicare and the uninsured. Public Health Studies majors have 1st priority for enrollment. Your enrollment may be withdrawn at the discretion of the PHS program if you are not a PHS major.
Instructor(s): J. Vernick
Area: Social and Behavioral Sciences.
AS.280.345. Public Health Biostatistics. 4.0 Credits.
Using problem-based learning focusing on public health topics, students learn to describe & summarize data, make inferences regarding population parameters, & test hypotheses. Recommended Course Background: Four years of high school math.
Prerequisites: Statistics Sequence restriction: students who have completed any of these courses may not register. EN.550.211 OR EN.550.230 OR AS.280.314 OR AS.280.315 OR EN.550.310 OR EN.550.311 OR EN.560.435 OR EN.550.420 OR EN.550.430 OR EN.560.348
Instructor(s): L. Jager; M. Taub
Area: Quantitative and Mathematical Sciences.

AS.280.346. Advanced Biostatistics Laboratory. 1.0 Credit.
As a complementary course to 280.345, Public Health Biostatistics, this course teaches R programming skills necessary for conducting independent data analyses, beyond those presented in the main course. No programming experience is necessary, but a willingness to learn independently and work with other students is indispensable.
Prerequisites: AS.280.345
Instructor(s): L. Jager; M. Taub
Area: Quantitative and Mathematical Sciences.

AS.280.347. Health Data Analysis Practicum. 2.0 Credits.
Students will learn to formulate precise scientific and policy questions, design exploratory and confirmatory statistical analyses to address the questions, conduct appropriate analyses using the statistical package R, and communicate their findings through graphical and tabular displays that are presented in writing and in person. The course will be run seminar style in which students conduct data analysis to present to one another in one meeting per week. Evaluation will be through class participation and a final project in which students will analyze their own data set to address a question of their choice. Students need to have taken an introductory statistics course at the level of AS.280.345 (Public Health Biostatistics) and must have some experience using the statistical software R to perform basic analyses.
Instructor(s): L. Jager; M. Taub
Area: Quantitative and Mathematical Sciences.

AS.280.350. Fundamentals of Epidemiology. 4.0 Credits.
A practical introduction to epidemiology focusing on the principles and methods of examining the distribution and determinants of disease morbidity and mortality in human populations. This course is restricted to Public Health Studies rising seniors and rising juniors.
Instructor(s): H. Mckay; M. Schneider
Area: Quantitative and Mathematical Sciences.

AS.280.360. Clinical & Public Health Behavior Change. 3.0 Credits.
This course explores the theory and practice of changing the health behaviors of individuals, and the public health and medical impact of doing so. Theoretical concepts are integrated with practical clinical applications, especially in the areas of diet and fitness. Skill building in persuasive, health-related communication will be included in smaller group discussions.
Instructor(s): L. Cheskin
Area: Social and Behavioral Sciences.

AS.280.380. Global Health Principles and Practices. 3.0 Credits.
Global health addresses the staggering global disparities in health status, drawing on epidemiology, demography, anthropology, economics, international relations and other disciplines. We review patterns of mortality, morbidity and disability in low and middle income countries, starting with malnutrition, infectious diseases and reproductive health, and continuing to an emerging agenda including mental health, injury prevention, surgical care, chronic diseases, and health impacts of climate change. Gender, health systems and health workforce challenges, and career trajectories in global health are also discussed. Recommended course background: Minimum of one prior course in Public Health.
Instructor(s): P. Winch
Area: Social and Behavioral Sciences.

AS.280.399. Community Based Learning - Practicum Community Health Care. 3.0 Credits.
This course is designed to expose students to urban health with focus on Baltimore City through lectures, class discussions, and experiential learning. Students will select a community-based organization (CBO) according to their expressed interests and schedule in order to complete 45 hours of service based learning. Grades are based on participation, completion of service learning project, presentation, and papers. Open to Junior Public Health Studies majors only. Others by permission of instructor.
Instructor(s): J. Goodyear; L. Bone
Area: Social and Behavioral Sciences.

How does U.S. military policy impact global and national public health? Do U.S. military missions promoted as humanitarian assistance, such as those in Africa and Afghanistan, compromise global development and independent humanitarian action programs? Did the CIA's covert use of a vaccination program in Pakistan as cover for intelligence gathering threaten the success of global immunization campaigns? How have vaccines and drugs developed for U.S. military use benefited global public health? These topics and much more will be the focus in this seminar that explores consequences within conflict zones and the developing world, and among military personnel and veterans. Gordis Teaching Fellowship course. Juniors and Seniors Public Health Studies majors only.
Instructor(s): R. Nevin
Area: Social and Behavioral Sciences.

AS.280.407. Public Health and Disasters. 3.0 Credits.
This course will introduce students to the public health component of preparedness and response to common emergencies, including the public health implications of such situations and the role of public health agencies and practitioners. The course will employ an all-hazard perspective, including emerging infections, natural disasters, and terrorism. Students will understand the public health community's role in preparing for and responding to disasters through case studies, discussion, debate, and material related to the national public health preparedness infrastructure. Juniors and seniors Public Health Studies majors only. Gordis Teaching Fellowship course. Recommended Course Background: AS.280.335
Instructor(s): N. Errett
Area: Social and Behavioral Sciences.
AS.280.409. Health Systems Challenges from Chronic Diseases in Low and Middle Income Countries. 3.0 Credits.
This course provides a multidimensional health systems approach to chronic diseases, presently the largest population health burden in low and middle income countries. Learning tools include patient interviews, in-class debates, and country case studies. Recommended course background: AS.280.350: Fundamentals of Epidemiology. Gordis Teaching Fellowship course open to junior and seniors only.
Instructor(s): M. Socal
Area: Social and Behavioral Sciences.

AS.280.411. “Where You Live Matters”: The Role of "Place" in Racial/Ethnic Health Disparities. 3.0 Credits.
This course will critically examine the impact of place of residence on health outcomes, and on racial/ethnic health disparities. This will be accomplished by examining different definitions and levels of “place”, and assessing the impact of each on various health outcomes and racial/health disparities. The role of “place” will be examined in the development of interventions targeting racial/ethnic health disparities. Juniors and seniors Public Health Studies majors only. Gordis Teaching Fellowship course.
Instructor(s): C. Bell
Area: Social and Behavioral Sciences.

AS.280.413. Information Communication Technology (e/mHealth) for Health Systems Strengthening. 3.0 Credits.
This course explores the emerging landscape of information and communication technology in public health, such as e/mHealth, through concepts and frameworks of health systems research with a focus on low and middle income countries (LMICs). It is designed to comprehensively address various aspects of e/mHealth including policy aspects of health systems governance, community aspects of health service delivery, economic aspects of the healthcare market, technological aspects of health information infrastructure, and individual aspects of self-monitoring/management. Multidisciplinary approaches will be encouraged to understand complex public health challenges and to suggest creative yet feasible solutions in low resource settings. Successful e/mHealth use cases across countries with various health system contexts will be introduced and discussed. The course is intended for undergraduate students interested in how information and communication technology is likely to affect health care in the future. Gordis Teaching Fellowship course open to Junior and Senior Public Health Majors only.
Instructor(s): Y. Jo
Area: Social and Behavioral Sciences.

AS.280.414. Leading Health Care Organizations. 3.0 Credits.
This seminar course is designed for students who seek an understanding of how to manage health care organizations including management processes, organizational structures, types of governance models and management issues of health care delivery systems. This course is designed to provide participants with an understanding of leadership and organizational behavior within health care organizations (HCOs). In this course, students will become skilled at identifying the forces that challenge the effective management of HCOs at multiple levels—individual, group and organization. Moreover, they will become skilled at developing and analyzing efforts to improve HCOs’ performance. Through case studies, readings, in-class exercises and class discussions, participants will learn analytic frameworks, concepts, tools and skills necessary for leading and management organizational learning, innovation and overall performance improvement in health care organizations. Gordis Teaching Fellowship course open to junior and seniors only.
Instructor(s): K. Henderson
Area: Social and Behavioral Sciences.

AS.280.415. Comparative Health Systems and Health Reform. 3.0 Credits.
The course explores the structural components of modern health care systems through a comparative approach. Students will develop a toolkit for analyzing how the financing, payment, and organization of health service provision determine system performance. Student teams will analyze a health system component and develop health reform recommendations for advancing the often-competing goals of improved population health, financial protection, and public satisfaction. They will also learn how to enhance the political feasibility of technically rigorous reforms through rational design and political stakeholder analysis. Theoretical frameworks utilized by international aid organizations and think tanks will be supplemented by case studies, hands-on class activities, and team projects to encourage active student learning. Gordis Teaching Fellowship course open to Junior and Senior Public Health Majors only.
Instructor(s): N. Done
Area: Social and Behavioral Sciences.

AS.280.416. Nutrition and Immunology in Chronic Disease. 3.0 Credits.
This course provides an overview of basic immunology and nutrition through the review of published chronic disease research. By careful reading and critique of published literature, students will learn to interpret scientific studies on nutrition and chronic disease. This course will cover a variety of globally important chronic diseases such as type II diabetes, heart disease and cancer. Course sessions will include lectures on the basics of nutrition and immunology, seminar sessions to critically evaluate published research findings and group presentations. Recommended prerequisite: Introductory Biology. Gordis Teaching Fellowship course open to junior and seniors only.
Instructor(s): J. Fontes
Area: Natural Sciences.
AS.280.417. Mental Health in Humanitarian Emergencies. 3.0 Credits.
This course will serve as an introduction to mental health in humanitarian emergencies. The course focuses on mental health disorders (PTSD, anxiety, depression and substance abuse) and well-being (functionality, self-esteem, hope, and pro-social behavior). Assessment of mental health in humanitarian emergencies will include identification of risk factors and protective factors that impact mental health disorders and promote well-being. Coursework will include exploration of ways gender, age, political climate, environmental factors, and social and cultural norms impact mental health. Furthermore, the course will consider development of mental health interventions for specific cultural contexts and evaluation of the effectiveness of interventions in meeting mental health needs in the short and long-term. Class sessions will be built around case studies from various countries and include contexts of natural disasters, armed conflict and complex emergencies. Gordis Teaching Fellowship course open to junior and seniors only. Instructor(s): M. Cherewick Area: Social and Behavioral Sciences.

AS.280.418. Introduction to Public Health Genomics. 3.0 Credits.
Advances in genomic medicine and technology have presented both opportunities and challenges for public health. Through lectures and case studies, the first half of the course will provide an historical overview and raise contemporary issues related to genomics at the individual, public and policy level. In the second half of the course, students will critically analyze psychosocial, behavioral, ethical and legal issues arising from increasingly widespread access to genetic technologies and information. Topics will cover the use of routine testing (prenatal testing, newborn screening and predictive testing for adult-onset conditions) and emerging technologies capable of whole genome sequencing, direct-to-consumer marketing of various kinds of genetic testing, pharmacogenomics and personalized medicine. Gordis Teaching Fellowship course open to junior and seniors only. Instructor(s): Y. Guan Area: Social and Behavioral Sciences.

AS.280.419. Introduction to Practical Data Analysis in Medicine and Public Health. 3.0 Credits.
The course is designed to introduce undergraduate public health majors to the methodology of data analysis, such as how to apply previously learned statistical methods in the performance of data analysis in medical and public health research. This course is unique in that it focuses on all parts of the data analysis process, from formulating a research question to synthesizing the results. While the emphasis is placed on developing and implementing various methods of data analysis, the course will also address interpreting and evaluating the strengths and limitations of existing data analyses. Students’ understanding will be solidified through small in-class activities that explore the data analysis process and evaluations of data analyses in the scientific literature, culminating in a final data analysis project relevant to their own areas of expertise for the purpose of incorporating knowledge gained from the course into their research. Gordis Teaching Fellowship course open to sophomore, junior, and seniors who have taken AS.280.345: Public Health Biostatistics. Prerequisites: AS.280.345 Instructor(s): T. Usher Area: Quantitative and Mathematical Sciences.

AS.280.420. Global Food and Nutrition Security. 3.0 Credits.
This course examines food insecurity in low and middle income countries from a public health nutrition perspective. Students will explore food insecurity as a complex phenomenon linked to important issues in global development and public health. Recommended prior course, either Issues in International Development or Global Health Principles & Practices. Gordis Teaching Fellowship course open to junior and seniors only. Instructor(s): B. Caswell Area: Social and Behavioral Sciences.

AS.280.421. Telling Public Health Stories through Maps. 3.0 Credits.
Maps play an increasingly central role in conceptualizing, investigating, and communicating many types of public health concerns. This semester-long course is intended for undergraduate students in their junior or senior year who are familiar with epidemiology and biostatistics. This course will develop the skills needed to create and manipulate spatial information for public health research and communication. The course also prepares students to critically evaluate spatial data and to identify the common pitfalls of map-making. Through a blend of lectures, student seminars, and lab exercises, students will examine and appreciate the history of map-making, its current uses in public health, and future directions of spatial analysis. This course involves active student participation during discussions, short responses to the readings, and culminates in an independent spatial analysis project involving Geographic Information Systems (GIS) software. Basic knowledge of biostatistics and epidemiology are recommended pre-requisites. Juniors/Seniors Only. Gordis Teaching Fellowship course Instructor(s): B. Davis Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.280.422. Health Equity and Disparities: Addressing Complex Global Health Challenges. 3.0 Credits.
In this course, students will be supported and challenged to develop a personal understanding of and perspective on global health equity and disparities, and acquire a toolbox of frameworks and strategies to use in addressing them. Students will have the opportunity to be exposed to numerous examples and case studies to gain experience in assessing and addressing issues of equity in the complex, real-life problems such as those they will be facing as public health professionals. Students will review major historical and contemporary global and national initiatives to address equity issues in the health sector, including global declarations and reports as well as policies and programs that have been developed to achieve improvements in health equity in specific contexts. Application of this historical and practical knowledge and their own perspectives to new and complex situations will be fostered throughout the course. Basic knowledge of biostatistics and epidemiology and courses on global health or international public health issues recommended pre-requisites. Juniors/Seniors Only. Gordis Teaching Fellowship course Instructor(s): M. Schleiff Area: Social and Behavioral Sciences.
AS.280.423. Data Visualization for Individualized Health. 3.0 Credits.
This course will explore how biostatistics and data visualization can be used to improve patient care and health outcomes. Students will learn and apply key concepts of effective data visualization to applications in individualized medicine. Teams of students will work with clinician-partners of the Hopkins Individualized Health Initiative (http://hopkinsinhealth.jhu.edu) to produce interactive web applications (http://shiny.rstudio.com) that support clinical decision-making by communicating a patient's health state, prognosis, or expected treatment outcomes. R programming experience (AS.280.419, AS.280.346, or R programming course in coursera (https://coursera.org/course/rprog)) is necessary before the start of this course.
Prerequisites: Prereg: AS.280.345
Instructor(s): R. Coley
Area: Quantitative and Mathematical Sciences.

AS.280.424. The Quest for Effective Universal Health Coverage in Low and Middle Income Countries. 3.0 Credits.
This course examines the movement to achieve effective universal health coverage with a particular focus on MICCs. It provides foundational grounding on health systems thinking to understand the key components of effective UHC and accordingly analyzes country cases to demonstrate lessons from health reforms in five LMICs.
Instructor(s): A. Bhadelia
Area: Social and Behavioral Sciences.

An elective for upper-level public health studies students with a strong biology background that reviews the basics of immunology and cancer biology, and then delves into how treatments at the interface are sparking a paradigm shift in how we understand and treat cancer. Special interest will be taken in the public health repercussions of this change in thinking and treatment. Students apply this knowledge by analyzing topics of current and potential immunotherapies such as cancer vaccinations, adoptive cell transfer therapies, immune checkpoint inhibitors, and more. Course format will be a combination of lecture and active learning activities such as facilitated discussions, case study analysis, and role-plays of system actions. Juniors/Seniors only.
Prerequisites: AS.020.151 OR AS.020.152 OR AS.020.243 OR AS.020.123 OR AP Biology
Instructor(s): J. Gordy
Area: Natural Sciences.

AS.280.426. Ethics of Obesity Prevention. 3.0 Credits.
This course introduces undergraduate PHS students to ethical issue of obesity prevention in public health, and how these issues have influenced the success or failure of past and current intervention efforts. Students explore the multiple perspectives of each issue, and use an ethical framework to learn how to address the ethical challenges associated with the development of obesity intervention programs and policy. Juniors/Seniors only.
Instructor(s): L. Redmond
Area: Social and Behavioral Sciences.

AS.280.427. Communicating Science: Skills to Analyze and Communicate Science News. 3.0 Credits.
Science communication is challenging. Experts are seldom trained to translate jargon in everyday language. In this course students will expand their knowledge of the biology basics of several public health issues, develop the critical thinking needed to assess health science reporting, and practice science communication skills.
Prerequisites: Prereg: AS.020.151 OR AS.020.152 OR AS.020.243 OR AS.020.123 OR AP Biology.
Instructor(s): N. Martin
Area: Humanities, Natural Sciences.

AS.280.428. Environmental Health and Disasters. 3.0 Credits.
Environmental Health and Disasters examines the core principles and applications of environmental health science in disaster and humanitarian emergency response. Lecture topics range from emerging infectious diseases to toxicology to climate change. Students will have the opportunity to apply lessons learned through completion of weekly in-class case studies based on recent global events. Juniors/Seniors only
Instructor(s): J. Freeman
Area: Natural Sciences, Social and Behavioral Sciences.

AS.280.429. An Introduction to Public Health Evaluation Using Population-Based Survey. 3.0 Credits.
Students will be introduced to key concepts for public health program evaluation, including how to develop evaluation research questions, common evaluation study designs, and aspects of study implementation including sample size calculation and questionnaire development. Students will become familiar with how to analyze datasets to answer global health evaluation research questions, and effectively interpret and summarize evaluation study results for key audiences. Students will get hands-on experience working with a Demographic and Health Survey (DHS) dataset to apply skills learned in each module. The DHS program provides indicators in areas of population, health, and nutrition from more than 300 surveys in 90 countries (see www.dhsprogram.com). Juniors/ Seniors only
Instructor(s): E. Carter
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.280.430. Communicating Public Health Findings Through Research-Based Theatre. 3.0 Credits.
Results of public health research have the potential to catalyze positive social change, yet often need to be creatively communicated to target audiences in order to produce meaningful effects. Research-based theatre is gaining traction in the health and social sciences as a compelling and effective means of disseminating research findings to audiences beyond those that typically read scientific journal articles. Equipped with the results of a resent mixed-methods study of sexual violence on JHU campuses, students will collaboratively prepare a messaging strategy, a research-based script, print/digital materials, and an audience evaluation plan for a live campus dissemination event at the end of the semester.
Instructor(s): E. Hurley
Area: Humanities, Social and Behavioral Sciences.
AS.280.431. Beyond Borders: Migration, Ethics, and Public Health. 3.0 Credits.
This course explores the public health, ethical, and policy implications of international human migration both globally and within the United States. It is intended for upper-level undergraduate students interested in bioethics, migration, public health, and political philosophy. The first part of the course acquaints students with the various types of migrants and relevant political theory, including citizenship, freedom of movement, open/closed borders, and human rights. In the second part of the course, students discuss different ethical/philosophical concepts related to migration and apply them in analysis of a wide variety of public health and health policy cases. The course culminates with a final paper that students workshop collaboratively. This course challenges students to draw connections between ethical theory and real-world events and policies involving human migration. This is a Gordis Teaching Fellowship course.
Instructor(s): R. Fabi
Area: Social and Behavioral Sciences.

AS.280.432. Statistical Thinking for Informed Decision Making. 3.0 Credits.
Much of the science that we are exposed to on a daily basis is not through original research articles but through sources such as news reports, articles from content aggregators, and social media postings. While these convenient sources of information can be useful in some respects, it is important to read the original scientific articles on which these reports are based. Only in this way can we better understand the state of science on the issues we care about. In this course, students will primarily learn about statistical concepts within the domains of association studies, causal inference, survey analysis, and survival analysis that provide the background necessary to read a wide variety of primary research in public health. Required readings from a custom course textbook will be supplemented by in-class lecture, discussion, and guided simulation exercises. Simulation exercises will use the Shiny environment in the R programming language which allows for point-and-click style exploration and does not require any coding. All code used to create these simulation activities will be made available so that students familiar with R or who want to learn more have the chance to explore on their own time. Secondary goals of the class include (1) examining the differences between information contained in original research articles and secondary sources and (2) improving written and oral communication about statistical ideas.
Prerequisites: AS.280.345 or EN.553.112 or EN.550.211
Instructor(s): L. Myint
Area: Quantitative and Mathematical Sciences.

AS.280.433. How to Feed the World: Perspectives in Global Food and Nutrition Security. 3.0 Credits.
How do we produce not only enough food, but enough of the right kinds of food, to nourish a growing population? In this course we define global food security and position it within the landscape of nutritional problems. We then discuss key challenges associated with food production and food distribution including climate change, weak supply chains, and changing dietary patterns. Finally, we learn about current efforts to improve global food security through policies, programs, and new technologies. This course is suitable for students with an interest in food, nutrition, global health, environmental sustainability, and complex systems.
Instructor(s): M. Spiker
Area: Social and Behavioral Sciences.

AS.280.434. Public Health Nutrition in Latin America. 3.0 Credits.
This course examines drivers and determinants of health in Latin American population from a public health nutrition perspective. Students will be able to discuss the Global Nutrition Transition framework, drawing from historical public health nutrition issues in Latin America to understand current diet-related concerns and patterns. This is a discussion-based course in which students will be constantly reflecting on past and current issues and lessons learned from these countries. By the end of this course, students be able to propose future public health policies and strategies to improve the nutritional profile of the Latin American population both in Latin American Countries and in Latino immigrant communities here in the United States. Gordis Teaching Fellowship course open to junior and seniors only.
Instructor(s): A. Trude
Area: Social and Behavioral Sciences.

AS.280.435. Alcohol Use and Social Disparities: A Public Health Perspective. 3.0 Credits.
This upper-level course examines alcohol use from an ethical, epidemiological, and social justice perspective. The course is structured in three parts: 1.) Ethical issues in alcohol-related harms, 2.) Alcohol and marginalized populations, and 3.) Alcohol and injustice. This course models how to frame a complex problem from a public health perspective and teaches students to critically engage with social justice concepts. This seminar-format course incorporates guest lectures, small group exercises, case studies, and role plays. Gordis Teaching Fellowship course open to juniors and seniors.
Instructor(s): P. Trangenstein
Area: Social and Behavioral Sciences.

AS.280.436. Using Secondary Data to Conduct Public Health Research. 3.0 Credits.
Students will learn how to use administrative claims, electronic health records, and other secondary data sources to conduct public health research. The course will address privacy issues, data cleaning, creation of new variables, missing data, and documentation of data analysis decisions. Students will have the opportunity to apply course concepts to real data sets. This course is intended for undergraduates in their junior or senior year who are interested in conducting public health research with large, secondary data sets. AS.280.345 (Public Health Biostatistics) OR other introductory statistics class required. Some familiarity with R is recommended, but not required. This is a Gordis Teaching Fellowship course.
Prerequisites: AS.200.314 OR AS.230.205 OR AS.280.345] OR EN.550.211 OR EN.550.310 OR EN.550.311 OR EN.550.413 OR EN.550.420 OR EN.550.430 OR EN.560.348
Instructor(s): S. Heins
Area: Quantitative and Mathematical Sciences.
AS.280.437. Saving Newborn Lives in Low Resource Settings. 3.0 Credits.
Child mortality has declined precipitously over the past 25 years, but neonatal mortality has remained largely unchanged. Today, around the world, 45 percent of all child mortality occurs in newborns, and these deaths are overwhelmingly in low-income countries. Prematurity, events during childbirth, and infections like pneumonia and sepsis are the largest killers of newborns, and most of these deaths could be prevented with quality care during childbirth. Students will spend the first half of the course learning the direct and indirect causes of perinatal and newborn mortality and interventions that have been proven to prevent perinatal and newborn deaths in low resource settings, such as skilled birth attendance, essential newborn care, helping babies breathe, kangaroo mother care, and treatment of the sick newborn. Students will spend the second half of the course working in teams to critically evaluate newborn health in a chosen country and propose a solution that will reduce perinatal and newborn deaths. Students will have the opportunity to present their final project design to a panel of professionals working in international public health. This class is designed to be highly engaging, so students should come prepared to work in groups, debate ideas, and discuss their points of view. Students will also have the opportunity to learn how to treat a newborn who is not breathing at birth, and simulate kangaroo mother care for thermoregulation. This is a Gordis Teaching Fellowship course.
Prerequisites: (AS.280.225 OR AS.280.380) AND AS.280.350
Instructor(s): A. Bear
Area: Social and Behavioral Sciences.

AS.280.438. Reproductive Health in Crisis: Issues in Meeting the Needs of Vulnerable Populations. 3.0 Credits.
Introduces students to the reproductive health needs of over 65 million people affected by humanitarian, economic, and environmental crises globally. Presents an overview of health care delivery systems in a variety of contexts, and examines the reproductive health consequences of disruptions in service provision during times of crisis. Examines the impact of policies and programs targeting affected groups. Discusses international standards in humanitarian response. Includes discussion of maternal and newborn health, family planning, abortion, and gender based violence. Students develop competency to conduct reproductive health service needs assessments and design an emergency preparedness plan that ensures provision of essential care. For the final project, students apply their skills to plan a response program to meet the reproductive health needs of a specific crisis-affected population. This is a Gordis Teaching Fellowship course.
Instructor(s): L. Collins
Area: Social and Behavioral Sciences.

AS.280.439. Ecological Change and Infectious Disease. 3.0 Credits.
This course will introduce students to key concepts in infectious disease ecology and epidemiology. Students will also learn how key ecological changes are influencing infectious disease dynamics. Ecological changes explored in the course include climate change, water management, deforestation, agriculture, and urbanization. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Prerequisites: AS.280.350 can be taken concurrently; AS.280.335
Instructor(s): A. Lorentz
Area: Natural Sciences.

AS.280.440. Introduction to Harm Reduction: Principles and Examples in Public Health. 3.0 Credits.
Harm reduction is an increasingly popular paradigm in public health research and practice. This course introduces students to the principles of and current research in harm reduction. The class will focus on a) history and principles of harm reduction, and appropriate research methods; b) harm reduction & substance abuse and policy; c) harm reduction & sexual health and sex work; d) ethical considerations in harm reduction. This seminar-format course uses journal clubs, small group discussions, and interactive debates. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Prerequisites: AS.280.345 OR EN.553.112 OR EN.550.112 OR EN.553.211 OR EN.550.211
Instructor(s): C. Tomko
Area: Quantitative and Mathematical Sciences.

AS.280.441. Social Media and Public Health. 3.0 Credits.
This upper-level undergraduate research methods design course explores the growing role of social media in public health research. The course first introduces the current social media landscape, tying in different public health and health communication theories of importance to social media research. This is followed by a discussion of qualitative and quantitative research methods that have been used to conduct social media research, as well as the unique ethical considerations presented by this novel field. The course will then delve into each type of social media platform in depth, discussing how public health research has been conducted and how this ever-changing field continues to move forward. By the end of the course, students will have given explicit consideration to the strengths and challenges posed by conducting social media research in public health, and will be able to apply social media research methods to a public health issue of their interest. Some background in research methods is preferred but not required. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.
Instructor(s): Y. Rivera
Area: Social and Behavioral Sciences.
AS.280.443. Health-Related Stigma: Concepts, Considerations, and Interventions. 3.0 Credits.

Health-related stigma plays an important role in health and social outcomes, however its impact on individuals and populations varies according to context. Through readings, discussions, and assignments, students acquire the framework and skills to conceptualize and assess stigma across a range of health domains. To develop their understanding and analytical approach, students examine examples of HIV/AIDS, smoking, obesity, addiction, and mental health stigma. In each case, students consider key questions including: What are the forms and consequences of stigma? What theories apply? What ethical issues exist? How might interventions minimize or leverage stigma for health promotion? Throughout the semester, students also consider broader questions including: When should interventions target stigma? What are the ethical considerations in health-related stigma research? Is stigma always a threat to health? As the course places a strong emphasis on reading, critiquing, and applying health and social scientific literature, knowledge of or experience with psychology, sociology, ethics, and/or statistics is recommended but not required. Gordis Teaching Fellowship course. Priority registration is given to Public Health Studies majors. Other students will be permitted to register as space allows.

Instructor(s): K. Heley
Area: Social and Behavioral Sciences.

AS.280.495. Honors In Public Health - Seminar. 3.0 Credits.

Using lectures, oral presentations, and writing assignments, this seminar is designed to assist Public Health Studies majors in writing a senior thesis. Students will formulate their topics, develop research skills, and address issues of professional ethics. Participating in this seminar is required for students pursuing honors in Public Health Studies. Permission Required. Classes will be held at Bloomberg School of Public Health.

Instructor(s): A. Herbert
Area: Social and Behavioral Sciences
Writing Intensive.

AS.280.499. Honors in Public Health. 3.0 Credits.

A research methods seminar to prepare students doing honors in Public Health Studies. Permission Required.

Instructor(s): J. Schrack; M. Bulzacchelli
Area: Social and Behavioral Sciences
Writing Intensive.

AS.280.500. Applied Experience-Public Health. 1.0 - 2.0 Credits.
Permit. Req’d, Public Health Majors Only. This is a supervised, hands-on experience working with public health professionals. Students will complete 80 hours of applied work and will submit a synthesizing assignment at the end of the term. Students completing their AE in the current semester will be enrolled in Section 2. Students whose time will roll over to an additional grading period will be enrolled in Section 1. Please contact your PHS Advisor for complete details.

Instructor(s): L. Folda.

AS.280.501. Internship-Public Health. 1.0 Credit.
Permission Required. Public Health majors only
Instructor(s): K. Henry; L. Folda; L. Foster; M. Bulzacchelli.

AS.280.502. Internship-Public Health. 1.0 Credit.
Permission Required. S/U only.
Instructor(s): K. Henry; L. Folda; L. Foster; M. Bulzacchelli.

AS.280.505. Research in Public Health. 3.0 Credits.

Instructor(s): L. Folda; L. Foster; M. Bulzacchelli.

AS.280.506. Research for Freshmen/Sophomores in Public Health. 0.0 - 3.0 Credits.

Permission Required.
Instructor(s): K. Henry; L. Folda; L. Foster; M. Bulzacchelli; R. Pearlman.

AS.280.507. Independent Study-Public Health. 3.0 Credits.
Public Health majors only. Permission Required.
Instructor(s): K. Henry; L. Folda; L. Foster; M. Bulzacchelli.

AS.280.508. Independent Study-Public Health. 3.0 Credits.
Consult the public health studies adviser for procedure. Permission Required.
Instructor(s): K. Henry; L. Folda; L. Foster; M. Bulzacchelli.

AS.280.511. Research for Juniors/Seniors in Public Health. 3.0 Credits.
Instructor(s): Staff.

AS.280.512. Research for Juniors/Seniors in Public Health. 0.0 - 3.0 Credits.
Restricted to public health studies majors. Consult the public health studies adviser for procedure. Permission Required.
Instructor(s): Staff.

AS.280.590. Internship - Summer. 1.0 Credit.
Instructor(s): K. Gebo; K. Henry; L. Folda; M. Bulzacchelli.

AS.280.596. Independent Study-Summer. 3.0 Credits.
Instructor(s): K. Henry; L. Folda; L. Foster; M. Bulzacchelli.

AS.280.598. Research for Juniors/Seniors in Public Health. 3.0 Credits.
Instructor(s): K. Henry; L. Folda; L. Foster; M. Bulzacchelli.
Cross Listed Courses

**English**

AS.060.155. Expository Writing: Introduction to the Research Paper - Controversies in Adolescence. 3.0 Credits.

"Introduction to the Research Paper" is designed to introduce more experienced student writers to the fundamental skills of the research process. These include asking research questions, evaluating the usefulness of sources to answer them, synthesizing sources, reading sources critically, and developing arguments that deliver an original thesis. Students will work with a research librarian at the Eisenhower Library, with whom they will learn to navigate traditional databases as well as new media sources. The Research Paper is topic-based and divided into three linked units of instruction. The course culminates with a paper of 10-12 pages that draws upon the cumulative skills of the semester. Each course is capped at ten students and available only to those who have taken "Expository Writing" (060.113/114)

Instructor(s): A. Watters

Area: Humanities

Writing Intensive.

**Anthropology**

AS.070.109. Introduction to Environmental Anthropology. 3.0 Credits.

What is an "environment," socially speaking? How have pipelines, animals, conservation, and capitalism shaped the way we talk about "nature" and "society" in the present day? This course examines the mutual transformation of humans and their environments through ethnography, environmental history, cultural and political ecology, human geography, and social theory.

Instructor(s): T. Ozden-schilling

Area: Humanities, Social and Behavioral Sciences.

AS.070.203. Healing: Politics and Poetics. 3.0 Credits.

Metaphors of health and illness; individual and social. The body in pain and the body politic. Ethnographies of historical memory vis-à-vis medicine, epidemics, sacredness, shamanism, terror, humanitarianism, truth and reconciliation.

Instructor(s): J. Obarrio

Area: Humanities, Social and Behavioral Sciences.

AS.070.327. Poverty's Life: Anthropology of Health & Economy. 3.0 Credits.

Medicine, economics, and ethics have profoundly shaped debates on poverty. This course analyzes these debates and tracks the relationships between body, economy, and the everyday. How can anthropological reasoning and methods inform approaches to health and economic scarcity and insecurity?

Instructor(s): C. Han

Area: Humanities, Social and Behavioral Sciences

Writing Intensive.

**History**

AS.100.411. Readings in the History of Public Health in the 20th and 21st Centuries. 3.0 Credits.

The students will read major and some minor works in the history of global public health and will each develop their own concept of how and why the major institutions, professions, and practices associated with public health have evolved over the past long century. To help the students focus on their ideas, they will write three essays on particular aspects of the history.

Instructor(s): L. Galambos

Area: Humanities, Social and Behavioral Sciences

Writing Intensive.

**History of Science Technology**

AS.140.105. History of Medicine. 3.0 Credits.

Course provides an overview of the medical traditions of six ancient cultures; the development of Greek and Islamic traditions in Europe; and the reform and displacement of the Classical traditions during the Scientific Revolution.

Instructor(s): G. Pomata

Area: Humanities, Social and Behavioral Sciences.

AS.140.106. History of Modern Medicine. 3.0 Credits.

The history of Western medicine from the Enlightenment to the present, with emphasis on ideas, science, practices, practitioners, and institutions, and the relationship of these to the broad social context.

Instructor(s): G. Mooney; J. Greene; R. Packard

Area: Humanities, Social and Behavioral Sciences

AS.140.146. History of Public Health in East Asia. 3.0 Credits.

This course examines the history of disease, epidemics, and public health responses in East Asia from the 17th-20th centuries. This public health history emphasizes the interactions, connections, and comparisons among China, Japan, Korea, and Taiwan.

Instructor(s): M. Hanson

Area: Humanities, Social and Behavioral Sciences

Writing Intensive.

AS.140.155. Harm City? Public Health in Baltimore, 1797 to the present. 3.0 Credits.

Explores the history of public health in urban America using Baltimore as example. Examines topics such as include infectious diseases, mental health, sanitation, rodent control, primary care, substance abuse, and STDs using frameworks of racism, classism, poverty and inequality.

Instructor(s): G. Mooney

Area: Humanities, Social and Behavioral Sciences.

AS.140.176. Public Health in East Asia Through Films & Documentaries. 1.0 Credit.

This course uses contemporary films and documentaries to address issues in public health in East Asia, past & present. Topics covered include medicine in turn-of-the-twentieth century Japan and China, revolutionary medicine, STDs, mental illness, HIV/AIDS in China, industrial pollution, the politics of universal health care insurance, and pandemics in East Asia.

Instructor(s): M. Hanson

Area: Humanities, Social and Behavioral Sciences.

AS.140.311. Ecology, Health, and the Environment. 3.0 Credits.

Explores diverse problems linking ecological, environmental and public health themes, with focus on Chesapeake region. Students’ research projects can be outside Chesapeake region.

Instructor(s): S. Kingsland

Area: Humanities, Social and Behavioral Sciences

Writing Intensive.

**Philosophy**

AS.150.219. Introduction to Bioethics. 3.0 Credits.

Introduction to a wide range of moral issues arising in the biomedical fields, e.g. physician-assisted suicide, human cloning, abortion, surrogacy, and human subjects research. Cross-listed with Public Health Studies.

Instructor(s): H. Bok

Area: Humanities, Social and Behavioral Sciences

Writing Intensive.
**Economics**

AS.180.252. Economics of Discrimination. 3.0 Credits.
This course examines labor market discrimination by gender, race and ethnicity in the United States. What does the empirical evidence show, and how can we explain it? How much of the difference in observed outcomes is driven by differences in productivity characteristics and how much is due to discrimination? How have economists theorized about discrimination and what methodologies can be employed to test those theories? What has been the impact of public policy in this area; how do large corporations and educational institutions respond; and what can we learn from landmark lawsuits? The course will reinforce skills relevant to all fields of applied economics, including critical evaluation of the theoretical and empirical literature, the reasoned application of statistical techniques, and analysis of current policy issues. Seniors by Permission Only.

**Prerequisites:** AS.180.102

**Instructor(s):** B. Morgan

**Area:** Social and Behavioral Sciences

**Writing Intensive.**

AS.180.289. Economics Of Health. 3.0 Credits.
Application of economic concepts and analysis to the health services system. Review of empirical studies of demand for health services, behavior of providers, and relationship of health services to population health levels. Discussion of current policy issues relating to financing and resource allocation.

**Prerequisites:** AS.180.102

**Instructor(s):** D. Bishai

**Area:** Social and Behavioral Sciences.

AS.180.390. Health Economics & Developing Countries. 3.0 Credits.

**Prerequisites:** AS.180.301 or AS.180.401; Students may not take AS.180.390 if they took AS.180.391.

**Instructor(s):** M. Gersovitz

**Area:** Social and Behavioral Sciences

**Writing Intensive.**

**Political Science**

AS.190.405. Food Politics. 3.0 Credits.
This course examines the politics of food at the local, national, and global level. Topics include the politics of agricultural subsidies, struggles over genetically modified foods, government efforts at improving food safety, and issues surrounding obesity and nutrition policy. Juniors, seniors, and graduate students only. Cross-listed with Public Health Studies.

**Instructor(s):** A. Sheingate

**Area:** Social and Behavioral Sciences

**Writing Intensive.**

**Writing Seminars**

AS.220.309. Writing Healthy Baltimore. 3.0 Credits.
Students will explore public health issues in Baltimore and then write about them first in short pieces, and then in longer, polished works. The framework will be the mayor's Healthy Baltimore 2015 initiative – launched in 2011 to address the city's top-10 public health problems, including obesity, smoking, drug and alcohol abuse, STDs, cancer, and environmental health hazards. Students will study the initiative and its historical context; examine data sets; explore where and how the initiative intersects with public health practitioners and advocacy groups at the neighborhood level; and write what they learn in different formats, including essays, breaking news, and substance analysis. Students will then "workshop" each other's papers.

**Instructor(s):** K. Masterson

**Area:** Humanities

**Writing Intensive.**

**Sociology**

AS.230.150. Issues in International Development. 3.0 Credits.
Why do billions of people continue to live in poverty? What obstacles stand in the way of secure and dignified lives for all? Who is most likely to bring about change, what strategies should they follow, and what kinds of institutions should they put in place? This course will introduce the main theoretical perspectives, debates, and themes in the field of international development since the mid-20th century. It has three sections. The first section focuses on debates over the optimal conditions and strategies for generating economic growth and on the relationship between growth, human welfare, and inequality. The second section presents critical assessments of development interventions from various perspectives. The third section considers the role of social movements in shaping development and social change in the 21st century.

**Instructor(s):** M. Levien

**Area:** Social and Behavioral Sciences.

AS.230.154. Freshman Seminar: Gender, Health and Aging. 3.0 Credits.
In this course students will develop an understanding of the ways in which gender structures health and well being through adulthood and later life. The experience of sexual minorities and the intersection of gender with class and ethnicity will also be discussed. Students will be expected to participate actively and lead discussions on specific topics.

**Instructor(s):** E. Agree

**Area:** Social and Behavioral Sciences

**Writing Intensive.**

AS.230.324. Gender and International Development. 3.0 Credits.
This course employs a comparative perspective to examine the gendered impact of international development experiences and policies. Students will discuss the historical evolution of how the concept of gender has been constructed, conceptualized, and integrated into international development theory and practice. The course will also examine how greater international development. In particular, we will examine structural theories of poverty reduction, individual theories of power and processes of stratification at the household and family level. Specific issue areas will include the globalization, class and work political participation and social movements. Cross-listed with International Studies (CP IR). Fulfills Economics requirement for IS GSCD track students only.

**Instructor(s):** R. Agarwala

**Area:** Social and Behavioral Sciences.
AS.230.335. Medical Humanitarianism. 3.0 Credits.
Humanitarian organizations play life-preserving roles in global conflicts, and have front-row views of disasters ranging from the 2010 Haiti earthquake to the 2011 Fukushima tsunami in Japan. Yet even while they provide vital assistance to millions of people in crisis, such organizations are beset by important paradoxes that hinder their capacity to create sustainable interventions. They work to fill long-lasting needs, but are prone to moving quickly from one site to the next in search of the latest emergency. They strive to be apolitical, yet are invariably influenced by the geopolitical agendas of global powers. How do such contradictions arise, and what is their impact upon millions of aid recipients around the world? Drawing on case studies from South Sudan to Haiti, this course addresses these contradictions by exploring how and why medical aid organizations attempt, and sometimes fail, to reconcile short-term goals, such as immediate life-saving, with long-term missions, such as public health programs and conflict resolution initiatives.
Instructor(s): I. Naveh Benjamin
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.341. Sociology of Health and Illness. 3.0 Credits.
This course introduces students to core concepts that define the sociological approach to health, illness and health care. Topics include: health disparities, social context of health and illness, and the Sociology of Medicine.
Instructor(s): E. Agree
Area: Social and Behavioral Sciences.

