The Center for Visual Arts (CVA) provides a studio environment where students can pursue their creative interests. Students can minor in art or take general elective classes from a diverse curriculum that includes drawing, painting, cartooning, architectural drawing, sculpture, printmaking, digital photography, and special topics. CVA faculty are accomplished artists, photographers, designers, and illustrators.

The study of visual arts encourages students to become engaged observers, creative problem solvers, and skilled practitioners in visual and design practices. CVA faculty teach creative problem solving, which is applicable and valuable in every avenue of human endeavor. The process of making art teaches perceptual skills, which improve the process of thinking and reasoning. The ability to be flexible in the interpretation of data is a key component of success in research, and making art helps students develop cognitive flexibility.

The Center for Visual Arts offers an art minor for students who seek a more advanced course of study in the digital and fine arts practices. Through Hopkins' cooperative programs with MICA and other colleges in the Baltimore area, students can take courses not offered at the Center for Visual Arts.

Each spring, the Hopkins community is invited to attend the Studio Show, an exhibition of the year's best work by CVA students. Additionally, a variety of temporary exhibits are hosted in Mattin Center throughout the year.

The photography, painting and drawing departments offer a summer study abroad program at Burren College of Art in Ballyvaughan, Ireland. More information can be found on the Study Abroad website (http://jhu-sa.terradotta.com).

AS.371.177. Design Studies: Detail, Product, Prototype. 3.0 Credits.
When we undertake the design of an artifact—something material, perhaps interactive—we do more than create a pretty little sculpture, or simply enclose the inner workings of a product. We think about aesthetics; about ergonomics; about material heft and surface texture. In a successful product, toy, or building detail it is often something ineffable—the way the object interfaces with the human hand, or the way it takes on a personality in the mind—that results in its success as an object of design. The course is structured as a series of design exercises, each intended to develop the graphical and manual skill-set of the designer. Our subject, broadly speaking, is the design of small things: from building details to useful products and tools, the act of drawing iterative design sketches, and creating prototypes, will guide us in the development of practical design intelligence.