AS.230.358. The Politics of Mental Health. 3.0 Credits.
This course examines how the psy disciplines – psychology, psychiatry, psychotherapy and related fields – create knowledge about the mind, and how these fields have in turn shaped political and social life since early 20th century. We will explore how the psy disciplines have proven useful to projects of state building by reconstructing the human mind as a calculable, quantifiable entity, one that can be measured and governed across diverse educational, military, and healthcare settings. We will then ask how psychiatric categories such as bipolar disorder and PTSD (post-traumatic stress disorder) were created, and consider their impact on both the legal/medical management of illness and on lay and expert notions of sanity and normality. Finally, we will examine the rising influence of humanitarian mental health interventions, and immerse ourselves in the debates they have engendered concerning the use of psychotherapy to alleviate suffering in war and disaster zones.
Instructor(s): I. Naveh Benjamin
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.393. Global Health and Human Rights. 3.0 Credits.
Is access to healthcare a fundamental human right? If so, then which global actors are obligated to provide healthcare to whom, and for how long? How do meanings of health and illness vary across time and place? And finally, how are human rights principles translated into frontline practice in order to promote well-being? This course takes a critical interdisciplinary approach to these questions through a series of global case studies ranging from humanitarian aid in post-tsunami Sri Lanka to anti-FGM (female genital mutilation) campaigns in Ghana. How do international NGOs, UN bodies, and governments collaborate (or compete) to distribute healthcare in places beset by dire resource shortages? Do human rights principles carry legal weight across borders, and if so, could access to healthcare services and essential medicines be litigated in order to compel governments to provide it? And finally, what cultural assumptions do human rights discourses carry with them, and what happens if rights-based approaches are poorly received by recipient populations? Moving beyond the basic principle of healthcare as a human right, this course aims to bring this idea’s history and politics into focus by offering an in-depth exploration of its ethics and implementation.
Instructor(s): I. Naveh Benjamin
Area: Social and Behavioral Sciences
Writing Intensive.

Earth Planetary Sciences

AS.270.308. Population/Community Ecology. 3.0 Credits.
This course explores the distribution and abundance of organisms and their interactions. Topics include dynamics and regulation of populations, population interactions (competition, predation, mutualism, parasitism, herbivory), biodiversity, organization of equilibrium and non-equilibrium communities, energy flow, and nutrient cycles in ecosystems. Field trip included. Permission of instructor.
Instructor(s): K. Szlavecz
Area: Natural Sciences.

AS.271.107. Introduction to Sustainability. 3.0 Credits.
Humans are having such a massive impact on Earth systems that some call this the Anthropocene epoch. Should we consider this state of affairs progress or catastrophe? How to we find a sustainable path to the future? This course provides an interdisciplinary introduction to the principles and practice of sustainability, exploring such issues as population, pollution, energy and natural resources, biodiversity, food, justice, and climate change through the lens of systems thinking. Course open to freshmen, sophomores, and juniors. Seniors by instructor permission only.
Instructor(s): R. Kelly.

AS.271.360. Climate Change: Science & Policy. 3.0 Credits.
Prereq: 270.103 or permission of instructor. This course will investigate the policy and scientific debate over global warming. It will review the current state of scientific knowledge about climate change, examine the potential impacts and implications of climate change, explore our options for responding to climate change, and discuss the present political debate over global warming.
Instructor(s): B. Zaitchik; D. Waugh
Area: Natural Sciences.
Interdepartmental
AS.360.115. Discover Hopkins Health: Food, Nutrition & Public Health. 1.0 Credit.
With the creation of President Barack Obama’s Task Force on Childhood Obesity, there is finally a national focus on the importance of childhood nutrition. First Lady Michelle Obama spearheads the “Let’s Move!” initiative, dedicated to the goal of eradicating childhood obesity through an emphasis on diet and physical activity. This class will tackle the issue of food, nutrition and health from the ground up; looking at multiple behavioral, cultural, and environmental factors that influence what and why we eat. We will also look at how our food systems and eating habits impact the health of individuals, communities, our country, and the world. In this two week session students will have a variety of experiences including trips to a Baltimore City urban farm, the Maryland Food Bank, farmer’s markets, one of Baltimore’s traditional public markets, and a sustainably-sourced restaurant. Students will hear guest speakers from the academic and government sectors.
Instructor(s): C. Burns; S. Lee; Y. Mui
Area: Social and Behavioral Sciences.

Center for Africana Studies
AS.362.325. The Role of “Place” in Racial Ethic Health Disparities. 3.0 Credits.
This course will introduce students to racial/ethnic health disparities, the need to examine the role of “place”, give different definitions of “place”, how the characteristics of where people live affects individual's health, and how this leads to racial/ethnic health disparities. The course will first examine large-scale measures of place, then down to smaller scale measures. Students will discuss various theories generally associated with racial/ethnic health disparities, as well as, the extension of “place” theories to this topic. Students will apply this knowledge through various assignments and activities about racial/ethnic health disparities of interest. These activities include class discussions, group assignments and development of interventions and solution-focused policy recommendations. This course is being offered for sophomores, juniors and seniors who have completed a statistic course or who have received permission from the instructor.
Prerequisites: Students may receive credit for AS.280.411 or AS.362.325, but not both.
Instructor(s): C. Bell
Area: Humanities.

AS.362.371. Public Health Crisis in Africa. 3.0 Credits.
This course examines the historical and current public health crises in Africa. Topics covered include infectious diseases and viral outbreaks, water and food access, sanitation, education, behavioral health, gender equality, health care and health care access, as well as the link between culture, economics and health. Introduction to Epidemiology is recommended but not required.
Instructor(s): M. Smart
Area: Humanities, Social and Behavioral Sciences.

Environmental Health and Engineering
EN.570.108. Introduction Environmental Engineering. 3.0 Credits.
Overview of environmental engineering including water/air quality issues, water supply/ wastewater treatment, hazardous/solid waste management, pollution prevention, global environmental issues, public health considerations/environmental laws, regulations and ethics. Cross-listed with Public Health Studies.
Instructor(s): H. Alavi
Area: Engineering.

Social Policy
http://krieger.jhu.edu/fields/social-policy/
Social policy is the study of policy solutions to the problems of education, inequality, poverty, crime, and other issues faced by society's families and children. It is an interdisciplinary field to which the disciplines of economics, sociology, and political science contribute in equal measure. It is a basic-science field with a strong applied-research focus that can prepare students for careers in government, nonprofits, and the private sector. Students who undertake the social policy minor will work with faculty who are experts in the study of poverty, the labor market, social demography, family structure, educational inequality, political participation, organizational dynamics, and health and welfare policy. They will be strongly grounded in social science training and will apply that training to real-world applications and policies. In the minor, students will be motivated to think about how knowledge translates into policy solutions, making this an appropriate specialization for young people who plan to attend law school, programs in public health, or graduate school in the constituent social science field.

Requirements of the Minor
A Social Policy minor is offered jointly by the Departments of Economics, Political Science, and Sociology. To complete the minor, students must take an introductory course, Introduction to Social Policy and Inequality: Baltimore and Beyond; a 300-level social policy elective in one of the three departments; the Baltimore Policy Fellowship; and a capstone course to be taken after the semester is completed. The preferred sequence is for students to take the introductory course in their freshman or sophomore years, the elective in the fall of their junior year, the Baltimore Policy Fellowship semester in the spring of their junior year, and the capstone course in their senior year. However, modifications in the sequence will be considered. The Fellowship semester will involve course work focusing on urban and national social policy problems coupled with an internship in Baltimore or Washington in a governmental agency or non-governmental organization that is involved with some aspect of social policy, or as a research assistant to a faculty member conducting research on social policy. The capstone course will involve discussion and research among students who have completed the Fellowship semester and is intended to build upon experiences in that semester.

Enrollment in the Fellowship semester will be limited to 15 and requires application and admission. The Social Policy Minor is grounded in the three disciplines and priority will be given to students who are majoring in Economics, Political Science, or Sociology, but students with other majors will be considered.

A list of electives to be used to fulfill the 300-level social policy elective is available on the Social Policy Program website (http://krieger.jhu.edu/socialpolicy). Students can identify these courses in the schedule of classes as they will have a POS-Tag of SPOL-UL.

Students interested in the minor should contact the Director of the Social Policy Program, by sending a message to socialpolicy@jhu.edu.

All courses must be taken for a letter grade and a grade of C- or better must be earned in all minor requirements.

Course Requirements
AS.360.247 Introduction to Social Policy: Baltimore and Beyond 3
AS.360.401 Social Policy Seminar 3
One 300- or 400-level approved social policy elective course from the Economics, Sociology, or Political Science Department

Baltimore Policy Fellowship semester

Sociology

http://soc.jhu.edu/

The Department of Sociology concentrates on two broad areas at the graduate and undergraduate levels: Global social change, which focuses on cross-national, comparative research; and social inequality, which primarily focuses on family, education, work, race, gender, policy, and immigration.

These concentrations trace back to the department’s founding in 1959 by renowned American sociologist James Coleman. The department has since earned a reputation as one of most selective, personalized, and behavioral sciences area designator in at least two other departments or programs.

Scholars in the department share a wide variety of interests and interdisciplinary partnerships. Students are given flexible parameters for their study, and several faculty members have been honored with joint appointments in other Johns Hopkins schools and divisions. The department shares a unique relationship with the Bloomberg School of Public Health, which offers faculty and students access to first-rate collaborations in fields such as population and demography, mental health and mental hygiene, and healthcare organization. The department

is also proudly partnered with the Department of Applied Mathematics and Statistics and is committed to building and maintaining strong foundations in quantitative research methods.

Undergraduate Programs

Major in Sociology

A major in sociology offers undergraduates a variety of post-graduation opportunities. Graduates from the department have found positions in financial institutions, education, non-governmental organizations focusing on international development, research departments of major corporations, and local government social service agencies. Others continue to graduate school in sociology, public health, law, urban planning, and education. A major in sociology can also be combined with the pre-medical course sequence, resulting in a medical school candidate who is well versed in the hard science of the human body and the social science of the human experience. For more details, please visit http://soc.jhu.edu/undergraduate/.

Requirements for a B.A. Degree

(Also see Requirements for a Bachelor’s Degree (p. 7).)

The required courses for a major in sociology provide students with a fundamental understanding of sociological theory, methods, and social statistics. Beyond these core requirements, elective courses are offered on a range of important sociological themes, including gender and family, social structure and personality, education, race and ethnicity, immigration, political sociology, international development, and the evolution of a world social system.

Sociology Electives *

Six elective courses in sociology, at least four must be non-introductory courses (at the 200-level or above)

Additional Social Science Electives

Three non-sociology courses at any level carrying a social and behavioral sciences area designator in at least two other departments or programs

* One elective course may be fulfilled by combining 1 or 2 credit courses for a total of at least 3 credits. All other elective courses must be at least 3 credit courses. Up to two of the six sociology electives and one of the three other social science electives may be independent study or independent research courses (at least 3 credits) supervised by Hopkins faculty. Only one course taken in the summer at JHU may apply towards the sociology electives.

All courses must be taken for a letter grade and a grade of C or better is required.

Foreign language study is not required, but it is strongly encouraged, especially for students considering graduate or professional study.
Sample Program
A typical program might include the following sequence of courses:

Total Credits: 46

Social Policy Minor
The Social Policy minor (p. 633) brings an interdisciplinary focus to the many social problems facing a city such as Baltimore and the nation as a whole. It encourages the search for policy solutions to those problems.

Global Social Change and Development Track
The Global Social Change and Development (GSCD) Track (http://krieger.jhu.edu/arrighi/undergraduate/gscd) is geared towards students interested in understanding critical issues surrounding contemporary processes of globalization and international development. The track provides students with a sophisticated set of research and critical-thinking skills, prepares students for twenty-first century professions, and helps them to become thoughtful global citizens. Ultimately, students pursuing the Global Social Change and Development track will receive a double major in both International Studies and Sociology.

Alpha Kappa Delta (AKD) Honor Society
In spring 2006, the Sociology department was awarded a chapter of the AKD sociology honor society. The chapter welcomed eleven new initiates that year, two faculty members, two new graduate students, and seven undergraduates. We now have over 70 members.

AKD is an open, democratic, international society of scholars dedicated to the ideal of Athropos Katamanthanein Diakonesein or "to investigate humanity for the purpose of service." AKD seeks to acknowledge and promote excellence in scholarship in the study of sociology, the research of social problems, and other social and intellectual activities that will lead to improvement of the human condition. AKD was founded at the University of Southern California in 1920 and affiliated with the Association of College Honor Societies in 1967. There are more than 97,000 lifetime members and over 600 chapters of the Society. These are persons with academic records showing excellence in sociology.

Initiates receive a chapter pin, a certificate of membership, and a membership activation form. Members who submit completed activation forms receive a one-year subscription to Sociological Inquiry, the official journal of the Society, the Alpha Kappa Delta Newsletter, election materials, and other services. In addition, the Society sponsors student paper contests, provides honoraria for initiation speakers, provides funds for student travel to regional sociological meetings, funds research symposia, sponsors a distinguished lecture series at the Annual Meeting of the American Sociological Association, and contributes annually to the ASA Minority Scholarship Fund. AKD members wear AKD honor cords at graduation ceremonies. AKD chapters are important in the academic, professional, and social lives of student and faculty members. They provide opportunities for initiating and sharing activities in keeping with the purposes of the Society.

To be eligible for membership, majors must have at least junior year standing, an overall GPA of at least 3.0, a sociology GPA of at least 3.5, and have taken at least four courses in sociology.

Election to Alpha Kappa Delta is without regard to race, creed, or national origin. For more information, interested students should contact the AKD Faculty Chapter Representatives: Meredith Greif (mgreif1@jhu.edu) & Katrina McDonald (kmcdon@jhu.edu).

James S. Coleman Award
This award was established by the Department of Sociology in 1994 in honor of Dr. James S. Coleman, first chair of the department. The award is for outstanding academic achievement by a senior majoring in sociology.
Graduate Programs

The department's primary educational goal is to train first-class sociology Ph.D.'s. The sociology graduate experience at Johns Hopkins is best characterized as a research apprenticeship—a careful blend of formal instruction, faculty-directed individual study, and supervised as well as self-initiated research. The department's small size and specific concentrations yield a personalized course of study and close relationships with faculty members and fellow graduate students. The social climate is informal, and the mix of students and faculty, drawn from a wide variety of geographic and social backgrounds, constitutes a rewarding intellectual community. For more details, please visit http://soc.jhu.edu/graduate/.

Admissions

Applicants must submit an application fee, personal statement, GRE scores, all college transcripts, at least two (preferably three) letters of recommendation, and a sample of written work. International applicants must also submit a TOEFL score and a financial statement (FS-1G Form: Graduate International Student Notification [F-1/J-1]). Applicants should have a broad background in social science, especially sociology, economics, and psychology. Training in mathematics is encouraged. The department gives greatest weight to an applicant's demonstrated ability and past performance. For more details, please visit http://soc.jhu.edu/graduate/admissions/.

* This fall semester course is taken during the first year. Faculty presentations introduce students to the substantive interests, research and professional background of the sociology faculty. It is graded pass/fail.

To count toward degree requirements, core curriculum courses other than the Trial Paper Research series of courses must be passed with a grade of B- or higher. After the core course requirement is satisfied, additional methods courses from the list above may be used to fulfill the nine-elective course requirement.

Electives

In addition to the core curriculum, graduate students must enroll in seven additional graduate-level courses. At least four of the seven electives must be JHU Sociology department courses. Up to four of the seven electives may be fulfilled by a combination of: 1) credit awarded for previous graduate coursework that predates matriculation at JHU; 2) courses taken outside the department that are permissible under the Handbook rules and with the Departmental advisor's approval; 3) and one directed research and independent study courses within the Department. All must be passed with a grade of B- or higher. While students are free to select these courses, the department strongly recommends that they be taken from diverse fields of specialization so as to maximize the breadth of exposure to core areas of sociology and other disciplines.

Teaching Assistantships

As part of their preparation for future academic work, graduate students are required to register for AS.230.811 Teaching Assistantship and serve as a teaching assistant for at least one semester.

Foreign Language

The Sociology Department no longer requires certification of fluency in a foreign language as part of the Ph.D. requirements. Students should be proactive in gaining the language skills necessary to conduct their TRP and dissertation research, and should work closely with their advisor to determine whether additional language education is needed.

Residence

A minimum of two consecutive semesters of full-time residence is mandatory for all degrees. However, at least six semesters of full-time residence is recommended by the department for completion of the core curriculum, electives, and completion of a research apprenticeship and a trial research paper. By the end of the fourth year in the program, the student is expected to have written a dissertation proposal and have defended it successfully before the appropriate examining committees.

Research Assistantship/Apprenticeship

AS.230.801 and AS.230.804

Students are required to develop practical research expertise through professional-level participation (data analysis, literature searches/reviews, non-routine data processing or coding, preparation and refinement of research instruments, and data/file management). This requirement is fulfilled by satisfactorily completing a Research Apprenticeship, which is required during the student's first year of full-time graduate study in the department. The standard for certification is substantial research accomplishment as judged by the faculty supervisor.

Trial Research Paper

The Trial Research Paper (TRP) affords students the experience of planning and executing a research project that leads to a scholarly paper. The TRP is expected to be a serious, complete work of scholarship, suitable for conference presentation or journal submission. Work on the TRP generally will be done over three semesters with students registering for a total of five TRP courses. By the end of the fall semester of their second year, students should invite a faculty sponsor to supervise the design and execution of the TRP project. A TRP proposal must be approved by the faculty sponsor by the end of the spring semester of the second year. By the end of the fall semester of the third year, the faculty sponsor must approve a draft of the paper which will then be reviewed by another department faculty member. The faculty sponsor, at her or his discretion, may extend this deadline to the end of the intersession period following the fall semester. The faculty reviewer will evaluate the paper and, if necessary, recommend revisions that should be made before the paper is certified. The faculty sponsor will determine required revisions and must certify a final TRP by the end of the spring semester of the third year.

Dissertation

The student must propose and conduct original research presented in a dissertation suitable for publication. The department administers an oral examination which must be passed before the student is allowed to defend before a university board. The dissertation must then be defended either at a Graduate Board preliminary oral examination, based on the
A graduate concentration is not required of Ph.D. students.

Special Programs
The department offers two special programs that coordinate activities in its two areas of concentration. Doctoral students may affiliate with one or both of these programs at their discretion. These programs function as fields of doctoral specialization within the Department of Sociology.

Program on Global Social Change (PGSC)
This concentration of graduate study focuses on cross-national, comparative research and long-term, world-scale social change. The goal of the program is to give students knowledge of the various theoretical perspectives in these areas, experience in data collection and analysis, and expertise in one or more substantive fields.

The program does not focus on a particular geographic area, although faculty members have conducted extensive research on Latin America, Africa, Asia, the Middle East, and Eastern and Southeastern Europe. Instead of a geographical approach, the emphasis is on issues of development and social change that cut across different countries and world regions. Examples are globalization and regionalization, labor and development, city systems and urban primacy, social movements and revolutions, state violence, migration and labor force formation, family structure and change, social structure and personality, and national and international stratification. Students enroll in a sequence of courses and seminars and participate actively in ongoing faculty projects dealing with one or more of the above issues.

In addition, the interdisciplinary character of graduate education at Johns Hopkins offers students ample opportunity to enroll in courses or collaborate in research of faculty in other departments. Faculty associates of the program include distinguished scholars in anthropology, economics, geography, history, political science, and public health.

A graduate concentration is not required of Ph.D. students.

Program on Social Inequality (PSI)
This concentration of graduate study focuses on the causes and consequences of social inequality, the social processes that sustain it, and how social policies can reduce it. These questions are addressed in terms of class, gender, race, ethnicity, and immigration status/citizenship.

The program is designed to train students in the sociological analysis of social inequality among individuals and groups. This training includes course work in areas such as social stratification, the sociology of the family, the sociology of education, sociology of immigration, social structure and personality, social policy, and research design and methods. Students in the PSI program enroll in a sequence of courses and seminars and participate actively in ongoing faculty projects dealing with one or more of the above issues.

In addition, the interdisciplinary character of graduate education at Johns Hopkins offers students ample opportunity to enroll in courses or collaborate in research with faculty in other departments. Faculty associates of the program include distinguished scholars in anthropology, economics, geography, history, political science, and public health.

A graduate concentration is not required of Ph.D. students.

Joint Program: Doctorate in Sociology and Master’s in Applied Mathematics and Statistics
The Department of Sociology, Krieger School of Arts and Sciences, and the Department of Applied Mathematics and Statistics, Whiting School of Engineering, announce a joint program leading to a Ph.D. in Sociology and an M.A. or M.S.E. in Applied Mathematics and Statistics. The purpose of the joint program is to offer Sociology doctoral students an opportunity to acquire advanced statistical knowledge and applied research skills.

The joint program requirements include all the Ph.D. requirements in Sociology and the specially designed requirements for an M.A. or M.S.E. in Applied Mathematics and Statistics. For Sociology Ph.D. requirements, see the Sociology Ph.D. Students Handbook. Applied Mathematics and Statistics courses may substitute for AS.230.600 Introduction to Social Statistics and AS.230.604. Two options for fulfilling the requirements are available for an M.A. or M.S.E. in Applied Mathematics and Statistics. For both options, students are required to meet the Applied Mathematics and Statistics department’s computing requirement (fulfilled through EN.553.413 Applied Statistics and Data Analysis), the purpose of which is to ensure that students are able to effectively use computers to solve mathematical problems.

Note: All Joint Program students are required to complete Responsible Conduct of Research (RCR) training, which is in addition to the HIPPA training required for the sociology Ph.D.

For more information, please visit http://soc.jhu.edu/graduate/jointprogram/.

Facilities
Each resident graduate student is provided office or desk space to conduct his or her studies and research. In addition, the department has a computer lab with a network of computers and printers for graduate student use. Close working relationships exist with other JHU Centers & Programs which provide excellent opportunities for research training.

Financial Aid
The department strives to provide five years of financial aid for all students who are in good academic standing. Eligibility for financial aid in the fifth year ordinarily requires successful oral defense of the dissertation proposal by May 31, following their fourth year in the Ph.D. program.

The department has a number of assistantships that are awarded each year to graduate students in the Ph.D. program. Opportunities are also available for graduate students to work as salaried research assistants with members of the Sociology faculty and staff at associated research centers.

For current faculty and contact information go to http://soc.jhu.edu/directoryindex/faculty/

Faculty
Chair
Andrew J. Cherlin
Benjamin H. Griswold III Professor of Public Policy; sociology of the family, demography, social policy.

Professors
Stefanie A. DeLuca
James S. Coleman Professor of Sociology and Social Policy; sociology of education, sociology of neighborhoods, life course studies.

Lingxin Hao
Sociology of the family, public policy, immigration, social inequality, sociology of education, quantitative methodology.

Ho-fung Hung
Henry M. and Elizabeth P. Wiesenfeld Associate Professor in Political Economy; global political economy, contentious politics, nationalism, and social theory.

Stephen L. Morgan
Bloomberg Distinguished Professor; education, inequality, demography, and methodology.

Beverly J. Silver
Historical capitalism, comparative and world-historical research methods, global inequality and development, labor and social movements.

Associate Professors
Rina Agarwala
International development, gender, labor, migration, globalization, India.

Joel Andreas
Post 1949 Chinese society, transitions to and from socialism, industrial democracy, education and class reproduction.

Katrina Bell McDonald
Sociology of the family, gender/ethnic identity, race and social class.

Vesla Weaver
Bloomberg Distinguished Associate Professor; racial inequality in the United States, how state policies shape citizenship, and the political causes and consequences of the growth of the criminal justice system in the United States.

Assistant Professors
Julia Burdick-Will
Urban sociology, education, stratification.

Ryan Calder
Economic sociology, political sociology, political economy, Middle East, Southeast Asia, Globalization, finance, Islamic banking, Islamic jurisprudence.

Meredith Greif
Race, urban sociology, and health in developing countries.

Michael Levien
Political and developmental sociology.

Christy Thornton
Comparative-historical sociology, global inequality and development, labor and social movements, political economy of Mexico and Latin America.

Professors Emeriti
Karl L. Alexander
Academy Professor in The Academy at JHU/KSAS; sociology of education, social stratification.

Melvin L. Kohn
Academy Professor in The Academy at JHU/KSAS; social structure and personality, cross-national comparative analysis, social class and stratification, sociology and social psychology of work.

Joint Appointments
David M. Altschuler
Adjunct Associate Professor (Institute for Policy Studies) Bloomberg School of Public Health; de-institutionalization and community-based services, delinquency and criminal justice, voluntary organizations and philanthropy, social policy.

Stanley Becker
Professor, Bloomberg School of Public Health; demography.

Joyce Epstein
Research Professor, School of Education (Center for Social Organization of Schools); sociology of education, evaluation research, social psychology.

Kelly Gebo
Adjunct Assistant Professor, School of Medicine; medical sociology and mental health.

Gail Geller
Professor, School of Medicine; ethical, social and cultural implications of genetic advances in the adult, pediatric and family contexts.

Jeffrey Grigg
Assistant Professor, School of Education (Center for Social Organization of Schools); sociology of education, research methods, school reform, social stratification, organization of schooling.

Thomas A. LaVeist
Professor, Bloomberg School of Public Health; medical sociology, mortality, health services, aging.

Vicente Navarro
Professor, Bloomberg School of Public Health; health and social policy, international health, health care policy.

Katherine Smith
Associate Professor, Bloomberg School of Public Health; social determinants of health behavior.

Marc Stein
Assistant Professor, School of Education; neighborhoods, school choice, academic achievement.

Research Professor/Lecturers
Emily Agree
Research Professor; gerontology demography.

Ilil Benjamin
Lecturer; Israel/Palestine, Humanitarism, Asylum and refugees studies.

Huei-ying Kuo
Associate Research Professor; Chinese diasporic business networks, Japanese and British imperialism, as well as Chinese nationalism in East and Southeast Asia.

Stuart Schrader
Lecturer/Assistant Research Scientist; security, policing, and counterinsurgency; the entwinement of foreign and domestic policy; and urbanization.

Sydney Van Morgan
Director of International Studies/Senior Lecturer

For current course information and registration go to https://sis.jhu.edu/classes/
Courses

AS.230.101. Introduction to Sociology. 3.0 Credits.
Introduces students to basic sociological concepts and perspectives, and applies them to a variety of topics including family, work, and the dynamics of class, gender, and racial/ethnic inequalities in the United States and globally.
Instructor(s): E. Agree; R. Calder
Area: Social and Behavioral Sciences.

AS.230.109. Freshman Seminar: Hot Topics in Education. 3.0 Credits.
This course examines current school reform initiatives and the controversies surrounding them through a sociological lens. Freshmen Only
Instructor(s): J. Burdick-Will
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.137. Special Opportunities in Undergraduate Learning: Exploring Baltimore: An Introduction to Urban Studies. 1.0 Credit.
Through an exploration of urban topics, this course will introduce students to data collection and analysis methods used in the social sciences. Students will discuss relevant research published by Johns Hopkins faculty in urban studies. Students will also gain an introduction to their adopted home, Baltimore, by collecting data and conducting field observations in different neighborhoods.
Instructor(s): M. Reese.

AS.230.143. Global Migration: Refugees, Economic Migrants, and Borders. 3.0 Credits.
This course introduces students to the different forms, catalysts, and consequences of global migration. Even as the plight of migrants and refugees has elicited the sympathy of millions worldwide, the majority of them still encounter closed borders and draconian immigration regimes on the fringes of more "desirable” destinations in Europe, Australia, and the United States, and many others remain in limbo in their countries of origin or in transit states. Are these border restrictions new? Or are they consistent with states’ long-standing ways of regulating who is and is not worthy of being admitted through their borders? Throughout the course, we will trace the divergent factors that prompt refugees and economic migrants to migrate, juxtaposing these with the responses of states, international treaties, and humanitarian organizations to their movement and arrival in host countries. Using a variety of written and verbal assignments, we will question the fundamental categories of migration: What is an economic migrant? What is a refugee? How are they different or similar? Whose interests do such categories serve, and how have they been used justify governmental practices of inclusion and exclusion over time?
Instructor(s): I. Naveh Benjamin
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.147. Introduction to Islam Since 1800. 3.0 Credits.
This course is an introduction to contemporary Islam and Muslim societies from approximately 1800 to the present. Key themes will include the colonial encounter, state formation and reform, revolution, Islamic revival, and globalization. Reflecting Islam's status as a world religion, the course will touch on developments around the Muslim-majority world and in the West.
Instructor(s): R. Calder
Area: Social and Behavioral Sciences.

AS.230.150. Issues in International Development. 3.0 Credits.
Why do billions of people continue to live in poverty? What obstacles stand in the way of secure and dignified lives for all? Who is most likely to bring about change, what strategies should they follow, and what kinds of institutions should they put in place? This course will introduce the main theoretical perspectives, debates, and themes in the field of international development since the mid-20th century. It has three sections. The first section focuses on debates over the optimal conditions and strategies for generating economic growth and on the relationship between growth, human welfare, and inequality. The second section presents critical assessments of development interventions from various perspectives. The third section considers the role of social movements in shaping development and social change in the 21st century.
Instructor(s): M. Levien
Area: Social and Behavioral Sciences.

AS.230.152. Housing and Schools: The Social Contexts of Inequality. 3.0 Credits.
Where families live is still a major determinant of the quality of children's schools, and this connection between residential location and educational opportunity plays a significant role in the perpetuation of social inequality. This course will examine recent research in housing and education to develop a critical understanding of the role of social inequality, public policy, and individual choices in shaping housing and school opportunities for families. The course will focus on the intersection of residential and educational choices, by examining housing and school interventions across a host of American cities, with a particular focus on how these issues operate in our own city of Baltimore at the end of the semester.
Instructor(s): A. Rhodes
Area: Social and Behavioral Sciences.

AS.230.154. Freshman Seminar: Gender, Health and Aging. 3.0 Credits.
In this course students will develop an understanding of the ways in which gender structures health and well being through adulthood and later life. The experience of sexual minorities and the intersection of gender with class and ethnicity will also be discussed. Students will be expected to participate actively and lead discussions on specific topics.
Instructor(s): E. Agree
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.166. Chinese Migration in Modern World History 1500's-2000's. 3.0 Credits.
This interdisciplinary course applies theories of economic sociology to examine the effects of Chinese overseas migration on modern world economy from the sixteenth century to the contemporary era. It examines the contribution of overseas Chinese to the development of capitalism in the following junctures: the East-West economic integration in the pre-modern era, China's modern transformation after the Opium War (1839-1842), the making of US national economy in the early twentieth century, as well as the postwar economic miracles in the Pacific Rim, among others. Special Note: Fulfills History requirement for GSCD track students.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences.

AS.230.158. Islam in the World. 3.0 Credits.
This course will trace the development of Islam from its origins in the 7th century to its rise as a world religion more than a thousand years later. Key themes include the role of political power in the growth and spread of Islam, the growth of religious scholarship, the emergence of Islamic political, social, and cultural institutions, the relationship between the different strands of Islamic religious and political thought, and the impact of the Muslim World on the rest of the world.
Instructor(s): M. Levine
Area: Social and Behavioral Sciences.
AS.230.175. Chinese Revolutions. 3.0 Credits.
This course introduces the origins, operation and impacts of five major revolutions in modern China between 1850 and 1950. These include the Taiping Rebellion, the republican revolutions, federalist and southern automatic movements, labor strikes as well as peasant rebellions. It draws on the existing historiography that examines China’s transition from an empire to a republic, impacts of western and Japanese influences to China, as well as the continuity and change of Chinese social organizations. Cross list with International Studies and East Asian Studies. Fulfills IS History requirement.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.195. Exploring Baltimore: An Introduction to Urban Studies. 3.0 Credits.
This course will introduce students to the field of urban studies and Baltimore itself. Students will learn data collection and analysis methods used in the social sciences. Students will discuss relevant research published in urban studies by Johns Hopkins faculty and other experts in the field. Students will also gain an introduction to their adopted home, Baltimore, by collecting data and conducting field observations in different neighborhoods.
Instructor(s): M. Reese
Area: Social and Behavioral Sciences.

The purpose of this course is to provide a sound introduction to the overall process of research and the specific research methods most frequently used by sociologists and other social scientists. Required for Sociology majors and IS GSCD track students.
Instructor(s): L. Hao
Area: Social and Behavioral Sciences.

AS.230.205. Introduction to Social Statistics. 4.0 Credits.
This course will introduce students to the application of statistical techniques commonly used in sociological analysis. Topics include measures of central tendency and dispersion, probability theory, confidence intervals, chi-square, anova, and regression analysis. Hands-on computer experience with statistical software and analysis of data from various fields of social research. Special Note: Required for IS GSCD track students.
Prerequisites: Statistics Sequence restriction: students who have completed any of these courses may not register: EN.550.211 OR EN.550.230 OR EN.550.310 OR EN.550.311 OR EN.550.413 OR EN.550.420 OR EN.550.420 OR EN.550.420 OR EN.560.435 OR AS.280.345 OR AS.200.314 OR AS.200.315 OR EN.560.348; Statistics Sequence Restriction: Students who have completed EN.550.111 OR EN.550.113 may not enroll.
Instructor(s): J. Grigg
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.230.213. Social Theory. 3.0 Credits.
This course will focus on three classical theorists whose ideas have greatly influenced the ways we study and understand society: Karl Marx, Max Weber, and Emile Durkheim. The course is devoted to understanding how each theorist understood the origin, structure and historical dynamics of modern societies. In addition to comparing their theories, we will apply them to current social issues.
Instructor(s): J. Andreas
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.217. Chinese Overseas in Global History. 3.0 Credits.
This course examines the topics of Chinese overseas migration after the long sixteenth century. It investigates the following themes: First, the making of Chinese maritime frontier in the longterm trade and migration across the South China Sea and beyond; Second, economic functions of Chinese overseas networks in the East-West integration from the early modern era to the ongoing wave of globalization; Third, politics of identity and heritage in Chinese overseas communities. Course may not be taken by students that previously took AS.230.166.
Prerequisites: Course may not be taken by students that previously took AS.230.166.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.221. Global Social Change. 3.0 Credits.
This course introduces students to issues of global social change, with a particular focus on the challenges of international development and the contemporary globalization process. Specific themes include world income inequality and global poverty, the rise of supranational organizations (e.g. WTO and EU) and their relations with sovereign states, anti-globalization activism, the rise of China and India in the global economy, and the origins as well as consequences of the current global economic crisis, among others. Lectures will be aided by documentary films and other multi-media materials. Special Note: Fulfills Economics requirement for IS GSCD track students only. Formerly offered as AS 230.353. Students who took AS.230.353 cannot take AS.230.221.
Instructor(s): H. Hung
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.222. Land, Labor, Environmental Rights and Struggles in Contemporary Africa. 3.0 Credits.
The course examines the new wave of social protest and popular uprisings in contemporary Africa through the interconnected themes of land, labor and environmental struggles. Attention will be placed on the early 21st century.
Instructor(s): R. Jacobs
Area: Social and Behavioral Sciences.

AS.230.223. Housing and Homelessness in the United States. 3.0 Credits.
This course will examine the role of housing, or the absence thereof, in shaping quality of life. It will explore the consequences of the places in which we live and how we are housed. Consideration will be given to overcrowding, affordability, accessibility, and past and existing housing policies and their influence on society. Special attention will be given to the problem of homelessness.
Instructor(s): M. Greif
Area: Social and Behavioral Sciences.

AS.230.228. Colonialism in Asia and Its Contested Legacies. 3.0 Credits.
This course surveys the impacts of colonialism in East and Southeast Asia. Special attention will be paid to the social and economic development in British Singapore and Hong Kong as well as Japanese Korea and Taiwan. Topics include free-trade imperialism, colonial modernity, anticcolonial movements, pan-Asianism, and post-war U.S. hegemony.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences
Writing Intensive.
AS.230.237. Sociology and Film. 3.0 Credits.
Do films merely mirror society, or do they in fact shape societal experience? This class will investigate these questions through a filmic analysis of sociological issues. We will consider both narrative and documentary films and use them to engage in sociological questions of class, race, and gender. We will discuss what the historical and current trends in film making and film subject say about society, and how these trends may in turn influence society.
Instructor(s): E. Talbert
Area: Humanities, Social and Behavioral Sciences.

AS.230.244. Race and Ethnicity in American Society. 3.0 Credits.
Race and ethnicity have played a prominent role in American society and continue to do so, as demonstrated by interracial and interethnic gaps in economic and educational achievement, residence, political power, family structure, crime, and health. Using a sociological framework, we will explore the historical significance of race and its development as a social construction, assess the causes and consequences of intergroup inequalities and explore potential solutions.
Instructor(s): M. Greif
Area: Social and Behavioral Sciences.

AS.230.253. Social Interaction. 3.0 Credits.
Interaction in small groups or in face-to-face situations ("microsociology") is the sole focus of this course. Wherever possible, a "hands on" approach in which students do sociology and not just learn about others' efforts is utilized. This will include field observations of public and semi-public spaces, recording and analyzing small group interaction, and participating in SIMSOC, an intense interactive simulation of society. Major conceptual approaches include symbolic interactionism, ethnomethodology and interaction ritual. Students that previously took AS.230.127 may not take this course.
Prerequisites: Students that previously took 230.127 may not take this course.
Instructor(s): T. Nelson
Area: Social and Behavioral Sciences.

AS.230.255. Men and Women in Society. 3.0 Credits.
This course will explore what it means to be male or female through academic writings, fiction, and film. It will examine how genders are defined by individuals, cultures, and institutions, and how those meanings shape everyday life for men and women. Power, inequality, and intersections with race-ethnicity, class, and sexuality will be a primary focus. Theories of gender addressed will include those related to masculinity, social psychology, feminism, and intersectionality. Though the course will primarily consider the United States, gender in other countries and cultures will also be addressed. Cross-listed with WGS.
Instructor(s): K. McDonald
Area: Social and Behavioral Sciences.

AS.230.265. Research Tools for Global Sociology and Development. 3.0 Credits.
This course will introduce students to a range of software programs that are critical for conducting social scientific research in the 21st century. Students will develop competency in the use of computer programs for statistical analysis, database management, the creation of maps and timelines, and the presentation of research reports. The course uses examples from ongoing social science faculty research projects at Johns Hopkins on global inequality and international development. Required for GSCD track students. Course previously titled "Research Tools and Technologies for the Social Sciences"
Instructor(s): M. Kang
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.230.275. Revolution, Reform and Social Inequality in China. 3.0 Credits.
This course explores various aspects of social inequality in China during the Mao Zedong and the post-Mao reform eras. We will examine inequality within villages, the rural/urban divide, urban inequality, education and health policies, and gender and ethnic inequality. Each of these issue areas will be tackled analytically, but the aim is also to understand what it was/is like to live in China during and after the Mao era. Formerly offered as AS.230.321.
Instructor(s): J. Andreas
Area: Social and Behavioral Sciences Writing Intensive.

AS.230.285. Maritime East Asia. 3.0 Credits.
This course examines the transnational connections among merchants and migrants in the waters of East and Southeast Asia from a historical and comparative perspective. We will explore how diplomatic ties, long-distance trade and migration contributed to the making of cosmopolitan cities such as Quanzhou (Zayton), Malacca, Fort Zeelandia (Formosa), Batavia, Manila, Singapore and Hong Kong in the region from the tenth century onwards. The course will close with an examination of how the transnational connections are relevant to understand interstate competition in Asia's long twentieth century. Key subjects to be introduced include tribute trade system, trading diasporas, Euro-Chinese co-colonialism, pan-Asianism, as well as history and historiography of maritime silk road.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences Writing Intensive.

AS.230.293. Immigration in the United States. 3.0 Credits.
This course examines patterns and consequences of immigration at the national, state, and local level. Special attention will be given to changing racial and ethnic relations in American gateway cities, immigrants' economic and cultural assimilation, the plight of the second generation, the importance of immigration policy in shaping the experiences of migrant groups, and public opinion on immigration.
Instructor(s): M. Greif
Area: Social and Behavioral Sciences.

AS.230.310. Becoming An Adult. 3.0 Credits.
While students may already be personally familiar with the subject matter, the course examines the sociological and psychological dimensions of this demographically dense period known as the transition to adulthood. Emphasizes life course theories of human development through readings of empirical work on adolescence, the transition to college, early employment and early family formation. Attention is paid to the ways class; gender; race and nationality influence the pathways, choices and outcomes of young people. A Statistics/ Sociology background is helpful, but not required.
Instructor(s): S. Deluca
Area: Social and Behavioral Sciences Writing Intensive.
AS.230.312. Education & Society. 3.0 Credits.
This course analyzes educational systems as social institutions and organizations. It gives particular attention to the often taken-for-granted ways that we structure learning in schools and their consequences for social inequality. To these ends, the course will examine classical institutional and organizational theory in sociology and evaluate these theories in their application to historical process of educational formation and the contemporary organization of K-12 schooling in the US.
Instructor(s): J. Burdick-Will
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.313. Space, Place, Poverty & Race: Sociological Perspectives on Neighborhoods & Public Housing. 3.0 Credits.
Is a neighborhood just a grouping of individuals living in the same place, or do neighborhoods have collective meanings and impacts on children and families? We will capitalize on research methodologies used to define and describe neighborhoods and their effects on economic and educational outcomes. These include case studies, census data, surveys, quasi/experimental data. Focus is on how research measures neighborhood effects and incorporates community level processes into models of social causation (e.g., social capital/control, community efficacy, civic engagement). Also examined: patterns in residential mobility, segregation, and preferences within black and white populations; development of housing policy in the U.S.; programs to determine how neighborhoods affect issues of social importance. Statistics and public policy background is helpful but not required.
Instructor(s): S. Deluca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.316. African American Family. 3.0 Credits.
This course is an examination of sociological theories and studies of African-American families and an overview of the major issues confronting African-American family life. The contemporary conditions of black families are explored, as well as the historical events that have influenced the family patterns we currently observe. Special attention will be given to social policies that have evolved as a result of the prominence of any one perspective at a given point in time.
Instructor(s): K. McDonald
Area: Social and Behavioral Sciences

AS.230.318. State and Society in Modern India. 3.0 Credits.
This course examines the complex, at times conflicting, relationship that has emerged between Indian seats of power from above and Indian expressions of society from below. Attention will be placed on the period between 1947 to the present.
Instructor(s): R. Agarwala
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.322. Quantitative Research Practicum. 3.0 Credits.
This course provides "hands on" research experience applying sociological research tools and a sociological perspective to problems of substance. Quantitative methods will be emphasized, as applied to census data, survey data and/or archival data. Students will design and carry out a research project and write a research report. Juniors and seniors only. Sophomores require instructor's permission. Recommended Course Background: AS.230.205, AS.230.202
Instructor(s): J. Burdick-Will
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences
Writing Intensive.

AS.230.323. Qualitative Research Practicum. 3.0 Credits.
This course provides "hands on" research experience applying sociological research tools and a sociological perspective to problems of substance. Qualitative observational and/or interviewing methods will be emphasized. Students will design and carry out a research project and write a research report. This course fulfills the "research practicum" requirement for the Sociology major.
Instructor(s): K. McDonald
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.324. Gender and International Development. 3.0 Credits.
This course employs a comparative perspective to examine the gendered impact of international development experiences and policies. Students will discuss the historical evolution of how the concept of gender has been constructed, conceptualized, and integrated into international development theory and practice. The course will also examine how greater international development. In particular, we will examine structural theories of poverty reduction, individual theories of power and processes of stratification at the household and family level. Specific issue areas will include the globalization, class and work political participation and social movements. Cross-listed with International Studies (CP, IR). Fulfills Economics requirement for IS GSCD track students only.
Instructor(s): R. Agarwala
Area: Social and Behavioral Sciences.

AS.230.325. Global Social Change and Development Practicum. 3.0 Credits.
This course provides "hands on" research experience in the field of global social change and development. Students will participate in a collaborative research project analyzing the causes and consequences of the recent upsurge of protest around the world in comparison with previous historical waves of social unrest. The course fulfills the "research practicum" requirement for Sociology majors and is required for the GSCD track.
Prerequisites: AS.230.265 or permission of instructor.
Instructor(s): B. Silver; S. Karatasli
Area: Social and Behavioral Sciences.

AS.230.332. Race, Racism & Racial Privilege. 3.0 Credits.
This course will examine the concepts of race, racism, racial privilege in contemporary America, and the West in general. Examples from other countries will be integrated as well. Historical contexts such as the colonialism, the Civil War and Reconstruction, the Civil Rights movement, and the post Civil Rights era will help to provide an understanding of the social, political, economic, and cultural forces processes that have constructed and shaped the concepts of race and the racialized subject over time.
Instructor(s): K. McDonald
Area: Social and Behavioral Sciences
Writing Intensive.
AS.230.335. Medical Humanitarianism. 3.0 Credits.
Humanitarian organizations play life-preserving roles in global conflicts, and have front-row views of disasters ranging from the 2010 Haiti earthquake to the 2011 Fukushima tsunami in Japan. Yet even while they provide vital assistance to millions of people in crisis, such organizations are beset by important paradoxes that hinder their capacity to create sustainable interventions. They work to fill long-lasting needs, but are prone to moving quickly from one site to the next in search of the latest emergency. They strive to be apolitical, yet are invariably influenced by the geopolitical agendas of global powers. How do such contradictions arise, and what is their impact upon millions of aid recipients around the world? Drawing on case studies from South Sudan to Haiti, this course addresses these contradictions by exploring how and why medical aid organizations attempt, and sometimes fail, to reconcile short-term goals, such as immediate life-saving, with long-term missions, such as public health programs and conflict resolution initiatives.
Instructor(s): I. Naveh Benjamin
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.336. Family, Gender and Sexuality in China. 3.0 Credits.
This course examines social changes in China since the beginning of the People's Republic (1949) through the lenses of family, gender and sexuality. The first half of the course focuses on understanding family institutions, women's status, gender relations and sexualities in connection with major historical transitions between 1949 and the present. The second half includes readings and discussions around several thematic topics regarding family, gender and sexuality in contemporary China in the broader context of politics, economy, and social norms.
Instructor(s): Y. Dong
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.341. Sociology of Health and Illness. 3.0 Credits.
This course introduces students to core concepts that define the sociological approach to health, illness and health care. Topics include: health disparities, social context of health and illness, and the Sociology of Medicine.
Instructor(s): E. Agree
Area: Social and Behavioral Sciences.

AS.230.343. Political Sociology of Latin America. 3.0 Credits.
This course provides an overview of Latin America through its historical, economic, social, and political dimensions. Emphasis will be given to the analysis of social structures: class, race and ethnicity, and the contemporary social movements. The course begins with an overview of the pre-Columbian civilizations and colonial legacies that gave rise to the multiethnic societies and the ethnic conflicts which characterize contemporary Latin America. Cross-listed with Program in Latin American Studies and International Studies (CP)
Instructor(s): M. von der Heydt-Coca
Area: Social and Behavioral Sciences.

AS.230.345. Rising Inequality in Rich Countries. 3.0 Credits.
This course examines explanations for why inequality has increased in North America and Western Europe over the last 40 years. The course focuses on macro-level economic and political changes. Topics include deindustrialization, globalization, financial sector growth, welfare program cuts, and decreasing tax progressivity.
Instructor(s): D. Thompson
Area: Social and Behavioral Sciences.

AS.230.346. Economic Sociology of Latin America. 3.0 Credits.
This course will offer an overview of Latin America's economic reality as an intertwined process of economic and political domestic factors within the constraints of the world economy. Latin American development will be analyzed from a historical perspective. The first half of the semester the course will focus on the analysis of the economic developmental patterns starting in the middle of the 19th century to the populist era in the middle of the 20th century. In the second half of the semester, we will analyze in depth the contemporary neoliberal approach to development. Globalization is the force that drives economic, social and political processes in Latin America. The course will include case studies as well the social conflicts generated by the increasing polarization of the society. Students will be exposed to important sociological theories.
Instructor(s): M. von der Heydt-Coca
Area: Social and Behavioral Sciences.

AS.230.351. Capitalism, Development and Resistance in South Korea. 3.0 Credits.
This course examines the trajectory of capitalist development in South Korea (hereafter, Korea) in the twentieth and the early twenty-first centuries. We will examine debates around the political economy of development in Korea as well as class formation and social and labor protest. This course is designed to help students explore the dynamics of capitalist development and workers' movements in Korea as a case of late development in the global South. The course also draws on theoretical perspectives and methodological tools from comparative and world-historical sociology to better understand the Korean case.
Instructor(s): M. Kang
Area: Social and Behavioral Sciences.

AS.230.352. Chinese Diaspora: Networks and Identity. 3.0 Credits.
This course combines lecture and class discussion. It examines the history and historiography of Chinese overseas migration. Major issues include overseas Chinese as "merchants without empire," Chinese exclusion acts in the age of mass migration, the "Chinese question" in postcolonial Southeast Asia, as well as the making and unmaking of Chinese identity in the current wave of globalization.
Prerequisites: Students may not have completed AS.230.217 previously.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences.

AS.230.355. Homelessness, Vacants and the Right to Housing. 3.0 Credits.
A Community Based Learning (CBL) course organized through the Center for Social Concern, we will collaborate with Housing Our Neighbors (HON) http://www.honbaltimore.org, a local organization comprised of people experiencing homelessness, allies and advocates promoting the human right to housing to examine and engage the vacant housing crisis in Baltimore. Students will be expected to participate in organizing and community sessions as well as ongoing research into the Baltimore vacant property market and ultimately seek to transform housing into a right for all people.
Instructor(s): D. Pasciuti
Area: Social and Behavioral Sciences.
AS.230.357. Baltimore and Beyond. 3.0 Credits.
This course uses the city of Baltimore as a lens through which to explore issues of urban inequality. We will focus on Baltimore's history of racial segregation and concentrated poverty, and its effect on the social and economic well-being of the city and its residents, with attention to education, employment, health and crime. Students will learn how to employ Census data, GIS approaches, and sociological research to inform questions about population change, inequality and the distribution of resources across the city and metropolitan region. Students will also work on one or more policy relevant studies based in Baltimore, including: a project on abandoned and vacant housing, a desegregation intervention, and a longitudinal study of inner city youth. Finally, students will become familiar with Baltimore City's programs and policy approaches to addressing the city's most pressing problems, and will design innovative and effective and innovative solutions as part of their course assignments. Enrollment restricted to Social Policy minors only.
Prerequisites: Students that took AS.360.357 may not take AS.230.357
Instructor(s): S. Deluca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.358. The Politics of Mental Health. 3.0 Credits.
This course examines how the psy disciplines — psychology, psychiatry, psychotherapy and related fields — create knowledge about the mind, and how these fields have in turn shaped political and social life since early 20th century. We will explore how the psy disciplines have proven useful to projects of state building by reconstructing the human mind as a calculable, quantifiable entity, one that can be measured and governed across diverse educational, military, and healthcare settings. We will then ask how psychiatric categories such as bipolar disorder and PTSD (post-traumatic stress disorder) were created, and consider their impact on both the legal/medical management of illness and on lay and expert notions of sanity and normality. Finally, we will examine the rising influence of humanitarian mental health interventions, and immerse ourselves in the debates they have engendered concerning the use of psychotherapy to alleviate suffering in war and disaster zones.

Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.359. Research Seminar on Global Social Protest. 3.0 Credits.
This research seminar will be run as a collective research working group in which we will carry-out a research project on the waves of social unrest around the world from the 19th century to present. The research project seeks to shed light on the recent (post-2008) global upsurge of labor and social unrest -- from the Arab Spring to Occupy Wall Street, from the anti-austerity movements roiling Europe to the wave of workers’ protests taking place in China (including the factories where Ipods, Ipads and Iphones are assembled) -- by comparing it with analogous historical periods since the early nineteenth century. We will document the spread and characteristics of this global wave as well as exploring its causes and consequences. The course will be devoted to the (i) theoretical discussions about major historical waves of social protest and labor unrest in the world, (ii) methodological discussions regarding data collection procedures using digital archives of historical newspapers (including reliability studies), (iii) data-coding, and (iv) substantive analysis of major waves of social protest. This course is suitable for students who are interested in deepening their understanding of the dynamics of global social protest as well as in deepening their experience with hands-on research on a topic of contemporary social and political relevance.
Prerequisites: AS.230.265 OR AS.230.325 OR permission of the instructor.
Instructor(s): S. Kumral
Area: Social and Behavioral Sciences.

AS.230.361. Class and Culture. 3.0 Credits.
This course examines the intersection of social class and culture—both the popular culture of movies, TV, music, etc, and "culture" in the anthropological sense as the shared way of life of a people. The course is divided into three main sections: 1) concepts of class, culture and the ways in which they interact; 2) cultures of each major class within American society, beginning with the "Old" and "New Money" classes, the "New Class" of intelligentsia, the much-invoked Middle Classes, the shrinking Working Class, and continuing through the poverty-stricken Lower Classes; 3) issues of cultural consumption and production and their role in reproducing the class structure.
Instructor(s): T. Nelson
Area: Social and Behavioral Sciences.

AS.230.362. Migration & Development. 3.0 Credits.
This course focuses on the relationship between international migration and development. The course first introduces theories of international migration, immigrant integration, and international development. Building on this foundation, we then examine how immigrants interact with their homeland and how sending country governments tap their diaspora to improve development outcomes. Cross-listed with International Studies (CP, IR). Fulfills Economics requirement for IS GSCD track students only.
Instructor(s): L. Hao; R. Agarwala
Area: Social and Behavioral Sciences
Writing Intensive.
AS.230.363. Sociology of Dispossession. 3.0 Credits.
The “grabbing” of land and natural resources has, in recent years, generated widespread political conflict across the world and put dispossession on the agenda of academics and policy-makers. Nevertheless, compared to other social relations of power, land dispossession has not been central to scholarly or public understandings of capitalism, the state, development, or politics. In this class, we will collectively explore the nascent field that we might call the sociology of dispossession. We will examine existing theories of dispossession, and proceed to challenge, reconstruct or supplant those theories as we consider a wide range of historical examples of dispossession from the English Enclosures and colonial plunder to contemporary urban redevelopment and rural land grabs. This is a reading- and writing-intensive seminar.
Instructor(s): M. Levien
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.364. Ethnic Violence in Comparative and Global Perspective. 3.0 Credits.
This course provides a framework for understanding and analyzing different forms of ethnic violence including ethnic riots, ethnic wars, and genocides around the world. Beginning with foundational texts on defining ethnic groups, we will examine causes and dynamics of ethnic mobilization and violence from different disciplines and perspectives. Throughout the course, we will explore texts that treat key themes in studies of ethnic violence including globalization, economic development, inequality, dismantling of the developmental state, migration, state formation and failure, conflict resolution, and democratization; focusing on various cases of ethnic violence in different regions including Eastern Europe, Basque Region, Turkey, Sudan, India, Sri Lanka, China, and historical cases like Northern Ireland. Fulfills Non-Western History (NWHIST) requirement for IS GSCD students only.
Instructor(s): S. Kumral
Area: Social and Behavioral Sciences

AS.230.367. Islamic Finance. 3.0 Credits.
Today, Islamic finance is a global industry comprising nearly $2 trillion in assets, with hubs from Kuala Lumpur to Dubai to London. But half a century ago, nothing called “Islamic finance” existed. So where did Islamic finance come from? Why is it growing so fast? And what does it mean for finance to be Islamic? We discuss the ban on riba in the Quran and hadith, finance in early and medieval Islamic societies, petrodollars and the birth of Islamic banking in the 1970s, the rise of Islamic capital markets since 2000, contemporary shariah-compliant financial structures, and the constitution of piety through financial practice.
Instructor(s): R. Calder
Area: Social and Behavioral Sciences.

AS.230.369. Sociology in Economic Life. 3.0 Credits.
This course discusses how geopolitics, technology as well as social differentiation (such as race, class and gender) shape the structure of economic actions. Special attention will be paid to patterns of state-business relationship, labor processes, migrant economy, globalization and international division of labor.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences.

AS.230.370. Housing and Homelessness in the United States. 3.0 Credits.
This course will examine the role of housing, or the absence thereof, in shaping quality of life. It will explore the consequences of the places in which we live and how we are housed. Consideration will be given to overcrowding, affordability, accessibility, and past and existing housing policies and their influence on society. Special attention will be given to the problem of homelessness.
Prerequisites: Students may not have previously taken AS.230.223.
Instructor(s): M. Greif
Area: Social and Behavioral Sciences.

AS.230.371. Sociology of Rock. 3.0 Credits.
This course examines the history and dynamics of rock music using key concepts and perspectives from sociology. The course is divided into four sections, each of which examines the phenomenon of rock music from a different analytical perspective. The first section on the origins of rock looks at the confluence of developments in post-war America, especially in terms of race, class and generational change, which produced this new musical form. The second section, “Rock as Cultural Production,” looks at all aspects of the rock “field,” not just artists and audiences but record labels, stores, DJ’s and radio stations, the music press and journalists, performance venues. The third section examines rock as a force for social change and protest from the 1960s until present, and the final section examines the performative aspects of rock as a kind of “interaction ritual” with its own microsociological dynamics.
Instructor(s): T. Nelson
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.373. Urban Sociology. 3.0 Credits.
This course will explore the growth and development of urban areas, and how cities create, influence, and perpetuate social and economic inequalities. It will explore how the community environment shapes social interactions, identities, and attitudes. Specific topics will include urban poverty, residential segregation, housing, crime, and health.
Instructor(s): M. Greif
Area: Social and Behavioral Sciences

AS.230.374. Poverty and Public Policy. 3.0 Credits.
This course examines the causes and consequences of U.S. urban poverty, its implications for health and wellbeing, and explores strategies for addressing it. We cover the major theoretical explanations scholars have advanced to explain the persistence of urban poverty including labor markets, residential segregation, welfare policy, family structure, and the criminal justice system. Within each topic area, students are introduced to a range of interventions aimed at alleviating urban poverty. Students will conduct a formal policy analysis of 20 pages and participate in a mock congressional hearing. Enrollment restricted to Social Policy minors only.
Prerequisites: Students that took AS.360.372 may not take AS.230.374.
Instructor(s): K. Edin
Area: Social and Behavioral Sciences
Writing Intensive.
**AS.230.375. Nations, States, and Boundaries. 3.0 Credits.**
This course explores the historical origins and development of the modern global political order based on sovereign nation-states, the crisis of this order through the twentieth century, as well as the unraveling of this order at the turn of the twenty-first century. We will focus on how dominant political organizations in the changing world order (such as states, political parties, and transnational governing bodies) have been shaped by different social forces (such as classes and ethnic groups) and vice versa. Topics covered include rise and fall of modern nationalism, formation of regional and global governing structures, “civilizational” turn of global politics, waves of separatism and redrawing of nation’s boundaries after the Cold War, politics of immigration and citizenship, among others.
Instructor(s): H. Hung
Area: Social and Behavioral Sciences
Writing Intensive.

**AS.230.377. Colonialism and Anti-Colonialism. 3.0 Credits.**
This seminar examines the theories and historiography of colonialism and anti-colonial movements. It focuses on the establishment of the colonial division of labor, comparative colonialism, identity formation, and nationalism as well as anti-colonial movement.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences.

**AS.230.378. Refugees, Human Rights, and Sovereignty. 3.0 Credits.**
What is a refugee? Since World War II, states that have pledged to offer protection to refugees have frequently been drawn instead to the dictates of nationalism and communitarianism, which prioritize concern for their own citizens, rather than to the needs of forced migrants. As a result, even those migrants that have been formally recognized as refugees according to the 1951 UN Refugee Convention have not been assured of protection, and other migrants have been even less assured. In this course, we will locate the reasons for this reality in the legal, political, and historical underpinnings of political asylum. What is the difference between an asylum seeker and a refugee? How has the refugee category been redefined and contested by international bodies since 1951? How are the ambiguities of real-life violence and persecution simplified in asylum adjudication interviews that require clear, factual narratives? What kinds of protections are offered to asylum seekers, whether by UN bodies, NGOs, or host governments, and how have such protections varied geographically and historically? Finally, what protections, if any, are afforded to those migrants who are fleeing not persecution but rather “merely” endemic poverty or climate-induced displacement? The course draws on literature from sociology, history, anthropology, and international refugee law in order to understand the capacity (or lack thereof) of human rights discourse and declarations to contravene state sovereignty in the name of protecting the rightless.
Instructor(s): I. Naveh Benjamin
Area: Social and Behavioral Sciences
Writing Intensive.

**AS.230.379. Undergraduate Research Seminar. 3.0 Credits.**
Seminar for Sociology students writing senior honor theses and conducting pre-approved independent research projects. Juniors and Seniors Sociology majors only. Permission of instructor.
Instructor(s): S. Kumral
Area: Social and Behavioral Sciences
Writing Intensive.
AS.230.385. Schooling, Racial Inequality and Public Policy in America. 3.0 Credits.

After examining alternative explanations for why individuals obtain different amounts and types of educational training, the course focuses on how an individual’s family background and race affect his or her trajectory through the educational system. The course covers the specific challenges that have confronted urban schooling in America since the 1960s, including the classic literature on the effects of school and community resources on student achievement as well as the development and later evaluation of school desegregation policies. The course also considers case studies of current policy debates in the US, such as housing segregation and school resegregation, voucher programs for school choice, and the motivation for and consequences of the establishment of state-mandated testing requirements. Throughout the course, emphasis is placed upon the alternative modes of inquiry and writing which opposing scholars, policymakers, and journalists use to address these contentious topics.

Instructor(s): S. Morgan
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.388. Sociology of the Family. 3.0 Credits.

Sociological perspectives on contemporary family life, including marriage and divorce, cohabitation, single parenthood, same sex partnerships, children’s wellbeing, balancing work and family responsibilities, domestic violence, and government policy toward families.

Instructor(s): A. Cherlin
Area: Social and Behavioral Sciences.

AS.230.393. Global Health and Human Rights. 3.0 Credits.

Is access to healthcare a fundamental human right? If so, then which global actors are obligated to provide healthcare to whom, and for how long? How do meanings of health and illness vary across time and place? And finally, how are human rights principles translated into frontline practice in order to promote well-being? This course takes a critical interdisciplinary approach to these questions through a series of global case studies ranging from humanitarian aid in post-tsunami Sri Lanka to anti-FGM (female genital mutilation) campaigns in Ghana. How do international NGOs, UN bodies, and governments collaborate (or compete) to distribute healthcare in places beset by dire resource shortages? Do human rights principles carry legal weight across borders, and if so, could access to healthcare services and essential medicines be litigated in order to compel governments to provide it? And finally, what cultural assumptions do human rights discourses carry with them, and what happens if rights-based approaches are poorly received by recipient populations? Moving beyond the basic principle of healthcare as a human right, this course aims to bring this idea’s history and politics into focus by offering an in-depth exploration of its ethics and implementation.

Instructor(s): I. Naveh Benjamin
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.394. Social Statistics. 4.0 Credits.

The application of statistical techniques commonly used in sociological analysis. Topics include measures of central tendency and dispersion, probability theory, confidence intervals, chi-square, anova, and regression analysis. Hands-on computer experience with statistical software and analysis of data from various fields of social research.

Instructor(s): J. Grigg
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.230.395. Contemporary Social Theory. 3.0 Credits.

This course will examine how major social theorists of the 20th century advanced upon the “classical” social theories of Marx, Weber, and Durkheim. As they grappled with the historical events and social concerns of the 20th century—the Russian revolution and its degeneration into Stalinism, the failure of communist movements in the West, the rise and fall of fascism and Nazism, the consolidation of capitalist democracies and welfare states, the emergence of anti-colonial movements in the “Third World,” and the persistence of race, gender and sexuality as forms of domination—social theorists provided novel answers to classical questions of social theory. 1) what is the structure of modern society, how does it change, and how is it reproduced? 2) what is the relation between social structures and ideas, knowledge, and subjectivity? and 3) what are the conditions of possibility for human freedom? Theorists to be covered include Antonio Gramsci, Franz Fanon, W.E.B. DuBois, Georg Lukacs, Talcott Parsons, Herbert Marcuse, Jurgen Habermas, Louis Althusser, Pierre Bourdieu, Michel Foucault, Nancy Fraser, Patricia Hill Collins, Judith Butler, and Henri Lefebvre. In addition to understanding and comparing the theories, we will try to use them to understand contemporary societies.

Instructor(s): M. Levien
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.396. Politics and Society. 3.0 Credits.

This seminar surveys texts that treat key problems of political sociology including the rise of the modern state, the relationship between political and economic power, the origins and nature of liberal democracy, the nation-state and nationalism, states and war, states and welfare, sources of authority, ideology and political contention, social movements, and social revolutions. Fulfills Comparative Politics for International Studies.

Prerequisites: AS.230.213 or permission of instructor.

Instructor(s): J. Andreas
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.397. The Political Economy of Drugs and Drug Wars. 3.0 Credits.

In the United States, we spend more than $100 billion annually on illegal drugs—and the government spends more than $50 billion a year to combat their sale and use. These statistics raise important and complicated social questions. This course will examine the production, sale, use, and control of illegal drugs from a historical and sociological perspective. We will have three objectives: to understand the social construction of drug use and illegality in the United States and other rich countries; to uncover the political and economic consequences of drug trafficking in those countries that produce drugs, particularly in Latin America; and to examine the political economy of drug control through the so-called War on Drugs, both domestically and internationally.

Instructor(s): C. Thornton
Area: Social and Behavioral Sciences.
AS.230.398. In Our Backyard: Housing and Community Change in Baltimore. 3.0 Credits.
This course will focus on how and why urban neighborhoods change. Why does vacant housing grow in some communities, while others seem on the brink of gentrification? Who benefits from neighborhood investment in Baltimore? Can urban revitalization benefit all residents? How can we study these challenging issues? These concerns are as relevant as they have ever been, as Baltimore contends with life after the death of Freddie Gray, contentious investment plans with major developers, and stubborn levels of poverty and crime. In this course, we will read scholarship in urban sociology, economics and housing policy data. A significant portion of the course will be dedicated to the analysis of longitudinal data on neighborhood change in the areas around both of Hopkins' campuses, as well as other communities in the city. The data includes the perspectives of residents, landlords, developers, and community leaders, as well as ground-level observations of street and housing conditions. The course provides students an opportunity to become involved in timely and relevant research in the city, and possibly produce papers that would be suitable for conference submission, senior theses, and writing samples for graduate school. We will also compare efforts in Baltimore to those elsewhere, such as Detroit, Chicago, Brooklyn, Washington, D.C. Previous coursework in statistics will also compare efforts in Baltimore to those elsewhere, such as Detroit, Chicago, Brooklyn, Washington, D.C. Previous coursework in statistics and research methods is helpful but not required.
Instructor(s): S. Deluca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.405. Neoliberalism. 3.0 Credits.
Neoliberalism, a political project that seeks to subject all aspects of social life to free market force, has ascended to orthodoxy in developed and developing countries alike over the last four decades. This course is a reading seminar focused on some of the key classic and cutting-edge original texts that critically examine and debate the origins, socio-political impacts, and crisis of the neoliberal project. It will cover such topics as the genealogy of the neoliberal idea, neoliberal state, informalization of works, neoliberal cities, rise of the one percent, and global governance. Class will be a mix of lecture and seminar-style discussions. Requirements include reading memo, class presentation, and a term paper.
Instructor(s): H. Hung
Area: Social and Behavioral Sciences.

AS.230.407. Comparative Labor Movements Research Seminar. 3.0 Credits.
Research-oriented course on the dynamics of labor and social movements from global and comparative-historical perspective. Prerequisites: AS.230.265 AND AS.230.325
Instructor(s): S. Karatasli
Area: Social and Behavioral Sciences.

AS.230.415. Social Problems in Contemporary China. 3.0 Credits.
In this course we will examine contemporary Chinese society, looking at economic development, rural transformation, urbanization and migration, labor relations, changes in class structure and family organization, health care, environmental problems, governance, and popular protest. The course is designed for both graduate and undergraduate students. Undergraduates must have already completed a course about China at Hopkins. Cross-listed with East Asian Studies.
Instructor(s): J. Andreas
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.435. The China Boom. 3.0 Credits.
This course addresses the origins, global impacts, and demise of China's economic ascendancy as a world economic and political powerhouse at the turn of the twenty-first century. The course will cover the historical origins of the China boom and impacts of the boom on global political economic order. It will also address the social-political imbalances within China that contribute to the global financial crisis and recent slowdown of the Chinese economy. Particular topics include late imperial and Maoist legacies' relation to contemporary economic growth, stages of China's capitalist development, China's outward investment in the developing world, formation and limits of US-China economic symbiosis, and China's participation in global governance, among others.
Instructor(s): H. Hung
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.440. Port Cities and Historical Capitalism in Maritime Asia. 3.0 Credits.
The goal of the seminar is to examine the prospects and limits of understanding the incorporation of Asia in the capitalist world-system from the prism of oceanic connections. The theoretical thrust of this course is to develop but also to adapt Janet Abu-Lughod emphasis on the connections across port cities and littoral in the Afro-Eurasian continents before the long sixteenth century in her Before European Hegemony. But instead of looking at a port city as its adjacent hinterland polity's gateway to global trade in the premodern era, the course examines the multifarious coast-hinterland relationships. The readings are organized by a chronological order, which begins with the historical maritime silk road between the third and thirteenth centuries, and will be followed by Asian port cities in the European age of empire and postwar American-led Cold War Structure, as well as the present-day Chinese New Silk Road Diplomacy. Students are expected to select an issue of regional tensions and to analyze its historical root.
Instructor(s): H. Kuo
Area: Social and Behavioral Sciences.

AS.230.445. Sociology of Religion. 3.0 Credits.
This seminar tackles major issues in the classical and contemporary sociology of religion. We begin with Ibn Khaldun, Friedrich Nietzsche, Karl Marx, Max Weber, Émile Durkheim, and Mary Douglas, asking basic questions: What are religion and the sacred? Why do they exist? What is the relationship between religion and social structure? And what role does religion play in morality, solidarity, boundaries, exploitation, patriarchy, and macrohistorical transformations such as the rise of capitalism? Keeping this theoretical grounding (and its flaws and biases) in mind, we continue to probe the problem of religion in modernity through more-recent writings. Topics include the secularization debate (Are modernity and religion antithetical?); "religious markets" and rational-choice theories of religion; religious revivalism, evangelicalism, fundamentalism, and proselytizing movements; feminist and queer sociologies of religion; civil religion (Is standing for the national anthem a religious act?); embodiment and prayer; Orientalism and postcolonial interrogations of the secular; religious violence and nationalism; the intersectionality of religion with race, class, and caste; and religion and neoliberalism. Although dominant sociologies of religion have focused on Christianity in Western Europe and North America, this course applies a global lens, training significant focus on non-Western and non-Christian contexts.
Instructor(s): R. Calder
Area: Social and Behavioral Sciences
Writing Intensive.
AS.230.460. Research Seminar on Stratification in the Modern World Economy: 1600-2014. 3.0 Credits.
This course examines stratification in the modern world economy from the 16th century to today, covering classical and contemporary theoretical perspectives and empirical studies on the hierarchical structure of the capitalist world economy (including Baranko Milanovic, Thomas Piketty, Andre Gunder Frank, Giovanni Arrighi, Christopher Chase-Dunn, P. Korzeniewicz and T. Moran, W. W. Rostow). Students will be expected to recreate and extend these empirical studies and engage in a quantitative discussion of theories of global inequality and development. In doing so, we will discuss how methodological choices, research designs, choice of indicators and inequality measures affect the outcomes and conclusions of this research. Using this theoretical and empirical background, the course will engage key questions on the contemporary and historical conditions of world inequality such as; has world income inequality been increasing or decreasing over time? Do we see stability or change in the hierarchical structure of the capitalist world economy? What are the consequences for contemporary rise of China and recent global financial meltdown for world income inequality? What will stratification in the world economy look like in the 21st century? Counts as IR/Global Sociology or Economics/Economic Sociology for GSCD Track.
Prerequisites: AS.230.150 AND AS.230.265 or permission of instructor
Instructor(s): D. Pasciuti; S. Karatasli
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.230.500. Independent Study. 3.0 Credits.
Instructor(s): Staff.

AS.230.501. Research Assistantship. 3.0 Credits.
Instructor(s): Staff.

AS.230.502. Senior Honors Program. 3.0 Credits.
Instructor(s): Staff.

AS.230.506. Independent Research. 3.0 Credits.
Instructor(s): Staff.

AS.230.507. Internship. 1.0 Credit.
Instructor(s): Staff.

AS.230.508. Internship. 1.0 Credit.
Instructor(s): Staff.

AS.230.597. Independent Research. 3.0 Credits.
Instructor(s): Staff.

AS.230.598. Summer Internship. 1.0 Credit.
Instructor(s): A. Cherlin; J. Andreas; K. McDonald; L. Hao.

AS.230.599. Independent Study. 3.0 Credits.
Instructor(s): Staff.

AS.230.600. Introduction to Social Statistics.
This course will introduce students to the application of statistical techniques commonly used in sociological analysis. Topics include measures of central tendency and dispersion, probability theory, confidence intervals, chi-square, anova, and regression analysis. Hands-on computer experience with statistical software and analysis of data from various fields of social research.
Instructor(s): J. Grigg
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

AS.230.602. Theories of Society.
This course will focus on three classical theorists whose ideas have fundamentally influenced the ways we study and understand society: Karl Marx, Max Weber, and Emile Durkheim. In the section on Marx, we will also read contributions by his close collaborator, Frederick Engels.
Instructor(s): J. Andreas.

AS.230.603. Contemporary Social Theory.
This course will examine how important schools of social theory challenged and reconstructed the “classical” theories of Marx, Weber, and Durkheim as they grappled with the historical developments and social concerns of the 20th and early 21st centuries.
Instructor(s): M. Levien.

A seminar in multiple regression (least squares and alternative estimation procedures) with a focus on sociological problems and software applications. Extensions to hierarchical linear models will be included. Graduate students should have completed AS.230.600 or the equivalent. Undergraduates only admitted with instructor’s permission, and AS.230.205 or equivalent. Recommended Course Background: AS.230.205, AS.230.600 or equivalent.
Instructor(s): J. Burdick-Will.

AS.230.605. Categorical Data Analysis.
This course provides the students with a set of statistical tools to understand and interpret social science research dealing with categorical dependent variables and to prepare students to apply these models in their own research. The models covered in the course include logit, probit, Poisson, and log-linear models, as well as multi-level models of categorical dependent variables.
Instructor(s): L. Hao
Area: Quantitative and Mathematical Sciences, Social and Behavioral Sciences.

This is an intensive reading seminar on working class formation from a comparative, historical and global perspective, including theoretical and empirical (case study) readings on changes over time in labor process, labor markets, and labor movements. We will build on a range of local case studies to establish spatial and temporal patterns, and discuss the connections between these global patterns and the dynamics of historical capitalism.
Instructor(s): B. Silver.

Individual one-hour presentations by faculty members will introduce students to the faculty’s substantive interests and research styles.
Instructor(s): A. Cherlin.

Advanced seminar for PhD students who are preparing their dissertation proposals or writing their dissertations. Sociology graduate students only.
Instructor(s): H. Hung.

AS.230.611. Seminar on Comparative & World-Historical Sociology.
In this seminar we will read key texts in comparative sociology. The topics covered are cross-national sociology, comparative national development, comparing world-systems, the modern world-system, globalization, and social movements.
Instructor(s): H. Hung.
**AS.230.612. Seminar on Social Inequality.**
This seminar attempts a broad survey of sociological theorizing and research on social stratification in the United States and the role of social institutions in generating and mitigating inequality.
Instructor(s): S. Deluca.

**AS.230.614. Seminar On The Family.**
A discussion-oriented seminar focused on major recent writings on the family, in both the developed and developing nations.
Instructor(s): A. Cherlin.

**AS.230.615. Sem:Panel Data Analysis.**
Instructor(s): L. Hao.

**AS.230.617. Seminar on Immigration.**
In-depth reading and discussion of theories and research on immigration to the U.S. theoretical issues include international migration, immigration, and assimilation. Research topics include: the impact of U.S. immigration laws on immigrant inflows and stocks, self-selection of immigrants, the impact of immigration on the native-born population, and the adaptation of the first and second generations. The course focuses on immigration since 1965 and its related controversies and debates.
Instructor(s): L. Hao.

**AS.230.623. An Introduction to Causal Inference.**
This course introduces strategies for estimating causal effects from a counterfactual perspective, uniting the potential outcome model with causal graph methodology. After an examination of the primary features of the counterfactual perspective and criteria for causal effect identification, the course focuses on developing a deep understanding of data analysis techniques that can work in favorable circumstances, such as matching, regression from a potential outcome perspective, and inverse probability of treatment weighting. The course concludes with the vexing challenges posed by unobserved determinants of both the cause and outcome of interest, and it provides a review of specialized designs that can salvage a research project in these situations.
Instructor(s): S. Morgan.

**AS.230.635. PGSC Research Seminar.**
Working seminar focusing on new research in the field of comparative and world-historical sociology. Sociology graduate students or permission of instructor.
Instructor(s): B. Silver.

**AS.230.641. Urban Youth and Inequality.**
Popular television shows and news media cast stark images of urban youth that range widely from notorious "corner boys" and controversial teen moms, to the celebrated examples of those writers, athletes and artists who beat the impossible odds of their backgrounds. This course takes a more systematic look at this population, with a sociological focus on the demography and social processes that characterize the transition to adulthood for disadvantaged youth growing up in America's cities. We will also examine the role of family, neighborhood, schools and peers in affecting the transition from high school to work and college, early family formation, and participation in risky behavior. Previous and contemporary policy approaches to addressing inequality among these young adults will also be explored.
Instructor(s): S. Deluca.

**AS.230.643. Sociological Analysis.**
An intensive analysis of a wide range of sociological studies, designed to acquaint the student with how sociologists deal with important theoretical issues, using a variety of methods and sources of data. Particular attention will be paid to the logical coherence of the studies and to the fit between data and interpretation.
Instructor(s): H. Hung
Area: Social and Behavioral Sciences.

**AS.230.644. Reading Capital @150.**
Instructor(s): B. Silver; S. Karatasli
Area: Social and Behavioral Sciences.

**AS.230.647. Agrarian Change.**
This course will explore questions related to historical and contemporary trajectories of agrarian change. It begins with classical theoretical debates on the distinctiveness of peasantries and their prospects under capitalism. It will then turn to major themes of agrarian change in the twentieth century: modes of production, class polarization and differentiation, peasant wars, moral economies, everyday resistance, collectivization and decollectivization, food regimes, and depeasantization. It will conclude with new themes in agrarian change, with a particular emphasis on contemporary forms of land dispossession and repossession. The course will be structured as a reading-intensive research seminar.
Instructor(s): M. Levien.

**AS.230.649. Qualitative Research Methods: Domestic and International Fieldwork.**
This course discusses the conceptualization of qualitative research involving fieldwork, and the collecting, analyzing, and reporting of sociological field data in both domestic and international settings. Data collection techniques such as intensive interviewing, participant-observation, document analysis, and ethnography are included. The course also covers the logic of qualitative inquiry, choosing research sites and cases, engaging archival sources, judging the validity and reliability of data, and software-based data analysis.
Instructor(s): K. McDonald; R. Calder
Area: Social and Behavioral Sciences.

**AS.230.650. Macro-Comparative Research.**
The course examines methods of studying long-term, large-scale social change. Both qualitative and quantitative methods are covered.
Instructor(s): B. Silver; C. Thornton.

**AS.230.651. Political Sociology.**
This seminar surveys key problems of political sociology including the rise of the modern state, the origins and nature of liberal democracy, the relationship between political and economic power, the nation-state model and nationalism, ideology and political contention, collective identity, and collective action.
Instructor(s): J. Andreas
Area: Social and Behavioral Sciences.
Instructor(s): B. Silver.

Area: Social and Behavioral Sciences.

A basic understanding of India's contemporary political economy is in contemporary India. The course will focus on the post-colonial era.

AS.230.674. Political Economy of India.
Instructor(s): S. Upadhyay.

Hopkins on global inequality and international development. examples from ongoing social science faculty research projects at Johns timelines, and the presentation of research reports. The course uses statistical analysis, database management, the creation of maps and Students will develop competency in the use of computer programs for are critical for conducting social scientific research in the 21st century. This course will introduce students to a range of software programs that critical are (or perhaps because of it), there has been an explosion of sociological research and writing on the topic over the past 30 years. This course is a survey of major themes, debates and innovative research which have appeared during this period. Because one semester cannot hope to cover it all, we will center on these topics: understandings of culture and its role in social life coming from several theoretical traditions, processes of cultural production and reception, methods of studying culture, and the role of culture in reproducing social inequality.

Instructor(s): T. Nelson
Area: Social and Behavioral Sciences.

"Culture" is a notoriously difficult concept to pin down. Despite this (or perhaps because of it), there has been an explosion of sociological research and writing on the topic over the past 30 years. This course is a survey of major themes, debates and innovative research which have appeared during this period. Because one semester cannot hope to cover it all, we will center on these topics: understandings of culture and its role in social life coming from several theoretical traditions, processes of cultural production and reception, methods of studying culture, and the role of culture in reproducing social inequality.

Instructor(s): T. Nelson
Area: Social and Behavioral Sciences.

This course will introduce students to a range of software programs that are critical for conducting social scientific research in the 21st century. Students will develop competency in the use of computer programs for statistical analysis, database management, the creation of maps and timelines, and the presentation of research reports. The course uses examples from ongoing social science faculty research projects at Johns Hopkins on global inequality and international development.

Instructor(s): S. Deluca.

AS.230.664. Political Economy of India.
This course is designed to critically engage political economy questions in contemporary India. The course will focus on the post-colonial era. A basic understanding of India's contemporary political economy is required.

Instructor(s): R. Agarwala
Area: Social and Behavioral Sciences.

Instructor(s): B. Silver.

AS.230.685. TRP PROPOSAL SEMINAR.
This seminar includes all members of the second year cohort of sociology graduate students. Class meetings will provide feedback and guidance as students develop proposals for their Trial Research Papers. The course will also include a series of professional developments seminars. For Sociology PhD students only.
Instructor(s): A. Cherlin.

AS.230.690. TRP PRESENTATION SEMINAR.
This seminar includes all members of the third year cohort of sociology graduate students. Class meetings will provide feedback and guidance as students revise the final drafts of their Trial Research Papers. For Sociology PhD students only.
Instructor(s): A. Cherlin.

Instructor(s): Staff.
AS.230.815. Trial Research Paper I.
Instructor(s): Staff.
AS.230.816. Trial Research Paper II.
Instructor(s): Staff.
AS.230.817. Trial Research Paper III.
Instructor(s): Staff.
This course is for graduate students in the PhD program in Sociology to obtain graduate credit for work off campus that provides training and the development of skills in teaching and/or research. Before the practicum is begun, the graduate student must identify a sponsoring faculty member or seek permission from the student's faculty advisor. The faculty member or adviser must sign a form that certifies that graduate credit will be granted, verifies the nature of the work to be performed by the student and explains how the practicum helps to fulfill the degree requirement. Once completed, the sponsoring faculty member or adviser submits a grade of pass or fail for the student. This course may be used for Curricular Practical Training (CPT).
Instructor(s): Staff.

Cross Listed Courses

Political Science

AS.191.206. Violence, Fast and Slow. 3.0 Credits.
Is poverty a form of violence? What about lead contamination in drinking water? How about rising sea levels? Do abrupt forms of violence supervene on slower forms? Can political struggles around violence be fast and slow? Can peacekeeping efforts? In this class, we read about violence, fast and slow
Instructor(s): J. Mohorcich
Area: Humanities, Social and Behavioral Sciences.
East Asian Studies
AS.310.307. Governance and Politics in China. 3.0 Credits.
A dramatic rise of popular protests in China today has spurred lively discussions about the causes, dynamics, and impact of these protests. This course will provide students with an opportunity to understand these issues by discussing the social, institutional and cultural background of protests, major forms of protest, social groups involved, government responses, and social implications of various kinds of protests. The first part of the course will explore significant socio-economic changes since 1978 and the effects of these changes on China’s social structure and stratification. This part will also examine changes in governance and political systems in the reform era and review important theories of contentious politics. The second part will examine protests by distinct social groups, including peasants, workers, homeowners, and ethnic minority groups, pro-democratic activists, among others. This part will identify similarities and differences in the demands and actions of different groups, introduce the major forms of popular resistance, and explore how the state deals with them accordingly. The course will conclude with discussion of the outcomes of social protests in China and make a cross-national comparison between protests in China and other authoritarian states. By taking China as an example, this course will enhance students’ knowledge about forms of popular contention and government responses in an authoritarian regime as well as help students develop analytical and critical thinking skills with regard to contentious politics.
Instructor(s): Y. Li
Area: Social and Behavioral Sciences
Writing Intensive.

AS.310.402. Labor Politics in China. 3.0 Credits.
This course explores the transformation of labor relations in China over the past century. It will cover the origins of the labor movement, the changes brought about by the 1949 Revolution, the industrial battles of the Cultural Revolution, the traumatic restructuring of state-owned enterprises over the past two decades, the rise of private enterprise and export-oriented industry, the conditions faced by migrant workers today, and recent developments in industrial relations and labor conflict. The course is designed for upper division undergraduates and graduate students. Cross-listed with Sociology and International Studies (CP).
Instructor(s): G. He; J. Andreas
Area: Social and Behavioral Sciences
Writing Intensive.

Interdepartmental
AS.360.247. Introduction to Social Policy: Baltimore and Beyond. 3.0 Credits.
This course will introduce students to basic concepts in economics, political science and sociology relevant to the study of social problems and the programs designed to remedy them. It will address the many inequalities in access to education and health care, unequal treatment in the criminal justice system, disparities in income and wealth, and differential access to political power. The focus will be on designing effective policies at the national and local level to address these pressing issues. This course is open to all students, but will be required for the new Social Policy Minor. The course is also recommended for students who are interested in law school, medical school, programs in public health, and graduate school in related social science fields. This course does not count as one of the required courses for the Economics major or minor, but it is required for the Social Policy Minor. Cross list with Sociology, Economics and Political Science. Freshman, Sophomore and Juniors only.
Instructor(s): B. Morgan; D. Schlozman; S. Deluca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.360.372. Poverty and Public Policy. 3.0 Credits.
This course examines the causes and consequences of U.S. urban poverty, its implications for health and wellbeing, and explores strategies for addressing it. We cover the major theoretical explanations scholars have advanced to explain the persistence of urban poverty including labor markets, residential segregation, welfare policy, family structure, and the criminal justice system. Within each topic area, students are introduced to a range of interventions aimed at alleviating urban poverty. Students will conduct a formal policy analysis of 20 pages and participate in a mock congressional hearing. Permission of instructor required.
Instructor(s): K. Edin
Area: Social and Behavioral Sciences
Writing Intensive.

AS.360.380. Making America Social Policy. 3.0 Credits.
This course analyzes the distinctive US welfare state in historical and comparative perspective. We begin with a survey of the policy context, an historical overview from the poorhouses through the Great Society, and a tour of welfare states across the rich democracies. We then survey developments – and explain the actual workings of policy – across jobs, education, welfare, pensions, and health care. We explore the institutional and political factors behind their divergent trajectories through conservative revival and the age of Obama. Students will write a seminar paper exploring policy development over time in a program or area of their choosing. Enrollment restricted to Social Policy minors only.
Instructor(s): D. Schlozman
Area: Social and Behavioral Sciences
Writing Intensive.
AS.360.387. Cities, Crime, and the Constitution. 3.0 Credits.
This course is meant to introduce students to the profound challenge of crime in American cities and to the opportunities and obstacles to address it. From gangs, gun violence, and the narcotics trade to crimes targeting vulnerable populations like children and the elderly, the course will survey the breadth and character of criminal enterprises in cities like Baltimore. Students will confront vexing questions raised by contemporary criminal justice practices relating to race, poverty, privacy, and policing. Students will also examine whether institutional reform in the areas of juvenile justice, conviction integrity, fairness in sentencing, and reentry reflect the Constitution's promise of equal justice for all.
Instructor(s): T. Vignarajah
Area: Social and Behavioral Sciences.

AS.360.401. Social Policy Seminar. 3.0 Credits.
This course is designed for students who have completed either the Baltimore intensive semester of the Social Policy Minor. The students will make presentations and pursue joint projects based on what they have learned during the intensive semesters concerning key social policy issues.
Instructor(s): S. Teles
Area: Social and Behavioral Sciences.

Program in Latin American Studies

AS.361.130. Introduction to Latin American Studies. 3.0 Credits.
The goal of this course is to provide an overview of Latin America, analyzing political and cultural aspects, chronologically organized. We will begin studying the origins of the multi-ethnic societies, starting with the ancient civilizations and their transformation under colonization. It is important to understand the survival of cultural traits among indigenous peasants today in the countries that were the cradle of ancient civilizations: Mexico, Guatemala and the Andean countries. In the republican era the course will focus on the classical Caribbean dictators in the first half of the 20th century and their reflection in the literature, comparing the historical reality with the magic representation in the work of Garcia Marquez. The course will scrutinize the most important revolutions in the continent: the Mexican, Cuban and Bolivian revolutions and the geopolitics of USA in the Americas. Weekly lectures related to the assigned reading will focus on specific periods, topics and regions. After each lecture, we will review the material, connecting specific details from the readings with the more theoretical aspects provided in my lecture. The course has a website where the PowerPoint presentations will be posted. Students are encouraged to post their questions, comments and suggestions on the web after their readings. Students will be given a study guide for each lecture, which will be the basis for the exams. Our perspective on Latin America will be enhanced by a selection of few films related to the topics.
Instructor(s): E. Cervone
Area: Humanities, Social and Behavioral Sciences.

Center for Africana Studies

AS.362.111. Introduction to African American Studies. 3.0 Credits.
This is an introductory course on the African-American experience. People of African descent were brought by force to the United States (and other parts of the "New World") yet still managed to forge a rich, resilient, and collective existence. Despite the cruelty of the institution of slavery, African Americans carved out their own cultural systems and a complex body of political and social ideas about the significance of their African roots, as well as the contradictory practices of American democracy and the oppression of black people. This course surveys and analyzes a wide spectrum of contributions made by intellectuals, political leaders, organizations, and race-based strategies that interdependently led to African Americans securing a central and unyielding place in American society.
Instructor(s): K. McDonald
Area: Humanities, Social and Behavioral Sciences.

‘Africa rising’ has become an influential, albeit contested, narrative used by institutions like the International Monetary Fund and World Economic Forum to describe the rapid economic growth in 21st century Africa. This rapid ‘economic growth has been accompanied by another type of ‘Africa Rising’ – a mushrooming of social protest and popular uprisings across the continent. The course will introduce important theoretical perspectives, debates, and examples to equip students to critically examine contemporary social dynamics through the interconnected themes of land, labor and environmental rights and struggles that have gripped the African continent. What has given rise to these awakenings? Who are the actors involved in these actions? What are their demands and strategies? What lessons does it hold for social movement theory and development more broadly? The first section focuses on land reclamation movements, the new wave of ‘land grabs’ and responses from below. The second section presents the role of labour movements and its intersection with popular uprisings. The third section considers responses from communities and movements to the ecological destruction and climate change.
Instructor(s): R. Jacobs
Area: Humanities.

AS.362.207. Race and public policy in comparative perspective. 3.0 Credits.
This course will explore the relationship between racial inequality, racial politics, and policy-making in the western world, particularly as it concerns the fight for equality by people of African descent in the US, Canada, Britain, and France. It will cover historical and contemporary struggles over policy, beginning with the African-American civil rights movement, the ensuing War on Poverty and War on Drugs, and followed by contemporary debates over immigration, racial segregation, poverty and racial economic inequality across the four countries. We will take insights from theory and empirical research to study the role that racial constructs and politics play in policy designs, contests over power and resources, electoral representation, public opinion, social movements, and political change. Through case studies of policies aimed at racial inequality (e.g., affirmative action, police reform, urban revitalization), we will examine why and under what circumstances they arise, what form they take, and in what ways they alleviate or reproduce racial inequality. These questions will be considered in light of the broader impact of neoliberalism on normative ideas about policy, race, and inequality.
Instructor(s): A. Livingstone
Area: Humanities.
AS.362.314. Police and Prisons in Comparative Perspective. 3.0 Credits.
This course will examine policing and prisons in the United States and beyond, with a focus on racial inequality. It will consist of two parts. First, we will explore the contemporary state of prisons and policing in the United States and look at debates around the rise of "mass incarceration" and aggressive forms of policing in the final third of the 20th century. Second, we will explore policing and prison in other parts of the globe in the contemporary moment, highlighting similarities and differences from the U.S. case. What can studying the instruments of social control in other societies reveal about our own? Students will develop an understanding of major trends, keywords, and debates in the literature on policing and prisons, with particular reference to race and racism.
Instructor(s): S. Schrader
Area: Humanities.

Study of Women, Gender, Sexuality

AS.363.325. Feminist and Queer Theory. 3.0 Credits.
This course explores the connections between social justice and academic inquiry. Students are encouraged to develop critical and comparative approaches to the study of gender and sexuality—often in interaction with related issues such as race, class, global health, and violence. Courses in the program are taught by prominent faculty members from across the disciplines and are cross-listed through a variety of departments. New courses are added frequently.

WGS also offers an undergraduate Seminar/Practicum, where students combine volunteer work in a local social service agency with a seminar that explores the connections between social justice and academic inquiry.

Minor Requirements
Students can receive a minor in women, gender, and sexuality by completing six one-semester courses. The following courses constitute the WGS core curriculum (363 prefix); they are offered every year:

- Introduction to the Study of Women, Gender, and Sexuality
- Feminist and Queer Theory
- Gender and Sexuality Beyond the Global West
- Health, Medicine, Gender, and Sexuality
- Internship/Practicum (offered in collaboration with the JHU Center for Social Concern, the internship-practicum combines academic work with volunteer experience)

Students are asked to complete at least two courses from the core WGS curriculum and may choose among the courses cross-listed with other departments for the remaining four. No more than two courses can be lower level (100 or 200). Students must earn a C- or better in all minor requirements and courses may not be taken satisfactory/unsatisfactory.

Please direct inquiries about the undergraduate minor to Katrin Pahl (kpahl@jhu.edu).

Any course with the number 363.XXX

Four additional Women, Gender and Sexuality courses ** 12

Total Credits 18

* At least four 300- or 400-level courses are required for the minor.

While core courses offered in recent years are listed as options, not all courses listed as core courses will be offered on a regular basis and some may have been offered only once. They are listed to provide examples of the types of courses that may be offered.

** These are either courses cross-listed with the Study of Women, Gender, and Sexuality or courses AS.363.xxx.

For current faculty and contact information go to http://anthropology.jhu.edu/wgs/directory.html
AS.363.305. Feminist & Queer Theory: Feminist Queer Theories: Past & Present. 3.0 Credits.

This course offers a range of transnational and US feminist and queer theories, starting from the present with which we are familiar and moving backwards into history. It is designed to facilitate deep engagement with feminist and queer theoretical language/s and concepts, as well as critical approaches applicable to further discourses beyond the class in other disciplines and outside them. The course is divided into 5 units, which roughly organize the reading thematically around the topics of: 1. language and cultural translation, 2. feminist critique, and thinking through the lenses of 3. queerness, 4. race and 5. class. The organization reflects the focus of each unit, yet the topics are intertwined. Students are encouraged to be patient with themselves and the readings and, especially if encountering theoretical discourses for the first time, not to expect to understand everything immediately but rather to acclimate to the radically different thinking of others throughout the course of the semester.

Instructor(s): K. Glanz
Area: Humanities
Writing Intensive.

AS.363.315. Genes, Gender and Reproduction in 20th Century America. 3.0 Credits.

Using the tools of historiography, anthropology and cultural studies, this course will discuss 20th and 21st century debates about gender, genetics and reproduction, family, bioethics and biomedical technology.

Instructor(s): M. Schmidt
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.363.316. Health, Medicine, Gender, and Sexuality: Gender, Sexuality, and AIDS in Africa. 3.0 Credits.

This course uses historical sources to connect constructions of gender and sexuality in Africa from the pre-colonial, colonial, and post-colonial periods to the epidemiology, politics, and culture of the AIDS epidemic.

Instructor(s): J. Cummiskey
Area: Humanities, Natural Sciences
Writing Intensive.
AS.363.325. Black Women, Feminism and Activism. 3.0 Credits.
This course will explore the intersection of race, gender/sexuality and class in regards to activism and social justice by considering black feminist thought and the experiences of black women activists in the 20th century.
Instructor(s): A. Davis
Area: Humanities.

AS.363.326. Capitalism and Gender. 3.0 Credits.
This course explores a range of critical work relating capitalism to gender, sex, and sexuality from theoretical accounts of witchcraft, marriage, and prostitution at the birth of capitalist social relations, to classic feminist debates around housework and reproduction, to contemporary thought on affect, finance, and the global dimensions of women's labor. As a centerpiece to the course we will read sections from Capital, interrogating the place of gender in Marx's text while developing a grasp of its arguments and influence.
Instructor(s): C. Westcott
Area: Humanities
Writing Intensive.

AS.363.327. Gender and Sexuality beyond the Global West: Feminism and Homosexuality in the Islamic World. 3.0 Credits.
This course explores the emerging discourses on gender and sexuality in Islam. As minorities, women and homosexuals developed a shared interest in exegetic tools challenging the dominant narratives that shaped a so-called Muslim tradition. We will investigate disruptive narratives that take place within theological debates but we will also grapple with discourses that have been produced on women and homosexuals in the Islamic World. We will deal with the question of imposing on Muslims a specific conception - that a good amount of scholars have identified as being western - of homosexuality and feminism. A set of questions will guide us through our readings: does sexuality constitute an identity or refer to a practice? Should equality be reduced to identity or can it be understood differently? Are agency and freedom best manifested through subversion and opposition?
Instructor(s): L. Ferhat
Area: Humanities.

AS.363.328. Beyond the Global West: Gender/sexuality, Post-colonialism & Global Capitalism: Feminist Inquiries from Asian Perspectives. 3.0 Credits.
This course examines gender and sexuality issues in both East and South Asian Societies and situates subject matters in the broader contexts of post-colonialism, state formation, revolution and global capitalism.
Instructor(s): Y. Dong
Area: Humanities
Writing Intensive.

AS.363.329. Gender and Sexuality in Contemporary Art in North Africa and the Middle East. 3.0 Credits.
This course aims to explore how gender and sexuality is situated in contemporary artistic practices in the geographical Middle East, through concepts of religion, war, revolution, resistance, nation-state, post-colonialism, and neoliberalism, especially as written and observed first-hand by artists, curators and scholars from the Middle East and North Africa region and their diasporas. Every week, under an overarching topic, notions of gender and sexuality will be questioned through works of selected artists across the region, as well as texts that provide the historical, theoretical, sociological and political background.
Instructor(s): E. Ince
Area: Humanities
Writing Intensive.

AS.363.330. Gender & Sexuality beyond the Global West: The Poetics of "Nasty Women" in Archaic and Classical Greece. 3.0 Credits.
This course is meant to examine the depiction of ambitious and intelligent women in ancient Greek literature of the Archaic and Classics Periods. During this semester we will acquire the critical tools necessary to think about gender in antiquity, with a particular focus on Clytemnestra, Medea, and Helen. Students will gain historical background of ancient Greece, become familiar with a variety of theoretical approaches for understanding gender in antiquity, and develop strategies for reading ancient Greek texts, especially epic, lyric poetry, and tragedy. Special emphasis will be given to exchange, gender, and feminist theoretical frameworks. All course material will be in English.
Instructor(s): R. Franklin
Area: Humanities.

AS.363.331. The Poetics and Politics of Sex: Gender and Sexuality in Twentieth Century European Empires. 3.0 Credits.
This course explores themes around sexuality and empire in nineteenth and twentieth century European empires, including (but not limited to) the gendered policies of colonial regimes, how colonialism encouraged ideal forms of femininity and masculinity, and nationalist feminisms in the era of independence.
Instructor(s): S. Rahnama; S. Stewart
Area: Humanities
Writing Intensive.

AS.363.332. The Poetics & Politics of Sex: Feminist Separatism & Its Afterlives. 3.0 Credits.
In 1977, feminist theorist Marilyn Frye asked, "What is it about separation, in any or all of its many forms and degrees, that makes it so basic and so sinister, so exciting and so repellent?" Her essay, "Some Reflections on Separatism and Power" was a response to the emergence and persistence in the 1960s of a feminist separatist politics, as well as its many detractors, both from outside the feminist movement and within (many black feminists, for example, critiqued the movement's essentialism and its positioning of gender and sexuality above considerations of race). Today, Frye's question still remains a live one; think, for example, of the now commonplace exclamation that one will "move to Canada" (or "leave Earth" as Tina Fey has it) in the face of an ominous political possibility. In a less facetious form, one might consider the separatism latent in the emergence of queer futurity politics, safe space discourse, and a more general pessimism about reform and assimilation as satisfying answers to a continually oppressive status quo. In this course, we will consider the ongoing salience of the idea of separatism, particularly as it is engaged within politics of gender and sexuality.
Instructor(s): N. Dubay
Area: Humanities.

AS.363.334. The Poetics and Politics of Sex: Gender and Sexuality in Twenty-first Century European Empires. 3.0 Credits.
This course explores themes around sexuality and empire in nineteenth and twentieth century European empires, including (but not limited to) the gendered policies of colonial regimes, how colonialism encouraged ideal forms of femininity and masculinity, and nationalist feminisms in the era of independence.
Instructor(s): S. Rahnama; S. Stewart
Area: Humanities
Writing Intensive.

AS.363.335. The Poetics and Politics of Sex: Feminist Separatism & Its Afterlives. 3.0 Credits.
In 1977, feminist theorist Marilyn Frye asked, "What is it about separation, in any or all of its many forms and degrees, that makes it so basic and so sinister, so exciting and so repellent?" Her essay, "Some Reflections on Separatism and Power" was a response to the emergence and persistence in the 1960s of a feminist separatist politics, as well as its many detractors, both from outside the feminist movement and within (many black feminists, for example, critiqued the movement’s essentialism and its positioning of gender and sexuality above considerations of race). Today, Frye’s question still remains a live one; think, for example, of the now commonplace exclamation that one will “move to Canada” (or “leave Earth” as Tina Fey has it) in the face of an ominous political possibility. In a less facetious form, one might consider the separatism latent in the emergence of queer futurity politics, safe space discourse, and a more general pessimism about reform and assimilation as satisfying answers to a continually oppressive status quo. In this course, we will consider the ongoing salience of the idea of separatism, particularly as it is engaged within politics of gender and sexuality.
Instructor(s): N. Dubay
Area: Humanities.

AS.363.337. The Poetics & Politics of Sex: Struck From the Record: Reclaiming Women’s Contribution to the Global March Towards Modernity. 3.0 Credits.
The course examines claims that present women’s historic role as limited to confinement in the home, and bearing children. Students will gain an understanding of the complexity the world's path to modernity and the important, and?until recently, silent?roles that women have played.
Instructor(s): S. Stewart
Area: Humanities
Writing Intensive.
AS.363.340. Costumes and Masquerades of the Self. 3.0 Credits.
An introduction to some of the fundamental texts and concepts of
gender theory through the study of representations, literary and art
historical, of dress. From cross-dressing in Shakespeare and George
Sand, Baudelaire's Dandy, to Woolf's notion of "frock consciousness,"
Hwang's Mr. Butterfly, and Cindy Sherman's parodies. Theoretical
Instructor(s): E. Ender
Area: Humanities.

AS.363.341. The Making of Modern Gender. 3.0 Credits.
Gender as we know it is not timeless. Today, gender roles and the
assumption that there are only two genders are contested and debated.
With the binary gender system thus perhaps nearing its end, we might
wonder if it had a beginning. In fact, the idea that there are two sexes
and that they not only assume different roles in society but also exhibit
different character traits, has emerged historically around 1800. Early
German Romanticism played a seminal role in the making of modern
gender and sexuality. For the first time, woman was considered not a
lesser version of man, but a different being with a value of her own. The
idea of gender complementation emerged, and this idea, in turn, put more
pressure than ever on heterosexuality. In this course, we will trace the
history of anatomy and explore the role of literature and the other arts in
the making and unmaking of gender.
Instructor(s): K. Pahl
Area: Humanities.

AS.363.350. Gender, Sexuality, and Religion: Muslim (In)Visibilities. 3.0
Credits.
"Muslim (In)Visibilities" focuses on gender and sexuality through
Orientalism. It considers representations of Muslim bodies within popular
Western discourses and what such (in)visibilities are productive of.
Instructor(s): M. Banahi
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.363.359. Poetics and Politics of Sex: Intimacy and Its Discontents. 3.0
Credits.
Where might one turn for intimacy if its available forms are dissatisfying?
What happens when politics authorizes certain forms of intimacy but not
others? How might intimacies and their discontents lack a language to do
them justice? This course explores problems with normative intimacies
such as monogamy, family, and intimate publics. It covers issues such
as optimism, ambivalence, trauma, queerness, war, and longing. It also
explores how authors try to describe intimacy through different genres,
such as poems, aphorisms, novellas, essays, and scholarly articles.
Instructor(s): C. Shomura
Area: Humanities
Writing Intensive.

AS.363.417. Internship/Practicum: Critical Theory and the Possibility of
Social Justice. 4.0 Credits.
This course combines a weekly seminar with 4 hours per week in a
Baltimore social justice organization, coordinated by the JHU Center for
Social Concern. Class discussions draw on readings in ethnography and
feminist, queer and critical race studies to address topics such as; race,
class and gender inequality, neoliberal development, health, institutional
violence and politically engaged research.
Instructor(s): A. Krauss
Area: Humanities, Social and Behavioral Sciences.

AS.363.418. Internship Practicum: Feminist Ethnographic Methods and
Social Justice Organizations. 3.0 Credits.
This course is for students who are working with social justice
organizations. It will introduce students to ethnographic research that
is informed by feminist methodologies of listening, care, ethics, and
structural analysis. Methods will be oriented to the "inside" and "outside"
of organizations."Inside" the organization might refer to listening to
marginalized voices, examining the place of bureaucracy and paperwork,
and engaging with activist research and records. Reaching beyond the
organization proper, we will learn to analyse localities, and less tangible
zones such as social media, political networks, and the state.
Instructor(s): M. Sehdev
Area: Humanities.

AS.363.419. Internship/Practicum: Dividing the Divisions. 3.0 Credits.
This course examines the essentially political ways in which class, race,
and gender relate to one another in the context of social division of labor,
resources, and representation. It intends to show how reflection and
transformative practice can best change the instances of social injustice
through introducing new divisions within the existing imposed divisions
in a manner that will make ineffective and inoperative the latter. With
the help of the analytic of the central modern notion of class and class
relations, we will revisit the relations of gender and race in concrete
situations. The course is twofold, practical and theoretical within the
framework of Women, Gender, and Sexuality. In one fold, students will
have the chance to engage in some kind of practical-social activity out
in an actual community with people who are committed to all sorts
of social work. This can span from LGBTQ or immigrant workers to
addiction among women. In the other fold, we will undertake theoretical
reflections on various aspects of these activities. We will read texts
mainly in feminist and Marxist traditions. How these two folds relate to
one another will be one key question of the whole course.
Instructor(s): O. Mehrgan
Area: Humanities.

AS.363.420. Stories of Hysteria. 3.0 Credits.
Hysteria, an elusive and polymorphous disease associated with
the female body, was first diagnosed in Greek Antiquity. When, in
the late nineteenth-century, Sigmund Freud decided to study it, he
made discoveries that shaped in a decisive way the new science of
psychoanalysis and offered new foundations for discussions of what
we might now call "psychosomatic illness." Though rarely diagnosed
nowadays, hysteria provides a fascinating introduction to medical,
clinical, social, and ethical questions connected to gender that have
lost none of their relevance. We will study fictional narratives from the
18th century to the present as if they were case-studies — as a way of
appraising hysteria’s changing and provocatively volatile definitions
time across and in different cultural frameworks. Among our topics:
trauma and PTSD, the concept of repression, masculinities, women and
madness, and, above all, transformations in gender roles and identities
in the modern era. In addition to selected readings of medical and historical
materials available on Blackboard, texts for study are: The Nun (Diderot),
Trilby (du Maurier), Fragment of a Case of Hysteria (Freud), Regeneration
(Barker), The Icarus Girl (Oyeyemi), Redeployment (Klay).
Instructor(s): E. Ender
Area: Humanities.
AS.363.445. Reading Judith Shakespeare: Women and Gender in Elizabethan England. 3.0 Credits.
If Shakespeare had a sister who went to London to be a writer, what would she write? Virginia Woolf’s account of the thwarted career of Shakespeare’s hypothetical sister, Judith, in A Room of One’s Own frames our reading of plays and poetry by Shakespeare and contemporary women writers, including Isabella Whitney, Elizabeth Cary, Mary Sidney, Amelia Lanyer, and Mary Wroth. Working within a selected historical context, students will create fictional biographies of “Judith Shakespeare,” including her perspective on our identified authors and a sample or description of Judith’s own literary accomplishments. Secondary course readings will reflect contemporary economic, political, and religious contexts.
Instructor(s): E. Patton
Area: Humanities
Writing Intensive.

AS.363.502. Independent Study. 3.0 Credits.
Instructor(s): E. Patton.

AS.363.601. WGS Graduate Colloquium.
Presenting new scholarship and art, the WGS Graduate Colloquium will catalyze intellectual discussions in which gender and sexuality concerns play important roles. The seminar includes lectures by invited speakers and a film series. Graduate students are encouraged to develop critical and comparative approaches to the study of gender and sexuality—often in interaction with related issues such as race, class, violence, law, medicine, art, and emotionality. This seminar can be taken for credit or audit.
Instructor(s): K. Pahl; T. Shepard
Area: Humanities.

Cross Listed Courses

History of Art
AS.010.331. The Renaissance Body Exposed: Exhibiting the Nude in European Art 1400-1550. 3.0 Credits.
Explores the extraordinary currency of the naked human figure in pre-modern European visual culture, only inadequately accounted for by explanations such as the "rise of naturalism" or the "revival of antiquity." Will also explore curatorial questions arising from an exhibition currently in preparation on the Renaissance nude. Assignment in the form of catalog texts and a "virtual exhibition."
Instructor(s): S. Campbell
Area: Humanities
Writing Intensive.

Classics
AS.040.140. Gender and Sexuality in Early Greece and the Eastern Mediterranean. 3.0 Credits.
In this course we will explore evidence and interpretations of gender and sexuality in the region of the Aegean and eastern Mediterranean during the third and second millennia BCE. Material investigated will include the "snake goddess" figures from Minoan Crete, anthropomorphic figurines from the Cyclades and Cyprus, wall paintings, etc. In each case we will consider the history of interpretation as well as investigate the objects’ archaeological and sociocultural contexts. Discussion topics will include representational ambiguity, the specific materialities of objects, and their possible roles in activities construing gender. The course will incorporate material from the JHU Archaeological Museum.
Instructor(s): E. Anderson
Area: Humanities

AS.040.218. Celebration and Performance in Early Greece. 3.0 Credits. 
Surviving imagery suggests that persons in Minoan and Mycenaean societies engaged in various celebratory performances, including processions, feasts, and ecstatic dance. This course explores archaeological evidence of such celebrations, focusing on sociocultural roles, bodily experience, and interpretive challenges.
Instructor(s): E. Anderson
Area: Humanities.

English

AS.060.201. The Nineteenth Century British Novel. 3.0 Credits.
Reading major novels from the nineteenth century including Austen, C. Brontë, Dickens, Eliot, Hardy, and Conrad. We will pay attention to formal conventions, and relation to social and historical context.
Instructor(s): J. Rosenthal
Area: Humanities.

AS.060.205. Feminist Fiction: Violence, Sex and Gender. 3.0 Credits.
This course will start with passages from Lysistrata and the Book of Judges, and have as a running concern the overlapping structures of violence, race and gender. Novels will include the following pairs: Jane Eyre and Wide Sargasso Sea, The Bluest Eye and Bastard Out of Carolina, The Handmaid’s Tale and Octavia Butler’s novella Bloodchild.
Instructor(s): M. Favret
Area: Humanities.

AS.060.319. Values and Gender in Nineteenth-Century British Literature. 3.0 Credits.
The course considers how nineteenth-century British authors—including Ruskin, Gaskell, Eliot, and Wilde—engage and oppose various sets of values in their representations of gender.
Instructor(s): M. Flaherty
Area: Humanities
Writing Intensive.

AS.060.320. Icons of Feminism. 3.0 Credits.
This course looks at four crucial figures who have haunted feminist thought and responses to feminism over the centuries. Sappho, known as the first female poet, remains an enigmatic icon of feminine desire and creativity; Antigone, the daughter of Oedipus and the heroine of Sophocles’s play Antigone, still inspires feminist analyses of women’s relationship to law, the state and civil society; and Joan of Arc, the militant maid of Orleans, troubles thinking about women and violence as well as women, religion and spirituality. The last figure is Mary Wollstonecraft, often cited as the first modern feminist. The course will examine literary works written about these iconic figures, as well as contemporary feminist writing about their influence and viability as models for the future of feminism.
Instructor(s): M. Favret
Area: Humanities
Writing Intensive.

AS.060.348. Virginia Woolf and Bloomsbury. 3.0 Credits.
An exploration of the achievements and investments of one of the most influential coteries in the history of Britain. In addition to delving into key fictions by Virginia Woolf, we will examine novels by Leonard Woolf and E. M. Forster, art criticism by Roger Fry and Clive Bell, biographical essays by Lytton Strachey, economic writings by John Maynard Keynes, and poetry by T. S. Eliot.
Instructor(s): D. Mao
Area: Humanities
Writing Intensive.
AS.060.388. Old World/New World Women. 3.0 Credits.
The course considers the transatlantic writing of three women in the early modern period, Anne Bradstreet, Aphra Behn, and Phillis Wheatley. We will consider issues of identity, spirituality, religion, commerce, enforced labor, sexuality, race, and gender, along with literary tradition, formal analysis and poetics. We will read a good deal of these early women writers. Foremost in our mind will be the question of how perceptions of space and time are mediated through the global experiences of early modernity.
Instructor(s): S. Achinstein
Area: Humanities
Writing Intensive.

Film and Media Studies
AS.061.389. Women Making Movies (Europe). 3.0 Credits.
This course introduces students to some of the most exciting female directors of the 20th century, asking how gender shaped the production and reception of their films. Do particular directors attribute any significance to the fact of being a woman? Does a director’s gender shape her choice of subject or how she represents it? Does wider knowledge of works directed by women change our sense of the canon and authorship? Covers non-U.S. films, strongly encouraged for FMS majors and minors. Cross-listed with WGS. No pre-requisite.
Instructor(s): L. Mason
Area: Humanities.

AS.061.391. Love and Film. 3.0 Credits.
In this course, we explore different understandings of “love” and the way that film has dealt with the concept as a medium. We explore a variety of approaches to the question of “love” - from the agapic to the familial to the romantic - through a series of interdisciplinary readings ranging from philosophy to anthropology. We will also equally explore the question of how film has engaged with the question of love as a concept, and what depictions of human affection - from the general to the personal - it has offered us. Screenings are required for this course. Lab fee: $50
Instructor(s): M. Ward
Area: Humanities
Writing Intensive.

AS.061.393. Violent Attractions. 3.0 Credits.
Violence, ritualized and anarchic, celebrated and deplored in popular film from silent era melodrama and slapstick comedy to contemporary sports, crime, and combat films. Twice-weekly screenings; oral presentation; two essays, 6 & 12 pp. Lab fee: $50
Instructor(s): L. Bucknell
Area: Humanities.

AS.061.397. French Masculinities. 3.0 Credits.
Examines changing ideals of masculinity in France after 1960 as they found expression on film, rooting the work of iconic stars and directors in their cultural, political and historical contexts.
Instructor(s): L. Mason
Area: Humanities
Writing Intensive.

Anthropology
AS.070.327. Poverty’s Life: Anthropology of Health & Economy. 3.0 Credits.
Medicine, economics, and ethics have profoundly shaped debates on poverty. This course analyzes these debates and tracks the relationships between body, economy, and the everyday. How can anthropological reasoning and methods inform approaches to health and economic scarcity and insecurity?
Instructor(s): C. Han
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.385. From Sexual Nature to Sexual Politics. 3.0 Credits.
This course traces anthropological concern with questions of sexuality. Students will explore anthropological notions of primitive promiscuity, cultural configurations of the correspondence between sex, procreation, and birth, and ideas about sexual rites of passage. The course will end with a discussion of sexual politics in Euro-America and public concern over HIV/AIDS. The course draws on the work of Freud, Malinowski, Meade, Herdt, Povinelli, Rubin, Bersani and Halperin. Cross-listed with Women Gender Studies
Instructor(s): A. Goodfellow
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.070.436. Vulnerability. 3.0 Credits.
Many in the contemporary world live in states of acute vulnerability. In this course, we will look closely at situations like forced displacement, experience of poverty and injury, environmental devastation, and the politics of social protest. Thinking with ethnography, feminist philosophy, fiction, and film, we will explore whether vulnerability may be taken as a condition to live with rather than one to overcome at any cost.
Instructor(s): A. Pandian
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

History
AS.100.201. Freshman Seminar: Prostitution in a Global Perspective, 1750-2012. 3.0 Credits.
This course examines topics such as the "medical model" of prostitution regulation, the rise of international anti-prostitution, and the responses of modern nationalists to sex work in a global context.
Instructor(s): S. Stewart
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.213. Freshman Seminar: History of Gender and the Family in the United States. 3.0 Credits.
For Freshman Only. Discussion style. Introduces major themes since 1700: family sentiment and authority relations; gender and sexuality; family and work; dynamics of family and race. Readings emphasize interdisciplinary perspectives and interpretation of primary sources.
Instructor(s): T. Ditz
Area: Humanities, Social and Behavioral Sciences.

AS.100.311. National Pastimes: Sports, Culture, and American History. 3.0 Credits.
National Pastimes examines the development of sports in the United States over the course of the 20th century with a particular interest in the relationship between sports and politics as well as issues of race, gender, sexuality and class.
Instructor(s): A. Davis
Area: Humanities, Social and Behavioral Sciences.

AS.100.323. America in the 1960s. 3.0 Credits.
The years between 1959, when the course begins, and 1971, when it ends, were tumultuous and divisive. This course explores the political, racial, and cultural struggles of a half century ago.
Instructor(s): R. Walters
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.
AS.100.327. Gender and Sexuality in Reformation and Counter-Reformation Europe. 3.0 Credits.
This course will discuss the centrality of gender, sexuality, and gendered rhetoric to the genesis and development of the Protestant Reformation and Catholic Counter-Reformation in Europe.
Instructor(s): J. Keene
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.357. Panic and Liberation: The Politics of Sex in 20th Century Europe. 3.0 Credits.
This course examines the 20th century history of sexual attitudes, desires, behaviors, identities, communities, and movements in Western Europe (most notably, Germany, France, and the United Kingdom).
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.359. Gender, Patriarchy, and the English Revolution. 3.0 Credits.
This course explores the varied experiences of gender and gender roles in seventeenth-century Britain and analyzes how these roles were challenged, changed, and sometimes upended during the English Revolution (1642-1660).
Instructor(s): C. Hinchliff
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.372. The Victorians. 3.0 Credits.
This course focuses on the politics of everyday life, consumption, intimate relations, and concepts of the self in Britain and its empire in the long nineteenth century. We devote particular attention to visual culture, entertainment, and the built environment. Course themes include popular nationalism; class differences; gender and body politics; and imperial expansion and racial thought.
Instructor(s): L. Pepitone
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.397. U.S. Histories Male and Female. 3.0 Credits.
This seminar will be devoted to exploring gender differences as they have been expressed in a sequence of autobiographies and autobiographical fiction set in a shifting social and historical context.
Instructor(s): M. Ryan
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.424. Women & Modern Chinese History. 3.0 Credits.
This course examines the experience of Chinese women, and also how writers, scholars, and politicians (often male, sometimes foreign) have represented women's experiences for their own political and social agendas. Cross listed with East Asian Studies.
Instructor(s): T. Meyer-Fong
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.426. Popular Culture in Early Modern Europe. 3.0 Credits.
Witchcraft, magic, carnivals, riots, folk tales, gender roles; fertility cults and violence especially in Britain, Germany, France, and Italy.
Instructor(s): J. Marshall
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.498. History of the Family & Gender in the United States. 3.0 Credits.
Topics include: history of emotions; politics of sexuality and marriage; impact of race, ethnicity, and class on family life; women and gender inequality. Primarily colonial era through the early twentieth century, with some attention to contemporary politics of family, gender, and sexuality.
Instructor(s): T. Ditz
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.635. Topics in European Imperial History.
This graduate reading course covers key topics in European Imperial History, c. 1600-1900.
Instructor(s): G. Paquette
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.100.765. Problems in Women and Gender Studies.
An exploration of recent work in women's and gender history, focusing on some of the following: sexuality, cultural production, politics, family formation, work, religion, difference, and civic orders.
Instructor(s): E. Rowe; H. Kim

Near Eastern Studies

AS.130.105. Freshman Seminar: Sex, Drugs, and Rock & Roll in Ancient Egypt. 3.0 Credits.
This seminar explores the social roles of sexuality, alcohol, other drugs, music, fragrance, and sensuality in secular and religious areas of Egyptian life, largely but not exclusively during the New Kingdom, ca. 1500 to 1000 B.C. The ancient attitudes towards these elements will be explored through the ancient textual sources in translation and the artistic representations.
Instructor(s): B. Bryan
Area: Humanities
Writing Intensive.

AS.130.330. The Garden of Eden. 3.0 Credits.
References to the story of the Garden of Eden can be found in every significant issue of our time, from sex to politics, from race to the environment. The course will examine the story itself as well as how it's been interpreted, leading up to today. Enthusiastic participation required.
Instructor(s): E. Robbins
Area: Humanities

AS.130.395. Being... in Ancient Egypt: Ethnicity, Sexuality, and Gender. 3.0 Credits.
What was it like to live in ancient Egypt? At first this question may seem deceptively straightforward. But with further thought, its complexity becomes clear. Who are we concerned with? How the king lived? A poor farmer? His wife or children? A foreign immigrant? Moreover, what is our evidence for life in Egypt? Do all of the sources support similar interpretations? This course will begin to tackle these questions by considering the experiences of different people in ancient Egypt.
Instructor(s): T. Prakash
Area: Humanities.
History of Science Technology
AS.140.350. Disability in 20th century America: Rights, Restrictions, Reproduction. 3.0 Credits.
Is disability a biological fact or determined by culture? This class discusses different ideas of difference in the context of disability rights, professional power, reproductive technology and bioethics. Cross-listed with Studies of Women, Gender, and Sexuality
Instructor(s): M. Schmidt
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

AS.140.353. Women, Health, and Medicine in Modern America. 3.0 Credits.
This course explores women's interactions with science, medicine, and health in the late-19th and 20th century United States. It is framed by an interest in medicalization, sex/gender, and feminism. Cross-listed with Studies of Women, Gender, and Sexuality.
Instructor(s): D. Stillwell
Area: Humanities, Social and Behavioral Sciences.

AS.140.381. History of Reproduction. 3.0 Credits.
This course investigates the history of reproduction in American medicine, science, politics, and culture. It explores changing ideas about reproductive bodies, sexuality, and the family as well as practices of contraception, conception, and childbirth.
Instructor(s): B. Gurtler
Area: Humanities, Social and Behavioral Sciences
Writing Intensive.

Philosophy
AS.150.404. The Idea of Power. 3.0 Credits.
The idea of Power surveys seminal texts in the history of political thought on the nature, promise, and dangers of political and social power; it also critically engages contemporary texts on race and gender power relations.
Instructor(s): C. Lebrén
Area: Humanities.

AS.150.436. Philosophy of Gender. 3.0 Credits.
In this class we will examine philosophical questions about gender, and about the intersections between gender and other social categories including race, class and sexuality. We will focus specifically on questions about the metaphysics of gender and other social categories.
Instructor(s): E. Taylor
Area: Humanities.

Economics
AS.180.252. Economics of Discrimination. 3.0 Credits.
This course examines labor market discrimination by gender, race and ethnicity in the United States. What does the empirical evidence show, and how can we explain it? How much of the difference in observed outcomes is driven by differences in productivity characteristics and how much is due to discrimination? How have economists theorized about discrimination and what methodologies can be employed to test those theories? What has been the impact of public policy in this area; how do large corporations and educational institutions respond; and what can we learn from landmark lawsuits? The course will reinforce skills relevant to all fields of applied economics, including critical evaluation of the theoretical and empirical literature, the reasoned application of statistical techniques, and analysis of current policy issues. Seniors by Permission Only.
Prerequisites: AS.180.102
Instructor(s): B. Morgan
Area: Social and Behavioral Sciences
Writing Intensive.

Psychological Brain Sciences
AS.200.204. Human Sexuality. 3.0 Credits.
Course focuses on sexual development, sexuality across the lifespan, gender identity, sexual attraction and arousal, sexually transmitted disease, and the history of commercial sex workers and pornography. Please note that the use of electronic devices is not permitted during this class, in order to promote the full interactive potential of this engaging seminar-style offering. Open to Juniors & Seniors within the following majors/minors: Behavioral Biology; Biology; Cognitive Science; Medicine, Science & the Humanities; Molecular & Cellular Bio; Neuroscience; Psychological & Brain Sciences; Public Health; Sociology; Study of Women, Gender, & Sexuality.
Corequisites: Students may enroll in both AS.200.204 and AS.290.420, but cannot do so in the same semester.
Instructor(s): C. Kraft
Area: Social and Behavioral Sciences.

German Romance Languages Literatures
AS.211.318. Women in Pre-Modern French Literature. 3.0 Credits.
This course will examine the changes in the relationship of women to literature in France up to the French Revolution from several points of view: (1) What were the social and intellectual contexts of gender distinctions? (2) How did men writing about women differ from women writing about women? (3) How were these questions affected by the changing norms of literary production? Texts by Marguerite de Valois, Mme. de Sévigné, Molière, Mme. de Lafayette, Prévolst, Diderot, Rousseau, Mme d'Épinay and Revolutional memorialists.
Instructor(s): W. Anderson
Area: Humanities
Writing Intensive.

AS.211.331. Vagabonds and Ramblers: Space & Place in Women's Cinema. 3.0 Credits.
In recent times in Italy, a new generation of women filmmakers has found its own space in the traditionally male dominated film industry. This "counter cinema" abounds with female city walkers, migrants, vagabonds and other types of urban nomads, whose movement through space signifies a quest for freedom, gestures of protest and rebellion, and a search for place. We start by looking at the work of a pioneer filmmakers such as Elvira Notari, the first woman director in Italy, and then discuss the issue of gender and space in contemporary films by directors Francesca Comencini, Alice Rohrwacher, and Eleonora Danco. To enrich the analysis, we shall also examine films directed by non-Italians who deal with the theme of women's mobility and their centrality/marginality from different socio-geographic contexts. Other directors included will be Agnès Varda (France), Chantal Akerman (Belgium), Haifa al-Mansour (Saudi Arabia), and Xiaolu Guo (China) Readings will include essays by Laura Mulvey, Ann E. Kaplan, Linda Williams, and Patricia White.
Instructor(s): L. Di Bianco
Area: Humanities.
AS.211.364. Drama Queens: Opera, Gender, and the Poetics of Excess. 3.0 Credits.
What is a drama queen? According to the Oxford English Dictionary, a drama queen is "a person who is prone to exaggeratedly dramatic behaviour" and "a person who thrives on being the centre of attention." While drama queens exist among us, the world of opera is certainly one of their ideal environments. Echoing back to their tragic fates, the powerful voices of Dido, Medea, Violetta, and Tosca never ceased to affect their empathetic public. In fact, excess and overreactions are two main features of the operatic experience both on stage and in the audience. By focusing on the ways in which operatic characters are brought to life, the course explores the social, political, and gender dynamics that inform the melodramatic imagination. Students will have the opportunity to attend live HD broadcasts of Verdi’s La Traviata and Tchaikovsky’s Eugene Onegin from the Metropolitan Opera. No musical skills required.
Instructor(s): E. Refini
Area: Humanities
Writing Intensive.

AS.211.400. Topics in Romance Literatures. 3.0 Credits.
This year’s "Topics in Romance Literatures" course is entitled “Voicing the Body: Sex and Desire in Medieval Poetry.” If you think that medieval poetry is all about idealized love and spiritual sublimation, then this course will make you change your mind. We will explore works and authors from all across Europe, from the erotic “Carmina burana” to the voluptuous poetry of French troubadours and trouvères, from German love poetry to the sensual songs of Spain and the passionate verses of Italian poets such as Dante and Petrarch. The course will explore the ways in which medieval poets sing about bodily passions and voice the lovers’ desire, with a special focus on the ways in which poetry interacted with music and was transmitted through music. The class is taught in English and all readings will be available in English. Students in Romance Languages (Italian, French, Spanish), depending on their language skills, will have the opportunity to work on the originals. A special reading list will be set up for graduate students who will take the course.
Instructor(s): E. Refini
Area: Humanities
Writing Intensive.

AS.212.362. Écrire l’héroïsme au féminin [Writing Heroism in the Feminine]. 3.0 Credits.
How can we define a heroine? What distinguishes heroines from mere female protagonists? Who are the main heroines to have marked the French literary tradition? This course examines how writers have transformed the notion of heroism inherited from Ancient Greece and Rome to lend it different and distinctly gendered shapes in the figure of the female hero: bravery, scandal, crime, sacrifice, nationalism. Focus will be placed on the evolution of the concept from the 17th century to the end of the 20th century in novels and plays by Racine, Madame de Lafayette, Prevost, Balzac, Maupassant, Anouilh, Wittig, and Condé. Recommended Course Background: AS.212.333 or AS.212.334.
Instructor(s): L. Cariou
Area: Humanities.

AS.212.783. Diderot, Power and Representation.
A reading of some of Diderot’s major works in light of his struggle to break out of imposed and self-imposed hierarchies of style and manner, and to reframe or reform radically the relationship between ethics, politics, sexuality, gender and the arts. Special emphasis on Diderot’s self-representation as arbiter of taste, mediator and mentor.
Instructor(s): E. Russo
Area: Humanities
Writing Intensive.

AS.213.300. Classic German Theater. 3.0 Credits.
Taught in German. In this seminar we will read some of the most important plays of German literature, by Lessing, Goethe, Schiller, Kleist, and Büchner. We will explore questions about the role of the theater toward the education of mankind in the spirit of the enlightenment. We will examine how tragedy is reconfigured around the context of the bourgeois family. We will study historical practices of stage production as well as modern filmic and theatrical productions. Finally, we will prepare an informal staging of a play.
Prerequisites: AS.210.361
Instructor(s): K. Pahl.

AS.213.318. The Making of Modern Gender. 3.0 Credits.
Taught in English. Gender as we know it is not timeless. Today, gender roles and the assumption that there are only two genders are vigorously contested and debated. With the binary gender system thus perhaps nearing its end, we might wonder if it had a beginning. In fact, the idea that there are two sexes and that they not only assume different roles in society but also exhibit different character traits, has emerged historically around 1800. Early German Romanticism played a seminal role in the making of modern gender and sexuality. For the first time, woman was considered not a lesser version of man, but a different being with a value of her own. The idea of gender complementation emerged, and this idea, in turn, put more pressure than ever on heterosexuality. In this course, we will explore the role of literature and the other arts in the making and unmaking of gender.
Instructor(s): K. Pahl.
Area: Humanities.

AS.213.321. Bodies and Pleasures. 3.0 Credits.
Taught in English. This course traces a literary history of sexuality from the Middle Ages to contemporary women's writing. We will analyze how sexual pleasure changed over time. In particular, we will discuss what role literature plays in the reproduction and transformation of bodily pleasures. The course explores how the pleasures of bodies are imagined in and through literature, but also whether words are bodies that give pleasure and perhaps even have their own pleasures. Authors discussed will include Boccaccio, Cleland, Rousseau, Schlegel, Kleist, Hoffmann, Novalis, Arnim, Büchner, Freud, Rilke, Kafka, Rich, Foucault, Kristeva, Cixous, Giddens, and Winterson.
Instructor(s): K. Pahl
Area: Humanities.

AS.213.350. Wie wir begehren. 3.0 Credits.
Taught in English. Human desire and sexuality proves of vital concern in German-speaking countries: from the invention by German sexologists of much of the terminology still in use today to the so-called sexual revolution in the late sixties to new perspectives on the topic today. We will study film, fiction and non-fiction. Recommended Background: AS.210.362
Instructor(s): K. Pahl
Area: Humanities.
AS.213.359. Kleist. 3.0 Credits.
Heinrich von Kleist was one of the most intriguing literary figures of the early nineteenth century in Germany. Neither Classicist nor Romanticist, he developed a unique style that combines such different elements as complex rhythmicality, drastic imagery, and philosophical precision. His novellas, plays, and nonfiction prose explore questions of gender, colonialism, the tragic, and of innocence and double dealing. Among the texts we will read together are "The Betrothal in St. Domingo" (Kleist's literary response to the Haitian revolution), "Penthesilea" (the play about lovers who can find each other only in war ends in a splatter scene), and "Marquise of O" (the story of a woman whose father rejects her because she finds herself pregnant, and yet she has no memory of the sexual intercourse that must have led to her current situation). Language of Instruction: German
Prerequisites: Pre-req: AS.210.362
Instructor(s): K. Pahl
Area: Humanities.

AS.213.373. Sex und Macht. 3.0 Credits.
We will discuss postwar and contemporary literature and films that grapple with the effect of unequal power structures on sexual relations. Taught in German.
Instructor(s): K. Pahl
Area: Humanities.

AS.213.668. Kleist.
This seminar will explore the narrative, dramatic, theoretical and quasi-journalistic work of Heinrich von Kleist along two lines of inquiry. We will read his literary experiments as reactions to the major shift in the sex-gender system and the new deployment of sexuality in the eighteenth century. We will discuss his unique role in the production, communication and interpretation of feeling across narrative and theater.
Instructor(s): K. Pahl
Area: Humanities.

AS.214.171. Freshman Seminar: Witchcraft and Demonology in Renaissance Europe. 3.0 Credits.
Who were the witches? Why were they persecuted for hundreds of years? Why were women identified as the witches par excellence? How many witches were put to death? (Answer: 30-40,000, between about 1400 and 1800.) What traits did European witchcraft share with witch-mythologies in other societies? After the witch-hunts ended, how did “The Witch” go from being “monstrous” to being “admirable” and even “sexy”? Answers are found in history and anthropology, but also in literature, folklore, music, and the visual arts. After an introduction to ancient and medieval witchcraft, we will study European witch-persecution between 1400 and 1800. The second half of the course will concentrate on artistic representations of witches in media ranging from manuscripts to movies, concentrating on Italy, France, Spain, and Germany.
Instructor(s): W. Stephens
Area: Humanities
Writing Intensive.

AS.214.376. Warrior Women from Ancient Times to Game of Thrones. 3.0 Credits.
This course will trace the origins of the warrior woman from ancient times through today's pop culture and reflect on the multiplicity of its social, cultural, and political ramifications.
Instructor(s): J. Gomez
Area: Humanities.

AS.215.353. Women Writing in Latin America: Prose and Poetry by Sor Juana, Mistral, Lisoba, Pizarnik, Castellanos, and other poets. 3.0 Credits.
The first objective of the course is to train students in close reading and analysis of literary texts. The second objective is to read prose and poetry by some of the canonical texts in the Latin American tradition written by women. Taught in English.
Instructor(s): S. Castro-Klaren
Area: Humanities
Writing Intensive.

AS.215.422. Amor y romanticismo en una novela y tres películas. 3.0 Credits.
Prerequisites: AS.210.311 AND AS.210.312
Instructor(s): E. Gonzalez
Area: Humanities.

Sociology
AS.230.154. Freshman Seminar: Gender, Health and Aging. 3.0 Credits.
In this course students will develop an understanding of the ways in which gender structures health and well being through adulthood and later life. The experience of sexual minorities and the intersection of gender with class and ethnicity will also be discussed. Students will be expected to participate actively and lead discussions on specific topics.
Instructor(s): E. Agree
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.223. Housing and Homelessness in the United States. 3.0 Credits.
This course will examine the role of housing, or the absence thereof, in shaping quality of life. It will explore the consequences of the places in which we live and how we are housed. Consideration will be given to overcrowding, affordability, accessibility, and past and existing housing policies and their influence on society. Special attention will be given to the problem of homelessness.
Instructor(s): M. Greif
Area: Social and Behavioral Sciences.

AS.230.255. Men and Women in Society. 3.0 Credits.
This course will explore what it means to be male or female through academic writings, fiction, and film. It will examine how genders are defined by individuals, cultures, and institutions, and how those meanings shape everyday life for men and women. Power, inequality, and intersections with race-ethnicity, class, and sexuality will be a primary focus. Theories of gender addressed will include those related to masculinity, social psychology, feminism, and intersectionality. Though the course will primarily consider the United States, gender in other countries and cultures will also be addressed. Cross-listed with WGS.
Instructor(s): K. McDonald
Area: Social and Behavioral Sciences.
AS.230.310. Becoming An Adult. 3.0 Credits.
While students may already be personally familiar with the subject matter, the course examines the sociological and psychological dimensions of this demographically dense period known as the transition to adulthood. Emphasizes life course theories of human development through readings of empirical work on adolescence, the transition to college, early employment and early family formation. Attention is paid to the ways class; gender; race and nationality influence the pathways, choices and outcomes of young people. A Statistics/ Sociology background is helpful, but not required.
Instructor(s): S. Deluca
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.316. African American Family. 3.0 Credits.
This course is an examination of sociological theories and studies of African-American families and an overview of the major issues confronting African-American family life. The contemporary conditions of black families are explored, as well as the historical events that have influenced the family patterns we currently observe. Special attention will be given to social policies that have evolved as a result of the prominence of any one perspective at a given point in time.
Instructor(s): K. McDonald
Area: Social and Behavioral Sciences.

AS.230.324. Gender and International Development. 3.0 Credits.
This course employs a comparative perspective to examine the gendered impact of international development experiences and policies. Students will discuss the historical evolution of how the concept of gender has been constructed, conceptualized, and integrated into international development theory and practice. The course will also examine how greater international development. In particular, we will examine structural theories of poverty reduction, individual theories of power and processes of stratification at the household and family level. Specific issue areas will include the globalization, class and work political participation and social movements. Cross-listed with International Studies (CP, IR). Fulfills Economics requirement for IS GSCD track students only.
Instructor(s): R. Agarwala
Area: Social and Behavioral Sciences.

AS.230.336. Family, Gender and Sexuality in China. 3.0 Credits.
This course examines social changes in China since the beginning of the People's Republic (1949) through the lenses of family, gender and sexuality. The first half of the course focuses on understanding family institutions, women's status, gender relations and sexualities in connection with major historical transitions between 1949 and the present. The second half includes readings and discussions around several thematic topics regarding family, gender and sexuality in contemporary China in the broader context of politics, economy, and social norms.
Instructor(s): Y. Dong
Area: Social and Behavioral Sciences
Writing Intensive.

AS.230.370. Housing and Homelessness in the United States. 3.0 Credits.
This course will examine the role of housing, or the absence thereof, in shaping quality of life. It will explore the consequences of the places in which we live and how we are housed. Consideration will be given to overcrowding, affordability, accessibility, and past and existing housing policies and their influence on society. Special attention will be given to the problem of homelessness.
Prerequisites: Students may not have previously taken AS.230.223.
Instructor(s): M. Greif
Area: Social and Behavioral Sciences.

AS.230.388. Sociology of the Family. 3.0 Credits.
Sociological perspectives on contemporary family life, including marriage and divorce, cohabitation, single parenthood, same sex partnerships, children's wellbeing, balancing work and family responsibilities, domestic violence, and government policy toward families.
Instructor(s): A. Cherlin
Area: Social and Behavioral Sciences.

Biophysics
AS.250.351. Reproductive Physiology. 2.0 Credits.
Focuses on reproductive physiology and biochemical and molecular regulation of the female and male reproductive tracts. Topics include the hypothalamus and pituitary, peptide and steroid hormone action, epididymis and male accessory sex organs, female reproductive tract, menstrual cycle, ovulation and gamete transport, fertilization and fertility enhancement, sexually transmitted diseases, and male and female contraceptive methods. Introductory lectures on each topic followed by research-oriented lectures and readings from current literature.
Instructor(s): B. Zirkin
Area: Natural Sciences.

Public Health Studies
AS.280.225. Population, Health and Development. 3.0 Credits.
This course will cover the major world population changes in the past century as well as the contemporary situation and projections for this century. Topics include rapid population growth, the historical and continuing decline of death and birth rates, contraceptive methods as well as family planning and child survival programs, population aging, urbanization, population and the environment and the demographic effects of HIV/AIDS. This course is restricted to Public Health Studies majors. Students minoring in Study of Women, Gender, and Sexuality can register with instructor approval.
Prerequisites: Students who have taken AS.230.225 may not take AS.280.225.
Instructor(s): S. Becker
Area: Social and Behavioral Sciences.
AS.280.422. Health Equity and Disparities: Addressing Complex Global Health Challenges. 3.0 Credits.
In this course, students will be supported and challenged to develop a personal understanding of and perspective on global health equity and disparities, and acquire a toolbox of frameworks and strategies to use in addressing them. Students will have the opportunity to be exposed to numerous examples and case studies to gain experience in assessing and addressing issues of equity in the complex, real-life problems such as those they will be facing as public health professionals. Students will review major historical and contemporary global and national initiatives to address equity issues in the health sector, including global declarations and reports as well as policies and programs that have been developed to achieve improvements in health equity in specific contexts. Application of this historical and practical knowledge and their own perspectives to new and complex situations will be fostered throughout the course. Basic knowledge of biostatistics and epidemiology and courses on global health or international public health issues recommended pre-requisites. Juniors/Seniors Only. Gordis Teaching Fellowship course
Instructor(s): M. Schleiff
Area: Social and Behavioral Sciences.

Behavioral Biology
AS.290.420. Human Sexual Orientation. 3.0 Credits.
This course will examine the historical and current theories of sexual orientation and sexual variation development by examining the biological, psychological and social contributing factors that influence the development of sexual orientations and variations along with treatment and modification of problematic sexual behaviors. Please note that the use of electronic devices is not permitted during this class, in order to promote the full interactive potential of this engaging seminar-style offering. Students may enroll in both AS.200.204 and AS.290.420, but cannot do so in the same semester. Enrollment is limited to Senior Majors & Minors in Behavioral Biology; Biology; Cognitive Science; Medicine, Science & the Humanities; Molecular & Cellular Bio; Neuroscience; Psychology; Public Health; Sociology; Study of Women, Gender, & Sexuality.
Corequisites: Students may enroll in both AS.200.204 and AS.290.420, but cannot do so in the same semester.
Instructor(s): C. Kraft
Area: Social and Behavioral Sciences.

Humanities Center
AS.300.133. Freshmen Seminar: Women of Epic Fame in Literature and Drama, 800 BCE-1650 CE. 3.0 Credits.
From Homer's Odyssey to Shakespeare's Antony and Cleopatra, powerful women who achieve their ends by working from within the system are often overlooked or not fully explored. Our readings and discussions will foreground these women of fiction, while we also consider the social conditions of their living contemporaries. Readings will include: Homer's Odyssey (Penelope); Virgil's Aenead (Dido); Dante's Inferno (Beatrice); Milton's Paradise Lost (Eve), and several accounts of Cleopatra in plays by Shakespeare and his contemporary women writers. Cross listed with Theater Arts, Writing Seminars, and WGS.
Instructor(s): T. Tower
Area: Humanities
Writing Intensive.

Comparative Thought and Literature
AS.300.312. Imagining Revolution and Utopia. 3.0 Credits.
What form should revolution take, and what should society look like after the revolution? What would happen to the state, family, home, status of women, human interrelations, and everyday life? These questions consumed radicals in 19th century Russia and Europe, and their answers helped to shape the political culture of the 20th century. This course examines theories of revolution and utopia and responses to them in literature, art and film. Primary case study is Russia and the Soviet Union, with a comparative look at influential European works.
Instructor(s): A. Eakin Moss
Area: Humanities
Writing Intensive.

Humanities Center
AS.300.317. The Russian Novel. 3.0 Credits.
Russian authors began writing novels in the shadow of counterparts in Western Europe, and thus had the chance to experiment with the form and scope of genres and themes they found in European literature: Alexander Pushkin's novel in verse Eugene Onegin pays homage to Byron's Don Juan and satirizes Richardson's Pamela; Mikhail Lermontov's nested stories A Hero of Our Time owes a debt to Romantic and gothic fiction, and Nikolai Gogol's Dead Souls brings Dante's Inferno to the Russian provinces. From these literary forefathers emerged the likes of Fedor Dostoevsky and Leo Tolstoy, who made a lasting impact on world literature with their psychological and philosophical novels. This course examines the Russian novel in its historical and cultural context alongside contributions of Russian literary criticism in defining novel form and genre.
Area: Humanities
Writing Intensive.

Humanities Center
AS.300.320. Lover's Discourse. 3.0 Credits.
Much of what we know about love and desire we owe to fiction's ability to evoke these experiences. Consider for example that the publication, in Germany, of The Sorrows of Young Werther inspired young men across Europe to dress and behave just like him. We will study in this course a selection of love stories chosen because they break the mold and question their conventions. Taking a critical distance from these tales of seduction, we will examine not only the manifestations and meanings of love, but also the configurations of gender they inspire and reflect. Indeed, just as nowadays film and television represent, as well as mold, our identities as desiring subject, fictions from the eighteenth-century onwards have shaped our current understanding of gendered subjectivities. The readings for this seminar (all available in English) include: Austen, "Persuasion"; Balzac, "The Girl with the Golden Eyes" and "Sarrasine"; Barthes, "Lover's Discourse"; Goethe, "The Sorrows of Young Werther"; Mann, "Death in Venice"; Rousseau, excerpts from "Julie or The New Heloise"; Sulzer, "A Perfect Waiter"; Winterson, "Written on the Body".
Instructor(s): E. Ender
Area: Humanities.
East Asian Studies

AS.310.115. Ghost Tales from China and Japan, 14th-19th Centuries. 3.0 Credits.
We cannot express our own experience of death – only imagine life after death. How did people in the past conceptualize the world of the dead? Ghost tales will teach us what we imagine as the experience of dead and life after death. This course aims to introduce students to a variety of ghost stories in Late Imperial China and Tokugawa Japan and connect their literary imagination of the dead to the cultural, socio-historical, and religious context of each society as well as to the broad East Asian tradition of supernatural narratives. While we also touch upon earlier traditions on narrating the dead, most of the stories in class readings are from the Ming (1368-1644) and Qing (1644-1911) dynasties of China, and the Tokugawa period (1600-1868) of Japan. Key issues include family, gender, sexuality, body, medicine and many more. Although we will also take a look at visual and theatrical representations of the dead, we will primarily focus on literary texts about ghostly phenomena. Film screenings required. All readings are in English.
Instructor(s): F. Joo
Area: Humanities.

AS.310.310. Shamans, She-Devils, and Pilgrims: Women & Gender in East Asian Religions. 3.0 Credits.
This course examines the complexities of gender and the role that women have played in the religions of China, Korea, and Japan. It explores two main types of content: 1) religious discourse on women and gender through doctrines, scriptures, narratives, myths, and legends; and 2) the practices, beliefs, and lives of real women through historical cases, including those of nuns, laity, sovereigns and family members. Organized in chronological order, the course begins with early sources across East Asia and finishes in contemporary times. Readings and assignments emphasize the analysis of primary sources, complemented by secondary works for historical and cultural context. Students will end the course with a research paper focused on a topic of their choice.
Instructor(s): F. Joo
Area: Humanities
Writing Intensive.

Center for Africana Studies

AS.362.340. Power and Racism. 3.0 Credits.
This course investigates the impact of white supremacy and anti-black racism, as a global system of power, on the political development of the United States of America.
Instructor(s): F. Hayes
Area: Social and Behavioral Sciences
Writing Intensive.

Theatre Arts and Studies

http://krieger.jhu.edu/theatre-arts

The program offers a comprehensive approach to the arts of acting, directing, playwriting, and theatre history, along with the fundamentals of technical direction, play production, play analysis, and theatre management.

For those students who intend to prepare for a career in the theatre, the courses offered are taught exclusively by established professionals with experience on Broadway, in the best of regional theatres, and in many countries of the world.

For those students not focused on a career in theatre arts, the courses offer a broader perspective, an understanding of societal traditions and culture, and an appreciation for the arts, whether theatrical, literary,
musical, or visual. Students pursuing careers in medicine, engineering, law, international relations, science, and others have been challenged and enriched by the school’s courses in theatre arts.

For those who seek careers in the arts, the acting and directing workshops, playwriting courses, and independent study opportunities provide rigorous training in acting and other theatre crafts, as well as an appreciation for and an understanding of the history of dramatic arts, its cultural significance, and the industries it has produced.

Located in the program’s home, the historic Merrick Barn, The Johns Hopkins University Theatre provides a vehicle for the fulfillment of student lab requirements. The University Theatre produces several plays each year in the John Astin Theatre and occasionally in the Meyerhoff Auditorium at the Baltimore Museum of Art, which adjoins the Homewood campus. Classes are also held in the Barn.

Theatre Arts and Studies Minor

All courses for the minor here must be taken for letter grades and receive a grade of C- or higher. Courses taken at another institution may not apply towards the minor without permission of the Director of Undergraduate Studies.

AS.225.100  Introduction to Theatre  3
or AS.225.300  Contemporary Theatre & Film  3
AS.225.301  Acting I  3
AS.225.302  Acting II  3
AS.220.105  Fiction/Poetry Writing I  3
One theatre history course  3
One drama course in other program *  3
One additional theatre course **  3

Total Credits  21

* Courses are identified by the POS-Tag THEA-DRAMA. Alternatively, another theatre history course from within the program (not counted towards another requirement) may apply towards this requirement with permission of the director of undergraduate studies.

** This course may be an acting, theatre production, playwriting, or theatre history course.

Faculty

**Visiting Instructors**
Margaret (Peg) Denithorne
Instructor: acting, directing, theatre history.

James Glossman
Instructor: directing, acting, theatre management, theatre history.

Joseph Martin
Instructor: theatre history, dramaturgy.

William Roche
Instructor: technical direction, theatre crafts, theatre management.

For current course information and registration go to https://sis.jhu.edu/classes/

Courses

**AS.225.100. Introduction to Theatre. 3.0 Credits.**
An introduction to the drama: how and why the theatre came into being; its role in human history; and how changing social structures in different regions and epochs have shaped different kinds of theatre, plays and performance. Also: how theatre “works” for us and on us, and the major plays of world drama. Instructor(s): J. Martin
Area: Humanities.

**AS.225.212. Voice and Speech for the Actor. 3.0 Credits.**
It has been said that 90% of what an actor does onstage is dependent on being effortlessly heard and understood by their audiences. This course is designed to establish the tools for the actor to begin to create this foundation. Using a combination of both the benchmark texts by Edith Skinner and Kristin Linklater, along with in-class exercises and monologues, we will begin the process of exploring both vocal power through breathing and breath control, and the fundamental tools of clarity in the speaking of a dramatic text onstage. Instructor(s): J. Glossman
Area: Humanities.

**AS.225.215. Performing Musical Theatre. 3.0 Credits.**
Effective performance in musical theatre demands a committed analysis of the musical and dramatic values of the song and the libretto from which it springs, in order to develop a fresh, organic interpretation. This course will provide you with the training to both analyze and interpret musical theatre scenes and songs and to make the most of them in performance. Instructor Permission Only. Instructor(s): M. Denithorne
Area: Humanities.

**AS.225.218. ANGELS IN AMERICA (The Play) The Millennium Shift in American Culture and Politics. 3.0 Credits.**
Tony Kushner’s epoch-making play weaves together astonishingly diverse sides of America in a broad tapestry: a modern work that emerged at the end of the 20th Century, now being revived world wide: it provides keys to understanding the American zeitgeist and the coming transformations of the culture. In one pivotal work we find the emergence of LGBT rights, the Mormon Church, the AIDS epidemic, the new “spirituality” the Reagan-era transformation of both government and business, and the looming figure of Roy Cohn whose influence in American politics “behind the scenes” ranged from the Rosenberg trial to his work as counsel for the McCarthy Committee in the 1950s: and even his legacy in the 2016 as primary political and business mentor of the current President of the United States. Instructor(s): J. Martin
Area: Humanities, Social and Behavioral Sciences.
AS.225.300. Contemporary Theatre & Film. 3.0 Credits.
An introduction to the performing arts, including an overview of theatre history, acting styles and the interaction of art and society. A personal view from inside.
Instructor(s): J. Astin
Area: Humanities.

AS.225.301. Acting I. 3.0 Credits.
An introduction to the fundamentals of acting through exercises, improvisation, and work on scenes from established plays and Shakespearean sonnets, based on the teachings of Stanislavsky, Greet, Boleslavsky, Michael Chekhov, Clurman, and Meisner. This course also includes a brief survey of major playwrights. Plays will be read, analyzed, and employed in scene work.
Instructor(s): J. Astin
Area: Humanities.

AS.225.302. Acting II. 3.0 Credits.
As in Workshop I, the principal classroom activities will consist of scene work, exercises, lectures, and discussion. Some rehearsal will also take place during school hours. It is expected that substantial out-of-class time be spent on rehearsals and exercises. Recommended Course Background: AS.225.301
Instructor(s): J. Astin
Area: Humanities.

AS.225.303. Acting III. 3.0 Credits.
Special attention is given to the development of spontaneity and emotional freedom using the principles of Workshops I and II. Hands on work with John Astin's "The Process" and the second Silverberg workbook are employed, along with the Uta Hagen text. Boleslavsky and Michael Chekhov are introduced. The Clurman, Meisner, Stanislavsky and Strasberg approaches are included. Substantial out of class time is required. Recommended Course Background: Two acting courses.
Instructor(s): J. Astin
Area: Humanities.

AS.225.304. Shakespeare in Performance. 3.0 Credits.
Students will work with a selection of Shakespeare’s plays — A MIDSUMMER NIGHT’S DREAM; MERRY WIVES OF WINDSOR; and KING LEAR — in exploring specific ways in which the power of the lines can be translated dynamically and immediately into vocal and physical performance. This course can be repeated for credit, because it covers different topics. (Some background in the acting sequence is encouraged).
Instructor(s): J. Glossman
Area: Humanities.

AS.225.305. Stagecraft. 3.0 Credits.
A hands-on approach to the technical and theoretical elements of production. Meets in the Merrick Barn Scene Shop. Permission Required.
Instructor(s): W. Roche
Area: Humanities.

AS.225.306. Directing Seminar. 3.0 Credits.
Fundamentals of mounting, casting and staging the play; various theories of directing; students must commit to a practical lab. It is understood that students have a working familiarity with acting fundamentals.
Instructor(s): J. Glossman
Area: Humanities.

AS.225.307. The Lab - The Actor/Director/Playwright Lab. 3.0 Credits.
Participants in the class will also collaborate on the creation of new material for the stage. Recommended Course Background: one course in Acting, Directing, or Playwriting.
Instructor(s): M. Denithorne
Area: Humanities.

AS.225.308. Design for the Stage. 3.0 Credits.
The fundamentals of stage design, with an emphasis on process, including script analysis, research, conceptualization, and implementation, from the first reading of the play to opening night, along with an overview of theatre architecture from the Greeks to the current day and into our imagined future.
Instructor(s): W. Roche
Area: Humanities.

AS.225.309. Adaptation for the Stage. 3.0 Credits.
For aspiring playwrights, dramaturgs, and literary translators, this course is a workshop opportunity in learning to adapt both dramatic and non-dramatic works into fresh versions for the stage. Students with ability in foreign languages and literatures are encouraged to explore translation of drama as well as adaptation of foreign language fiction in English. Fiction, classical dramas, folk and fairy tales, independent interviews, or versions of plays from foreign languages are covered.
Instructor(s): J. Martin
Area: Humanities
Writing Intensive.
AS.225.328. The Existential Drama: Philosophy and Theatre of the Absurd. 3.0 Credits.
Existentialism, a powerful movement in modern drama and theatre, has had a profound influence on contemporary political thought, ethics, and psychology, and has transformed our very notion of how to stage a play. Selected readings and lectures on the philosophy of Kierkegaard, Nietzsche, Camus and Sartre – and discussion of works for the stage by Sartre, Ionesco, Genet, Beckett, Albee, Pinter, Athol Fugard (with Nkani & Nshone), Heiner Müller and the late plays of Caryl Churchill. Opportunities for projects on Dürenmatt, Frisch, Havel, Witkiewicz, and Mrozek.
Instructor(s): J. Martin
Area: Humanities
Writing Intensive.

AS.225.329. Acting and Directing Musical Theatre. 3.0 Credits.
Musical Theatre is a unique form of theatrical expression that requires special skills of its actors and directors. In this course, students will study the form and structure of musicals as they apply to acting and directing. Students will direct and perform musical numbers as well as book scenes from classic and contemporary American musicals.
Instructor(s): M. Denithorne
Area: Humanities

AS.225.330. Playwriting Strategies. 3.0 Credits.
A seminar and workshop in playwriting with Dr. Joe Martin, playwright and dramaturge. Student writers, developing their plays, will learn how to open up to the creative process, “brainstorm,” refine their work, and shape it toward an act of artistic communication. Writer’s techniques, such as attending to plot or “story,” delineation of character, creating effective “dialog,” even overcoming “writer’s block,” will be addressed. This course is designed to be complementary to – not a replacement for – playwriting classes in the Writing Seminars.
Instructor(s): J. Martin
Area: Humanities
Writing Intensive.

AS.225.333. Scene Study 3. 3.0 Credits.
Classes and scenes tailored to the needs of the actors. Some rehearsal will take place during school hours. It is expected that substantial out-of-class time be spent on rehearsals and exercises.
Instructor(s): J. Astin
Area: Humanities.

AS.225.339. Exploring The Major Plays of Anton Chekhov. 3.0 Credits.
This is an advanced class for actors who are interested in delving into the ”world of the play.” Students will work on scenes from the four major plays of Anton Chekhov. We will also explore some modern adaptations including VANYA, SONIA, MASHA, and SPIKE.
Prerequisites: AS.225.301 AND AS.225.302 or permission of the instructor
Instructor(s): M. Denithorne
Area: Humanities

AS.225.345. History of Modern Theatre & Drama. 3.0 Credits.
Designed to impart a deepened appreciation and understanding of today’s theatre by surveying the major playwrights, historical movements, and theatre practices of the 20th century. The course also seeks to help students understand theatre’s relationship to the societal and political power structure of each era and to introduce students to great dynamic literature in its intended form, which is performance.
Instructor(s): M. Denithorne
Area: Humanities
Writing Intensive.

AS.225.346. Creative Improvisation: For Theatre and for Life. 3.0 Credits.
An exploration of the imagination and the senses using basic techniques of improvisation: exercises, conflict resolution, ensemble building, and theatre games. Texts: Spolin, Johnstone, LaBan and Feldencreis. Open to all students.
Instructor(s): M. Denithorne
Area: Humanities.

AS.225.501. Independent Study. 1.0 - 3.0 Credits.
Permission only.
Instructor(s): J. Astin; J. Glossman; J. Martin; M. Denithorne.

AS.225.502. Independent Study. 1.0 - 3.0 Credits.
Instructor(s): J. Astin; J. Glossman; J. Martin; M. Denithorne.

AS.225.520. Projects in Theatre. 3.0 Credits.
Special projects created for and tailored to the individual theatre student. Enrollment limited. Permission Required.
Instructor(s): J. Astin.

AS.225.590. Summer Internship in Theatre. 1.0 Credit.
Instructor(s): J. Astin.

AS.225.599. Independent Study. 3.0 Credits.
Instructor(s): J. Astin.

Cross Listed Courses

German Romance Languages Literatures
AS.211.312. Acting French: learning about French language and culture through theater. 3.0 Credits.
Performing a play in a foreign language not only improves language skills, but develops the ability to express oneself through the body and to communicate both efficiently and elegantly. Using excerpts from popular French stage plays by Camus, Sartre, Feydeau, Ionesco, Pagnol and Rostand among others, this course aims to help students to 1) improve French pronunciation, intonation, syntax, and vocabulary; 2) appreciate and understand linguistic nuance and socio-cultural practices; 3) learn fundamentals of acting that carry over into everyday communication, from body language and vocal projection to the expression of emotion and improvisation. Students will view filmed representations of select plays as well as present an end-of-semester staging. Recommended course background: AS.210.301.
Instructor(s): K. Cook-Gailloud; M. Alhinho
Area: Humanities.

Humanities Center
AS.300.113. Freshmen Seminar: Drama and Gender in Shakespeare's England. 3.0 Credits.
In this seminar we will read male and female authored plays and discuss how they reflect contemporary social expectations in Tudor and Stuart England. Authors include William Shakespeare; Mary Sidney, Countess of Pembroke; Christopher Marlowe; Elizabeth Cary; Ben Jonson; and Mary Sidney, Lady Wroth.
Instructor(s): E. Patton
Area: Humanities.
AS.300.133. Freshmen Seminar: Women of Epic Fame in Literature and Drama, 800 BCE-1650 CE. 3.0 Credits.
From Homer’s Odyssey to Shakespeare’s Antony and Cleopatra, powerful women who achieve their ends by working from within the system are often overlooked or not fully explored. Our readings and discussions will foreground these women of fiction, while we also consider the social conditions of their living contemporaries. Readings will include: Homer’s Odyssey (Penelope); Virgil’s Aenead (Dido); Dante’s Inferno (Beatrice); Milton’s Paradise Lost (Eve), and several accounts of Cleopatra in plays by Shakespeare and his contemporary women writers. Cross listed with Theater Arts, Writing Seminars, and WGS.

Instructor(s): T. Tower
Area: Humanities
Writing Intensive.

Comparative Thought and Literature
AS.300.353. Present Mirth: Stages of Comedy. 3.0 Credits.
A comparative survey of presentational comedies from Aristophanes to Beckett on stage and screen, with some attention to to to the vexed question of theories of comedy [no laughing matter].
Instructor(s): R. Macksey
Area: Humanities
Writing Intensive.

Humanities Center
AS.300.363. Reading Judith Shakespeare: poetry and drama by women writers in Elizabethan England (ca 1558-1650). 3.0 Credits.
Virginia Woolf’s account of the thwarted career of Shakespeare’s hypothetical sister, Judith (in A Room of One’s Own) frames our reading of plays and poetry by Shakespeare and contemporary women writers, including Isabella Whitney, Elizabeth Cary, Mary Sidney, Aemelia Lanyer, Mary Wroth, and others. Students will create fictional biographies of “Judith Shakespeare” and her literary accomplishments. Cross listed with English, Theater Arts, Writing Seminars, and WGS.
Instructor(s): E. Patton
Area: Humanities
Writing Intensive.

Visual Arts
http://krieger.jhu.edu/visualarts/
The Center for Visual Arts provides a studio environment in which undergraduates can pursue their creative interests and earn academic credit in a visual arts program. Art classes allow students to enrich their lives, while diversifying and broadening their educational experience. The Center for Visual Arts (formerly Homewood Art Workshops) provides a studio environment in which undergraduates can pursue their creative interests. The arts teach people to look at reality from different angles. They teach creativity, which is applicable and valuable in every avenue of human endeavor. They teach skills, including perceptual skills, which actually improve the process of thinking and reasoning. In fact, the ability to be flexible in the interpretation of data is a key component of success in research, and making art helps students develop exactly this sort of cognitive flexibility.

Courses in drawing, painting, printmaking and sculpture develop observational skills and techniques in the beginning student. Courses in photography, cartooning, and digital media balance studio work with research and critical analysis. Although there is currently no major, students can earn a minor in visual arts. For the minor in visual arts, students may focus on either traditional studio courses or a digital curriculum, or they can combine the two tracks for a more diverse experience. Students wishing to take more advanced fine arts courses are encouraged to take advantage of Hopkins’ cooperative programs with other colleges in the Baltimore area.

Visual Arts-Minor
Students may focus on one of two tracks: (1) traditional studio courses or (2) a digital curriculum. They have the option to combine the two tracks for a more diverse, if more general, experience.

A minimum range of 15 to 18 credits, including:

Core Course
AS.371.131 Studio Drawing I

or AS.371.152 Introduction to Digital Photography

Art History Course
One course at any level in history of art

Visual Arts Electives
Four additional visual arts courses

Total Credits
15-18

Additional details:

• Students may count as many as two visual arts courses taken at MICA, but not offered at Hopkins, toward the minor. These courses must be approved in advance by the advisor.
• All courses must be taken for a letter grade and students must receive a grade of C- or better to apply the course towards the minor.
• One independent study course in the visual arts may be counted toward the minor.
• One visual arts course, not offered at Hopkins, taken in a JHU-affiliated study abroad program may be counted toward the minor.
• Each student’s complete program of study must be approved by the advisor.
• Advising will be done by the Director (Studio) and the Photography Coordinator (Digital).

For current faculty and contact information go to http://www.jhu.edu/artwork/faculty.htm

Faculty

Director
Margaret Murphy
Instructor: painting and drawing.

Instructor
D. S. Bakker
Aesthetics, visual philosophy, Surrealism.

Phyllis Berger
Photography Supervisor: photography, artists’ books, documentary photography.

Cathy Goucher
Art therapy, non-traditional materials and techniques

Thomas Chalkley
Sequential imagery, political and social satire, popular culture.

Howard Ehrenfeld
Digital photography and imaging, location photography.

Barbara Gruber
AS.371.130. Studio Drawing I. 2.0 Credits.
This course focuses on developing fundamental drawing skills for the student with little or no previous studio experience. Basic concepts of form and composition will be taught through exercises based on the book, Drawing On The Right Side Of The Brain, and with the aid of still life setups and live models. Attendance at 1st class is mandatory. Approval for this course will be considered after enrollment in SIS; no need to email.
Instructor(s): Staff.

AS.371.131. Studio Drawing II. 2.0 Credits.
Building on basic drawing skills, this course explores various media, techniques, and compositional elements with special emphasis on still life, portrait, and life drawing. A visit to the Baltimore Museum of Art's Print & Drawing Library supplements lectures and enriches the student's understanding of the history of artists' drawings. Recommended Course Background: AS.371.130 or instructor's permission. Approval for this course will be considered after enrollment in SIS; no need to email.
Prerequisites: (AS.371.131 or equivalent) or instructor's permission.
Instructor(s): B. Gruber.

AS.371.132. Oil Painting I. 2.0 Credits.
This course offers the fundamentals of oil painting techniques for the serious student with minimal prior studio experience. Observational skills are taught through the extensive use of still-life setups, with particular attention paid to issues of light, color, and composition. Slide lectures and a museum trip give students an art historical context in which to place their own discoveries as beginning painters. Approval for this course will be considered after enrollment in SIS; no need to email.
Prerequisites: (AS.371.131 or equivalent) or instructor's permission.
Instructor(s): C. Hankin.

AS.371.133. Oil Painting II. 2.0 Credits.
This course focuses on the traditions and techniques of oil painting for the student with little or no previous studio experience. Basic concepts of form and composition will be taught through exercises based on the book, Drawing On The Right Side Of The Brain, and with the aid of still life setups and live models. Attendance at 1st class is mandatory. Approval for this course will be considered after enrollment in SIS; no need to email.
Prerequisites: (AS.371.131 or equivalent) or instructor's permission.
Instructor(s): C. Hankin.

AS.371.134. Oil Painting III. 2.0 Credits.
Students who have mastered basic painting skills undertake sustained projects, including portrait and plein air landscape work. Slide lectures and handouts deepen students' appreciation of representational traditions. Advanced techniques, materials, and compositional issues are also investigated. Recommended Course Background: AS.371.133 or equivalent. Approval for this course will be considered after enrollment in SIS; no need to email.
Prerequisites: Prereq: AS.371.133 or permission of the instructor.
Instructor(s): B. Gruber.

AS.371.135. Studio Drawing III. 2.0 Credits.
This intensive look at the traditions and techniques of portrait drawing. Students work from live models in a variety of media and study master portraits by Holbein, Rembrandt, Ingres, Degas, etc. Trips to the Baltimore Museum of Art Print & Drawing Room and JHU Archaeological Museum will enhance knowledge and appreciation of the history and traditions of portraiture. Recommended Course Background: AS.371.131 or permission required.
Instructor(s): C. Hankin.

AS.371.136. Still Life/Interior/Landscape. 2.0 Credits.
This intermediate drawing class will examine three grand traditions in representational art. We will explore problems in still life that have occupied artists from Chardin to Morandi; in interiors from Vermeer to Giacometti; in landscape from Corot to Diebenkorn. We will also look at where the boundaries between these genres blur and how they overlap.
Instructor(s): C. Hankin.

AS.371.147. Design Studies: Art of Architecture. 3.0 Credits.
In this course, students will learn to design, draw, and see like an architect. A series of progressive design exercises will teach the practical capacities and habits of mind that lead not merely to competence but success and advancement in the field. We will look at what architecture has been, discuss what it is becoming, and explore both formal and narrative methodologies for design. The class will use the built environment of the city - and the Homewood campus - as a classroom and a site for interpretive drawing and creative design work. Essential in the architect's education is the sketchbook, which functions not merely as a place to 'store' what has been witnessed, but a place to interpret and explore implications of design in the world, whether close to home or traveling in exotic locales.
Instructor(s): C. Phinney
Area: Humanities.

AS.371.149. Visual Reality. 3.0 Credits.
In art, "Realism" is a simulation of visual reality. But art can also simulate alternative realities, those realities or truths which exist only in daydreams or nightmares. In this class, we will learn to explore and create representations of these additional moments of existence. This will require thinking creatively or "outside the box," a useful skill in any field. Using a variety of media, students are asked to solve problems to which there is no one correct answer.
Instructor(s): D. Bakker
Area: Humanities.

AS.371.150. Life Drawing. 2.0 Credits.
An intermediate drawing course focusing on all aspects of the human form. Beginning with infrastructure (skeletal and muscular systems), we will work directly from the model using a variety of media and techniques to address problems in figurative art from the Renaissance to the present.
Prerequisites: Prereq: AS.371.131 or instructors permission.
Instructor(s): C. Hankin.

Sculpture, printmaking.

For current course information and registration go to https://sis.jhu.edu/classes/
AS.371.151. Photoshop/Digital Darkroom. 3.0 Credits.
Photoshop is not only the digital darkroom for processing images created with digital cameras; it is also a creative application for making original artwork. In this course, students use Photoshop software as a tool to produce images from a fine art perspective, working on projects that demand creative thinking while gaining technical expertise. Students will make archival prints, have regular critiques, and attend lectures on the history of the manipulated image and its place in culture. We will look at art movements which inspire digital artists, including 19th-century collage, dada, surrealism, and the zeitgeist of Hollywood films. Students must have a digital SLR camera. Prior knowledge of Photoshop is not required. Attendance at first class is mandatory. Approval for this course will be considered after enrollment on SIS; no need to email.
Instructor(s): H. Ehrenfeld
Area: Humanities.

AS.371.152. Introduction to Digital Photography. 3.0 Credits.
Students learn to use their digital cameras through a variety of documentary, landscape and portrait projects, which will help them develop technical and creative skills. Critiques and slide lectures of historic photographs, which range from postmortem daguerreotypes to postmodern digital imagery, help students develop a personal vision. Students are provided digital SLR cameras and gain proficiency with one-on-one instruction in the field. Basics for print adjustment and output will be covered. Attendance at first class is mandatory. Approval for this course will be considered after enrollment on SIS; no need to email.
Instructor(s): G. Salazar; H. Ehrenfeld
Area: Humanities.

AS.371.154. Introduction to Watercolor. 2.0 Credits.
Watercolor is simultaneously the most accessible of all painting media and the most misunderstood. This course provides experience and instruction in observational and expressive watercolor techniques, materials, concepts, and vocabulary. Topics to be reviewed include line, perspective, value, texture, composition, color, and pictorial space. There will be an introduction to contemporary practices in watercolor, as well as experimental and abstract exercises, collage, and conceptual work.
Instructor(s): S. Kopf.

AS.371.155. Introduction to Sculpture. 2.0 Credits.
A studio course introducing students to sculptural concepts and methods. Emphasis is on the process of creating. Even the simplest materials can effectively activate space, convey meaning, and elicit emotion when used thoughtfully and imaginatively. Students will learn different methods including additive and reductive techniques, construction, modeling, and mold-making. No prerequisites except a willingness to experiment, make mistakes... and clean up when you are done. Seniors only or permission required.
Instructor(s): L. Premo.

AS.371.162. Black and White: Digital Darkroom. 3.0 Credits.
In this digital course, students explore the black-and-white aesthetic. They develop camera skills on numerous field trips including Ladew Topiary Gardens, the Maryland Zoo & Botanical Gardens, and an optional weekend trip to Cape Henlopen State Park in Delaware. Students meet frequently for critiques and discussions based on historic and contemporary imagery. They will learn to use Photoshop for image adjustment. Techniques such as high dynamic range, duotone, panorama and infrared will be covered. Students work on a project of their choice and produce a portfolio of ten prints. Digital SLRs are provided. Attendance at 1st class is mandatory. No need to email for approval.
Instructor(s): P. Berger
Area: Humanities.

AS.371.164. Introduction to Printmaking. 2.0 Credits.
Working with non-toxic/water based inks and both an engraving press and hand tools, students will explore several types of printmaking. Methods will include intaglio, collograph and both simple and multi-plate relief. As they develop their prints, students can then observe and exploit the strengths that each method has to offer. Drawing and Photoshop skills are helpful but not required.
Instructor(s): L. Premo.

AS.371.165. Location Photography. 3.0 Credits.
Working in the studio and in various locations, students will learn the fundamentals of lighting interiors and strategies for working in almost any environment. Field trips will include the National Aquarium, Evergreen Museum & Library, a Howard County horse farm, a Tiffany-designed church and a Hampden photo studio. Students will also concentrate on the fine art of printing in our digital lab. They will develop a final portfolio of 10 photographs which express a personal vision about a location of their choice. A basic knowledge of digital photography is helpful, but not required. Approval for this course will be considered after enrollment on SIS.
Instructor(s): H. Ehrenfeld
Area: Humanities.

AS.371.166. Landscape Photography. 3.0 Credits.
Class begins: Wednesday, July 6th. In this course students will experience the drama and beauty of the urban and rural landscape. On numerous field trips they will hone their camera technique as well as learn elements of composition and develop a personal style. Students will learn the fundamentals of Photoshop and they will also be introduced to the beauty of black and white in Silver Efex software. Digital SLR cameras will be provided.
Instructor(s): P. Berger
Area: Humanities.

AS.371.167. Lens to Page: The Photographer's Book. 3.0 Credits.
In this unique course, a photographer, a museum curator, and a book artist mentor students as they create photography books on subjects of their choosing. The class will concentrate on elements of composition, narration, design, and aesthetics. Field trips to view both public and private book collections and libraries will provide historical context for the evolution of book production, while actual shared volumes may serve as inspiration or models for emulation. As final project, each student will create a hardbound book using Blurb software. Fundamentals of Photoshop will be covered. A culminating exhibition affords students the opportunity to showcase their respective volumes at JHU's elegant Evergreen Museum & Library. Attendance at first class is mandatory.
Instructor(s): P. Berger
Area: Humanities.

AS.371.170. Works on Paper. 2.0 Credits.
As the title suggests, experienced students in this course will focus on the creation of artwork on paper. We'll use a wide variety of paper supports and mediums will include pastel, ink, watercolor, charcoal, acrylic and oil paint. Subject matter will range from figure to landscape, from color theory to differentiation. Working visits to the Baltimore Museum of Art and Johns Hopkins Archaeological Museum are planned.
Instructor(s): B. Gruber
Area: Humanities.
AS.371.171. Color Explorations & Theory. 3.0 Credits.
Course begins Tuesday, June 28th. We will explore the physical characteristics, psychological effects and basic physics of color through exercises in various applications. Primary mediums include: Paint, Color-Aid Paper & Photoshop. Emphasis is placed on the investigation of color effects used in applied and fine arts.
Instructor(s): C. Gregory
Area: Humanities.

AS.371.172. DIY Art: You Are the Medium. 3.0 Credits.
Art is not confined to the makers labors with traditional art materials. Art is transactional and can be made of anything. It brings forth personal narrative ones internal experience in a concrete form sand seeks resonance with the viewer. Art-making is a shared place of possibility and self-revelation, available to anyone with a desire to make visible their thoughts and feelings. Students will engage with novel creative processes and materials and will be challenged to broaden their perspectives on the essential nature of art. Personal narratives will be deepened through a class visit to the American Visionary Art Museum, as well as a short-term group residency with the artists of Make Studio in Hampden. Approval for this course will be considered after enrollment on ISIS; no need to email.
Instructor(s): C. Goucher
Area: Humanities.

AS.371.174. Introduction to Digital Art Production. 2.0 Credits.
An introduction to digital media tools with a focus on creating art and communicating ideas. Develop your skills in audio/visual communication including graphics, web design, sound and video production. Class meets at the Digital Media Center and includes an introduction to DMC’s facilities and broad range of digital production gear, plus studio visits with digital artists working in a variety of media.
Instructor(s): K. Anchor.

AS.371.177. Design Studies: Detail, Product, Prototype. 3.0 Credits.
When we undertake the design of an artifact—something material, perhaps interactive—we do more than create a pretty little sculpture, or simply enclose the inner workings of a product. We think about aesthetics; about ergonomics; about material heft and surface texture. In a successful product, toy, or building detail it is often something ineffable—the way the object interfaces with the human hand, or the way it takes on a personality in the mind—that results in its success as an object of design. The course is structured as a series of design exercises, each intended to develop the graphical and manual skill-set of the designer. Our subject, broadly speaking, is the design of small things: from building details to useful products and tools, the act of drawing iterative design sketches, and creating prototypes, will guide us in the development of practical design intelligence.
Instructor(s): C. Phinney
Area: Humanities.

AS.371.190. Painting & Drawing the Local Landscape. 2.0 Credits.
Clear fall weather in Baltimore and the wide variety of landscape and architecture in and around the Homewood campus provide an ideal opportunity to paint and draw outside. Working from life, masterworks and slides, we will investigate the history and practice of landscape painting, beginning with tonal wash drawings and progressing to full-color paintings. Media will include charcoal, ink, watercolor and oil paint. Slide lectures, demonstrations and museum and library visits will be featured. Portable easels provided.
Prerequisites: AS.371.131 OR AS.371.133 OR Instructor’s Permission Required
Instructor(s): B. Gruber.

AS.371.191. Introduction to Video Art. 2.0 Credits.
Throughout the semester, students will screen video art and respond by shooting and editing their own video works. They will think critically about the personal and societal function that video artwork serves. We’ll look at the work of artists ranging from Martha Rosler and Henessy Youngman, to Spike Jonze and music videos. We will discuss and explore the intersections between video, poetry, painting, and music. Students will be required to learn video editing software, write short video responses, and read and discuss relevant essays. Students can expect to shoot and edit four video production assignments.
Instructor(s): J. Roche.

AS.371.200. Visualizing Music. 3.0 Credits.
In this course, JHU photography students will pair up with Peabody Conservatory of Music student composers to develop an interdisciplinary work that grows out of their conversations and passions. Working under the guidance of Phyllis Berger, CVA Photography Supervisor, and David Smooke, Peabody Conservatory Music Theory Chair, students will design a program of music and photography that brings together the experience of looking and listening. Their work will be exhibited and performed at Evergreen Museum and Library. Attendance at first class is mandatory.
Instructor(s): D. Smooke; P. Berger
Area: Humanities.

AS.371.201. Drawing Outside the Box. 3.0 Credits.
Class begins Monday, May 27th. We will explore essential principles, tools, terminology & media, while pushing the boundaries of "traditional drawing" by adopting alternatives such as drawing with wire, inking with grass, and animating gesture in Photoshop. Not only will we draw from observation, which builds the perceptual platform and skills for spatial understanding and rendering, we will draw from intuition, movement, and outdoor stimuli. Subject matter may include: still life, interiors, landscape, architecture, the human figure and personal narrative.
Instructor(s): C. Goucher
Area: Humanities.

AS.371.202. Street Photography: Ten Photos, Ten Stories. 3.0 Credits.
Street photography is about seeing and reacting, in order to capture small, revelatory moments in a single image. We’ll cover camera operation basics, study inspiring examples by historical and contemporary photographers such as Robert Frank and Helen Levitt, and develop a more acute sense of sight on field trips to public parks and neighborhoods and through assignments and critiques. In the second half of the semester, students work on their own projects to develop 10 images that each tell a story, however slight, about the human condition.
Instructor(s): J. Bishop
Area: Humanities.

AS.371.301. Landscapes: Photographing the Burren. 3.0 Credits.
The Burren College of Art, located in a medieval castle on Ireland’s Atlantic coast, serves as the base for this digital photography course. Fundamentals of the Digital SLR are reviewed as well as image correction and manipulation in Photoshop. Focusing on the varied landscapes of Ireland, students will assemble a portfolio of digital photographs and exhibit their work in a group show at the end of the Program. Students of all majors and levels are welcome. Course must be taken for a grade.
Instructor(s): P. Berger
Area: Humanities.
AS.371.302. Photographic Portfolio. 3.0 Credits.
In this upper level course, experienced students will work on a semester-long project that reflects their artistic sensibility, interests and passion for photography. They will develop their ideas within a seminar style format that allows for conversation and debate and provides a forum for the evolution of content within their work. Through a combination of critique, lecture and lab, students will complete a portfolio of ten printed images that work together in a series. Recommended Course Background: Previous CVA photography course or instructor's permission. 
Instructor(s): P. Berger
Area: Humanities.

AS.371.303. Documentary Photography. 3.0 Credits.
In this course, we will explore different genres of documentary photography including: the fine art document, photojournalism, social documentary photography, the photo essay and photography of propaganda. Field trips offer opportunities to work in the field. Students will work on a semester-long photo-documentary project on a subject of their choice. Camera experience is a plus, but not a prerequisite. Students will be loaned a digital SLR for the semester.
Instructor(s): P. Berger
Area: Humanities.

AS.371.304. Photo Seminar: Wet Darkroom. 3.0 Credits.
In this film based course, students develop a project of their choice over the semester working independently in the darkroom and meeting for weekly critiques and discussions. Using the zone system (a method of pre-visualization developed by Ansel Adams) students will experiment with different film, paper and developer combinations specific to their projects. Writing in the form of a journal as well as critical analysis of images are integral parts of the seminar experience. 
Prerequisites: AS.371.146 or Permission Required
Instructor(s): Staff
Area: Humanities.

AS.371.305. Photographs and Text: The Art of the Narrative. 3.0 Credits.
In the tradition of the illuminated manuscript, students will use photographs and text creatively to tell a story. Their journey will begin with visits to Johns Hopkins University museums, where they will choose an object as inspiration for their narrative. This could be an illustration from the George Peabody Library, a statue from the Archaeological Museum, an instrument from the Civil War at the Johns Hopkins Medical Museum, or a silver spoon at the Homewood Museum. Field trips to the JHU museums will be an integral part of this course. The resulting portfolios of five large prints will be curated by Evergreen Museum & Library director James Abbott for an exhibition at Evergreen Museum. Course will be co-taught by CVA instructor Phyllis Berger and book artist Betty Sweren.
Instructor(s): P. Berger
Area: Humanities.

AS.371.306. Digital Photography: Photographing the Burren. 3.0 Credits.
The Burren College of Art, located in a medieval castle on Ireland’s Atlantic coast, serves as the base for this digital photography course. Fundamentals of the Digital SLR are covered as well as image correction and manipulation in Photoshop. Students will work one-on-one with their instructor and will exhibit their work in a group show at the end of the program. Students of all majors and levels are welcome. Course must be taken for a grade.
Instructor(s): H. Ehrenfeld; P. Berger
Area: Humanities.

AS.371.501. Independent Study. 2.0 Credits.
Instructor(s): B. Gruber; P. Berger.

AS.371.502. Independent Study. 0.0 - 2.0 Credits.
Instructor(s): B. Gruber; C. Hankin; P. Berger.

AS.371.590. Independent Study. 3.0 Credits.
Instructor(s): C. Hankin.

Cross Listed Courses
Film and Media Studies
AS.061.376. Arts and Culture Journalism: Interactive Media, Online Publishing. 3.0 Credits.
Students will participate in the ongoing creation of BmoreArt.com, an online arts and culture publication that serves the Baltimore community. In conjunction with visiting professionals, students will investigate the Baltimore cultural community and create different types of editorial content using interactive media including film, video, sound, and writing. Students will produce creative content utilizing their individual areas of expertise - such as visual art, art history, music, literary arts, film, and theater - while working together as a professional organization. A strong emphasis will be placed on the student’s collaborative participation and creative experimentation. Students with differing backgrounds in media will approach this project from unique perspectives, which will be valued and cultivated. Students with previous experience in journalism are welcome. An introductory writing or film course is suggested as a prerequisite.
Instructor(s): C. Ober
Area: Humanities
Writing Intensive.

German Romance Languages Literatures
AS.213.348. Picturing Jews: Representing Jewish Identity in Modern Art, Film & Literature. 3.0 Credits.
This course will consider the different ways Jewish identity has been represented in the 19th and 20th centuries, focusing primarily on Central and Eastern Europe. Race, nationalism, religion, language, geography, politics—all helped shape different ways of understanding just what it meant to be a Jew, and all found expression in art and literature by both Jews and non-Jews. Looking at texts originally written in German, Yiddish, and Hebrew, including prose, poetry, journalism and drama, as well as painting, photography, graphic design, architecture, and film we will gain an understanding of the range of ways that Jewish identity could be understood and expressed as well as of the ideological stakes and historical contexts of such representations. Writers and artists examined will include Chagall, Kafka, Sholem Aleichem, and Bialik. All readings will be in translation.
Instructor(s): S. Spinner
Area: Humanities.

Writing Seminars
AS.220.407. The Illustrated Short Story. 4.0 Credits.
A collaboration of The Writing Seminars and The Center for Visual Arts Students will study JHU’s Homewood House, residence of the Carroll family, choosing a room as the site of a story or a series of prose poems. To illustrate their work and produce an artist book, students will learn camera handling and Photoshop.
Instructor(s): J. McGarry
Area: Humanities.
Program in Museums and Society
AS.389.335. Recreating Ancient Greek Ceramics. 4.0 Credits.
This hands-on course in experimental archaeology brings together undergraduate and graduate students across disciplines to study the making of Athenian vases. Students work closely with expert ceramic artists, and in consultation with art historians, archaeologists, art conservators, and materials scientists to recreate Greek manufacturing processes.
Instructor(s): S. Balachandran
Area: Humanities.

Writing Seminars
http://writingseminars.jhu.edu/
The Writing Seminars exists to help students combine imaginative writing with scholarship in the general context of the humanities.

Undergraduate Program
Requirements for a B.A. degree
(Also see Requirements for a Bachelor’s Degree (p. 7))
AS.220.105 Fiction/Poetry Writing I and AS.220.106 Fiction/Poetry Writing II are prerequisite courses required for all majors and others who want to take advanced courses in writing. Majors must receive a grade of C- or better in all courses required for the major and no major requirements may be taken satisfactory/unsatisfactory.

Graduate Program
The Writing Seminars offers a Master of Fine Arts (M.F.A.) in fiction and poetry. Students admitted to the M.F.A. program enroll in two years of course work and produce a substantial manuscript in the form of a novel or collection of fiction or poetry. M.F.A. candidates are chosen on the basis of a manuscript, college transcripts, GRE scores, and appropriate letters of recommendation that testify to the student’s ability and willingness to undertake serious study in the literary arts. Since all students receive financial aid in the form of full tuition and a teaching assistantship, applicants must be able to demonstrate aptitude for college teaching.

The program requires two full years of residency in Baltimore. Students enroll each semester in two courses: a writing workshop in poetry or fiction and a second course in craft or literature taught within the department. At the end of the first year, students present a portfolio of revised work for faculty review. Successful completion of this work is a requirement for continuation in the second year.
The M.F.A. degree in The Writing Seminars is designed for students committed to the study and practice of literary writing at the highest level of accomplishment. Approximately four poets and four fiction writers will be admitted annually. Our pedagogy emphasizes genre-informed discussions, faculty conferences, independent readings, and interactions with visiting writers. Culminating in a book-length thesis, this immersion in literary study is designed to inculcate the habits and skills necessary for a productive writer's life.

Students applying to the M.F.A. program should have a bachelor's degree. All must demonstrate competence in a foreign language at the college level.

**Courses**

**AS.220.101. Narrative Medicine. 1.0 Credit.**
The course will introduce students to the role of storytelling in medicine through a variety of essays, short stories and documentaries, from Susan Sontag's Illness as Metaphor to Atul Gawande's Complications to Terry Wrong's Hopkins. In addition to studying these narratives, students will produce their own written works and meet guest writers from the local medical community. Throughout, the course will provide students with valuable practice in critical analysis and reasoning, skills that are tested on entrance exams such as the MCAT.

Instructor(s): E. Parker
Area: Humanities.

**AS.220.105. Fiction/Poetry Writing I. 3.0 Credits.**
A course in realist fiction and traditional verse, with readings in Eudora Welty, Vladimir Nabokov, Henry James, Robert Frost, Paul Fussell, John Gardner, Seamus Heane, and Gwendolyn Brooks. This first course for writers is a study of forms of short fiction and metered verse. Students compose short stories and poems; includes practice of critical attention to literary models and workshop of student writing. This course is a prerequisite for most upper level courses. This course is part one of the year-long Introduction to Fiction and Poetry, and must be taken before AS.220.106.

Instructor(s): Staff
Area: Humanities
Writing Intensive.

**AS.220.106. Fiction/Poetry Writing II. 3.0 Credits.**
The second half of IFP, a course in counter-traditional antirealist fiction and free verse (Emily Dickinson, Virginia Woolf, Elizabeth Bishop, Franz Kafka, Italo Calvino, and William Carlos Williams). This course is a prerequisite for most upper level courses.

Prerequisites: AS.220.105

Instructor(s): M. Broida; R. Pereira Espinosa
Area: Humanities
Writing Intensive.

**AS.220.108. Introduction to Fiction & Nonfiction. 3.0 Credits.**
A course in realist fiction and nonfiction, with readings by Eudora Welty, Vladimir Nabokov, Henry James; George Orwell, Beryl Markham and Truman Capote. Students compose short stories and essays with attention to literary models. AS.220.105 can be substituted for AS.220.108.

Instructor(s): J. Cavanaugh-Simpson
Area: Humanities
Writing Intensive.
AS.220.138. Make 'Em Laugh. 3.0 Credits.
The quickest way to kill a joke is to explain it. So how do we learn to be funny? In this class, we'll explore techniques in humor writing. Whether poking holes in accepted absurdities or helping us laugh at death, humor makes us smile and think. Each week, we'll focus on a different type of humor—dark comedy, satire, etc.—through stories, nonfiction, criticism, and author interviews. Students will write imitations and original work.
Instructor(s): G. Kirby
Area: Humanities
Writing Intensive.

AS.220.142. Seriously Funny: Writing Humor Poetry. 3.0 Credits.
This course will examine both light verse and how humor can enrich serious subjects in poetry. We will explore many subjects, from bad love to aesthetic experiences. Principal readings will range from classic exemplars such as Shakespeare, Dryden, and Eliot to selections from American poets since 1950, as represented in the anthology "Seriously Funny: Poems about Love, Death, Religion, Art, Politics, Sex, and Everything Else." Students will be required to write several seriously funny poems of their own. Fun is mandatory.
Instructor(s): S. Greer
Area: Humanities.

AS.220.146. Introduction to Science Writing. 3.0 Credits.
Science writing is science written in plain English and told as a story. Students research, write, edit others, rewrite. They also analyze published stories for structure, substance, accessibility, and clarity.
Area: Humanities
Writing Intensive.

AS.220.148. Portraits of the Artists: Writing Self in Fiction. 3.0 Credits.
Flannery O'Connor once said "Anybody who has survived his childhood has enough information about life to last him the rest of his days." Fiction is a carefully hewn combination of memory and imagination, and while it is impossible to know how much of the literary canon is sourced in autobiography, the truism holds firm: people write what they know. In this course, we will focus on modern and contemporary autobiographical fiction, looking closely at source, creative process, craft, and style, in order to answer the essential question, How does a writer successfully roll fact into fiction? Students will complete writing activities and participate in discussions and workshops. They will produce either an autobiographical story, or the first chapter of a longer work. Novels: Portrait of the Artist as a Young Man, Joyce; The Bell Jar, Plath; The Lover, Duras. Stories by Hemingway, Updike, Munro, O'Brien, Casey.
Instructor(s): J. Slovak
Area: Humanities.

AS.220.150. Steal This Book. 3.0 Credits.
From Spike Lee to The Clash, art can wield immense influence on our worldview. This class will explore the intersection of social critique and American literature. Class texts will also include a range of pertinent films, documentaries, and popular music. We'll examine the social utility of art and how artists use their craft to make a statement. Classwork includes Blackboard posts on current events, weekly creative writing assignments, and a final portfolio of creative work.
Instructor(s): J. Takacs
Area: Humanities
Writing Intensive.

AS.220.152. Words of Light: Poetry and Photography. 3.0 Credits.
This course examines the role of lyric poetry in a media culture that has become obsessed with photographs. In a world where everyone with a cell phone is a photographer—and every literate person a writer—how do we create valuable work? We will pair genres of photography and lyric poetry in discussion—landscape photos and poems of place, for example—and view each through the other. Students will read a body of poetry and criticism (prose by Walter Benjamin, Susan Sontag, Penelope Pelizzon, Roland Barthes, et al.). In addition to bringing worthwhile comments on the readings to each class, students will submit one original poem and one original photo each week for credit.*
Prerequisites: Each student is required to have a device capable of taking digital photos. Cell phones are fine.
Instructor(s): S. Greer
Area: Humanities.

AS.220.152.16. Writing for Children: The Tales We Can't Seem to Forget. 1.0 Credit.
In this summer mini-course, students will use canonical works of children's literature to inspire their own stories and verses, which they will read aloud and discuss in a workshop setting. We will focus on the uses and reuses of fairy and folk tales—from early works compiled by the Brothers Grimm and Charles Perrault to fantasies from the Victorian era by Mary de Morgan and Oscar Wilde. We will end with contemporary reimaginings by Roald Dahl, Neil Gaiman, Angela Carter and Lauren Child. Class will include discussion of illustration, recent trends in children's literature, and the publishing process. Course instructor Sarah Smith is the former Children's Book editor at the New York Times Book Review.
Instructor(s): S. Smith
Area: Humanities.

AS.220.155. Writing Unreality: Fantastical Fiction. 3.0 Credits.
While fiction is by definition not "real," some modes of fiction present deliberate departures from the world as we know it. This class will examine fantastical and non-realist writing, including surrealism and magic realism stories, as well as works with fairy-tale and folklore influences, and stories with elements of the uncanny or supernatural. Students will read and discuss representative fiction, complete weekly creative assignments, and participate in workshop of a final, full-length piece.
Instructor(s): S. Robinson
Area: Humanities.

AS.220.156. Writing Unreality: Fantastical Fiction. 3.0 Credits.
While fiction is by definition not "real," some modes of fiction present deliberate departures from the world as we know it. This class will examine fantastical and non-realist writing, including surrealism and magic realism stories, as well as works with fairy-tale and folklore influences, and stories with elements of the uncanny or supernatural. Students will read and discuss representative fiction, complete weekly creative assignments, and participate in workshop of a final, full-length piece.
Instructor(s): S. Robinson
Area: Humanities.

AS.220.165. Writing Unreality: Fantastical Fiction. 3.0 Credits.
While fiction is by definition not "real," some modes of fiction present deliberate departures from the world as we know it. This class will examine fantastical and non-realist writing, including surrealism and magic realism stories, as well as works with fairy-tale and folklore influences, and stories with elements of the uncanny or supernatural. Students will read and discuss representative fiction, complete weekly creative assignments, and participate in workshop of a final, full-length piece.
Instructor(s): S. Robinson
Area: Humanities.

AS.220.167. Serious Nonsense: Light & Comic Poetry. 1.0 Credit.
This course will provide a guided tour of some of the funniest poems ever written in English. Genres covered will include light verse, satire, parody, absurdism ("nonsense"), and others. We'll explore the serious side of comic poetry and vice versa. Students will have the opportunity to write their own comic verse in the genres discussed.
Instructor(s): A. Allen
Area: Humanities.
AS.220.180. Special Opportunities in Undergraduate Learning: Metaphor and Poetry. 1.0 Credit.
We all use figurative language, such as metaphor, simile, and irony. But what does it mean for language to be figurative, and how does this affect its meaning? This course will approach these questions from the angle of poetry. We’ll ask further questions like: how do some poets use metaphor differently from others? What does Shakespeare mean when he says “my love is as a fever”? We’ll read passages from different critics on metaphor, including several from Lakoff and Turner’s More Than Cool Reason: A Field Guide to Poetic Metaphor and Denis Donoghue’s Metaphor. Students will write poems with specific metaphorical requirements; they’ll learn to use conceits (metaphors that govern an entire poem); they’ll learn to use conventional metaphors; most importantly, they’ll learn to think critically about why certain metaphors work and certain ones don’t.
Instructor(s): J. Frantz.

AS.220.195. Fitzgerald’s Short Stories. 3.0 Credits.
An examination of F. Scott Fitzgerald’s major short stories in the 1920s and 1930s. We’ll analyze Fitzgerald’s commitment to exploring the tension between two opposing intellectual movements: literary naturalism (which championed the primacy of environmental determinism) and literary realism (which championed the primacy of free will). We’ll trace Fitzgerald’s mercurial loyalty to each movement: his abandonment of one school of thought for the other, from one year to the next. In “May Day” he even embraced both movements equally—testimony to his belief that “the test of a first-rate intelligence is the ability to hold two opposed ideas in mind at the same time and still retain the ability to function”. Did Fitzgerald ultimately advocate one school of thought over the other? Or, did he intend simply to stage the debate between them?
Instructor(s): J. Rockefeller V
Area: Humanities
Writing Intensive.

AS.220.200. Introduction to Fiction. 3.0 Credits.
Study in the reading and writing of short narrative with focus on basic technique: subject, narrative voice, character, sense of an ending, etc. Students will write weekly sketches, present story analyses in class, and workshop one finished story. Selected parallel readings from such models of the form as Henry James, Anton Chekov, James Joyce, John Cheever, Alice Munro, and others. Permission Required. (Formerly AS.220.191.)
Prerequisites: AS.220.105 and AS.220.106
Instructor(s): K. Noel, R. Puchner, T. Davies
Area: Humanities.

AS.220.204. Introduction to Dramatic Writing: Film. 3.0 Credits.
Screenwriting workshop. This course will look at the screenplay as both a literary text and blue-print for production. Several classic screenplays will be analyzed. Students will then embark on their own scripts. We will intensively focus on character development, creating “believable” cinematic dialogue, plot development, conflict, pacing, dramatic foreshadowing, the element of surprise, text and subtext, and visual storytelling. Several classic films will be analyzed and discussed (PSYCHO, CHINATOWN, BLADE RUNNER). Students will learn professional screenplay format and write an 8-12 page screenplay that will be read in class and critiqued.
Instructor(s): M. Lapadula
Area: Humanities
Writing Intensive.

AS.220.205. Introduction to Dramatic Writing: Plays. 3.0 Credits.
This seminar will explore the stage play across a variety of styles, tones and genres. After reading and analyzing classic theatrical works by Edward Albee, Harold Pinter, Samuel Beckett, Caryl Churchill, Tennessee Williams, Beth Henley and Martin McDonough, students will be inspired to embark on creating their own stage-worthy material. The final goal of the class will be for each playwright to compose a ten-minute one-act play by the end of the summer session. Various assignments will be given along the way which will include writing monologues, two-character scenes, creating situations where the physical environment impacts dramatically on the characters’ lives and more. Students will have their plays read aloud in class and each will be closely analyzed.
Instructor(s): M. Lapadula
Writing Intensive.

AS.220.206. Writing about Science I: Daily News Journalism. 3.0 Credits.
This course is designed to teach students the skills of daily news reporting, with a focus on covering science news. Students will learn how to turn scientific discoveries into lively and engaging prose for the general public, interview sources, and pitch stories to news organizations. The skills taught are applicable to all areas of journalism, not just science journalism.
Instructor(s): D. Grimm
Area: Humanities
Writing Intensive.

AS.220.210. Introduction to Non-Fiction: Science as a Social Activity. 3.0 Credits.
Using the political and economic milieu of science and technology as a context for our writing, we will study how social factors such as government, money, secrecy, and ethics affect the conduct and public presentation of scientific and medical research. Controversies from 20th century history as well as current events will be discussed. Writing assignments to satisfy the W requirement will consist of short papers derived from classroom topics.
Instructor(s): W. Biddle
Area: Humanities
Writing Intensive.
AS.220.211. Journalism for Writers. 3.0 Credits.
Learn reporting through analysis of famous and infamous work by contemporary journalists such as Janet Malcolm, Michael Finkel, Sarah Corbett and Seymour Hersch. Students will use readings to understand concepts central to news and feature writing, including libel, fair use, balanced reporting, and appropriate sourcing. They will then head out to find and write their own stories about local issues using best practices learned in class. Sarah Harrison Smith is a former managing editor of the New York Times Magazine and the author of "The Fact Checker’s Bible.
Instructor(s): S. Smith
Area: Humanities.

AS.220.212. Line and Lineage: A Survey of Poetry Writing. 3.0 Credits.
In this lecture-based course, students will build their knowledge of the history of poetry writing in English through a chronological exploration of the poetic line. This course will serve as a foundation for future studies in the writing and reading of poetry?
Prerequisites: AS.220.105 AND AS.220.106
Instructor(s): C. Childers
Area: Humanities.

AS.220.213. Fiction Survey: Once Upon a Time. 3.0 Credits.
A review of the origins and development of the realist short story from fable, fairy tale, saint’s life, Bible story, through versions created in the Renaissance and classic (19th and 20th century) periods, to modern narratives. Writing Seminars majors only.
Prerequisites: AS.220.105 AND AS.220.106
Instructor(s): J. McGarry
Area: Humanities.

AS.220.217. If Mama Could See: Poets Writing about Motherhood. 3.0 Credits.
In a 1982 essay, Adrienne Rich writes that "the experience of motherhood was eventually to radicalize me." In this class, we will consider the ways in which women poets have written through the experiences of being a child and a mother. We will read poems, essays, and interviews by late twentieth century women poets including Adrienne Rich, Lucille Clifton, and Audre Lorde, among others, placing them in a larger historical context. Students will turn in one creative assignment a week, and the course will culminate in a short critical paper.
Instructor(s): J. Hudgins
Area: Humanities.

AS.220.218. Writers on Film. 3.0 Credits.
An interdisciplinary course focusing on the film writings of poets, novelists, critics, and essayists such as Virginia Woolf, H.D., James Agee, James Baldwin, and Pauline Kael; and films showing the intertitle and screenplay work of writers such as Anita Loos, F. Scott Fitzgerald, William Faulkner, and Jean Cocteau. Participants will write weekly assignments on film from a critical perspective.
Instructor(s): K. Stine
Area: Humanities
Writing Intensive.

AS.220.219. Readings in Fiction and Literary Nonfiction. 3.0 Credits.
This course offers an in-depth exploration of content, style, and crossover literary techniques among authors who write both fiction and nonfiction, including Jamaica Kincaid’s memoir My Brother and “Girl.” Students will evaluate why each genre was chosen to narrate, for example, such quandaries as ethics in surgery: Abraham Verghese’s novel Cutting for Stone and Richard Selzer’s essay, “The Knife,” as well as the reportage and novels of Ernest Hemingway and others. Also explored: topics of social import and questions of identity in James Baldwin’s essays ("Notes of a Native Son") and stories ("Sonny’s Blues"), and other works; The course builds on literary writing and reading techniques established in Intro to Fiction & Nonfiction (IFN) and Intro to Fiction & Poetry (IFP). Either course is a prerequisite, with IFN preferred.
Prerequisites: AS.220.105 OR AS.220.108
Instructor(s): J. Cavanaugh-Simpson
Area: Humanities
Writing Intensive.

AS.220.210. If Mama Could See: Poets Writing about Motherhood. 3.0 Credits.
In a 1982 essay, Adrienne Rich writes that “the experience of motherhood was eventually to radicalize me.” In this class, we will consider the ways in which women poets have written through the experiences of being a child and a mother. We will read poems, essays, and interviews by late twentieth century women poets including Adrienne Rich, Lucille Clifton, and Audre Lorde, among others, placing them in a larger historical context. Students will turn in one creative assignment a week, and the course will culminate in a short critical paper.
Instructor(s): J. Hudgins
Area: Humanities.

AS.220.219. Readings in Fiction and Literary Nonfiction. 3.0 Credits.
This course offers an in-depth exploration of content, style, and crossover literary techniques among authors who write both fiction and nonfiction, including Jamaica Kincaid’s memoir My Brother and “Girl.” Students will evaluate why each genre was chosen to narrate, for example, such quandaries as ethics in surgery: Abraham Verghese’s novel Cutting for Stone and Richard Selzer’s essay, “The Knife,” as well as the reportage and novels of Ernest Hemingway and others. Also explored: topics of social import and questions of identity in James Baldwin’s essays (“Notes of a Native Son”) and stories (“Sonny’s Blues”), and other works; The course builds on literary writing and reading techniques established in Intro to Fiction & Nonfiction (IFN) and Intro to Fiction & Poetry (IFP). Either course is a prerequisite, with IFN preferred.
Prerequisites: AS.220.105 OR AS.220.108
Instructor(s): J. Cavanaugh-Simpson
Area: Humanities
Writing Intensive.

AS.220.310. Intermediate Fiction: Nature Writing. 3.0 Credits.
Our central text will be Thoreau’s “Walden”. Most of our readings will be American, though we will read excerpts from Lucretius and Darwin. We will examine various ways in which the natural world has been depicted in nonfiction, fiction, and poetry. Students will write critical papers on nature writers as well as to do creative nature writing of their own. Our authors may include: Emerson, Rachel Carson, Loren Eiseley, John Updike, Robert Frost, Donald Culross Peattie.
Instructor(s): B. Leithauser
Area: Humanities
Writing Intensive.

AS.220.311. Intermediate Fiction: Point of View. 3.0 Credits.
In this course, we will workshop student short stories, complete short writing exercises, and discuss published writing with an emphasis on the possibilities of point of view. We will explore the opportunities and challenges of writing in first, second, and third person, think about how narrative distance and tense complicate these choices, and connect narrative voice to story shape and structure.
Instructor(s): D. Evans
Area: Humanities.
AS.220.312. Intermediate Fiction: Detail and Description. 3.0 Credits.
An intermediate workshop focusing on the question of how to make fictional worlds feel real. We'll read 19th, 20th, and 21st century short fiction by authors such as Anton Chekhov, Jhumpa Lahiri, Junot Díaz, and Alice Munro, focusing particularly on how authors make the lives on the page feel three-dimensional. Students will write stories and exercises, including exercises that involve exploring Baltimore in order to observe and write about the city in which we live. Recommend Course Background: Students need to have completed a 200-level Writing Seminars course.
Prerequisites: AS.220.105 AND AS.220.106
Instructor(s): K. Noel
Area: Humanities

AS.220.313. Writing about the Arts. 3.0 Credits.
Learn the practice of arts journalism, from reviewing to conducting interviews and writing profiles. In class, students will study the work of some of the best writers in this field, pitch story ideas, report and write, and then discuss their pieces in a workshop setting. Instruction will include journalistic ethics, plagiarism, libel law, and use of social media. Students can expect class visits from established journalists. Writing Seminars Majors only
Instructor(s): S. Smith
Area: Humanities

AS.220.314. Journalism and Opinion. 3.0 Credits.
Students will learn about writing op-eds, reviews and feature articles, analyzing a broad range of examples and producing their own work in each category. The course will place a particular emphasis on op-ed-writing as a valuable skill to possess on any career path.
Instructor(s): M. Lasswell
Area: Humanities

AS.220.315. Intermediate Poetry: Sound Effects. 3.0 Credits.
This course explores the crucial role sound plays in the power of poetry, from early roots in oral traditions to contemporary contexts. Through readings, discussion, academic reflection, and creative exercises, participants will explore a range of sound techniques in their own poems and in the poems of others.
Instructor(s): D. Malech
Area: Humanities

AS.220.317. Writing about Science II: Feature Writing Journalism. 3.0 Credits.
This course is designed to teach students the skills of long-form narrative journalism, with a focus on covering science news. Skills taught apply to all areas of journalism, not just science journalism, and include how to compose scenes, create three-dimensional characters, create narrative tension, and conduct on-site reporting. The primary writing assignment will be a 3,000-word piece that is pitched, reported, and workshoped throughout the course of the class. "Writing About Science IV" (formerly Becoming a Science Journalist) is recommended as a prerequisite for this course. Students who have not taken this course will need to complete a short writing test (may be waived for Writing Seminars students) and obtain the permission of the instructor to enroll.
To schedule this test, please contact the instructor at dgrimm5@jhu.edu
Instructor(s): D. Grimm
Area: Humanities

AS.220.318. Intermediate Fiction: Voice. 3.0 Credits.
This workshop will focus intensely on student writing, and on reading stories with a strong narrative voice, the kinds of stories in which the reader can hear the narrator speaking, where the voice gets stuck in the reader's mind, where the story feels like an invasion of the narrator's private thoughts, or is a retelling of the tale for some invisible public, or is the quiet, clear prose of a diarist, journaling into the void.
Area: Humanities

AS.220.325. Intermediate Fiction: Story and Plot. 3.0 Credits.
The study of plot, with questions, both practical and theoretical, inevitably raised by the short story form. Readings in Chekhov, James, O'Connor, Cheever, Joyce, and Hemingway.
Instructor(s): T. Davies
Area: Humanities

AS.220.327. Intermediate Fiction: Characters. 3.0 Credits.
Instructor(s): B. Leithauser
Area: Humanities

AS.220.329. Forming The Short Story. 3.0 Credits.
In the early 1800s popular writers began to compress novel-like narrations into much shorter forms. By the 1880s what we recognize today as the short story had emerged. In this course we will trace the development of the form from its earliest stirrings in the tales of ETA Hoffmann through the Russians Pushkin, Gogol, and Turgenev, to its apotheosis in the stories of Chekhov and Wharton. Critical responses will be creative, using short sketches to experiment with the techniques, some adopted others rejected, and constraints experienced by writers along the way.
Instructor(s): T. Davies
Area: Humanities

AS.220.331. Intermediate Fiction: Forms of Fiction. 3.0 Credits.
A workshop in the formative genres of fiction: romance, confession, anatomy, and novel. Readings include Flaubert, Stevenson, Camus, and Stephen Dixon. Frequent sketches and two stories.
Prerequisites: Prereqs: AS.220.105 AND AS.220.106
Instructor(s): T. Davies
Area: Humanities

AS.220.337. Intermediate Dramatic Writing: Film. 3.0 Credits.
An intensive workshop focusing on methodology: enhancing original characterization, plot development, conflict, story, pacing, dramatic foreshadowing, the element of surprise, text and subtext, act structure, and visual storytelling. Each student is expected to present sections of his/her "screenplay-in-progress" to the class for discussion. The screenplay Chinatown will be used as a basic text.
Instructor(s): R. Buso-garcia
Area: Humanities

AS.220.340. Writers on Writing. 3.0 Credits.
A study of advice from authors such as Francine Prose, E.B. White and John McPhee about the craft of writing. Students will assess points of agreement and disagreement, and gauge how the writers' work reflects their advice. The course will emphasize practical tools that students can employ in their own nonfiction writing.
Instructor(s): M. Lasswell
Area: Humanities
**AS.220.370. Intermediate Fiction: Dialogue and Exposition. 3.0 Credits.**

We will look at a variety of ways in which dialogue further artistic ends. We will ask questions like: When is dialogue best expressed directly? When is it best summarized? How does dialogue-heavy short fiction differ from a play? When can dialogue stand on its own, and when does it require an author's explanation or interpretation? Students will write both creative and expository papers. 

**Prerequisites:**

- AS.220.200 AND AS.220.106
- Instructor(s): B. Leithauser
- Area: Humanities
- Writing Intensive.

**AS.220.371. Nonfiction in the Post-Factual Era. 3.0 Credits.**

When facts are widely ignored or mistrusted in public discourse, what happens to nonfiction as a genre? We will consider the current state of various political and scientific debates, examine historical precedents, and search for practical solutions in nonfiction writing.

- Instructor(s): B. Leithauser
- Area: Humanities
- Writing Intensive.

**AS.220.377. Intermediate Poetry: Poetic Forms. 3.0 Credits.**

Poetic Forms I fulfills one of the Intermediate requirements for The Writing Seminars Major. It deals with rhyme, meter, traditional forms, and ad hoc forms of students' own making. Whether you are a poet, novelist, song writer, science writer, or dramatist, this course will help you master lines and sentences even better.

**Prerequisites:**

- AS.220.201
- Instructor(s): G. Williamson

**AS.220.378. Intermediate Poetry: Poetic Forms II. 3.0 Credits.**

This course builds on the information and techniques encountered in Poetic Forms I and uses them in reading and imitating a range of contemporary poets. Please note, however, Poetic Forms I is NOT a prerequisite for Poetic Forms II.

- Instructor(s): G. Williamson
- Area: Humanities.

**AS.220.379. Intermediate Poetry: Performing Shakespeare. 3.0 Credits.**

This course, which begins with careful textual study, offers students the opportunity to experience Shakespeare's language as a spoken expression, marked by rhythm, sound, rhetoric, and emotion. By working with (and ultimately committing to memory) sonnets, speeches, and scenes, students will deepen their understanding of Shakespeare's art, through performance and brief critical writings. Recommended Course Background: Need to have completed a 200-level Writing Seminars class.

- Instructor(s): D. Yezzi
- Area: Humanities.

**AS.220.380. Intermediate Fiction: The Scene. 3.0 Credits.**

Emphasis in writing scenes-the building blocks of fiction-units of action, units of dialogue. Readings will include the stories of Chekhov, Cheever, Hemingway, and Carver. Recommended Course Background: AS.220.200

- Instructor(s): T. Davies
- Area: Humanities.

The class will read and discuss classic autobiographical texts by Benjamin Franklin, Frederick Douglass, Henry Thoreau, Henry Adams, Gertrude Stein, Malcolm X, and others. Students will write and workshop their own life stories of substantial length.

- Instructor(s): W. Biddle
- Area: Humanities
- Writing Intensive.

**AS.220.385. Intermediate Nonfiction: Communicating Risk. 3.0 Credits.**

Scientists, engineers and physicians create and define risks. The public perceives these risks and decides what is acceptable. We will study the psychology and politics of risk communication between experts and laymen.

- Instructor(s): W. Biddle
- Area: Humanities
- Writing Intensive.

**AS.220.387. Intermediate Poetry: The Poet as Observer. 3.0 Credits.**

A workshop course with readings and writing assignments that emphasize the artistic value of the outward gaze. Students will keep a daily journal of observations, and over the semester will develop those observations into at least 10 new poems. Course readings will include work by Rainer Maria Rilke, Elizabeth Bishop, and Theodore Roethke. 

- Instructor(s): J. Arthur
- Area: Humanities.

**AS.220.391. Performing Poetry & Fiction. 3.0 Credits.**

Performing Fiction & Poetry: An Acting Workshop for Writers. This hands-on performance workshop, combining literary and theatrical practice, will look closely at what makes a performance or reading compelling, clear, and resonant. Through textual analysis, vocal technique, and group discussion, students will create a pliant and powerful reading style to best serve their work. The course includes regular writing assignments in poetry and fiction and weekly performance and group discussion.

- Instructor(s): D. Yezzi
- Area: Humanities
- Writing Intensive.

**AS.220.393. Intermediate Poetry: Poets in Conversation. 3.0 Credits.**

This exploring of poetic process as ongoing discourse within and across generations. Readings, writing assignments, and in-class workshop of student poems will encourage and enable course participants to join the conversation themselves.

- Instructor(s): D. Malech
- Area: Humanities
- Writing Intensive.

**AS.220.397. Intermediate Poetry: The Lyric. 3.0 Credits.**

What is a lyric poem in the 21st Century? What causes such a thing? What does it sound like? What is it good for? Who writes them? We will. By reading lyric poems written over the last 500 years in English, and by writing our own original work we will find some answers to these questions. This class will have a special emphasis on Free Verse and the particular challenges and joys of such a poem. This workshop aims to generate new work and to cultivate skills necessary for a writer.

- Instructor(s): S. Scafidi
- Area: Humanities.

**AS.220.399. Intermediate Poetry: The Poet as Observer. 3.0 Credits.**

A workshop course with readings and writing assignments that emphasize the artistic value of the outward gaze. Students will keep a daily journal of observations, and over the semester will develop those observations into at least 10 new poems. Course readings will include work by Rainer Maria Rilke, Elizabeth Bishop, and Theodore Roethke. 

- Instructor(s): J. Arthur
- Area: Humanities.
- Writing Intensive.
AS.220.399. Intermediate Poetry: Playwriting for Poets: Suting the Action. 3.0 Credits.
Many of the finest modern and contemporary poets were also groundbreaking dramatists, including Goethe, Yeats, Eliot, Millay, Cummings, Brecht, and Walcott. Taking these writers' poetic dramas as models, students will explore the elements of playwriting - plot, character, rhythm, etc. - in order to create original dramatic works. Speeches, scenes, and short plays will be read aloud in class and considered in a workshop setting.
Instructor(s): D. Yezzi
Area: Humanities
Writing Intensive.

AS.220.400. Advanced Poetry Workshop. 3.0 Credits.
The capstone course in poetry writing. Consideration of various poetic models in discussion, some assigned writing, primarily workshop of student poems. Students will usually complete a "collection" poems. (Formerly AS.220.396.)
Prerequisites: AS.220.201
Instructor(s): D. Malech
Area: Humanities.

AS.220.401. Advanced Fiction Workshop. 3.0 Credits.
The capstone course in writing fiction, primarily devoted to workshop of student stories. Some assignments, some discussion of literary models, two or three completed student stories with revisions. Completion of Intermediate Fiction is required for admission. (Formerly AS.220.355)
Prerequisites: Pre-req: AS.220.200
Instructor(s): B. Leithauser; T. Davies
Area: Humanities.

AS.220.407. The Illustrated Short Story. 4.0 Credits.
A collaboration of The Writing Seminars and The Center for Visual Arts.
Students will study JHU's Homewood House, residence of the Carroll family, choosing a room as the site of a story or a series of prose poems. To illustrate their work and produce an artist book, students will learn camera handling and Photoshop.
Instructor(s): J. McGarry
Area: Humanities.

AS.220.408. Readings in Poetry: War Poetry From Troy to Afghanistan. 3.0 Credits.
The course will follow a chronological line from Homer through to American and British poets of the current war in Afghanistan. This means we will be looking at (among other things) Beowulf, poems of the English Civil War, poems of the American Civil War, poems of the First and Second World Wars, and poems about the conflicts in Iraq and Syria as well as Afghanistan. Each class will be divided into two sections of equal length. In the first half we will study poems written by our predecessors - poems by women as well as men, poems written in the front line as well as behind the lines in hospitals and 'at home', and poems written in a variety of forms - ranging from pure lyric to prose-poetry; in the second half we will discuss poems written by members of the class in response to conflict, and/or in response to the poems we are discussing in any given week.
Prerequisites: AS.220.201
Instructor(s): A. Motion
Area: Humanities.

AS.220.409. Readings in Fiction: Faulkner, Fitzgerald, & Hemingway. 3.0 Credits.
An examination of the fiction of three American modernist masters in the context of the early 20th century movement in the verbal and visual arts.
Not a workshop course.
Instructor(s): J. Irwin
Area: Humanities.

AS.220.410. Readings in Poetry: Four Women Poets. 3.0 Credits.
A study of technique and strategy in the poetry of Emily Dickinson, Marianne Moore, Elizabeth Bishop, and Amy Clampitt. Not a workshop course.
Instructor(s): M. Salter
Area: Humanities.

AS.220.413. Fiction Survey: Pairings Across Time. 3.0 Credits.
We will trace the ancestry of some modern genres, pairing a modern book with a nineteenth-century counterpart. We will look at suspense fiction (Patricia Highsmith's The Talented Mr. Ripley and Dickens's Tale of Two Cities), romantic comedy (Anne Tyler's Accidental Tourist and a Jane Austen novel), science fiction (Philip K. Dick's Do Androids Dream of Electric Sheep?—the basis for Blade Runner—and Wells's The Time Machine) and tales of the fantastic (stories by John Cheever and Steven Milhauser paired with Poe and ?Hawthorne). A few films may be shown, but not during class.
Instructor(s): B. Leithauser
Area: Humanities.

AS.220.414. Readings in Fiction: The Lyric Mode. 3.0 Credits.
This course will focus on musicality in prose, with close attention to the effects that fiction writers can achieve through assonance, refrain, and the careful management of rhythm. Readings will include work by Toni Morrison, Vladimir Nabokov, Michael Ondaatje, Rainer Maria Rilke, Marilyne Robinson, and Virginia Woolf.
Prerequisites: AS.220.201
Instructor(s): J. Arthur
Area: Humanities.

AS.220.415. Fiction and Social Engagement. 3.0 Credits.
In this Community-Based Learning course, students will explore fiction and areas of social concern in partnership with high-school age writers from Baltimore public schools. Students will read and write fiction and engage in community conversation and collaboration. Participation in some events outside of class time will be required.
Instructor(s): K. Noel
Area: Humanities.

AS.220.417. Advanced Nonfiction Workshop. 3.0 Credits.
Classes will be devoted to writing and collective editing of factual work of significant length and ambition, including essays, journalistic reports, histories, and biographies. Instructor permission required.
Instructor(s): W. Biddle
Area: Humanities
Writing Intensive.

AS.220.418. Readings in Fiction: The Novella. 3.0 Credits.
Registration Restrictions: Permission required. Twentieth-century novellas, with a new author and book each week. The course asks: What can and has been accomplished by American fiction writers in fewer than 150 pages?
Instructor(s): B. Leithauser
Area: Humanities
Writing Intensive.
AS.220.420. Readings in Contemporary Fiction: Coetzee, Delillo, Freudenberger, Johnson. 3.0 Credits.
The central concern of this course is to read, study, think about, and discuss several novels and short story collections, paying special attention to the voice and structural techniques these authors have invented to create compelling works.
Instructor(s): M. Klam
Area: Humanities.

AS.220.424. Science as Narrative. 3.0 Credits.
Class reads the writings of scientists to explore what their words would have meant to them and their readers. Discussion will focus on the shifting scientific/cultural context throughout history. Authors include Aristotle, Copernicus, Galileo, Descartes, Newton, Darwin, Freud, Einstein, Heisenberg, Bohr, Crick and Watson.
Instructor(s): R. Panek
Area: Humanities
Writing Intensive.

AS.220.425. Readings in Fiction: The Story Cycle. 3.0 Credits.
A study of the short story cycle as a literary form. Authors may include Joyce, Schulz, Anderson, Welty, Calvino, Munro, Erdrich, Diaz and others.
Instructor(s): R. Puchner
Area: Humanities
Writing Intensive.

AS.220.427. Readings in Fiction: The Novella. 3.0 Credits.
A study of the novella as a literary form. Authors may include Melville, Turgenev, Tolstoy, Chekhov, Kafka, James, Wharton, Baldwin, Porter, Rulfo, Smiley, and others.
Instructor(s): B. Leithauser
Area: Humanities
Writing Intensive.

AS.220.428. Readings in Fiction: The Stories and Letters of Anton Chekhov. 3.0 Credits.
We will read the major long and short stories of Chekhov, along with selected letters written in the full course of his lifetime. Juniors and Seniors only.
Prerequisites: AS.220.105 AND AS.220.106 AND AS.220.200 AND 300 level Intermediate Fiction
Instructor(s): J. McGarry
Area: Humanities.

AS.220.429. Readings in Poetry: Poetry of Ireland Since 1900. 3.0 Credits.
A close study of twentieth- and twenty-first-century Irish poetry. Course readings will include work by W.B. Yeats, Austin Clarke, Michael Longley, Seamus Heaney, Eiléan Ni Chuilleanáin, Eavan Boland, Ciarán Carson, and others. This is not a workshop course, but students will have the opportunity to respond artistically as well as analytically to the course readings.
Instructor(s): J. Arthur
Area: Humanities.

AS.220.430. Readings in Poetry: Lives of the Poets. 3.0 Credits.
Lives of the Poets: Hecht, Merrill, Sexton, Plath. “The intellect of man is forced to choose / perfection of the life, or of the work” wrote Yeats. This course examines important intersections between the life and the work in the poems and memoirs of four, biographically interconnected poets. Poems treating subjects of depression and mental illness (Hecht, Sexton, Plath), the terror of war (Hecht), the depredations of disease (Merrill), and suicide (Sexton, Plath), find their sources in these poets fascinating—and, to varying degrees, troubled—lives.
Instructor(s): D. Yezzi
Area: Humanities.

AS.220.431. Readings in Fiction: Origins of the Short Story. 3.0 Credits.
This course will trace the development of the short story beginning with its tentative emergence from the shadow of the novel, through the early commercial period triggered by the invention of inexpensive newsprint, and to its full maturation at the turn of the 20th century. Works by E.T.A. Hoffmann, Heinrich Von Kleist, Alexander Pushkin, Nikolai Gogol, Ivan Turgenev, Guy de Maupassant, Henry James, Anton Chekhov, and Edith Wharton.
Instructor(s): T. Davies
Area: Humanities.

AS.220.432. Readings in Fiction: Innovators of the Short Story. 3.0 Credits.
In this class, we'll look at particularly influential writers who've had a lasting effect on the form of the short story, reshaping it through their own idiosyncratic vision. Authors may include Hawthorne, Kafka, Chekhov, Babel, Joyce, Borges, O'Connor, Welty, Barthelme, Paley, and Munro.
Instructor(s): R. Puchner
Area: Humanities.

AS.220.434. Readings in Poetry: The Mind in Motion: The Rhetoric of Poetry. 3.0 Credits.
This course examines how argument and formal thought shape poetry. Through class discussion about readings ranging from Donne to Dickinson to contemporary poets, and through critical and creative exercises, students will explore poems that reveal not only feeling and observation, but also the architecture of the analytical mind at work.
Instructor(s): D. Malech
Area: Humanities.

AS.220.435. Readings in Poetry: The Romance Tradition. 3.0 Credits.
A writer's survey of the medieval romance and of the subsequent poetry that it inspired. Course readings will include Sir Gawain and the Green Knight, The Death of King Arthur, and romances by Chretien de Troyes, as well as poetry by Spenser, Tennyson, and Robert Browning. This is a workshop course, but students will have the opportunity to respond artistically as well as analytically to the course readings.
Instructor(s): J. Arthur
Area: Humanities.

AS.220.436. Readings in Fiction: A Writer's Journal. 3.0 Credits.
We will study the role journals play in the work of Virginia Woolf, Franz Kafka, Rainer Maria Rilke, and Anton Chekov. Readings include novels, stories, and diaries.
Instructor(s): J. McGarry
Area: Humanities.

AS.220.437. Creating the Poetry Chapbook. 3.0 Credits.
Students will build on previous work in the major by completing a project of sustained length, depth, and cohesion (15 - 25 pages) in their final semester. Application only; Advanced Poetry prerequisite.
Prerequisites: AS.220.400
Instructor(s): D. Malech
Area: Humanities.
AS.220.438. Readings in Poetry: Of Late: Poetry & Social Justice. 3.0 Credits.
In this Community-Based Learning course, students will explore poetry of social and political engagement in partnership with high-school age writers from Writers in Baltimore Schools. Participants will put learning into practice by organizing community conversation, reflection, and collaboration. Participation in some events outside of class time will be required.
Instructor(s): D. Malech
Area: Humanities.

AS.220.439. Readings in Fiction: Caribbean Voices. 3.0 Credits.
Caribbean history is reflected in the literature of emigration and collapse of empire. We'll study novels by Naipaul, Rhys, and other 20th century authors.
Instructor(s): W. Biddle
Area: Humanities
Writing Intensive.

AS.220.441. Readings in Poetry: Shakespeare and Company. 3.0 Credits.
A study of three of Shakespeare's plays, and of some of the most important creative responses to these plays by modern writers, such as Auden and Stoppard. Students will familiarize themselves with Shakespeare's continuing place in contemporary culture, and write short critical responses; they will also write a longer creative work that in some way transforms one of Shakespeare's plays.
Instructor(s): M. Salter
Area: Humanities.

AS.220.442. Readings in Fiction: Narrative Strategies of Jane Austen. 3.0 Credits.
We will read the major novels with the aim of detecting the chief patterns and devices the author uses to make the familiar and ubiquitous marriage plot suspenseful and gripping. Writing Seminars Majors only
Prerequisites: AS.220.105 AND AS.220.106 AND AS.220.200
Instructor(s): J. McGarry
Area: Humanities.

AS.220.443. Readings in Poetry: International Voices. 3.0 Credits.
International voices will combine the workshopping of poems by students with a study of contemporary poems written by black British writers and British writers in dialect, African-American writers, Caribbean writers, and Indian and South African poets who are writing in English. The study of broad themes and subjects will be combined with a particular appreciation of linguistic and acoustic matters - which means among other things that time will be spent listening to and evaluating recordings of the poets concerned. Writing Seminars Majors Only
Prerequisites: AS.220.105 AND AS.220.106 AND AS.220.201
Instructor(s): A. Motion
Area: Humanities.

AS.220.444. Divided Loyalties: Translating Poetry. 3.0 Credits.
"Translation is impossible" and "All is translation": between these rival claims literary translating takes place. In this workshop course, students will translate a foreign-language poet of their choice and learn to place their approach to translating within the appropriate historical and theoretical contexts.
Prerequisites: AS.220.105 AND AS.220.106 AND AS.220.201
Instructor(s): C. Childers
Area: Humanities.

AS.220.445. Readings in Fiction: Novels about Journalism. 3.0 Credits.
Fiction writers writing about nonfiction writers: Miss Lonelyhearts, by Nathanael West; Bel Ami, by Guy de Maupassant; Psmith, Journalist, by P.G. Wodehouse; Scoop, by Evelyn Waugh; The Shipping News, by E. Annie Proulx.
Instructor(s): W. Biddle
Area: Humanities.

AS.220.446. Readings in Fiction: The Art of Fiction: the Novels of Henry James and Robert Louis Stevenson. 3.0 Credits.
Given the significant differences between their aims and styles as novelists - James the great investigator of the interior life, and Stevenson the equally great exponent of the adventure story - it's somewhat surprising to find the two men were good friends who admired one another's work. This course will use their friendship as a starting point to explore their novels in general, while paying particular attention to their narrative techniques; the novels under discussion will include Daisy Miller, Turn of the Screw, Portrait of a Lady, Treasure Island, Dr. Jekyll and Mr Hyde, and Kidnapped. Students will also be asked to create original work that both responds to and takes off from their reading of these books.
Instructor(s): A. Motion
Area: Humanities.

AS.220.447. Theater and Social Concern. 3.0 Credits.
In this Community-Based Learning course, students will explore theatre and areas of social concern in partnership with high-school age writers from Writers in Baltimore Schools. Participants will put learning into practice by organizing community conversation, reflection, and collaboration. Participation in some events outside of class time will be required.
Instructor(s): D. Yezzi
Area: Humanities.

AS.220.448. Readings in Fiction: Hybrid Forms. 3.0 Credits.
We will read essays that have the texture and imagination of a short story; stories that are closer to poems, journalists who use the tools common to fiction, and novelists whose work straddles the line between autobiography and fiction. Our reading for the semester will be based around broad, thematic concerns. We will discuss the relationship between form and content, the ethics of narration, and ultimately, how we can apply the tools and techniques of the writers we’ve read to our own creative and critical writing. Students will be expected to write short, critical responses to the readings as well as generate a substantial body of creative text. At the end of the semester, students will submit a portfolio that includes one extended work of creative writing, along with a critical essay.
Instructor(s): D. Mengestu
Area: Humanities
Writing Intensive.

AS.220.449. Readings in Poetry: Exploring Baltimore Through Poetry. 3.0 Credits.
Students in this course will write poems based on an exploration of Baltimore itself. weekly assignments will require the students to get off campus, visit specific sites around town, and craft their observations into original poems. Course readings will include work by Baltimore authors past and present; other readings, drawn from further afield, will take up the question of what it means to explore a city. Writing Seminars majors only.
Prerequisites: AS.220.105 AND AS.220.106
Instructor(s): J. Arthur
Area: Humanities.
AS.220.451. Readings in Fiction: Doing Likewise: Imitation, Continuation, Updating, Upending. 3.0 Credits.
In this course, we will look at stories and novels that, in one way or another, riff on the work of other authors. We'll consider both the old work and the new. Written assignments will consist of doing the same.
Prerequisites: AS.220.105 AND AS.220.106 AND AS.220.200
Instructor(s): A. McDermott
Area: Humanities.

AS.220.501. Independent Study. 3.0 Credits.
Ordinarily no more than one independent study course may be counted among the eight Writing Seminars courses presented for graduation.
Instructor(s): A. McDermott; D. Yezzi.

AS.220.502. Independent Study. 1.0 - 3.0 Credits.
Instructor(s): Staff.

AS.220.505. Writing Seminars Internship. 1.0 Credit.

AS.220.506. Writing Seminars Internship. 0.0 - 3.0 Credits.
Instructor(s): T. Davies.

AS.220.507. Honors Thesis. 3.0 Credits.
Permission Required.

AS.220.508. Honors Thesis. 0.0 - 3.0 Credits.
Department Permission Required.

AS.220.509. Practicing Journalism Internship. 1.0 Credit.
This internship is given in conjunction with local media and must be taken on a satisfactory/unsatisfactory basis. It covers many aspects of the operation of a metropolitan newspaper or magazine or TV station. Permission Required. Satisfactory/ Unsatisfactory only.
Instructor(s): T. Davies.

AS.220.510. Practicing Journalism. 1.0 Credit.
Permission Required.

AS.220.513. Teaching Writing. 3.0 Credits.
Permission Required.
Instructor(s): T. Davies.

AS.220.592. Internship - Summer. 1.0 Credit.
Instructor(s): T. Davies.

AS.220.594. Practicing Journalism Internship. 1.0 Credit.

AS.220.596. Teach Writing-Internship. 1.0 Credit.
Instructor(s): S. Dixon.

AS.220.598. Independent Study. 3.0 Credits.
Instructor(s): G. Blake; G. Williamson; J. McGarry; T. Davies.

A study of Modernism focusing on long poems and poem sequences by Stein, Pound, Eliot, Rukayser, Tolson, and others. Coursework will include completion of a long poem or poem sequence.
Instructor(s): D. Malech.

The central concern of this course is to read, study, think about, and discuss several novels and short story collections, paying special attention to the voice and structural techniques these authors have invented to create compelling works. Restricted to Graduate Students.
Instructor(s): M. Klam
Area: Humanities.

We will examine a number of classic and contemporary coming-of-age novels. Students will compose their own: an original work of fiction that may well described as such.
Instructor(s): A. McDermott
Area: Humanities.

This course will look at the ways in which poetry finds words to express moments of vision and self-forgetting. Ranging from the Elizabethans to the present day, it will begin by looking at poetic manifestos by Sidney and Shelley (among others), and explore the ways in which they require poetry to engage with what cannot easily be put into words, then go on to consider: poems about religious transcendence; poems about rapturous communication with nature; visionary poems; dream poems; poems about ghosts and haunting; and poems which explore the possibility of saying the unsayable. Donne and other Metaphysical poets, Wordsworth, Dickinson, Christina Rossetti, Whitman, Hardy, Edward Thomas, T. S. Eliot, and Seamus Heaney will be among those poets discussed. Workshop time will be divided equally between critical discussion, and the presentation of original work by students.
Instructor(s): A. Motion
Area: Humanities.

AS.220.623. Fiction Workshop.
Discussion and critique of fiction manuscripts by students enrolled in the M.F.A. program. Some assignments possible.
Instructor(s): D. Evans.

AS.220.624. Graduate Fiction Workshop.
Discussion and critique of fiction manuscripts by students enrolled in the MFA program. Some assignments possible.
Instructor(s): A. McDermott.

AS.220.625. Poetry Workshop.
Discussion and critique of poetry manuscripts by students enrolled in the M.F.A. program. Some assignments possible.
Instructor(s): A. Motion.

AS.220.626. Graduate Poetry Workshop.
Discussion and critique of poetry manuscripts by students enrolled in the MFA program. Some assignments possible.
Instructor(s): D. Yezzi.

A study of three major poets--Caribbean, Irish, and Russian--who self-identified with at least two cultures. We'll examine these poets' literary friendship and their shared engagement with subjects such as tyranny, empire, home, exile, and the English language. Exploration of these poets’ shared debt to a predecessor, Robert Frost, and the debt owed to them by younger poets, will lead to students' own original projects in poetry and prose.
Instructor(s): D. Yezzi.

We will read all--or most--of Chekhov's short stories, his "notebook," as well as the letters that have been translated into English.
Instructor(s): J. McGarry.
A study of three major poets (English, Irish, American) who each introduced signature tones, techniques, and themes in modern poetry. Some other figures, such as Louise Bogan and the World War I poets, may be discussed.
Instructor(s): M. Salter.

AS.220.646. Graduate Readings in Pedagogy: Teaching Fiction and Poetry.
A graduate course designed to develop both close reading and genre study, and to support the teaching of Introduction to Fiction and Poetry (IFP) I and II. Readings in selected works of American, English, and European poetry and short fiction. Course required by all graduate students in fiction and poetry.
Instructor(s): J. Arthur; J. McGarry; R. Puchner
Area: Humanities.

This course focuses on three poets whose individual relationships with form, inspiration, and innovation continue to shed light on the poetic process.
Instructor(s): D. Malech
Area: Humanities.

Based on a close reading of major texts, this course will look at the ways in which Romantic and port-Romantic British poetry deals with the passage of time, how it creates elegiac structures, and how it records various kinds of loss: the loss of self, the loss of traditional consolations (especially in terms of the environment), and the threatened loss of poetry itself. Students will be encouraged to respond creatively, as well as critically. Restricted to graduate students in the MFA program.
Instructor(s): A. Motion
Area: Humanities.

AS.220.651. Readings in Fiction: Five from the Fifties.
We will examine five American writers who were emerging or thriving in the middle of the 20th century: John Cheever, Bernard Malamud, Vladimir Nabokov, Jean Stafford, John Updike. We will read short stories by all five, as well as the following novels: Malamud's The Assistant, Nabokov's Lolita and Pale Fire. Restricted to graduate students in the MFA program.
Instructor(s): B. Leithauser
Area: Humanities.

A study of the interplay of the line and the sentence in poetry, with an emphasis on syntax. Some prose works will also be used for context. Poets employing syntax with great verve and precision, whether they obey or disrupt the rules, will be read in order to inform students' own stylistic choices.
Instructor(s): J. Arthur
Area: Humanities.

AS.220.656. Readings in Fiction: Doing Likewise: Imitation, Continuation, Updating, Upending.
In this course, we will look at stories and novels that take their inspiration from other authors, mostly Shakespeare. We'll consider both the old work and the new. Written assignments will require class members to do likewise.
Instructor(s): A. McDermott
Area: Humanities.

A study of major figures, including Dickinson, Moore, Bishop, Clampitt, Brooks, and others. The theme of place and displacement will be a focus.
Instructor(s): M. Salter
Area: Humanities.

"Translation is impossible" and "All is translation": between these rival claims literary translating takes place. In this workshop course, students will translate a foreign-language poet of their choice and learn to place their approach to translating within the appropriate historical and theoretical contexts. Writing Seminars majors only. Special Notes: Students should have reading knowledge of at least one foreign language.
Instructor(s): C. Childers
Area: Humanities.

AS.220.800. Independent Study.
Instructor(s): Staff.

Instructor(s): J. Arthur.
Cross Listed Courses

AS.061.148. Storytelling for Film and Fiction. 3.0 Credits.
Through the analysis of narrative films, short fiction, myths, fairy tales, and ghost stories, and through the workshopping of their own creative writing, students will explore the art and science of "a good story well told." This course is an essential primer for upper-level screenwriting.
Instructor(s): L. Bucknell
Area: Humanities
Writing Intensive.

AS.061.205. Introduction to Screenwriting. 3.0 Credits.
In this course we will explore the basic principles of visual storytelling in narrative film as they apply to the design and execution of a screenplay. During the course of the semester, each student will work on different writing exercises while they search for their specific story and the best way to approach it. We will study different narrative tools and methods of screenwriting by analyzing films to ascertain how they work or fail to do so at script level. Through in-class critiques, group discussions and one-on-one sessions, students will apply these techniques to their own work as they undergo the process of designing, breaking down, outlining and writing a screenplay for a short film. In-class analysis and debate on the strengths and challenges posed by the students’ work will help shape the thematic emphasis of the second half of the course.
Instructor(s): Staff
Area: Humanities
Writing Intensive.

AS.061.316. Characters for the Screenplay. 3.0 Credits.
A workshop devoted to creating complex characters for the screen. Students will examine memorable film characters from the silent era to the present, with attention to how these characters are revealed through both the drama and the mise en scene. Weekly screenings. Short critical and creative written exercises and a longer, creative final project. $50 Lab Fee.
Prerequisites: AS.061.148 OR AS.061.270 OR AS.061.205
Instructor(s): L. Bucknell
Area: Humanities
Writing Intensive.

AS.061.371. Unrealities: The Fantastic in Film & Fiction. 3.0 Credits.
The fantastic, the absurd, the blackly comic in films by Cocteau, Hitchcock, and others; and in the short fiction of Barthelme, Cortázar, Hrabal, and others. Several short creative exercises and a longer final project.
Instructor(s): L. Bucknell
Area: Humanities
Writing Intensive.

AS.061.373. Intermediate Dramatic Writing: Film. 3.0 Credits.
This course will explore different approaches towards understanding the fabric of story as it pertains to film. Students will be exposed to key challenges in conceiving, structuring and executing a compelling, memorable and vibrant feature-length screenplay. By studying key examples, we will discuss possible solutions to these issues. In every class, students will share their work in progress and will help each other find approaches or solutions to their specific challenges and issues. We will analyze films with screenplays that effectively play with the form to create lasting, thought-provoking and affecting stories. Through in-class critiques, group discussions and one-on-one sessions, students will apply new tools and approaches to their own work as they undergo the process of designing, breaking down, outlining and writing a full step outline, a beat sheet and the first ten pages of a feature length screenplay. As the semester progresses, in-class analysis and debate on the strengths and challenges posed by the students’ work will shape the thematic emphasis of each class.
Prerequisites: AS.220.204 OR AS.061.205 OR AS.061.270
Instructor(s): R. Buso-garcia
Area: Humanities
Writing Intensive.

AS.061.376. Arts and Culture Journalism: Interactive Media, Online Publishing. 3.0 Credits.
Students will participate in the ongoing creation of BmoreArt.com, an online arts and culture publication that serves the Baltimore community. In conjunction with visiting professionals, students will investigate the Baltimore cultural community and create different types of editorial content using interactive media including film, video, sound, and writing. Students will produce creative content utilizing their individual areas of expertise - such as visual art, art history, music, literary arts, film, and theater - while working together as a professional organization. A strong emphasis will be placed on the student’s collaborative participation and creative experimentation. Students with differing backgrounds in media will approach this project from unique perspectives, which will be valued and cultivated. Students with previous experience in journalism are welcome. An introductory writing or film course is suggested as a prerequisite.
Instructor(s): C. Ober
Area: Humanities
Writing Intensive.

AS.061.404. Advanced Screenwriting. 3.0 Credits.
Intensive workshop course where students will write both a first draft and a full revision of a feature length screenplay. Classes will be designed and centered on the specific challenges of the students’ works-in-progress, with an emphasis on exploring and discussing different narrative approaches and solutions that will enhance their writing and revision processes. Select films will be screened and analyzed as they pertain to the students’ scripts. Students will aim to have a polished draft of their screenplay to be submitted to industry-recognized screenwriting labs at the end of the semester.
Instructor(s): A. Rodgers
Writing Intensive.

Anthropology

AS.070.203. Healing: Politics and Poetics. 3.0 Credits.
Metaphors of health and illness; individual and social. The body in pain and the body politic. Ethnographies of historical memory vis-à-vis medicine, epidemics, sacredness, shamanism, terror, humanitarianism, truth and reconciliation.
Instructor(s): J. Obarrio
Area: Humanities, Social and Behavioral Sciences.
Instructor(s): M. Alhinho

German Romance Languages Literatures
AS.211.472. Barbers and countesses: conflict and change in the Figaro trilogy from the age of Mozart to the 20th century. 3.0 Credits.
2016 marks the bicentennial of Rossini’s irreverent masterwork The Barber of Seville, which premiered in Rome in February 1816. Thirty years earlier, in 1786, Mozart’s The Marriage of Figaro had opened in Vienna. The two operas, based on the first two plays of Beaumarchais’ controversial “Figaro trilogy”, stage conflicts of class and gender, challenging the assumptions of the aristocracy as well as the ludicrous pretensions of the raising bourgeoisie. The same themes inform the post-modern portrayal of the past in John Corigliano’s The Ghosts of Versailles (1991), which ideally completes the musical afterlife of the trilogy. By studying how the plays were adapted to the opera stage within their different cultural and historical contexts, the course will explore the representation of the ideological, social, and political turmoil that, eventually, culminated in the French Revolution. The course will also include field trips and screenings of movies such as Stanley Kubrick’s Barry Lyndon (1975) and Milos Forman’s Amadeus (1984). This course may be used to satisfy major requirements in both the French and Italian majors.
Instructor(s): E. Refini
Area: Humanities
Writing Intensive.

AS.214.479. Dante Visits the Afterlife: The Divine Comedy. 3.0 Credits.
Dante’s Divine Comedy presents a complete picture of the medieval world-view in all its aspects: physical (the structure of the cosmos), historical (the major actors from Adam to Dante himself) and moral (a complete system of right and wrong). Dante shows how the Christian religion portrayed itself, other religions, the nature of God, humans, angels and devils, and human society. We will explore these topics both from the viewpoint of Dante’s own time, and in terms of its relevance to our own societal and cultural concerns.
Instructor(s): W. Stephens
Area: Humanities
Writing Intensive.

AS.211.479. Dante’s Journey through the Afterlife. 3.0 Credits.
Dante’s Divine Comedy presents a complete picture of the medieval world-view in all its aspects: physical (the structure of the cosmos), historical (the major actors from Adam to Dante himself) and moral (a complete system of right and wrong). Dante shows how the Christian religion portrayed itself, other religions, the nature of God, humans, angels and devils, and human society. We will explore these topics both from the viewpoint of Dante’s own time, and in terms of its relevance to our own societal and cultural concerns.
Instructor(s): W. Stephens

Writing Intensive.

AS.212.205. Winter Is Coming: Writing and Rewriting French Dark Ages. 3.0 Credits.
This course will not aim at drawing the exhaustive literary landscape of French Middle Ages, neither will it be a Comparative Literature or History class. It may be considered a gateway to French Medieval literature, given that the Modern Fantasy has obviously improved the last decades, the latter being built as a rewriting of Medieval themes and Western European folklore. Looking at texts originally written in Old French, including prose and poetry, but also at the French Medieval iconography, we will try to understand the old roots of the Modern and so popular (but sacrificing) Fantasy Literature. Basic French will be required.
Instructor(s): M. Alhinho
Area: Humanities

AS.213.361. The Holocaust in Film and Literature. 3.0 Credits.
How has the Holocaust been represented in literature and film? Are there special challenges posed by genocide to the traditions of visual and literary representation? Where does the Holocaust fit in to the array of concerns that the visual arts and literature express? And where do art and literature fit in to the commemoration of communal tragedy and the working through of individual trauma entailed by thinking about and representing the Holocaust? These questions will guide our consideration of a range of texts – nonfiction, novels, poetry – in Yiddish, German, English, French and other languages (including works by Elie Wiesel, Primo Levi, and Isaac Bashevis Singer), as well as films from French documentaries to Hollywood blockbusters (including films by Alain Resnais, Claude Lanzmann, and Quentin Tarantino). All readings in English.
Instructor(s): S. Spinner
Area: Humanities.

AS.213.387. Major City, Minor Literature? Berlin in German-Jewish and Yiddish Literature. 3.0 Credits.
Between the two World Wars, a period of intense artistic and intellectual vitality, Berlin was an international center for theater, visual arts, and literature. Many important Yiddish-language writers were drawn to Berlin and, together with their German-language counterparts, produced a body of literature that explores issues of modernity and identity. By comparing works in Yiddish and German, we will learn about inter-War Berlin’s cultural diversity and richness, while also gaining insight into the particular issues of writing about Jewish identity in the 1920s, and the implications of writing in a minor language (Yiddish). We will read works by authors including Joseph Roth and Alfred Döblin in German, and Moyshe Kulbak and David Bergelson in Yiddish. All texts will be in translation. Some questions we will explore include: • What is a minority/ minor language or literature? • How did German and Yiddish interact in cultural and social spheres? • Can texts in different languages comprise a single body of literature? • What did it mean to be German and what did it mean to be Jewish? • Are assimilation and hybridity useful concepts? • Is there such a thing as Jewish modernism? • How did literature of the period respond to the rise of the Nazi party and the intensification of antisemitism?
Instructor(s): S. Spinner
Area: Humanities.

AS.214.479. Dante Visits the Afterlife: The Divine Comedy. 3.0 Credits.
Dante’s Divina commedia is the greatest long poem of the Middle Ages; some say the greatest poem of all time. We will study the Commedia critically to find: (1) What it reveals about the worldview of late-medieval Europe; (2) how it works as poetry; (3) its relation to the intellectual cultures of pagan antiquity and Latin (Catholic) Christianity; (4) its presentation of political and social issues; (5) its influence on intellectual history, in Italy and elsewhere; (6) the challenges it presents to modern readers and translators; (7) what it reveals about Dante’s understanding of cosmology, world history and culture. We will read and discuss the Commedia in English, but students will be expected to familiarize themselves with key Italian terms and concepts. Students taking section 02 (for 4 credits) will spend an additional hour working in Italian at a time to be mutually decided upon by students and professor.
Instructor(s): W. Stephens
Area: Humanities
Writing Intensive.
AS.215.353. Women Writing in Latin America: Prose and Poetry by Sor Juana, Mistral, Lisoba, Pizarnik, Castellanos, and other poets. 3.0 Credits.
The first objective of the course is to train students in close reading and analysis of literary texts. The second objective is to read prose and poetry by some of the canonical texts in the Latin American tradition written by women. Taught in English.
Instructor(s): S. Castro-Klaren
Area: Humanities
Writing Intensive.

AS.215.463. Borges: His Fiction and Critical Essays. 3.0 Credits.
This course will deal with close readings of Borges ficciones and critical essays in order to determine how his thinking on the problem of writing and thinking is fictionalized in his stories.
Instructor(s): S. Castro-Klaren
Area: Humanities
Writing Intensive.

This course will focus on the art of writing poetry, the art of reading poetry and the poetics of each of the poets whose work is the textual matter of the course.
Instructor(s): S. Castro-Klaren
Area: Humanities
Writing Intensive.

AS.216.300. Contemporary Israeli Poetry. 3.0 Credits.
This course examines the works of major Israeli poets such as Yehuda Amichai, Nathan Zach, Dalia Rabikovitch, Erez Biton, Roni Somek, Dan Pagis, Yona Wollach, Yair Horwitz, Maya Bejerano, and Yitzhak Laor. Against the background of the poetry of these famous poets we will study recent developments and trends in Israeli poetry, including less known figures such as Mois Benarroch, Shva Salhoov and Almog Behar. Through close reading of the poems, the course will trace the unique style and aesthetic of each poet, and will aim at presenting a wide picture of contemporary Hebrew poetry.
Prerequisites: Students may receive credit for AS.216.300 or AS.300.413, but not both.
Instructor(s): N. Stahl; Z. Cohen
Area: Humanities
Writing Intensive.

AS.216.342. The Holocaust in Israeli Society and Culture. 3.0 Credits.
This course examines the role of the Holocaust in Israeli society and culture. We will study the emergence of the discourse of the Holocaust in Israel and its development throughout the years. Through focusing on literary, artistic and cinematic responses to the Holocaust, we will analyze the impact of its memory on the nation, its politics and its self-perception.
Instructor(s): N. Stahl
Area: Humanities
Writing Intensive.

AS.216.370. Israel Through Prose. 3.0 Credits.
This course examines representations of various aspects of Israeli society and culture in contemporary Israeli prose. The course will follow both a thematic and chronological path in order to study the ways in which Israeli prose reflects political, ideological, social and cultural aspects of contemporary Israel. In this context, we will read works by several major authors such as: Agnon, Shabtai, Kahanah-Carmon, Oz, Kenaz, Yehoshua, Grossman, Castel-Bloom, Matalon, Laor, Kashua and Hoffmann. Students who sign up for section 2 will work an additional hour in Hebrew with Professor Cohen at a time mutually agreed upon by the professor and the students enrolled.-Carmon, Oz, Kenaz, Yehoshua, Grossman, Castel-Bloom, Matalon, Laor, Kashua and Hoffmann.
Instructor(s): N. Stahl; Z. Cohen
Area: Humanities
Writing Intensive.

AS.216.373. War in Israeli Arts and Culture. 3.0 Credits.
In this course we will study the various representations of what functions as one of Israel’s most unifying and yet dividing forces: war. By analyzing literary and cinematic works as well as visual art and popular culture we will attempt to understand the role of war in shaping Israeli society, culture and politics. Topics such as commemoration and mourning, heroism, dissent and protest, trauma and memory and the changing image of the soldier will stand at the center of the course.
Instructor(s): N. Stahl; Z. Cohen
Area: Humanities.

AS.216.398. Zionism: Literature, Film, Thought. 3.0 Credits.
This course studies the relations between modern Hebrew and Israeli culture and Zionism. Based on a close reading of both literary and non-literary Zionist texts, we will explore the thematic, social and political aspects of the Zionist movement. The course focuses on primary sources and its main goal is to familiarize students with the various ways in which Zionism was formed and understood. In the last part of the semester we will investigate the different meanings of Post-Zionism through contemporary literary and non-literary texts as well as recent Israeli films.
Instructor(s): N. Stahl; Z. Cohen
Area: Humanities.

AS.216.412. The Divine in Literature and Cinema. 3.0 Credits.
This course studies various issues concerning literary and cinematic representations of the divine. We will investigate theoretical, theological, generic and aesthetic aspects of the topic and will familiarize ourselves with the general problem of the relation between religion, literature and cinema. Among the topics to be discussed are, negative theology in literature and film, theodicy and anti-theodicy, the question of religion and literary modernism, providence and narratology in the modern novel and in contemporary cinema.
Instructor(s): N. Stahl.
AS.216.444. The Apocalypse in Literature and Film. 3.0 Credits.
“Everything which we loved is lost! We are in a desert”—this emotional assertion was the reaction to Kazimir Malevich’s 1915 painting The Black Square, as the artist himself recalled it. This sentiment of fearing, warning and even witnessing the end of the world as we know it, will stand at the center of the course. We will study the literary and cinematic representations of this apocalyptic notion and investigate its theoretical, theological, physiological and aesthetic aspects. We will seek to trace the narrative dynamics as well as literary and cinematic means of apocalyptic representations in works from various periods, languages, cultures and religions. Among the issues to be discussed: what is the apocalypse, biblical apocalypse, dystopia and nostalgia, trauma and post trauma, war and the apocalypse, the Holocaust as the end of civilization, the atomic bomb, realism and anti-realism, political changes and the apocalypse in popular culture.
Instructor(s): N. Stahl
Area: Humanities
Writing Intensive.

Theatre Arts Studies
AS.225.324. Adaptation for the Stage. 3.0 Credits.
For aspiring playwrights, dramaturgs, and literary translators, this course is a workshop opportunity in learning to adapt both dramatic and non-dramatic works into fresh versions for the stage. Students with ability in foreign languages and literatures are encouraged to explore translation of drama as well as adaptation of foreign language fiction in English. Fiction, classical dramas, folk and fairy tales, independent interviews, or versions of plays from foreign languages are covered.
Instructor(s): J. Martin
Area: Humanities
Writing Intensive.

AS.225.330. Playwriting Strategies. 3.0 Credits.
A seminar and workshop in playwriting with Dr. Joe Martin, playwright and dramaturge. Student writers, developing their plays, will learn how to open up to the creative process, “brainstorm,” refine their work, and shape it toward an act of artistic communication. Writer’s techniques, such as attending to plot or “story,” delineation of character, creating effective “dialog,” even overcoming “writer’s block,” will be addressed. This course is designed to be complementary to—not a replacement for—playwriting classes in the Writing Seminars.
Instructor(s): J. Martin
Writing Intensive.

Humanities Center
AS.300.113. Freshmen Seminar: Drama and Gender in Shakespeare’s England. 3.0 Credits.
In this seminar we will read male and female authored plays and discuss how they reflect contemporary social expectations in Tudor and Stuart England. Authors include William Shakespeare; Mary Sidney, Countess of Pembroke; Christopher Marlowe; Elizabeth Cary; Ben Jonson; and Mary Sidney, Lady Wroth.
Instructor(s): E. Patton
Area: Humanities.

AS.300.133. Freshmen Seminar: Women of Epic Fame in Literature and Drama, 800 BCE-1650 CE. 3.0 Credits.
From Homer’s Odyssey to Shakespeare’s Antony and Cleopatra, powerful women who achieve their ends by working from within the system are often overlooked or not fully explored. Our readings and discussions will foreground these women of fiction, while we also consider the social conditions of their living contemporaries. Readings will include: Homer’s Odyssey (Penelope); Virgil’s Aenead (Dido); Dante’s Inferno (Beatrice); Milton’s Paradise Lost (Eve), and several accounts of Cleopatra in plays by Shakespeare and his contemporary women writers. Cross listed with Theater Arts, Writing Seminars, and WGS.
Instructor(s): T. Tower
Area: Humanities
Writing Intensive.

Comparative Thought and Literature
AS.300.139. Introduction to Intellectual History. 3.0 Credits.
This course offers a conceptual and historical introduction to Intellectual History. What makes the “history of ideas” different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call “ideas”? In what sense do they have a history? These are examples of the kind of questions addressed in the course.
Instructor(s): P. Marrati
Area: Humanities.

AS.300.143. Introduction to Comparative Literature. 3.0 Credits.
This course offers an introduction to the history, theory, and praxis of comparative literature. We will read texts from some of the founding figures of the discipline and look at the most recent debates in the field, including translation studies, literary theory, and world literature, among others. Particular attention will be given to the methodologies and problems of studying literatures in different linguistic traditions and the relation between literature and other areas of thought and culture, such as philosophy, art history, and psychoanalysis. Case studies in comparative approaches to literature will provide concrete examples to our discussions.
Instructor(s): L. Lisi
Area: Humanities.

Comparative Thought and Literature
AS.300.311. Introduction to Intellectual History. 3.0 Credits.
This course offers a conceptual and historical introduction to Intellectual History. What makes the “history of ideas” different from the history of other objects? What, if anything, distinguishes the history of ideas from the history of philosophy? What is it exactly that we call “ideas”? In what sense do they have a history? These are examples of the kind of questions addressed in the course.
Instructor(s): H. Sirin; P. Marrati
Area: Humanities.
AS.300.321. Rise of the Modern Short Story. 3.0 Credits.
A comparative tour of examples of short stories from three continents that emerged from earlier narrative forms in the 19th and 20th centuries. Attention will be given to new structural, rhetorical, and thematic concerns including the development of new sub-genres, e.g. fictions of detection, case histories, portraits of the artist, and the adaptation of several stories to newer media. At least two of the longer narratives translated to film will be screened. A detailed syllabus of our readings will be available later in the summer. Because there is no anthology that quite fits our needs, all the texts or translations, as well as critical and contextual notes, will be supplied in digital forms. Note: there will also be an optional hour for questions & discussion TBA.
Instructor(s): L. Lisi
Area: Humanities
Writing Intensive.

AS.300.323. Shakespeare and Ibsen. 3.0 Credits.
William Shakespeare and Henrik Ibsen are the two most frequently performed playwrights in history, and both have been credited with reinventing drama. Shakespeare for the Elizabethan stage and Ibsen for the modern. In this course we will pair together plays by each author – those that stand in an explicit relation of influence as well as those that share a significant set of concerns – in order to investigate how each takes up and transforms key problems in the literary, political, and philosophical tradition for their own historical moment. Plays to be studied: by Shakespeare, A Midsummer Night's Dream, Hamlet, Othello, King Lear, The Tempest, A Winter's Tale; by Ibsen, St. John's Night, Hedda Gabler, Rosmersholm, The Wild Duck, The Master Builder, When We Dead Awaken.
Instructor(s): L. Lisi
Area: Humanities.

AS.300.337. The Tragic Tradition. 3.0 Credits.
This course offers a broad survey of tragic drama in the Western tradition, from its origins in ancient Greece to the twentieth century. In weekly lectures and discussion sections, we will study the specific literary features and historical contexts of a range of different works, and trace the continuities and transformations that shape them into a unified tradition. Key questions and themes throughout the semester will include what counts as tragic, the tragedy of social and political conflict, the bearing of tragedy on the meaning and value of life, the antagonistic relation between world and humans, the promises and dangers of tragedy for contemporary culture. Authors to be studied: Sophocles, Euripides, Seneca, Shakespeare, Racine, Goethe, Ibsen, Strindberg, Chekov, Brecht, Pirandello, and Beckett.
Instructor(s): L. Lisi
Area: Humanities.

AS.300.339. Introduction to Comparative Literature. 3.0 Credits.
This course offers an introduction to the history, theory, and practice of comparative literature. We will read texts from some of the founding figures of the discipline and look at the most recent debates in the field, including translation studies, literary theory, and world literature, among others. Particular attention will be given to the methodologies and problems of studying literatures in different linguistic traditions and the relation between literature and other areas of thought and culture, such as philosophy, art history, and psychoanalysis. Case studies in comparative approaches to literature will provide concrete examples to our discussions.
Instructor(s): L. Lisi
Area: Humanities.

Humanities Center
AS.300.363. Reading Judith Shakespeare: poetry and drama by women writers in Elizabethan England (ca 1558-1650). 3.0 Credits.
Virginia Woolf's account of the thwarted career of Shakespeare's hypothetical sister, Judith (in A Room of One's Own) frames our reading of plays and poetry by Shakespeare and contemporary women writers, including Isabella Whitney, Elizabeth Cary, Mary Sidney, Amelia Lanyer, Mary Wroth, and others. Students will create fictional biographies of "Judith Shakespeare" and her literary accomplishments. Cross listed with English, Theater Arts, Writing Seminars, and WGS.
Instructor(s): E. Patton
Area: Humanities
Writing Intensive.

Comparative Thought and Literature
AS.300.372. Dance and the Russian Avant-Garde. 3.0 Credits.
This course will explore the relationship between art and dance during the explosion of artistic creativity at the time of the Russian Revolution (1900s-1920s) as well as the influence of the Russian Avant-Garde on modern dance and theories of movement through the 20th century. We will examine how dance both gave physical form to aesthetic, philosophical and political ideas and catalyzed new forms of thinking about the human body and modern spaces. Lecture and discussion of readings and screenings will be paired with a weekly movement workshop in the dance studio that will introduce students to different forms and theories of avant-garde and modernist dance and movement theory. No prior dance experience or knowledge of Russian is required.
Instructor(s): A. Eakin Moss; C. Dinapoli
Area: Social and Behavioral Sciences.

Interdepartmental
AS.360.133. Freshman Seminar: Great Books at Hopkins. 3.0 Credits.
Freshman Seminar: Students attend lectures by an interdepartmental group of Hopkins faculty and meet for discussion in smaller seminar groups; each of these seminars is led by one of the course faculty. In lectures, panels, multimedia presentations, and curatorial sessions among the University's rare book holdings, we will explore some of the greatest works of the literary and philosophical traditions in Europe and the Americas. Close reading and intensive writing instruction are hallmarks of this course; authors for Fall 2018 include Homer, Boethius, Machiavelli, Shakespeare, Descartes, Aphra Behn, Mary Shelley, Mozart, Douglass, and Woolf.
Instructor(s): E. Patton; E. Refini; S. Weiss; W. Egginton
Area: Humanities
Writing Intensive.

Center for Africana Studies
AS.362.304. Reading and Writing Black Poetry. 3.0 Credits.
This course is an exploration of twentieth and twenty-first century black poetry and poetics. Readings include Paul Laurence Dunbar, Langston Hughes, Gwendolyn Brooks, Amiri Baraka, Sonia Sanchez, Nikki Giovanni, Lucille Clifton, Rita Dove, Natasha Trethewey, Terrance Hayes, Claudia Rankine, and Danez Smith. Texts will be mined for theme as well as formal technique as a basis for poetic experimentation.
Instructor(s): A. Gunn
Area: Humanities
Writing Intensive.
**Study of Women, Gender, Sexuality**  
**AS.363.445. Reading Judith Shakespeare: Women and Gender in Elizabethan England. 3.0 Credits.**  
If Shakespeare had a sister who went to London to be a writer, what would she write? Virginia Woolf’s account of the thwarted career of Shakespeare’s hypothetical sister, Judith, in *A Room of One’s Own* frames our reading of plays and poetry by Shakespeare and contemporary women writers, including Isabella Whitney, Elizabeth Cary, Mary Sidney, Aemelia Lanyer, and Mary Wroth. Working within a selected historical context, students will create fictional biographies of "Judith Shakespeare," including her perspective on our identified authors and a sample or description of Judith’s own literary accomplishments. Secondary course readings will reflect contemporary economic, political, and religious contexts.  
Instructor(s): G. Dean  
Area: Humanities  
Writing Intensive.

**Program in Museums and Society**  
**AS.389.311. From Treasure House to Production House: Exploring New Roles for the Museum in the 21st Century. 3.0 Credits.**  
Students work with the Director of, the Peale Center for Baltimore History and Architecture as it reinvents itself as a museum for the twenty-first century. Involves working with community story-tellers in residence. Extra time is to allow for field trip travel - most days class runs 1:30-3:50.  
Instructor(s): Staff  
Area: Humanities, Social and Behavioral Sciences.

**AS.389.329. Author/Canon/Archive. 3.0 Credits.**  
Why are some literary works from the past reprinted, anthologized, and considered worthy of study, but not others? Why are some works “lost” and some “rediscovered,” while others simply fall out of favor? Focusing on nineteenth- and early twentieth-century American literary culture, we will use rare books and archival materials from JHU collections to examine Edgar Allan Poe, Walt Whitman, Emily Dickinson, Stephen Crane, Charles Chesnutt, and Zora Neale Hurston, along with a few authors you’ve never heard of, in terms of the relationship between authorship, stewardship, and status.  
Instructor(s): G. Dean  
Area: Humanities, Social and Behavioral Sciences.

**AS.389.343. Edgar Allan Poe and His Afterlives. 3.0 Credits.**  
We will investigate the creative development and iconic afterlife of a canonical American author, Edgar Allan Poe, as a case-study in literary legacy and cultural heritage. What is the lifespan of a literary work, and how do works “stay alive” for later generations? Students will examine rare Poe materials and create a digital exhibition of Poe archives.  
Instructor(s): G. Dean  
Area: Humanities, Social and Behavioral Sciences.

**AS.389.359. Modernist Networks in the Archive. 3.0 Credits.**  
This class examines three American writers who built important and enduring networks, Ezra Pound, Gertrude Stein, and Langston Hughes. We will investigate the artefactual traces of their networks through recently acquired special collections materials and digital representations, in order to address questions about aesthetics and style, politics and power, race and gender, and what is and is not present in the literary archive.  
Instructor(s): G. Dean  
Area: Humanities.

**Center for Leadership Education**  
**EN.661.110. Professional Writing and Communication. 3.0 Credits.**  
This course teaches students to communicate effectively with a wide variety of specialize and non-specialized audiences. Projects include production of resumes, cover letters, proposals, instructions, reports, and other relevant documents. Class emphasizes writing clearly and persuasively, creating appropriate visuals, developing oral presentation skills, working in collaborative groups, giving and receiving feedback, and simulating the real world environment in which most communication occurs. Not open to students who have taken EN.661.110 as Technical Communication or Professional Communication for Science, Business and Industry or EN.661.120 Business Communication. No audits.  
Prerequisites: Students may take EN.661.110 or EN.661.120, but not both.  
Instructor(s): Staff  
Writing Intensive.

**Whiting School of Engineering**  
http://engineering.jhu.edu/  
Engineering education at Johns Hopkins began with the establishment of an engineering school in 1913. Throughout its history, the Whiting School has maintained close ties with the Krieger School of Arts and Sciences, which has led pioneering education and research since the Faculty of Philosophy was assembled in 1876. The Whiting School of Engineering provides its students with an education and research environment that fosters a lifetime ability to create and apply new knowledge and to contribute to their professions.

The Whiting School offers 10 ABET-accredited programs in engineering leading to the Bachelor of Science degree: biomedical engineering, chemical and biomolecular engineering, civil engineering, computer engineering, computer science, electrical engineering, engineering mechanics, environmental engineering, materials science and engineering, and mechanical engineering. The school also offers B.S. and B.A. degrees in applied mathematics & statistics as well as B.A. degrees in biomedical engineering, computer science, and general engineering.

Our commitment to advanced study and research yields outstanding programs that lead to masters and doctoral degrees. In the descriptions that follow, each department lists its faculty and their research, research facilities, graduate programs, and the elementary and advanced courses they offer. More details can be obtained from the departmental websites, through the Whiting School homepage at http://engineering.jhu.edu.

**Applied Mathematics and Statistics**  
http://engineering.jhu.edu/ams  
The Department of Applied Mathematics and Statistics is devoted to the study and development of mathematical disciplines especially oriented to the complex problems of modern society. A broad undergraduate and graduate curriculum emphasizes several branches of applied mathematics: *Probability*, the mathematical representation and modeling of uncertainty; *Statistics*, the analysis and interpretation of data; *Operations Research*, the design, analysis, and improvement of actual operations and processes; *Optimization*, the determination of best or optimal decisions; *Discrete Mathematics*, the study of finite structures, arrangements, and relations; *Scientific Computation*, which includes all aspects of numerical computing in support of the sciences; and *Financial Mathematics*, the modeling and analysis of financial markets.
Undergraduate Programs

The undergraduate major in applied mathematics and statistics may serve as preparation for employment as an applied mathematician, for graduate study in applied mathematics or related areas, or as a general quantitative training for a career in business, medicine, or other fields. An undergraduate major in applied mathematics and statistics takes an individually tailored program of courses within the department and in the Department of Mathematics (calculus, and perhaps further courses such as differential equations, analysis, complex variables, topology, and modern algebra) and electives in science and engineering. By suitable choice of electives, heavy concentration in a specific field of engineering is possible.

In order to develop a sound program suited to individual needs and interests, the student should consult regularly with the faculty advisor. Additional advisory information, including information about the areas of focus described below, may be obtained from the department office.

With the advice and consent of the faculty advisor, each student constructs an individualized program meeting the requirements below. A written copy of the program should be on file with the faculty advisor, with whom it can be revised and updated from time to time.

Bachelor's Degrees

Departmental majors can earn either the B.A. or the B.S. degree by meeting the general university requirements and the general requirements of the School of Engineering (see Requirements for a Bachelor's Degree (p. 7), including Writing Requirement, in this catalog), and the departmental requirements.

All courses used to meet the following departmental requirements must be taken for a letter grade and passed with grade of C- or higher:

1. Calculus I, II, and III

<table>
<thead>
<tr>
<th>AS.110.106 &amp; AS.110.107</th>
<th>Calculus I (Biology and Social Sciences) and Calculus II (For Biological and Social Science)</th>
</tr>
</thead>
<tbody>
<tr>
<td>or AS.110.108 &amp; AS.110.109</td>
<td>Calculus I and Calculus II (For Physical Sciences and Engineering)</td>
</tr>
<tr>
<td>or AS.110.113</td>
<td>Honors Single Variable Calculus</td>
</tr>
</tbody>
</table>

| AS.110.202 | Calculus III |
| or AS.110.211 | Honors Multivariable Calculus |

2. Linear Algebra and Differential Equations

Two courses in linear algebra and differential equations. These two courses must, collectively, touch both areas. There are two ways to meet this two-course requirement:

Option A

Choose one of the following for Linear Algebra:

| AS.110.201 | Linear Algebra |
| or AS.110.212 | Honors Linear Algebra |

Choose one of the following for Differential Equations:

| AS.110.302 | Differential Equations and Applications |
| or AS.110.417 | Partial Differential Equations |
| or EN.553.386 | Scientific Computing: Differential Equations |
| or EN.553.388 | Scientific Computing: Differential Equations in Vector Spaces |
| or EN.553.391 | Dynamical Systems |

Option B

| EN.553.291 | Linear Algebra and Differential Equations |
| Plus an additional course in linear algebra or differential equations chosen from among the following: |
| EN.553.385 | Scientific Computing: Linear Algebra |
or EN.553.386 Scientific Computing: Differential Equations
or EN.553.388 Scientific Computing: Differential Equations in Vector Spaces
or EN.553.391 Dynamical Systems
or EN.553.792 Matrix Analysis and Linear Algebra
or AS.110.417 Partial Differential Equations

Choose one of the following (or one of the courses approved to meet the the Master’s/PhD Computing Requirement):

AS.250.205 Introduction to Computing 3-4
or EN.500.200 Computing for Engineers and Scientists
or EN.510.202 Computation and Programming for Materials Scientists and Engineers
or EN.530.371 Quantitative Applications in Mechanical Engineering
or EN.540.305 Modeling and Statistical Analysis of Data for Chemical and Biomolecular Engineers
or EN.553.281 Introduction to Mathematical Programming
or EN.553.383 Scientific Computing with Python
or EN.553.385 Scientific Computing: Linear Algebra
or EN.553.386 Scientific Computing: Differential Equations in Vector Spaces
or EN.553.400 Introduction to Mathematical Programming
or EN.553.413 Applied Statistics and Data Analysis
or EN.553.433 Monte Carlo Methods
or EN.553.436 Data Mining
or EN.553.443 Financial Computing in C++
or EN.553.450 Computational Molecular Medicine
or EN.553.487 Numerical Methods for Financial Mathematics
or EN.553.488 Financial Computing I
or EN.553.493 Mathematical Image Analysis
or EN.560.220 Civil Engineering Programming
or EN.570.210 Computation/Math Modeling
or EN.580.200 Introduction to Scientific Computing in BME using Python, Matlab, and R
or EN.580.223 Models and Simulations
or EN.601.475 Machine Learning
or EN.601.482 Machine Learning: Deep Learning

4. Discrete Mathematics
Choose one of the following:

EN.553.171 Discrete Mathematics 4
or EN.553.172 Honors Discrete Mathematics
or EN.553.371 Cryptology and Coding
or EN.553.471 Combinatorial Analysis
or EN.553.472 Graph Theory

5. Probability and Statistics

EN.553.420 Introduction to Probability 4
EN.553.430 Introduction to Statistics 4

6. Optimization
EN.553.361 Introduction to Optimization 4

7. Completion of an area of Focus, chosen from the list below.

Two additional courses are to be taken in the area of focus, distinct from those used to satisfy requirements 5 and 6.

8. Courses coded Quantitative Studies totaling 40 credits of which at least 18 credits must be in courses numbered 300 or higher. (Courses used to meet the requirements above may be counted toward this total.)

9. For the B.S. degree, at least 12 credits coded Natural Sciences Laboratory courses that accompany Natural Science courses may be used in reaching this total. (Courses used to meet the requirements above may be counted toward this total.)

Area of Focus
Two additional courses are to be taken in the area of focus.

Probability and Stochastic Processes
Choose two of the following:

AS.110.405 Real Analysis I
EN.553.426 Introduction to Stochastic Processes
EN.553.427 Stochastic Processes and Applications to Finance
EN.553.433 Monte Carlo Methods
EN.553.492 Mathematical Biology

Statistics and Statistical Learning
Choose two of the following:

EN.553.400 Mathematical Modeling and Consulting
EN.553.413 Applied Statistics and Data Analysis
EN.553.414 Applied Statistics and Data Analysis II
EN.553.416 Introduction to Statistical Learning, Data Analysis and Signal Processing
EN.553.417 Mathematical Modeling: Statistical Learning
EN.553.433 Monte Carlo Methods
EN.553.436 Data Mining
EN.553.439 Time Series Analysis
EN.553.450 Computational Molecular Medicine

Optimization and Operations Research
Choose two of the following:

EN.553.362 Introduction to Optimization II
EN.553.400 Mathematical Modeling and Consulting
EN.553.453 Mathematical Game Theory
EN.553.463 Network Models in Operations Research
EN.553.465 Introduction to Convexity

Discrete Mathematics
Choose two of the following:

AS.110.401 Introduction to Abstract Algebra
EN.553.371 Cryptology and Coding
EN.553.463 Network Models in Operations Research
EN.553.471 Combinatorial Analysis
EN.553.472 Graph Theory

Financial Mathematics
Choose two of the following:

EN.553.427 Stochastic Processes and Applications to Finance
EN.553.441 Equity Markets and Quantitative Trading
EN.553.442 Investment Science
EN.553.444 Introduction to Financial Derivatives
EN.553.445 Interest Rate and Credit Derivatives
EN.553.447 Quantitative Portfolio Theory and Performance Analysis

Scientific Computing *
Choose two of the following: 7-8
EN.553.383 Scientific Computing with Python
EN.553.385 Scientific Computing: Linear Algebra
EN.553.386 Scientific Computing: Differential Equations
EN.553.388 Scientific Computing: Differential Equations in Vector Spaces
EN.553.433 Monte Carlo Methods

* Neither the pair of EN.553.385-EN.553.386 nor EN.553.386-EN.553.388 allowed in fulfillment of the area of focus.

Requirements 1–9 together constitute a minimal core program, allowing maximum flexibility in planning degree programs. Students often are able to complete a second major during a four-year program or to proceed to the department’s combined bachelor’s/master’s degree program.

It is highly recommended that students develop a coherent program of study (see below) or at least take additional departmental courses, in order to establish a broad foundation for a career as an applied mathematician. Of particular importance are additional courses in optimization (EN.553.362 Introduction to Optimization II), stochastic processes (EN.553.426 Introduction to Stochastic Processes), statistics (EN.553.413 Applied Statistics and Data Analysis), dynamical systems (EN.553.391 Dynamical Systems), mathematical modeling and consulting (EN.553.400 Mathematical Modeling and Consulting), scientific computing (EN.553.385 Scientific Computing: Linear Algebra, EN.553.386 Scientific Computing: Differential Equations), and investment science (EN.553.442 Investment Science). Students planning to continue to graduate school in an applied mathematics program are encouraged to consider taking one or more graduate-level courses in probability (EN.553.720 Probability Theory I, EN.553.721 Probability Theory II), statistics (EN.553.730 Statistical Theory, EN.553.731 Statistical Theory II), optimization (EN.553.761 Nonlinear Optimization I, EN.553.762 Nonlinear Optimization II), combinatorics (EN.553.671 Combinatorial Analysis), graph theory (EN.553.672 Graph Theory), numerical analysis (EN.553.781 Numerical Analysis), or matrix analysis (EN.553.792 Matrix Analysis and Linear Algebra).

Honors
The Department of Applied Mathematics and Statistics awards departmental honors based on a number of factors, including performance in coursework, research experiences, teaching, and service. If a student completes a senior thesis (EN.553.501 Senior Thesis) and also earns a GPA of 3.5 or higher in Applied Mathematics and Statistics courses, then the student will automatically be awarded departmental honors.

Minor in Applied Mathematics and Statistics
The minor in applied mathematics and statistics should be attractive to students majoring in a variety of disciplines, in both the School of Engineering and the School of Arts and Sciences. The minor provides formal recognition of the depth and strength of a student's quantitative knowledge beyond the minimal requirements of his/her major.

The requirements of the minor in applied mathematics and statistics are the following:

- Completion of an approved program of study containing at least 18 credits in courses coded Quantitative Studies. The first two courses in calculus (AS.110.106 Calculus I (Biology and Social Sciences) or AS.110.107 Calculus II (For Biological and Social Science)) or AS.110.108 Calculus I-AS.110.109 Calculus II (For Physical Sciences and Engineering) or their equivalents) may not be used to fulfill this requirement.

- Among the courses comprising the 18 Q credits, there must be
  - (a) at least four courses in the Department of Applied Mathematics and Statistics (each of these must be a 3- or 4-credit course); and
  - (b) at least three 3- or 4-credit courses coded Q at the 300-level or above, of which at least two must be in the Department of Applied Mathematics and Statistics; and
  - (c) an approved semester course based on a high-level computer language chosen from the list below or one of the courses approved to meet the AMS Master's/PhD Computing Requirement (http://engineering.jhu.edu/ams/courses-approved-meet-ams-masterph-d-computing-requirement).

| AS.250.205 | Introduction to Computing |
| or EN.500.200 | Computing for Engineers and Scientists |
| or EN.510.202 | Computation and Programming for Materials Scientists and Engineers |
| or EN.530.371 | Quantitative Applications in Mechanical Engineering |
| or EN.540.305 | Modeling and Statistical Analysis of Data for Chemical and Biomolecular Engineers |
| or EN.553.281 | Introduction to Mathematical Programming |
| or EN.553.383 | Scientific Computing with Python |
| or EN.553.385 | Scientific Computing: Linear Algebra |
| or EN.553.386 | Scientific Computing: Differential Equations |
| or EN.553.388 | Scientific Computing: Differential Equations in Vector Spaces |
| or EN.553.400 | Mathematical Modeling and Consulting |
| or EN.553.413 | Applied Statistics and Data Analysis |
| or EN.553.433 | Monte Carlo Methods |
| or EN.553.436 | Data Mining |
| or EN.553.443 | Financial Computing in C++ |
| or EN.553.450 | Computational Molecular Medicine |
| or EN.553.487 | Numerical Methods for Financial Mathematics |
| or EN.553.488 | Financial Computing I |
| or EN.553.493 | Mathematical Image Analysis |
| or EN.560.220 | Civil Engineering Programming |
| or EN.570.210 | Computation/Math Modeling |
| or EN.580.200 | Introduction to Scientific Computing in BME using Python, Matlab, and R |
| or EN.580.223 | Models and Simulations |
| or EN.601.475 | Machine Learning |
| or EN.601.482 | Machine Learning: Deep Learning |

- All courses used to meet AMS departmental minor requirements must be taken for a letter grade and passed with grade of C- or higher.
• Students may not count all 3 courses, EN.553.310 Probability & Statistics/EN.553.311 Probability and Statistics for the Biological Sciences and Engineering, EN.553.420 Introduction to Probability, and EN.553.430 Introduction to Statistics toward minor requirements.
• A student wishing to complete a minor in applied mathematics and statistics may obtain more information from the Applied Mathematics and Statistics Department office.

Graduate Programs
A wide variety of advanced courses, seminars, and research opportunities is available in the Department of Applied Mathematics and Statistics.

Requirements for the Master's Degree in Applied Mathematics and Statistics
Students may elect to work toward either the master of arts (M.A.) degree or the master of science in engineering (M.S.E.) degree in applied mathematics and statistics. All master's degrees in applied mathematics and statistics ordinarily require a minimum of two semesters of registration as a full-time resident graduate student.

To obtain departmental certification for the master’s degree in Applied Mathematics and Statistics, the student must:

1. Complete satisfactorily at least eight one-semester courses of graduate work in a coherent program approved by the faculty advisor. All 600-level and 700-level courses (with the exception of seminar and research courses), are satisfactory for this requirement. Certain courses in other departments are also acceptable, and must be approved in advance. At most 3 courses outside the department may be counted toward the Master’s degree requirements. WSE courses listed as 1- or 2-credit courses count only as one-half course. Approved KSAS graduate courses count as one-half course if the number of meeting hours per week is 1 or 2 and count as a full course otherwise.

2. Meet either of the following options:
   • (a) submit an acceptable research report based on an approved project; or
   • (b) complete satisfactorily two additional one-semester graduate courses, as approved by the faculty advisor.

3. Satisfy the computing requirement by receiving a grade of B- or better in one of the following courses:
   - EN.553.600 Mathematical Modeling and Consulting
   - EN.553.613 Applied Statistics and Data Analysis
   - EN.553.633 Monte Carlo Methods
   - EN.553.636 Data Mining
   - EN.553.650 Computational Molecular Medicine
   - EN.553.688 Financial Computing I
   - EN.553.693 Mathematical Image Analysis
   - EN.553.732 Bayesian Statistics
   - EN.553.743 Graphical Models
   - EN.553.753 Commodities and Commodity Markets
   - EN.553.761 Nonlinear Optimization I
   - EN.553.762 Nonlinear Optimization II
   - EN.553.763 Stochastic Search & Optimization
   - EN.553.765 Convex Optimization
   - EN.553.780 Shape and Differential Geometry
   - EN.553.781 Numerical Analysis
   - EN.601.675 Machine Learning
   - EN.601.682 Machine Learning: Deep Learning

4. Complete an area of focus by taking three courses in one of the following areas. A list of courses that can be counted toward each area of focus will be maintained and updated every year. Some courses from other departments can be eligible to count toward area of focus. They can be used within the three-course limit specified in point 1, above. This list of courses is based on recent offerings.

Mathematics and Statistics, the student must:
To obtain departmental certification for the master’s degree in Applied Mathematics and Statistics, the student must:
EN.553.636 Data Mining 4
EN.553.639 Time Series Analysis 3
EN.553.650 Computational Molecular Medicine 4
EN.553.730 Statistical Theory 4
EN.553.731 Statistical Theory II 3
EN.553.732 Bayesian Statistics 3
EN.553.733 Advanced Topics in Bayesian Statistics 3
EN.553.737 Distribution-free statistics and Resampling Methods 3
EN.553.740 Machine Learning 3
EN.553.782 Statistical Uncertainty Quantification 3

Optimization and Operations Research
EN.553.600 Mathematical Modeling and Consulting 4
EN.553.661 Optimization in Finance 4
EN.553.653 Mathematical Game Theory 4
EN.553.663 Network Models in Operations Research 4
EN.553.665 Introduction to Convexity 4
EN.553.761 Nonlinear Optimization I 3
EN.553.762 Nonlinear Optimization II 3
EN.553.763 Stochastic Search & Optimization 3
EN.553.765 Convex Optimization 3
EN.553.766 Combinatorial Optimization 3
EN.553.797 Introduction to Control Theory and Optimal Control 3

Computational and Applied Mathematics
EN.553.688 Financial Computing I 3
EN.553.692 Mathematical Biology 3
EN.553.693 Mathematical Image Analysis 3
EN.553.780 Shape and Differential Geometry 3
EN.553.781 Numerical Analysis 4
EN.553.784 Mathematical Foundations of Computational Anatomy 3
EN.553.792 Matrix Analysis and Linear Algebra 4
EN.553.793 Turbulence Theory 3
EN.553.795 Advanced Parameterization in Science and Engineering 3

Discrete Mathematics *
At least one of:
EN.553.671 Combinatorial Analysis 4
or EN.553.672 Graph Theory
or EN.553.766 Combinatorial Optimization
Additional options:
EN.601.631 Theory of Computation 3
EN.601.633 Intro Algorithms 3
EN.601.634 Randomized and Big Data Algorithms 3
EN.601.635 Approximation Algorithms 3

* The Discrete Mathematics area of focus requires a minimum of one Applied Mathematics and Statistics course (listed in the first section), but the other two courses may include other listed Applied Mathematics and Statistics offerings or the listed Computer Science offerings. The Computer Science courses can be used within the three-course limit specified in point 1, above.

5. Complete training on the responsible and ethical conduct of research, if applicable. Please see WSE Policy on the Responsible Conduct of Research.
6. Complete training on academic ethics.

An overall GPA of 3.0 must be maintained in courses used to meet the program requirements. At most two course grades of C or C+ are allowed to be used and the rest of the course grades must be B- or better.

Each candidate for the master’s degree must submit to the department for approval a written program stating how they plan to meet their degree requirements. This should be done early in the first semester of residence.

Doctoral students in other departments may concurrently undertake a master’s program in Applied Mathematics and Statistics with the permission of the AMS department through an application review. Application information is available in the department office.

Requirements for the Master’s Degree in Financial Mathematics
The department offers an M.S.E. degree in Financial Mathematics. The structure of this program is summarized below. More detailed information about this program may be found on the department’s website.

Full-time students in this program are expected to attend courses for three semesters beginning in the fall semester, a summer internship after the spring semester of their first year, and return for a second fall semester.

For departmental certification for this degree, the student must complete the following courses or approved substitute courses with program approval pursuing either the Legacy Track or Area of Focus Track:

Area of Focus Track
Core financial mathematics requirements (2 courses)
EN.553.644 Introduction to Financial Derivatives 4
EN.553.645 Interest Rate and Credit Derivatives 4
Core applied mathematics requirements (3 courses)
EN.553.613 Applied Statistics and Data Analysis 4
EN.553.627 Stochastic Processes and Applications to Finance 4
EN.553.639 Time Series Analysis 3
Electives *
7 elective courses:
One in Applied Mathematics and Statistics 4
Two courses in Financial Mathematics 4
Four additional courses from the approved electives listing or with prior program approval

Financial Mathematics Masters Seminar
Computing requirement (includes the Financial Computing Workshop)
Communication skills requirement (includes the Communication Skills Practicum)
Summer Internship

Legacy Track
Core financial mathematics requirements (4 courses)
EN.553.642 Investment Science 4
The introductory phase of graduate study acquaints the student with the current frontiers of their chosen specialized disciplines. Highly motivated and exceptionally well-qualified undergraduates may apply for admission to the combined bachelor’s/master’s program in applied mathematics and statistics. Interested students should apply no later than fall semester of their senior year.

The requirements for this program consist of those for the bachelor’s and master’s programs.

Requirements for the Ph.D. Degree
The objective of the department’s Ph.D. program is to produce graduates who are broadly educated in applied mathematics and statistics and who can work at the current frontiers of their chosen specialized disciplines. The introductory phase of graduate study acquaints the student with a spectrum of topics, provides an opportunity to fill gaps in his or her background, and affords a close view of the doctoral research process and of potential research areas and advisors. Continuation to advanced study and dissertation research is based upon favorable evaluation of preparedness and potential. The progress of students is evaluated at the end of every semester. The culmination of the program is the doctoral dissertation, representing an original and significant contribution to knowledge in applied mathematics.

In addition to fulfilling the university requirement of a minimum of two consecutive semesters of registration as a full-time resident graduate student, the student must accomplish the following to obtain departmental certification for the Ph.D.:

- Pass the Introductory Examination, normally offered immediately before each semester.
- Pass the Ph.D. Candidacy Examination. This oral examination is normally taken in the third year of residency. The scope of the exam will be governed by a syllabus prepared by the student with the help of the student’s mentor or advisor.

- Pass the Graduate Board Oral Examination, normally taken in the third year of residence.
- Acquire teaching experience under the supervision of the faculty.
- Complete at least 12 one-semester courses of graduate work in a coherent program approved by the faculty advisor.
- Demonstrate a working knowledge of the utilization of computers in applied mathematics and statistics.
- Complete a program of original research and its clear exposition in a written dissertation. The dissertation must be approved by at least two faculty readers and be certified by them to be a significant contribution to knowledge and worthy of publication in scholarly journals. The candidate defends the dissertation in a public examination held under the auspices of the department.

Additional details on these items may be found on the department’s website.

Course Program
The most common way for students to gain the knowledge and skills to succeed in the Ph.D. program is through course work. In consultation with his or her advisor, each student will develop a program of proposed course work. The relevant courses for the Ph.D. are of three types: basic graduate-level courses, additional specialized courses appropriate to the student’s field of research, and an elective one year course selected to broaden the student in applied mathematics. To promote a well-rounded education and record, all full-time graduate students are expected to enroll in an appropriate number of courses for their stage in the program. Students are required to enroll in and attend EN.553.801 Department Seminar, the Applied Mathematics and Statistics Department Seminar, every semester. Grades of B- or better (or equivalent level of performance in pass/fail courses) are expected of all department Ph.D. graduate students in their course work.

Basic Courses
All students are encouraged to master basic material in:

- probability (EN.553.720), statistics (EN.553.730), and stochastic processes (EN.553.626);
- optimization (EN.553.761);
- numerical and matrix analysis (EN.553.781, EN.553.792); and
- discrete mathematics (EN.553.671, EN.553.672).

Normally, a student will have completed at least eight basic courses by the end of the fourth semester of residence.

Specialized Courses
Each student takes advanced courses appropriate to the proposed area of dissertation research, with the approval of the research advisor.

Elective Courses
Students are encouraged to take additional elective course work, either covering one area in depth or covering two areas. Typical areas in other departments are biology, econometrics, mathematical economics, mathematical ecology, computational geometry, systems theory, health systems, mathematics, facility location, psychometrics, and physics. These courses may complement or supplement the student’s previous experience, but if a student has no previous experience in an area some elementary course work may be necessary as a prerequisite to acceptable graduate level courses.

Electives *

- 3 elective courses:
  - One in Applied Mathematics and Statistics | 4
  - One course in Financial Mathematics       | 4
  - One additional course with prior program approval | 4

Financial Mathematics Masters Seminar
Computing requirement (includes the Financial Computing Workshop)
Communication skills requirement (includes the Communication Skills Practicum)
Summer Internship

For courses used toward the degree, all grades must be at least 3.0. Some elementary course work may be necessary as a prerequisite to some advanced courses.

* Please see department website for approved electives.

Please see department website for approved electives.

Additional details on these items may be found on the department’s website.

Applied Mathematics and Statistics
**Financial Assistance**

A limited number of teaching and research assistantships providing full tuition and a competitive academic year stipend are available to qualified full-time Ph.D. candidates. Furthermore, the following special fellowships are awarded:

- The Rufus P. Isaacs Fellowship, named in honor of a late member of the faculty acclaimed for his contributions to operations research.
- The Charles and Catherine Counselman Fellowship, generously endowed by Hopkins alumnus Charles Counselman.

In addition, summer employment opportunities are often available within the university and in the Baltimore-Washington corridor.

**Faculty**

**Chair**
E. Laurent Younes
Professor: mathematical imaging, shape theory and applied differential geometry, computational probability, statistics.

**Vice Dean for Graduate Education**
Edward R. Scheinerman
Professor: discrete mathematics, graph theory, social networks, random methods, partially ordered sets.

**Director of Graduate Studies**
Daniel Q. Naiman
Professor, Director of Financial Mathematics Master’s Program: statistics, computational probability, bioinformatics.

**Director of Undergraduate Studies**
Donnelli E. Fishkind
Associate Research Professor: combinatorics, graph theory, matrix analysis.

**Associate Director of Undergraduate Studies**
James A. Fill
Professor: probability, stochastic processes, random structures, and algorithms.

**Executive Director of Financial Mathematics Master’s Program**
David Audley
Senior Lecturer: financial mathematics, term structure models, fixed income derivatives, and quantitative portfolio strategies.

**Professors**

William J. Cook
Professor: combinatorial optimization, integer programming, operations research, large-scale computing.

Gregory L. Eyink
Professor: mathematical physics, fluid mechanics, turbulence, dynamical systems, partial differential equations, nonequilibrium statistical physics, geophysics and climate.

Donald Geman
Professor: image analysis, statistical learning, bioinformatics.

Yannis Kevrekidis
Bloomberg Distinguished Professor: algorithms, data, and the computer-assisted modeling of complex dynamical systems.

Sunil Kumar
Professor, Provost and Sr Vice President for Academic Affairs: optimizing manufacturing systems, service operations, and communications

Mauro Maggioni
Bloomberg Distinguished Professor: analysis, partial differential equations, algebraic topology, big data, data intensive computation, harmonic analysis over manifolds and over discrete structures.

Carey E. Priebe
Professor: statistics, image analysis, pattern recognition.

John C. Wierman
Professor: probability, statistics, discrete mathematics, percolation theory, stochastic processes.

**Associate Professors**

Amitab Basu
Associate Professor: optimization, discrete and combinatorial geometry, convex analysis, operations research.

Tamas Budavari
Associate Professor: computational statistics, Bayesian inference, low-dimensional embeddings, streaming algorithms, parallel processing on GPUs, scientific databases, survey astronomy.

**Assistant Professors**

Maxim Bichuch
Assistant Professor: financial mathematics, utility optimization, market with transaction costs, counterparty risk, valuation adjustments

Nicolas Charon
Assistant Professor: shape analysis, image analysis, Riemannian and discrete geometry.

Edinah Gnang
Assistant Professor: discrete mathematics, graph theory, multilinear algebra, image analysis, experimental math.

Daniel P. Robinson
Assistant Professor: optimization, numerical analysis, matrix analysis, complementarity problems.

Yanxun Xu
Assistant Professor: Bayesian statistics, cancer genomics, clinical trial design, graphical model, nonparametric Bayesian, statistical inference for big data analysis, high-throughput genomic data and proteomics data.

**Research Professor**

Helyette Geman
Research Professor: financial mathematics, commodities.

James C. Spall

**Associate Research Professor**

Minh Hai Tang
Associate Research Professor: statistical pattern recognition, high-dimensional data analysis.

**Assistant Research Professor**

Avanti Athreya
Assistant Research Professor: probability, stochastic processes.
Mengyang Gu  
Assistant Research Professor: Bayesian analysis, uncertainty quantification, computer model emulation and calibration, spatial statistics, time series, robust analysis, graphical models.

**Senior Lecturer**  
Beryl Castello  
Senior Lecturer: operations research, optimization, facility location, inventory modeling.

Mario Micheli  
Senior Lecturer: image processing, shape analysis, variational methods, and applied statistics.

John Miller  
Senior Lecturer: financial mathematics, equity derivative trading and risk management, number theory.

Fred Torcaso  
Senior Lecturer: stochastic processes, asymptotics, and partial differential equations.

**Associate Research Scientist**  
Antwan D. Clark  
Associate Research Scientist: high performance computing and resiliency analysis.

**Assistant Research Scientist**  
Devrim Kaba  
Assistant Research Scientist: statistics, dynamical systems, and optimization for security assessment in power systems.

**Joint and Secondary Appointments**  
Gregory Chirikjian  
Professor: Mechanical Engineering, computational structural biology, applied mathematics, robotics.

John Goutsias  
Professor: Electrical and Computer Engineering.

Benjamin F. Hobbs  
Professor: Environmental Health and Engineering, energy and environmental systems and economics.

Pablo Iglesias  
Professor: Electrical and Computer Engineering.

Takeru Igusa  
Professor: Civil Engineering.

S. Rao Kosaraju  
Edward J. Schaefer Professor: Computer Science, design of algorithms, parallel computation, pattern matching, robotics computational geometry.

Fei Lu  
Assistant Professor: Mathematics.

Enrique Mallada  
Assistant Professor: Electrical and Computer Engineering.

Michael I. Miller  
Professor: Biomedical Engineering.

Jerry L. Prince  
Professor: Electrical and Computer Engineering, multi-dimensional signal processing, medical imaging, computational geometry.

Suchi Saria
